The PRESIDING OFFICER. The Senator from Rhode Island is recognized.

UP AMENDMENT NO. 693

Mr. CHAFEE. Mr. President, this amendment was discussed, to some degree, this forenoon. I might explain to the Members present the gist of it.

The current law is that when an X-ray comes in from the coal mine area, indicating that a miner has black lung disease, it then goes to a section in the Department of Labor where the Government has an opportunity to read the X-ray again. This is read by what is known as a B reader. These men are specially trained, having gone through the course at Johns Hopkins University. They are specially trained, not just to read X-rays, but to read X-rays of the lungs.

ORDER OF PROCEDURE

Mr. JAVITS. Mr. President, will the Senator yield for a moment?

Mr. CHAFEE. Yes.

Mr. JAVITS. Mr. President, I ask unanimous consent that it may be in order to ask for the yeas and nays on the Javits amendment at this time.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. JAVITS. Mr. President, I ask unanimous consent that it may be in order to ask for the yeas and nays on the Randolph amendment at this time.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. JAVITS. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

UP AMENDMENT NO. 693

Mr. CHAFEE. In the event that the Government reader should determine that, based on his reading, there cannot be a determination of black lung disease, the situation does not end, Mr. President. Instead, the claimant has a right to appeal to an administrative law judge. The administrative law judge can call in expert witnesses, can ask for further X-rays, can seek whatever additional information he needs in connection with the reading of that X-ray.

Let us take a step further, Mr. President. Let us assume that the administrative law judge determines that the claimant, based on this X-ray, does not have a case. That does not end it. It then goes to the Benefits Review Board.

The principal reason, I believe, Mr. President, that this is a most extraordinary change in the law is that the change in the law proposed in this amendment is that the Government has no reading of the X-ray. The X-ray comes in from the coal mine area, with a statement by the reader there, the local doctor, who examines it and determines that there is black lung disease. That settles that point. The Government has no chance to read the X-ray. We are thereby depriving the Government of its opportunity to determine that, in the Government's view, there is no claim. It seems to me that that is a most extraordinary deprivation of the Government's right to protect the taxpayers of this Nation.

I further point out, Mr. President, that oftentimes, when the Government gets the X-ray under the present situation, it upgrades the award. In other words, it determines that the black lung disease is more serious than the original reader had expected.

There is a further protection for the claimant in that, in 40 percent of the cases that were examined in 1975 under a study, the Government's second reader found that there was previously undetected evidence of lung cancer, tuberculosis, and emphysema. What my amendment does is go back to the situation where we are now. In other words, it protects the Government's right to have a second reading and changes the proposed law, which would eliminate the right of the Government, the taxpayers of this Nation, the citizens of this Nation, to have its second reading made prior to any benefit being paid.

Mr. JAVITS. Will the Senator yield?

Mr. CHAFEE. Yes.

Mr. JAVITS. Mr. President, I support this amendment. I think it is inconceivable that the Government should not have that right. I moved it in the committee. It was defeated by a very narrow vote. I hope very much that it carries in the Senate.

Mr. CANNON. Mr. President, I ask unanimous consent that William Kroger of my staff may have the privilege of the floor during debate and vote on this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHAFEE. I further point out that this amendment was defeated in the committee, 6 to 5. The amendment is supported by the administration, as the Assistant Secretary for Employment Standards stated in his letter.

The PRESIDING OFFICER. The Senator's time has expired. Who yields time?

Mr. RANDOLPH. I yield myself the remainder of the time. Is that 5 minutes on the majority side?

The PRESIDING OFFICER. The Senator is correct.

Mr. RANDOLPH. Mr. President, I have discussed this very thoroughly during debate earlier today. I really regret—and we cannot, I am sure, have it otherwise—that Members of the Senate were not present. So often, we find ourselves coming in and voting on a subject which is rather complex, such as this subject. I know that Senator CHAFEE and the manager of this bill went into this subject very thoroughly.

I submit that Dr. Donald Rasmussen is a man who understands this problem. I am afraid that Mr. CHAFEE, the able Senator from Rhode Island, really does not understand the importance that I attach to the position I hold of, frankly, defeating this amendment.

Dr. Rasmussen said:

> Chest films of good quality should be obtained on all applicants, primarily to exclude infectious, malignant or other diseases or conditions of the lungs or thorax. There is little or no reason for the elaborate system of multiple readers, since the presence or absence of pneumoconiosis per se is pertinent only in cases who have worked less than 15 years in the coal industry.

Then he said:

> Even in these cases, there is no relationship between the X-ray findings and the presence or absence of impaired function.

Mr. President, the Labor Department admits that, in the vast majority of the cases, X-ray rereading results in the reversal of positive findings of pneumoconiosis. The GAO, in its recent report on the administration of the black lung program, points out that the rereading of X-rays results in significant delays in claims processing. The provision in the committee bill gives the Secretary adequate means of assuring the quality of the X-ray. The rereading prohibition applies only if all the factors are present: that the X-ray was taken by a qualified technician; that the original interpretation was made by a certified radiologist or a radiologist who is eligible for certification by the Board of Radiologists; that the X-ray is of sufficient quality to show pneumoconiosis; that there is no evidence of fraud.

I agree that the executive branch must be able to reread X-rays for the purpose of discovering illness.

This is not the issue in the vote here on the amendment. The issue, as I have

indicated earlier today, is whether rereaders hired by the Government should be allowed to second-guess the coal field radiologist, the man who is there where the mining is taking place, who is far more knowledgeable about the individual miner.

Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back or having expired, the question is on agreeing to the amendment of the Senator from Rhode Island. The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arizona (Mr. DECONCINI), the Senator from Arkansas (Mr. MCCLELLAN), and the Senator from Minnesota (Mr. HUMPHREY), are necessarily absent.

I further announce that the Senator from South Carolina (Mr. HOLLINGS), the Senator from Mississippi (Mr. EASTLAND), and the Senator from Mississippi (Mr. STENNIS), are absent on official business.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY), would vote "nay."

Mr. STEVENS. I announce that the Senator from Idaho (Mr. MCCLURE), the Senator from South Carolina (Mr. THURMOND), and the Senator from North Dakota (Mr. YOUNG), are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS), is absent on official business.

I further announce that, if present and voting, the Senator from South Carolina (Mr. THURMOND), would vote "yea."

The result was announced—yeas 41, nays 49, as follows:

[Rollcall Vote No. 311 Leg.]

YEAS—41

Bartlett	Glenn	Morgan
Bellmon	Goldwater	Muskie
Brooke	Gravel	Nelson
Bumpers	Griffin	Packwood
Byrd, Harry F., Jr.	Hansen	Proxmire
	Hatch	Roth
Case	Hathaway	Schmitt

Eagleton	Metzenbaum	
Ford	Moynihan	

NOT VOTING—10

DeConcini	Mathias	Thurmond
Eastland	McClellan	Young
Hollings	McClure	
Humphrey	Stennis	

So Mr. CHAFEE's amendment was rejected.

Mr. RANDOLPH. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HUDDLESTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 695

The PRESIDING OFFICER. The question recurs on amendment No. 695, offered by the senior Senator from West Virginia (Mr. RANDOLPH).

The Senate will be in order. The Senate will not proceed until the Senate is in order. Senators will clear the aisle and clear the well and will continue their conversations in the cloakroom.

On this amendment there will be 10 minutes of debate, to be equally divided between the sponsor of the amendment and the Senator from New York (Mr. JAVITS).

Who yields time?

Mr. RANDOLPH. Mr. President, a question: What is the status of the pending amendment? Has there been debate on this amendment in any degree?

The PRESIDING OFFICER. The Chair understands that there has been debate—a few minutes less than 10 minutes.

Mr. RANDOLPH. Mr. President, I yield myself such time as I may require.

The PRESIDING OFFICER. The Senator is recognized.

Mr. RANDOLPH. Mr. President, it has been asserted by the Senator from New York in reference to the report of the Committee on Finance that a substantial shortfall in revenues in relation to benefits will result from passage of this bill. That assertion is based on a series of cost and revenue assumptions. The sources are the Joint Committee on Internal Revenue Taxation and the Department of Labor staff.

On the other side of the question the Congressional Budget Office, directed by Dr. Alice Rivlin, has determined in a July 11 cost estimate that the shortfall of revenues will be only in the amount of $35 million over a period of 5 years, or $7 million a year.

Our bill, in fact, requires the trustees of the fund to report on the condition of the fund and to recommend to Congress any requirement for changes in the tax. This is to be done annually. Thus there is no need, as I see it, for a termination date on the tax.

Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. JAVITS. Mr. President, I yield 3 minutes to the Senator from Louisiana.

The PRESIDING OFFICER. The Senator from Louisiana.

Mr. LONG. Mr. President, I would think we could all agree that much remains to be seen about what the cost of this program is going to be. For example, the Senate just gave its approval to a rather controversial provision in the bill which says that the Government does not have the right to have its experts pass judgment on what those X-rays show. So if someone goes to his family doctor and the family doctor says he has black lung disease, the Government cannot have one of its specialists testify what, in his judgment, that X-ray shows.

The Department of Labor, of course, opposed the Committee on Human Resources on that item and, frankly, those of us on the Committee on Finance were inclined to feel that it is not how you ought to do business, where the Government is precluded from having its witnesses testify on behalf on the Government's position.

But that was the judgment of the Senate and, I dare say, most Senators, I do not think, had the opportunity to fully appraise themselves of what the problem here was that will raise the cost of the program.

We also have a problem here with regard to the presumption created by the bill that a person who worked in the mines for 25 years is presumed to have black lung, for the benefit of his widow or his heirs.

From the point of view of most of us, when a person is dead why can you not have an autopsy and see if he has black lung? Well, we are not going to have the right to have the autopsy. We are going to presume he has black lung because he worked in a mine for 25 years.

These things are going to increase the cost of the program. The view of the Committee on Finance and the view of the Senator from New York (Mr. JAVITS), is, that being the case, we ought to provide a tax to pay for this matter for 5 years, and then after 5 years we ought to take another look at it and see what it is costing and have a chance to pass judgment on what our program should be.

I heard the argument of the Senator from West Virginia, and I suppose I cannot quarrel with his views, he representing coal miners, and they ought to have everything that can be recommended. But I would think, in view of the fact that the costs of this matter may wind up being a great deal more than anybody anticipates, where the costs wind up being anywhere from 2 to 10 times what anybody estimated they would wind up being, it would seem we ought not to be so liberal and we should be cautious. We should wind up with this being the cost for 5 years, and then we should take another look at it.

I would like to ask is this an amendment offered by the Senator from West Virginia or is it the Committee on Finance amendment we would be voting on?

The PRESIDING OFFICER (Mr. CHILES). The amendment offered by the Senator from West Virginia.

Mr. LONG. Then I hope the Senate will not agree to the amendment.

Mr. JAVITS. Mr. President, I yield myself 2 minutes.

The PRESIDING OFFICER. The Senator from New York.

Mr. JAVITS. Mr. President, it seems to me if anything is open and shut, this is it. Here is a time limitation on a tax, an ad valorem tax, which is going to be passed on to the consumer, and we ought to have a time limitation to review what we are spending.

This program has cost the Government $1 billion a year. Now future costs are going to be transferred to the coal

consumer. Do we just want that program to go on forever without implementing it into workers' compensation or requiring some other evidence of responsibility? I almost cannot understand ourselves if that is the way we feel.

Now, we have a limitation of 1981 in the present act. This is not of meaning to me; it is of meaning to our country and to the consumers of coal. We have a limitation of 1981. We are willing to push that up to 1983. Not to review this program at all, not to take another look at the tax when the time expires in 5 years, seems absolutely beyond me, especially as the estimates of money will fall short, whether it is $35 million or $400 million, they are going to fall short. Therefore, we should end them at a given time.

Mr. LONG. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. LONG. Basically what this amounts to is that we have here a $1 billion tax to finance what by any standard is an exceedingly generous program and, frankly, there are going to be situations where we are going to pay a lot more than anybody ever dreamed of for some cases which, to say the least, will be controversial.

Now, the view of the Committee on Finance and the view of the Senator from New York in this matter is that we ought to take another look at it in 5 years' time and see what it is going to cost.

Mr. JAVITS. That is the course of basic responsibility, and I see that as the point of view of the Committee on Finance, and I argue to sustain the position of the Committee on Finance.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. CURTIS. I just want to add my support to the position of the Senator from New York and my distinguished chairman, Senator Long.

There are many unknowns in this bill. It is a new tax. It came to us on an excise tax basis. We effected a change. We think it will work out equitably, but it is a new program so far as this tax arrangement is concerned, and I would feel much better if it had a termination date so that another Congress could look at it.

The PRESIDING OFFICER. All time on the amendment has expired.

Mr. JAVITS. I yield 2 minutes on the bill.

Mr. RANDOLPH. Mr. President, I would remind my able chairman of the Committee on Finance, Mr. LONG, that the surface mining bill provides a tax for 15 years. Now, that is a fact. How can you reason or how can the members reason that we should do any less for those persons in a bill that is people-oriented, very frankly. I recognize that. The miner and the program, as I see it, need a continuity, and that is why I take the position that I do.

I understand in part the reasoning, but I cannot, of course, agree with the situation as stated by those, including the Senator from Louisiana, who want a so-called termination date of this type.

Mr. JAVITS. I yield a minute to the Senator from Colorado.

Mr. HART. Mr. President, first of all, if we apply a sunset principle to this tax, then I think we should do so in all tax subsidies on an experimental basis just to see how it works, just to be fair.

Second, under the present program 90 percent of the miners in Colorado are having trouble getting their benefits because they are delayed and the applications are stacked up, and the presumption is they do not have black lung until they prove they do.

I think the medical evidence is quite to the contrary. I think the presumption should be on those who say they do not have black lung to prove they do not. I think the presumption should operate in favor of the person who has been under the ground for 25 years. That is what I take it the purpose of the Senator's proposal is, and I think we should support him.

Mr. JAVITS. Mr. President, I yield myself 1 minute to reply.

The difficulty is we picked out one industrial illness, and we favored it. If we were doing it across the board, I would be sympathetic with my colleague. I am the last person who is going to stand against some form of compensation. I have made fair treatment of workers my whole life's work.

I feel, having picked it out specially, we have really gone pretty much overboard with it and at least we should have some review process.

We have this amendment relating to the tax, and then we have my own amendment relating to the new claims after 1982. We have to get it back into the State workers' compensation system or at least do it for the others who are similarily affected at one and the same time.

For those reasons, I hope very much the Senate will reject the amendment.

I yield the floor.

Mr. RANDOLPH. Mr. President, I say to the Senator from New York that if the tax is terminated then the program, as I have said earlier today, is also terminated. It follows that benefits also will be terminated.

I do not believe that it is fair or appropriate to provide benefits for 5 years and then, frankly, very suddenly cut them off.

Mr. JAVITS. In answer to that, I believe that we should stop taking new claims after the end of 1983 and review this whole program. This is an element in that determination which I believe is a prudent one for the Senate in view of the way this program has rolled up the costs at the same time that it has been restricted to one industrial illness. I am very sympathetic to it. But we have to have some controls and some restraints.

Mr. RANDOLPH. Mr. President, will my able colleague yield again?

Mr. JAVITS. I yield.

Mr. RANDOLPH. I have said earlier today that the alternative which I have indicated I think is equally bad. If the tax terminates, the benefits will have to be paid out of the general revenues, as the Senator has just said.

If this is what is contemplated, it is merely a continuation of the existing system. Only I think it is making the system worse.

I hope that we realize that one of the major reasons for the development of this bill was to transfer the burden of paying black lung benefits from the Federal Government to the coal industry.

I also wish to add, with the permission of my colleague——

Mr. JAVITS. Of course.

Mr. RANDOLPH (continuing). That in this legislation we require that the trust fund report on the condition of the fund, and then we recommend to Congress any requirement for changes in the tax, and I remind Senators that this is done on an annual basis.

Thus, I repeat. I think it is unwise to have the termination date as the opponents believe on the tax itself.

Mr. JAVITS. Mr. President, I think it is time to end the debate on this.

Mr. LONG. Mr. President, will the Senator yield a minute?

Mr. JAVITS. I yield.

Mr. LONG. Mr. President, there are two things in here we should take a look at. Both of them have to do with people who might not have black lung at all.

The Senate just went along with the proposition that the Government is to be denied the right to let those Government witnesses testify what those X-rays mean. So, if the Government is not permitted to call its witnesses you might say the doctor for the claimant has the first, last, and only say on what that X-ray means. So that just sets the stage, and the Labor Department itself that is very friendly toward labor and sympathetic toward labor recommends against that.

The Senate went along with this proposition that the Government witnesses cannot testify for the Government. That is No. 1.

No. 2, in this bill we have also a presumption that if a person worked in the mines 25 years he had black lung even though the person is dead. You have the body right there and an autopsy could very well prove that he does not have black lung. The Labor Department is against that also.

I note that we may find that we have a great deal more cost in this program than we ever anticipated.

In view of the Finance Committee having to worry about where all the money is going to come from to pay for this, I say let us provide the $1 billion tax to pay for it for roughly 5 years but then let us take a look to see if we can really afford all this generosity.

Clearly we are going to be paying black lung benefits to a great number of people who do not have black lung. How far do we wish to go with it?

So the suggestion of the Finance Committee is to put the tax on to pay for it for 5 years and then give ourselves the right to take a look at it 5 years from now to see if we wish to be that generous.

Obviously all those who have black lung wish us to continue the benefits. However, as to those who do not have black lung, should we not have another look at this thing 5 years from now? In

that case, the judgment of the Finance Committee majority, as was the judgment of the Senator from New York, who served on the Human Resources Committee, was that in that event we should take a look at it after 5 years to see how the costs are comparing to the estimates.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. JAVITS. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time has expired.

The question occurs on agreeing to the amendment of the Senator from West Virginia. The yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. HUMPHREY) and the Senator from Arkansas (Mr. MCCLELLAN) are necessarily absent.

I further announce that the Senator from Mississippi (Mr. EASTLAND), the Senator from Mississippi (Mr. STENNIS), and the Senator from South Carolina (Mr. HOLLINGS) are absent on official business.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY) would vote "yea."

Mr. STEVENS. I announce that the Senator from Idaho (Mr. MCCLURE) and the Senator from South Carolina (Mr. THURMOND) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

I further announce that, if present and voting, the Senator from South Carolina (Mr. THURMOND) would vote "nay."

The result was announced—yeas 47, nays 45, as follows:

[Rollcall Vote No. 312 Leg.]

YEAS—47

Abourezk	Glenn	Metzenbaum
Anderson	Gravel	Morgan
Baker	Hart	Pell
Bayh	Haskell	Percy
Biden	Hatfield	Proxmire
Bumpers	Hathaway	Randolph

NOT VOTING—8

Eastland	Mathias	Stennis
Hollings	McClellan	Thurmond
Humphrey	McClure	

So Mr. RANDOLPH'S amendment was agreed to.

The PRESIDING OFFICER. There will now be 10 minutes of debate before the vote on the Javits amendment.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. JAVITS. I would like Members to stay here to listen to this debate. I believe one of the things we have suffered from is the fact that Members do not hear the debate. They come in and vote and, on the exhortation of a friend, vote yea or nay as the case may be. I hope very much they will just stay for 10 minutes and attend to their duty and vote their conscience.

This amendment coming up is the most important vote of all.

Now I will yield.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, the President wants to swear in certain nominees before 5 p.m. today. I ask unanimous consent to proceed for not to exceed 2 minutes.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations of the calendar.

Mr. BAKER. Mr. President, I rise only to advise my friend, the majority leader, that we have cleared on the Executive Calendar items on the first and second page, which I understand he is going to present to the Senate for confirmation at this time. We have no objection to proceeding.

Mr. ROBERT C. BYRD. Mr. President, I thank the minority leader.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. The nominations will be stated.

DEPARTMENT OF JUSTICE

The second assistant legislative clerk read the nomination of James J. Gillespie, of Washington, to be U.S. attorney for the Eastern District of Washington.

The PRESIDING OFFICER (Mr. DECONCINI). Without objection, the nomination is considered and confirmed.

THE JUDICIARY

The second assistant legislative clerk read the nomination of Edward L. Filippine, of Missouri, to be U.S. district judge for the Eastern District of Missouri.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF JUSTICE

The second assistant legislative clerk read the nomination of Joseph F. Dolan, of Colorado, to be U.S. attorney for the District of Colorado.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of Charles E. Graves, of Wyoming, to be U.S. attorney for the District of Wyoming.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF DEFENSE

The second assistant legislative clerk read the nomination of Hans Michael Mark, of California, to be Under Secretary of the Air Force.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of Walter Barber LaBerge, of Virginia, to be Under Secretary of the Army.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of Antonia Handler Chayes, of Massachusetts, to be an Assistant Secretary of the Air Force.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

U.S. AIR FORCE, U.S. ARMY, U.S. NAVY—NOMINATIONS PLACED ON THE SECRETARY'S DESK IN THE AIR FORCE, NAVY, AND MARINE CORPS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the remaining nominations, all of which have been cleared on both sides of the aisle as indicated by the distinguished minority leader, be considered and confirmed en bloc.

The PRESIDING OFFICER. Without objection, they are considered and confirmed en bloc.

(All nominations considered and confirmed today are printed at the conclusion of the Senate proceedings.)

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to move to reconsider the votes by which all the nominations were confirmed.

The PRESIDING OFFICER. Without objection, the motion is in order.

Mr. ROBERT C. BYRD. Mr. President, I make that motion.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative business.

There being no objection, the Senate resumed the consideration of legislative business.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Senator from New York.

BLACK LUNG BENEFITS ACT OF 1977

The Senate continued with the consideration of S. 1538.

AMENDMENT NO. 530

Mr. JAVITS. Mr. President, I will confine my remarks to 5 minutes. Unless there is a compelling reason, I will not yield any more than 5 minutes in opposition, so we should vote in 10 minutes.

Mr. President, this amendment proposes to put a termination date for new claims on this whole bill, and every argument which has been made on both sides of the question leads up to this conclusion: This is a discriminatory law which this bill would perpetuate indefinitely, and we need to give ourselves 5 years in which to try to include other occupational diseases somewhere, whether in this or any other statute. This is certainly a reason for placing a termination date.

If the amount raised by the tax, now without a termination date, falls short materially, not $35 million but $400 million or more, then we should certainly have another look at the whole program as to new claims.

We have had a termination date in the law, 1981. When that question came before the committee previously objection to retaining that termination date in this law was voiced. I am proposing now that it be 1983.

Mr. President, will all respect for my colleagues who favor this bill, they are really pushing it too far. This has no right to be a permanent program of the United States. Many people may benefit from it. A lot of people in my community would benefit if we give some special reward to those who have been unemployed for a year. There are plenty of those. Or some other special class could be singled out for favored treatment.

Now, Mr. President, there are equities, but I think they are more than fully satisfied by what we are doing. Now we are levying a tax on the public, roughly $1 billion in this 5-year period. Mr. President, it seems to me that we certainly ought to review the bidding at the end of 5 years in respect to any new claims which are then to be filed. I hope very much that we will not defy reason in this matter and that we at least will continue the policy we, ourselves, inaugurated, of not creating a permanent program.

We have had a cap, a termination date. Let us continue to have a date. That, it seems to me, is the only fair way in which to proceed in this matter. I have recommended to the Senate by this amendment that December 31, 1983, is a more than adequate time to see what ought to be done about this program; should we continue it, work it out by State workmen's compensation reform, or take some other direction. But to just build in the United States a permanent program for one occupational disease cannot be justified by any standard of justice or reason to the consumers or the taxpayers of the United States.

I hope very much that we will act decisively at least on this, the final amendment which will tell the whole story as to whether we intend to be provident about this matter. This black lung legislation was originally estimated to cost, at the most, $300 million. It now costs $1 billion a year.

Members may raise their eyebrows at me arguing about economy, but I am not arguing about economy. I am arguing about justice and prudence; justice to others who are subject to occupational disease and prudence in terms of the personal responsibility for dealing with the peoples' money.

I had hoped very much that Senator RANDOLPH would accept this amendment. But I hope that the Senate will sustain at least this amendment, for reasons of justice and prudence if no other.

Mr. GRAVEL. Will the Senator yield?

The PRESIDING OFFICER. The Senator's time has expired.

Mr. GRAVEL. Who has time so I may speak?

The PRESIDING OFFICER. The Senator from West Virginia has 5 minutes.

Mr. RANDOLPH. I yield 3 minutes to the distinguished Senator from Alaska.

Mr. GRAVEL. I was one of the persons who were not here for the debate and got bits and pieces of it, as normally happens when we come to the floor. As I understand it, this is a tax on coal. Is that the case?

Mr. JAVITS. That is correct.

Mr. GRAVEL. In my rudimentary knowledge, if we are taxing coal and the mining of coal creates a health hazard to the people who mine, it would seem proper to me that the element of society that consumes the coal should bear the cost of that health hazard that is created in mining the coal.

Is that an improper deduction, in the Senator's thinking, of what should be the case as we clear the accounts in our society?

Mr. JAVITS. My answer is decidedly yes, in this case, because there are just as great equities for the miners of iron and the miners of talc and the knitters of the textiles as there are for coal miners. The coal miners happen to be first at the trough. That is OK. I am not arguing against that, and I am going to vote for this bill. But I do not believe we ought to shut off all these other equities by having no terminal date at all when we can take another look at this thing and see what is just for others as well.

Mr. GRAVEL. There is probably something in this bill that I am not acquainted with that shuts off people who mine iron or mine other products. I do not know what that would be. But the fact that we move affirmatively to set the accounts straight in our society, from an economic point of view, on a health hazard from black lung should not preclude us from coming back and setting the account straight on iron ore and setting the account straight on any mining activity that creates a health hazard for those people who pursue that way of life.

When we diffuse this health hazard into the total tax base, we indirectly subsidize that kind of activity. Maybe we want to do that. But I think it is better for society to recognize where the costs are and pay them there. That is what we do environmentally, when we make the steel mills clean up the dirty water, and the chemical plants clean up the dirty water. We put more cost on selling their chemicals and selling their steel. That is part of the pollution. Black lung is a human pollution.

As I understood it when I voted for the amendment of the Senator from West Virginia, I was committing myself to vote to pay for the cost of black lung where it should be paid for, on a pound of coal. So if I consume a pound of coal and somebody has black lung as a result of it, I am paying enough to pay for that cost, which is a real cost. We have been walking away from these costs.

The PRESIDING OFFICER. The Senator's 3 minutes have expired.

Mr. GRAVEL. I think I have made the point I wanted to make. I thank my colleague.

Mr. RANDOLPH. Mr. President, how much time do I have?

The PRESIDING OFFICER. Two minutes.

Mr. RANDOLPH. Mr. President, the amendment now being considered was considered very carefully in our Committee on Human Resources. The proposal of Senator JAVITS was defeated by a vote of 7 to 4. There was, I think, a full discussion of that amendment.

Certainly, my colleague and friend has preserved his right to offer the amendment here. I strongly believe that the amendment should be defeated, just as it was earlier defeated in the committee.

No one can offer assurance that there will be no compensable black lung cases 5 years hence. Pneumoconiosis is a progressive disease. A miner who is not disabled today may well be totally disabled 5 or 10 years from now. This is possible even if the miner terminates his coal mine employment today.

While there is reason to hope that workmen's compensation programs will fully cover black lung and other occupational diseases, that date, that millennium, has not yet arrived. There is no ironclad assurance that the situation can or will change within 5 years. There is no justification for allowing the program to terminate, even for new claims. If miners continue to be disabled by pneumoconiosis, as the able Senator of Alaska (Mr. GRAVEL) said, from their coal mine employment, they should be compensated, no matter what that year of compensation is.

I yield back my time.

The PRESIDING OFFICER. All time has expired.

The question is on agreeing to the amendment of the Senator from New York. The yeas and nays have been ordered. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. HUMPHREY), the Senator from Arkansas (Mr. MCCLELLAN) are necessarily absent.

I further announce that the Senator from Mississippi (Mr. EASTLAND), the Senator from Mississippi (Mr. STENNIS), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Louisiana

(Mr. LONG) are absent on official business.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY), would vote "nay."

Mr. STEVENS. I announce that the Senator from Idaho (Mr. MCCLURE) and the Senator from South Carolina (Mr. THURMOND) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS), is absent on official business.

I further announce that, if present and voting, the Senator from South Carolina (Mr. THURMOND), would vote "yea."

The result was announced—yeas 42, nays 49, as follows:

[Rollcall Vote No. 313 Leg.]

YEAS—42

Allen	Goldwater	Pearson
Bartlett	Griffin	Percy
Bellmon	Hansen	Roth
Bentsen	Hatch	Schmitt
Biden	Hayakawa	Scott
Brooke	Helms	Stafford
Byrd, Harry F., Jr.	Javits	Stevens
	Laxalt	Stone

Durkin	McGovern	Williams
Eagleton	Melcher	
Ford	Metcalf	

NOT VOTING—9

Eastland	Long	McClure
Hollings	Mathias	Stennis
Humphrey	McClellan	Thurmond

So Mr. JAVITS' amendment was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. RANDOLPH. Mr. President, I state this for the information of Senators: We know of only one amendment that is to be offered. I hope that Senator JAVITS and I can be in agreement as to the amendment to be offered by the able Senator from Kentucky (Mr. FORD).

UP AMENDMENT NO. 696

Mr. FORD. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kentucky (Mr. FORD) proposes an unprinted amendment numbered 696:

On page 24, line 21, strike the quotation marks.

On page 24, insert between lines 21 and 22 the following:

"(d) any individual whose claim for benefits under this title is denied shall receive from the Secretary a written statement of the reasons for denial of such claim, and a summary of the administrative hearing record, or, upon good cause shown, a copy of the transcript thereof.

Mr. FORD. Mr. President, I commend the leadership and the distinguished floor manager, Senator RANDOLPH, for recognizing the need to bring this measure up for the consideration of the full Senate.

As an elected representative of the country's leading coal-producing State, I have very strong emotions about this issue, and I can assure my colleagues of the extreme importance of this legislation to thousands of miners who are suffering from black lung and attendant illnesses.

These men and their families have, for far too long, suffered from the inadequacies of a program that neither understands nor satisfactorily addresses their medical condition, and there should be no doubt among any of us here today that reforms in our present black lung benefits program are needed, and, in fact, long overdue.

Mr. President, it is a fact that if you work in the mines long enough, 9 chances out of 10 are that you will contract black lung. Medical evidence shows beyond a doubt there is an overwhelming probability that lung disease is a risk that goes with working in the mines.

It is becoming increasingly evident that dust standards in the mines are not being met and miners are still subjected to the daily risks of contracting black lung. Naturally, our obligatioin is to do all we can to prevent unhealthy and unsafe working conditions, and it is hoped that the mine safety legislation that this body approved earlier this year will result in significant improvements in miners' working conditions. Until we succeed in this goal, however, we have an obligation to insure satisfactory compensation for the risks inherent in this vocation, which is so very essential to helping this country meet its present and future energy needs.

Certainly, part of the problems associated with the black lung benefits program are compounded by internal administrative procedures in the Department of Labor. However, under the new administration I have been encouraged by a change in attitude accompanied by a sincere desire to take a close look at how the program can be improved through changes in administrative procedures.

In fact, last month at my request the new Assistant Secretary of Labor, Donald Elisburg, sent several of the top officials involved with administering the black lung benefits program to Kentucky to meet with concerned groups and individuals and see firsthand the problems which are being experienced by those who are intended to be the beneficiaries of this program. These officials spent 2 days in eastern Kentucky and now have a better understanding of the many frustrations experienced by those miners and their survivors who apply for black-lung benefits.

I am confident that as a result of this visit a reevaluation of the Department's administrative procedures will be made, and I feel certain that improvements will be implemented.

To further improve the program's administration—and quite possibly reduce the ever-growing number of court challenges of claim denials—I am offering an amendment to this bill which would require the Secretary of Labor to provide to a denied claimant specific reasons for the denial. In addition, my amendment would also require that the claimant be provided with a (see amends) his claim determination, without the necessity of court action.

I urge this amendment's inclusion as part of this bill.

Finally, Mr. President, I point out that while no piece of legislation can ever satisfy all segments of society, this bill represents more than a reasonable compromise in relation to providing benefits due individuals who contract black lung and in its cost to society. Most important, it is the best hope—the only hope—for remedying the many shortcomings and inequities of the present law at this time.

Mr. President, I understand that the leadership on both sides have agreed to this amendment.

I yield back the remainder of my time.

Mr. JAVITS. Mr. President, we have worked out this amendment with Senator FORD, and I am perfectly agreeable to take it to conference.

Mr. RANDOLPH. Mr. President, the Senator from New York (Mr. JAVITS) is correct. We have worked with the Senator from Kentucky (Mr. FORD) on the proposed amendment. It is acceptable to us.

We do know that black lung claimants currently are not told the specific, detailed reasons for the denial of their claims. Thus, often they have little to go on to determine whether or not they would desire to appeal the denial. This amendment would permit the claimant, as we understand, to have the reasons for his denial. It would provide him an opportunity to review the full record of his case, without the necessity of going to court.

Mr. FORD. The Senator is correct. This amendment, it is hoped, will cut down on the backlog of claims in the courts and will help expedite matters.

This body has added a number of judges to eastern Kentucky in order to help eliminate the backlog, and I believe this will be a step in the right direction.

Mr. RANDOLPH. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 697

Mr. GRIFFIN. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Michigan (Mr. GRIFFIN) proposes an unprinted amendment No. 697:

On page 6, line 11, at the end of section 105(a), which precludes the Government from even questioning an X-ray determination by a certified radiologist, change the period to a semicolon and insert the following:

"Provided, however, That this section shall be effective when and if the Commissioner of Internal Revenue determines and proclaims that it is no longer necessary to examine and audit the income tax return of any taxpayer whose return is certified to by a certified public accountant."

Mr. GRIFFIN. Mr. President, this is a simple amendment which should be supported. There was logic in the Chafee amendment, which would have given the Government merely the right to question the evidence upon which a determination of black lung was based.

If the language in the bill is left to stand, as is, this would be the first situation I am aware of, after 20 years of service in Congress, in which the Government would be absolutely barred from even looking at the evidence in cases where the taxpayers will have to foot the bill. Consumers and taxpayers of this country will be required to pay out billions of dollars under this legislation, and they have a right to assurance that those who benefit really do have black lung.

I have offered this amendment, with tongue in cheek, as a way of giving my colleagues another opportunity to vote on the Chafee proposal. I hope that six or seven of them may now realize the mistake of their earlier vote.

I am submitting this amendment, and I will ask for the yeas and nays, which I do now——

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. GRIFFIN. I want to be sure that Senators really knew what they were doing when they voted earlier.

I believe it would be just as illogical and as irrational to say that the Commissioner of Internal Revenue should never question or examine the tax return of any taxpayer whose return is certified to by a certified public accountant. It seems to me that it is the same principle.

Of course, it would be a cold day in hell before the Commissioner of Internal Revenue would ever issue a proclamation like the one described in the amendment. Obviously, I do not want this particular provision in the bill to become effective, and it will not become effective if my amendment is adopted.

I ask for a vote, Mr. President.

The PRESIDING OFFICER. Who yields time?

Mr. RANDOLPH. Mr. President, there is no time needed. I think the matter, regardless of whether men knew what they were voting on in the prior amendments, they certainly have the opportunity here to vote again. I believe in the theory of fairness, and my position has been made known on the Chafee amendment, and there is no need to restructure the situation from the standpoint of the Senator now speaking.

It is agreeable with me if it is desired to have a rollcall, so let us proceed.

Mr. GRIFFIN. I yield back the time.

Mr. RANDOLPH. Of course, as we were against the Chafee amendment, which was defeated, we, of course, are against the amendment now offered.

Mr. GRIFFIN. Let me say again that anyone who does not want the language in the bill to become effective, of course, should vote for this amendment.

Mr. RANDOLPH. I yield back my time.

The PRESIDING OFFICER. All time yielded back? The question is on agreeing to the amendment of the Senator from Michigan. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. HUMPHREY), and the Senator from Arkansas (Mr. MCCLELLAN) are necessarily absent.

I further announce that the Senator from Mississippi (Mr. EASTLAND), the Senator from Mississippi (Mr. STENNIS), the Senator from Louisiana (Mr. LONG), and the Senator from South Carolina (Mr. HOLLINGS) are absent on official business.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY) would vote "nay."

Mr. STEVENS. I announce that the Senator from Idaho (Mr. MCCLURE), the Senator from New Mexico (Mr. SCHMITT), and the Senator from South Carolina (Mr. THURMOND) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

I further announce that, if present and voting, the Senator from South Carolina (Mr. THURMOND) would vote "nay."

The result was announced—yeas 22, nays 68, as follows:

[Rollcall Vote No. 314 Leg.]

YEAS—22

Bartlett	Goldwater	Roth
Bellmon	Griffin	Scott
Chafee	Hansen	Stevens
Curtis	Hatch	Tower
Danforth	Hayakawa	Young
Dole	Helms	Zorinsky
Domenici	Laxalt	
Garn	Lugar	

NAYS—68

Abourezk	Ford	Moynihan
Allen	Glenn	Muskie

Eagleton	Morgan	Williams

NOT VOTING—10

Eastland	Mathias	Stennis
Hollings	McClellan	Thurmond
Humphrey	McClure	
Long	Schmitt	

So Mr. GRIFFIN's amendment was rejected.

The PRESIDING OFFICER. Is there further amendment to be proposed?

Several Senators addressed the Chair.

Mr. JAVITS. Mr. President, how much time do I have remaining on the bill?

The PRESIDING OFFICER. The Senator has 29 minutes remaining.

Mr. JAVITS. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Clerk will call the role.

The legislative clerk proceeded to call the role.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RANDOLPH. Mr. President, let us have order, please, in the Chamber.

The PRESIDING OFFICER. The Senate will be in order.

UP AMENDMENT NO. 698

Mr. CHAFEE. Mr. President, I send to the desk an unprinted amendment and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Rhode Island (Mr. CHAFEE) proposes an unprinted amendment numbered 698:

On page 5, line 16, insert after the word "that" the following:

"In the case of a miner who was employed in one or more coal mines for 25 or more years, and where there is other evidence of pulmonary or respiratory impairment."

Mr. CHAFEE. Mr. President, this amendment provides that there be no requirement of a second reading, of any reading of the X-ray by the Government official, in the case of any miner who has worked in the mines for 25 years or more and has other evidence of pulmonary problems.

In other words, what we are doing, Mr. President, is saying that in that category there can be no reading of the X-ray by the Federal Government.

However, in the other cases, where a miner has worked less than 25 years, then the Government is permitted to read the X-ray, and that, of course, as Senators know, is the situation that exists now. This proposal would partially eliminate the Government's rights.

Mr. President, I would just like to say this: No one here who would support this amendment, particularly the Senator from Rhode Island, objects to any miner receiving what he should receive. But we do object to the Federal Government having no protection whatsoever. This proposal would permit the Federal Government to read the X-ray in other cases, and if there is objection, if there are problems, if we do not see what the local doctor sees, then it can go through the regular appeal process.

I might say this, Mr. President: One of the great objections to having the Government read the X-ray is the delay, and the claim that this takes a long time. Maybe it does. But the solution to that, Mr. President, is not to eliminate all the safeguards that the Government has, but to approach the problem from another direction: Have more so-called B readers. Have more readers, and speed up the process in other innumerable ways. As a matter of fact, Mr. Elisberg, who is the Assistant Secretary for Em-

ployment Standards, has testified that he wants to speed up the process, and we think that is right.

Mr. President, this is a very understandable amendment. It is, as Senators know, similar to the amendment we voted on earlier today, but it eliminates, that is, it does not pertain to, those miners who have been in the mines for 25 years or more. There is no second reading on their X-rays, no challenge by the Government except in those extraordinary cases of fraud, or where a certified radiologist did not submit the X-ray. For the others, it provides the Government, which is making the payments, some protection by providing for this second reading.

Mr. President, I do not really understand how this amendment can be seriously opposed. I would be delighted to hear the counterarguments. I think we can set aside the argument on 600 days, and all that contention that they make on all the other approaches.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield for a question?

Mr. CHAFEE. I yield to the Senator from Virginia.

Mr. HARRY F. BYRD, JR. As I understand the amendment of the Senator from Rhode Island, it represents a compromise between his original amendment and the committee bill?

Mr. CHAFEE. That is right. I look upon it as a compromise. The floor manager of the bill, of course, will have to speak for himself; but this amendment provides that as to those miners with 25 years in the mines, their X-rays cannot be rejected, but for the others, their X-rays can be reread, and then there are the challenge procedures that the Senate has provided.

I yield to the Senator from Michigan.

Mr. GRIFFIN. Mr. President, I preferred the Senator's original amendment which would have allowed the Government to examine X-rays in any case, whenever there is a question—and that was the intent of the amendment I offered, as well. However, since neither the Senator's original amendment nor my amendment was adopted, I shall certainly vote now for this amendment offered by the Senator from Rhode Island. I hope the Senate will come to its senses and adopt it.

Mr. CHAFEE. I thank the Senator from Michigan.

Mr. GARN. Mr. President, will the Senator yield?

Mr. CHAFEE. I yield.

Mr. GARN. I certainly strongly support the amendment of the Senator from Rhode Island. There have been a lot of issues that have come before this body since I have been here, and on first reading of this amendment, I could not imagine how anyone cannot be for it.

In the committee bill, we make a presumption that all doctors are honest. If that were true, if we knew every doctor would look at the X-rays honestly, there would be no objection. But, my goodness, looking at the medicare and medicaid scandals that have gone on recently, with doctors making a half million dollars a year right here in Washington for illegally filling out medicare and medicaid forms, it seems to be absolutely and totally unreasonable to assume that all of the situations would be properly certified by a doctor.

Certainly to be able to have a medical expert of the Government look at those X-rays seems entirely reasonable to me. I wish there were more Senators here. I wonder how many Senators knew exactly what they were voting for on the last amendment. We have an empty Chamber as usual. But I would hope that at least to a certain extent, we could protect the taxpayers of this country from fraud, and that is all we are talking about.

I certainly have no objection to anyone getting benefits to which he is medically and legally entitled. But there is no corner on honesty among M.D.'s, CPA's, attorneys, or otherwise. Unfortunately, in any line of endeavor, there are some people who are not honest. Most CPA's would submit only honest tax returns. Unfortunately, there are some who would not, and the Internal Revenue Service has a right to audit returns. It seems to me we can make an assumption that some doctors would not make an honest analysis and diagnosis of a case, and those cases the Government doctors ought to have a right to check into.

I support the amendment.

Mr. FORD. Mr. President, who has control of the time?

Mr. CHAFEE. Mr. President, since I have control of the time in support of the amendment, assuming the Senator from Kentucky will speak in support of it, I yield him 1 minute.

Mr. FORD. No; if the Senator from West Virginia will yield 1 minute, I would like to answer the Senator from Utah.

Mr. RANDOLPH. Mr. President, I yield the Senator from Kentucky 2 minutes.

Mr. FORD. Mr. President, the Senator from Utah made the assumption that all the doctors for the Government were honest. That is his assumption. He assumed that all doctors on the other end were dishonest. The Senator is saying they are all dishonest down in your home town and my home town, but that those doctors employed by the Federal Government are totally honest. I want the Senator to know that I object to his assumption.

Mr. GARN. I am not assuming by any means that all private doctors are dishonest, Governor. I certainly do not believe that. I would suppose that the proportion in the Government or in the private sector would be about the same, just like the proportion of mayors or Governors.

I do not think it makes too much difference, what kind of training we have had. But the point I want to make is what happens to this is neither one is the final one if there is a dispute. It goes to an administrative decision, but maybe the lawyers have the same problem. I do not know.

The PRESIDING OFFICER. Who yields time?

Mr. SCOTT. Will the Senator yield briefly?

Mr. CHAFEE. I yield 2 minutes.

Mr. SCOTT. I just want to pose a question. Would there be anything that would prevent a miner from shopping around for a physician who would approve his claim? If he went to one and received a reading that was unfavorable, could he go to another one to get a reading and keep shopping until he received a reading which would prove his claim? If somebody needs a physician's certificate in order to take sick leave, his private physician will give him a certificate. I would address my question to the Senator from Rhode Island, asking if he can comment on that.

Mr. CHAFEE. In answer to the question, there is nothing in the bill which would prevent a claimant from going to any doctor or a series of doctors to seek the opinion that he would approve of. When he gets whatever opinion he seeks, he then sends it in with the X-rays to the Federal Government.

Under the system as proposed, that ends it. The Government cannot check that X-ray unless, of course, there is a fraud, a fraud situation, as I mentioned earlier this morning, where an X-ray in theory is for miner X where actually it is for miner Y, or something of that nature. But as to the determination of the reading of the X-ray, that cannot be challenged by the Government.

Mr. SCOTT. I would say to the distinguished Senator that I intend to support his amendment. I did support his other amendment. I represent coal miners and have a lot of sympathy for miners who do obtain black lung. I heard one of our colleagues refer to this as a ripoff. If it should pass in its present form, I think that would be a good terminology to use. I would think it would be a ripoff of the Government to permit any such thing, any such potential for fraud, to be enacted into law. I cannot support a bill which would do anything like that.

I appreciate the Senator yielding.

Mr. CHAFEE. Mr. President, there is another point I would like to make. We are talking about a trust fund. I think the key point is that we should do everything we can to protect the trust fund for the legitimate claimants. Under the predictions which have been made, unless something is done this trust fund will fall short of the necessary funds by some $300 million. I believe we have all had experience is seeing trust funds run short of money. This amendment I have proposed would save that trust fund some $250 million. In other words, it would see that the money went to the legitimate claimants, the claimants who really require it, rather than having it go to claimants who, in fact, present no valid cases.

I feel this is not imposing a restriction on miners. I believe anybody who votes for the amendment I have proposed is striking a blow for the legitimate claimants. I urge Members of the Senate to support what I believe to be a very sensible amendment which does so much for those who really require the funds.

Mr. RANDOLPH. Mr. President, I rise in opposition to the amendment. I want it understood in good humor that I admire the persistence of my friend from Rhode Island. If he cannot approach his objective by one route, he will attempt to approach it by another. That certainly is

his prerogative, and he speaks, of course, always with persuasiveness.

The trouble with the amendment now pending is that my opposition to his prior amendment, which was defeated, I now have because this is not an amendment which changes the concept in the amendment which earlier was defeated. The concept is just the same now as in the earlier amendment.

Mention has been made by the able Senator from Virginia (Mr. HARRY F. BYRD) that this is a compromise amendment. It is not a compromise amendment. It continues what the Senator, understandably, is attempting to do.

I have a high regard, of course, for both Senators from Virginia. Senator SCOTT has indicated that he would be unable to support this legislation without the Chafee amendment in it. That is my understanding.

Mr. SCOTT. The Senator is correct.

Mr. RANDOLPH. And he has indicated that he could not support the bill because, in a sense, it is a ripoff. I want to be very careful in my language.

Mr. SCOTT. Let me ask the distinguished Senator from West Virginia the same question asked of the Senator from Rhode Island: would it be possible for a claimant to shop around from physician to physician until he found one who would approve his claim? Would there be a prohibition against his going to more than one physician?

It just seems to me that if that is true, it is a ripoff. I do not hesitate to use this phrase. It did not originate with me. It was said in private conversation by another Member, a colleague of ours. I agree with him.

Mr. RANDOLPH. I would not want to inadvertently use a word someone else had used and the Senator is repeating. Now since the Senator is perhaps glad to have a joint authorship of the word, if I understand it, I would like to make reference to the question the Senator has asked.

Mr. SCOTT. Could the Senator respond to the question? I would appreciate it.

Mr. RANDOLPH. I will do so.

In the bill, on page 5, is section 105, evidence required to establish claim. I will read a portion of that language:

> The Secretary shall accept a board certified or board eligible radiologist's interpretation of a chest roentgenogram which is of a quality sufficient to demonstrate the presence of pneumoconiosis submitted in support of a claim for benefits under this title if such roentgenogram has been taken by a radiologist or qualified radiologic technologist or technician, except where the Secretary has reason to believe that the claim has been fraudulently represented.

I hope that language, at least in degree, is somewhat an answer to the concern of my friend, who does look into these matters very, very carefully.

Mr. SCOTT. If the Senator will yield briefly, let me say I am sure the distinguished Senator from West Virginia does not want to be the author of legislation which could reasonably be used in a fraudulent manner. Yet the portion he has just read does not indicate anything that would prohibit a miner wanting to get affirmative relief from shopping from physician to physician until he obtained one who would permit him to receive black lung benefits.

(Mr. HARRY F. BYRD, JR. assumed the chair.)

Mr. SCOTT. I know I am not using the technical language that the distinguished Senator referred to, because I, too, would stumble over a few of these words that they are using. We are talking about physicians with a specialty and we are talking about miners that, in popular terminology, get black lung disease. Just as anyone might shop around to find an expert witness that would testify in favor of his claim, I see nothing that would prevent a miner from shopping until he got an affirmative opinion.

I appreciate the Senator's indulgence.

Mr. RANDOLPH. Mr. President, I do not look upon it as an indulgence. I am here, of course, to try to understand the position of those who oppose the position or positions that I take.

I must say that even the American Medical Association has suggested that persons go from one physician to another. I do not call it shopping around to have one physician and to check with another physician. I do not think that is a shopping-around process. I think that that is an intelligent way for a person to act, back home or somewhere else, or in Washington, D.C., who is troubled by a feeling that he just wants to know what another doctor might say.

I do not think it is trying to receive a favorable report from someone. I think it is an effort to feel a certain security or a certain, let us say, positive feeling by the person who is ill that he is having the best advice possible. That is the theory on which I have mentioned the matter in reference to shopping around.

I have a very great affection for the Senator from Utah (Mr. GARN). I listened very carefully to him as he spoke this afternoon. I have patterned my life, I hope, on believing that, in whatever profession, there are more good people than bad people in that profession. I know that is his thinking. If we go on the theory that there are more people that are dishonest than there are people who are honest, the Founding Fathers of this country were wrong, and now, when we begin the third century, we shall be working on a premise that I think could cause a deterioration of the Nation. Even at such times as now, although there are differences between us, I have great faith in the American people as a whole.

I hope—and I do not want to imply that he said anything other than what I am saying. I just want to stress that I am positive, I am not negative. I believe that, in this program to help the miners of the United States of America, frankly, we are dealing not so much in statistics; we are dealing in the lives of people. It is a people program. I think that, sometimes, we may forget, looking at the expenditure of money, whether it comes from the Federal Government or some fund or is paid by a tax on coal or comes from the mine operators themselves, that this program, in the long look, will be an indication that the Congress of the United States—beginning in 1969, carrying through with amendments in 1972, and now, with the further, hoped-for passage of this act—will have brought about an investment in a belief that we have. In the inherent fairness and justice of the Congress and the Government of the people of the United States of America, we believe that, when there is a proved case by those who have fueled the Nation and have provided us with a mobility that we enjoy, when those persons have valid claims, they will be honored and not be delayed for a year or 2 years.

Mr. GARN. Will the Senator yield?

Mr. RANDOLPH. Yes, I shall yield in just a moment.

If I wanted to be shocked at some amendment, as Senator CHAFEE was shocked, and used the word in his letter—frankly, I have great fondness for the Senator from Michigan (Mr. GRIFFIN) but that is an amendment that I think deserved exactly the vote it got. There were only 22 votes in this body for the amendment and 68 against it. It was in no wise a matter of partisanship. It was in no wise because Members were not on the floor. Members have been here during the afternoon, going and coming. That, to me, was an amendment that had, frankly, not the substance that I think an amendment should have. I do not think the result was one that was helter-skelter. I think the Members knew exactly how they were voting when they voted, 68 against the amendment and only 22 for it.

I do not think we can attribute any lack of knowledge to the membership when it votes on these amendments. I hope that this further amendment by Senator CHAFEE will not prevail.

I want to add that an X-ray does not establish eligibility for benefits. The claimant must still prove his case. We must remember that. The Government can still, in any case, dispute the miner's claim of the disability for which he is to be awarded compensation.

Mr. GRIFFIN. Will the Senator yield to me, since he used my name?

Mr. RANDOLPH. Yes, and I used it, I hope, in a very acceptable way.

Mr. GRIFFIN. I want to say that I cannot argue with the Senator. There was a very solid vote against the amendment. I thought that Senators did not understand what they were doing when they voted on the first amendment by the Senator from Rhode Island.

Mr. RANDOLPH. I know that.

Mr. GRIFFIN. I wanted to give them another chance, because the effect of my amendment was intended to be the same as the first Chafee amendment; in other words, the language of the bill would not have gone into effect. I am very disappointed, and, naturally, I think a majority of my colleagues were wrong.

Let me ask a question of the distinguished chairman. Am I correct in my assumption that the mine union has a lot to do with the processing of many claims by union members for black lung?

Mr. RANDOLPH. I know of no action, frankly, direct or indirect, that the union has in connection with the processing of a black lung claim.

Mr. GRIFFIN. Does the union have clinics in which their doctors examine the claimants?

Mr. RANDOLPH. Yes.

Mr. GRIFFIN. They certainly have something to do with it, then, do they not?

Mr. RANDOLPH. There are, of course, hospitals. There have been miners' hospitals.

Mr. GRIFFIN. Are there union-run clinics?

Mr. RANDOLPH. There have been from time to time.

Mr. GRIFFIN. Do they employ their own doctors?

Mr. RANDOLPH. There are some, yes. There are some. I do not see, though, that this has anything to do with it.

Mr. GRIFFIN. I just want to ask the Senator if he feels, then, with regard to a worker who happens to be nonunion, in a small mine, somewhere far removed, is the Senator satisfied and assured that such an individual is going to get the same treatment under this law as would be the case of a union miner who would go to a union clinic and be examined by a union doctor?

Mr. RANDOLPH. Yes, he will.

Mr. GRIFFIN. I thank the Senator very much.

Mr. RANDOLPH. I could point to the Senator from Kentucky on that situation. I expect there are more nonunion miners in the State of Kentucky than in any other State. I have conferred with Senator FORD, but I hope he would agree with me.

Mr. GRIFFIN. Of course, the certificate of any doctor, including an unpaid doctor in a union clinic, once he determined the X-ray showed black lung, that could not be questioned by the Government under this bill as submitted by the distinguished Senator from West Virginia, is that correct, unless it proved wrong?

Mr. RANDOLPH. I have to come back to the X-rays. I have said it over and over, it is a small part of the program. That is why we came in 1972 to amend the original act. We came with the pulmonary and respiratory disease program as proof of the black lung condition, the disease which has struck down literally—I am hesitant to use figures—but hundreds of thousands of persons have contracted black lung in the mining of coal.

Very frankly, I say that if there is any error to be made, I will make it on behalf of the person rather on the dollar involved.

Mr. GRIFFIN. What is the average benefit of the person who receives benefit under the black lung law?

Mr. RANDOLPH. $205 to $410.

Mr. GRIFFIN. Is the Senator talking about a month or a year?

Mr. RANDOLPH. A month.

Mr. GRIFFIN. What does that translate into, $4,000 a year?

Mr. RANDOLPH. Fifty percent of the GS–2 on total disability.

Mr. GRIFFIN. And that would be, of course, in addition to social security?

Mr. RANDOLPH. It could be, if he had social security.

Mr. GRIFFIN. I mean, there is no setoff?

Mr. RANDOLPH. No, there is not, not under part B. There is an offset under part C, the program we are considering.

Mr. GRIFFIN. I thank the Senator very much.

Mr. RANDOLPH. I thank my colleague.

Mr. GARN. Will the Senator from West Virginia yield?

Mr. RANDOLPH. Yes.

Mr. GARN. I wish to clarify one point. The Senator said he would like to make a positive assumption most people in the professions were honest. I did not want my remarks misinterpreted. I thought I said the same thing. The vast majority of doctors—I say the vast majority, not just the majority—are honest, but I think we would be naive if we did not recognize some are not.

The only point I tried to make before is that there will be some who would certify, just like when abortions were illegal there were some doctors who would do illegal abortions.

I do not think it is a matter of doctor shopping. I think it would be that miners would learn which doctors would be willing to certify they had it.

That is the only reason I think we ought to have a check at Government level.

I agree with the distinguished Senator that the vast majority are honest and would not be participating in that.

Mr. HATCH. Will my colleague from West Virgina yield?

Mr. RANDOLPH. Yes, in just a moment.

I believe Senator CHAFEE has 18 minutes. I believe I have 7 minutes. I am trying just to think in terms of perhaps Senator CHAFEE giving his time, if he would.

I do not say that I have been too generous. I have been delighted to yield.

Mr. CHAFEE. I will do that.

Does the Senator want to continue now and I will give him time later?

Mr. RANDOLPH. No, he may continue.

The PRESIDING OFFICER. The Chair states that the Senator from Rhode Island has 18 minutes, the Senator from West Virginia has 7.

Mr. CHAFEE. This is on my time.

Mr. HATCH. Would my distinguished colleague from West Virginia give me his attention?

Mr. CHAFEE. Mr. President, I wonder if we could interrupt a minute, I would like to ask for the yeas and nays on this.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. CHAFEE. I thank the Chair.

Mr. HATCH. If my dear friend from West Virginia will consider a couple of comments I have to make, I have for many years fought for working people. I have tried all kinds of FELA cases in the railroad business. I think this is setting a very dangerous precedent. Because I have tried cases on the plaintiff's side, I have tried cases on the defendant's side. I think it would be a safe estimate to say I have been involved in thousands of cases—not tried, but I have been involved in thousands, have tried hundred.

I can say now, the railroad companies have railroad clinics, and this is a dangerous precedent because that could just as easily swing around to the point where those clinics will make final determinations with regard to injuries in the railroad business, which is a very dangerous business.

Also, I think anybody that thinks that union doctors or railroad doctors do not find what they want to find—and I am not necessarily calling them dishonest—but they are there to find certain things and certain conclusions.

It is like in the automobile negligence business.

I have seen a lot of defense doctors come in with the same reports in every case against the injured plaintiff and I have seen a lot of plaintiffs' doctors come in with reports that are just as much for the plaintiffs as the defendants' doctors were for the defendants.

Frankly, it did not take long for either side to find out where they were, who they were, and how they could get the very best benefits and, in essence, shop for medical help.

I think it really is absurd to not allow the Government to do this and to ask the taxpayers of this Nation to foot the bill.

I agree, it is a bill I support. I want the distinguished Senator, my friend from West Virginia, to know I support it, because I realize the effect of pneumoconiosis and the dangerous work these men do in the mines, and I think it is important work for this country.

But I think it is a dangerous thing and a very bad thing. And I think it is an absurd thing to expect the taxpayers of this country to pay all of these benefits without having at least the privilege of doublechecking on any roentgenologist's report and reading the X-rays.

My experience has been that for the most part, roentgenologists are accurate doctors. For the most part, they do a good job. But I have also seen instances where we have had wide disparities between two roentgenologists, both of whom were decent and honorable and wonderful doctors.

I think in those situations the Government ought to have the benefit of the doubt of at least looking at them. I want to protect the men, too. But my goodness, I can guarantee that if this particular amendment is not granted—and I would have prevented it in the original form also because it would have been fairer to the taxpayers and to all concerned if it is not granted—then we will find every case that is brought is going to be automatically granted, because what is there to check medically other than the X-rays in pneumoconiosis?

I think that may be an oversimplification, but the fact of the matter is that it is the most crucial aspect of the examination and of the whole matter.

I would like my distinguished friend, my dear friend from West Virginia, to really consider accepting this particular amendment because it is a compromise, one I think a lot of us feel should not have been compromised, and I think a reasonable compromise at that, and one

that really is not going to hurt anybody and does protect the taxpayers, at least to a degree.

This is going to cost millions and millions of unnecessary dollars and the taxpayers will know, they are going to know it is costing them, and unnecessarily.

Mr. SCOTT. Will the Senator yield?

Mr. HATCH. Certainly.

The PRESIDING OFFICER. The Senator's 4 minutes have expired.

Mr. SCOTT. One minute.

Mr. CHAFEE. Yes.

Mr. SCOTT. I appreciate the Senator from Rhode Island yielding.

But the Senator from Utah has referred to his experience as a trial lawyer.

Is it not a fact that one can generally get an expert witness to testify to his point of view—if I could have the attention of my colleague from Utah——

Mr. HATCH. I am sorry.

Mr. SCOTT. The Senator has referred to his experience as a trial attorney. Is it not a fact that in the field of expert witnesses, generally, you can get an expert witness who will testify to the point of view of the individual who is paying his fee?

As I recall, the Supreme Court, in a decision involving expert witnesses in land appraisal cases, made a statement to the effect that it was common knowledge that a land appraiser, a professional appraiser, did color his opinion to fit the views of the person who was paying his fee. Is there not a danger in being able to shop around? I use the phrase "shop around" advisedly, because I think that is what would be done. Does the Senator from Utah share this thought?

Mr. HATCH. I agree with the distinguished Senator from Virginia. I prefer to believe that most medical practitioners are honest and decent men, trying to do a good job. But it does not take too long for either side to find a doctor who is going to come through for them on every issue, and there are those in every major metropolitan area in this country.

I think the Senator has hit upon a very good point.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. CHAFEE. Mr. President, I ask the floor manager of the bill a question.

I have trouble understanding why we are departing from the existing system. The best I can understand it is that there is too much delay. There are 300 days; there are 600 days. If that is so, I say to the distinguished Senator from West Virginia, let us tackle that problem. Let us get in more readers. Let us feed the system. Let us have these so-called B-readers out in the community.

I have great difficulty understanding why the solution should be to deprive the Government of its possible defense. I reiterate that when we are depriving the Government of its defense, we really are depriving the other miners of their defense; because this trust fund is going to have only x dollars in it, and the drain upon the fund is anticipated to be x plus $300 million. So unless we guard the fund cautiously and see that it goes to the people who are deserving, the fund will be disappearing, and the people who are really entitled to it will not get their benefits.

If that is the thrust, to cut down delay, why are there not other ways to approach this, rather than eliminating this step?

(Mr. ZORINSKY assumed the chair.)

Mr. RANDOLPH. I will be delighted to comply with the request, and we will do it on my time.

How much time do I have, Mr. President?

The PRESIDING OFFICER. The Senator from West Virginia has 7 minutes remaining.

Mr. RANDOLPH. How much time does my colleague have?

The PRESIDING OFFICER. Eleven minutes.

Mr. RANDOLPH. Then, I guess I had better withdraw my generosity. [Laughter.]

Mr. CHAFEE. I yield 2 minutes.

Mr. RANDOLPH. I thought it was the reverse.

I say to my colleague from Utah that fraud occurs. I am sure it occurs. An unscrupulous doctor can even send in an X-ray which shows complicated pneumoconiosis and the B-reader can readily agree, of course, with the first interpretation. We know that.

However, I say to the Senators who are in the Chamber that that is not the only problem. Sixty percent of X-rays originally read as positive are being reread as negative. Let us see about that situation. Sixty percent originally read as positive and reread, under the type of program the Senator wants of rereading, as negative.

I must repeat, very quietly but earnestly: I say that the coalfield radiologist knows the miner and his condition. The "B" reader, the rereader, does not. I do not say the facts side completely on either the coal field radiologist or competely on the rereader. But the balance will be with the radiologist in the field.

Mr. HATCH. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. CHAFEE. We are on my time, are we not?

Mr. RANDOLPH. I will yield on my time. I am a generous man.

Mr. HATCH. The only question, I say, is this: I venture to make the prediction that if this bill is passed in its present form, everyone will be found to have pneumoconiosis, or almost everyone.

If 60 percent have been questioned and found negative rather than positive, perhaps there are some legitimate reasons for that.

That is all I think Senator CHAFEE's amendment is requesting: let us at least not bar the Government from making out its own case. If the Government is abusing that or if there is a time factor here, let us amend the bill to take care of that. Let us not take away and change the whole system of law in this country simply because we want to protect the men.

I believe this is a reasonable amendment. It is a dangerous precedent if we pass this bill in its present form, and in the end the men are going to be hurt, because the trust fund will go faster. We either will have to increase the trust fund or, in the end, many men in other industries, who presently could be taken serious advantage of, could be hurt because we have tried to make an exception in this industry. I think that is basically wrong.

Mr. RANDOLPH. I do not understand this to be a precedent. Of course, there is always the innovative, the creative, the resourceful approach to any problem.

In 1942, I offered the constitutional amendment to give 18-, 19-, and 20-year-old youth the opportunity and responsibility to participate with the ballot. It happened in 1971, when my resolution was passed.

We had no support in 1942 for an innovative, creative, and proper approach to the problem, no support whatever in the hearing. Practically no one was present, only one member of the committee. But in 1971, its time had come. Ninety-four Senators joined in that legislation which I proposed for the constitutional amendment.

That is not to say that this is on all fours, but I am only saying that I do not get excited because we have something unusual here. We have it because black lung is a highly unusual disease. It is attached to coal mining, as my friend knows. That is why we have special attention for it, a special program.

Just this thought, and I hope it will not be misunderstood: a transplant specialist said, "I must perform an operation immediately. What hearts have I available?"

He was told by his aides that he had the heart of a beautiful young woman, the heart of a celebrated athlete, and the heart of a banker. He said, "Give me the heart of the banker."

The operation was performed, apparently successfully.

A few days later, the aide said to him, "Why did you use the heart of the banker?"

"Well," he said, "that's understandable. It had never been used." [Laughter.]

I did not tell that story simply to interrupt what might be the continuity of debate. I think it is very important for us to realize that everyone—the banker, the doctor, the Member of the Senate, the miner, the storekeeper; I could run the list—are all part of America, and they all fit together. It is a good America. It has shortcomings; mistakes and errors are being committed. But there will be no error today if this measure is passed without the amendment of my able friend from Rhode Island.

Mr. GRIFFIN. Mr. President, will the Senator yield?

Mr. JAVITS. I yield the Senator 2 minutes on the bill.

Mr. GRIFFIN. Mr. President, it strikes me that if 60 percent of the cases in which the Government examines the X-rays result in rejection by the Government of the claim, that is mighty strong and powerful evidence that there are at least some claims in there that are not valid.

The distinguished chairman indicated that he did not see this as a precedent. Well, I do see it as a precedent, and that is one of the reasons why I am so concerned. It is not that I lack compassion for coal miners. I understand and share the deep feeling the chairman has.

But it would be ridiculous, and certainly not in the public interest, if the Commissioner of Internal Revenue were to say, "We will never examine any tax return that it is certified by a certified public accountant."

I think it would be equally ridiculous if the Commissioner of Social Security were to say, "We are going to grant disability benefits under social security to anybody who can get a certificate from a doctor saying he is disabled." The Government would not be in a position to examine or question the certification.

I find it necessary to ask the Senator from West Virginia whether he has thought about that, and what would be his position if an amendment were offered here in the Senate to give a social security claimant the same kind of a right as he is giving to those who are making claims under this particular act? I wonder if the Senator from West Virginia heard the question?

I asked the question because he says he does not see any precedent here. I am concerned that it does establish a precedent.

I wonder what the Senator's position would be if a Senator came in with an amendment providing the same kind of a guarantee to any claimant who is seeking disability benefits under social security? He shops around and finds a physician who will say he is disabled. I can foresee such an amendment here in the not too distant future arguing, "If that is good enough for coal miners it ought to be good enough for people who want social security disability benefits."

I wonder what the position of the Senator from West Virginia would be?

Mr. RANDOLPH. I would give it a sympathetic hearing.

Mr. GRIFFIN. In other words, this would be a precedent.

Mr. RANDOLPH. I do not understand precedent. The way I discussed it black lung was a highly unusual occupational disease, and I say we take extraordinary, perhaps, if you want to use that, means to compensate those who have that disease.

Mr. GRIFFIN. Well, being disabled is highly unusual and unfortunate for any individual, whether he is a coal miner or not.

Mr. RANDOLPH. I doubt if that is a statement my friend would like to stand on.

Mr. FORD. Mr. President, will the Senator yield?

Mr. RANDOLPH. Yes, I yield.

Mr. FORD. I am not as articulate as other Senators, and I do not have the ability to paint the word picture I would like to paint, but I want to bring up a point, and I have not been in court and argued a thousand cases. I am not a good lawyer because I am not a lawyer. Probably if I were, I would not be a good one. But the point that is being made in opposition to the committee here is that the X-ray is the only thing. The X-ray is not the only thing, so I would like for you to think of the other items that this miner has to comply with in order to secure his claim.

We are asking for one item, and one item only, to help. We have backlogs of going to court. Where do the 60 percent go? I think the lawyers who are arguing against this over there are trying to help lawyers in eastern Kentucky get more cases, because if the Government denies 60 percent of the claims then we go to court.

What I have been trying to do, and the amendment was accepted, was so we might help expedite these claims that are turned down.

So I would suggest to the Senators on the other side that we are losing the total picture of what we are trying to do here and zeroing in on one little item and, of course, you can ask questions of any Senator here he cannot answer. That is simple. All you have to do is ask a question, think up something, dream up something.

But the point here is, we are trying to help people, and the X-ray is not the sole question we are involved in this afternoon.

Mr. HATCH. Mr. President, will the Senator yield?

Mr. JAVITS. Mr. President, I yield myself 2 minutes.

Mr. President, I support this amendment. I am a lawyer, and I do sit on the other side, but I will yield to no one in this Chamber as to my ardent defense of the rights of labor for three decades. So, with respect, sir, I will speak.

I think due process is the essence of the American system, and whether you deny it in one little thing or you deny it in a big thing, a denial of due process runs contrary to the American system.

These people are going to go to court anyhow, and there are plenty of other procedural things that can be raised. Any able lawyer will find you 50 not just this 1. But I feel very uncomfortable in the presence of an effort to cut around the due process of law to which every American, whether it is a corporation or whether it be an individual, is entitled. Always there is that adage "There but for the grace of God go I."

It sounds right to those who advocate this position in this matter. Tomorrow it may prove very, very wrong, indeed, because it puts us on a path of cutting around what is the process of proof, and probative proof, which, in my judgment, is very unwise.

The Nation will not collapse if this is legislated into this bill. But let us remember it was put into this bill in order to produce claims. That is why it is here. It is not here for any other reason but to produce more claims, to make it easier to approve claims, and I do not think that is the purpose of this statute.

The purpose of this statute is to do justice to people who are hurt, not just to produce claims and, therefore, I believe the amendment should be adopted.

The PRESIDING OFFICER. Who yields time?

Mr. HATCH. I take exception to the distinguished Senator from Kentucky. The reason I stood and recited some of the experiences I have had as an attorney is because I fought for these people. I fought for the railroad workers in our society who are in just as dangerous a profession as the miners, and I have great sympathy for and I am going to support this bill.

But the precedent it is setting, if it passes in its present form without at least some amendment like this, is a bad precedent, and that is the point. Over the long run, the people of this country are not going to like it because it is wrong.

I would like to just aline myself with the remarks of the distinguished ranking member of the Committee on Human Resources, Senator JAVITS. I think he has hit the nail right on the head, as usual, in a very cogent and very well-reasoned way, and I think it basically sums up the position. I appreciate his remarks.

Mr. CHAFEE. Mr President, just one contribution here. The suggestion was that under the present system if a claim is denied, then you go into the courts. Now, that is not quite accurate. Under the present system it goes to a so-called administrative law judge, a single person, not shrouded, not circled, with all the normal laws that apply to a court proceeding.

Further testimony can come in, further X-rays, and then if the claimant loses before this administrative law judge it then goes to the so-called Benefits Review Board.

I think everyone in this Chamber and everyone interested in this act believes there should be greater speed than presently exists. There are many ways of achieving greater speed than throwing out the baby with the bath water as we are doing here today.

Mr. President, I yield the remainder of my time.

Mr. RANDOLPH addressed the Chair.

The PRESIDING OFFICER. The Senator from West Virginia has 1 minute.

Mr. RANDOLPH. Mr. President, due process is not really the issue, as I understand it. Due process is wholly preserved through the hearing process in this bill.

The argument of the Senator from New York would seemingly apply in any situation where we have a presumption. I hope the amendment offered by the Senator from Rhode Island will not be approved by the Senate, and I think the action earlier taken is an indication of our feeling within this body.

I, of course, recognize always the conviction and the votes of the Members of this body as we come to face our decision on this matter.

I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Rhode Island. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. HANSEN. Mr. President, regular order.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. HUMPHREY), the Senator from Arkansas (Mr. MCCLELLAN), and the Senator from Louisiana (Mr. JOHNSTON) are necessarily absent.

I further anonunce that the Senator from South Carolina (Mr. HOLLINGS), the Senator from Louisiana (Mr. LONG), and the Senators from Mississippi (Mr. EASTLAND and Mr. STENNIS) are absent on official business.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY) would vote "nay."

Mr. STEVENS. I announce that the Senator from Idaho (Mr. MCCLURE) and the Senator from South Carolina (Mr. THURMOND) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

I further announce that, if present and voting, the Senator from South Carolina (Mr. THURMOND) would vote "yea."

The result was announced—yeas 48, nays 42, as follows:

[Rollcall Vote No. 315 Leg.]

YEAS—48

Allen	Garn	Nunn
Bartlett	Glenn	Packwood
Bellmon	Goldwater	Pearson
Bentsen	Gravel	Proxmire
Brooke	Griffin	Roth
Bumpers	Hansen	Schmitt
Burdick	Hatch	Scott
Byrd, Harry F., Jr.	Hathaway	Sparkman
	Hayakawa	Stafford
Case	Helms	Stevens
Chafee	Javits	Talmadge
Chiles	Laxalt	Tower
Church	Leahy	Wallop
Curtis	Lugar	Young
Danforth	McIntyre	Zorinsky
Dole	Muskie	
Domenici	Nelson	

NAYS—42

Abourezk	Hart	Morgan
Anderson	Haskell	Moynihan
Baker	Hatfield	Pell
Bayh	Heinz	Percy
Biden	Huddleston	Randolph
Byrd, Robert C.	Inouye	Ribicoff
Cannon	Jackson	Riegle
Clark	Kennedy	Sarbanes
Cranston	Magnuson	Sasser
Culver	Matsunaga	Schweiker
DeConcini	McGovern	Stevenson
Durkin	Melcher	Stone
Eagleton	Metcalf	Weicker
Ford	Metzenbaum	Williams

NOT VOTING—10

Eastland	Long	Stennis
Hollings	Mathias	Thurmond
Humphrey	McClellan	
Johnston	McClure	

So Mr. CHAFEE'S amendment was agreed to.

Mr. JAVITS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. CHAFEE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. JAVITS. Mr. President, as far as I know there are no further amendments.

The PRESIDING OFFICER (Mr. CULVER). The Senator will please suspend for a moment. The Senate is not in order. The Senate will be in order.

The Senator from New York may proceed.

Mr. JAVITS. Mr. President, as far as I know we have no further amendments on this side.

UP AMENDMENT NO. 699

Mr. RANDOLPH. Mr. President, there are certain technical amendments that come from the Finance Committee, and in the absence of Senator LONG, who of necessity is unable to be here at this time, I present these amendments in his behalf. They are, as I say, technical and clarifying amendments, and Senator JAVITS and I have agreed that it is proper to have them included.

The PRESIDING OFFICER. The clerk will state the amendments.

The second assistant legislative clerk read as follows:

The Senator from West Virginia (Mr. RANDOLPH) for Senator LONG, proposes an unprinted amendment numbered 699.

The amendment is as follows:

On page 34, line 7, strike out "Amendments" and insert in lieu thereof "Amendment".

On page 35, line 10, strike out "subsection (d) of this subsection" and insert in lieu thereof the following: "subsection (a) of section 424 of the Federal Coal Mine Health and Safety Act of 1969".

On page 36, line 2, strike out "subsection (e)" and insert in lieu thereof the following: "subsection (b) of section 424 of the Federal Coal Mine Health and Safety Act of 1969".

On page 37, line 7, strike out "(b) Operation Liability" and insert in lieu thereof the following: "(d) Payments from Fund".

On page 37, line 23, strike out "and".

On page 38, line 10, after "subsection (b) (2)" insert the following: "of section 203 of the Black Lung Benefits Revenue Act of 1977."

On page 40, line 1, strike out "section 424 (e)" and insert in lieu thereof the following: "section 424(b)".

On page 40, line 5, strike out "section 424 (e)(2)" and insert in lieu thereof the following: "section 424(b)(2)".

On page 41, line 7, strike out "Secretary" and insert in lieu thereof the following: "Secretary of Labor".

On page 42, line 3, strike out "(c)" and insert in lieu thereof "(e)".

On page 42, lines 3 and 4, strike out "amendment made by subsection (a)" and insert in lieu thereof the following: "amendments made by subsections (a), (b), and (c)".

On page 42, line 5, strike out "(b)" and insert in lieu thereof the following: "(d)".

On page 42, line 6, strike out "until" and insert in lieu thereof the following: "before".

On page 44, lines 9 through 11, strike out "section 424 of the Federal Coal Mine Health and Safety Act of 1969" and insert in lieu thereof the following: "section 203 of the Black Lung Benefits Revenue Act of 1977".

On page 47, line 18, strike out "Claims" and insert in lieu thereof the following: "Claim".

On page 48, line 4, insert a comma after "Expenditures".

On page 54, line 16, strike out "(G)" and insert in lieu thereof the following: "(H)".

On page 54, line 20, strike out "(E)" and insert in lieu thereof the following: "(F)".

On page 55, line 1, strike out "(D)" and insert in lieu thereof the following: "(E)".

On page 55, line 3, strike out "(F), and (G)" and insert in lieu thereof the following: "(G), and (H)".

On page 55, line 10, strike out "(D)" and insert in lieu thereof the following: "(E)".

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. RANDOLPH. I also ask unanimous consent to have printed in the RECORD the Congressional Budget Office cost estimates.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., July 11, 1977.

Hon. RUSSELL LONG,
Chairman, Committee on Finance, U.S. Senate, Washington, D.C.

DEAR SENATOR LONG: In response to a request from the staff of your Committee, the following represents our most recent estimate of the total trust fund costs, including current law, in S. 1538 ($ in millions):

1978	213.1
1979	274.2
1980	338.3
1981	158.0
1982	163.2
5-year total	1,146.8

The above numbers differ slightly from those submitted by the Department of Labor in their recent reestimate submitted to your Committee. In recent discussions with the Labor Department, we have been able to reconcile the differences in our respective cost estimates of this bill for all but one provision: the costs of Section 2(c) relating to the application of medical standards to determine total disability.

CBO's original estimate for this Section was based upon data provided to us by the Department of Labor. More recent information that they have compiled would, according to them, significantly increase the approval rate for claims filed. Since CBO had no independent means of estimating the number of claims that would be affected by this Section, we cannot dispute this reestimate prepared by the Labor Department as it relates to Part C claims. However, included in their estimate are an additional 7,250 claims denied under Part B which would, in their opinion, be approved as a result of this provision. Some of these claims were already included in our estimate in Section 4, the removal of the current employment bar. The rest of these claims are assumed to be primarily individuals who were denied under Part B because of filing after June 1973. We assume that approximately 2,100 of these miners are already counted under the Section 4 provision and, of the remainder, we would project that only half as many claims would actually now be eligible. Thus, CBO would estimate an additional 2,500 approvals of Part B claims under Section 2(c). Based upon this reduction in the Labor Department's projected number of approvals from 7,250 to 2,500, the following represents our estimate of the costs of this Section ($ in millions):

1978	81.2
1979	151.8
1980	210.6
1981	91.1
1982	95.8
5-year total	630.5

We hope this information will be helpful to you and would be pleased to be of further assistance to you in this matter.

Sincerely,

ALICE M. RIVLIN,
Director.

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., July 11, 1977.

Hon. RUSSELL B. LONG,
Chairman, Committee on Finance,
U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to Section 403 of the Congressional Budget Act of 1974,

the Congressional Budget Office has prepared the attached cost estimate for S. 1538, the Black Lung Benefits Revenue Act of 1977.

Should the Committee so desire, we would be pleased to provide further details on the attached cost estimate.

Sincerely,

ALICE M. RIVLIN,
Director.

CONGRESSIONAL BUDGET OFFICE COST ESTIMATE

1. Bill number: S. 1538 (Finance Committee)

2. Bill title: Black Lung Benefits Revenue Act of 1977

3. Purpose of bill: S. 1538 was originally reported by the Committee on Human Resources (S. Rept. 95–209) on May 16, 1977. That bill provided for modification in the eligibility criteria of the Black Lung Benefits program by reducing and clarifying some of the evidentiary requirements for entitlement, thus expanding the number of potential beneficiary to this program. The bill also made all of these new beneficiaries eligible under the Department of Labor (Part C) program and created a trust fund to pay all claims under Part C except where a responsible mine operator can be identified. The Finance Committee version of S. 1538 creates, through a one percent ad valorem tax on all coal (except lignite), a mechanism to raise funds to support the trust fund. Under current law, benefits paid under Part C are financed through general revenues.

4. Cost estimate: ($ in millions)

Fiscal year:	*Total receipts*
1978	137.7
1979	169.0
1980	185.8
1981	204.3
1982	224.7

5. Basis for estimate: Revenues were calculated using data from the Joint Tax Committee on projected 1977–1982 tonnage for anthracite, bituminous, and sub-bituminous coal and the price per ton for each type of coal over the same period. Because of the effective date of October 10, 1977 as mandated in the bill, revenues in Fiscal Year 1978 reflect only 11⅔ months of collections. Further, a one month lag in collecting revenues was also assumed. Lastly, because data was provided on a calendar year basis, it was assumed that equal amounts would be collected in each month during the calendar year and collections for four months of the previous fiscal year and eight months of the current year were added to calculate revenues. Four months from the previous fiscal year was used (as opposed to the three in the fiscal year) in order to take into account the one month lag in collections.

Total receipts collected over the five year period would be $921.5 million. Total trust fund liabilities are calculated to be $1,146.8 million or $225.3 milion more than revenues. However, the trust fund liabilities include $145.0 million in Part C liability under current law and a $45.2 million payback of prior claims from the trust fund to general revenues. Thus, the total new appropriations needed to support the trust fund will be $35.1 million over the five year period.

6. Estimate comparison: Not Applicable.

7. Previous CBO estimate: None.

8. Estimate prepared by: Jeffrey Merrill (225–7766).

9. Estimate approved by: C. Muckols, for James L. Blum, Assistant Director for Budget Analysis.

Mr. RANDOLPH. Mr. President, under the unanimous——

The PRESIDING OFFICER. Will the Senator please suspend? The Senate is not in order.

The Senator from West Virginia.

Mr. RANDOLPH. Mr. President, under the unanimous-consent agreement which was proposed by the able majority leader and agreed to by the minority leader, who has worked in partnership on this legislation, we would not be voting on the final passage of this measure, going to third reading, as we understand, but the House, presumably, will vote on next Tuesday. There is this matter of a constitutional problem.

I understand from the leader that we feel the unanimous-consent agreement preserves the position of the Senate and preserves the position of the House. We will not vote but wait until the House takes action. Is that correct?

Mr. ROBERT C. BYRD. The Senator is correct. The Senate will proceed to third reading and then the measure will be left on the Calendar.

Mr. RANDOLPH. Returned to the Calendar for the moment, yes.

Mr. HARRY F. BYRD, JR. Will the Senator yield for a question?

Mr. RANDOLPH. I yield.

Mr. HARRY F. BYRD, JR. Is the understanding of the Senator from Virginia correct that if and when the House acts affirmatively on similar legislation and that is reported to the Senate, then a vote will be taken on the Senate bill and not the House bill?

Mr. RANDOLPH. The able Senator from Virginia is correct.

Mr. HARRY F. BYRD, JR. I shall support the Senate proposal, but I wanted to be clear as to whether it was a Senate bill or a House bill on which we would be voting.

Mr. RANDOLPH. The Senate measure. I thank my friend for the inquiry.

Mr. HASKELL. Mr. President, I want to voice my strong support for S. 1538, the Black Lung Benefits Reform Act of 1977. In so doing I also want to commend the distinguished senator from West Virginia, Mr. RANDOLPH, for his dedication in guiding this important legislation through the Human Resources Committee, and the distinguished majority leader for his commitment to bringing this bill to the floor as expeditiously as possible. Both have performed an invaluable service, and I deeply hope that the House of Representatives can now be persuaded to act quickly so that these badly needed and long delayed changes in the black lung benefits program can at last become law.

The ravages of black lung disease are all too well known to the coal miners of this Nation who perform a physically demanding task in surroundings that are nearly always dangerous and often debilitating and deadly. Hundreds of thousands of coal miners have been disabled as a result of this incurable and irreversible disease. In testimony before the Labor and Public Welfare Committee last year I noted that among the some 10,000 active and retired miners in my own State of Colorado, almost 1,300 black lung claims were being processed in 1976.

The evidence is overwhelming that various debilitating degrees of black lung disease afflict the vast number of miners after numerous years in the mines.

We have taken belated steps to make mines safer and cleaner. We must now take the steps necessary to insure that those who have suffered from past inattention to these problems are dealt with fairly and compassionately.

In the 94th Congress I introduced S. 3183, with the cosponsorship of 21 of my colleagues, to remedy many of the ills which have been found to exist in the present black lung benefits program. We were nearly able to secure enactment of that legislation into law, but failed in the closing hectic days of the 94th Congress.

I am deeply gratified that the substance of my previous legislation has been incorporated into original legislation reported this year by the Committee on Human Resources, and that we are acting on this legislation in adequate time to secure House passage and finally see these needed reforms become law.

The Black Lung Benefits Reform Act of 1977 is responsible legislation, containing adequate safeguards against potential abuse. It is neither a "give-away," nor a "boondoggle" for coal miners. It is rather a major step toward securing elemental justice for those who have suffered from society's inattention to coal mine safety.

I urge my colleagues to support this important and badly needed legislation.

Mr. HART. Mr. President, I would like to express my strong support for S. 1538, which will amend title IV of the Federal Coal Mine Health and Safety Act to improve the black lung benefits program.

Mr. President, prior to the 20th century, most Americans lived and worked in agricultural communities. During the industrial revolution, however, more and more people gravitated to the cities to work in factories. Initially, concerns for worker safety, wages, hours and compensation benefits were ignored. However, as the public began to demand safe and equitable working conditions, the Federal Government moved to help protect workers in a variety of different ways.

In 1908, Federal workers first received compensation for job-related injuries. Since that time, government involvement in the workplace has resulted in provisions of workmen's compensation insurance; unemployment insurance; social security retirement benefits; as well as the assurance of a relatively safe working environment in many industries. In general, we have made considerable progress in protecting worker health and safety. However, many reforms are still needed, and in terms of individuals, none are now more in need of assistance than those who work in the coal mines.

As oil and gas supplies diminish, our country will become even more dependent on coal as a basic energy resource. Our annual consumption of coal is extracted by less than two-tenths of 1 percent of the American work force—about 180,000 miners.

These miners work in conditions that most of us would not tolerate, risking their lives to keep this country running and to earn a living for themselves. We have all heard of gruesome incidents where mine walls collapse; critical mine safety equipment fails; explosions occur

from accumulations of methane gas and coal dust; and so forth. And yet even when "safer" conditions prevail, a miner is constantly surrounded by a cloud of coal and rock dust. If a miner works in this dust for a period of years, the odds are almost absolute that he will suffer the respiratory impairment known as black lung disease or coal workers' pneumoconiosis. Pneumoconiosis is a progressive disease—once a minor has it, his health begins to deteriorate.

To date, some 500,000 victims of pneumoconiosis are receiving benefits under the black lung program established by title IV of the Federal Coal Mine Health and Safety Act. Approximately $5 billion in benefits have been distributed since the program began in 1970.

However, while the program has benefited many individuals, a large number of miners have had claims denied. S. 1538 will remove certain eligibility restrictions and expedite claims for the victims of black lung disease and their survivors. Moreover, this legislation will assure that coal mine operators will at least assume substantial financial responsibility for the black lung program. In sum, the bill will go a long way toward eliminating some of the difficulties encountered by thousands of disabled miners and their widows in their efforts to obtain what are well deserved compensation.

Mr. CURTIS. Mr. President, S. 1538, the Black Lung Benefits Reform Act of 1977, was referred to the Committee on Finance after having been reported by the Committee on Human Resources. Because the bill, as reported by that committee, establishes a coal tax and trust fund to finance the black lung benefits program, the bill was referred to the Committee on Finance.

Under the present law and under S. 1538, as reported by the Committee on Human Resources, a part of the cost of black lung benefits is charged directly against the former employer of the beneficiary when liability can be established under certain statutory criteria. Where this is not possible, the present law provides for the costs of benefits to be financed out of Federal general revenues. The Human Resources Committee bill would impose an excise tax on the producer's sale of coal, at a rate determined by the coal's British thermal unit (Btu) value. Revenues from this tax would be automatically appropriated to a trust fund, which would pay benefits in cases where there is no "responsible operator" and with respect to all claims in which the miner's last coal mine employment was before January 1, 1970.

The Committee on Finance has modified the excise tax and trust fund provisions of the bill, converting the tax into a tax on coal—other than lignite—at the rate of 1 percent of the price for which it is sold, and terminating the tax and trust fund provisions after 5 years. In addition, the Finance Committee has added provisions amending the tax status of operators' self-insurance trusts.

Mr. President, I have two serious reservations with the bill as reported by the Committee on Human Resources:

The first change would prohibit the Department of Labor from challenging the intrepretation of an X-ray submitted by a claimant in support of the claim if read by a Board-eligible or Board-certified radiologist.

The second change in S. 1538 would create a presumption of eligibility for survivors of miners who worked for 25 years or more in coal mining prior to June 30, 1971 and who die on or before the date of enactment of the bill. Benefits would be payable to such survivors unless the Department of Labor establishes that the miner, at the time of his death, was neither totally disabled nor partially disabled from black lung disease. This provision has an estimated average annual cost of $35 million over the next 5 years.

I am hopeful that changes, especially the later, which converts the program to a pension plan, will be deleted by my colleagues.

Mr. MUSKIE. Mr. President, S. 1538, the Black Lung Benefits Reform Act of 1977, has an admirable goal—to place the burden for compensating miners disabled by pneumoconiosis, or black lung disease, on the coal industry rather than the taxpayer. Since 1969, almost the entire burden of black lung compensation has rested with the general fund of the Treasury, which will have paid out a total of $5.6 billion in black lung benefits by the end of this fiscal year. Under S. 1538, while the general funds would continue to pay benefits to those who applied prior to June 30, 1973, benefits to those applying after that date, where the Department of Labor is unable to identify a single operator responsible for the working conditions which caused black lung, would be paid from a newly established trust fund financed through an excise tax assessed against coal operators. Through this mechanism, then, much of the financial responsibility for black lung benefits would be assumed by the coal industry.

The Human Resources Committee, in its section 302(b) allocation of budget authority and outlays among its programs, found room to allocate $306 million in budget authority and $137 million in outlays for this legislation. The new costs added by S. 1538 are $149 million in budget authority and outlays.

Thus, the bill is consistent with the committee's budget authority allocation, but it does exceed the outlay assumptions slightly. Thus this bill, when viewed alone, can be accommodated by the 1978 First Budget Resolution except for the small outlay increase.

However, Mr. President, I must point out that First Budget Resolution also assumed savings due to legislation in other programs in the income security function of the budget. These savings were assumed to occur in programs under the jurisdiction of the Finance Committee and were expected to total $50 million in budget authority and $827 million in outlays. Both Presidents Ford and Carter recommended such savings in their fiscal 1978 budgets. The Finance Committee in its March 15 letter to the Budget Committee, suggested that most of these savings be assumed in the budget resolution, and the Finance Committee assumed all these savings in its section 302(b) allocation under the First Budget Resolution. Nonetheless, to date no action has been taken on legislation to achieve these savings in either the House or the Senate.

It goes without saying that without these savings the targets for the income security function will be breached, even if the black lung bill or other legislation is not enacted. As chairman of the Budget Commitee, we are bound to attempt to enforce the spending targets of the congressional budget.

Therefore, if the Finance Committee is unable to take prompt action to bring about the savings assumed in the first budget resolution, we must make an effort to achieve those savings on the floor of the Senate by amending the next appropriate legislation.

I shall not attempt to attach my savings amendment to the black lung bill now before us, because the savings would be achieved in programs unrelated to the black lung benefits program, and because the black lung bill was initiated by the Human Resources Committee and not the Finance Committee. However, I understand that the Finance Committee will soon report H.R. 7200, a bill pertaining to various programs under the Social Security Act. If the savings suggested by the Finance Committee are not contained in that measure, I, along with other Senators, shall sponsor an amendment to H.R. 7200 which would achieve those savings.

We understand that the Finance Committee has had a heavy schedule of legislation this year. But the savings suggested by the Finance Committee and assumed in the first budget resolution have not been achieved. We must do all in our power to achieve these savings in order to maintain the fiscal discipline of the congressional budget and see that the budget policy we adopted in May is not thwarted.

In regard to S. 1538, the bill before us today, I will vote for this bill to improve the financing of black lung benefit payments. However, I do plan to support amendments to eliminate certain benefit liberalizations contained in this bill in order to assist the Congress in living within its budget. I urge my colleagues to consider carefully these amendments in the context of the huge budget deficit we face for fiscal year 1978 and vote to live within our budget so that a larger 1978 deficit will not be necessary.

Mr. CLARK. Mr. President, the passage of S. 1538, the Black Lung Benefits Reform Act of 1977, would significantly improve the administration of the black lung benefits program. I strongly support this legislation so that we can provide relief to tens of thousands of former coal miners and their dependents and restore integrity to the program.

Among the major provisions are:

First, the financial burden of the program will be shifted from the Government to the coal industry. The cost of claims prior to January 1, 1970, will be financed by an excise tax on coal;

Second, chest X-rays must be accepted as evidence, as long as they are of good quality and are taken and interpreted by qualified persons;

Third, affidavits shall be accepted as evidence where no medical evidence exists or where it is insufficient;

Fourth, the term "total disability" is broadened to permit benefits for those who were employed as miners at the time of death;

Fifth, a survivor is entitled to automatic benefits if the miner worked 25 years in mine employment prior to June 30, 1971; and

Sixth, prompt consideration of claims and appeals will be required.

These and other provisions of S. 1538 would do much to streamline the black lung benefits program and make it more responsive to the needs of miners, their dependents, and their survivors.

Last year, my staff calculated that, on the average, claimants in Iowa waited 2 years and 2 months before their claims were processed. Some of my constituents have been waiting 3 or 4 years, with no word about whether their claims have been approved.

The letter below, which I ask unanimous consent be printed in the RECORD, is representative of the type of correspondence I receive from Iowans regarding the black lung program. Mrs. Louis Valentine of Mystic, Iowa, writes:

I and many of us have been very frustrated by the constant delays, denials, appealing over and over, test after tests and hearings year after year.

The time has come for Congress to relieve these individuals and their families of their financial strain, their disillusionment, and their frustration. I urge my colleagues to approve S. 1538.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MYSTIC, IOWA, *May 11, 1976.*

Hon. DICK CLARK,
U.S. Senator of Iowa,
Washington, D.C.

DEAR SIR: In reply to your letter of May 6, 1976, I beg of you to try your utmost to get my husband, (Louie Valentine S.S. No. 485–10–7456). Black Lung Benefit Claims passed, as I need help now.

My husband, after working in the underground coal mines for 32 years, and undergoing nearly six years of tests, trips and hearings, even though his own Doctor, E. A. Larsen, M.D. testified that Louie Valentine had to quit work in the mines in 1944 because of Miners Lung and respiratory conditions, despite this was denied his claim. Even then my husband worked in the coal fields, hauling coal until the age of 68 (for 24 years now).

After spending over 50 years in the coal fields, I think that he or any man well deserves the Black Lung Benefits without test after test and Hearings at the age of 77 years, which is be-meaning and confusing to people of that age, as if they were asking for something they did not deserve.

Now my husband suffered a stroke on March 17, 1976, was entered in the St. Joseph's Hospital and from there had to be taken to the "Golden Age Manor" as I can not possibly take care of him, my own health being very poor, as I suffer from Atherosclerosis and had open heart surgery in April 1, 1975.

We truly need the Black Lung Benefits now, and Louie Valentine filed his claim on January 20, 1971, being denied, he kept appealing his claim to date.

I talked to Ms. Lois B. Schaefer, Claims Examiner from the U.S. Department of Labor and she did have all the records and reports which the Social Security office of Ottumwa was to forward to Ms. Schaefer at once. (I personally called them to send all records of when Louie first filed for Black Lung). To date I have heard no more and I do pray that she has gotten these records by now and with your help that we will now receive the Black Lung Benefits my husband so richly deserves.

I and many of us have been very frustrated by the constant delays, denials, appealing over and over, test after tests and hearings year after year, when I know this is a legitimate claim and feel that surely action will be taken now, under the new bill H.R. 10760 approved by the House of Representatives and co-sponsored Bill S. 3183 which you approve and you will give us prompt consideration.

I thank you for your interest and any help you can and will give us to hasten the action on our appeal for the Black Lung benefit claim filed by Louie Valentine.

Sincerely,

MRS. LOUIE VALENTINE.

Mr. HUDDLESTON. Mr. President, as the Nation looks to coal to pull us through the energy shortage, we must be constantly aware of the high price of that coal in terms of the health, and often the lives, of our miners. If a miner escapes a roof fall, an explosion, or one of the many other types of accidents all too prevalent in the mines, he still faces a near guarantee of lung and breathing impairments caused by coal workers' pneumoconiosis—a progressive irreversible, and seriously debilitating disease caused by the inhalation of coal mine dust. According to medical authorities, in many cases respiratory damage is present after only 1 year underground; in at least 52 percent of all underground miners there is X-ray evidence of pneumoconiosis after 11 years; and at least 88 percent of the coal miners who have served in the mines for 15 years or more can successfully establish under present criteria that they suffer from black lung.

Ideally, we should clean up the mines and end the cause of the disease. We are making progress in that direction and, with strict enforcement of the law, eradication of new black lung cases should be accomplished. But, in the meantime, the very least we can do for the victims of this insidious disease is to try to assure them of some compensation for their hardship and suffering.

In 1969, the Congress enacted a program to compensate miners disabled by black lung and the families of miners killed by it. Clearly, that program has had its successes—monthly payments ranging to a maximum of $410.80 are going to over 500,000 miners or their families. But, unfortunately, the record is full of cases of inexcusable delays in processing claims, seemingly endless and expensive appeals, and denials which at times appear inexplicable. And, each and every one of these cases means that some disabled miner and his family are suffering severe and unnecessary hardship.

The bill before us today is designed to correct some of the deficiencies in the black lung program and bring some relief from the bureaucratic redtape, delays, and outright inequities which have become so closely identified with the current system.

First, as reported, it eliminates the 1981 termination date of the current black lung law, leaving no doubt that we fully intend to permanently honor our commitment to our disabled miners.

At long last, the responsibility for financing the program is put where it belongs—on the coal mine employers, and not on the Federal Government.

It amends the terms "pneumoconiosis" and "miner" to assure that all respiratory and pulmonary impairments arising out of coal mine employment, and all coal workers exposed to these impairments, are compensable.

It eliminates unnecessarily strict time limits under present law which often have prevented the consideration of claims on their merits.

It ends the terrible practice of forcing a miner to leave his job, and gamble with his family's future, before he can file a black lung claim and receive a determination of eligibility.

The rereading of X-rays, which have resulted in so many delays and so many denials, is ended.

Survivor's claims are facilitated.

Field offices to assist claimants in filing and expediting their claims are authorized, and both HEW and the Department of Labor are required to provide information and assistance to potential beneficiaries.

Claimants who have had their claims denied under the old program will be able to have their claims reviewed under a simple refiling procedure.

And, a permanent $10 million annual authorization is provided for black lung clinical facilities.

Mr. President, disabled miners and their widows should not face an uphill battle to secure benefits which they deserve and for which they have paid so dearly. This bill is in no way a giveaway, but it should at least give claimants their rightful opportunity to have their claims decided equitably and quickly.

Mr. WILLIAMS. Mr. President, coal workers' pneumoconiosis, or black lung disease is a truly dreadful disease. It is a progressive, irreversible respiratory ailment which robs its victims of vitality and energy by making it increasingly difficult for them to obtain oxygen from the air they breathe. Eventually, it robs its victims of life itself.

Anyone who has seen the ravages of this disease, the agony of its victims, cannot help but be touched by the terrible suffering it causes to miners and their families. The sight of active miners used to the most physical of work, who are unable to even walk without great suffering is truly a pathetic picture.

Black lung disease is perhaps a truly classical occupational disease. It is caused by one thing, and one thing only; the inhalation, over a period of time, of coal dust.

In 1969, when we passed the Federal Coal Mine Health and Safety Act, we set upon a course to eliminate the scourge of black lung. We were to have made our

mines less dusty, and by doing so, we were to have eliminated the risk that a miner would get black lung disease.

We know now, that to a large extent, we have been unsuccessful in doing this. As a result, the problem of black lung is still with us. And it will be with us for years to come.

That is why, Mr. President, it is imperative that we reform the black lung program.

That program has, since its inception, been fraught with administrative and statutory problems which have rendered it a hollow promise to hundreds of thousands of our Nations' miners and their families. Under the current program, the victims of this dreadful disease are made to wrestle futilely with a faceless bureaucracy and with Byzantine procedures while their lives slowly ebb away.

This bill corrects many of the injustices which have developed in the administration of the black lung program. It streamlines the procedures by which the black lung program is administered, and eases the burden of establishing a claim. These burdens have frustrated eligible and deserving claimants in the past.

We must streamline procedures, because they are currently out of control. The Labor Department's own internal task force reported that in fiscal year 1976, processing time for claims within the Department had increased to an average of 630 days. The General Accounting Office, in its recent report to the Committee on Human Resources, indicated that there are more than 50,000 claims backlogged in the Department of Labor. Nearly one-third of these have been there for more than 2 years.

We must also ease the unfair burden of proof which the program currently places on claimants. Through fiscal year 1976, the Labor Department had received more than 92,000 black lung claims. It had approved only 3,233 claims. In addition to the complex administrative procedures currently in force, a reason for this low claim approval rate is that often it is all but impossible for legitimate claimants to establish their eligibility. Medical evidence is often imprecise and difficult to evaluate. Symptoms can be confusing. Often, and especially so in cases of older miners, doctors are not sufficiently skilled in diagnosing black lung. In many cases the illness or death of a miner due to black lung has been attributed to some other cause. Then, when the miner's widow went to file her claim, she had insufficient medical evidence to establish her eligibility.

And yet, we know that black lung has been, and continues to be a serious problem in our coal industry. A study done by the National Institute of Occupational Safety and Health indicates that, based on autopsies, more than 90 percent of the deceased miners studied had the disease.

This bill would ease some of the burdens on claimants and would also eliminate many of the administrative bottlenecks. It would require the Secretary of Labor to establish effective medical criteria. It would recognize the continuing prevalence of the disease among our Nation's coal miners. It would eliminate unfair statutes of limitations which work to the disadvantage of those claimants who are most in need.

Finally, Mr. President, this bill would shift the cost of this program to the coal industry. In 1969, when the Congress established the black lung program, we intended that the industry would pay benefits for claims filed after 1974. So far, this has not been the case. Very few of these claims have been allowed. Fewer still have been assigned to responsible operators. The operators have contested more than 90 percent of the claims which were issued to them. The rest are still being paid by the Government.

This bill established a trust fund, funded by a tax on coal, which will pay the claims which are now being paid by the Government, but which we intended to be paid by the industry.

This is an important step toward encouraging the industry to finally clean up our mines.

And, we must clean up our mines. The President of the United States has sent up his energy proposals. They rely on increased production and use of coal as an energy source. Mr. President, if we are to increase our coal production, it cannot be at the cost of the health, well-being, and the very lives of our Nation's miners. We must eliminate the scourge of black lung, and we must fairly and adequately compensate the victims of this dreaded disease.

This bill is a giant stride toward the accomplishment of both of these goals. I urge the Senate to pass this bill, and to keep the promise we made to our coal miners in 1969.

Mr. HATCH. Mr. President, I intend to support the final passage of S. 1538, the Black Lung Benefits Reform Act of 1977.

I do so as a part of my concern for the working people in our country and the thousands of Utah coal miners who have courageously labored in our Nation's coal mines at great personal risk to themselves and their dependents. I believe we are in a new era of concern for the welfare of America's coal miners by virtue of the passage of the Federal Coal Mine Health and Safety Act of 1969 and my concern is continuing.

Since passage of that act, many constructive improvements have been made in the miners' inherently hazardous work environment, although the coal miners of America are not yet as safe and healthful as we would wish them to be. We in Congress and the coal mine industry are working toward this goal.

Until we have reached the stage where mine operations have made the work environment as safe as can be achieved, it is our obligation to insure that victims of black lung disease and their survivors are fairly and timely compensated for disabling pneumoconiosis. This bill is a continuing link in support of the chain of events triggered by the enactment of the Federal Coal Mine Safety and Health Act.

Title IV of that act provides a mechanism for compensating miners totally disabled due to black lung, or pneumoconiosis, the dependents of such miners, and the eligible survivors of such miners. Part B is administered by the Social Security Administration for claims filed from the date of enactment of the act—December 30, 1969—through June 30, 1973. Beneficiaries are paid from the general funds of the Treasury for life. Some 375,000 claims, out of about 550,000 filed, have been approved, and 180,000 have been denied. Current appropriations for part B are about $850 million.

Part C is administered by the Department of Labor for claims filed after June 30, 1973. Beneficiaries are to be paid, according to the statute, by responsible coal operators through State workers' compensation systems which meet benefit standards set by the Secretary of Labor. Where there is no responsible operator, the Department of Labor pays the claim.

Out of approximately 109,000 claims filed, 4,100 have been approved and 56,000 have been denied. The remaining 49,000 undecided claims form the backlog resulting in large part from an average claim processing time of 630 days. Of the claims approved, coal operators are paying only 200; the industry is controverting 97 percent of the claims for which a responsible operator has been identified by the Secretary of Labor.

Because of the few claims being paid by mine operators, a Federal Government-administered trust is created which is designed to shift part C benefits payments to the coal industry as originally intended by Congress in the 1972 amendments to the Coal Act.

In fact the industry has gone on record as commending the trust fund and tax amendments made by the Senate Finance Committee as a constructive approach toward financing black lung liability under part C. In fairness, however, I must say that it opposes some of the other provisions of the bill.

I am somewhat disturbed by the provision which allows widows an automatic entitlement to benefits based solely on years of coal mine employment. Current law provides no compensation on this basis. While I am opposed to the precedent here, I believe that my concern is overriden in this case because of the extreme difficulty widows experience in providing medical evidence to support a claim, and due to the pervasive financial hardship of most coal miners' widows.

In summary, Mr. President, while I am not totally happy with all aspects of the bill, I believe that on balance it is a fair and constructive approach to compensating those gallant miners who have sacrified their health and become totally disabled in consideration of the Nation's demanding energy needs.

Mr. HEINZ. Mr. President, last year the Congress failed to enact a black lung reform bill, despite the fact that there are over 51,000 pending claims filed by miners who have risked their health and lives to provide all of us with much needed energy resources.

I have been a strong supporter of black lung reform legislation because I am aware of the very real problems encountered by thousands of old and

disabled miners and their families in their efforts to obtain what they believe are their well deserved benefits. My office receives hundreds of requests by miners to help them with the bureaucratic tangles that they must cope with in order to achieve benefits. Unfortunately, in our efforts to provide assistance to those who suffer from black lung disease, we have created mechanism which often results in frustration and denial of benefits for many deserving miners.

If this Nation ever expects to increase production of its vast coal resources, we must assure that we will have the manpower to mine and move our coal. As long as people think that mining is a job that dooms people to ill health with improper care and no economic security, we cannot recruit the manpower we need.

So the future demands that we develop reasonable assurance of security for those who risk their health to help this country achieve energy independence. Without a workable black lung program the incentive for coal mine manpower will be reduced and our goals of increasing coal production will be delayed.

Today we will consider the Black Lung Benefits Reform Act of 1977, a bill designed to eliminate some of the delays in the present system and create a funding mechanism that will finance the benefits program. The bill also creates field offices to assist black lung benefits claimants with their claim filing and processing in the areas where they live. As the Committee on Human Resources points out, we now know that the number of disabled miners far exceeds earlier estimates. Currently, there are about 562,000 claims on file under part B of the program, which includes those who filed on or before June 30, 1973 and are entitled to the payment of benefits for life or as long as they remain eligible. There are also over 110,000 claims on file under part C which was designed to be administered by State workers' compensation agencies meeting minimum standards, or by the Secretary of Labor where such standards were not met. Unfortunately, no States have yet been able to meet the minimum requirements and as a result the Department of Labor has administered the entire part C program.

This evidence clearly demonstrates an overwhelming need for changes to be made in the existing program and I urge my colleagues to join me in voting in favor of S. 1538.

(This concludes additional statements submitted.)

Mr. ROBERT C. BYRD. Third reading.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendments to be proposed, the question is on the engrossment and the third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

The PRESIDING OFFICER. Under the order, the bill will be returned to the calendar.

The Senator from West Virginia.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider Calendar No. 3 on the Calendar of Treaties.

The PRESIDING OFFICER. Is there objection?

Mr. BAKER. Mr. President, there is no objection on this side.

There being no objection, the Senate proceeded to the consideration of executive business.

TREATY WITH MEXICO ON THE EXECUTION OF PENAL SENTENCES

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

Calender No. 3, Executive D, 95th Congress, First Session. Treaty with Mexico on the Execution of penal Sentences, reported favorably, with a declaration.

The Senate, as in Committee of the Whole, proceeded to consider the following treaty, which was read the second time:

TREATY BETWEEN THE UNITED STATES OF AMERICA AND THE UNITED MEXICAN STATES ON THE EXECUTION OF PENAL SENTENCES

The United States of America and the United Mexican States, desiring to render mutual assistance in combatting crime insofar as the effects of such crime extend beyond their borders and to provide better administration of justice by adopting methods furthering the offender's social rehabilitation, have resolved to conclude a Treaty on the execution of penal sentences and, to that end, have named their plenipotentiaries Joseph John Jova, Ambassador Extraordinary and Plenipotentiary by the President of the United States of America and Alfonso Garcia Robles, Secretary of Foreign Relations by the President of the United Mexican States,

Who, having exchanged their full powers and having found them in proper and due form, have agreed on the following Articles:

ARTICLE I

(1) Sentences imposed in the United Mexican States on nationals of the United States of America may be served in penal institutions or subject to the supervision of the authorities of the United States of America in accordance with the provisions of this Treaty.

(2) Sentences imposed in the United States of America on nationals of the United Mexican States may be served in penal institutions or subject to the supervision of the authorities of the United Mexican States in accordance with the provisions of this Treaty.

ARTICLE II

This Treaty shall apply only subject to the following conditions:

(1) That the offense for which the offender was convicted and sentenced is one which would also be generally punishable as a crime in the Receiving State, provided, however, that this condition shall not be interpreted so as to require that the crimes described in the laws of the two States be identical in such matters not affecting the character of the crimes such as the quantity of property or money taken or possessed or the presence of interstate commerce.

(2) That the offender must be a national of the Receiving State.

(3) That the offender not be a domiciliary of the Transferring State.

(4) That the offense not be a political offense within the meaning of the Treaty of Extradition of 1899 between the parties, nor an offense under the immigration or the purely military laws of a party.

(5) That at least six months of the offender's sentence remains to be served at the time of petition; and

(6) That no proceeding by way of appeal or of collateral attack upon the offender's conviction or sentence be pending in the Transferring State and that the prescribed time for appeal of the offender's conviction or sentence has expired.

ARTICLE III

Each State shall designate an authority to perform the functions provided in this Treaty.

ARTICLE IV

(1) Every transfer under the Treaty shall be commenced by the Authority of the Transferring State. Nothing in this Treaty shall prevent an offender from submitting a request to the Transferring State for consideration of his transfer.

(2) If the Authority of the Transferring State finds the transfer of an offender appropriate, and if the offender gives his express consent for his transfer, said Authority shall transmit a request for transfer, through diplomatic channels, to the Authority of the Receiving State.

(3) If the Authority of the Receiving State approves the request, it shall promptly so inform the Transferring State and shall initiate the necessary procedures to effect the transfer of the offender. If it does not approve the request, it shall so notify promptly the Authority of the Transferring State.

(4) In deciding upon the transfer of an offender the Authority of each Party shall bear in mind all factors bearing upon the probability that the transfer will contribute to the social rehabilitation of the offender, including the nature and severity of his offense and his previous criminal record, if any, his medical condition, the strength of his connections by residence, presence in the territory, family relations and otherwise to the social life of the Transferring State and the Receiving State.

(5) If the offender was sentenced by the courts of a state of one of the Parties, the approval of the authorities of that state, as well as that of the Federal Authority, shall be required. The Federal Authority of the Receiving State shall, however, be responsible for the custody of the transferred offender.

(6) No offender shall be transferred unless either the sentence which he is serving has a specified duration, or such a duration has subsequently been fixed by the appropriate administrative authorities.

(7) The Transferring State shall furnish the Receiving State a statement showing the offense of which the offender was convicted, the duration of the sentence, the length of time already served by the prisoner and any credits to which the offender is entitled, such as, but not limited to, work done, good behavior or pretrial confinement. Such statement shall be translated into the language of the Receiving State and duly authenticated. The Transferring State shall also furnish the Receiving State a certified copy of the sentence handed down by the competent judicial authority and any modifications thereof. It shall also furnish additional information that might be useful to the Authority of the Receiving State in determining the treatment of the convict with a view to his social rehabilitation.

(8) If the Receiving State considers that the documents supplied by the Transferring State do not enable it to implement this Treaty, it may request additional information.

(9) Each Party shall take the necessary legislative measures and, where required, shall establish adequate procedures, to give for the purposes of this Treaty, legal effect, within its territory to sentences pronounced by courts of the other Party.

ARTICLE V

(1) Delivery of the offender by the authorities of the Transferring State to those of the Receiving State shall occur at a place agreed upon by both parties. The Transferring State shall afford an opportunity to the Receiving State, if it so desires, to verify, prior to the transfer, that the offender's consent to the transfer is given voluntarily and with full knowledge of the consequences thereof, through the officer designated by the laws of the Receiving State.

(2) Except as otherwise provided in this Treaty, the completion of a transferred offender's sentence shall be carried out according to the laws and procedures of the Receiving State, including the application of any provisions for reduction of the term of confinement by parole, conditional release or otherwise. The Transferring State shall, however, retain the power to pardon or grant amnesty to the offender and the Receiving State shall, upon being advised of such pardon or amnesty release the offender.

(3) No sentence of confinement shall be enforced by the Receiving State in such a way as to extend its duration beyond the date at which it would have terminated according to the sentence of the court of the Transferring State.

(4) The Receiving State shall not be entitled to any reimbursement for the expenses incurred by it in the completion of the offender's sentence.

(5) The Authorities of each party shall, every six months, exchange reports indicating the status of confinement of all offenders transferred under this Treaty, including in particular the parole or release of any offender. Either Party may, at any time, request a special report on the status of the execution of an individual sentence.

(6) The fact that an offender has been transferred under the provisions of this Treaty shall not prejudice his civil rights in the Receiving State in any way beyond those ways in which the fact of his conviction in the Transferring State by itself effects such prejudice under the laws of the Receiving State or any State thereof.

ARTICLE VI

The Transferring State shall have exclusive jurisdiction over any proceedings, regardless of their form, intended to challenge, modify or set aside sentences handed down by its courts. The Receiving State shall, upon being advised by the Transferring State of action affecting the sentence, take the appropriate action in accordance with such advice.

ARTICLE VII

An offender delivered for execution of a sentence under this Treaty may not be detained, tried or sentenced in the Receiving State for the same offense upon which the sentence to be executed is based. For purposes of this Article, the Receiving State will not prosecute for any offense the prosecution of which would have been barred under the law of that State, if the sentence had been imposed by one of its courts, federal or state.

ARTICLE VIII

(1) This Treaty may also be applicable to persons subject to supervision or other measures under the laws of one of the Parties relating to youthful offenders. The Parties shall, in accordance with their laws, agree to the type of treatment to be accorded such individuals upon transfer. Consent for the transfer shall be obtained from the legally authorized person.

(2) By special agreement between the Parties, persons accused of an offense but determined to be of unsound mental condition may be transferred for care in institutions in the country of nationality.

(3) Nothing in this Treaty shall be interpreted to limit the ability which the Parties may have, independent of the present Treaty, to grant or accept the transfer of youthful or other offenders.

ARTICLE IX

For the purposes of this Treaty—

(1) "Transferring State" means the party from which the offender is to be transferred.

(2) "Receiving State" means the party to which the offender is to be transferred; and

(3) "Offender" means a person who, in the territory of one of the parties, has been convicted of a crime and sentenced either to imprisonment or to a term of probation, parole, suspended sentence, or any other form of supervision or conditional sentence without confinement.

(4) A "domiciliary" means a person who has been present in the territory of one of the parties for at least five years with an intent to remain premanently therein.

ARTICLE X

(1) This Treaty is subject to ratification. The exchange of ratifications shall take place in Washington.

(2) This Treaty shall enter into force thirty days after the exchange of ratifications and shall remain in force for three years.

(3) Should neither contracting party have notified the other ninety days before the three-year period mentioned in the preceding paragraph has expired of its intention to let the Treaty terminate, the Treaty shall remain in force for another three years, and so on every three years.

Done at Mexico City in duplicate, this twenty-fifth day of November, one thousand nine hundred seventy-six, in the English and Spanish languages, each text of which shall be equally authentic.

The PRESIDING OFFICER. Without objection, the treaty will be considered as having passed through its various parliamentary stages up to and including the presentation of the resolution of ratification, which the clerk will state.

The assistant legislative clerk read as follows:

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Treaty between the United States of America and the United Mexican States on the Execution of Penal Sentences which was signed in Mexico City on November 25, 1976 (Ex. D, 95–1), subject to the following declaration:

That the United States Government declares that it will not deposit its instrument of ratification until after the implementing legislation referred to in article IV has been enacted.

Mr. ROBERT C. BYRD. Mr. President, there is a 4-hour limitation on this treaty, but I am advised by the very distinguished chairman of the Foreign Relations Committee (Mr. SPARKMAN) that in his judgment it will not require over an hour. I am sure the distinguished minority leader would like to say something on this point because he and I have also discussed the matter.

Mr. BAKER. Mr. President, I have inquired of Members on this side, and it seems to me that while there are speakers who wish to address themselves to this treaty, it will not take a long time, and certainly not the full 4 hours. We are agreeable to proceeding to its consideration at this time. I would estimate that it will take much less time.

Mr. ROBERT C. BYRD. Mr. President, I wonder if I could ask the minority leader whether or not, so that Senators may be able to plan for dinner at home, the time could be reduced to 1 hour.

Mr. JAVITS. Mr. President, reserving the right to object, I happen to think 1 hour is too short. I was going to ask the majority leader a question.

We have a conference report which really should come up. It has passed the House by an overwhelming vote. It is the Youth Employment Act. As far as I know, it has no opposition or controversy here. I think we can finish it in minutes, if we can take it up first, or, if the Senator wishes me to, I am willing to wait until after the Mexican treaty discussion. I just ask the Senator in order to determine what I ought to do about this matter.

Mr. ROBERT C. BYRD. I will be glad to respond to the distinguished Senator from New York. We are attempting to find the manager of the conference report on this side of the aisle. I would be very glad to take it up following the vote on the Mexican treaty. I understand there will not be a vote necessitated on the conference report. Am I correct?

Mr. JAVITS. That is what I assume. Senator BELLMON and Senator DOMENICI are both present.

Mr. DOMENICI. I want 5 minutes to exchange views about it with the distinguished Senator from New York, but I do not insist on a yea and nay vote.

Mr. BELLMON. I would like to have 2 minutes.

Mr. JAVITS. Mr. President, could we agree on a half-hour debate on the conference report after the disposition of the Mexican treaty? Is that agreeable to the leader?

As to the 1-hour limitation on the treaty, I would want about 5 minutes. It sounds all right to me.

I will say this to both leaders: This was a very controverted hearing. Grave questions of constitutionality were raised. I only submit that to them, not that I want more time but in the interest of the dignity of the Senate if they feel they want to limit it to 1 hour, I will certainly not object. I give the Senator that information.

Mr. BAKER. Reserving the right to object, I have checked with the distinguished Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan, who is on the Foreign Relations Committee, and with Senator TOWER, who has expressed a very serious interest in this matter. All of them are agreeable to a 1-hour limitation on the treaty.

Mr. GOLDWATER. Five minutes is all I need.

Mr. LUGAR. I would like to have 5 minutes, also.

Mr. BAKER. I believe we can cover it in 1 hour. I would not object to a unanimous-consent request for 1 hour.

Mr. ROBERT C. BYRD. I thank the distinguished minority leader and all Senators who have participated in the colloquy.

TIME-LIMITATION AGREEMENT—TREATY

I ask unanimous consent that the unanimous-consent request on the treaty to be changed to provide that 1 hour instead of 4 hours be the limitation.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME LIMITATION AGREEMENT—CONFERENCE REPORT ON H.R. 6138

Mr. BAKER. Mr. President, I advise the majority leader that I believe that, on this side, we are probably in a position to offer a unanimous-consent agreement for a time limitation on the youth employment conference report if he wishes to do that now.

Mr. ROBERT C. BYRD. Very well.

Mr. President, I ask unanimous consent that, on the youth employment conference report, H.R. 6138, there be a time limitation of not to exceed 30 minutes, to be equally divided between Mr. NELSON and Mr. JAVITS.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I make that request as in legislative session.

Mr. BAKER. Mr. President, I direct one further question to the distinguished majority leader. We have ordered the yeas and nays now on the ratification vote on this treaty. We have a time limitation on the youth employment conference report. It appears to me that there will be only one more rollcall vote and that no rollcall will be asked on the conference report. Will the majority leader give us his views in that respect?

Mr. ROBERT C. BYRD. I am under the same impression. However, I am not sure that we can assure Members of that until we find out from Mr. JAVITS and Mr. NELSON. I think the Senator is correct, but before we can assure him, I think I should like to ascertain from my manager if that is his feeling.

Mr. BAKER. I thank the majority leader.

Mr. ROBERT C. BYRD. Before the vote on the treaty, I am sure we can assure Members one way or the other.

Mr. BAKER. I thank the majority leader.

Mr. ROBERT C. BYRD subsequently said: Mr. President, earlier there was a colloquy between the distinguished minority leader and myself with respect to the possibility of a vote on the conference report on youth employment. I have checked on my side. The manager of the conference report on my side has indicated he would not expect a rollcall vote. Therefore, I would be willing to state for the information of the Senate that the rollcall vote on the treaty will be the last rollcall vote today.

TREATY WITH MEXICO

Mr. BAKER. Mr. President, might I inquire of the majority leader if it might not be appropriate to ask for the yeas and nays on ratification?

Mr. ROBERT C. BYRD. We should have the yeas and nays on ratification of the treaty.

Mr. BAKER. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. SPARKMAN. Mr. President, the Committee on Foreign Relations has examined thoroughly the treaty with Mexico on the execution of penal sentences and as a result of this examination recommends that the Senate give its advice and consent to the ratification of this treaty. The Senate, on July 19, by a vote of 95 to 0, gave its advice and consent to a similar treaty with Canada.

The purpose of this treaty is to achieve the effective social rehabilitation of Americans presently in Mexican jails and Mexicans in U.S. jails. Individuals incarcerated in a foreign jail face overwhelming obstacles to rehabilitation and re-entry into society upon their release. In the case of Mexico and the United States, these prisoners have to deal with language barriers in addition to such problems as distance from family and inability to participate in work release, parole and counseling programs.

The United States has a definite interest in the rehabilitation of its citizens held in Mexican jails since eventually most of these individuals will return to the United States. The majority of the Americans in Mexico are young, first offenders who deserve the best possible chance for rehabilitation. These young men and women will come back to the United States, and it would only add to our problems and theirs if they were released into society as hardened criminals or without the ability to find employment. The United States would also be able to deal with its citizens with its own parole laws.

Another worthwhile benefit that will result from the ratification of the treaty will be a lessening of the friction in our bilateral relations that has resulted from incarceration of so many of each nation's citizens in the prisons of the other. This friction has been heightened by numerous news accounts about the plight of Americans imprisoned in Mexico. We have all heard from our constituents or from newspaper accounts about the conditions in Mexican jails and the charges that have been made about the Mexican criminal justice system by Americans who have become involved in that system. Although the Mexican Government has taken commendable steps to improve these conditions, these actions will not solve the problem of rehabilitation addressed by the treaty.

Since the treaty involves new legal concepts for the United States, the committee carefully examined the constitutional and legal questions arising from the transfer of individuals to U.S. prisons to serve out Mexican sentences. The committee determined that a strong case for the constitutionality of the treaty and the legislation necessary to implement it could be made. The committee solicited the opinions of a number of legal scholars, and all these opinions indicated that the treaty was constitutionally defensible. The Committee on the Judiciary, during its consideration of the implementing legislation, has taken additional steps to bring the transfer program into line with our constitutional system and to protect the rights of the prisoners to be transferred.

The committee recommends that the Senate give its advice and consent with a declaration that the instrument of ratification not be deposited until the implementing legislation has been enacted. This will prevent a situation in which we have a valid treaty, but no means of executing the transfer process. This declaration will also avoid raising the hopes of Americans imprisoned in Mexico and then destroying their morale should the implementing legislation not be enacted promptly.

I ask unanimous consent that an article-by-article analysis of the treaty be printed in the RECORD along with the committee statement of comment on the treaty.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COMMITTEE COMMENTS

Individuals imprisoned in a foreign nation face large obstacles to rehabilitation: language barriers; distance from family; differences in culture; inability to participate in educational, work-release or counseling programs; and difficulty in receiving parole. Parolees also have problems, such as securing suitable employment in a foreign nation, once they are paroled. The transfer of these prisoners or parolees to their home countries to finish out their sentences or to receive parole would greatly increase the prisoners' chances of making a successful reentry into society. Taking the case of Mexico, for example, most of the U.S. prisoners in jail there are young Americans who are first-time offenders. Their ability to readjust would undoubtably be enhanced if they could participate in job training, counseling and other programs available in penal institutions in the United States.

Since most of the prisoners will eventually return to their home countries after completing their sentences all three nations have an interest in the penal conditions of their citizens incarcerated abroad. The Treaties would also have a beneficial effect in reducing the tension between the United States and Mexico and the United States and Canada arising from the imprisonment of each others' citizens.

These Treaties involve concepts and legal issues new to the criminal justice system of the United States. The Committee recognizes that legitimate constitutional issues are raised by these treaties and the implementing legislation. The ultimate test of constitutionality may, of course, come before the Supreme Court of the United States. But the Committee has carefully considered these issues and has concluded that a case for the constitutionality of the Treaties can be made.

All the legal opinions received by the Committee concur in the constitutionality of the treaties. Under the terms of the Treaties, collateral attacks on the sentences of the foreign nations can only be made in the courts of that nation. These provisions would have the effect of denying to an American citizen who is transferred to the United States an opportunity to petition for a writ of *habeas corpus* for the purpose of challenging the validity of his Mexican or Canadian sentence or conviction. The Committee has determined that any constitutional questions involved in this preclusion of a writ of *habeas corpus* can be resolved by a valid waiver made at the time of the prisoners' consent to transfer. If the consent is to constitute a waiver, then the prisoner must be made fully aware of the consequences of his consent and the attendant waiver. The Committee understands that procedures will be established under the implementing legislation to provide full coun-

seling, legal assistance and information to prisoners eligible for transfer. The families of prisoners, to the extent possible, should be informed of these conditions and of the status of their family member.

In considering the question of waiver, the Committee notes that the prisoner in a foreign jail would not have access to the courts of the United States to attack his conviction or sentence. It is only upon transfer to the jurisdiction of the United States that a transferee could claim any access to U.S. courts. As a practical matter, the prisoner is thus not waiving a right held prior to transfer. It would place the United States in a paradoxical posture to insist that the writ of *habeas corpus* be available to transferees to contest the judgments of foreign courts when the result would be that the Americans would remain in foreign jails with no access to the courts of the United States for any purpose dealing with their confinement.

Although the implementation of the transfers will benefit several hundreds of Americans imprisoned in Mexico and Canada, the Treaties should not be viewed as a final solution to the problems of all U.S. citizens imprisoned in those countries. Some will not be eligible for transfer and others will not become eligible until they have been convicted, received definite sentences, and appealed these convictions and sentences. Therefore, the Committee feels that the Government of the United States should continue to assist fully those prisoners not transferred. Particularly important are improved consular services, including more consular offices where needed, and insistence, through appropriate diplomatic channels, on respect for the rights of the accused. These steps should not be confined to the two nations with which we have negotiated these treaties, but should be taken in all countries where significant numbers of Americans have been arrested and imprisoned.

The purposes of these Treaties are worthwhile. Their provisions are in accord with the Constitution. Their subject matter is within the area appropriate for a Treaty. Accordingly, the Committee on Foreign Relations recommends that the Senate give its advice and consent to their ratification.

SECTION-BY-SECTION ANALYSIS OF THE TREATY WITH MEXICO ON THE EXECUTION OF PENAL SENTENCES

PREAMBLE

The Mexican treaty to transfer offenders to their native country to finish their sentences has for its purpose the goal of rendering mutual assistance to combat international crime, to provide better administration of justice and to further the social rehabilitation of offenders.

Article I

The first section of Article I gives authority for sentences imposed on U.S. nationals by Mexican courts to be served in the United States. The second section provides the same authority as it relates to sentences of Mexican nationals imposed by U.S. courts.

Article II

This article imposes six conditions for a transfer as authorized in Article I:

(1) The crime must be one punishable under the laws of both states. The crime need not be identical in matters not affecting the character of the crime.

(2) The offender must be a national of the Receiving State and,

(3) Not a domiciliary of the Transferring State.

(4) The offense is not a political crime or an offense of the purely military or immigration laws of the parties.

(5) At least six months remain on the offender's sentence, and

(6) No appeal or other proceeding affecting the sentence be pending in the Transferring Nation and the time for appeal has expired.

Article III

This article states that each State designate an authority to perform the functions provided in the treaty.

Article IV

Section 1 provides that transfer shall be initiated by the Transferring State, but also allows the prisoner to petition the Transferring State.

Section 2 provides that if the prisoner expressly consents, the request for transfer will be forwarded through diplomatic channels.

Section 3 establishes procedures for the acceptance of the request for transfer by the Receiving State.

Section 4 sets up the criteria to be used in determining the suitability of the transfer. The basic question is how will the social rehabilitation of the prisoner be best served.

Section 5 stipulates that if the offense involved was a state crime under the laws of either nation, the permission of the individual state is required before transfer.

Section 6 requires that the sentence of the transferee be a definite one.

Section 7 details the information to be supplied by the Transferring State to the Receiving State.

Section 8 allows the Receiving State to request additional information that may be required.

Section 9 requires the adoption of the necessary implementing legislation.

Article V

Section 1 provides that the place of exchange shall be mutually agreed upon. It also follows a Receiving State to verify the validity of a prisoner's consent.

Section 2 states the sentence shall be carried out according to the laws of the Receiving State, including those dealing with parole and reduction of sentence. Reserves to the Transferring State the power to grant amnesty or pardon.

Section 3 prevents a Receiving State from extending the sentence beyond time set by Transferring State.

Section 4 prevents reimbursement to Receiving State for costs of incarceration.

Section 5 provides for exchange of reports on transferred prisoners every six months.

Section 6 protects a transferred prisoner from the loss of any civil rights that would not have occurred as a result of his conviction in the Transferring State.

Article VI

This article gives to the Transferring State exclusive jurisdiction over any appeal or any other proceeding intending to challenge the sentences imposed by its courts. If a sentence is set aside or otherwise modified, the Transferring State will notify the Receiving State so it may take appropriate action.

Article VII

This article protects a transferred prisoner from double jeopardy, or in other words from being tried for the same offense in the Receiving State.

Article VIII

This article provides that youthful offenders and those determined to be mentally unsound may also be exchanged.

Article IX

This article gives definitions of terms used in the treaty.

Article X

This article sets Washington as the place of exchange of ratifications and sets the term of the treaty at three years. The treaty will automatically be renewed for additional three-year periods unless either Party gives notice 90 days prior to the termination of such a three-year period.

Mr. SPARKMAN. Mr. President, I have sent word to Senator CASE, who, I understand, is still down in the Committee on Foreign Relations. I hope he will be here momentarily.

Mr. GRIFFIN. Mr. President, the minority leader has asked me to take charge of the time on this side. If the Senator from New Jersey (Mr. CASE) comes in, I shall immediately defer to him. In the meantime, maybe I can get recognition and use some of the time on this side.

The PRESIDING OFFICER. The Senator from Michigan is recognized.

Mr. GRIFFIN. I thank the Chair.

Mr. President, I voted to report this treaty out of the Committee on Foreign Relations. I did so with a good deal of concern and reluctance, because I think there are serious constitutional questions involved. But I did vote that way and I shall vote now in the Senate for the resolution of ratification because it contains this language:

That the United States Government declares that it will not deposit its instrument of ratification until after the implementing legislation referred to in article IV has been enacted.

In other words, we are not taking a final action here. We are approving it, but our Government will not actually deposit the instrument of ratification until after certain legislation required to implement the treaty is enacted. The legislation in question will be considered by the Committee on the Judiciary, which is particularly equipped to examine further these constitutional questions.

The Committee on Foreign Relations was concerned about these matters. Constitutional experts were examined and testified. While I must admit that some of these questions still trouble me, I think that the Foreign Relations Committee has done a good job. It makes sense now to take this step and allow the Committee on the Judiciary to go further into the constitutional problems.

I submitted some individual views to the Foreign Relations Committee's report on this treaty analyzing the constitutional issues as I see them. Rather than ask the Senate to listen to my discussion at this late hour, I ask unanimous consent, Mr. President, that my views be printed in the RECORD at this point.

There being no objection, the views were ordered to be printed in the RECORD, as follows:

CONSTITUTIONALITY OF THE TREATY WITH MEXICO ON THE EXECUTION OF PENAL SENTENCES

INDIVIDUAL VIEWS OF U.S. SENATOR ROBERT P. GRIFFIN

The Committee has considered certain constitutional issues associated with the Treaty with Mexico on the execution of penal sentences. In particular, Article VI of the Treaty, which purports to deny American courts jurisdiction to review the sentences of American transferees, was closely examined. The Committee heard testimony from a number of constitutional law experts, including Professor Herbert Wechsler of the Columbia Law School. All concluded that the Treaty is constitutionally defensible. I respect the opinions of such experts but I continue to be concerned.

There is little doubt that American prisoners who are transferred from Mexican prisons will attempt, in our courts, to challenge the constitutionality of their convictions. The Treaty purports to forbid Ameri-

can courts from entering such challenges. Thus, the crucial questions are, first, whether an individual has a colorable due process claim to attack the constitutionality of his Mexican conviction, and second, whether he can validly consent or waive this claim.

It may be argued that imprisoning American transferees raises no constitutional questions but is merely a conflicts of law situation. Because the offender's trial and alleged denial of constitutional rights occurred in a foreign country through the sole conduct of foreign authorities, the United States' judiciary has no jurisdiction to entertain suits brought on foreign judgments. Therefore, it can be argued, the role of this country under the Treaty is merely to assume custody over the offender. This assertion, however, entirely ignores the historic fundamental principle that before an accused may be imprisoned in this country he must be afforded a trial which comports with basic fairness. This principle is embodied in the Fifth Amendment's guarantee of due process of law.

Thus, it can be argued that the Treaty, by denying the prisoner's right to challenge the reliability of his conviction, presents a cognizable due process violation. As Professor Alan Swan of the University of Miami Law School stated: "Certainly, if our system imprisons people wholly on the strength of a foreign proceeding without any intervening trial according to constitutional standards, it would be anomalous indeed if 'fairness and decency' in those proceedings was a matter to which our constitution was indifferent."[1]

It must be emphasized, however, that the prisoner should have a colorable due process claim only when the alleged deprivation impinges upon the reliability of the truth-finding function. When the alleged misconduct involves an invasion of individual integrity, there is no persuasive reason to permit the prisoner to collaterally attack the Mexican judgment. This situation will most frequently arise when a prisoner challenges, under American constitutional standards, the propriety of a Mexican search and seizure. It is well recognized that the primary purpose underlying our exclusionary rule is to deter police misconduct. When American officers neither conduct nor in any way participate in the transgression, it would be difficult to perceive what purpose would be advanced by refusing to recognize the validity of the Mexican judgment. Certainly, excluding evidence seized by Mexican officers would not deter those officers from conducting similar searches in the future. In such a case, ordinarily, the prisoner's guilt is not really in question. Under such circumstances, American courts should refuse to recognize the asserted validity of such a claim.

Thus, as stated by the authors of a Harvard Law Review Note, so long as the reliability of the truth-finding function is the only issue, "(t)he Treaty's prohibition of collateral review of Mexican convictions appears to be unconstitutional unless each prisoner waives all access to such review as a condition of his transfer."[2] Under controlling Supreme Court authority, in order to have a valid waiver, there must be "an intentional relinquishment or abandonment of a known right or privilege" that was made "voluntarily after proper advice and with full understanding of the consequences."[3] Hence, the crucial question that is presented here is whether the prisoner's consent not to assert his due process rights can be deemed voluntary, considering the conditions of his Mexican imprisonment. Or, phrased in different terms, are the conditions prevailing in Mexican prisons so unbearable that any consent or waiver given in such circumstances is inherently involuntary?

In confronting this question, it is useful to draw upon the plea-bargain negotiation process in our criminal justice system. In pleading guilty, the defendant waives various constitutional rights, including such guarantees as the right to a speedy trial, to confront adverse witnesses, and to trial by an impartial jury. At the same time, however, the accused gains a substantial benefit, namely, the possibility of a reduced sentence or other tangible benefit relating directly to the conditions of his confinement (e.g., incarceration in a medium rather than maximum security institution). This aspect of the plea bargaining process was recognized by the Supreme Court in *Brady* v. *United States*.[4]

At first glance, the Treaty with Mexico comports with this waiver-benefit analysis. In return for foregoing any claims challenging the constitutionality of his Mexican conviction, the transferee gains the benefit of serving his sentence in this country. There is one critical distinction, however, which separates this situation from the plea-bargaining process. In determining whether to plead guilty, the accused is faced with two viable alternatives, namely, whether to stand trial with the attending constitutional safeguards, or to acknowledge his guilt with the possibility of a more lenient sentence. The prisoner in Mexico, however, is denied such freedom of choice. His alternatives are incarceration in this country or continued confinement in Mexico. The alternative of remaining in Mexico is so unattractive to most prisoners that in reality these individuals are left with but one choice—incarceration in this country. To deprive an individual of his right to challenge his Mexican conviction under such circumstances conflicts with fundamental notions of fairness.

Some commentators contend that this deficiency may be overcome by surrounding the consent or waiver process with various procedural safeguards which include a hearing before a United States Magistrate, right to counsel, and that the proceedings be recorded.[5] It is difficult to perceive, however, how the implementation of these procedures will render the consent or waiver voluntary. In fact, such discussion obscures the crucial issue. If the consent or waiver is deemed inherently involuntary, then it is invalid no matter what procedures are employed.

Thus, I believe the Treaty raises grave constitutional concerns. It is important that the Judiciary Committee, to which the implementing legislation has been referred, will carefully consider these issues. It is well to keep in mind that if the Treaty subsequently should be declared unconstitutional by the courts, our relations with Mexico, and the treatment of American prisoners there, could be significantly worsened.

Mr. GRIFFIN. I do think it should be noted that, although perhaps to a lesser degree, these issues also apply with respect to the prisoner exchange treaty with Canada. As far as I am concerned, it is unfortunate that we have rather routinely approved a similar treaty with Canada while we seem to be focusing in more detail on the treaty with Mexico.

The terms are quite similar. Many of the same questions are involved, although it is true that the legal system of Canada is more similar to ours and there would be less likelihood that these questions would be raised with respect to Americans held in Canadian prisons.

The key problem is that in these treaties we agree to deny American citizens who are transferred to American prisons the right to raise questions about their guilt. They must waive any right to appeal their conviction under this treaty in order to receive the benefit of it.

We have all heard stories about prison conditions in Mexico. And if even some of these accounts are accurate, I think we must ask ourselves whether a waiver would be a truly voluntary act, or whether the conditions of imprisonment in Mexico make such a waiver inherently coercive.

This is the kind of question that concerns me.

No one could take issue with the desirability of bringing Americans held in Mexican prisons back to the United States. But I would certainly hope that this could be done without compromising too many civil rights of the people involved.

As I have said before, I hope the Judiciary Committee will take more time and will examine in more detail the fundamental constitutional questions that are raised by this treaty.

I yield to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I do not propose to speak long on this.

I think it is a good treaty. I think it will accomplish what it intends to accomplish.

Mr. President, as one who has lived his entire life on the Mexican border, I would just like to say that in Mexico we find a little different approach than we have in this country to law and order.

The Mexicans do not treat drug abuse lightly, and I would say that many of our American nationals who are incarcerated in Mexico have been incarcerated for drug abuse.

The Mexican Government does not treat automobile accidents or automobile violations lightly, while we do. And some of our Americans have been arrested for violations there.

But one area that we in Arizona have had quite a bit of a problem with has been the question of airplanes belonging to citizens, not only of our State, but other States—I think at one time there were over 180 involved—being held by the Mexican Government for supposed violations that Americans find it very difficult to understand.

I will say that if we enforced our aviation rules the same way the Mexican Government enforces them, we probably would have fewer accidents and, certainly, would have fewer missing aircraft.

I do not want to oppose this treaty in any way. I will not, because I want to vote for it. But I do not want the impression left that because we saw fit to pass this treaty in cooperation, I must say, with the Government of Mexico, that we in any way are condemning Mexico.

I have had occasion, many occasions, to try to intercede on behalf of Arizon-

ians and others in jail in Mexico. I found, in the majority of the cases, the person involved had every right to be in jail.

Mr. President, I want to defend Mexico, if that defense is necessary, and not have this made out like we have a bunch of people, U.S. citizens, in jail in Mexico because of some capricious action on the part of the Mexican officials.

When you are arrested in Mexico, you are arrested, and there is no way of any hanky-panky in getting out. You serve the term. As I indicated, the offense for which most people are in jail in Mexico, those people from other countries, are offenses which I think the Mexican Government had every right to be concerned with.

I thank the Chair. That is all I have to say.

The PRESIDING OFFICER. Who yields time?

The Senator from Indiana.

Mr. LUGAR. I thank the Senator.

Mr. President, four Members of this body, the Senator from Texas (Mr. BENTSEN), the Senator from North Carolina (Mr. MORGAN), the Senator from Utah (Mr. GARN), and I were the senatorial delegation for the 17th Interparliamentary Conference recently held in Mexico in which this was a subject of great concern to our counterparts in the senate of Mexico and to a President of Mexico.

As we know, the initiative for this treaty came from the Government of Mexico, and reports of the Foreign Relations Committee, in fact, reflect the thought that Secretary Kissinger found the idea congenial and began to approach the idea here, and to proceed to ratification in Mexico in the latter part of December, last year.

Our delegation was asked with some pointedness by the Mexican delegation why we had not proceeded.

Clearly, from the standpoint of the Government of Mexico, the protest with regard to our 600 or more prisoners has been a source of embarrassment. The Mexicans who met with us in the 17th Interparliamentary Conference mentioned that they, as Mexican legislators, have taken considerable action to alleviate some of the conditions which we have complained against.

Clearly, the item of greatest concern for us in this body is a compassionate concern for Americans who are incarcerated there in Mexico presently. Many of them are, in fact, a product of the crackdown on drug enforcement that our Government impelled, and the Mexicans were very successful and very helpful in this respect.

The Mexicans have pointed out that their social services budgets, their budgets of local governments, are not as extensive as ours.

It is customary, for example, for prisoners in Mexican jails to be supported frequently by their families with clothing, food, and other support, as opposed to the support of prisoners in jails in our country.

However, clearly to alleviate this difficulty which has arisen in the relationships between our countries, the Mexicans have proceeded, through the previous President of Mexico, Echeverria, to move this treaty.

I support the treaty with all the potential reservations that the distinguished Senator from Michigan has mentioned, and which I think have been acknowledged freely by the committee in its consideration and have been given considerable due in the report of this bill.

There are potential problems, but constitutional lawyers have offered substantial testimony that these should not overcome support of the treaty.

I suspect, taking the worst case, even if constitutional points were raised that provided immediate freedom or freedom after various court appeals to some Americans involved in this, I still would be prepared to support the treaty, not only because of what I think is a sense of justice in regard to the Americans involved but also with regard to our relationships with the Government of Mexico.

I am simply impressed, after the 17th parliamentary meeting, that this entire area is one that offers a demonstration of good faith on the part of this body; that, in fact, very considerable concessions have been made by the Mexicans in proposing it and implementing it rapidly; but that they are looking to us for equal interest and equal timeliness of our activity.

For all those reasons, I encourage very substantial and enthusiastic support by this body and then very thoughtful concern about the implementing legislation, which is still to come down the trail.

These elements of that implementing legislation will be important for the reasons that the Senators have pointed out. We are working through the rocks and shoals of potentially difficult constitutional territory, and the situation is a grave one. However, having said that, I hope we will proceed to the ratification, and it will be a pleasure to support this treaty.

Mr. GRIFFIN. Mr. President, I yield 5 minutes to the Senator from New York.

Mr. JAVITS. Mr. President, I support the ratification of these treaties, and I believe that the legal and constitutional questions are answered in the committee report.

I carefully considered the legal opinions on the issue of constitutionality, and I believe they are weighty enough to deserve ratification of the treaty. The two constitutional questions involved are these:

First, what is the authority of the United States to imprison an individual not convicted of a crime against the United States?

Second, can we preclude a transferred prisoner from using the writ of habeas corpus in order to test his incarceration?

On the first issue, we have excellent legal testimony which equates this with a judgment of a foreign court to which we give due faith and credit. It is felt that this extends this practice to foreign criminal judgments under the proposed treaties. When I say "treaties," I mean the treaty with Mexico and Canada.

As to the habeas corpus argument, it is felt that there can be a valid waiver of constitutional rights, and the treaty calls for such a waiver by any prisoner transferred.

Mr. President, the things I should like to be emphasized are these: First, at my insistence—and I am delighted that I did insist—the committee made it clear that we are acting in complete good faith in this matter in recommending the ratification of these treaties and that we had every reason to believe that the issues were settled and that we should ratify the treaties but that, naturally, we could not predict what the courts would do.

We asked our Mexican colleagues who were entering into this treaty with us to understand that we are acting in complete good faith; that we had done everything we could to sustain in good faith the commitments undertaken by the treaty; and that if our courts took some other action, we were laying on the table all the considerations that motivated us, so that there might be no question with the Government of Mexico that we had done all we could to see the treaties enforced exactly as agreed to.

Second, it is a fact that not all U.S. prisoners will be transferred under these treaties. Some will not be eligible for transfer. Others will not become eligible until they have been convicted and received definite sentences—perhaps appeal the conviction and the sentence—because this applies only to prisoners serving a term.

There was tremendous complaint—and I have to run into it personally in Mexico and out of Mexico—from families in my State. We had testimony to the effect that conditions were really quite inhuman; that various nefarious practices were exercised upon Americans—extortion and other impositions.

Hence, the committee wrote a letter to the President of the United States urging that representation should be made to the Government of Mexico on this subject as to those prisoners who remain in Mexican hands; and, second, that an adequate number of consular officers should be appointed so that these cases might be followed through—the visits to prisoners, the situation inquired into and so forth.

Mr. President, knowing the Mexican situation as I do, I considered that representation to the President as being almost equal in importance to the ratification of the treaty. I know, from the character of my colleagues on the committee and from my own determination in the matter, that we will follow through and do all we humanly can to see that this treaty is carried out in good faith as to some several hundred U.S. citizens who are imprisoned there, but also that these very serious conditions which have been so bitterly complained about are alleviated by our own action in having the necessary consular officers and by the most urgent representations to the Government of Mexico.

I urge and recommend the Senate to ratify the treaty.

Mr. GRIFFIN. Mr. President, Senator TOWER has remarks to deliver in this matter, and he wants to be called to the floor. If there are no other speakers, perhaps we can have a brief quorum call and give him a chance.

Mr. SPARKMAN. I suggest that we have a quorum call and get word to him in the meantime.

Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time not be charged to either side.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. (Mr. WILLIAMS). Without objection, it is so ordered.

Mr. TOWER. Mr. President, I laud the objectives and purposes of the treaty with Mexico. There is no question but there are a number of American citizens languishing in Mexican jails who are there as a result of legally judicial processes that we consider alien in this country, possessed of a system based on Anglo-Saxon theories of law and right, and we place a high premium on due process of law.

I think it is far better for these Americans to have the kind of treatment we have come to expect as a minimum standard in the penal institutions of the United States rather than those of Mexico which are, of course, markedly different, to say the least, from our own.

I think there are a number of us who have some concerns about the treaty from the standpoint of its impact on the Bill of Rights and the provisions for due process that are contained therein.

I do not think any of us wants to be a party to ratifying a document which is tantamount to a waiver of those rights. These questions have been raised by a number of outstanding constitutional lawyers in this country.

I intend to vote for this treaty out of humane considerations.

I still have lodged in my own mind some concerns about the impact on the Constitution insofar as it applies to due process of law, and I hope the Senate will be very careful in framing the implementing legislation for this treaty, and that due attention will be paid to the constitutional implications.

Of course, I reserve the right that I possess as a Senator to review very closely the provisions of that implementing legislation, and to vote either positively or negatively on it, depending on the manner in which the constitutional questions are met.

Therefore, Mr. President, I will support the ratification of this treaty.

I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. SPARKMAN. Mr. President, let me say to the Senator from Texas that we have done our best to make this, shall I say, airtight, and I would like to just read a brief statement here that tells some of the things we have done to protect the rights of American citizens in Mexico, and those who may be transferred to the United States.

Mr. TOWER. May I say to my distinread a brief statement here that tells guished friend from Alabama before he reads that statement that I am aware it is the abrogation of rights as they are understood and applied here in the United States that prompted us to seek this treaty in the first place, and that I do understand that. What our citizens have been subjected to there is certainly not due process by our standards.

Mr. SPARKMAN. That is correct, and we have recognized that fact. Let me just read this brief statement I was going to read.

Should the United States insist that we cannot approve this treaty since it involves a limited relinquishment of the right to petition for a writ of habeas corpus, we would be in fact denying Americans imprisoned in Mexico other important rights under our system. A transferred prisoner could contest the validity of his conviction and sentence only in a Mexican court, but he could petition for a writ of habeas corpus on any other ground concerning his continued imprisonment in the United States. Our failure to approve this treaty would mean that the prisoners would remain in Mexico with no access to our courts for a writ and with none of the benefits of the laws of the United States, such as our parole system. This treaty does not take away a right presently held by an American in a Mexican prison, but it does allow them the greater protection of our laws and an improved chance successfully to re-enter society.

Mr. TOWER. I understand what the Senator from Alabama is saying, and I think his remarks are certainly not inconsonant with what my own views are.

As I say, I do support the treaty. I just want to make sure that, once having made the exchange, Americans do not fall short of access to due process when they get back to this country as a result of the treaty arrangements we have made with Mexico, and that is my only concern.

I fully understand they cannot expect due process by our standards where they are now. I want to make sure they can expect it once they get home.

Mr. SPARKMAN. I tried to make that clear. I say that the treaty will put them under the protection of the laws of the United States when they get back here, and it will give them an opportunity to apply for any rights to which they may be entitled, including parole.

I certainly think their opportunity will be greatly enhanced if this treaty is ratified.

Mr. TOWER. I concur with my distinguished friend from Alabama.

I have never spent any time in a Mexican jail myself, but I have friends who have, and they tell me that they did not exactly relish the experience of some of them which they have had when they had the opportunity to spend time in both Mexican jails and Texas jails, and they find the Texas jails far superior in terms of the cuisine, the quarters, and all of the other accommodations that go along with it.

Mr. SPARKMAN. Well, it does give them an opportunity to reestablish themselves in this country. They will have the benefit of parole, for instance, and other rights to which they might be entitled under our laws. We have tried to make certain that we have given them every protection we can.

Does the Senator wish to yield to anyone?

Mr. GRIFFIN. I believe we are ready. The Senator from Texas wishes the floor.

Mr. SPARKMAN. I yield to the Senator from Texas.

Mr. BENTSEN. Mr. President, will the Senator yield 5 minutes? I would like to say to my colleague from Texas I was born and reared along the Mexican border, and I have had those calls at midnight from friends who were on the other side in one of those jails, and in getting them released I found it a very expensive process.

Mr. President, this May I was privileged to serve as chairman of the Senate delegation to the 17th Mexico-United States Interparliamentary Conference. I came away from our meetings in Hermosillo, Sonora, deeply impressed by the importance of this Prisoner Exchange Treaty as an issue in Mexican-American bilateral relations.

The presence of some 600 American citizens in Mexican prisons, most of them on drug-related charges, has been a sore point between Mexico and the United States for several years, and the source of much unfavorable publicity directed at the Mexican Government.

In an honest effort to redress this situation, while at the same time preserving the integrity of the judicial process, Mexico and the United States have negotiated an innovative, precedent-setting prisoner exchange agreement. This treaty was ratified by the Mexican Government in December, and I can report from firsthand experience that our counterparts in the Mexican Legislature are anxiously awaiting Senate action.

As a Senator from a State that shares an extensive border with Mexico, a State that is home to many of the 600 American citizens presently incarcerated in Mexican facilities, I am also acutely aware of the anguish, the problems and the desperation these young people and their families have lived with for years.

I must assume that being in prison, even in the best circumstances, is a frightening and degrading experience. But to be held for long periods in a foreign country, far from home, friends and family; to subsist in an environment with different customs, language, a different criminal code and procedures, must be doubly disheartening and frustrating.

While in Mexico this spring we were shown a film in which many of the American prisoners stated their desire to return home and begin to rebuild their shattered lives. The prisoners urged prompt Senate ratification of the prisoner exchange treaty, and one could not help but sympathize with their situation.

Today the Senate has an opportunity to help remove a major political issue in Mexican-American relations and to temper justice with mercy. I think we must

assume that most of the American citizens held in Mexican prisons are guilty of some criminal offense—in many cases the odious offense of trafficking in narcotics. And I recognize that there are those who will say, "Let them rot. They deserve what they are getting."

I cannot accept this view. Few of these young people, most of them in their mid-twenties, have made a life or career of crime. They can still be rehabilitated, and their prospects for rehabilitation can be improved by allowing them the opportunity to return to this country where they will be subject to our judicial procedures.

These people deserve to be punished; they have been punished, and many will continue to be punished in American facilities. A vote in favor of the Prisoner Exchange Treaty is not a vote in favor of amnesty for drug offenders. Rather, it is a vote in favor of permitting American citizens, most of whom are guilty of a criminal offense, to return to this country and be punished in accordance with our laws.

The Prisoner Exchange Treaty with Mexico is a creative response to difficult international situation; it raises some novel issues in international law. Nevertheless, the basic legal issues are identical to those contained in a companion agreement with Canada, a treaty that recently received the unanimous approval of the Senate.

I urge the same prompt and strong support for the Mexican treaty.

I thank the distinguished chairman for moving on this piece of legislation.

Mr. SPARKMAN. May I say I appreciate greatly the remarks of the Senator from Texas.

Let me say that, in the testimony before the committee dealing with this problem, we had some pitiful stories, as the Senator related, and the witnesses had some terrible experiences with their loved ones in the Mexican jails and the conditions that were reported there. We had some very fine testimony. Naturally, it was concerned testimony, as it rightfully should be.

But I think the big thing is that this provides a method for many of them to be repatriated, shall I say, and rehabilitated and to have the benefit of American laws that they could not get in Mexico, such as the parole system, as I mentioned.

By the way, let me say that just within the last day or two we ratified a similar treaty with Canada.

Mr. BENTSEN. By unanimous vote too?

Mr. SPARKMAN. What is that?

Mr. BENTSEN. By unanimous vote?

Mr. SPARKMAN. That is correct.

I think it would be a great thing, and I hope that the Senate can ratify this treaty with a unanimous vote as it did the Canadian treaty.

I thank the Senator from Texas. Does the Senator from Michigan have any additional remarks?

Mr. GRIFFIN. No.

Mr. SPARKMAN. I have no additional requests for time, Mr. President.

Mr. CHURCH. Mr. President, the treatment of U.S. citizens imprisoned in Mexico has become a major issue in the normally amicable relations between our two countries. The pending treaty with Mexico on the execution of penal sentences represents a new approach in dealing with a situation in which mainly young Americans find themselves imprisoned, rightly or wrongly, for long periods of time, where their treatment is often harsh and sometimes brutal.

During the course of the hearings on the treaty, the Foreign Relations Committee was disturbed by the reports it received from former prisoners in Mexico and the families of prisoners still there regarding such abuse. These witnesses told of torture, extortion, and a denial of basic rights.

For example, a letter has come to me from a young man whose parents live in Idaho. It gives an account of how he and his wife were arrested, how he pleaded guilty, under coercion, with the understanding that if he did so, his wife would be released. After his wife was released, he undertook to renounce the declaration that he had made in order to secure his wife's return to the United States.

He sets out the facts as he claims they occurred, which constitute a case of entrapment. He has not been charged nor tried. Yet he has been held in prison for months in violation of the laws of Mexico. Riots have occurred in the prison where the Americans have been singled out, beaten, and brutally treated.

If the facts are as he relates them, he would not be in jail at all in the United States. I hope, through ratification of this treaty, we may secure the cooperation of Mexican authtorities in cases of this kind.

But beyond the treaty, the Foreign Relations Committee believes that our diplomatic representatives abroad should take additional action to protect U.S. citizens, not only in Mexico but in Bolivia and other countries where numbers of Americans are being held in prison. That is why I suggested language in the Foreign Relations Authorization Act which was approved by the committee expressing the sense of the Senate that the Secretary of State "shall make every effort to seek the early release of American citizens unjustifiably held in foreign jails, and that he shall direct the appropriate consular officers to redouble their efforts for the protection and welfare of imprisoned American citizens abroad." The amendment also directs the Secretary of State to "report to the Committee on Foreign Relations annually on the number of American citizens in foreign jails, the charges against them, and what measures have been taken to assist these individuals."

Mr. President, it is my hope that the Senate will ratify this treaty and that the enabling legislation it calls for will soon be enacted into law.

Mr. BAYH. Mr. President, the treaty with Mexico on the execution of penal sentences represents a somewhat unique and, I believe, beneficial development in American diplomacy. The treaty would allow citizens of our country and Mexico who have been convicted of crimes in a foreign jurisdiction to serve their prison sentences in their home country. This procedure should assist in the rehabilitative efforts of confined individuals and relieve the special hardships which confinement abroad imposes.

The very uniqueness of this treaty and the Canadian treaty ratified earlier this week, however, raises a number of difficult constitutional issues which, as chairman of the Subcommittee on the Constitution, I feel deserve particular attention. I am pleased to note that a considerable portion of the hearings on the treaty conducted by the Foreign Relations Committee as well as the hearings on the implementing legislation held by Senator BIDEN'S Penitentiaries Subcommittee, was devoted to a review of these constitutional concerns.

Much of the attention engendered by this treaty and legislation has been focused on the several hundred Americans currently serving sentences in Mexico. I hope that our legislative process can work expeditiously to return these citizens to America. At the same time, however, our concern for human rights both at home and abroad requires us to seek methods by which the procedures established by the legislation are consistent with the constitutional values we espouse. We must do our best to see that neither our constitutional fabric nor the rights of returning Americans will be damaged by the process which we will develop to implement the provisions of the exchange treaty.

The constitutional issues presented by this treaty arise from the simple, but essential, fact that our criminal justice system in America differs from many of those found in other countries. Mexico, for example, operates on a civil law system, while much of our procedural and substantive law arises out of the traditions and developments of the common law as interpreted in light of our Bill of Rights. One of the essential questions presented by this treaty therefore, is whether the American Government can confine persons in this country based on a conviction secured in a foreign country through procedures that may not have been consistent with American notions of due process.

Obviously, this presents a difficult question; one that can be disposed of at this point with absolute certainty only by either abandoning this project and leaving our citizens in foreign jails or by insisting that foreign prosecutions of Americans be conducted under procedures consistent with our view of due process. Neither of these alternatives is viable or realistic.

I believe one of the best methods for resolving these issues in a manner consistent with our constitutional heritage is to insure that Americans currently in foreign jails who wish to return to the United States do so voluntarily and with a clear and intelligent understanding of the consequences of this decision. The choice of returning to America or staying in a foreign jurisdiction is an important one for these prisoners and we must do all we can to insure that it is an informed choice, made without coercion or intimidation. Establishing procedures to facilitate an informed choice will, I believe, go a long way toward resolving

some of the constitutional issues presented by this unique treaty.

I believe, therefore, that the implementing legislation for this treaty must establish clear procedures to determine if an American serving a sentence in a foreign prison is making the decision to return voluntarily and with an awareness of the consequences to such a choice. The right to counsel in these proceedings is especially helpful and I hope that this right will be stringently observed. Additionally, it might be helpful to have the person designated to verify the consent of an American desiring a transfer to be an attorney in order to insure that the prisoner will be able to have any questions about the consequences of his or her transfer answered in full. I know that Senator BIDEN's hearings have considered these matters and I have presented the subcommittee with my views on them.

I also wish to compliment the Mexican Government on the recently announced decision to forego imprisonment of Americans for simple possession of small amounts of marihuana. This new policy should help avoid in the future some of the problems which the treaty and implementing legislation are designed to alleviate.

Obviously, we are embarking on a course which raises constitutional questions of first impression. Some of them are unanswered and will have to await a definitive solution until such time as they are addressed by our courts. Nevertheless, the need for this treaty is apparent and its foundation in the humanitarian spirit of this country is firm. I look forward to an expeditious return of these citizens to the United States.

I ask unanimous consent that if Senator CASE, who is the ranking minority member on the committee, desires to make an insertion in the RECORD it be admitted.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I might advise the distinguished manager of the bill that I talked to Senator CASE a moment ago. He is occupied in an important conference with the Foreign Relations Committee.

Mr. SPARKMAN. I know. I should be there myself.

Mr. BAKER. And he indicated that he did not have any further requirement for time now and was willing for us to go ahead on passage of this resolution this afternoon.

Mr. ROBERT C. BYRD. Has all time been yielded back?

Mr. SPARKMAN. Anyone else?

Mr. President, I yield back such time as I have.

Mr. GRIFFIN. I yield back the time I have remaining.

The PRESIDING OFFICER. The first question is on agreeing to the declaration of the resolution of ratification.

The declaration to the resolution of ratification was agreed to as follows:

That the United States Government declares that it will not deposit its instrument of ratification until after the implementing legislation referred to in Article IV has been enacted.

The PRESIDING OFFICER. The question is on agreeing to the resolution of ratification on Executive D, 95th Congress, first session, treaty with Mexico on the execution of penal sentences. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. MCCLELLAN), the Senator from South Dakota (Mr. ABOUREZK), and the Senator from Louisiana (Mr. JOHNSTON) are necessarily absent.

I further announce that the Senator from Mississippi (Mr. EASTLAND), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Louisiana (Mr. LONG), and the Senator from Mississippi (Mr. STENNIS) are absent on official business.

Mr. STEVENS. I announce that the Senator from Idaho (Mr. MCCLURE), and the Senator from South Carolina (Mr. THURMOND) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

I further announce that, if present and and voting, the Senator from South Carolina (Mr. THURMOND) would vote "yea."

The yeas and nays resulted—yeas 90, nays 0, as follows:

[Rollcall Vote No. 316 Ex.]

The PRESIDING OFFICER. Two-thirds of the Senators present and voting having voted in the affirmative, the resolution of ratification is agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution of ratification was agreed to.

Mr. SPARKMAN. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, there is a nomination reported earlier today, which has been cleared on both sides of the aisle. While the Senate is in executive session, I ask unanimous consent that the 1-day rule be waived and that the Senate proceed to the immediate consideration of the nomination.

Mr. BAKER. Mr. President, reserving the right to object, and I will not object, the matter has been cleared and I am happy to report to the majority leader there is no objection to proceeding to the consideration and confirmation of this nomination.

Mr. ROBERT C. BYRD. I thank the distinguished minority leader.

The PRESIDING OFFICER. The nomination will be stated.

DEPARTMENT OF JUSTICE

The second assistant legislative clerk read the nomination of Hubert T. Taylor, of West Virginia, to be U.S. marshal for the northern district of West Virginia.

Mr. ROBERT C. BYRD. Mr. President, I have been asked by my senior colleague to request unanimous consent to waive the 1-day rule. I thank the minority leader for agreeing to that waiver. I yield now to my distinguished senior colleague Mr. RANDOLPH.

The PRESIDING OFFICER. The Senator from West Virginia is recognized.

Mr. RANDOLPH. Mr. President, I thank the very able majority leader. I express appreciation also to the distinguished minority leader. This position that Hubert Taylor of Martinsburg, W. Va., will be called upon to fill is that of U.S. marshall for the northern district of West Virginia. The position of U.S. marshal is in all of our States, a very important law enforcement assignment.

I have felt for many years that we need to give very careful attention—those of us who are in the Senate—to any endorsement of a candidate for such a position, and to the approval procedure once the nomination has been forwarded from the President to the Senate. This nomination has worked its way through the Justice Department, the White House, and the Judiciary Committee. And now it is before the Senate.

I have known Hubert Taylor for more than 25 years. He is, as I have noted, a native of Martinsburg, W. Va., in the eastern panhandle of our State.

I know that Senator BYRD and I have an obligation always to support those candidates who we believe will discharge their duties in an effective and responsible manner. In this regard, it should be stressed that Hubert Taylor has had 19 years of Federal law enforcement experience, including an assignment to the White House Police detail as a member of the U.S. Secret Service. He has worked in private industry as well as in Government, as a law enforcement officer.

It is my desire to indicate that he is a gentleman of character, a man of citizenship responsibility, and an individual who is industrious, personable, and very qualified for the important duties which he will assume as U.S. marshal.

I know that the Federal judge for the northern district of West Virginia, the Honorable Robert E. Maxwell, of Elkins, W. Va.—a man in whom Senator BYRD and I have great trust—wants always to have a marshal, as well as deputy marshals, who will serve with him in the best interests of the people of that district. Hubert Taylor meets this test.

I thank my colleague for giving me the opportunity to speak these words in behalf of the nominee for U.S. marshal for the northern district of West Virginia.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. ROBERT C. BYRD. Mr. President, I join my distinguished colleague in the words that he has stated.

I move to reconsider the vote by which the nomination was confirmed.

Mr. RANDOLPH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. RANDOLPH. I ask unanimous consent that the President be notified of the confirmation of this nomination.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate resume legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

YOUTH EMPLOYMENT—CONFERENCE REPORT

Mr. NELSON. Mr. President, I submit a report of the committee of conference on H.R. 6138 and ask for its immediate consideration.

The PRESIDING OFFICER (Mr. WILLIAMS). The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6138) to provide employment and training opportunities for youth, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of July 19, 1977.)

Mr. NELSON. Mr. President, I ask unanimous consent that the following professional staff members of the Committee on Human Resources have the privileges of the Senate floor during the consideration of the conference report on H.R. 6138, the Youth Employment and Demonstration Projects Act of 1977: Richard Johnson, Scott Ginsburg, Martin Jensen, Jim O'Connell, and Babette Polzer.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, the conference agreement on the Youth Employment and Demonstration Projects Act of 1977 was signed unanimously by all the conferees on the part of both the Senate and the House of Representatives. The conference report passed the House of Representatives on July 19, by a vote of 356 to 58.

The Senate version of this legislation passed the Senate on May 26 by a vote of 80 to 3.

The conference agreement embodies the principal elements of the bill that the Senate passed, and also includes several significant elements contained in the House-passed bill. The conference agreement contains four major youth employment programs:

Title I of the bill establishes a Young Adult Conservation Corps, to provide work for unemployed youths in the Nation's parks and forests, by adding a new title III to the Comprehensive Employment and Training Act—CETA—with a 3-year authorization of such sums as may be necessary through fiscal year 1980 for such title.

Title II of the bill amends CETA by adding at the end of title III thereof a new part C, entitled "Youth Employment Demonstration Programs," with a 1-year authorization of appropriations through fiscal year 1978. This new part C contains three subparts: Subpart 1 authorizes "Youth Incentive Entitlement Pilot Projects" to test the efficacy of guaranteeing part-time work for youths who return to or remain in school. Subpart 2 authorizes "Youth Community Conservation and Improvement Projects" to provide work on rehabilitation of public facilities and low-income housing and on local conservation projects. Subpart 3 authorizes "Youth Employment and Training Programs" to provide a broad variety of employment and training opportunities for youths in local communities throughout the Nation.

President Carter's economic recovery program sent to Congress on January 31 of this year included budget requests totaling $1.5 billion for the programs authorized by this legislation, to be spent through the end of fiscal year 1978.

Of this total, $1 billion has already been appropriated by the Economic Stimulus Appropriations Act (Public Law 95-29). The administration will obligate these funds soon after the signing of this legislation. The remaining $500 million which the President has requested for the youth employment program will be considered by the Appropriations Committee in a supplemental appropriations bill for fiscal year 1978.

The administration estimates that the funds appropriated to carry out the purposes of this legislation will support 200,000 employment and training opportunities for youths. Of the total, $350 million will be made available for carrying out the Young Adult Conservation Corps, supporting approximately 35,000 enrollees in the Corps under the new title VIII of CETA added by this legislation. The remaining $1,150,000,000 budgeted for the purposes of this legislation would support about 165,000 employment and training opportunities throughout the Nation under the programs authorized in the new part C of title III.

YOUNG ADULT CONSERVATION CORPS

The conference agreement establishes a Young Adult Conservation Corps, to provide useful work to unemployed youths from ages 16 to 23—inclusive—in our parks and forests. The Corps is open to all unemployed youths, whether economically disadvantaged or not.

The conference agreement authorizes the appropriation of such sums as may be necessary for each of fiscal years 1978 through 1980 for carrying out the Young Adult Conservation Corps under the new title VIII of the Comprehensive Employment and Training Act—CETA.

The Corps would be administered by the Secretary of Labor, who would enter into interagency agreements with the Secretaries of the Interior and Agriculture. The day-to-day operation of Corps projects—the work to be done on the projects and the centers where the youths would reside and be based—would be under the control of the Departments of the Interior and Agriculture. The Secretary of Labor would refer eligible youths who wish to enroll in the Corps to the Secretaries of the Interior and Agriculture, who would make the final selection of the youths to be enrolled in the Corps. The maximum enrollment period will be 12 months for each youth—or three or fewer periods which total 12 months.

The conferees accepted the provision of the Senate bill providing that, in referring candidates for enrollment in the Corps, the Secretary of Labor shall undertake to assure that an equitable proportion of candidates shall be referred from each State. However, the House conferees insisted upon deleting the provision that no less than one-half of 1 percent be referred from each State, and that provision is not in the conference agreement.

While most of the Young Adult Conservation Corps projects will be carried out in national parks and forests, the conference agreement reserves 30 percent of the funds for the Young Adult Conservation Corps to be made available for projects to be carried out by States and local agencies. The conference agreement provides that such funds be allocated to each State on the basis of youth population within that State.

While the activities of enrollees in the Young Adult Conservation Corps are primarily focused upon work on public lands, Corps members could be used in emergency situations on private lands for such purposes as fighting forest fires and other natural disasters when failure to do so endangers public lands in the area.

The Senate prevailed in the conference deliberations in its position that the Department of Labor will serve as the "umbrella" agency for the Young Adult Conservation Corps. The Senate bill and the conference agreement are in accord with the President's proposal in this respect.

The conferees have made clear, in the joint explanatory statement, the intent of the conferees that the two land man-

agement agencies, the Departments of the Interior and Agriculture, have the responsibility for the day-to-day operation of the program. In addition, the conferees emphasize that, as provided in the conference agreement, these agencies will participate in the development of the pool of candidates to be referred for enrollment in the Corps and that the Secretaries of the Interior and Agriculture have the responsibility for final selection of any candidates referred by the Department of Labor. The transfer of funds provision is intended to insure that the Departments of the Interior and Agriculture will have the necessary funds readily available for prompt implementation of this program. The conferees expect that the funds appropriated for the purposes of this program which are necessary to carry out the Interior and Agriculture Departments' responsibilities will be transferred to those Departments expeditiously.

Section 802 of the new title VIII specifically provides that the Young Adult Conservation Corps program is to be administered through interagency agreements between the Secretary of Labor and the Secretaries of the Interior and Agriculture. The interagency agreements will cover all aspects of the administration of the program, consistent with the delineation of responsibilities spelled out in the legislation. The interagency agreement will therefore set forth the procedures to be used in the development of lists of candidates for referral to the Secretaries of the Interior and Agriculture. Although the bill does require that the list of referrals only come from the Secretary of Labor, the process for making up that list and referral of candidates should be made pursuant to interagency agreement. This would also include the specific qualifications for youths eligible for placement in the Young Adult Conservation Corps. The Secretary of Labor would carry out his responsibilities for referring youths as provided in the interagency agreements; and, likewise, the Secretaries of the Interior and Agriculture would carry out their responsibilities with respect to the location of centers and employment conditions on the projects in accord with the interagency agreements.

YOUTH EMPLOYMENT DEMONSTRATION PROGRAMS

Title II of the conference agreement amends title III of CETA by adding a new part C which establishes youth employment and training programs authorized in the Senate and House versions of this legislation—other than the Young Adult Conservation Corps.

The new part C is entitled "Youth Employment Demonstration Programs." The purpose of the new part is to establish a variety of employment, training, and demonstration programs to explore methods of dealing with the structural unemployment problems of the Nation's youth.

Subpart 1 of the new part C creates a program called "Youth Incentive Entitlement Pilot Projects." A limited number of pilot projects will be funded for the purpose of demonstrating the efficacy of guaranteeing employment opportunities to youths who resume or maintain attendance in a secondary school or a high school equivalency program. Economically disadvantaged youths between the ages of 16 and 19—inclusive will be eligible for part-time work during the school year and full-time work during vacation periods. These pilot projects were authorized in the House bill, which earmarked 25 percent of the part C funds for such projects. Under the conference agreement, youth incentive entitlement pilot projects will receive 15 percent of the part C funds.

Subpart 2 of the new title III–C authorizes "Youth Community Conservation and Improvement Projects," the Stafford-Randolph proposal contained in the Senate bill. Unemployed youths between ages 16 and 19—inclusive—would be provided work opportunities on community improvement projects in the rehabilitation or improvement of public facilities, repair to low-income housing—including weatherization and other energy conservation techniques, and conservation, maintenance, or restoration of natural resources on non-Federal public lands. All unemployed youth, whether economically disadvantaged or not, would be eligible to participate on work projects under this subpart.

The conferees accepted the community improvement program without any substantial change. The Senate bill had authorized such sums as may be necessary for this program, but the conferees decided to earmark 15 percent of the part C funds for the community improvement programs.

Under subpart 2, funds are to be allocated to the statewide level in such a manner that 75 percent of such funds are allocated on the basis of the relative numbers of unemployed persons within each State as compared to all States, with no State receiving less than one-half of 1 percent of the funds so allocated.

Project applications would be submitted to each prime sponsor by public and private nonprofit agencies within the prime sponsor's area. Project application's approved by the prime sponsor would be submitted to the Secretary of Labor, who would select project applications for approval within the total funding level allocated for use within each State.

The remaining 25 percent of the funds under subpart 2 would be available as the Secretary deems appropriate, except that not less than 2 percent would be used for Native American youth projects and 2 percent for projects for migrant and seasonal farmworker youths.

Subpart 3 of the new part C provides financial assistance for programs for a variety of employment opportunities and appropriate training and supportive services for eligible participants. It is the purpose of this subpart to enable local communities to develop programs designed to make a significant long-term impact on the structural unemployment problems of youths, to enhance the job prospects and career opportunities of young persons. The goal of such programs is to enable participants to secure unsubsidized employment in the public and private sectors of the economy.

Unemployed and underemployed youths from ages 16 to 21—inclusive—are eligible to participate in such programs, as well as in-school youths ages 14 and 15, to the extent authorized by regulations issued by the Secretary of Labor. Youths are not eligible if they are members of households whose family income exceeds 85 percent of the lower living standard income level.

The Bureau of Labor Statistics lower living standard budget for a family of four is $10,000, so the eligibility level of 85 percent of the lower living standard budget means that a youth who is a member of a family of four persons could participate if family income does not exceed $8,500. The conference agreement is a compromise between the eligibility level specified in the Senate bill of 70 percent of the lower living standard budget, and the eligibility level specified in the House bill of 100 percent of the lower living standard income level.

The Secretary may provide by regulation for participation in certain supportive services of persons who do not meet the income eligibility requirement. In addition, the conferees accepted a provision in the House bill allowing 10 percent of the funds available for subpart 3 to be used for programs which include youths of all economic backgrounds, without regard to family income.

Under subpart 3, 75 percent of the funds available for this subpart would be made available for CETA prime sponsors, with the remainder made available to the Governor for special statewide services, Native American programs, migrant programs, and the Secretary's discretionary projects.

The funds made available to prime sponsors will be allocated among prime sponsors by a formula based 37.5 percent on relative numbers of unemployed persons, 37.5 percent on relative numbers of unemployed persons residing in areas of substantial unemployment—6½ percent or higher unemployment rates, and 25 percent on the number of persons in low-income families. The House conferees insisted upon deleting the provision of the Senate bill which provided that not less than one-half of 1 percent of such funds be allocated to each State, and that provision is not in the conference agreement.

The conference agreement includes provisions to assure that services for youths in the regular training programs under title I of CETA will not be reduced, because of assistance available under subpart 3. Any modification in the plan for the use of title I funds will be approved by the Secretary of Labor, who would base his action upon a determination in each case that there is no reduction of regular training opportunities for youths, because of the new funds available under this subpart.

The conferees accepted the provisions in the Senate bill providing that each prime sponsor establish a youth council under the prime sponsor's CETA plan-

ning council. The council would consist of representatives of educational agencies, business and labor, agencies serving youth, and youths themselves. It would be responsible for planning and review of activities under both subparts 2 and 3, and for making recommendations to the prime sponsor's planning council with respect to youth employment and training activities.

The conferees accepted the Senate bill's provision requiring that the Secretary and prime sponsors give special consideration to community-based organizations which have demonstrated effectiveness in the delivery of employment and training services, such as Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, employer-related nonprofit organizations, and other similar organizations. This requirement applies both to the prime sponsor's use of allocated funds, and the Secretary's use of discretionary funds. This provision was sponsored by Senator SCHWEIKER.

Under the conference agreement, not less than 22 percent of each prime sponsor's allocation is to be used to carry out arrangements to serve in-school youths pursuant to joint agreements entered into by the prime sponsor and a local educational agency or agencies. Under this provision—sponsored by Senators JAVITS and HUMPHREY—employment opportunities and other training and supportive services are to be provided to eligible participants enrolled in a program leading to a secondary school diploma, a junior or community college degree, or a technical or trade school certificate of completion.

Out of the funds available for subpart 3, the conference agreement provides for several special funding set-asides.

The conference agreement provides that an amount equal to 5 percent of the amount available for part C shall be made available to Governors for special statewide services, including employment and training opportunities for eligible youths who are under the supervision of the State—such as those in correctional programs—as well as for other model programs involving coordination among various agencies within the State.

The conference agreement also provides that an amount equal to not less than 2 percent of the funds available for part C shall be made available for programs for Native American eligible youths; and an amount equal to not less than 2 percent of the funds available for part C shall be made available for programs for eligible youths in migrant and seasonal farmworker families.

The remainder of the funds under subpart 3 is available for the Secretary's discretionary projects. With these funds, the Secretary of Labor is authorized to make arrangements—either directly or by contractual arrangements with prime sponsors, public agencies, and private organizations—to carry out innovative and experimental programs to test new approaches for dealing with youth unemployment problems.

The conference agreement retains the Senate requirement that the Secretary of Labor consult with the Secretaries of Commerce; of Health, Education, and Welfare; of Housing and Urban Development; and of Agriculture; and the Directors of the ACTION Agency and the Community Services Administration. The Secretary's discretionary funds may be transferred to other Federal departments and agencies to enable them to carry out functions delegated to them by the Secretary of Labor.

The conferees accepted the Senate bill's provisions, sponsored by Senators JAVITS and HUMPHREY, providing that the National Occupational Information Coordinating Committee give special attention to the problems of unemployed youths, by such means as working to develop State occupational information systems, to make job information more accessible to local schools. The conference agreement also retains the Senate bill's provisions providing that the Secretary of Labor transfer between $3 and $5 million annually from his discretionary funds to enable the National Occupational Information Coordinating Committee to carry out its functions under this legislation.

The conference agreement provides that, in carrying out youth employment programs under the new part C, appropriate efforts are to be made to develop new and restructured occupations and job classifications. Both the Senate and House bills contained such language. In addition, the Senate-passed bill contained an amendment introduced by Senator DOMENICI designed to make applicable to jobs for youths the "prevailing rates of pay for occupations and job classifications of individuals employed by the same employer," instead of prevailing rates of pay "in similar occupations."

The conference agreement retains Senator DOMENICI's language, and further clarifies the procedures to be used by the Secretary of Labor in determining appropriate rates of pay for youths to be employed in jobs supported under this legislation.

The conference agreement provides that youths shall be paid no less than the applicable Federal or State minimum wage. Nevertheless, if a young person is hired to fill an existing occupation or job classification, the prevailing wage for that occupation or job classification would apply. But if the prime sponsor, the employer, and the labor organization representing employees engaged in similar work in the same area have entered into an agreement to pay a lower wage for the job to be filled by a youth, then the wage would be that specified in the agreement.

However, as I pointed out, the conferees expect prime sponsors to make appropriate efforts to create new and different or restructured jobs for eligible youths. The conference agreement provides that, whenever an existing job is reclassified or restructured, youths employed in such jobs shall be paid not less than the applicable minimum wage; if a labor organization represents employees engaged in similar work in the same area, such youths shall be paid at the rates specified in an agreement entered into by the appropriate prime sponsor, the employer, or the labor organization with respect to such reclassified or restructured jobs. If no agreement is reached within 30 days of the initiation of the agreement procedure, the labor organization, prime sponsor, or employer may petition the Secretary of Labor, who shall establish appropriate wages for the reclassified or restructured positions, taking into account wages paid by the same employer to persons engaged in similar work.

In the case of "new or different" job classifications or occupations, the Federal or State minimum wage would apply, but any dispute as to whether a job is actually new or different from an existing, restructured, or reclassified job could be submitted to the Secretary of Labor for a decision within 30 days. If the Secretary finds that the job is not new or different, the provisions relating to existing, restructured, or reclassified jobs would apply.

The aim of these provisions is, therefore, to assure that if a youth is employed in an existing job, with respect to which there is a prevailing rate of pay, that will continue to apply to any individual filling that position. While a mere change in the title of an existing job would be the kind of action which could be appealed to the Secretary of Labor, the creation of new and different jobs for youths to be employed under this legislation would be subject only to the applicable minimum wage law.

The special veterans provisions contained in the Senate bill were accepted by the conferees. The conference agreement provides for the Secretary of Labor to take appropriate steps for the increased participation, in CETA public service employment programs and job training, of qualified disabled veterans and Vietnam-era veterans who are under 35 years old.

Under the conference agreement, individual prime sponsors would develop local goals for veterans' participation in public service employment programs, taking into account the number of qualified eligible veterans and the number of qualified persons in other significant segments of the population in the area served by such prime sponsors. In addition, the conference agreement provides that appropriate veterans organizations or groups be invited to serve as temporary members of prime sponsors' planning councils, State manpower services councils, and the National Commission for Manpower Policy.

The conference agreement retains the Senate bill's provisions requiring that, in using public service employment funds under titles II and VI of CETA, prime sponsors shall give special consideration, in filling elementary and secondary school teaching positions, to unemployed persons with previous teaching experience who are certified by the State.

NEED FOR YOUTH EMPLOYMENT LEGISLATION

Mr. President, the need for this youth employment legislation is compelling. The unemployment rate for youths 16

to 24 years old is 14 percent—twice the rate for the labor force as a whole. In fact, youths 16 to 24 years old account for close to half of all the unemployed persons in the Nation.

Even when general economic conditions improve, the structural unemployment problems facing youths entering the labor force do not significantly improve.

The chronic youth unemployment problem is the reason that this legislation is so important. It will provide financial resources for testing a variety of programs to help youths move out of the ranks of the unemployed and into useful employment in our Nation's communities.

Many members of this body made important contributions to this legislation.

Senator JAVITS, the ranking minority member of both the full Human Resources Committee and the Subcommittee on Employment, Poverty, and Migratory Labor, sponsored several important provisions in the legislation, and as always worked closely with the majority of the committee on all aspects of the legislation.

Senator HUMPHREY joined with Senator JAVITS in sponsoring provisions in the legislation designed to strengthen in-school youth programs and occupational information systems.

Senator JACKSON was the sponsor of the Young Adult Conservation Corps, to provide year-round work in the Nation's parks and forests for unemployed youths ages 16 to 23.

Senators STAFFORD and RANDOLPH authored the youth community and conservation improvement program, to provide work for unemployed youths, ages 16 to 19, in improving and rehabilitating community facilities and conserving natural resources on non-Federal public lands in urban and rural communities.

Senators CRANSTON and KENNEDY proposed several provisions which were originally contained in the Youth Intiatives Act of 1977 (S. 20) which they introduced on January 10 of this year.

Senator SCHWEIKER sponsored the provisions requiring that, in carrying out youth employment and training programs, special consideration be given to community-based organizations of demonstrated effectiveness.

The broad bipartisan basis for this youth employment legislation is demonstrated by the fact that one of the bills on which the legislation was based is the Youth Employment Act (S. 503), introduced by Senators MCCLURE, BELLMON, DOMENICI, BAKER, DANFORTH, GARN, HANSEN, HATCH, HAYAKAWA, JAVITS, LAXALT, LUGAR, SCHMITT, STEVENS, and WALLOP on January 28 of this year.

Mr. President, this legislation, which was requested by President Carter in his March 9 message on youth employment, was supported and developed in both the Senate and House of Representatives by Republicans and Democrats, by conservatives and liberals. I know of no piece of legislation with broader support than that contained in this conference agreement, which is designed to provide the legislative base for the beginning of a concentrated attack upon youth unemployment in this Nation.

The legislation combines the very best features of the Civilian Conservation Corps—CCC—program of the 1930's, putting youths to work on useful conservation projects in both national and State parks and forests, with education and training programs leading to better employment opportunities for young people as they pursue their adult careers.

Mr. President, I yield the floor.

Mr. JAVITS. Mr. President, I am pleased today to join my colleague from Wisconsin, (Mr. NELSON), the distinguished chairman of the Senate Employment Subcommittee, in urging the Senate to approve the conference report on the youth employment bill.

The youth unemployment problem continues to be one of the more vexing we face in this country. While the national unemployment rate moved down in May to 6.9 percent of the labor force, the unemployment rate of youths aged 16 to 24 remains around 15 percent, because almost half of the total unemployed—3.2 million out of 6.7 million—are youth in this age group. And in some areas of our country, especially in the central cities, nonwhite youth unemployment approaches the shocking rate of 50 percent.

The bill the House-Senate conferees have agreed to will establish programs which will begin to relieve the disproportionate burden of joblessness borne by our young people by creating up to 200,000 job and training slots at a 2-year cost of $1.5 billion. Basically, the conferees have agreed upon the following legislative principles, to wit:

One, that youth employment programs need to be targeted at low income youths and at high unemployment areas of our country;

Two, that linkages need to be established between education and work, in order to improve the transition of youths from school to employment;

Three, that work experience programs must include a significant component of training, counseling, guidance, and so forth in order to upgrade the long run employability of youth. Short-term "make work" approaches are not only futile but are wasteful of taxpayers' money and demeaning to the youth participants themselves.

Four, that innovative and experimental programs and projects must be tested in order to demonstrate which employment and training programs offer the best hope for removing the competitive disadvantages that often characterize the labor market experience of young people.

As Senator NELSON has explained, the agreed upon bill includes several imaginative and innovative ideas based upon these four underlying principles.

The bill would authorize a Young Adult Conservation Corps, which would involve up to 35,000 youths 16 to 23 years old from all States in conservation and maintenance jobs in Federal and non-Federal parks and forests. The Corps is to be administered by the Secretary of Labor, through interagency agreements with the Secretaries of the Interior and Agriculture. The conferees have agreed upon an appropriation recommendation of $350 million for the period ending September 30, 1978, for the Conservation Corps.

Second, the conferees agreed to the youth incentive entitlement program contained in the House bill and proposed initially by Congressman SARASIN of Connecticut, the ranking Republican on the Employment Opportunities Subcommittee. This program of pilot demonstration projects, described in subpart 1 of part C, would guarantee part-time jobs to poor youths who attend school. The so-called Sarasin program will test among other concepts the proposition that youths can be encouraged to remain in school and complete their studies if they are given the opportunity to have gainful employment. An appropriation of $172 million has been contemplated for this new program which will operate in approximately 20 prime sponsor areas selected by the Secretary of Labor.

Third, and to accentuate the importance the conferees accorded to programs to facilitate the transition of youth from school to work, the bill includes provisions authored by myself and Senator HUMPHREY which were contained originally in our youth bill—S. 170—and in our amendment to the President's youth bill. These would require the 442 or so prime sponsors in the United States to set aside 22 percent of the subpart 3 funds allocated to them by formula in order to operate programs for in-school youth. These provisions break important new ground by requiring every CETA prime sponsor for the first time to operate in-school youth programs jointly with local education agencies.

I hasten to add that this is not intended to be a categorical program, because prime sponsors and local education agencies are free to agree to undertake any one of a combination of the employment, training, or supportive services enumerated in section 342. I should emphasize the understanding of the conferees, however, that these programs are to be administered jointly by prime sponsors and local education agencies and are to be undertaken pursuant to agreements between them which describe in detail the programs to be operated. If the prime sponsor local government and the education agency or agencies in its jurisdiction are unable to reach agreement in respect of the programs to be undertaken, the earmarked 22 percent set aside cannot be expended.

In order to clarify one point regarding the size of the set-aside, I might add that the dollar amount contemplated by the conferees is the same as in the Senate bill—approximately $135 million. The percentage has been raised to 22 percent, from the 15 percent contained in the Senate bill, because of the structural change agreed to by the conferees. Jointly administered in-school youth programs are now included as 22 percent of the amounts allocated to prime sponsors in subpart 3 of the new part C amendment to title III, in contrast with their inclusion in the Senate bill as 15 percent of the total part C funds. In both the conference agreement and the Senate

bill, therefore, 22 percent of the total amounts allocated to prime sponsors is to be utilized for jointly administered programs for inschool youth.

This program is intended to bring work study or cooperative education, as well as a host of other important programs and services to low-income, inschool youth through the establishment of collaborative processes between local manpower agencies and local education agencies.

Fully one-third of the 16- to 24-year-old labor force and over half of the 16- to 19-year-old labor force is enrolled in school, and Congress intends for this cohort to receive top priority in being served.

It is my hope, and I am sure that of Senator HUMPHREY as well, that prime sponsors and local education agencies will work closely with one another in the design, development, and operation of programs of work experience, training, counseling, vocational exploration, career education, and so forth, for inschool youths. Up to the present, competition between prime sponsors and local education agencies has been the rule, while cooperation has been the exception. There is a need to nudge these two competing systems closer together, so that the inschool youth labor force can be served in a more efficient and sensible manner.

As the Senate report stressed,

> The Committee believes it is essential that cooperation take place between prime sponsors and local education agencies in providing employment opportunities and training and supportive services for youths enrolled in school. In the absence of such linkages, inschool youths may continue to be served by two separate and competing delivery systems, which bifurcate their labor market experience at a critical stage of their transition between school and work.

We in the Senate will be watching closely to see how this program evolves in the coming months and expect prime sponsors and local education agencies in the public interest to put aside any jurisdictional rivalries they may have in operating these programs.

The set-aside concept, which has been coauthored by Senator HUMPHREY and myself, can begin to improve the entire process of transition from school to work by strengthening the linkages between education and employment through such programs as those which are designed to familiarize youths with the labor markets they are about to enter. Indeed, this concept has been endorsed by the Government's own manpower advisory body, the National Commission for Manpower Policy, which stated in its October 1976 report, "A range of policy and program thrusts are possible for improving the transition process from school to work which involve both the education system and the labor market. New linked approaches appear necessary between the schools and the labor market agencies including CETA." This is precisely what we had in mind when initially we proposed the set-aside provision, and we are so pleased that Congress, in its wisdom, has seen fit to ratify it.

Time and time again, it is said that we need to build better bridges between the world of education and the world of work if we are to eradicate the shocking problem of structural unemployment and underemployment in our country. Congress is now about to enact a bill which provides the authority to begin construction of those bridges. I am counting on our Nation's prime sponsors and local education agencies to work together to build those bridges from both sides; indeed, the futures of a generation of American youths may well depend upon their collaboration.

Mr. President, two recent publications are suggestive of the salutary effects of strengthening the linkages between education and work. The first is an excellent publication of the U.S. Government Printing Office developed for the Office of Manpower, HEW, by Urban Management Consultants of San Francisco, Inc. It is entitled "Education and CETA" and I ask unanimous consent to have printed in the RECORD at the end of my statement a few brief excerpts. I found the publication to be useful particularly for its analysis of coordination agreements between prime sponsors and local education agencies.

The second is a publication of the Work in America Institute, in New York, and describes the success of high school work-study programs undertaken by the Continental Illinois Bank of Chicago. I ask unanimous consent to have this article printed in today's RECORD at the end of my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. JAVITS. A fourth element contained in the conference agreement is the so-called "Stafford Program," proposed by the distinguished Senator from Vermont (Mr. STAFFORD). This program of community conservation and improvement projects will involve the employment of some 20,000 16-to-19-year-olds in small community rehabilitation programs. When the public works bill was on the floor early this year, it contained a title II youth employment program similar in most respects to subpart 2 of this bill. Senator STAFFORD, Senator RANDOLPH, and other cosponsors stayed their hands, as it were, and agreed to strip the bill of that title because they wanted to give the Human Resources Committee a chance to consider the program. I am so pleased the full Senate and the House conferees have seen the great merit of this program and I commend the Senator from Vermont (Mr. STAFFORD) and the Senator from West Virginia (Mr. RANDOLPH) for their wisdom in developing it.

In the Youth Employment and Demonstration Projects Act of 1977, we have provided for greater targeting than has been achieved heretofore. We have done this in two ways, to wit: (1), at low-income youths, by limiting participation in the subpart 3 programs to youths from families who earn less than 85 percent of the lower living standard budget and, (2), at high unemployment areas, by distributing 37½ percent of the subpart 3 allocated funds to areas of substantial unemployment. This should help us focus what are really very tiny amounts, in relation to the magnitude of the youth unemployment problem, at the individuals and areas of greatest need.

In respect of the wage provisions, which were the subject of considerable debate in this body, I believe the conference agreement contains provisions which all can agree to. As our colleagues will recall, we faced a dilemma in this bill: Either we provide for prevailing wages for the job classifications in which youths were employed—and thereby perhaps unduly limit the number of positions that could be made available with the sums contemplated—or we provide less than the prevailing wage—and thereby perhaps displace existing civil servants or impede the rehire of employees on layoff. Some thought that the language in the Senate bill which allowed below-prevailing rates of pay for "restructured" jobs, was likely to cause far too much displacement of adult workers, since the question of "Who decides?" was not spelled out and, therefore, jobs could be called "restructured" rather unilaterally.

Similarly, the Senate bill language mandating the prevailing wage "for similar occupations," was thought by some to be far too broad, since really anything can be made similar, so the creativity in respect of the job opportunities provided for youths would be reduced.

For this reason the Senate adopted an amendment proposed by Senator DOMENICI and others which basically placed the Secretary of Labor in the position of making the determination as to whether youths were placed in jobs for which the prevailing rate of pay was required.

This principle of secretarial determination was accepted by House conferees when I proposed it be made a part of the language proposed by Mr. QUIE, the ranking Republican on the Education and Labor Committee. The conference agreement provides, therefore, first, that youths be paid the prevailing wage when they are placed in existing jobs, unless a union makes an agreement respecting the below-prevailing rates of pay; and, second, that youths placed in restructured jobs receive the wage stipulated in an agreement between the union and the employer, except that if no agreement is reached after 30 days, the union, the prime sponsor or the employer can petition the Secretary of Labor to make a determination as to the appropriate wages which are to be paid youths in the restructured positions.

Furthermore, the conference agreement permits youths to be paid the minimum wage or higher if they are placed into new jobs. If a dispute arises as to whether the jobs are truly "new," the union may petition the Secretary of Labor to determine whether or not the jobs are "new." If he determines they are, the wage stands. If he determines they are not new, the agreement procedure for restructured jobs goes into effect.

Mr. President, I believe Senate and House conferees have brought back to their respective bodies an acceptable conference agreement. We need to begin as soon as possible to implement all the innovative and imaginative programs

provided for in this bill. I urge my colleagues in the Senate to approve this conference report so we can get on with the job of improving the opportunities for those who are, at one and the same time, our most precious national treasure and our future; our youth.

EXHIBIT 1

EDUCATION AND CETA

FIND OPPORTUNITIES

This guide offers insights into an approach designed to help you find attractive opportunities to work together with CETA. This approach consists of the following steps:

Acquiring knowledge about CETA;

Assessing your program's own needs or unmet objectives;

Analyzing areas of commonality where CETA might fit your program's needs;

Discovering possible opportunities to coordinate with CETA;

Weighing the costs and benefits of coordination; and, if applicable,

Negotiating and implementing a joint project.

The chapters in this guide follow this approach.

WHY COORDINATE WITH CETA?

Adult education, vocational education and CETA programs are intended to serve highly complementary purposes. Each is directed toward preparing individuals with the appropriate basic knowledge, skills and awareness needed to cope in the world of work. Vocational education is further concerned, as is CETA, with providing job-related training, and securing and retaining permanent employment consistent with an individual's capabilities, capacities and interest. Adult education includes this within the broader scope of providing opportunities for undereducated adults to acquire skills and information needed to become more employable, productive, and responsible citizens and to assist such persons to improve their problem-solving and decision-making skills.

Education and CETA programs serve overlapping target groups. Common constituents include adults and youth who are unemployed, underemployed, or economically disadvantaged. Adult education and vocational education programs demonstrate complementary strengths with CETA in several service delivery areas, particularly formal instruction and training. Furthermore, adult education, vocational education and CETA programs currently face a number of program issues which affect and are affected by coordination. Ideally, through coordination, each program can better meet its objectives, avoid duplication of services or participants, capitalize on program strengths, and address program concerns. A discussion of each of these areas appears in Chapter 2.

THE IMPORTANCE OF LEADERSHIP

Interprogram coordination represents a significant challenge to the management skills of program leadership. First, coordination initiatives imply change, and organizations typically do not change comfortably without the exercise of leadership. Second, coordination initiatives with the potential for substantial gains almost always involve substantial risk; some in the organization may perceive this risk as being intolerably high. If both education and CETA leadership prepare properly, however, experience has shown that the risks associated with contemplated coordination arrangements can be identified early and openly discussed. Where the risks are acceptable to both education and CETA leadership, there remains a third challenge: gaining consensus among the counterpart staffs in acknowledging the risk, taking steps to reduce it, and viewing the residual risk as acceptable in relation to potential advantages.

Open and unequivocal commitment of the leadership of all agencies or programs is absolutely essential for the success of any coordination strategy.

The opportunities, problems and issues of interprogram coordination as they are identified and discussed in this guide are framed as leadership concerns. The approach proposed for searching out mutually appealing coordination arrangements assumes from the outset that the focus is on ways to preserve agency strengths, to improve agency performance, to enhance agency services, and to keep exposure to risk within tolerable limits. Of course, these are also primary concerns of CETA leadership.

THE FEDERAL ROLE

Adult education, vocational education, and CETA programs all receive Federal dollars. Even though agency autonomy in each program is high, Federal support can enhance coordination initiatives. In certain cases, Federal officials can be of value in removing obstacles to success, such as the granting of formal waivers or informal approval of a use of funds. Early assessment of the potential benefits and/or problems that the Federal sector can bring to the effort will enable deliberate actions to take advantage of the benefits and minimize the problems.

The HEW Regional Director's manpower coordination unit, headed by the Regional Manpower Coordinator, exists for just the purpose of assisting state and local program operators and CETA Prime Sponsors to work together more effectively. This staff has in recent months conducted detailed analyses of the operation of HEW programs in each state and is accordingly well-versed on the basic issues.

The Regional Manpower Coordinator will not attempt to deal with individual program issues, which are properly the responsibility of state and national agencies, Prime Sponsors, or the Department of Labor, but will be available to assist where requested with the analysis, design or implementation of coordination opportunities.

REDUCING THE RISKS

Each potential coordination arrangement will include certain risks as a part of its design. These risks are real and cannot be ignored in developing a successful agreement to implement the arrangement. The illustrative coordination arrangements in Chapter 3 specify major risks likely to be perceived by adult education, vocational education and CETA staffs, and the actions that could be taken to reduce each risk. Similar analysis by education administrators for other coordination options will generate similar indications of likely risk areas.

Early identification of potential risks can assist in making a final decision whether to proceed. It can also identify immediate actions that can be taken to reduce the risk. Once the arrangement is underway, however, the most significant risks will develop: those operating problems which may cause failure through lack of communication or absence of mutual agreement. A thorough written operating agreement (about which more later) will do much to prevent these occurrences. Identified risks can be addressed in the agreement and specific actions to prevent their occurrence laid out.

The benefits of coordination must be as clearly perceived by CETA as they are by the education program. If either organization does not believe that it will gain, the proposal will fail.

The more individuals actively involved in negotiating a coordination agreement, the higher is the probability that progress will break down before agreement is reached.

Early support of individuals in key decision-making capacities can make the process easier but it is essential that the merits of the proposal be argued convincingly while risks are presented in proper perspective.

Resistance to change will occur within both the education and the Prime Sponsor's organizations, but realistic strategies can be developed to overcome it. Habit, tradition, and fear for one's role in a new system are powerful deterrents to cooperation. If you anticipate them, you can deal with them on an individual-by-individual basis. If you ignore them, the resistance can gather momentum and severely compromise the goals of the proposal.

When planning to implement a coordination proposal, be as realistic as possible about what can be controlled or influenced and what is beyond current agency capability or capacity.

At this point, discussions with a counterpart in the other organization can begin with realistic chance of success. Initial discussions seldom result in immediate agreement, though. The individual with whom you are dealing will need time for internal assessment of the benefits and risks from his/her perspective. Therefore, it is important in first discussions to:

Introduce the proposal logically and as simply as possible, stressing the benefits to both agencies and to both agencies' clients;

Minimize premature discussions of organizational implications, budgets, authority, or other issues that involve "turf";

Try to view the initial reactions of the counterpart from that program's perspective. Remember a person is not convinced merely because his/her objectives have been silenced.

If the initial discussions are successful, there should be basic agreement as to the value of proceeding further. The first step therein should be the development of specific, mutually agreeable, realistic results for the project. In determining what is realistic, both education and CETA staff should together:

Review all original expectations for the project and modify them as necessary to be satisfactory to each organization;

Agree on the specific results that are expected from the coordination proposed; when this is achieved, put them in writing;

Exchange frank views on what constraints and obstacles to the proposal exist from the point of view of each agency, based on both internal and external analyses.

Once there is agreement on the results that both parties expect and the issues each thinks will arise as those results are pursued, it is necessary to design the operating details of the project and to record them in a written agreement. Developing the project plan is critical in one very special way—it is the initial test as to whether or not both programs can work together toward a common purpose.

Key officials of the agencies involved should agree on:

Specific actions/decisions that must take place prior to the signing of an agreement. This should include items such as procedural waivers, legal opinions, authority to enter into financial arrangements, broad organizational requirements, etc.

Specific individuals or other agencies that will need to be involved. These should be those individuals in a position to approve the specific actions or decisions listed above.

Strategy and timing for involving key individuals, particularly the Chief Elected Official, if required, or other highly placed individuals. Plans should include identification of issues that should be resolved prior to soliciting support and identification of arguments that will be most persuasive in gaining their support.

A schedule for completing the agreement. This should detail the schedule on which each action item or decision should take place and should specify individuals responsible for accomplishing each item.

NEGOTIATING A WRITTEN OPERATING AGREEMENT

Two steps remain in putting the coordination arrangement into operation:

Finalizing a written agreement that will specify the way coordination will take place;

Working together to carry out elements of the plan.

Both steps will probably move forward concurrently. In many cases the agreement will not (and need not) be a formal *contract* between agencies. Rather, the written agreement serves as a document which ensures that all staff participants in the project, particularly those who were not a part of its development, understand the results to be achieved and the various assignments that will ensure their accomplishment.

Note: An unwritten agreement is not an agreement at all—it is an understanding and understandings are easily misinterpreted as time goes by. If programs have something worth doing together, then it is worth taking the time to record the details properly. Everyone will have invested far too much time and energy by the time actual coordination activities are scheduled to start to base success on memories, impressions, or prior perceptions of what was agreed.

A written operating agreement is very different from a legal enabling agreement between the agencies. Because, in the eyes of many, detailed "agreements" are synonymous with contracts, they are frequently avoided as unnecessary or restrictive. In other cases, agencies sign agreements establishing the legal basis for coordinating but omit the necessary detailed description of how that coordination will take place. In either case, the result is usually confusion and misunderstanding at the operating level, requiring considerable time to discuss what was supposed to happen and in what way. In fact, absence of a written operating agreement can cause coordination to begin wrong or too late, dooming it from the start. It only takes limited experiences of this nature before both parties are ready to concede that it is easier to work alone.

Although they may vary widely in format and language, all good agreements state, at a minimum:

1. Precisely what is to be accomplished between the two parties (purpose, reason for coordinating).
2. The situations in which the agreement will apply.
3. A summary of the agency activities that are affected by coordination and the way in which these activities will be expected to serve the coordination project.
4. Who, in each organization, is responsible for the specific activities listed.
5. What will constitute service standards, response time, etc.
6. Administrative procedures (reporting procedures, supervision, etc.).
7. How and how often service standards will be reviewed.
8. Modification procedures.
9. Financial arrangements.

An agreement that covers the above items leaves little room for debate on what was intended, what was supposed to occur, when it was supposed to occur, or who was responsible. Although it is more difficult to agree on that kind of detail than it is to wait and "work things out" once coordination begins, your work in putting together a good agreement will be more than offset by the strengthened, predictable nature of the results.

An example of a complete operating agreement is included as Appendix I.

WORKING TOWARD SUCCESS

Once the coordination arrangement is underway, the challenge to all participants is keeping the initiative moving forward despite whatever obstacles may arise. If major obstacles have been anticipated the task will be easier, but under no circumstances will a new and different experience such as this be easy. Offered below are some tips on keeping the initiative on track.

1. Expect problems and budget enough time (both calendar time and person-hours) to deal with them. Even the most thorough planning cannot account for all contingencies.

2. When lack of progress in any one specific area threatens the undertaking, review the original agreement on benefits, particularly those accruing to clients, and the agreement to date, emphasizing where the ability to resolve issues has already been demonstrated.

3. Keep in mind that individuals in both organizations have the same kinds of concerns (political, personalities, regulations) and that both must decide how and with what speed to deal with internal issues.

4. If unable to resolve an issue that is critical to the success of coordination, don't move ahead until it is resolved (see item 1 above). There is almost never a reason to expect that resolution will become easier in the future.

5. Don't let individuals involved in implementing a coordination strategy get so involved in the process of accomplishing it that they forget why they wanted it in the first place.

6. Plan the work with a view toward conflicting or competing time requirements. If, for instance, the major activity in preparing for coordination must occur simultaneously with final preparation of the yearly program plan or an agency reorganization chances are coordination will come in second—and last.

7. Once it has been decided that coordination will in fact take place, internal staff of both programs should be thoroughly oriented on what this means for them and what will be expected of them. If staff is involved at the proper time, they are likely to have more of an interest in and commitment to the success of the effort.

EVALUATING THE PROCESS AND PROJECT RESULTS

If agencies agree to proceed on a coordinated approach to service delivery, they should make certain that both agencies profit from the experience and, if successful or not, learn why.

To gain this knowledge, which will be very valuable in designing future activities, evaluation of the results of the arrangement and the processes that took place will be needed. It is clear that whatever form the evaluation takes (simple or complex, formal or informal, quantitative or qualitative) the written operating agreement will provide the basic record of what the coordination effort set out to do. From this, any intentional or unintentional deviations can be measured and analyzed.

APPENDIX I

ILLUSTRATIVE AGREEMENT [1]

The following agreement is an adaptation of an actual agreement which illustrates the principles set forth in Chapter 4. The agreement relates to the cooperative situation described in Case No. 11: *Providing Work Experience and Youth Employment to School Dropouts.*

[1] With minor editing changes this agreement is one which was signed in August 1975, by the Minnesota Urban Comprehensive Employment and Training Consortium and the Suburban Hennepin County Area Vocational Schools, District 287 (supported by the Distributive Education Clubs of America and the Division of Vocational-Technical Education, Minnesota State Department of Education).

I. PURPOSE

Because increasing emphasis is to be given in the State of _____ to targeting Federally-supported vocational education for employment and for training of young people, particularly high school dropouts between the age of 16 and 21, and further because those persons are a significant segment of the unemployed, under-employed and/or economically disadvantaged population of _____, the _____ Department of Vocational Education and the _____ in District ____ in which _____ and _____ agree to cooperate in the provision of services to individuals eligible for assistance under both the Comprehensive Employment and Training Act of 1973, and the Vocational Educational Education Act of 1973, as amended, according to the terms and conditions which follow.

II. EXPECTED RESULTS

The parties hereto contemplate service as specified herein to approximately one hundred and twenty-five (125) individuals over a twelve month period commencing on the date this agreement is last signed. Enrollment will be on a quarterly basis.

Projected accomplishments are that:

At a minimum, 75 are anticipated to be placed on a job (60 per cent of total enrollees);

With close cooperation among all the available resources an estimated 85 to 100 enrollees will be placed in a job before the funding year is out (70–80 percent);

The percentage of enrollees placed in unsubsidized employment 90 days after entrance into employment is anticipated to be 70–80 percent as above;

The average wage over the funding year in unsubsidized employment is anticipated to be approximately $2.50 to $3.25 per hour for all enrollees.

Because the program is experimental in nature the parties agree to exercise flexibility as appropriate to changing conditions and as indicated upon review of experience. Problems will be discussed as encountered and addressed rapidly.

The participating agencies expect this joint activity to accomplish the following:

Significantly increase the number of school dropouts served and found employment for by the CETA Prime Sponsor.

GED classes along with pre-GED work, if necessary, to be conducted by the local vocational technical school at least twice a week.

The 70,001 *Individual Instructional Program* designed to teach pre-employment counseling (job application, good grooming etc.) through sales techniques. It is completely individualized so as to give maximum flexibility to the client and the coordinator.

Supervised Youth Activities Program. A DECA 70,001 Chapter will be formed to participate in the local, state, regional and national DECA competitive activities. This structured program is designed to teach vocational skills while providing a strong motivational tool for developing personal achievement and self-confidence in the client. In addition, a wide variety of civic, social and leadership development activities will be conducted by the Chapter members.

Liaison established with all community support services to meet the needs of the clients.

Liaison established to the entire range of educational opportunities offered by the community.

Public relations activities designed to build community support, particularly that of the business groups for the client's activities will be ongoing. A local advisory committee will be established to assist the District in this endeavor.

Provide immediate full time employment/supervised on-the-job training, related occupational and academic instruction and a

program of supervised, civic, vocational and other sound activities for the participants.

Provide the enrollee with both the capacity and the opportunity for a productive career in the field of retail sales and distribution.

III. THIS AGREEMENT WILL APPLY IN THE FOLLOWING SITUATIONS

Where a Voc Ed and/or CETA counselor agree that services to a specific youth, who has dropped out of school and been out of school six months, will be of benefit to that individual.

Where appropriate authorities of each participating agency agree on the desirability of shared funding of a service to clients of both agencies.

Where individuals contact both agencies on their own initiative and are found to be eligible to participate in the project.

IV. SERVICE TO BE PROVIDED

The vocational technical school, with assistance from Distributive Education Clubs of America's advisory committee, will provide CETA Prime Sponsor cliens:

On-the-job training in the field of retail sales and distribution. 100 placements will be effected on a 52-week basis and employees (CETA clients) will be paid directly by the employers with no subsidies by the CETA Prime Sponsor.

On-the-job and after work job counseling by a trained coordinator in the discipline area.

V. SPECIFIC RESPONSIBILITIES WITHIN EACH PARTICIPATING AGENCY

Intake interviewers in both vocational education and CETA will be responsible for flagging youth potentially eligible for these programs and reporting such information to the appropriate counselor or caseload manager within 2 days.

Once the individual is enrolled in the program he/she will be the responsibility of the vocational technical school until the course of the program is completed.

It will be the responsibility of the CETA Prime Sponsor to conduct follow-up evaluations at regularly scheduled times (3 months, 6 months and 1 year) after placements.

VII. ORGANIZATION AND ADMINISTRATION

Program Organization:

The basic plan to be used for managing and operating the program is as follows:

Staffing:

The project manager and program coordinator duties are included in the addendum. A secretary is employed to maintain necessary records, provide clerical assistance to staff and enrollees and act as a receptionist. Program coordinators will be paid up to $15,000 annually, the program manager up to $4,800 annually (20% of the time), and the secretary up to $8,000 annually.

The project manager will devote 20% of his time to the program in order to minimize administrative costs. This time is felt sufficient due to the National Task Force, National 70,001 staff, State Department of Education staff, and District central office staff involvement. The four program coordinators will devote full time to the program. One of the four will serve as department chairman. The program manager and coordinators will be vocationally certified according to the State Board of Education criteria.

Administration:

Supervision and service personnel activity in each agency will follow policies and procedures established for that agency.

All status changes, completions, placements, terminations or interruptions in service will be reported by the local vocational agency responsible for the activity to the CETA agency within 5 days.

Each agency will be responsible for costs of services provided directly or by subcontract in carrying out their portion of the youth employment program. Any limitation on costs to either agency must be specified at the time the service plan is negotiated. Additional services or extension of services not included in the original youth services plan will be negotiated by the appropriate agencies and must be mutually agreed upon.

Internal Monitoring System:

In order to identify and correct problems plus strengthen the program's effectiveness, an internal monitoring system will be established. In addition to the District administrative office staff, a local program advisory committee will be formed consisting of business, labor and concerned agency representatives. This committee will meet no less than four times yearly to review and advise program direction, services and results. In addition, the existing six district-wide marketing and distribution advisory committees will be involved. A form of an internal/external monitoring system will be the State Department of Education staff plus the National 70,001 Task Force.

VII. DEFINITIONS AND SERVICE STANDARDS

Enrollee:

This means an individual of either sex who meets the requirements set forth below and who is selected by the local education agency and the CETA Prime Sponsor to participate in its program and who, in fact, does join and enroll in such program, regardless of the length of time such individual remains in the program. The parameters for those people to be included in such a program are those who need such skills and motivation.

Participation in the Program:

This shall mean that any enrollee is considered to be participating so long as he or she:

a. receives assistance in his or her on-the-job training;

b. participates in any phase of the instructional program offered.

Graduate:

This shall mean the individual who has successfully completed, as defined by the local education agency, the program in which such individual was enrolled.

Graduation from the Project:

This shall mean when one or more of the following has been achieved:

a. when the immediate supervisor, coordinator and enrollee agree that the enrollee is a valued member of that firm and has achieved the necessary skills and attitudes to make him or her a desirable employee;

b. substantial promotion within his or her company, as defined by the coordinator and immediate supervisor;

c. entrance into a Management Training Program, designed to lead to substantial promotion, available at the enrollee's place of employment;

d. entrance into any of the military services of the United States.

State:

This shall mean the state or territory in which the Agency is located.

Coordinator:

This shall mean an individual who by reason of education, training or other experience or ability is deemed by the Agency to be a coordinator, and who shall work either part-time or full time and have major responsibility for the program.

Immediate Supervisor:

This shall mean the individual responsible for a project enrollee at his or her place of employment.

Month:

For the purposes of this agreement, if an enrollee has participated in the program for fifteen days or more, he or she shall be considered as having participated in the program for one month.

Services:

Services delivered must be precisely as specified in the plan.

Timing:

The date for the commencement of the program is from ------ to ------ (a date one year later).

The average enrollee should complete the program in 6 months to one year after entrance into the program.

Reports or status of activities will be provided the CETA Prime Sponsor according to the following schedule:

The Monthly Enrollment and Termination Report will be submitted no later than ten (10) working days after the close of each reporting month.

The Monthly Summary of Participant Characteristics will be submitted no later than ten (10) working days after the close of each reporting month.

The Monthly Enrollment and Expenditures Report will be submitted no later than three (3) working days after the close of each reporting month.

The Monthly Report of Cash Transactions, Monthly Invoice and Detailed Statement of Costs (Form C–100) will be submitted no later than five (5) working days after the close of each reporting month.

An Intake Form (Number 02) will be submitted for each new enrollee no later than Monday following the close of the reporting month.

A Termination Notice (Number 03) will be submitted on each terminated client no later than Monday following the close of the reporting week.

A Client Status Change Notice (Form Number 04) will be submitted weekly on all clients who transfer into other Consortium CETA-funded activities, no later than Monday following the close of the reporting week.

The reports cited above are to be submitted in weekly batches with a transmittal document (Form Number 01).

A Sub-Grant Close Out Package will be submitted no later than sixty days following the termination date of this Agreement.

VIII. REVIEW OF STANDARDS

Individual client progress will be jointly reviewed by Voc Ed and CETA staff at 1 month intervals.

Termination data (placement, dropout, completions) will be reviewed jointly at 3 month intervals.

Youth services plans and associated costs may be modified by mutual agreement by both the local education agency and the CETA Prime Sponsor.

Program changes which require budgetary modifications in excess of twenty (20) percent of any line item contained in the Sub-Grantee's On-the-Job Training Program budget must be approved in writing by the Prime Sponsor.

This Agreement may be terminated by either party hereto by written notice to the other given at least thirty (30) days prior to the date of desired termination. In the event of such termination, no further reimbursements by the Prime Sponsor shall be due except for past-due obligations hereunder.

The Prime Sponsor reserves the right to reopen negotiations within thirty (30) days following the execution of the Sub-Grant for the purpose of negotiating program performance standards.

IX. FINANCIAL ARRANGEMENTS

The CETA Prime Sponsor shall reimburse the Sub-Grantee for the Sub-Grantee's On-the-Job Training Program upon receipt of a monthly itemized invoice from the Sub-Grantee specifying the costs incurred by the Sub-Grantee for the operation and administration of the program during the previous month. Such itemized monthly invoices shall be due and payable by the Consortium to the Sub-Grantee at intervals specified in the invoice provided; however, the Consortium shall not reimburse the Sub-Grantee for any costs incurred by the Sub-Grantee which are not in accordance with the Sub-Grantee's

program planning summary and budget information summary.

The Sub-Grantee shall certify in writing to the Prime Sponsor a statement of fiscal responsibility which shall:

1. designate the title of an atuhorized officer or agent of the Sub-Grantee who shall be responsible for the proper accounting and management of the On-the-Job Training Program funds received by the Sub-Grantee from the Consortium; and

2. designate a special account for the deposit of training funds received by the Sub-Grantee from the Prime Sponsor in instances where the Sub-Grantee is not a governmental unit.

[From World of Work Report, June 1977]

CONTINENTAL BANK, YOUNG WORKERS MARK SUCCESS OF WORK-STUDY PLAN

Continental Illinois Bank in Chicago has just completed a very positive evaluation of its last three years' experience in employing about 500 youths, age 16 to 21, in a halftime split between school and work.

The bank found that young, permanent part-time employees, when compared to two control groups (other employees in the same age categories, and other employees in the same salary grades), showed these results:

The work-study employees had a higher retention rate, as compared to regular hires, both full-time and part-time.

The work-study employees were somewhat superior in job performance ratings, again compared to full-time and part-time regular hires.

The cooperative education employees also had better attendance rates.

For those in the cooperative education program who later transferred to full-time work at the bank, the costs per hire were somewhat lower than for regular "off-the-street" hires.

Owen C. Johnson, Vice President of Personnel for Continental, says the bank has concluded that "this system also benefits the company by permitting a close look at these cooperative education employees before they were hired fulltime. On their part, the employees had a much better knowledge of our company's methods and working environment, and also a much clearer idea of what kinds of full-time jobs to aim for."

Mr. Johnson feels that work-study programs, involving high school and college students, are not nearly large enough compared to the need for them. He asserts that cooperative education programs might be considerably expanded if employers would create more parttime positions, and if school systems would give higher priority to these programs. To do so, Mr. Johnson feels that the schools would have to become more flexible organizationally.

About 9,000 Chicago public school students take part in a variety of cooperative education programs; this is only about 2% of all the students. Continental Bank is employing 140 students this year, and is thus the largest employer of those in the Office Occupations category of work-study programs.

Mr. Johnson, together with other personnel managers, is urging the Chicago Board of Education to promote more flexible class schedules in the schools. The aim is to enable more students to work mornings and go to school in the afternoon. At present, over 90 percent of the high school students come to work at the bank after morning classes. If a second shift of students could be developed, two students could share one full-time job, and many more students could be hired.

Brenda Russell, a Continental personnel officer who coordinates the program, states that work-study "allows business to share in the development of the student. These youths become better performers when they shift to full-time because they don't have the same adjustment problems. They have a remarkably better absentee rate than young regular hires, and while they are here, they perform better. So we win all three ways."

Kery McIntosh, a 17-year-old high school senior who works half-time at Continental as a typist, says that "I am a step ahead in seeing if I like the business world. Sometimes, I feel older than the kids at school. I work in personnel here, and am thinking of going to college to train in personnel work."

Rick Simonton, another 17-year-old senior in the personnel department, says that "work attitudes are most important—like not turning down any new assignment, and feeling that you can do it."

The Continental Bank's experience with work-study employees is contrasted with a study entitled "Business Views Education in Chicago," which was commissioned by Chicago United and published in the May 1975 issue of Phi Delta Kappan. The study reported on a survey of 20 chief personnel managers of 17 Chicago United companies. It found that:

When asked to estimate the proportion of high school graduates interviewed who are ready for employment with their present educational background, only three respondents felt more than 40 percent were ready. Six said that less than 20 percent of the graduates were ready, and nine said that 20 percent to 40 percent were ready. Two gave no response.

Two strong work-study recommendations from the report were that:

1. The schools must provide children with basic skills: reading, writing, spelling, speaking, listening, and computing.

2. The schools must introduce children to the world of work, so they have reasonable exposure to a variety of career options, and know the amount and kind of training and education needed to reach a career goal. Many businesses are already participating in some form of career education, and are willing to do more.

Mr. JAVITS. Mr. President, I strongly commend this conference report to the Senate, and express my gratitude to the majority leader and to the minority leader for facilitating its consideration tonight. We ascertain that there was no opposition to this action. It carried by an overwhelming vote in the other body, and it is to be remembered that this particular measure was worked out as almost an example of cooperation between the Senate and the Executive.

We had differences of opinion, but they were resolved.

Second, it is not too usual that the handiwork of individual members is so clearly evident, Mr. President, as it is in this particular measure. It is really broken into fairly identifiable parts.

The first part relates to the young Adult Conservation Corps, which bears, essentially, the stamp of the Senator from Washington (Mr. JACKSON). He worked with Congressman MEEDS in the other body.

It sets up a Young Adult Conservation Corps which will involve 35,000 youths, 16 to 23 years of age. The Corps will be administered by the Secretary of Labor. The conferees have agreed on $350 million for the period ending September 30, 1978.

I must say parenthetically that I heard so many observations in my native city of New York last weekend, where we have had this catastrophe of looting and burning, in which people literally prayed for such an agency as the one I have described.

It is not happy for us that we are limited to 35,000 youths. I think an agency like this could probably stand 350,000—and they could stand it, too, and it would make a major difference in the social climate of our country.

The second measure which is encompassed in this conference report relates to a very fine initiative by Congressman SARASIN of Connecticut, endorsed by the House. This seeks a series of pilot plant operation with a guarantee of part-time jobs to poor youths who attend school in order to test, among other concepts, the proposition that youths can be encouraged to remain in school and complete their studies. if given the opportunity to have gainful employment.

The $72 million is contemplated for this new program and we hope to try it out in 20 cities and some 440 prime sponsor areas.

The third program is one which Senator HUMPHREY and I had the honor to author. It seeks to facilitate the transition of youth from school to work.

We now find a great deal of the unemployment is attributable to the fact that youth does not have work experience, and such simple things as getting up in the morning, how to brush their teeth, dress and get on the bus and report for work on time, seem to be things people have to learn.

Our ideas were contained originally in S. 170. We implemented our ideas into the aggregate youth bill upon which we agreed with the administration. This measure requires the 442 prime sponsors in the United States to set aside 22 percent of the funds allocated to them by formula under a particular aspect, subpart 3 of this bill, essentially for in-school youth.

The estimate is that there will be about $135 million which will be attributable to that particular setaside.

I would like to pay tribute to our beloved colleague, Senator HUBERT HUMPHREY, who stoutly fought for this concept and coauthored it with me and helped very much to bring it into being.

The fourth element of our program constitutes a very gifted element, introduced by our colleague from Vermont (Mr. STAFFORD). This program, especially designed for 16- to 19-year-olds, concentrates on small community rehabilitation, that is, area and physical rehabilitation programs.

It will provide employment, it is fully funded for 20,000 and comes out of the public works bill which was on the floor earlier this year and contained a youth employment program similar in many respects to the one which is incorporated in the conference report.

I would like to pay a great tribute to Senator STAFFORD and to his associate, Senator RANDOLPH, and their cosponsors, who held up the opportunity to get enacted their particular part of the public works bill because all of us felt, who were deeply interested, that there would be preempted the opportunity to get a comprehensive youth employment bill, and they relied upon us to see that their part of it was ruled into the youth employment bill, as indeed it was.

It is a splendid program and both men demonstrated a splendid degree of cooperation with the Senate and with their colleagues in bringing it into being.

Mr. President, I am going to include everything I had to say in the record without repeating it here. But I would like now to pay a tribute to three others of my colleagues on the Republican side of the aisle, Senator BELLMON, Senator DOMENICI, and Senator MCCLURE, who in the most enlightened way, worked with us to bring in their concepts.

They had been the author of a very gifted, progressive youth employment bill themselves, and they worked with us intimately and closely in working out our agreements with the executive department. They worked amendments into the bill and finally came through the committee stage and on the flood.

Each of them deserve the highest praise and the highest public thanks for their role in this total effort which I herewith extend.

Mr. President, I believe this is really a criterion for the way in which a legislature should work, in and of itself, and with the executive.

I highly commend the conference report to the approval of the Senate.

I yield such time as the Senator may require.

Mr. WILLIAMS. Mr. President, it is a pleasure to join my colleagues on the Human Resources Committee in urging adoption of the conference report on H.R. 6138, the Youth Employment and Demonstration Projects Act of 1977.

This comprehensive and far-reaching legislation is the product of extraordinary cooperation between Congress and the Carter administration, between the Senate and the House of Representatives, and between majority and minority Members of both bodies.

We owe a particular debt of gratitude to the Senator from Wisconsin (Mr. NELSON), chairman of the Subcommittee on Employment, Poverty and Migratory Labor, and to the Senator from New York (Mr. JAVITS), the ranking minority member of the subcommittee, for their tireless efforts and adroit management of this bill.

The result, Mr. President, is an amalgam of programs for helping American young people develop the skills and the experience that can lead them to a satisfying place in the nation's work force.

The bill draws upon the proven blueprints of the past, as well as ideas for the future. A mainstay of this legislation is the modern equivalent of the Civilian Conservation Corps of the 1930's, giving jobless youth the opportunity to work at reducing the backlog of conservation work in the Nation's parks and forests.

The National Young Adult Conservation Corps, created by title I of the bill, provides unemployed youth from every segment of society the opportunity to know the exhilaration of building the physical foundation of tomorrow's land, water, and transportation resources. Participants will be gaining valuable experience in such fields as forestry, wildlife management, recreation development, and combating natural disasters in wilderness areas.

Careers and new commitments to conservation are founded on such experience. Both are indispensable to the Nation's future.

Mr. President, the dimensions of the predicament in which jobless youth find themselves cannot be underestimated. The number of unemployed teenagers has increased dramatically over the last decade to the level of 18 percent of the unemployed work force—nearly three times the rate for unemployed adults. Their lack of experience and skills, combined with an unprecedented increase of youth entering the job market, has precluded a meaningful job for them under current economic conditions. The programs in this bill are specifically designed to strike at the roots of the structural disadvantage among youth—their lack of skills and experience when looking for their first full-time job.

Youth unemployment is not a simple problem, and the bill does not propose a simple answer. It authorizes the Secretary of Labor to implement a variety of innovative employment programs and demonstration projects to determine the most effective design for relieving youth unemployment using limited Federal assistance.

The bill is a multifaceted manpower effort that mobilizes the resources of local communities, States, and Federal agencies. The Secretary of Labor is the coordinating arm of the entire youth manpower effort under this act.

The Young Adult Conservation Corps program would become a new title VIII under CETA, and would have a 3-year authorization. As a year-round program, the Corps will be administered by the Secretaries of Agriculture and the Interior through interagency agreements with the Secretary of Labor.

The national YACC program contains important provisions for State and local funding to allow work on non-Federal public lands and waters. Thirty percent of the program funds are reserved for grants to the States.

The balance of the act is devoted to testing a wide variety of employment and demonstration programs. They include youth incentive entitlement pilot projects, youth community conservation and improvement projects, and youth employment and training programs. These will comprise a new part C under title III of CETA.

Youth incentive entitlements would, in areas selected for pilot programs, guarantee a 20-hour work week during normal school sessions and full-time jobs during the summer, encouraging youth to stay in school. In a time when private employers expect a measure of experience and competence in prospective employees, these graduates will be able to approach employers with both a diploma and job experience.

Youth community conservation and improvement projects offer full-time employment to jobless youth, who have finished school, in locally developed projects near their homes. It enables communities to join forces with their unemployed young people to rehabilitate housing and public facilities, upgrade neighborhoods, and begin the long struggle to weatherize and repair energy wasting structures. This kind of incentive-oriented work based on community self-help will put tangible results up front for both youth and the community.

Mr. President, these local conservation and improvement projects can be of special value if funds to support them can be distributed down to the neighborhood level. There is a strong suggestion of this in the report of the Committee on Human Resources with respect to these community conservation and improvement projects. Our report said:

> The program encourages broad community participation which is vital in the development of good projects. Any private or public nonprofit group, including private citizens' voluntary groups, can participate and submit project applications. Needs for community or neighborhood improvements cut across a wide spectrum of community affairs and interests, and community groups must be encouraged to develop programs.

In administration of subpart 2 projects, it may prove difficult to target the funds to specific neighborhoods where they can be of immense value. The application procedure, involving local governments, prime sponsors, and the Secretary of Labor, will undoubtedly seem awesome and forbidding in the eyes of many local neighborhood groups, both voluntary and otherwise. Throughout the consideration of this bill, the committee and the conferees recognized this potential problem, and because of it, the bill provides very broad discretion for the Secretary of Labor in utilizing his discretionary funds under subpart 2.

The Secretary of Labor should be—and will be, I am sure—alert to other avenues for channeling funds to the neighborhood groups and associations. For example, the Office of Neighborhood Voluntary Associations and Consumer Protection of the Department of Housing and Urban Development has exceptional resources for mustering the neighborhood organizations that have deep commitments to community development and restoration.

In formulating programs to be funded with his subpart 2 discretionary funds, the Secretary of Labor should explore with this HUD office and other similar officers in Federal agencies with strong contacts in the neighborhoods the possibility of funding projects under their auspices.

Employment and training programs under subpart 3 of the act are designed to have a significant impact on high unemployment among youth, through locally planned and administered programs. Twenty-two percent of the employment and training funds will be used in programs jointly planned by CETA prime sponsors and local education agencies. Their purpose will be to provide not only work and training, but basic job-related services such as counseling, occupational information, and placement. The counseling and training services will be career oriented, and based upon the continued development of labor

market information that is comprehensive and reliable.

Funds for these employment and training programs are distributed under a formula that targets additional funds to areas where joblessness is worst and youth have greater difficulty finding work. The bill targets 37.5 percent of the subpart 3 authorization to areas which suffer substantial unemployment; 37.5 percent is allocated on the basis of numbers of unemployed, and 25 percent is allocated on the basis of the number of low-income families within each State. As a result, States like New Jersey will have additional resources to overcome the disadvantage of a severe job shortage.

Mr. President, I am particularly pleased that the House of Representatives has accepted the recommendations of our committee that special consideration should be given both to exceptionally disadvantaged youth and to community-based organizations that have a long history of proven effectiveness in skill development, job development, and placement.

The bill earmarks a portion of the funds to be spent only to help Native Americans, including Hawaiian natives, and members of migrant and seasonal farmworker families.

The bill also provides for making greater use of the inadequately tapped resources of community-based organizations across the Nation. Organizations such as Opportunities Industrialization Centers—OIC—the Urban League, community action agencies, Jobs for Progress—SER—and recruitment and training program have, over the past decade, demonstrated their effectiveness in working with youth.

These agencies operate in the heart of the ghettos and barrios of the inner city, the hollows of Appalachia, and the rural pockets of poverty and despair. They are an accepted institution in these areas of great need and have an uncommon degree of communication with those young people most in need of help. They are a ready resource for utilization by Governors, mayors, and county officials as they develop their programs to deliver services to youth in their communities.

Mr. President, the wage provisions of H.R. 6138 were developed specifically for these programs. These provisions recognize the need for new and different kinds of jobs and job classifications for the unskilled and inexperienced among the young people who will seek out the opportunities created by this legislation.

In general, youth participants in any of the bill's activities are guaranteed the applicable Federal or State minimum wage, except when they are placed in jobs that threaten the employment of workers in similar jobs. It is not the purpose of this bill to reduce unemployment among youth by creating unemployment among older workers

To avoid such displacement, youth employed in similar jobs with the same employer would be paid the prevailing rate for that occupation or job classification, unless the CETA prime sponsor, the employer, and the labor organization that represents employees doing similar work in the same area reach an agreement to pay another wage. Where new jobs have been created for youth, or existing jobs have been restructured, and no prevailing rate of pay can be identified, the Secretary of Labor is empowered to settle disputes that cannot be resolved by prime sponsors, employers and labor organizations at the local level.

By building in such flexibility, Mr. President, I believe we have minimized the likelihood that wage levels will interfere with the general purposes of this legislation. At the same time, we will avoid the kind of low-paying jobs that neither culminate in a carrer nor motivate young people to strengthen their attachment to the work force.

Mr. President, the future well-being of this country will be undergirded by the innovative programs we are beginning. These programs and what they generate will be a means to break the bottleneck of high unemployment.

Since last October, 2.2 million Americans found work, yet over seven million Americans still remain jobless. Youth unemployment has been the center of unyielding joblessness. Last month, youth unemployment bounced back up seven-tenths of 1 percent to 18.6 percent, a level just two-tenths below that recorded in early 1976. Black teenage unemployment remains at a tragically high 40 percent.

We have come to a crossroads on the question of youth unemployment and have found a new determination to transform the problem into a force upon which this Nation can base its hope for improved economic health.

The bill presents an enormous challenge to Congress and seems to be a way of testing our national pride—whether we intend to give young people who are without opportunity a chance to make their mark on the American heritage.

Few legislative proposals have reflected, as realistically as this one, a human need so evident on every street corner and in every rural community across the country. Youths might now be able to gain new opportunities to fulfill their aspirations in meaningful jobs.

I am pleased to have been part of this legislative effort. It signals our reluctance to mortgage the future for a foreshortened present. And it demonstrates our commitment to the right of every able American, who wants a job, to contribute his labor and achieve his goals.

I strongly urge my colleagues to support this first significant step in that direction.

Mr. STAFFORD. Mr. President, I appreciate the Senator yielding.

I rise simply to state that, of course, I am in support of the conference report.

I appreciate the gracious words of the senior Senator from New York and I want to say how much I have appreciated all of his help in getting the part of the bill Senator RANDOLPH and I offered through the Senate and through the conference.

Mr. President, I join the distinguished ranking minority member of the committee in what he said about our colleagues who have participated in the formulation of this legislation.

Mr. President, I was privileged to serve as a conferee for the Senate on this important legislation, and I support the conference agreement. The final bill includes proposals from both the House and Senate measures and represents a strong step forward in meeting the serious employment problems affecting the youth of this country.

The extremely high rates of unemployment prevailing among young people is recognized as a serious national problem, requiring a specific, tailored strategy to deal with the situation. A commitment was made by the Congress and the administration early in the session to develop a comprehensive youth employment program. That commitment has been honored.

The Manpower Subcommittee, under Senator NELSON's leadership, held hearings and reported legislation which passed the Senate in May. The House Committee on Labor and Education also gave very early consideration to a youth employment measure, permitting us to go to conference in June. The conferees met in a spirit of cooperation to enact a program this year. I commend the House and Senate Members of the conference for their work.

The conference agreement includes sections from both the Senate-passed measure and the House bill. The youth incentive entitlement program, introduced by Congressman SARASIN and one of the principal new approaches in the House bill, is part of the final legislation. The section authorizes an experimental program to test an entitlement concept in meeting employment and training needs of youth.

The inschool program, authored by Senator JAVITS, is included in the conference agreement. The inschool program will strengthen linkages between educational institutions and manpower activities.

The conferees also adopted the community improvement program as authorized in the Senate bill. This program is patterned on a proposal introduced earlier this year by Senator RANDOLPH and myself.

Each of these proposals brings a different perspective to youth employment problems and I am pleased they all could be included in the conference report. In the coming months, each of these ideas can be tested and evaluated as we develop employment policies for young people.

The principal value of the legislation is its innovative character. It breaks new ground and moves into new areas, expanding our understanding of youth employment problems and the way we deal with them. I view this bill—as I know the other conferees do—as a means to implement and test new ideas and new ways of serving the needs of young people. This is particularly true under the community improvement program. In implementing the authority, the Secretary should encourage and reward the new ideas and new approaches. The framework of the program places the responsibility and authority with the Secretary.

The programs authorized in this bill are not a substitute, or a new funding source, for ongoing youth manpower programs. In fact, I do not know of any existing program which has as its primary objective the creation of jobs for teenagers, ages 16 through 18, on community improvement projects. To realize the full potential of this legislation, the Secretary must seek to insure, as far as possible, that there is no substitution of the activities authorized in this bill for other ongoing youth efforts.

I am pleased the conference report includes the community improvement program. Throughout discussions and deliberations on this legislation, there have been three ideas which have remained consistent: The idea that this program is to provide jobs for young persons who are in need of initial employment experience; the idea that these jobs will be created on projects which serve the community in a tangible, constructive way; and the idea that the initiative for meeting the needs of these young people should be in the hands of local citizens who best know their needs and aspirations. The conference agreement is identical to the Senate measure, maintaining this approach as a separate, identifiable program.

Strong participation of local groups is necessary if we are to focus on community needs. Although the program is included as part of the Comprehensive Employment and Training Act, it is not a traditional CETA program. It is designed to use the in-place mechanism of CETA to facilitate the handling of applications and avoid creating a new Federal bureaucracy but it is not simply a pass through of funds to local CETA sponsors. The program is designed to create jobs on community improvement projects and extends beyond the traditional manpower training efforts. The community or neighborhood improvements cut across a wide spectrum of community affairs and interests and community groups are encouraged to bring programs forward. I anticipate that most of the projects will be designed and carried out by those local groups even though the applications will pass through the CETA mechanism.

I am glad the conferees retained the flexibility for funding of equipment and supplies as provided in the Senate bill. As noted in the conference report, the Secretary of Labor will monitor the use of funds for this purpose. Exercising judgment and commonsense, the Secretary of Labor can avoid abuses of the authority while assuring adequate funding of worthwhile projects.

I consider the flexibility in funding for materials and supplies a crucial part of the program. We have no experience with this type of program and need to be able to conduct a full, fair test of the concept. The jobs are there, they only need to be identified and organized. Young people, like their elders, have little respect for make-work, makeshift activities which result from too little preparation and too little funding for needed materials. The problems should not arise under this program.

During the conference, concern was expressed that these funds, without some limit, could be used to fund expensive machinery. This program is not designed for communities to subsidize their heavy equipment needs. I believe there are sufficient restraints in the bill, including the Secretary's oversight, to avoid abuses.

Discretionary funds are made available for the Secretary so he may explore new ideas and further the purposes of the community improvement program. The Secretary should seek to reward worthwhile projects, or projects which are national in scope or cut across jurisdictional lines. The Secretary may also use these funds to initiate proposals and develop the linkages and relationship between groups and institutions which will assure a sound program, one that charts new areas. While the Secretary can determine the mechanism to use, it is the intent of the conferees that the discretionary authority is not simply another way to distribute funds but, as far as possible, a means to do something extra in this program. Effort should be made to focus these funds—rather than spreading them too thinly—so that meaningful, measurable projects can be undertaken.

The administration has been committed to the development of youth employment legislation and has been instrumental in the progress of the legislation. I am hopeful the administration will implement these new programs in an innovative manner and with a strong commitment to their success.

It is important that the administration move ahead as quickly as possible so the new programs can get underway by the end of the year. This is only a 2-year bill, through fiscal year 1978, and we need to gain as much experience as possible with the new programs in order to evaluate them. I understand the young adult conservation corps program will be operating this summer. This speedy action is commendable. I hope the other new programs will also be given the attention needed to get them started this year.

Mr. President, I endorse the intent and direction of the youth employment bill. I think it is good legislation, responding to a serious need and I urge its adoption by the Senate.

Mr. JAVITS. I thank my colleague and I yield such time as the Senator may desire.

Mr. DOMENICI. I thank the distinguished Senator from New York.

Mr. President, the passage of the Youth Employment and Demonstration Projects Act is an event of great importance. The managers of the bill, my esteemed colleague from Wisconsin, Senator NELSON and the distinguished Senator from New York, Mr. JAVITS, for whom I have great respect and admiration, are to be congratulated for producing this fine piece of legislation. Congress has acted quickly and decisively to ameliorate the problems of the youth of this Nation. While this act will not serve all of the 4 million unemployed youths, it is a sizable step toward solving the youth unemployment problem.

With the exception of the portion of the act which creates the Youth Conservation Corps, the act is authorized for only 1 year. This fact should not be misinterpreted as a limited commitment on the part of the Congress. There is widespread support for youth employment legislation, and I am certain that this support will continue until the problem is eliminated. The 1-year authorization will allow for a year of experience under the program so that improvements can be made. The committee was wise to structure this new initiative in such a manner.

I spent last week in New Mexico meeting and talking with constituent groups. In Albuquerque, I met with business and civic leaders and city and educational officials to encourage their participation in this act. All were very excited at the prospect of Federal support to address the pressing problem of youth employment. I would like to pass on two of their major areas of concerns.

I am convinced that if the youth employment program is to be successful that the private sector must be heavily involved. While representatives of the private sector in New Mexico were anxious to cooperate with CETA prime sponsors, they were disappointed that flexibility for private sector involvement is limited. I believe before this act is reauthorized next year, that we in Congress should look for more and better ways to bring the private sector into the program in order to combine local initiative, private sector investment and Federal support.

Another concern centered on the eligibility criteria for participation in the program. The youth employment and training funds which flow by formula to CETA prime sponsors are to be used primarily for youths from poor families. While any unemployed youth is eligible for certain educational and supportive services under the act, actual jobs created under subsection (a) (1) and (2) of section 342 are limited to those who meet the poverty criteria. My constituents in New Mexico objected to this provision pointing out that youth unemployment is a problem for middle class youth as well as those whose families meet the poverty criteria.

I note in the conference report the adoption of a House provision which allows 10 percent of the funds to be used for any unemployed youths regardless of family income. I am pleased that this provision is part of the final bill. I intend to devote further study to the nature of the youth unemployment problem and the needs of middle class youth before next year's reauthorization.

Another issue of concern to me is the need for prime sponsors to cooperate with all other Federal, State, and local agencies which either offer similar services or serve the same clientele. I note in the conference report that the conferees expect that the Secretary of Labor will consider using funds for demonstration projects which coordinate the delivery of manpower and social services. It is my hope that the Secretary of Labor will give priority to such projects.

I would like to take this opportunity to point out the progress that the Albuquerque prime sponsor has made in coordinating services with the local and State education agencies and with the

employment services. I am proud of OCETA, the Albuquerque/Bernalillo consortium for their efforts in this regard. I am impressed with OCETA for everything from their automated data system which is one of the finest in the country to the administrative arrangements which promote sensitive responses to the needs of the area's unemployed. Visiting the Albuquerque/Bernalillo prime sponsor gives me confidence in the entire CETA system nationwide.

There is one final issue in this Youth Employment Act that I feel compelled to mention. The debate over the prevailing wage provision which took place when the bill was before the Senate on May 26, is only a prelude I believe to debate over the same issue in regard to welfare reform. The final bill does contain the compromise language that jobs created should be restructured and thus not subject to the prevailing wage provision. I still believe very strongly that jobs created under this act and any jobs created under welfare reform should be subject only to minimum wage requirements and not to prevailing wage rates.

I would like to reiterate my support for this bill and to promise my continued attention to authorization and budgetary support for youth legislation.

Mr. President, I join Senator STAFFORD in thanking Senator JAVITS for the leadership he exhibited in bringing together with others, but primarily from our side, through his effort, the diverse views and approaches into one youth bill. I believe that but for this effort, we would have had numerous bills before us, and there would be little chance that we would have set ourselves on the path on which this bill sets us, which is a concerted and specific effort in connection with the problems of youth employment.

I should like to share two observations with the Senator from New York and ask him to comment.

The first comment is this, and I ask the Senator whether he agrees: We have only a 1-year bill here, as I understand it, and it is nonetheless a bill with substantial resources, all concentrated at youth—a first, as I understand it, in terms of a concerted youth effort; and certainly when you consider that it is a first, it has a rather tremendous commitment by Congress in terms of resources which have been followed up by an appropriation.

Does the Senator agree with those observations to this point?

Mr. JAVITS. I thoroughly agree.

First, the bill is exclusively targeted at low-income youth and targeted at high unemployment areas of the country.

Second, it links education and work, which is really a breakthrough concept.

Third, it emphasizes and implements the concept of work experience.

Fourth, it makes room for experimental programs. It is really a breakthrough.

Mr. DOMENICI. The Senator is well aware of my two areas of concern. The reason I make the point that this is a 1-year bill is that I have received assurance from a number of Senators on the committee that we really are going to use the year to evaluate and consider other approaches as we move into a permanent and lasting bill.

In that regard, I want to share with the Senator two areas that disturb me.

The first is best explained this way: In my home city of Albuquerque, I believe we have almost an exemplary agency. In fact, historically, the record will reflect that the notion of CETA came from Albuquerque's efforts to pool our previous employment programs, employment training programs. At a public hearing, those who are running the program indicated one very serious area of concern, and it was that many of the people who need help do not come from poor families as defined by our guidelines. There was a genuine concern as to why we had not done more and whether we understood their concern.

I understand that in this bill we have adopted a provision that will permit 10 percent to be used by agencies such as that in my home city for youth who are not from the poverty level, and that we will be looking collectively and as committees at what the adequacy of this 10 percent is and what kind of problems remain to be solved that we do not address for the middle-income youth, who also have a serious problem.

Does the Senator have any observations and thoughts to share with me on that subject?

Mr. JAVITS. I thought the concept of 10 percent was a very gifted beginning. I consider it a beginning. I consider it subject to evaluation.

We are trying to make fine Americans here. If it proves that the admixture of Americans of a somewhat higher economic level will give us better Americans than the 90 percent who are under that level and some greater proportion will do it, I will be all for it and quite ready to be convinced.

The PRESIDING OFFICER. The time of the Senator from New York has expired.

Mr. JAVITS. Mr. President, I think there was a half hour on the conference report.

The PRESIDING OFFICER. The other side has 14½ minutes remaining.

Mr. JAVITS. I know of no opposition. I wonder whether the majority leader might give us some of that time.

Mr. ROBERT C. BYRD. Yes, indeed. I will be delighted to yield whatever time the Senator desires. I yield it to the minority leader, and he may yield it.

Mr. BAKER. I yield to the Senator from New York such time as he requires.

Mr. DOMENICI. Mr. President, I ask unanimous consent to have printed in the RECORD the statement I made before business and civic leaders and government officials at Albuquerque, N. Mex., on July 5, 1977.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR PETE V. DOMENICI

Ladies and Gentlemen, the purpose of this meeting is to discuss the serious and severe problem we have in these United States with Youth Unemployment.

One-half of all unemployed persons in this country who are seeking work are youths aged 16–24. *One-half of the unemployed.* This figure is particularly startling given the fact that youths make up only one-fourth of the labor force.

The youth employment rate is high compared to historical rates in the United States, and it is high compared to youth unemployment in most other industrial nations.

Four million youths walk the streets of this country looking for work. Twenty-thousand of these young people live in New Mexico. Between 6 and 7 thousand unemployed youths who are seeking work live in the Albuquerque area. For these youths, prolonged periods of unemployment result in lost opportunities to develop skills and work habits. Unemployment is literally endangering the future of many of our young people.

The lifetime implications for these youths, many of whom have never worked, is not only a serious problem for the individuals concerned, but is a societal problem as well. There is growing concern among those who have studied the problem that many of those youths who are cut off from the labor market through unemployment will go through the teenage and young adult period without making the necessary transition from school to work. Those youths who emerge from this period as adults with no employment history and few marketable job skills may carry their unemployment into their middle years. These youths then represent a potential loss to society of great magnitude. Not only will their productivity and their contribution be lost to society, but continued unemployment poses a drain on the resources of the society as well.

Another serious aspect of the problem which cannot be overlooked is the relationship between those who are unemployed and those who commit crimes. For every 1 percent increase in unemployment, there is a 4 percent increase in the number of persons sent to prisons. An estimated 45–50 percent of all persons entering prison were not regularly employed in the year preceding incarceration. It is obvious that our soaring crime statistics are partially a result of increased unemployment.

The magnitude of the youth unemployment problem makes it imperative that we act quickly and decisively. The nature of the problem is such that a solution depends on concerted action by both the private and public sectors. Early in this legislative session, in January, I introduced a bill along with Senator McClure of Idaho, Senator Bellmon of Oklahoma, and Senator Javits of New York, and 11 other co-sponsors, which recognized that the youth unemployment problem is national in scope but depends on local labor markets for solution. My bill, The Youth Employment Act, funneled funds through the decentralized CETA program. As you know, CETA, The Comprehensive Employment and Training Act, provides comprehensive manpower services including training and counseling programs, work experience, and actual public service jobs. My youth bill provided for additional authority and funding for CETA prime sponsors to address the needs of youth.

A critical component of this bill was that it provided incentives for private sector involvement. It is my strong belief that labor market problems must be solved in the market place.

Several other youth bills were introduced in the Senate which sought to address the problem through various delivery systems. As you know, introduction of a bill in Congress may represent weeks and months of study. This was the case for my bill as well as for most of the others. However, introduction is only a first step toward passage.

Because the Congress has now passed a youth bill, which was reported out of conference on June 22, I think you may be interested in some of the behind-the-scenes

work and negotiation which led toward passage.

While several senators had become convinced that youth unemployment was a serious problem, many other Senators were unaware of the severity of youth unemployment. Education of the Senate on this issue was an early order of business. Because of the variety of approaches, the youth bills were referred to three different committees. Senator Jackson's bill, which I will describe later in more detail, sought to create a national youth conservation corps, and was referred to the Committee on Energy and Natural Resources, a committee on which I serve. Senator Stafford's bill, which will also be described later, provided jobs for youths in public works projects, and was referred to the Public Works Committee, another committee on which I serve. My own bill and four others were referred to the Human Resources Committee. In addition, the issue was considered in detail in the Budget Committee on which I serve also, since it is up to the Budget Committee to include in its budget targets money to fund all legislation. Funding for a new youth employment program was included in the Budget Resolution ceiling. The fact that youth bills were before three different authorizing committees as well as the Budget Committee, hastened the education process. Many more senators became involved in the issue, and it became apparent by late February that three bills, one from each committee, were headed for passage.

I now found myself in a very interesting situation. As one of the leading advocates of youth legislation serving on 2 of the 3 committees, with my own bill receiving favorable treatment from the third committee, I was very pleased at the progress we had made in a very short time. However, from my vantage point on several of the committees, I became concerned that we needed to establish a comprehensive youth policy that would embody several of the suggested approaches.

Negotiations were begun between the Budget Committee and the three authorizing committees to consider the bills in relation to each other. Up until this time, the White House had not shown particular interest in the youth unemployment problem, and the President did not include a bill aimed specifically at youth in his economic stimulus proposal. When it became apparent that the Senate was intent on passage of youth legislation, the President asked Congress to delay action on any of the bills until he could prepare an administration position on youth unemployment. The Senate agreed and negotiations began between the President and the committees involved. The White House Domestic Council and the Department of Labor took several of the Senate bills, including my own, and combined them into one bill. The President then sent his bill, which was an amalgam of several Senate bills, to the Congress.

The Human Resources Committee in the Senate and the Education and Labor Committee in the House of Representatives, held hearings on the bill in March. Although a portion of the Administration's program was modeled after my bill, I was not totally happy with it and felt it was necessary to testify before the Committee and to work with Senators on the Committee. I was particularly concerned that while my bill and the Humphrey-Javits bill had both made provision for public school involvement and for services to in-school youth, the Administration's bill addressed neither of these areas.

The formula for distribution of funds was also a problem. In addition to actual numbers of unemployed, I favored a factor in the formula tied to the unemployment rate. This will benefit New Mexico where the actual number of unemployed persons is smaller than many states but the percent of unemployed is relatively high. Fortunately, the Committee incorporated these and other suggestions.

All of the bills introduced in the Senate provided that youths who were placed in actual jobs under the various programs would be paid the minimum wage of $2.30 an hour. The bill the Administration sent to Congress raised the amount to be paid to the prevailing wage rate, which as you know, is often much higher than the minimum wage. This position endangered the workability of the entire bill. It would have meant that a youth who had never worked would be paid higher than minimum wages while employed in a job created to give him entry level experience. This would have lowered considerably the number of youths to be served and would have resulted in a wage push inflationary spiral. I offered an amendment on the floor and was able to modify the prevailing wage provision so that prime sponsors are directed to create restructured, re-classified jobs for youths to which prevailing wage rates do not apply.

The Senate bill was passed in early June, as was a slightly different House version. The conference ironed out the differences between the two bills, and the Youth Employment and Training Act of 1977 now awaits the President's signature. The bill is not perfect, as one might expect of a bill that combines several different approaches, but it is an important and significant piece of legislation.

The Act adds a new title VIII to the CETA legislation and also amends Title III of CETA. While the legislation authorizes such sums as are necessary to carry out the program, the Budget Committee has allowed in its budget resolution for $2.0 billion which could be appropriated for youth.

The Appropriations Committee has already appropriated $1.0 billion for this purpose, and the funds will be distributed as soon as the bill is signed into law. While I expect additional funds to be appropriated later, as I describe the bill and the amounts available for each part, I will be referring to the billion which has already been appropriated and will be available immediately.

FEDERAL APPROACHES

Young Adult Conservation Corps

Several provisions of the bill are national in scope. The National Young Adult Conservation Corps, originally proposed by Senator Jackson, is authorized for three years and will become a new Title VIII of CETA. The program will provide work for unemployed youths in the nation's parks and forests. The corps would be administered by the Secretary of Labor through interagency agreements with the Secretaries of Interior and Agriculture. $350 million of the $1 billion is set aside for this purpose. $245 million will be used for projects on Federal lands and the remaining $105 million will be available for projects on public lands which are under State and Local jurisdiction. Any unit of general local government, any public agency or any private non-profit agency which has been in existence for at least two years will be eligible to compete for these grants which will provide jobs for youth in conservation and maintenance of public parks and forests.

The 35,000 youths who will be served in the program will be referred to the Secretary of Labor by CETA prime sponsors, and to be eligible for the program, a youth must be between the ages of 16 and 23 and be unemployed. In-school youth will not be considered for this program, and each job will last for only one year.

I expect New Mexico to benefit from this program in three ways. First, many New Mexico youths will be eligible to be served in the program. Second, because of the large amount of Federal land in New Mexico, I expect the Federal government will establish one or more of its conservation projects here. I am also hopeful that New Mexico will be successful in competing for part of the $105 million for state or local projects. In order to enhance our chances in this competition, I recommend that local and state officials work jointly on a proposal or that they propose projects which complement each other so that each project can be endorsed by both levels of government.

Public Works

"The Youth Community Conservation and Improvement Project" is a provision modeled after a bill originally introduced by Senator Stafford of Vermont which I cosponsored. Approximately 20,000 youths aged 16–19 will be put to work on the rehabilitation or improvement of public facilities, including weatherization. Prime sponsors may apply to the Secretary of Labor for such grants and 97.5 million dollars is available nationally. Prime sponsors will compete for these monies but at least one-half of a percent of the total is guaranteed for each state. New Mexico's minimum guarantee will be $480,000. I hope we can get more than this minimum allotment.

Pilot projects

Representative Sarasin, a Republican in the House of Representatives, authored the "Youth Innovative Demonstration Projects Program". Prime sponsors can compete for $97.5 million under this program also. In-school youths from disadvantaged families are eligible for service in this program.

An additional amount of close to $100 million will be available for special projects under discretionary grants provided by the Secretary of Labor to prime sponsors.

The total amount available then for all competitive programs is approximately $400 million. I would like to see New Mexico get several million dollars of those funds.

State and local programs

I've saved the provision of the legislation most important to you, the state and local programs section for last. This component of the bill is modeled after the bill which I introduced and the Humphrey-Javits bill. This program will provide for comprehensive manpower services for youth to be administered by state and local governments through the CETA prime sponsors. The bill authorizes a broad variety of program approaches similar to those already provided for adults under CETA, including work experience and appropriate training and services such as outreach, counseling, occupational information, institutional and on-the-job training, and transportation and other supportive services. It also requires that in-school programs be carried out by agreement between the prime sponsors and the local education agencies. Fifteen percent of the funds under the program are set aside for in-school youth.

This program also requires youth councils under the prime sponsor planning council. The membership for this council includes adults who work with youths and youth themselves. The provision for the council and youth participation, which also was in my original bill, is important, I believe, to the planning process.

Funding

Of the $1 billion dollars already appropriated for youth, $373 million will go by formula to CETA prime sponsors for state and local programs. (The additional appropriation expected for youth will be directed primarily at this component. If $500 million additional dollars are appropriated for youth $288 million additional will go to state and local programs for a total of $661 million.)

New Mexico's share according to the formula, will depend on the final appropriated level. Of the $1 billion already appropriated, the Albuquerque prime sponsor will receive approximately $700,000. The New Mexico bal-

ance of state prime sponsor will receive approximately $1.4 million for a state total of $2.1 million. Obviously, this amount would increase significantly if additional funds are appropriated. (These are unofficial figures worked out by my staff without the aid of the Department of Labor computers.)

Private sector involvement

While the provision for private sector involvement in this program is not as strong as in my original bill, there is authorization for private sector participation in the program. Job sampling, including vocational exploration in the private sector and on-the-job training in the private sector are permissable activities under this program. The prime sponsor can also work with the private sector in job development and direct job placement and can provide supportive services for youths placed in private sector jobs.

It is my belief that the answer to the youth unemployment problem lies in the private sector. Let me give you an example that illustrates this point.

Let's say for the sake of discussion that over the next year, the Albuquerque prime sponsor receives a total of $1.4 million. Now, if the prime sponsor chose to take the entire grant award and create public service jobs, only 175 youths could be served per year. At the end of the year, new youths would be placed in the jobs and those youths turned out of the jobs would be back on the streets again, looking for work.

On the other hand, let's assume that the Albuquerque prime sponsor decides on a more creative approach working in cooperation with business, industry, schools, and non-profit organizations. If each of these groups, recognizing not only an immediate benefit, but the long-term necessity of driving down the high youth unemployment rate, will make a commitment to get involved, will make an investment of time and money, then we can eliminate this problem. The prime sponsor can provide the organization, the money to get started, and supported services. Instead of serving 175 of Albuquerque's 6–7 thousand unemployed youth, I believe this year we can serve as many as a thousand or more of these youths, a 600-percent increase.

We have large and small business and large and small industry represented in this room. If each one of you will look at your own operation, I am sure you can come up with a way to help. Are you working one or more employees a considerable amount of overtime? A part-time job at the minimum wage will cost you less than time and a half for overtime, and you'll be providing an opportunity for an unemployed person. Call Robert Sanchez over here who is in charge of the Albuquerque youth project, and he'll help you structure a part-time job and place a youth in it. If the youth needs supportive service, the Albuquerque prime sponsor can provide that also.

The economy is improving and your business should improve with it. Do you foresee that you will be able to add one or ten or one hundred new jobs in the next year? Then take on the responsibility now for training those people. You provide part-time or full-time on-the-job training. You bear the training costs and the prime sponsor will pay a stipend to you. Or do it just the opposite—you contract with the prime sponsor who will pay for training costs and you pay a wage to the youth.

I see school administrators here who can certainly help by providing outreach. Get some of these kids back in school, and then provide meaningful relevant training that will help them get jobs. We need to coordinate CETA and vocational education programs as well. I could go on with examples, but the creative approach that meets your situation needs to come from you. If each of you will consider what you can do, if you'll work with each other and with the prime sponsor, then the combination of local initiative, private sector investment and Federal support will solve this pressing problem.

I believe we can do it, and I want Albuquerque and New Mexico to demonstrate to the nation that it can be done. The investment that we make now will save much greater costs in the future. The youth of New Mexico, our youth, are counting on you.

Mr. DOMENICI. I yield the floor at this time. I thank the Senator.

Mr. JAVITS. I thank my colleague.

I yield to Senator BELLMON.

Mr. BELLMON. I thank the distinguished Senator from New York.

I congratulate the Senator from New York and Senator NELSON for the work that went into this measure and for the very innovative approaches they are taking to one of the most serious problems we have in our country.

Those of us who are involved in this matter are interested in targeting a program to evaluate unemployment among the young people of the country, the group most affected, and I believe this conference report reflects as good an approach to that problem as could possibly be made.

Mr. President, I am happy to vote today for final passage of the Youth Employment and Demonstration Projects Act of 1977. I am particularly pleased that the conference did accept Senate provisions for providing programs for in-school youth through cooperation with local education agencies. In May, at the time this bill was before the Senate, I referred the managers of the bill to a bill to provide jobs in rural areas which I introduced in a prior session. Both Senator NELSON, the distinguished chairman of the Employment and Poverty Subcommittee and Senator JAVITS, the distinguished ranking minority member assured me that on-the-job training under part C could be carried out in rural areas on farms and ranches. It was also pointed out that jobs could be provided in rural areas under part B for rehabilitation and repair or weatherization of housing.

Mr. President, I mention this discussion because I believe that the CETA system has become very urban in its outlook. By providing jobs primarily in urban areas, prime sponsors actually are encouraging migration of youth from rural areas to the city. I do not believe this is desirable. The percent of rural youth who are unemployed is high. It has been well established that the youth unemployment problem is as severe in rural areas as in cities. Yet, I fear that most jobs and training programs provided by prime sponsors will focus on the city. Most county, consortia, and balance-of-State prime sponsors serve rural as well as urban areas. I want to urge these prime sponsors to plan programs for these rural areas. There are many jobs that youth can do in smaller communities and farms and ranches. I urge prime sponsors to work with rural employers in order to provide training, on-the-job training, and jobs as their legislation contemplates.

Mr. President, I particularly call attention to the fact that the legislation as finally approved by both the House and the Senate does make provision for providing jobs for young people in rural areas.

The problem of youth employment is often thought of as being primarily a problem of the urban centers, but the fact is that in many cases that problem begins in rural areas, where young people simply cannot find employment; therefore, they move into the cities, where they become a major problem. However, if we were able to alleviate the difficulties in the rural areas, that outmigration never would occur in the first place.

So I am very appreciative of the fact that the conference report does make possible the use of CETA by prime sponsors and other groups in small communities where many opportunities exist and where many of the problems have their origin. I believe sincerely that this is one of the better features of the bill.

I again express my appreciation to both the author and the ranking minority member for having incorporated this provision in the legislation. I am sure it will prove to be one of the better features of the bill.

Mr. JAVITS. I thank my colleague very much for his very kind statement. I completely endorse and validate everything he said about his own participation in it.

I yield to the Senator from Pennsylvania.

Mr. SCHWEIKER. Mr. President, I support the conference report on the Youth Employment and Demonstration Projects Act of 1977 and would like to comment in particular on the agreement of the conferees with regard to the role of community-based organizations in the delivery of employment and training services under this bill.

As passed by the Senate, S. 1242 required the Secretary of Labor and prime sponsors to give special consideration to community-based organizations in carrying our certain programs under part C of the bill. I am very pleased that the House conferees recede to the Senate position on this matter, with only a minor amendment.

Under the conference agreement, programs receiving assistance under paragraph (1) of subsection 343 are required to give special consideration to community-based organizations which have demonstrated effectiveness in the delivery of employment and training services, such as opportunities industrialization centers, the national urban league, SER-jobs for progress, mainstream, community action agencies, union-related organizations, employer-related nonprofit organizations, and other similar organizations, in providing employment, training, and supportive services authorized under section 342.

In addition, under section 348, the Secretary and prime sponsors, as the case may be, are required to give special consideration to community-based organizations in carrying out innovative and experimental programs.

Mr. President, I believe these provisions should insure an active and prominent role for community-based organizations in the delivery of comprehensive employment and training services to

youths. Although many prime sponsors currently utilize community-based organizations in carrying our programs under other titles of CETA, these new provisions require sponsors and the Secretary to give special consideration to these groups under subpart 3 of the new part C of title III.

I believe prime sponsors and the Secretary should observe this requirement diligently and should note that it is deliberately stronger than current law with respect to the role of community-based organizations in the delivery of manpower services. In this light, I expect that the Secretary and prime sponsors will provide an increased role for community-based organizations in the delivery of employment and training services to youths.

I ask the distinguished Senator from New York (Mr. JAVITS) if he shares my interpretation of the conference agreement and agrees with my assessment of the impact of these new provisions?

Mr. JAVITS. Mr. President, I certainly share the fundamental thrust of what the Senator has said, and I would like, if I could, to put it in my own words as follows: The Senator recognizes that our need in this colloquy is to give specific definition and emphasis to the words "special consideration." That was the rubric which we decided on.

Now, "special consideration" means a strong impact—I think those were the words the Senator used—it means a very open door. It means a case for the community-based organization as a right to require consideration of what it has to offer in these particular youth employment activities, and a good reason why what the community-based organization is offering is rejected if the prime sponsor finds that it needs to be rejected. In other words, we had to avoid priority because that is a straitjacket.

But we certainly wanted the spirit of priority incorporated. So unless there was a good reason, unless there was some other competing way to do it which was demonstrably better, it was our desire to see that the community-based organization was given the opportunity to render the services it was capable of rendering.

I would like to point out when we adopted CETA in October of 1976, the report language relating to title VI said the following:

> The conferees expect prime sponsors to provide a substantial portion of the project funds to nonprofit agencies.

At that time we had nothing in the law that said that. Now we have in the law the requirement for special considerations to community-based agencies, and that is why I have given those words the strong definition which I just have to the Senate.

In short, I want to repeat that, we expect that community-based agencies will be favored unless there is demonstrably a better way.

Our purpose is to see that their services are the services which are used, and that, I think, fully expresses, and I developed the words "special consideration" myself, as Senator SCHWEIKER has noted, in the committee as a way of trying to reconcile the views of those who, like Senator SCHWEIKER, fought hard for priority, and those who could not quite go the priority route.

Senator SCHWEIKER himself realized that we had a problem. It was too much of a straitjacket. So we went as far as we could. But in my judgment the spirit is that community-based organizations shall be used, and they shall be the ones whose services are employed unless there is a demonstrably better way.

Mr. SCHWEIKER. I certainly appreciate very much the remarks of the distinguished Senator from New York. I think he has very ably and very articulately expressed the intent and my understanding of what we are trying to do.

Those provisions, as he mentioned, are an outgrowth of an amendment I offered in committee to add as an additional title to the bill a revised version of S. 175, the Opportunities Industrialization Centers Skills Training and National Community Based Organizations Job Creation Employment Act of 1977.

As was indicated, Senator JAVITS played a very key role in arriving at a resolution of this issue with the "special consideration" language. I find this a very good approach to resolving this situation.

I certainly want to pay tribute to him for his support and help.

In addition I would like to thank the distinguished chairman of our full committee, Senator WILLIAMS of New Jersey, for his help and support in this effort, and also the chairman of the subcommittee, the Senator from Wisconsin (Mr. NELSON). I thank the Senator very much.

Mr. JAVITS. I thank my colleague very much.

Mr. President, we are about to close on this report. I would like to pay a special tribute and give public thanks and appreciation to Senator STAFFORD's assistant, Judy Parente; to the young woman who worked closely with Senators BELLMON, DOMENICI, and MCCLURE, Letitia Chambers; to my own assistant, Jim O'Connell, who has rendered a herculean service here; and in respect of the OIC, and the special consideration privilege of the law to which Senator SCHWEIKER has referred, to Ned Kelly, his assistant.

Mr. President, I move the approval of the conference report. I yield back my time.

ADDITIONAL STATEMENTS SUBMITTED

Mr. KENNEDY. Mr. President, today's final passage of the Youth Employment Act begins a comprehensive effort to deal with chronic unemployment among our Nation's young people. This bill will provide hope to the over 3 million young Americans who have been dealt the cruel blow of joblessness.

The bill establishes a National Youth Adult Conservation Corps to put youth to work in our parks and forests. Others will be hired for community improvement projects, such as renovating low-income housing and weatherizing homes. Most important, the bill provides funds for programs, many to be coordinated with local schools, to give youth the training and skills necessary to get and keep full-time jobs. These programs will facilitate that difficult transition between the classroom and the workplace. They will also encourage our young people to stay in school.

The legislation was designed to provide the Secretary of Labor with considerable discretionary funds. The Secretary must be willing to use these funds to explore new concepts, new techniques of dealing with youth unemployment. These include outreach programs, OJT, vocational counseling, skill training, and job sampling.

I wholeheartedly support provisions in the bill which will encourage cooperation between local prime sponsors and educational institutions. Senators HUMPHREY and JAVITS must be commended for incorporating this concept into the bill. Indeed, this type of cooperation is absolutely essential if we are to provide youth with the skills needed to secure meaningful, long-term employment.

I am also pleased that the legislation recognizes the important role of community-based organizations. Many of these organizations, including opportunities industrialization centers, OIC, the National Urban League, SER-Jobs for Progress, and Mainstream, have been highly successful in local employment and training activities. The Secretary is directed by the legislation to give special consideration to these groups in order to insure an active and prominent role for community-based organizations.

Mr. President, $1.5 billion will be spent on this program, a program which represents a major commitment to our Nation's youth. I want to commend the distinguished Senator from Wisconsin and the committee for their quick action on this legislation, and I urge my colleagues to join me in support of this vital program.

Mr. HUMPHREY. Mr. President, the Senate's favorable action on the Youth Employment and Demonstration Projects Act of 1977 today provides a ray of hope for the more than 3 million unemployed youth of America. The passage of this landmark legislation represents the first step in the development of a comprehensive effort to break the vicious cycle that denies jobs to youth because they lack job skills or job experience. This bill represents a major new commitment by Government to provide young people with the help they need to enter the job market and it is representative of this Government's dedication to meeting the needs of youth.

This bill is an extremely timely piece of legislation that has been developed through the close cooperation of the administration with the Congress. I am pleased to have been a cosponsor of the Youth Employment and Training Act, the Senate version of the bill, and to have worked in developing some of that bill's key provisions. Many of its provisions were adopted from the Comprehensive Youth Employment Act of 1977, S. 170, which I introduced with Senator JAVITS earlier this year. I hope that the effort put into this bill by the administration and by many of us in Congress indicates continuing cooperation between

Congress and the administration toward eradicating unemployment.

It is now clear that not all segments of our society are benefiting from the general economic recovery. This fact is most clearly supported by youth unemployment. The plague of unemployment continues to strike the hardest at our youth, destroying their hopes, creating disillusionment, and breeding disenchantment. In May of this year, the unemployment rate among teenagers 16 to 19 years old was 17.9 percent while the unemployment rate for adults 25 years and older was 4.8 percent. The rate for people 20 to 24 years old, many of whom have family responsibilities, is now 10.7 percent. The unemployment rate now stands at 38.7 percent for black teenagers and it approaches an appalling 60 percent in some of our central cities. Almost half of all unemployed Americans are under the age of 25. That has been true every month this year.

It is a crime and a national shame that so many of our youths are wasting their time, energy, and resources when there are so many national needs that have to be met. It is a tragic waste of one of our Nation's most valuable resources. It is clear that the most direct and rapid way of alleviating youth unemployment is through specifically targeted youth employment programs. Economic recovery alone will not provide enough job opportunities to satisfy the nearly 3.2 million youths who want jobs, who want to be productive, who want to earn a living, who want a fighting chance, but who are turned away at the door by potential employers.

The Youth Employment and Demonstrations Projects Act specifically addresses itself to the structural unemployment problems confronting youth. The Young Adult Conservation Corps and the youth community conservation and improvements projects created by the bill will provide unemployed youth with the opportunity to become productive wage-earning members of society. It will provide them with an opportunity that they would otherwise never have had. The jobs they will have will not be make-work jobs. They will be jobs which teach them a skill and work habits—jobs like range management improvement, erosion control, recreation development, rehabilitating public facilities, and repairing low-income housing.

The youth employment and training program set up by the bill will supplement the other provisions of the bill by insuring a long-term attack on the structural unemployment problems of youth. They will reenforce the bill's other programs by providing such services as counseling, activities promoting the education to work transition, bilingual, and other important support services.

I am particularly pleased the bill provides that a significant portion of the funds allocated to each prime sponsor are to be used for in-school youth programs. Under part C, subpart 3, Minnesota will receive $6 million, of which $1.3 million will be for in-school programs. It is critical that youths who are still in school have the same access to jobs and training as youths who are out of school and the bill now insures that will happen. Of course, given the size of the problem, this program is extremely modest.

Yet, Mr. President, the enactment of this legislation will provide innumerable benefits to unemployed youth. I strongly support it and I am pleased to have taken an active role in developing it.

Mr. CRANSTON. Mr. President, I rise in support of the conference report on H.R. 6138, the "Youth Employment and Demonstration Projects Act of 1977", which was agreed to in conference on June 16 and which the House passed on Tuesday by a 356 to 58 vote. This bill adds a new title VIII and a new part C of title III to the Comprehensive Employment and Training Act of 1973 (CETA), as amended, to provide job and job training opportunities for young people. This legislation, which is based on a proposal submitted by the administration on April 6, represents the basis for undertaking a long overdue, major effort to deal with the problems of youth in the labor market. This conference agreement is the result of a carefully worked out compromise between the House-passed bill, H.R. 6138, the "Youth Employment and Innovative Demonstration Projects Act of 1977," and the provisions of S. 1242, the "Youth Employment and Training Act of 1977", as passed by the Senate on May 26.

Mr. President, on January 10, joined by Senator KENNEDY, I introduced S. 20, the "Youth Initiatives Act of 1977." That bill, which is designed to stimulate the creation of employment opportunities for youth in the public and private sectors would establish a national youth service program and an opportunities in private enterprise program. Through these initiatives young people would be provided with meaningful work experience, an appropriate income, and opportunities to develop a better knowledge of their career interests and aptitudes, further their education and training, and develop their employment skills for entrance into the labor market.

As S. 1242 was considered by the Senate, I worked closely in the Subcommittee on Employment, Poverty, and Migratory Labor and in the Committe on Human Resources to blend into the proposal a number of critical elements of S. 20 which I believe are important to include in any initiative which attempts to meet the needs of youth.

At this time, Mr. President, I would like to discuss briefly those elements which were accepted in conference and have been interwoven into this legislation.

YOUNG ADULT CONSERVATION CORPS

Mr. President, title I of the conference bill adds a new title VIII to CETA for the establishment of a Young Adult Conservation Corps—YACC. This program would provide useful work for unemployed youths—ages 16 to 23—on projects on Federal and non-Federal public lands and waters. It is authorized through fiscal year 1980.

The bill provides, as did the Senate-passed version, that the Secretary of Labor will administer the Corps through interagency agreements with the Secretaries of Agriculture and the Interior. The Secretary of Labor would be responsible for making arrangements to refer candidates for enrollment in the Corps from the public employment service, CETA prime sponsors, and other appropriate agencies, including the Departments of the Interior and Agriculture. The Secretaries of Agriculture and the Interior would be responsible for management of the Corps' centers on public lands and waters under their respective jurisdictions.

Importantly, Mr. President, the bill contains a 30-percent earmarking for State and local programs and special projects on State and local parks and forests. This is based on a provision which was included in the Senate bill, at my request, for not less than 30 percent of the title I funds to be provided for such State and local projects; the House-passed bill contained only an authorization—limited to not more than 30 percent—of the title I funds for these projects.

This earmarking for State and local programs could be utilized for such initiatives as are underway in California, Michigan, and Wisconsin. For example, California is operating a very innovative and exciting program, designed by Gov. Gerry Brown, the California Conservation Corps—the CCC—which provides residential employment and training opportunities for young people on State lands. This earmarking will provide additional resources for ongoing and future initiatives along these lines, avoid duplication, and promote coordination of efforts among Federal, State, and local authorities.

YOUTH EMPLOYMENT DEMONSTRATION PROGRAMS

Title II of the bill, Mr. President, adds a new part C to title III of CETA, authorizing a variety of employment, training, and demonstration programs through fiscal year 1978 to explore methods of dealing with the structural unemployment problems of the Nation's youth.

The new part C contains three subparts, as follows:

Subpart 1. "Youth Incentive Entitlement Pilot Projects"—to demonstrate the efficacy of guaranteeing part-time employment to economically disadvantaged youth who are between the ages of 16 and 19, inclusive, who resume or maintain enrollment in programs of secondary education.

Subpart 2. "Community Conservation and Improvement Employment Projects"—to establish employment opportunities for young people, aged 16 to 19, inclusive, on labor-intensive community improvement projects which have lasting and beneficial community impact such as rehabilitation of housing, weatherization, neighborhood improvements, and conservation or restoration of natural resources on public lands.

Subpart 3. "Youth Employment and Training Programs"—to establish comprehensive youth employment and training programs under which a variety of employment and training opportunities would be carried out to meet the needs of young persons ages 16 to 21, inclusive—and, as the Secretary may authorize, youths 14 and 15 years of age.

Mr. President, the bulk of opportunities available under this legislation is in

subpart 3. These opportunities would include meaningful work experience, as well as training and support services for youth such as outreach, counseling, occupational information, transportation, and placement assistance. These opportunities, as well as other opportunities available under the new part C, would be channeled through the prime sponsor system already in place under CETA.

There are a number of particular items related to subpart 3 of which I would like to make special note.

INCOME LIMITATIONS

First, Mr. President, while employment opportunities under the new title VIII and subpart 2 of title III–C are open to youths of all economic backgrounds, and opportunities under subpart (C)(1) are restricted to economically disadvantaged youth, employment opportunities under subpart (C)(3) are targeted on those youths who are members of families whose family income does not exceed 85 percent of the BLS lower living standard budget—about $8,500 for an urban family of four on a national average. However, the conferees accepted a provision, which I had revised in the Senate-passed bill, from the administration's version, that allows certain limited participation, as authorized by the Secretary, of noneconomically disadvantaged young people in otherwise ongoing support and training activities such as those noted above. Additionally, the conference agreement contains a House-passed provision which allows prime sponsors to use up to 10 percent of their funds for work experience and employment opportunities for noneconomically disadvantaged kids. The conferees did not intend that these funds would be used to establish segregated programs for youths from families with greater economic resources, but rather envisioned "mixing" youths from all economic backgrounds in employment programs conducted under this subpart.

I believe that these are crucial elements since, while our major emphasis should be on those who are most in need of services—and will be as a result of the income targeting provisions—we must also be cognizant of the fact that the phenomenon of youth unemployment is not restricted to just those who are poor. In reality, the structure of our labor market makes it difficult for any youth—regardless of his or her economic resources—to find a meaningful job.

YOUTH COUNCILS

Second, Mr. President, the conferees accepted a provision which is based on a provision contained in my bill, S. 20, as well as drawing on concepts in a provision contained in S. 170, the "Comprehensive Youth Employment Act of 1977," introduced by Senators JAVITS and HUMPHREY and others and contained in an amendment (No. 184) which they offered to S. 1242 in the Senate.

This provision requires that prime sponsors establish youth councils which are to function as subcouncils of the prime sponsors' planning council established under title I of CETA. These youth councils are to be responsible for planning and reviewing activities under subparts 2 and 3 of title III–C, and making recommendations with respect to these programs to the full planning council.

Each youth council would be composed of representatives of local educational agencies, vocational education advisory councils, postsecondary institutions, businesses, unions, the public employment service, local government and nongovernment agencies, and organizations which are involved in meeting the special needs of youth, the community, the prime sponsors' planning council, and most importantly, youths themselves.

Mr. President, I believe that it is not possible to overstate the importance of having representation by reasonable numbers of young persons on the council. This membership by youths will insure their input into the planning of activities designed to benefit them and their peers. This contribution to the advisory council is fundamental to meeting the needs of youth in an effective, comprehensive manner that will assist in attempting to assure that programs are truly responsive to their needs.

STATE ROLE

Third, Mr. President, is the provision in the conference bill which is based on a suggestion I made along with other members of the Senate and House Committees for a set-aside for the States under subpart 3. The conference agreement provides that 5 percent of the total funds available under title III–C be made available to the Governors for such statewide services—or about $57.5 million based on a $1.5 billion appropriation.

These funds are to be used for special statewide youth services, such as joint projects to coordinate efforts of State services, special programs to meet the special needs of the youth population, such as youths in fostercare programs or young criminal offenders, and special model employment and training programs. I am hopeful that this provision for a State role will enhance the quality of services afforded youth and complement and supplement the programs of prime sponsors within the individual States.

TARGETING SERVICES ON YOUTH IN SPECIAL NEED

Fourth, Mr. President, the conference agreement contains my amendment to require that efforts be made to insure that youths participating in activities under subparts 2 and 3 shall be youths who are experiencing severe handicaps in obtaining employment. This includes youth who lack credentials—such as a high school diploma—or who require substantial basic and remedial skill development in order to compete more effectively in the labor market. In addition, these categories of youth could include women and minorities, those who are veterans of military service, offenders, those with handicaps, and those who have dependents, as well as those with other special needs.

Mr. President, with respect to these categories of individuals who would benefit from involvement in job opportunities, I would like to make specific mention of young veterans. Historically, this group suffers disproportionately high rates of joblessness, much of which has been theoretically accounted for by the fact that these individuals enter the labor force for the first time at an older age than high school graduates, and very often, while having obtained considerable skills training in the service, find such skills inapplicable to civilian jobs. The rate of unemployment for young male veterans aged 20 through 24 in the first quarter of 1977 was 16.5 percent, while the rate for male nonveterans of the same age group was 10.8 percent. The June rate for 20- through 24-year-old veterans was 18.1 percent as compared to 8.9 percent for comparable nonveterans.

Undoubtedly, Mr. President, the kind of training and employment opportunities under these programs would be invaluable to these young veterans, as well as to those individuals who have not spent time in the service.

Later in this statement, Mr. President, I will describe section 305 of the bill which deals with veterans participation in CETA as a whole, and which would apply with equal force to the new youth programs.

Mr. President, this severe-hardships targeting provision is based on my belief that programs established under this or any other youth employment and training authority should be tailored to meet the special needs of those groups of young people who are least likely to receive services under other programs. We need to avoid the "most bang for the money" approach that results in "creaming" the target population—placing those young persons that would find it relatively easy —as compared with their most disadvantaged peers—to compete in the labor market. Even though it is vital that we equip all youths with adequate skills to make an effective transition from the world of education to the world of work, we need to make sure that the more difficult cases, as well as the easy ones, are provided service. This provision attempts to insure that those most in need are involved in efforts carried out under these programs.

COUNSELING AND PLACEMENT SERVICES

Fifth, Mr. President, is the provision in the bill that requires that in all activities conducted under the new part C of title III there be provision for appropriate counseling and placement services designed to facilitate the transition of youth from participation in these activities to permanent jobs in the public or private sector or to further education or training programs which would improve the quality of their lives. In addition, under subpart 3, youths are to be provided appropriate job skills and be given necessary basic education and training. Procedures are to be established in order to document the competencies derived from the individual's participation in the program.

Mr. President, these provisions, too, incorporated from the Senate bill, derive from S. 20, I believe that young persons who participate in these new programs must gain something more than just the experience of 1 year of wages and work. It is imperative that youths be better off in terms of their job potential after

participating in these programs than they were before, and these provisions are an attempt to insure, through counseling, placement, and job development services, that these youths obtain substantially greater and more lasting assistance.

Mr. President, the bill as reported from committee contains a "such sums" authorization through fiscal year 1978. The Economic Stimulus Appropriations Act—Public Law 95–29—which was signed by the President on May 13, contains an appropriation of $1 billion for youth employment initiatives. This means that as soon as this authorizing legislation is enacted these efforts can get underway and we can begin immediately to provide job and job training opportunities to young people. It is anticipated that at least another $500 million will be made available through fiscal year 1978.

Mr. President, this is just the beginning—but one of the most important beginnings we have had in years in the area of youth employment and one that represents a true spirit of commitment to solving the problem. I will be working closely with the administration and the Congress as we begin to implement this legislation and as we develop more than a 1-year program and to make any expansion, extension, or modification of these provisions necessary to insure the full success of our efforts to provide jobs for as many young people as we possibly can.

VETERANS PROVISIONS

Mr. President, as I indicated, I would like to make special note of the provisions of section 305 of this bill, which relate to employment and training opportunities for veterans.

The need for these provisions are underlined by the continuing disproportionately high rates of Vietnam-era veteran unemployment. During June, and for each of the 2 previous months, rates of unemployment for Vietnam-era veterans were higher in every single age category, as well as overall, than rates for comparable categories of nonveterans. For instance, the rate for Vietnam-era veterans ages 30 through 34 in June was 4.5 percent; for nonveterans of the same age, the rate was 4.0 percent. Veterans aged 25 through 29 suffered an unemployment rate of 7.1 percent; nonveterans had a 6.3 percent rate of unemployment. As I stated earlier, in describing the targetting provision for youth employment and training programs under subparts 2 and 3 the statistics are particularly outrageous in the case of young veterans ages 20 through 24: 18.1 percent. For nonveterans in that age group the rate was 8.9 percent.

On January 27, following his swearing in, Secretary of Labor Marshall announced the administration's commitment to make the plight of the jobless disabled and Vietnam-era veterans a high priority. At that time, the administration unveiled a three-part program designed to help bring these veterans back into the mainstream of America's economic life.

The first part of the administration's proposal is Project HIRE—Help through Industry Retraining and Employment. This program is designed to enlist the Nation's largest corporations to make private-sector job and training opportunities available to disabled and Vietnam-era veterans. The "kick-off" of this long awaited program took place at the White House on June 14. The administration anticipates that 92,000 new jobs for veterans will be created over the life of this program through fiscal year 1978.

Second, the President's program established the disabled veterans outreach program whereby outreach units staffed by disabled Vietnam-era veterans, would be established within employment service offices around the country. These temporary paraprofessionals are to concentrate on identifying disabled veterans in need of services and bringing them into the mainstream of the labor market through jobs, job training, and related services to which they are entitled. This program is to provide 2,000 jobs for disabled veterans outreach workers, and over the 18 months life of the program is expected to place over 40,000 other disabled veterans.

Mr. President, thus far, this initiative has enjoyed considerable success and has been favorably received across the country. I ask unanimous consent that a letter which I recently received from Martin R. Glick, director of the employment development department of the State of California, outlining the success of the program there, be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EMPLOYMENT DEVELOPMENT DEPARTMENT,
Sacramento, Calif., June 7, 1977.

Hon. ALAN CRANSTON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CRANSTON: I thought you might like to see the attached update of the Disabled Veteran Outbreak Program in California. We are very pleased with the early results. Thanks for your support of this effort.

Regards,

MARTIN R. GLICK, *Director.*

DISABLED VETERANS OUTREACH PROGRAM—DVOP

California was allocated 172 DVOP positions on February 28, 1977 with instructions to hire Viet Nam Era veterans by July 1, 1977. The first DVOP participant was hired on April 1, 1977 and a total of 169 were hired as of April 12, 1977. These individuals immediately received training and orientation to the functions of the Employment Development Department and were providing direct services to veterans by May 15, 1977. The following is a breakdown of the individual characteristics of those hired with regards to veteran status, sex and ethnic background: 165 Disabled Vietnam Era Veterans; 4 Vietnam Era Veterans; 166 Males; 3 Females; 92 Caucasians 41 Blacks; 28 Spanish; 5 Native American; and 3 Asian.

California was subsequently allocated 36 additional DVOP positions to be hired starting June 1, 1977. The Department will hire the newly allocated positions plus the remaining 3 positions of the initial allocation prior to June 30, 1977. On or before that date we will have 208 DVOP participants working on the veteran outreach program.

During the month of April the DVOP participants placed 286 veterans in jobs, referred 139 to training openings which resulted in 42 entering training programs, and developed 365 job openings. The program has been very helpful in highlighting the department's services in local communities. Articles such as the one in the Orange County edition of the Los Angeles Times with the caption "Hunt Staged for Disabled Vietnam Era Veterans", described the program and highlighted the role of the department in meeting the employment needs in the community.

One disabled veteran was hired just at the time the local veteran employment representative was hospitalized. The newly hired participant, a native American and the student body president of an Indian Community College, took over the promotion of "Hire a Veteran Week". As a result of his endeavors he was able to find jobs for 10 Vietnam Era Veterans, 3 were disabled veterans. He also placed 2 other veterans in jobs.

In another community we were able to hire a Vietnam disabled veteran who had worked at a community college as a veterans service representative. This veteran has done a tremendous job in gaining the confidence and cooperation of employers in the area. Some of these employers had not previously used the department's employment services. This same individual, on a number of occasions, has talked to unemployment insurance claimants while they were in the office, found some of them jobs and motivated others to take a more active part in looking for work.

My initial impression is that we have been able to select a group of outstanding Vietnam Era veterans as DVOP participants. I feel confident that in the months ahead we will be able to appoint many of these participants to regular civil service positions in the department.

Mr. CRANSTON. Mr. President, this excellent report about progress in California under this innovative and promising program is most encouraging, and I am eagerly awaiting important gains for seriously disabled service-connected veterans in the job market when this program has been fully operational for 6 months or so.

Mr. President, the third element of the President's proposal is the provision of increased opportunities for disabled and young Vietnam-era veterans in public service jobs under CETA. The President proposed that, in filling new public service job opportunities under titles II and VI of CETA, there be established a national goal that 35 percent of all new CETA PSE hires be veterans, and submitted legislation to provide a hiring preference for young and service-connected disabled veterans. The preference concept was rejected by the House in its consideration of the 1-year CETA extension legislation.

In response to this action by the House and in close cooperation with the other members of the Committee on Human Resources and the administration, I worked out with the administration a substitute for its preference proposal. This substitute provisions was passed by the Senate as part of the youth employment legislation on May 26.

As accepted by the conference, this provision directs the Secretary of Labor to take appropriate steps to increase the participation of certain veterans in CETA job and job training opportunities. These veterans are defined as those men and women who served during the

Vietnam-era who are under 35 years of age and those veterans with 30 percent or more service-connected disabilities arising out of any period of service—regardless of age. As passed by the Senate, the amendment was targeted on disabled veterans and Vietnam-era veterans under the age of 27. In conference, an amendment offered by Congressman WEISS of New York—which I supported—was accepted increasing the age of eligible Vietnam-era veterans to those under 35.

The provision specifically includes two steps that the Secretary will take to serve the employment needs of these veterans. This list, however, is not inclusive and any steps which the Secretary determines are appropriate may be implemented, such as those required by present law which were spelled out in the Senate provision.

The two steps included in the provision are:

First, the development by the individual prime sponsors of local goals for the participation of these veterans in their P.S.E. programs. These goals would be keyed to the needs of veterans and other significant segments of unemployed persons within the individual areas served by the prime sponsors. Clearly, this provision does not provide a statutory preference about which many reservations have been expressed. It is designed to provide ample latitude and flexibility—without hamstringing prime sponsors or others involved in the delivery of job and job training opportunities—while at the same time giving the Secretary a clear mandate to serve the needs of especially hard-hit groups of unemployed veterans.

Second, the invitation to representatives of veteran groups and organizations to serve as temporary members of the prime sponsors planning councils, the State manpower service councils, and the National Commission for Manpower Policy established under CETA. Presently, there is nothing to preclude the representation on these entities by veterans and in the case of some prime sponsors they are already onboard. This is an attempt, however, to give visibility to and make the prime sponsors aware of the needs of veterans.

Mr. President, the provision also requires that the Secretary report to the Congress within 60 days of enactment on the funds and personnel he has made available for carrying out these efforts.

In carrying out these and all other employment efforts related to veterans, the Secretary is directed to consult and cooperate with the Administrator of the Veterans' Administration in order to better meet the needs of veterans.

The conferees deleted, as redundant, the provision which required the Secretary, in carrying out these provisions, to consult with the Deputy Assistant Secretary of Labor for Veterans' Employment—DAS—but noted that since the DAS is by law the principal adviser to the Secretary on all matters relating to veterans' employment, this would be a matter of routine procedure with respect to this or any other provision of law affecting veterans.

This post of the DAS was created by Public Law 94–502, the Vietnam-Era Veterans Education and Employment Assistance Act of 1976, which was enacted last year. The first Deputy Assistant Secretary, Roland Mora, is expected to be confirmed shortly. He has appeared for confirmation hearings before the Senate Human Resources and Veterans' Affairs Committees. I am hopeful that he will play an active role in the implementation of this provision.

Mr. President, as I indicated, the conference agreement did not retain references in the Senate-passed bill to steps which the Secretary should take in carrying out existing statutory programs to serve the employment needs of veterans. These provisions included:

First. The full implementation of the Secretary's responsibilities with respect to the conduct of a public information and outreach program to maximize employment opportunities for veterans. This is already required under Public Law 93–567.

Second. The full implementation of the Secretary's responsibilities under title 38 of the United States Code relating to job counseling, training, and placement services for veterans, mandatory listing, veterans' reemployment rights, and other provisions relating to veterans' employment.

Third. The full utilization of the provisions within existing CETA law which define certain groups of veterans as significant segments of the population and require "special consideration" for veterans of Indochina and Korea service. These provisions have been in CETA since its enactment in 1973.

However, Mr. President, it is not intended that these current provisions of the law should not be complied with or utilized as a means of meeting the needs of these veterans. Hence, the conferees noted, at page 48 of the conference report Joint Statement (H. Rept. No. 95–456), that "such provisions of the law have not been adequately carried out in the past."

Indeed, the weight of the evidence is that these provisions have been poorly enforced and laxly implemented by prior administrations. The Senate Human Resources Committee report on the 1-year CETA extension (S. Rept. No. 95–174) to which this provision was initially attached—contains a 7-page discussion of the failure in the implementation of these laws already on the books to improve significantly the plight of the jobless veteran.

And, Mr. President, while it has been suggested that veterans are being served adequately under CETA, the statistics do not bear this out.

For instance, using fiscal year 1976 unemployment data for the purposes of comparison with the most recent CETA participation figures, the rate of unemployment for Vietnam-era veterans was 8.7 percent—up from the fiscal year 1975 rate of 7.5 percent. For younger veterans, those aged 20 through 24, the fiscal year 1976 rate was 18.9 percent in fiscal year 1976—up from the fiscal year 1975 rate of 15.7 percent by more than three percentage points, and more than twice the fiscal year 1974 rate of 9 percent. And the unemployment rates for young minority group veterans are nothing less than tragic—29.9 percent of young black and other minority group veterans were unemployed in fiscal year 1976.

Statistics are not collected on disabled veterans or on handicapped persons, but it is a fact that there are more than 197,800 service-connected disabled veterans who served during the Vietnam-era alone who are rated at 30 percent or more disabled, and more than the 986,000 with 30-percent-or-more service-connected disabilities from all conflicts.

Turning to the participation rates, Mr. President, the inadequacy of efforts to meet the needs of veterans—especially in light of these high rates of unemployment—become quickly apparent.

Under titles II and VI, "special Vietnam-era veterans," recently discharged veterans, and service-connected veterans are required to receive "special consideration."

However, under titles I, II, and VI, Mr. President, in each case and overall, the record for special Vietnam-era veterans—those who served in Indochina or Korea during the Vietnam era—was worse in fiscal year 1976 than it was in fiscal year 1975. While the unemployment rates rose, their enrollment rates declined. Overall, 5.3 percent of those enrolled in these three CETA titles in fiscal year 1976 were special Vietnam-era veterans.

During fiscal year 1976, the Department of Defense advised that there were 2,741,014 enlisted persons who fell into the category of "recently discharged veterans"—those who have been out of the service for less than 48 months. Out of this "pool," only 71,595 individuals were enrolled in any of the three titles of CETA—constituting less than 3 percent of the total enrollments. In fiscal year 1976, only 10,425 disabled veterans were enrolled in any CETA program. This was only four-tenths of 1 percent of the total enrollments.

Mr. President, we cannot afford to be satisfied with this—which is only an example of the poor performance record—and continue to have these laws inadequately carried out. In this regard, I want to make special note of the language which appears at page 48 of the conference report, as follows:

> The conferees expect that such provisions will be fully enforced and implemented by the Secretary in attempting to meet the employment needs of veterans. The conferees believe that the interests of Vietnam-era veterans would be served by improving the coordination of CETA services with existing readjustment and other veterans benefit programs such as those authorized under title 38, U.S.C. Accordingly, the conferees expect the Secretary to provide the necessary technical assistance and other resources needed to improve prime sponsors' awareness of existing veterans programs, to utilize more effectively current CETA services for veterans, and to increase prime sponsors' understanding of the unique readjustment problems of Vietnam-era veterans.

The conferees also accepted an amendment which requires the Secretary of Labor to take all reasonable precautions

to insure that, in preparing reports on the client characteristics of CETA participants, veterans are not counted more than once. In the past, the statistics have been questionable since a service-connected, recently separated, Vietnam combat veteran could appear in three categories—making the participation rate for veterans appear to be higher than what it is in reality.

Mr. President, I think it is unforgiveable that veterans who bore the brunt of the most unpopular war this country has ever known and those who still bear the scars of battle, are precisely those persons who bear and have borne the brunt of most of the heaviest unemployment rates in the labor market.

Mr. President, the need for this provision is clear. The statistics and the performance record both require the enactment of a greater statutory mandate in this area. It is time for those of us in the Congress to renew our commitment to serve those who have served, and I am hopeful that the implementation of this new provision, and the response to the mandate to fully carry out the existing law conclusion will be prompt and forceful.

Mr. President, in closing, I would like to pay tribute to the members and staff of the Senate Human Resources Committee and the House Education and Labor Committee for the Cooperation, dedication, and hard work that has resulted in this legislation. In particular, I want to express my appreciation to Senators NELSON and JAVITS and Congressmen HAWKINS, PERKINS, QUIE, and WEISS and their staffs for their outstanding efforts in developing this legislation.

In addition, on what is for myself and my staff a sad note, I'd like to express my sincere and deepest appreciation to Dick Johnson who will today be leaving his position as counsel to the Senate Subcommittee on Employment, Poverty, and Migratory Labor. His assistance to me and my staff over the past years has been invaluable. His expertise and ability are unsurpassed in the employment and training and poverty areas. His performance has been of the highest professional caliber.

We will miss Dick greatly, but I want to extend my best wishes to him in all his future endeavors. And we are delighted that he will be continuing to work closely with us in the very important new responsibilities he will be undertaking at the Labor Department in the welfare reform and employment programs. This conference report is a fine tribute to him, and we look forward to his help from downtown when we take up youth employment legislation next year.

Mr. President, I am hopeful that this legislation will be just the beginning and that it will provide us with the basics and the experience necessary to make a full-fledged national commitment to youth a reality before the end of the 1970's. I urge the Senate to take favorable action on this legislation.

(Conclusion of additional statements submitted.)

The PRESIDING OFFICER. All time is yielded back. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. JAVITS. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. JAVITS. I thank the Chair.

Mr. BAKER. Mr. President, will the Senator yield to me just for a brief moment just so I can take this opportunity to express my appreciation to the Senator from New York for his handling of this measure at this time, this late in the evening, and to the other Senators on this side who participated.

Mr. JAVITS. I thank the Senator.

Mr. BAKER. I thank the Senator.

Mr. ROBERT C. BYRD. I thank the distinguished minority leader. I would like to add my compliments to those of the distinguished minority leader, which have been tendered to the distinguished Senator from New York (Mr. JAVITS), and the same to the Senator on this side of the aisle, Mr. NELSON.

Mr. JAVITS. Mr. President, I think GAYLORD NELSON is one of our real stars here, and he showed it in the way he handled it.

Mr. ROBERT C BYRD. He is something; he is a remarkable man.

Mr. JAVITS. Mr. President, as I walked out the door I realized that I had not said anything about the father of all, Senator WILLIAMS of New Jersey, the occupant of the chair. His chairmanship and my partnership with him have been one of the great joys of my service, and the tact and freedom which he gives those who work with him, including Senator NELSON and myself, are an enviable example to every committee chairman, and he showed it superbly in this very matter of the youth employment bill.

I thank my colleague.

Mr. ROBERT C. BYRD. I thank the Senator. Mr. President, a word fitly spoken is like apples of gold in pictures of silver. I share the distinguished Senator of New York's views with respect to the present occupant of the chair, Mr. WILLIAMS.

RICHARD E. JOHNSON

Mr. NELSON. Mr. President, I wish to make a brief statement, particularly while the chairman of the Committee on Human Resources is in the chair, the senior Senator from New Jersey.

Mr. President, today I want to take a moment of the Senate's time to pay tribute to Richard E. Johnson.

Since 1969, Dick has served as counsel to the Senate Subcommittee on Employment, Poverty, and Migratory Labor. He will soon be leaving Capitol Hill to assume a position in the Labor Department. When he leaves, he will be taking with him our friendship, as well as our gratitude for having served the Senate brilliantly and diligently for over 8 years.

During this time, Dick has been the primary staff person responsible for a wide array of legislation, including the Economic Opportunity Act Amendments of 1969, 1972, and 1974, the Legal Services Corporation Act, the Comprehensive Employment and Training Act of 1973, the Emergency Jobs and Unemployment Assistance Act of 1974, and the Youth Employment and Demonstration Projects Act of 1977.

Dick has not received, nor sought, credit for these enactments, but those of us who have worked closely with him know that he has played a vital role in the passage of these major pieces of social legislation.

Throughout the years, first in the Office of General Counsel, Department of Health, Education, and Welfare, then in the Office of Legislation, U.S. Office of Education, at the Subcommittee on Poverty, and now at the Department of Labor, Dick has devoted his energy and talents to help this Nation's poor and underprivileged. And his work has made a difference. The litany of legislation he has helped develop is witness to that.

Dick Johnson is one of those rare individuals whose commitment, judgment, and counsel could always be depended upon to help guide us in the most difficult of times toward the right solutions. His presence shall be missed, but we are indeed fortunate to have had the opportunity to be associated with him.

To our friend and colleague, Richard E. Johnson, goes our sincere appreciation for a job well done. We extend to him, his wife, Carol, and their three children—Mark, Scott, and Susan—our prayers and wishes for a happy future.

Mr. JAVITS. Mr. President, I, too, would like to pay tribute to Dick Johnson. When one is a public servant, one does not often realize that those professional staff members in the minority and majority counsel positions, themselves, serve the people and require not only a degree of expertise, but a conscience and a sense of responsibility which is almost equivalent to our own. Though they are employees of the Senate, they are very much an element of what we are able to do for the people.

I have often pointed to my professional staff members, and said, "There are my brains." I am not notoriously known to be stupid myself, but, nonetheless, I have felt that way because of the unbelievable dedication and hard work, beyond what anybody ever imagines—weekends, Sundays, nights—given unstintingly. The giving of themselves to us for what we need to know and have crammed into our heads in unbelievably short time, we owe to the Dick Johnsons of the Senate. I wish to pay him my tribute.

Mr. NELSON. Let me say to the distinguished Senator from New York that everyone who has worked with Dick Johnson in the executive branch before he came here, those who recommended that he come to our subcommittee, and those of us on both sides of the aisle who have worked with him, have all been tremendously impressed by his dedication, his great intelligence, his great thoughtfulness, and his great competence.

Having said that, I think that, really, the most important thing to be said

about Dick Johnson is that he is a man of absolute integrity. On those occasions when a member of the minority would inquire of me whether the particular provision that they were interested in was adequately covered in the bill as drafted, and I assured them, without qualification, that it was, they would then ask, "What does Dick Johnson think?"

I would say, "Well, he says it is adequately covered," and the Member of the minority would say, "That is good enough for me."

Mr. JAVITS. I thank the Senator for putting so eloquently what I was trying to say. That is the same thing we have found of him. I am delighted to join in the wonderful tribute which my colleague from Wisconsin has paid to his own assistant.

AUTHORIZATION FOR A STAFF INVESTIGATOR TO APPEAR AND TESTIFY

Mr. ROBERT C. BYRD. Mr. President, I send to the desk, at the request of Mr. JACKSON, a resolution and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will state the resolution by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 227) to authorize a staff investigator of the Senate Permanent Subcommittee on Investigations of the Committee on Governmental Affairs to appear and testify.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that further reading of the resolution be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered .

Mr. JACKSON. I report today a resolution to permit a staff investigator of the Permanent Subcommittee on Investigations of the Committee on Governmental Affairs to testify at a pretrial hearing.

By letter of July 8, 1977, the office of the U.S. attorney, central district of California, requested that the subcommittee make Mr. John Walsh, a staff investigator, available in California to appear and testify at a pretrial hearing scheduled for July 25, 1977, in the matter of *United States* v. *Elko, et al.* (CR 77–739–ALS). Mr. Walsh will be testifying about matters developed in the course of his investigation into the Federal guaranteed student loan program pertaining to the transactions of certain individuals, which transactions are pertinent to a seven-count indictment in the central district of California against these individuals.

Pursuant to rule XXX of the Standing Rules of the Senate, and the privileges of the Senate, such testimony is prohibited without a resolution of the Senate.

Accordingly I report the following resolution, approved by the Committee on Governmental Affairs, and ask that the resolution be adopted.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution was agreed to.

The preamble was agreed to.

The resolution (S. Res. 227), together with the preamble, is as follows:

Whereas the United States Attorney for the Central District of California has formally requested in writing, by letter dated July 8, 1977, that John J. Walsh, a staff investigator of the Senate Permanent Subcommittee on Investigations of the Committee on Governmental Affairs be authorized to appear and testify at a pretrial hearing in the matter of *United States* v. *Elko, et al.* (CR 77–739–ALS);

Whereas the subject matter of the testimony pertains to information obtained by Mr. Walsh in the course of his employment as a staff investigator for the Senate Permanent Subcommittee on Investigations; and

Whereas by the privileges of the Senate of the United States and by rule XXX of the Standing Rules of the Senate, no information secured by staff employees of the Senate pursuant to their official duties may be revealed without the consent of the Senate: Therefore, be it

Resolved, That John J. Walsh, a staff investigator of the Permanent Subcommittee on Investigations, be authorized to appear and testify at a pretrial hearing in the matter of *United States* v. *Elko, et al.* (CR 77–739–ALS).

SEC. 2. The Secretary of the Senate shall transmit a copy of this resolution to William D. Keller, United States Attorney, Central District of California, 312 North Spring Street, Los Angeles, California 90012, attention: David R. Hinden.

AUTHORIZATION TO MAKE TECHNICAL AND CLERICAL CORRECTIONS—S. 701

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of S. 701.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR THE CONSIDERATION OF S. 1613 TOMORROW

Mr. ROBERT C. BYRD. Mr. President, there is a measure on the calendar which I would like to call up tomorrow, and I ask unanimous consent that, following the recognition of the two leaders, on tomorrow, if there are no orders for the recognition of Senators—and I am informed there are none—that the Senate then proceed to the consideration of calendar order No. 318, S. 1613, a bill to improve access to the Federal Courts by enlarging the civil and criminal jurisdiction of U.S. magistrates, and for other purposes.

Mr. BAKER. Mr. President, reserving the right to object, I would only say to the majority leader this matter has been cleared on this side for consideration tomorrow, and we have no objection to its consideration in that way.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a time limitation on S. 1613 of 1 hour to be equally divided between Mr. DECONCINI and Mr. THURMOND; that there be a time limitation on any amendment, debatable motion or appeal or point of order, if such is submitted to the Senate for its decision or if discussion is entertained by the Chair thereon, of 20 minutes to be equally divided, and that the agreement be in the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 11 A.M. TOMMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 11 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, I guess about all I can say at the moment is that on tomorrow the Senate will convene at 11 a.m. and following the two leaders or their designees under the standing order the Senate will take up S. 1613 under a time agreement. As far as I know, there is likely to be a rollcall vote on passage of that measure.

Following the disposition of that measure, I am not at the moment in a position to state what will occur. But I can say I think with certitude that the Senate will not be in late tomorrow and that there will not be late votes tomorrow. And on that point, I think I can say that because of the fact on next Monday and Tuesday the Senate will be debating the public financing bill during both days, there will not be late sessions on Monday and Tuesday, and there will not be late votes on Monday and Tuesday.

Mr. BAKER. Mr. President, I thank the distinguished majority leader for that information which I am sure will be most helpful to Senators in arranging their schedules.

Mr. President, I expect that next week will be a busy week, that there will be much debate, but I am especially pleased the majority leader made that prediction for us.

Mr. ROBERT C. BYRD. I thank the able minority leader.

RECESS UNTIL 11 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until the hour of 11 a.m. tomorrow morning.

The motion was agreed to; and at 7:22 p.m. the Senate recessed until tomorrow, Friday, July 22, 1977, at 11 a.m.

NOMINATIONS

Executive nominations received by the Senate July 21, 1977:

AMBASSADOR

Peter R. Rosenblatt, of New York, for the rank of Ambassador during the tenure of his service as Personal Representative of the President to conduct negotiations on the future political status of the Trust Territory of the Pacific Islands.

*HMCM Gayle H. Damstrom, U.S. Navy.

CONFIRMATIONS

Executive nominations confirmed by the Senate July 21, 1977:

DEPARTMENT OF JUSTICE

James J. Gillespie, of Washington, to be U.S. attorney for the eastern district of Washington for the term of 4 years.

Joseph F. Dolan, of Colorado, to be U.S. attorney for the district of Colorado for the term of 4 years.

Charles E. Graves, of Wyoming, to be U.S. attorney for district of Wyoming for the term of 4 years.

Hubert T. Taylor, of West Virginia, to be U.S. marshal for the northern district of West Virginia for the term of 4 years.

DEPARTMENT OF DEFENSE

Hans Michael Mark, of California, to be Under Secretary of the Air Force.

Walter Barber LaBerge, of Virginia, to be Under Secretary of the Army.

Antonia Handler Chayes, of Massachusetts, to be Assistant Secretary of the Air Force.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

THE JUDICIARY

Edward L. Filippine, of Missouri, to be U.S. district judge for the eastern district of Missouri.

IN THE AIR FORCE

The following officer under the provisions of title 10, United States Code, section 8066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 8066, in grade as follows:

To be lieutenant general

Maj. Gen. Charles A. Gabriel, xxx-xx-xxxx xxx-...FR (brigadier general, Regular Air Force), U.S. Air Force.

The following officers for appointment in the Reserve of the Air Force to the grade indicated, under the provisions of chapters 35, 831, and 837, title 10, United States Code:

To be major general

Brig. Gen. Robert E. Buechler, xxx-xx-xxxx xxx-...GG, Air National Guard of the United States

To be brigadier general

Col. Ervin H. Bucher, xxx-xx-xxxx FG, Air National Guard of the United States

Col. James E. Darst, Jr. xxx-xx-xxxx FG, Air National Guard of the United States

Col. Donald W. Forney, xxx-xx-xxxx FG, Air National Guard of the United States

Col. Orlando Llenza, xxx-xx-xxxx FG, Air National Guard of the United States

Col. Ralph A. Skowron, xxx-xx-xxxx FG, Air National Guard of the United States

IN THE ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be general

Lt. Gen., Sam Sims Walker, xxx-xx-xxxx, Army of the United States (major general, U.S. Army).

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Thomas Howard Tackaberry, xxx-xx-xxxx U.S. Army.

The following-named officers for appointment in the Regular Army of the United States to the grade indicated, under the provisions of title 10, United States Code, sections 3284 and 3306:

To be brigadier general

Maj. Gen. Richard H. Thompson, xxx-xx-x... xxx-... Army of the United States (colonel, U.S. Army).

Maj. Gen. William E. Eicher, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. Richard L. Harris, xxx-xx-xxxx, Army of the United States (colonel U.S. Army).

Brig. Gen. James G. Boatner, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Lt. Gen. Edward C. Meyer, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. William R. Richardson, xxx-xx-x... xxx-... Army of the United States (colonel, U.S. Army).

Brig. Gen. Edward A. Partain, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. Roscoe Robinson, Jr., xxx-xx-x... xxx-x... Army of the United States (colonel, U.S. Army).

Maj. Gen. Alexander M. Weyand, xxx-xx-x... xxx-x... Army of the United States (colonel, U.S. Army).

Maj. Gen. Robert G. Yerks, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. James M. Rockwell, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. Albert B. Akers, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. Ernest D. Peixotto, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. Morris J. Brady xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. Wesley E. Peel, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. Benjamin L. Harrison, xxx-xx-xxxx xxx-x... Army of the United States (colonel, U.S. Army).

Brig. Gen. Donald E. Rosenblum, xxx-xx-xxxx xxx-x... Army of the United States (colonel U.S. Army).

Maj. Gen. Charles C. Rogers, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. Paul S. Williams, Jr., xxx-xx-xx... xxx-... Army of the United States (colonel, U.S. Army).

Maj. Gen. Richard E. Cavazos, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. John N. Brandenburg, xxx-xx-x... xxx-x... Army of the United States (colonel, U.S. Army).

Maj. Gen. Oscar C. Decker, Jr., xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. John K. Stoner, Jr., xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Maj. Gen. Emmett W. Bowers, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. William I. Rolya, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. Story C. Stevens, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. Sampson H. Bass, Jr., xxx-xx-x... xxx-... Army of the United States (colonel, U.S. Army).

The following-named officer to be placed on the retired list in grade indicated under the provisions of title 10, United States Code, section 3962:

To be lieutenant general

Lt. Gen. Frank Ambler Camm (age 55), xxx-xx-xxxx Army of the United States (major general, U.S. Army).

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. John Royster Thurman, III, xxx-... xxx-xx-x..., U.S. Army).

IN THE NAVY

Adm. David H. Bagley, U.S. Navy (age 56), for appointment to the grade of admiral on the retired list, pursuant to the provisions of title 10, United States Code, section 5233.

Vice Adm. Shannon D. Cramer, Jr., U.S. Navy (age 55), for appointment to the grade of vice admiral on the retired list pursuant to the provisions of title 10, United States Code, section 5233.

IN THE AIR FORCE

Air Force nominations beginning Maj. Gene A. Budig, to be lieutenant colonel, and ending Maj. Patricia A. Chalcraft, to be lieutenant colonel, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 11, 1977.

IN THE NAVY

Navy nominations beginning Timothy M. Aspery, to be ensign, and ending John R. Dooley, to be commander, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on June 23, 1977.

IN THE MARINE CORPS

Marine Corps nominations beginning Vincent P. Andaloro, to be colonel, and ending Frank W. Ziegler, Jr., to be colonel, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 11, 1977.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

(Statements in connection with bills and joint resolutions introduced today are as follows:)

By Mr. NELSON:

S. 1902. A bill to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, and to eliminate from that system gender-based distinctions; to the Committee on Finance.

SOCIAL SECURITY FINANCING

Mr. NELSON. Mr. President, today I am introducing President Carter's proposal to restore the financial soundness of the social security system. Secretary of Health, Education, and Welfare Joseph Califano requested that I introduce this bill on behalf of the administration.

On May 9, 1977, President Carter sent a message to Congress containing a number of proposals to solve the financing problems of the social security system.

This legislation—the "Social Security Financing, Benefit Indexing, and Equal Rights Amendments of 1977"—embodies the President's legislative package.

Right now, the social security trust funds are not in balance. Expenditures from the social security trust funds outpace the amount of income to them.

There are, in fact, two shortfalls in the cash benefits programs: a short-term deficit caused by recent economic conditions—excessive unemployment and high inflation—and a long-term deficit caused by changing economic and demographic projections used for the actuarial estimates and by an unintended over-adjustment for inflation approved by Congress in 1972.

According to the 1977 social security trustees report, income to the old age and survivors trust fund and to the disability insurance trust fund is inadequate to meet future benefits. When the reserves in these trust funds run out, there will not be adequate amounts of income to these trust funds to meet obligations to beneficiaries. The reserves in the old age and survivors insurance program will be depleted by 1983, and the disability insurance reserve will be exhausted by 1979.

Expressed another way, $83 billion in additional funds are needed by 1982 to maintain the present social security program on an actuarially sound basis.

These immediate financial shortfalls are compounded by the projected long-term deficits. In the 75-year period ending in 2051, the long-run average deficit for the cash benefits programs is estimated at 8.2 percent of taxable payroll. This is equivalent to $66 billion a year if based on 1977 constant dollars.

Mr. President, the social security system touches the lives of virtually every American family. Presently 33 million Americans receive social security benefits, and some 107 million Americans pay taxes to support the trust funds. It is imperative that Congress take swift action to restore public confidence in the social security system—support that has been shaken by reports of mounting deficits.

The social security system cannot afford to have the American people, who are contributing or have contributed their hard-earned dollars every payday, question the soundness of the program. The social security system cannot afford to have millions of older Americans and disabled persons worry about whether their monthly checks will arrive on time and in the amounts to which they are entitled. The social security system cannot afford to have American workers doubt whether they and their families can depend upon receiving social security benefits when they retire, become disabled, or die leaving dependents.

The administration's legislative program is a comprehensive package of proposals that deals with the immediate financing problems, as well as with the long-term deficits, confronting the social security system. It is a plan that goes to the very heart of the problems threatening the future stability of one of this Nation's most important and enduring institutions. This legislation would restore the financial soundness of the social security system by:

Instituting a counter-cyclical system of financing from general revenues which would replace the social security taxes that are lost when the national unemployment rate exceeds 6 percent.

Removing the ceiling on the amount of an individual's wage or salary on which the employer pays social security taxes. The wage base would be increased in three annual steps beginning in 1979.

Restoring the basic old age, survivors and disability insurance—OASDI—social security tax that is paid by the self-employed to the traditional rate of 1½ times the tax on employees.

Making shifts in funds among the Hospital Insurance and OASDI trust funds.

Imposing increases in the amount of wage or salary on which an employee must pay social security tax. The increase would be $600 in each of 4 future years, 1979, 1981, 1983, and 1985.

Changing the test of whether an individual may claim social security benefits as a dependent, in conformity with recent Supreme Court decisions requiring men and women to be treated equally.

Correcting the excessive adjustment for inflation which was inadvertently applied to future social security benefits.

Advancing to 1985 one-quarter of the 1 percent increase in the OASDI tax which is currently scheduled to go into effect in 2011 and advancing the remaining three-quarters of 1 percent to 1990.

Of these various proposals, two are of particular significance: Using general revenues to help finance the social security trust funds during periods of excessive unemployment and removing the ceiling on the amount of an individual's wage or salary on which the employer pays social security taxes. These two proposals, more so than any of the others, would establish landmarks in the social security law if adopted by Congress.

Until this time, general revenues have not generally been used to finance the social security cash benefits programs, nor the hospital insurance program. And the wage base upon which employers pay social security payroll taxes thus far has been equal to the wage base upon which workers contribute their share of the payroll tax. This legislation would modify the traditional method of financing the social security benefits programs.

Mr. President, the social security system has been the subject of a great deal of debate over the past few years. Some people have questioned the effectiveness of the social security programs in satisfying the needs of our population, while others have concentrated on both the immediate and long-term financial problems of maintaining the programs now in effect. But these two issues cannot be discussed alone, one without the other, because each is a crucial part of the problem as well as the solution. A discussion of financing the social security trust funds is inextricably linked to a discussion of the adequacy and amount of benefits to be provided.

The administration's bill has comprehensively addressed each of these issues, and it would make the following assurances to the American people:

Revenues taken into the social security trust funds would exceed expenditures from them beginning in 1978.

The exhaustion of the disability insurance trust fund, which would otherwise occur in 1979, would be prevented.

The depletion of the OASDI trust fund, which would otherwise occur in 1983, would be prevented.

There would be no immediate tax rate increases—beyond those already written into the law—on an employee's wages.

The threat of impairing economic recovery this year and next would be averted by postponing any form of increased social security tax until 1979.

Adequate balances in the trust funds would be achieved by 1982.

The social security program would be placed in full actuarial balance through the beginning of the next century.

The remaining deficit facing the social security system in the next century would be manageable so as not to place an inordinate burden on future generations.

Benefit payments to retired persons, disabled workers, and dependents would be safeguarded from any threat of reductions or late payments.

The Senate Finance Subcommittee on Social Security, of which I am chairman, thus far has held 5 days of hearings on the President's social security package. Administration witnesses, including the Secretary of Health, Education, and Welfare and the Commissioner of Social Security, have presented testimony to the subcommittee, and witnesses representing a wide diversity of interests—business, labor, the insurance industry, small businesses, social security experts, State and local governments, and public interest groups—also have testified. Additional hearings may be necessary to complete consideration of the administration's refinancing plan.

One thing is very certain. No matter what mechanism is used to compensate for the social security deficits, any proposal or set of proposals which impose new taxes or change the status quo inevitably will be extremely controversial. The administration has proposed a plan that will assure that the social security trust funds will not go bankrupt. Those who oppose the program, or who seek modification of it, bear the responsibility of meeting the objectives sought by President Carter.

Action should be taken this year to assure American workers and beneficiaries of a secure and solvent system, which can be relied upon to meet its obligations now as well as in the future. As chairman of the Senate Finance Subcommittee on Social Security, it is my intention to move forward on a bill this year.

The legislation I am introducing today is organized into three titles:

Title I of the bill—the Social Security Financing Amendments of 1977—increases the income to the trust funds over the short- and long-term.

Title II of the bill—the Social Security Benefit Indexing Amendments of 1977—stabilizes the rates at which social security benefits replace income that is lost because of retirement, death, or disability.

Title III of the bill—the Social Security Equal Rights Amendments of 1977—eliminates gender-based distinctions from title II of the Social Security Act.

Mr. President, the Department of Health, Education, and Welfare has prepared a sectional analysis of this legislation, and I ask unanimous consent that this summary be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

SECTIONAL SUMMARY OF SOCIAL SECURITY FINANCING, BENEFIT INDEXING, AND EQUAL RIGHTS AMENDMENTS OF 1977

SHORT TITLE OF DRAFT BILL

Section 1 of the draft bill would provide the short title of the bill—the "Social Security Financing, Benefit Indexing, and Equal Rights Amendments of 1977."

TITLE I—PROVISIONS TO IMPROVE THE FINANCING OF THE OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE PROGRAMS

SHORT TITLE OF TITLE I

Section 101 of the draft bill would provide the short title I—the "Social Security Financing Amendments of 1977".

CONSTRUCTION FROM THE GENERAL FUND OF THE TREASURY OF THE SOCIAL SECURITY TRUST FUNDS FOR YEARS OF EXCEPTIONALLY HIGH UNEMPLOYMENT

Section 102 of the bill would amend section 201 of the Social Security Act to provide for compensating the social security trust funds for social security tax receipts lost as a result of unemployment rates in excess of 6 percent.

The new subsection 201(j) would provide that on or before July 1 of each calendar year immediately succeeding a calendar year in which the average rate of unemployment has exceeded 6 percent, the Secretary of the Treasury would transfer to the Old-Age and Survivors Insurance, Disability Insurance, and Hospital Insurance Trust Funds an amount equal to three times the amounts appropriated and/or deposited in the three funds in the preceding calendar year, multiplied by the number of whole one-tenth percentage points, divided by one thousand, by which the average rate of unemployment exceeded 6 percent in the preceding calendar year. (The multiplier is derived from what is known in economic theory as "Okun's law," which relates each percentage point increase in unemployment to a 3 percent decrease in the gross national product.)

The amounts so transferred would be apportioned among the trust funds in the same proportions as the amounts appropriated to and deposited in the trust funds in that preceding the new subsection would be deemed effective on January 1, 1976. Transfers that would have been made in calendar years 1976 or 1977 are to be made in three equal installments, the first within 30 days after enactment, the second by June 30, 1979, and the third by June 30, 1980. No transfers could be made under the subsection with respect to unemployment for any calendar year after 1982 (i.e., no transfer could be made after 1983).

APPLICATION OF EMPLOYER EXCISE TAX TO WAGES IN EXCESS OF CONTRIBUTION AND BENEFIT BASE

Section 103 of the bill would amend section 230(c) of the Act, and sections 3111(a), 3111(b), 3121(a), and 3221(a) of the Internal Revenue Code gradually to impose the employer portion of the Federal Insurance Contributions Act tax on the entire compensation of employees in covered employment (including employment covered by the railroad retirement acts). For these purposes, the taxable earnings base would be increased to $23,400 and $37,500 with respect to remuneration paid during calendar years 1979 and 1980, respectively, and would be removed as a limit, with respect to employer contributions in regard to annual compensation of their employees, for years after 1980.

INCREASE IN CONTRIBUTION AND BENEFIT BASE FOR EMPLOYEES

Section 104 of the bill would increase the current $16,500 contribution and benefit base for employees, above what it would otherwise be after automatic increases expected in future years under current law, by $600 in each of the four calendar years 1979, 1981, 1983, and 1985.

ADVANCE OF PLANNED EMPLOYMENT TAX INCREASE; INCREASE IN SELF-EMPLOYMENT TAX; REALLOCATION AMONG TRUST FUNDS

Section 105 would amend current law as follows:

OASDI tax rates for employees and employers (sections 3101(a) and 3111(a) of the Internal Revenue Code of 1954):

[Percent]

	Current rate	New rate
1977	4.95	4.95
1978–80	4.95	5.05
1981–84	4.95	5.15
1985–89	4.95	5.40
1990–2010	4.95	6.15
2011 and after	5.95	6.15

Hospital insurance tax rates for employees, employers, and the self-employed (sections 3101(b), 3111(b), and 1401(b) of the Internal Revenue Code of 1954):

[Percent]

	Current rate	New rate
1977	0.90	0.90
1978–80	1.10	1.00
1981–85	1.35	1.15
1986 and after	1.50	1.30

OASDI tax rates for the self-employed (section 1401(a) of the Internal Revenue Code of 1954):

[Percent]

	Current rate	New rate
1977	7.00	7.00
1978	7.00	7.10
1979–80	7.00	7.60
1981–84	7.00	7.70
1985–89	7.00	8.10
1990 and after	7.00	9.20

Allocation of wage tax rate to Disability Insurance Trust Fund (section 201(b)(1) of the Social Security Act).

[Percent]

	Current allocation	New allocation
1977	1.15	1.15
1978–80	1.20	1.50
1981–82	1.30	1.60
1983–85	1.30	1.70

2011 and after	1.000	1.720

TITLE II—STABILIZATION OF INCOME REPLACEMENT RATES IN THE OLD-AGE AND DISABILITY INSURANCE PROGRAMS

SHORT TITLE OF TITLE II

Section 201 of the draft bill provides for it to be cited as the "Social Security Benefit Indexing Amendments of 1977".

COMPUTATION OF PRIMARY INSURANCE AMOUNT

Section 202(a) of the bill would amend section 215(a) of the Social Security Act as follows:

Section 215(a)(1) of the Act, as so amended, would establish the formula for computing the primary insurance amount of individuals (described in section 215(a)(3)) to whom the amended section applies. Here is the formula:

Subparagraph (A) of Section 215(a)(1) would set the primary insurance amount (hereinafter "PIA") as the sum of three amounts: 94 percent, 34 percent, and 16 percent of different portions of an insured individual's "average indexed monthly earnings" or AIME.

Subparagraph (B)(i) would establish these AIME portions for 1979: The first portion (to which the 94 percent applies) would be $180; the second portion (to which the 34 percent applies) would be the next $895 of AIME; and the third portion would be the remainder of the individual's AIME.

Subparagraph (B)(ii) would index these 1979 AIME portions to subsequent year increases in the national average wage. This indexing would be accomplished by multiplying the 1979 AIME portions, set out in subparagraph (B)(i), by a fraction whose numerator is the national average wage for the second calendar year preceding the calendar year for which the determination is made, and whose denominator is the national average wage for calendar year 1977. (The final amount would be rounded, by subparagraph (B)(iii), to the nearest $5.00.)

Subparagraph (b)(iv) would specify that the AIME portions to be used in determining an individual's PIA are those established under subparagraph (B) for use in the year in which the individual initially becomes entitled to an old-age insurance benefit, or (if earlier) becomes disabled or dies. In all cases that year, as provided by subparagraph (B)(ii)(I), that year will be the second calendar year preceding the calendar year for which the determination is made.

Subparagraph (C) would establish minimum PIA's. In substance, these are to be the minimums of current law, *i.e.*, $9.00 multiplied by the individual's years of coverage in excess of 10 (the present section 215(a)(3)), and the current minimum benefit amount increased to $120.60 in anticipation of cost-of-living increases to 1979. This latter minimum, like its present-law counterpart, would be subject to adjustment by changes in the Consumer Price Index. The subparagraph's definition of "years of coverage" for purposes of the $9.00 minimum is that of existing law.

Subparagraph (D) would direct the Secretary to publish in the Federal Register, on or before November 1 of each calendar year after 1978, the PIA computational formula (to be applied to AIME, established by subsection (b), infra, for indexing wages) that is to be effective for the following year, and the average wages on which it is based. With the initial publication of that information, the Secretary would also publish all average wage data for years after 1950

Section 215(a)(2) conforms to the new section 215 structure a portion of current section 215(a), applicable to certain disability beneficiaries, but with modifications. In substance, current law provides that an individual entitled to a disability insurance benefit prior to his death, his entitlement to old-age insurance benefits, or his attainment of age 65, continues after any of those

events to retain the PIA used to determine his disability benefit or, if greater than that PIA, the special minimum PIA (which, in the future, would be computed under the previously described paragraph (1)(C)(i)(III)). As modified, the provision would convert a disability beneficiary's PIA into a PIA for OASI purposes if the beneficiary had been entitled to disability benefits for any of the 12 months before the month of his OASI entitlement, DI reentitlement, or death. The converted PIA would be increased by intervening cost-of-living increases. Also, with respect to all disability cases, an individual's disability PIA would be established as the minimum PIA that would be determined with respect to the individual's future entitlement to old-age insurance benefits, disability insurance benefits based upon a new period of disability, or death.

Section 215(a)(3) would establish the categories of individuals to whom the new PIA computation applies, as follows:

Subparagraph (A)(i) of section 215(a)(3) would apply the new computation to every insured individual who was not eligible for an old-age insurance benefit (as the term "eligible" is defined in subparagraph (B), infra) prior to January 1979 and who in that month or thereafter becomes eligible for that benefit, a disability benefit, or dies.

Subparagraph (A)(ii), read in conjunction with paragraph (4)(A), would make clear that the new computation applies to an individual who had been eligible for disability insurance benefits during a disability period that had closed at least 12 months prior to the earlier of the individual's eligibility for an insurance benefit or death, after 1978.

Subparagraph (B) of section 215(a)(3) defines the meaning of the term "eligible" as used in this title. An individual would be deemed to be "eligible" for a benefit if he would be entitled to the benefit but for his failure to file an application for it. In the case of a disability benefit, an individual so deemed eligible for it is also deemed eligible for it during the disability waiting period established by section 223(c)(2), that is, from the onset of the disability (as described in section 216(i)(2)(C)).

Section 215(a)(4) would carve out, from the categories made eligible for the new PIA computation by section 215(a)(3), the the groups to whom the new computation does not apply. These are as follows:

Subparagraph (A) of section 215(a)(4) would exclude individuals who were eligible for or entitled to disability insurance benefits prior to 1979, unless, prior to their death, or their becoming entitled to old-age insurance benefits or a renewed disability benefit, there intervenes a 12-month period during which they were not entitled to disability insurance benefits.

Subparagraph (B) would exclude individuals who would be subject to the new computation by virtue of becoming first eligible for old-age insurance benefits after 1978 and before 1984, but whose PIA would be greater if computed under pre-existing (i.e., current) law. This comparison—between what an individual's PIA would be under wage-indexing and what it would be under current law—would be made by comparing a trial wage-indexed computation with a trial computation that uses the table of benefits in section 215(a) immediately prior to the effective date of these amendments, i.e., December 1978. For these purposes the 1978 table would not be updated by cost-of-living increases that occur from 1979 up to the first year of eligibility or death, and earnings could not be used in and after the first year of eligibility. In addition, the special present law computation involving earnings before 1951 would be used for individuals who become eligible or die after 1978 if a higher PIA would result.

Section 215(a)(5) would preserve the current section 215(a) for application to individuals to whom the new computation does not apply. For this purpose, the table for determining PIA's and maximum family benefits contained in the section will continue to be revised to reflect cost-of-living and earnings base increases after 1978.

Section 202(b) of the bill would amend section 215(b) of the Social Security Act as follows:

Section 215(b) would establish the formula for computing the individual's average indexed monthly earnings or AIME. Here is the computation:

Paragraph (1) of section 215(b) would establish the AIME as the total of the individual's covered wages and self-employment income credited to his benefit computation years, divided by the number of months in those years. These wages and income would first be adjusted, however, to current wage levels, as described in paragraph (3), infra.

Paragraph (2)(A) would, like the current section 215(b)(2)(A), provide that the number of an individual's benefit computation years shall equal the number of "elapsed years", reduced by five. An individual may never have less than two benefit computation years.

Paragraph (2)(B)(i) would, like the current section 215(b)(2)(B), define "benefit computation years" to mean those "computation base years", equal in number to the years determined under the preceding subparagraph, for which the total of the individual's wages and self-employment income is the largest. For the purposes of making this determination, however, wages and self-employment income would be adjusted to current wage levels, as described in paragraph (3), infra.

Paragraph (2)(B)(ii) would define "computation base years" substantially as it is defined by the current section 215(b)(2)(C), modified, however, to take into account the new PIA computational method. Computation base years would, as in present law, be calendar years after 1950 and prior to the year in which the individual becomes entitled to old-age insurance benefits or the year following the year of his death (excluding calendar years entirely included in a disability period).

Paragraph (2)(B)(iii) would re-enact the current section 215(b)(3) definition of "elapsed years", i.e., the number of calendar years after 1950 (or, if later, the year in which the individual attained age 21) and before the year in which the individual died, or if it occurred after 1960, the year in which he attained age 62. The term would continue to exclude any calendar year any part of which is included in a disability period.

Paragraph (3) of section 215(b) would establish the formula for indexing covered wages and self-employment income. Here is the formula:

Subparagraph (A) of paragraph (3) would deem those earnings, for each of an individual's benefit computation years, to be equal to the product of those earnings for that year multiplied by a wage-indexing fraction. That fraction consists of a numerator that is the national average wage for the second calendar year (after 1976) preceding the earliest of the year of the individual's initial entitlement to old-age insurance benefits, initial eligibility for disability insurance benefits, or death; and a denominator that is the national average wage in the benefit computation year being indexed.

Subparagraph (B) would exclude from wage-indexing any earnings credited to a benefit computation year that occurs after the second calendar year referred to in the preceding subparagraph, or that becomes a benefit computation year by virtue of a recomputation. Only the actual earnings in these years would be included in the AIME computation.

Paragraph (4) of subsection 215(b) would preserve the current law provisions applicable to determining average monthly wage for purposes of computing the PIA of individuals to whom wage-indexing is not applicable. However, because an individual to whom wage-indexing is not applicable because of the guarantee provision (section 215(a)(4)(B), supra) would be entitled only to a PIA computed on the basis of the table under section 215(a) as in effect in December 1978, without the benefit of cost-of-living increases that occurred after that date and prior to the year in which the individual attains age 62, the paragraph redefines computation base years as including only years prior to initial eligibility for old-age insurance benefits.

Section 202(c) of the bill would amend section 215(c) of the Act, which deals with PIA computations under prior provisions of the tables now in the law, so as to continue to apply to individuals not eligible for wage-indexing.

Section 202(d) of the bill would wholly revise section 215(d) of the Act, which deals with PIA computations (so-called "empirical old-start" cases) under prior provisions of law. Current law, enacted in 1967, was designed to allow computers to figure out old-start computations for workers who reached age 21 before 1937. The bill would establish an empirical old-start computation for individuals who reached age 21 after 1937 and before 1951.

Essentially, instead of applying the current method of allocating wages established by section 215(d)(1)(B), the wages of such an individual would be allocated equally to each of the years elapsing after the year in which the individual attains age 21 and prior to the earlier of 1951 or the year of the individual's death. No more than $42,000 could be credited during the period.

The individual's PIA would be 40 percent of the first $50 of average monthly wages plus 10 percent of the next $200, increased one percent for each "increment year". Increment years would be equal to a number (not more than 14 nor less than 4) obtained by dividing the total of the individual's earnings credited from 1937 through 1950, by $1,650. This formula is intended to approximate the level of PIA's obtained under the current old-start provisions.

Section 202(e) of the bill would make conforming changes in section 215(e) of the Act, which pertains to exclusion for PIA computational purposes of amounts earned in excess of the contribution and benefit base.

Section 202(f) of the bill would amend section 215(f) of the Act, which deals with recomputations, as follows:

Paragraph (2)(A) of section 215(f) would restate the current recomputation rule under the wage-indexed system: an individual who has wages or self-employment income for a year after 1978 for any part of which he is entitled to old-age or disability insurance benefits will receive a recomputation, subject to the other requirements of the subsection. The addition of entitlement to disability insurance benefits as the basis for a recomputation is new.

Paragraph (2)(B) would provided that the formula to be applied to recomputations will be, in the case of individuals who were not eligible for old-age or disability insurance benefits prior to 1979, the formula in effect for the initial computation of their PIA. That is, increases (on account of indexing) in the AIME portions to which the percentages established by subsection (a)(1)(A) (described supra) apply, that occurred between the time of the individual's initial eligibility for benefits and his recomputation, are disregarded.

Paragraph (2)(C) would restate the current-law rule that the recomputation year is treated as the last year of the individual's computation base years.

Paragraph (2)(D) would restate the current-law rule that makes a recomputation with respect to any year effective beginning with benefits for January of the following year or, in death cases, benefits beginning with the month of death.

Paragraph (3) of current law which is executed, would be repealed.

Paragraph (4), which now provides that a recomputation is effective only if it results in a higher PIA, would be amended to conform to the new structure.

Paragraph (7) would be added to preserve the application of current recomputational law to individuals who become entitled to benefits after December 1978, but under current law (i.e., individual's eligible for benefits prior to 1979 and guarantee cases under new section 215(a)(4)(B)) for a PIA computed under section 215(a) as in effect in December 1978. For guarantee cases, however, the individual's earning in the year of initial eligibility for old-age insurance benefits, or succeeding years, would be disregarded.

Section 202(g) of the bill would amend section 215(i) of the Act, dealing with cost-of-living increases, as follows:

Paragraph (2)(A)(ii) of section 215(i) would be amended primarily to conform to the new benefit structure. The paragraph would preserve the application of the Consumer Price Index to PIA's and family benefits whether computed under wage-indexing or pre-existing law. As under current law, the minimum PIA now contained in section 215(a)(3) and which would be contained in new section 215(a)(1)(C)(i)(III) (described *supra*) would not be indexed.

Paragraph (2)(A) would be further amended to add a new clause (iii) to provide that individuals are to receive any cost-of-living increases in their PIA's provided in the year in which they become eligible for old-age insurance or disability insurance benefits or, if earlier, died. (In subsequent years, cost-of-living increases would be provided in accordance with paragraph (2)(A)(ii).)

Paragraph (2)(D) would be amended to retain cost-of-living indexing for the current-law minimum benefit contained in the present section 215(a) benefit table, and which would be contained in paragraph (1)(C)(II) of the restructured section 215(a) (described *supra*). With respect to other individuals this amendment, read in conjunction with a new paragraph (4), would "decouple" the PIA computation used for individuals coming on to the benefit rolls from the computation of benefits payable to those individuals, resulting from cost-of-living increases, after they are in benefit status, except for individuals who are eligible for benefits prior to 1979 and who become entitled or die thereafter, and guarantee provision cases.

Paragraph (4) would preserve the applicability of section 215(i), as now in effect, to section 215(a), as now in effect. In other words, the table contained in section 215(a) in December 1978 would continue to be adjusted by cost-of-living increases, and would reflect earnings base increases. The adjusted tables would continue to be published in the Federal Register for use in the case of individuals whose PIA is computed after December 1978 under pre-existing law.

MAXIMUM BENEFITS

Section 203(a) of the bill would amend section 203(a) of the Act as follows:

Section 203(a) of the Act, as so amended, would establish the formula for computing the maximum benefit to which individuals may be entitled for any month in respect of the PIA of an insured individual. Here is the formula:

Paragraph (1) of section 203(a) would set the maximum benefit as the sum (rounded to the next higher multiple of $0.10) of four amounts: 150 percent, 275 percent, 130 percent, and 175 percent of different portions of an insured individual's PIA.

Paragraph (2)(A) would establish these PIA portions for 1979: The first portion (to which the 150 percent applies) would be $245; the second portion (to which the 275 percent applies) would be the next $95; the third portion (to which the 130 percent applies) would be the next $115; and the fourth portion would be the remainder of the individual's PIA.

Paragraph (2)(B) would index these 1979 PIA portions to subsequent year increases in the national average wage. This indexing would be accomplished by multiplying the 1979 PIA portions, set out in paragraph (2)(A), by the same fraction used to index the AIME portions under subparagraph (B)(i) of section 215(a)(1), described *supra*. Amounts would be rounded to the nearest $5.00.

Paragraph (2)(C) would direct the Secretary to publish in the Federal Register on or before November 1 of each calendar year after 1978, the maximum benefit formula that is to be effective for the following year.

Paragraph (3)(A) would restate section 203(a)(1) of current law, pertaining to the application of the maximum benefit to individuals entitled to child's benefits on the basis of earnings of more than one worker, except in one respect. Whereas the total benefits in those cases may not now be reduced for any month below the smaller of two amounts, one of which is "the last figure in column V of the table appearing in section 215(a)", the new paragraph would substitute for that amount, in the case where it is based upon the PIA's of wage-indexed insured individuals, an amount equal to the product of 1.75 and the PIA that would be computed under the new section 215(a)(1) for that month with respect to AIME's equal to one-twelfth of the highest contribution and benefit base determined for that year under section 230.

Sections 203(b) through 203(f) would make conforming changes in the remainder of section 203(a) of the Act and would eliminate matter held by the courts to discriminate against illegitimate children in violation of the Constitution. Section 203(g) of the bill would add a new paragraph (6) to section 203(a). The paragraph would preserve the current section 203(a) in effect with respect to insured individuals to whom wage's indexing does not apply. Also, in the case of benefits payable on account of two or more PIA's, where at least one PIA was computed under the wage-indexed system and one was computed under pre-1978 law, the maximum benefit based on those PIA's would be the product of 1.75 and a PIA computed under the wage-indexed system using an AIME equal to one-twelfth of the highest contribution and benefit base determined for the year under section 230.

Section 203(g) of the bill would also add a new paragraph (7) to section 203(a) which (subject to the new paragraph (6)) would preserve the applicabilty of section 203(a), as in effect in December 1978, to primary insurance amounts computed under the tables that will be published under section 215(a), as then in effect. However in guaranteed provision cases, the family maximum will be governed by the amended section 203(a).

CONFORMING CHANGES

Section 204 of the bill contains numerous conforming changes to various sections of title II of the Act and to section 1839(c)(3)(B) relating to the computation of the SMI monthly premium rate. Subsection (d) of this section of the bill would establish a new category of beneficiaries for hospital insurance benefits under part A of title XVIII: individuals who would meet all current criteria for eligibility except for the filing of an application for title II benefits. The purpose of this category is to permit individuals who are not actually retired to file for Medicare entitlement only without thereby fixing the benefit computation years subject to wage-indexing in the computation of their AIME.

EFFECTIVE DATE PROVISIONS

Section 205 of the bill would make the bill, with one exception, effective with respect to monthly benefits and lump-sum death payments under title II of the Social Security Act payable for months after December 1978. The exception is the amendment to section 215(d), allowing the use of the empirical method to determine a PIA based on earnings before 1951 for those who attained age 22 between 1937 and 1951. This section, section 202(d), is effective for monthly benefits for those eligible or who die after 1977.

TITLE III—ELIMINATION OF GENDER-BASED DIFFERENCES IN STATUTORY PROVISIONS OF THE OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE PROGRAM

SHORT TITLE

Section 301 of the draft bill would provide the short title of the title—the "Social Security Equal Rights Amendments of 1977".

BENEFITS FOR DIVORCED MEN

Section 302 of the draft bill would provide social security benefits to aged divorced husbands and aged or disabled surviving divorced husbands of covered female workers. Currently, benefits are provided to aged divorced wives and aged or disabled surviving divorced wives but benefits are not provided for identically situated men.

REMARRIAGE OF SURVIVING SPOUSE BEFORE AGE 60

Section 303 of the draft bill would make the remarriage rule for widowers the same as it now is for widows. Currently, widows and widowers who remarry before age 60 are treated differently with respect to their eligibility for benefits based on their deceased spouses' earnings. A woman may qualify for benefits as a surviving spouse even though she has remarried, so long as she is not married at the time she applies for benefits. A man, on the other hand, currently loses forever his eligibility as a surviving spouse of a covered female worker if he remarries before age 60.

ILLEGITIMATE CHILDREN

Section 304 of the draft bill would modify the rules applicable to benefits for illegitimate children so that such children will be eligible for benefits based on their mothers' earnings as they are currently for benefits based on their fathers' earnings. In general, the determination of one's status as a parent or child for purposes of the social security program is based upon the interstate succession laws of the State in which the insured individual is domiciled. However, an illegitimate child may be eligible for benefits based upon a man's earnings, without regard to the appropriate State interstate laws, if, among other things, the man has been decreed by a court to be the father of the child, or the man is shown by evidence satisfactory to the Secretary to be the father of the child. These provisions do not currently apply when an illegitimate child claims a benefit based upon his mother's earnings.

TRANSITIONAL INSURED STATUS

Section 305 of the draft bill would apply to husbands and widowers certain social security eligibility provisions which currently apply to wives and widows. Under current law, certain workers who attained age 72 before 1969 are eligible for social security benefits based upon fewer quarters of coverage than would ordinarily be re-

quired. Wives and widows of eligible male workers who reached 72 prior to 1969 also are eligible for benefits under this provision, but husbands and widowers of eligible female workers are not. The amendment which would be made by section 305 would extend "transitional insured status" to such husbands and widowers.

EQUALIZATION OF BENEFITS UNDER SECTION 228

Section 306 of the draft bill would amend the section of the Social Security Act which authorizes benefits for certain uninsured individuals who attained the age of 72 prior to 1972. In order for a couple to receive payments under this section, both spouses must have attained age 72 prior to 1972. However, even though each spouse must meet the same eligibility requirements he or she would have to meet if not married, once the eligibility of each is determined, the couple is treated as if the husband were the retired worker and the wife were the dependent. The amount of the special payment for the couple is not divided equally between husband and wife. Rather, the payment, which comes largely from general revenues, is allocated so that the husband is paid two-thirds of it and the wife is paid one-third. Section 306 of the draft bill would require that the payment be divided evenly.

FATHER'S INSURANCE BENEFITS

Section 307 of the draft bill would provide social security benefits to a father who has in his care an entitled child of his retired, disabled, or deceased wife (or deceased former wife). Currently under the statute, a mother who has in her care a child of such a spouse receives a benefit for both herself and her child based upon the earnings of her husband. As a result of a Supreme Court decision in *Weinberger* v. *Wiesenfeld*, 420 U.S. 636 (1975), a similar situated widowed father can qualify for father's benefits based on his deceased wife's earnings. Benefits are not provided for the husband of a retired or disabled worker (or the surviving divorced husband of a deceased worker) who has an entitled child in his care. Section 307 would amend the statute to conform to the *Wiesenfeld* decision, and would provide benefits for a husband or surviving divorced father with an entitled child in his care.

EFFECT OF MARRIAGE ON CHILDHOOD DISABILITY BENEFICIARY

Section 308 of the draft bill would terminate the benefits of a childhood disability beneficiary, regardless of his sex, when his spouse is no longer eligible for benefits as a childhood disability beneficiary or disabled worker beneficiary. A childhood disability beneficiary is a person with a severe disability that began before age 22 who is entitled to benefits as the son or daughter of an insured worker who is entitled to social security benefits (or who has died). In general, the social security law provides for termination of dependent's or dependent survivor's benefits at the time of marriage, since it is presumed that the dependency situation necessitating the benefits no longer exists. An exception is made when one social security beneficiary marries another, since it cannot be presumed that either one is able to support the other. Thus, in general, when a childhood disability beneficiary marries another social security beneficiary, none of the benefits are terminated by reason of the marriage. However, when a childhood disability beneficiary is married to another childhood disability beneficiary or to a disabled worker beneficiary, and the spouse of the childhood disability beneficiary has his benefits terminated because he recovers or engages in substantial work, the continued eligibility of the childhood disability beneficiary depends upon his sex. A woman's childhood disability benefits end when her husband's disability benefits end. However, a man's childhood disability benefits are not terminated when his wife's disability benefits end. The amendments made by section 408 would be effective with respect to terminations of benefits of childhood disability or disabled worker beneficiaries occurring after the month of enactment.

EFFECT OF MARRIAGE ON DEPENDENTS' OR DEPENDENT SURVIVORS' BENEFITS

Section 309 of the draft bill would terminate social security payments to an individual, regardless of his sex, who is receiving dependents' or dependent survivors' benefits, when his spouse is no longer eligible for childhood disability benefits or benefits as a disabled worker. Currently, in general, if a childhood disability or disabled worker beneficiary marries a person getting certain kinds of social security dependent or survivor benefits, the benefits of each individual continue. If the disabled beneficiary is a male and he recovers or engages in substantial work and his benefits are terminated, his wife's benefits also end. If, however, the disabled beneficiary is a woman, her husband's benefits are not terminated when her benefits are. The amendments made by section 309 would be effective with respect to terminations of benefits of childhood disability or disabled worker beneficiaries occurring after the month of enactment.

TREATMENT OF SELF-EMPLOYMENT INCOME IN COMMUNITY PROPERTY STATES

Section 310 of the draft bill would permit self-employment income of a married couple in a community property State to be credited for social security purposes to the spouse who exercises the greater management and control over the trade or business. Currently, in community property States, all income from a business owned or operated by a married couple is deemed, for purposes of social security, to be the husband's, unless the wife exercises substantially all management and control. In all other States, such self-employment income is credited to the spouse who owns or is predominantly active in the business. The amendment made by section 309 would be effective with respect to taxable years beginning after the month of enactment.

CREDIT FOR CERTAIN MILITARY SERVICE

Section 311 of the draft bill would apply to widowers a provision of the social security law which currently permits a widow, under certain circumstances, to waive the right to a civil service survivor's annuity and receive credit (not otherwise possible) for military service prior to 1957 for purposes of determining eligibility for, or the amount of, social security survivors' benefits.

REVISED TEST FOR DEPENDENT'S BENEFITS

Section 312 of the draft bill would modify the test currently provided by the Social Security Act to determine whether a man was dependent upon his wife. The statute requires that to be dependent a man must have received at least one-half his support from his wife at the time the event occurred which gave rise to the entitlement to benefits. In the case of a woman, the statute provides no test; rather, a woman is presumed dependent upon her spouse. This gender-based distinction in determining one's eligibility for dependents' benefits was held to be unconstitutional in *Califano* v. *Goldfarb* (March 2, 1977). The modified test which would be established by section 312 would be applicable to both wives and husbands, widows and widowers, and mothers and fathers. Under the test which would be required by section 312, to be deemed a dependent, either spouse would have to show that his income, for the three years preceding the event giving rise to social security eligibility, was less than that of his spouse. The amendments by section 312 would be effective with repect to benefits for months after the month of enactment. However, the new dependency test provided by the section would not apply to a person who is entitled (or who, upon application, would have been entitled) to wife's, husband's, widow's, widower's, mother's, or father's benefits for the month of enactment until such time as he is not entitled to any such benefits. Standards for determining eligibility for dependents and survivors benefits under the Railroad Retirement Act will not be modified by this amendment.

CONFORMING AMENDMENTS

Section 313 of the draft bill would make a number of conforming changes in provisions of title II of the Social Security Act which are required on account of the substantive changes which would be made by the preceding sections of title III of the draft bill.

EFFECTIVE DATE

Section 314 of the draft bill would provide that the amendments made by sections 302, 303, 304, 305, 306, 307, 311, and 313 of the draft bill would be effective with respect to benefits under title II of the Social Security Act for months after the month of enactment of the draft bill.

By Mr. JACKSON (for himself, Mr. ANDERSON, Mr. KENNEDY, Mr. METZENBAUM, Mr. HART, and Mr. SCHWEIKER):

S. 1903. A bill to amend chapter 55 of title 10, United States Code, to authorize the use of health maintenance organizations in providing health care under such chapter, and for other purposes; to the Committee on Armed Services.

HMO OPTION FOR CHAMPUS BENEFICIARIES

Mr. JACKSON. Mr. President, today I am introducing legislation to revise the civilian health and medical program for the uniformed services—CHAMPUS—by authorizing the Secretary of Defense, after consultation with the Secretary of Health, Education, and Welfare, to contract with qualified health maintenance organizations for the purpose of providing health care to CHAMPUS beneficiaries.

This legislation is similar to S. 2934 which I introduced in the 94th Congress; however, I believe that some important improvements have been developed which will help to make CHAMPUS a better run and more cost efficient program if enacted.

First, my bill provides for the establishment of an enrollment program for CHAMPUS eligible persons. The lack of a defined enrolled population is one of the most basic deficiencies of the CHAMPUS program. The absence of this data severely impairs the ability of the Department of Defense to administer this program. The Department has no idea exactly how many eligible beneficiaries there are, where they live, where they are likely to seek benefits, whether they have coverage under some other medical insurance program, and so on. It is simply impossible for the Department to eliminate the inefficiencies and abuses which exist in CHAMPUS unless it first develops basic information about who is eligible for the program.

The second major provision of the bill would authorize the Secretary of the

Department of Defense to contract with health maintenance organizations to provide CHAMPUS benefits if several conditions are met. First, the Secretary must be able to certify that the per capita costs of providing benefits through an HMO will not exceed either the per capita cost of providing benefits through the existing fee for service system to those beneficiaries who would enroll in an HMO or the existing per capita rate which the HMO in question charges its non-CHAMPUS enrollees. The Secretary would also have to certify that the existing military medical facilities in the area to be served under the contract cannot meet the medical needs of the CHAMPUS population without overburdening those facilities.

The purpose of these provisions is to allow HMO's into the CHAMPUS program and to assure that this will result in cost savings to the Government. It would not be permissible to contract with an HMO if it would cost the Government more per capita to do so than to continue the existing system; and, it would not be permissible for the Government to get into a position where it was paying an HMO to provide health care while military facilities are underutilized.

My bill would limit eligibility for this program to HMO's currently approved by the Department of HEW under the Public Health Services Act or by the Civil Service Commission under the Federal employees health benefits program. It would also require the Department of Defense to monitor the effectiveness of HMO's at providing health care benefits pursuant to contracts authorized by the bill and to report its findings to the Congress.

By Mr. BARTLETT:

S. 1904. A bill to amend the Customs Administrative Act of 1938 to prohibit the Secretary of the Treasury from extending the privilege of admission free of duty without entry of their baggage and effects to high officials of the U.S. Government; to the Committee on Finance.

Mr. BARTLETT. Mr. President, until recently, Members of Congress returning to the United States from travels abroad were accorded certain privileges not available to other U.S. citizens. Specifically, I am referring to the privilege of bringing various articles into this country without having to pay the customs duty that would otherwise have applied to those articles.

This exception to our customs laws was based on a Treasury Department ruling issued many years ago. No specific statutory authorization for this exception has ever existed. Fortunately, this early Treasury Department ruling was withdrawn by Secretary Simon late in 1976, by Treasury decision 76–325. Since the effective date of that decision, Members of Congress have been required to pay the same customs duties as apply to other returning citizens.

While this inequity in the application of the customs laws has been remedied administratively at least for the present, I think it is important that Congress make it quite clear that no such special allowance for Members of Congress should be allowed in the future. I am therefore introducing today legislation which, if enacted, would foreclose some future Secretary of the Treasury from reopening this particular loophole.

This bill would amend the Customs Administrative Act of 1938 (19 U.S.C. 1321). It provides that the Secretary of the Treasury may not extend the privilege of admission free of duty without entry of baggage and effects to any officer or employee of the U.S. Government under terms or conditions other than those under which such privilege is extended to all U.S. citizens returning from travels abroad.

Mr. President, absent some legitimate reason for treating Congressmen differently from other citizens, it seems to me that we should be treated like every other citizen. This bill would accomplish that objective. I urge that Congress give favorable consideration to it.

By Mr. DOLE (for himself, Mr. JAVITS, and Mr. STAFFORD):

S. 1905. A bill to authorize Federal assistance to private, profitmaking agencies and organizations under title II of the Rehabilitation Act of 1973; to the Committee on Human Resources.

Mr. DOLE. Mr. President, I am pleased to introduce today legislation which would make private agencies and organizations eligible to apply for research and training money under the Rehabilitation Act. As you may know, this landmark act created the Rehabilitation Services Administration within HEW, and instructed it to promote the development of advanced medical technology and information for finding solutions to rehabilitation problems of the handicapped.

The RSA funds research and training projects working to discover new ways of serving the disabled in order to meet their legislative directive. Although this organization is only a few years old, it has become a pacesetter in providing assistance to the handicapped, in spite of the limited resources and restrictions with which it has had to cope with.

Growth has been restricted in part because of legislative language which permits RSA to contract with only public or nonprofit organizations for research and training projects.

The omission of private agencies clamps a heavy restriction on the RSA, for it does not allow them to tap the knowledge and experience of private industry. Some of these target groups have no interest in spending money to conduct research on rehabilitation programs. Why? Because the handicapped market is numerically too small to justify this expenditure.

However, if such research can be contracted through RSA, this incentive should make private groups more receptive to conducting research for rehabilitation. Many of these businesses have equipment and laboratories that would cost millions of dollars to duplicate. It is the handicapped individual who loses if RSA is not allowed to benefit from existing technology.

This problem also affects small business enterprises that are interested in addressing rehabilitation needs of the handicapped, yet they are forced to operate within the confines of a small budget. Often, these small businesses are run by handicapped persons who are trying to earn a living and who know from personal experience how few manufacturers care to serve handicapped consumers. These small operations are eager to work on research projects for special needs persons, but they lack the financial assistance to do so. Businesses employing one, two, or three persons simply do not have sufficient capital to finance this research.

There are examples of this situation all across my State of Kansas. Small business enterprises are still operated from a personal vantage point. The owner or manager may be handicapped, or there may be a handicapped employee, or a handicapped friend or relative. These concerned persons are familiar with the needs in this area, yet don't have the money for research. Kansas businesses have contacted me asking about Federal assistance. I have to tell them that because they are not nonprofit. RSA cannot even consider their proposal, regardless of its merit.

I do not see the rationale for this provision—and certainly it is inconsistent with Federal policy in other programs. For example, the Bureau of Education for the Handicapped has the option of contracting with private agencies, and many successful educational programs have resulted. It should be recognized that some private organizations have resources, equipment, and experience that are not duplicated in the nonprofit sector.

A similar bill to mine has been introduced in the House of Representatives by Congressmen TEAGUE and BRADEMAS. I am pleased that Senators JAVITS and STAFFORD have joined as cosponsors to my bill, and I am hopeful that this provision will be accepted as an amendment to the Rehabilitation Act.

By Mr. CRANSTON:

S. 1906. A bill to establish the Channel Islands and Santa Monica Mountains National Park and Seashore in the State of California, and for other purposes; to the Committee on Energy and Natural Resources.

CHANNEL ISLANDS AND SANTA MONICA MOUNTAINS NATIONAL PARK AND SEASHORE

Mr. CRANSTON. Mr. President, I introduce for appropriate reference a bill to establish the Channel Islands and Santa Monica Mountains National Park and Seashore. The bill is nearly identical to H.R. 7264 introduced in the House by Congressman ANTHONY BEILENSON.

Mr. President, the Channel Islands and Santa Monica Mountains comprise the last major undeveloped recreational resource in the Los Angeles metropolitan area. But continuing pressures of urbanization are threatening the region. Roads are being built, mountains scarred, and subdivisions developed eliminating valuable potential parkland. Unless we act now, by creation of a national park and seashore, we will lose this open space forever.

Today, the Los Angeles Basin with its 10 million people has less open space for public recreational and cultural use than

any other major city in the United States, including New York. At the same time, the strain on existing open space and recreational facilities is intensified by the influx of over 8 million visitors to southern California each year.

The Santa Monica Mountains contain about 210,000 acres of open space, stretching from the Pacific Ocean to the heart of downtown Los Angeles. Placing the mountains in the national park system would create a park of national significance and high recreational value. The beaches, coastal bluffs and canyons, high mountain meadows, and hillsides covered with sage, yucca and chapparel would be opened up to hikers, picknickers, and beachgoers. When added and connected to the 40,000 acres of existing State, county and city parks, it would be possible to establish a hiking and equestrian trail system on public lands throughout the entire mountain range.

Thirty miles offshore are the Channel Islands—including Santa Cruz and Santa Rosa, now devoted to ranching; San Miguel, under the jurisdiction of the Department of the Navy; and Anacapa and Santa Barbara, which are designated as a national monument.

The national monument islands are characterized by high sea cliffs and rocky terrain where succulents and desert cacti grow. Sea lions, sea otters, sea elephants and the Guadalupe fur seal are found on the small sandy beaches of both islands. Santa Cruz Island, 97 square miles, has extensive acreage of grasslands, numerous streams, forests of pine and beautiful wooded areas of oak, holly and ironwood. The 86-square-mile Santa Rosa Island has lush fields of grass and unique varieties of wildflowers. San Miguel, the westernmost island of the chain 22 square miles, is covered with space vegetation. But the island is of interest with one of the largest known colonies of sea elephants, six other species of pinnipeds, a distinct variety of island fox, and rookeries of sea birds.

Mr. President, I have previously sponsored separate bills to protect and preserve the Channel Islands and Santa Monica Mountains. This legislation would put them under joint management of the National Park Service. The Channel Islands and Santa Monica Mountains are part of a single mountain range 125 miles long, which is mostly submerged beneath the Pacific Ocean. In addition to this geologic tie, the mainland mountains are linked to the islands historically and culturally. Remains of the earliest known inhabitants of California, the Chumash Indians, have been found on Santa Cruz Island. Altogether over a thousand archeological sites exist on both the islands and the mountain range. The islands, more protected over the centuries from development by man, also display unique flora and fauna providing insight into the natural history of the southern California coast.

Mr. President, the bill I am introducing today designates the Channel Islands and Santa Monica Mountains National Park and Seashore, authorizes $150 million for land acqustion and $50,000 for development, and calls for the completion of the acquisition of park lands within 5 years. The Channel Islands National Monument would be abolished.

Because of the fragile nature of the islands, the legislation stipulates that they be administered on a limited-entry basis as a scientific resource, while more intensive public recreation would be located in the Santa Monica Mountains. The bill specifically provides that San Miguel, Santa Rosa and Santa Cruz would not be opened to the public until the Secretary of the Interior approves a park management plan which insures permanent protection of the islands. In addition, in view of the fact that Santa Rosa and Santa Cruz Islands are presently protected under private ownership, the bill provides that no Federal funds can be expended for their acquisition against the wishes of the owners unless the present use changes and the islands become threatened.

The bill also creates a Citizens Advissory Commission to work with the Interior Department. The Citizens Advisory Commission would be composed of members of the public as well as individuals representing the various State and local governmental units in the area.

Mr. President, I am aware that other proposals have been put forward to protect the Channel Islands and Santa Monica Mountains. While I believe that national park designation is the best way to preserve these areas, the Senate Energy and Natural Resources Committee may wish to examine alternative approaches. I am eager to work with the committee to develop a final bill.

Mr. President, there is strong local public support for the creation of the Channel Islands and Santa Monica Mountains National Park and Seashore. An article recently appeared in the Los Angeles Times making the case for immediate Federal acquisition of these parklands. Mr. President, I ask unanimous consent that the article appear in the RECORD following my statement.

I also ask unanimous consent that the text of the bill appear at this point in the RECORD.

There being no objection, the bill and article were ordered to be printed in the RECORD, as follows:

S. 1906

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

PURPOSE

SECTION 1. In order to protect and preserve in public ownership an area in the State of California possessing significant scenic, wilderness, recreational, public health, educational, scientific, natural, and archeological values, and in order to provide for the maintenance of recreational open space necessary to the urban environment, the Secretary of the Interior (hereinafter referred to as the "Secretary") shall establish the Channel Islands and Santa Monica Mountains National Park and Seashore (hereinafter referred to as the "park and seashore"). In the management of the park and seashore, the Secretary shall utilize the park and seashore resources in a manner which will preserve its scenic, natural, and historical setting and its public health value as an airshed for the Southern California metropolitan area while providing for the recreational and educational needs of the visiting public. In order to preserve their delicate habitat, the Channel Islands and the channel waters shall be managed in a manner consistent with their status as a fragile resource area.

LAND ACQUISITION

SEC. 2. (a) The park and seashore shall consist of the lands and waters and interests therein generally depicted on the map entitled "Boundary Map, Channel Islands and Santa Monica Mountains National Park and Seashore, California", numbered , and dated , which shall be on file and available for inspection in the offices of the National Park Service, Department of the Interior, Washington, District of Columbia, and in the offices of the General Services Administration in the Federal Office Building in West Los Angeles, California, and in the main public libraries in Ventura, and Santa Barbara, California. After advising the Committee on Interior and Insular Affairs of the House of Representatives and the Committee on Energy and Natural Resources of the Senate, in writing, the Secretary may make minor revisions of the boundaries of the park and seashore when necessary by publication of a revised drawing or other boundary description in the Federal Register.

(b) Within the boundaries of the park and seashore the Secretary, after consultation with the Governor of the State of California and the California Coastal Commission and the Santa Monica Mountain Comprehensive Planning Commission, may acquire lands, improvements, waters, or interests therein by donation, purchase with donated or appropriated funds, transfer from any Federal agency, exchange, or otherwise. Any lands or interests owned therein, as well as any lands hereafter acquired, by the State of California or any political subdivision thereof (including any park district or other public entity) may be acquired only by donation or exchange. Notwithstanding any other provisions of law, any Federal property located within the boundaries of the park and seashore area shall, with the concurrence of the head of the agency having custody thereof, be transferred without transfer of funds to the administrative jurisdiction of the Secretary for the purposes of the park and seashore.

(c) The Channel Islands National Monument (52 Stat. 1541) is hereby abolished and any funds available for purposes of the monument shall be available for purposes of the National Park and Seashore.

(d) With respect to Santa Cruz and Santa Rosa Islands, the Secretary shall not acquire the property by condemnation unless the Secretary finds that the lands are being used, or are threatened to be used, for purposes which are detrimental to the purposes of the park and seashore.

(e) With respect to improved properties, as defined in this Act, the Secretary may acquire scenic easements or such other interests as, in his judgment, are necessary for the purposes of the park and seashore. Fee title to such improved properties shall not be acquired unless the Secretary finds that such lands are being used, or are threatened to be used, for purposes which are detrimental to the purposes of the park and seashore, or unless each acquisition is necessary to fulfill the purposes of this Act.

(f) When any tract of land is only partly within the boundaries of the park and seashore, the Secretary may acquire all or any portion of the land outside of such boundaries in order to minimize the payment of severance costs. Land so acquired outside of the boundaries may be exchanged by the Secretary for non-Federal lands within the boundaries. Any portion of the land acquired outside the boundaries and not utilized for exchange shall be reported to the General Services Administration for disposal under the Federal Property and Administrative Services Act of 1949, as amended: *Provided*, That no disposal shall be for less than the fair market value of the lands involved.

(g) For the purposes of this Act, the term "improved property." means (i) a detached single-family dwelling, the construction of which was begun before January 1, 1978 (hereafter referred to as "dwelling"), together with so much of the land on which the dwelling is situated, the said land being in the same ownership as the dwelling, as the Secretary shall designate to be reasonably necessary for the enjoyment of the dwelling for the sole purpose of noncommercial residential use, together with any structures necessary to the dwelling which are situated on the land so designated, or (ii) property developed for agricultural uses, together with any structures accessory thereto which were so used on or before January 1, 1978. In determining when and to what extent a property is to be considered an "improved property", the Secretary shall take into consideration the manner of use of such buildings and lands prior to January 1, 1978, and shall designate such lands as are reasonably necessary for the continued enjoyment of the property in the same manner and to the same extent as existed prior to such date.

(h) The owner of an improved property, as defined in this Act, on the date of its acquisition, as a condition of such acquisition, may retain for herself or himself, her or his heirs and assigns, a right of use and occupancy of the improved property for noncommercial residential or agricultural purposes, as the case may be, for a definite term of not more than twenty-five years, or, in lieu thereof, for a term ending at the death of the owner or the death of her or his spouse, whichever is later. The owner shall elect the term to be reserved. Unless the property is wholly or partially donated, the Secretary shall pay to the owner the fair market value of the property on the date of its acquisition, less the fair market value on that date of the right retained by the owner. A right retained by the owner pursuant to this section shall be subject to termination by the Secretary upon his determination that it is being exercised in a manner inconsistent with the purposes of this Act, and it shall terminate by operation of law upon notification by the Secretary to the holder of the right of such determination and tendering to him the amount equal to the fair market value of that portion which remains unexpired.

(i) In exercising the authority to acquire property under this Act, the Secretary shall give prompt and careful consideration to any offer made by an individual owning property within the park and seashore to sell such property, if such individual notifies the Secretary that the continued ownership of such property is causing, or would result in, undue hardship.

SEC. 3. (a) Within six months after the date of enactment of this Act, in connection with the description of the boundaries of the park and seashore pursuant to the second section of this Act, the Secretary shall identify the areas within such boundaries which must be acquired and held in public ownership for the following critical purposes: Preservation of beaches and coastal uplands; protection of undeveloped inland stream drainage basins; connection of existing State and local government parks and other publicly owned lands to enhance their potential for public recreational use; protection of existing park roads and scenic corridors, including such right-of-way and adjacent or related sites as are necessary for the development of the Mulholland Scenic Parkway Corridor; and development and interpretation of historic sites and recreation areas in connection therewith, to include, but not limited to, parks, picnic areas, scenic overlooks, hiking trails, bicycle trails, and equestrian trails.

(b) The Secretary may from time to time revise the identification of such areas, and any such revisions shall become effective in the same manner as herein provided for revisions in the boundaries of the park and seashore.

(c) Within one year after the date of the enactment of this Act, the Secretary shall submit, in writing, to the Committee on Interior and Insular Affairs of the House of Representatives, the Committee on Energy and Natural Resources of the Senate, and the Committees on Appropriations of the House and the Senate a detailed plan which shall indicate:

(i) the lands and areas identified in subsection (a),

(ii) the lands which he has previously acquired by purchase, donation, exchange, or transfer for the purpose of this recreation area, and

(iii) the annual acquisition program (including the level of funding) which he or she recommends for the ensuing five fiscal years.

(d) It is the express intent of the Congress that the Secretary shall substantially complete the acquisition program contemplated by this Act within five years after the date of its enactment and shall substantially complete the acquisition of the lands, improvements, waters, or interests therein identified for the critical purposes referred to in subsection (a) within three years after the date of enactment of this Act, and during such three year period funds appropriated for the acquisition of property within the park may be used only for acquisition of the lands, improvements, waters, and interests therein so identified.

ADMINISTRATION

SEC. 4. (a) The Secretary shall establish the park and seashore by publication of a notice to that effect in the Federal Register at such time as the lands, improvements, waters, and interests therein have been acquired in an amount sufficient in the determination of the Secretary to be administered efficiently for the purposes of this Act. Such notice shall include a map and a detailed description of the boundaries of the park and seashore.

(b) The Secretary shall administer the park and seashore in accordance with the provisions of the Act of August 25, 1916 (39 Stat. 535), as amended and supplemented (16 U.S.C. 1 et seq.). In the administration of the park and seashore, the Secretary may utilize such statutory authority available for the conservation and management of wildlife and natural resources as he or she deems appropriate to carry out the purpose of this Act. The islands and the fragile resource areas of the mainland portion of the park and seashore shall be administered on a low-intensity, limited-entry basis.

(c) San Miguel, Santa Cruz, and Santa Rosa Islands shall not be opened to the public until the Secretary has approved a park management plan which insures permanent protection of unique island species and provides for continued scientific research.

(d) The Secretary may enter into cooperative agreements with the State of California, or any political subdivision thereof, for the rendering, on a reimbursable basis, of rescue, firefighting, and law enforcement services and cooperative assistance by nearby law enforcement and fire preventive agencies.

(e) Notwithstanding any other provision of law, the Secretary is authorized to accept donations of funds, property, or services from individuals, foundations, corporations, or public entities for the purpose of land acquisition and providing services and facilities which he or she deems consistent with the purposes of this Act.

(f) The Secretary may, on his or her own initiative, or at the request of any public agency or local government having jurisdiction over land located within or adjacent to the park and seashore, assist and consult with the appropriate officers and employees of such public agency or local government in establishing zoning laws or ordinances which will assist in achieving the purposes of this Act. In providing assistance pursuant to this subsection, the Secretary shall endeavor to obtain provisions in such zoning laws or ordinances which—

(1) have the effect of prohibiting noncompatible use of all real property adjacent to the park and seashore;

(2) aid in preserving the character of the park and seashore by appropriate restrictions on the use of real property in the vicinity including, but not limited to, restrictions upon building and construction of all types; signs and billboards; the burning of cover; significant modifications of natural habitat types; removal of topsoil, sand, or gravel; dumping, storage, or piling of refuse; or any other use which would detract from the aesthetic character of the recreation area; and

(3) have the effect of providing that the Secretary shall receive notice of any hearing for the purpose of granting a variance and of any variance granted under, or of any exception made to, the application of such law or ordinance.

(g) The Secretary shall give full consideration to the recommendations of the California Department of Parks and Recreation, the Santa Monica Mountains Comprehensive Planning Commission, and the California Coastal Commission.

TRANSPORTATION STUDIES

SEC. 5. (a) The Secretary, in cooperation with the State of California and the affected political subdivisions thereof, local and regional transportation agencies, relevant advisory groups, and the Secretary of Transportation, shall plan a coordinated public and private transportation system to and within the mainland portions of the park and other units of the National Park System in Los Angeles and Ventura Counties. This system shall include but not be limited to the Mulholland Scenic Parkway with its roadway and its bicycle, equestrian, and hiking trails.

(b) The Secretary shall make and submit to the Congress a study as to the design, construction, and operation of a public scenic transportation system to and from the mainland and the Channel Islands. The Secretary shall implement the construction and operation of such transportation system, unless within thirty calendar days of continuous session of Congress after the report has been submitted to it, either House passes a resolution stating in substance that that House does not favor the construction of such system. Such transportation system shall be consistent in all respects with the more stringent of environmental standards established by the State of California and the United States.

ADVISORY COMMISSION

SEC. 6. (a) There is hereby established the Channel Islands and Santa Monica Mountains National Park and Seashore Advisory Commission (hereinafter referred to as the "Advisory Commission"). The Advisory Commission shall terminate ten years after the date of establishment of the park and seashore.

(b) The Advisory Commission shall be composed of seventeen members to serve for terms of five years as follows:

(1) The fourteen members of the Santa Monica Mountains Comprehensive Planning Commission; or the successor regional agency. After the termination of the Santa Monica Mountains Comprehensive Planning Commission, the Secretary shall appoint fourteen members with approximately the same representation of local areas and interests.

(2) One representative appointed by and who is a member of the South Central Coast

Regional Coastal Commission of California or if there is no such commission, one representative appointed by the California Coastal Commission.

(3) One representative appointed by and who is a member of the South Coast Regional Coastal Commission of California or if there is no such commission, one representative appointed by the California Coastal Commission.

(4) One representative appointed by and who is a member of the Citizens Advisory Committee on the Mulholland Scenic Parkway.

The Advisory Commission shall designate one of its members as Chairperson and any vacancy shall be filled in the same manner in which the original appointment was made.

(c) Members of the Commission shall serve without compensation as such, but the Secretary may pay expenses reasonably incurred by the Commission and reimburse members for reasonable expenses incurred in carrying out their responsibilities under this Act on vouchers signed by the Chairperson.

(d) The Secretary, or his or her designee, shall from time to time but at least semiannually, meet and consult with the Advisory Commission on matters relating to the development of this recreation area and with respect to carrying out the provisions of this Act.

SEC. 7. (a) There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act, but not more than $150,000,000 for the acquisition of lands and interests in lands.

(b) For the development of essential public facilities there are authorized to be appropriated not more than $500,000. Within one year from the date of establishment of the park and seashore pursuant to this Act, the Secretary shall, after consulting with the Advisory Commission, develop and transmit to the Committee on Interior and Insular Affairs of the House of Representatives and the Committee on Energy and Natural Resources of the Senate a final master plan for the development of the park and seashore consistent with the objectives of this Act, indicating—

(1) the facilities needed to accommodate the health, safety, and recreation needs of the visiting public;

(2) the location and estimated costs of all facilities;

(3) the projected need for any additional facilities within the area;

(4) any additions or alterations to the boundaries of the park and seashore which are necessary or desirable to the better carrying out of the purposes of this Act.

(c) For the design and study of the transportation system referred to in section 5 of this Act there are authorized to be appropriated not more than $500,000.

SANTA MONICA MOUNTAINS ARE NOT OUT OF THE WOODS

(By Mary Ellen Strote and Susan Nelson)

The Santa Monica Mountains have been "saved," haven't they? The creation of three state parks in the mountains and the City of Los Angeles' commitment to preserve the Mulholland Parkway all seem to assure that the mountains will be set aside for the public's enjoyment.

A nice thought, but unfortunately it isn't true. Even though they take in 28,000 acres, the three state parks—Topanga, Malibu Creek and Pt. Mugu—are relatively small green spots in a region now threatened by speculators with subdivision maps and blueprints rolled under their arms. Every day bulldozers scrape more chaparral from the sides of the Santa Monica range's steep hills; every day ancient sycamores are uprooted and high ridges leveled to make way for building pads.

Despite these pressures, much of the Santa Monicas remain, at least for now, a valuable and unique wilderness which long has been discussed as the obvious site to become Southern California's first national park. The introduction of legislation by U.S. Rep. Anthony Beilenson (D-Los Angeles) in May is the latest in a series of attempts in Congress achieve this aim.

Stretching west from the crowded picnic tables of Griffith Park, the Santa Monica is a picturesque range of mountains which divides the cultural and business centers of Los Angeles' mid-Wilshire district from the suburban San Fernando Valley. Along the way the mountains take on other names—Hollywood Hills, Beverly Hills—but they continue west in an uninterrupted upthrusting, passing rocky streams in Topanga Canyon and fern forests near Malibu.

They tower over oak-studded, straw-colored grazing lands in Calabasas and Agoura and finally ease down into the coastal marshes of Ventura County. Thirty miles offshore, they rise again, this time as isolated mountaintops known as the Channel Islands—including Santa Cruz and Santa Rosa, now devoted to ranching; San Miguel, owned by the U.S. Navy, and Anacapa and Santa Barbara, which have been designated as national monuments.

Beilenson's bill, would create the Channel Islands and Santa Monica Mountains National Park and Seashore, would enable the acquisition of land to tie together existing city, county and state facilities in the mountains and bring the offshore islands into the chain. Hikers, cyclists and pleasure drivers would be able to follow an uninterrupted path of parks, greenbelts and scenic traffic corridors all the way from the densely populated heart of the city to the shores of the Pacific. But if land acquisitions are not made now, the opportunity to preserve this open space will be lost forever.

The idea of linking the mountains with the offshore islands as a national park is a new one, but efforts to protect the islands date back 20 years in Congress, and conservation groups have been seeking a national park in the Santa Monicas for 14 years.

The reasons for such a long delay in winning approval remain a mystery. Horace Albright, an early director of the National Park Service, offered one explanation recently when he said that "had the Santa Monicas been located in any other part of America, they would long ago have been set aside in the national interest. Only in California, which boasts such an abundance of spectacular scenery, has it been possible to ignore them."

We have scenery, yes, but not enough of it is open to the public for recreation. For many reasons, the park is a necessity:

Southern California is one of the most park-poor areas of the country. Only 2 percent of the City of Los Angeles is reserved for open space, parks and beaches. In contrast, San Francisco has set aside 14 percent and New York 18 percent of their land for parks.

Recreation needs in Southern California are growing even faster than the population. More than 10 million residents of metropolitan Los Angeles are increasingly demanding more space for hiking, bicycling and camping; 8 million visitors a year also place strains on existing facilities.

Smog in Los Angeles is bad, but it could be worse. The Santa Monicas sit squarely in the path of our fresh-air flow from the ocean. Developed, the mountains would be an additional source of pollution. Reserved as open space, they are a lifeline to the city's major source of clean air.

Southern California *deserves* a national park. Northern California has five, including Yosemite and Sequoia, and within the last decade acquired the Pt. Reyes National Seashore as well. Southern California has none. During the federal Legacy of Parks program of the early 1970s, new urban parks were created near San Francisco, New York and Cleveland—but not Los Angeles. Delegates at a recent Washington conference sponsored by the Urban Environment Foundation rated the Santa Monicas national park as one of the four most needed such projects in the country.

Both islands and mountains are truly unique and must be protected. The Channel Islands contain important archeological sites in addition to plants and animals found nowhere else in the world. These are threatened by uncontrolled contact with man. In addition, waters around the islands offer an unusual opportunity for development of marine sanctuaries. The Santa Monica Mountains are unmatched anywhere for providing the beauty of a wilderness in the middle of a metropolis.

Certainly the state has made an excellent beginning in establishing three state parks in the mountains. In addition, the new state Coastal Commission and the Santa Monica Mountains Comprehensive Planning Commission are working on land use plans for the area. Officials of Los Angeles' city and county governments are being pressured to preserve the mountain land, much of it along Mulholland Drive and Mulholland Highway, under their control.

The critical need now is for land acquisition, particularly along the seashore and around the state parks, which are threatened by development on all sides. The federal government is in the best position to make these acquisitions. The Beilenson bill provides $100 million for land purchases in the mountains and $50 million for the islands, three of which are already federally owned.

Private landowners would be compensated. The great parks of America's past were carved out of vast tracts of federal land containing few private holdings. Today, it is much harder to acquire desirable land in urban areas, but the government has worked out a whole new process for dealing with the problem.

Nor would a national park crowd out all private development. Land zoned for private recreation and agricultural use often serves as a valuable buffer for such parks.

The Santa Monica Mountains bill has been referred to the House Interior and Insular Affairs Committee's national parks and recreation subcommittee and has the support of several key Congressmen and government agency heads. In addition, public support has reached such a level that the Department of the Interior reported recently that it had received more mail on the Santa Monicas than any previous park proposal.

Thus Los Angeles now stands a chance of getting its own national park *and* seashore. The opportunity will not last a decade or so this time, however. We are looking at a classic case of now or never.

By Mr. WILLIAMS:

S. 1907. A bill to amend the Social Security Act to provide medicare benefits for individuals who require total parenteral nutrition, TPN, as a result of intestinal surgery; to the Committee on Finance.

TOTAL PARENTERAL NUTRITION

Mr. WILLIAMS. Mr. President, in recent years an innovative medical procedure has offered a promising alternative to a growing number of Americans who had previously been faced with certain hospital confinement. I am referring to the home treatment known as total parenteral nutrition—TPN—a technique involving the infusion of liquid nutrients into patients who are not able to take

nourishment any other way. These patients, victims of diseases which necessitated the removal of the major part of their intestinal tracts, must be fed for the rest of their lives through a tube implanted in a major blood vessel. The nutrients are mechanically administered with the assistance of a specially trained relative or friend. Although the TPN process requires a considerable amount of time each day, the patient is free to pursue a normal, productive existence in his hours away from the treatment. It is estimated that there are 500 to 600 citizens in our country who are undergoing this method of feeding in their homes.

Unfortunately, the expenses of this technique are enormous. In addition to the surgery needed to prepare a patient for the TPN process and the machinery involved in the treatments, the cost of the nutrients alone can range from $10,000 to $20,000 a year for each patient. This expense usually far exceeds the financial resources of the patient; yet, in many cases, the moderate income of the patient's family prevents entitlement to public assistance programs which could help pay for this care.

The TPN process is similar to renal dialysis, the blood cleansing treatment for persons with severe kidney disorders: both procedures utilize expensive machinery; they must be performed on a periodic basis; and they accrue costs which, in almost all cases, quickly outstrip the patient's ability to pay for continuing treatment. Unlike dialysis, however, TPN is not covered by the special provisions of the medicare program that provide for payment of dialysis treatments without regard to the age of the patient. My legislation, therefore, seeks to include TPN treatments under medicare in the same manner as dialysis, with an added provision that coverage begin in the month in which treatment is initiated.

It is believed that the cost to medicare of such home treatments would run about $10 million a year. I might point out that TPN treatments performed in an institutional facility would cost over $50 million a year. This modest investment in the survival of a significant number of our citizens is a most humane and worthwhile application of the principles embodied in the medicare program.

The need for such legislation is immediate. Our citizens whose lives depend on this treatment need financial relief now. Their needs cannot wait for a national health insurance plan to be enacted, or for a comprehensive reform of our welfare system. These Americans must not be forced to make the choice between financial disaster for their families or death. Mr. President, I urge immediate action on this legislation.

By Mr. ROTH:

S.J. Res. 76. A joint resolution proposing an amendment to the Constitution of the United States with respect to the reconfirmation of Federal judges after a term of 10 years; to the Committee on the Judiciary.

Mr. ROTH. Mr. President, I send to the desk a joint resolution proposing a constitutional amendment to limit the tenure of Federal judges to 10 years.

This legislation is essential to halt the continuing erosion of one of our most sacred principles—the separation of legislative, judicial, and executive powers.

This state of affairs was unacceptable to the distinguished writers of "The Federalist" two centuries ago, and it is unacceptable to the people of this Republic today.

In recent years the Federal judiciary has moved away from its traditional role of curbing abuses in the legislative and executive branches to the force drafting of wholesale social change. Federal court judges have sought to rewrite the Constitution in the guise of interpreting it. In the process they have usurped prerogatives properly belonging to the elected Representatives of the people. By decreeing "enlightened" social policy rather than the law, the "new" judiciary has become a super-legislature responsible to no one. They have become a continuing constitutional convention without elected delegates and, in a very real sense, a judicial oligarchy decreeing to the States and Congress what they must do. This situation must be brought to a rapid conclusion for it violates the very principles upon which this Nation has grown and prospered since its inception.

Today's "new judiciary" includes within its purview education policy, highway standards, mental health, and auto safety. The members of this body have been handed decisions which affect hospital administration, penal institutions, child support, voting registration, and natural resource allocation. The judiciary has even gone so far as to seek to limit the size of college football squads, ban smoking in public places, and set school tax rates.

Regardless of the merits of these cases, judges are not social planners, they are legal theorists. They have neither the resources nor most importantly, the mandate to intervene in the policy development and implementation functions of the executive and legislative branches.

Supreme Court Justice John M. Harlan wrote that—

> The Constitution is not a panacea for every blot upon the public welfare; nor should the court, ordained as a judicial body, be thought of as a general haven for reform movements.

Well, the judiciary never took Judge Harlan's words seriously. To the extent any court perceives its functions as one of making fundamental value choices for society, while ignoring traditional constitutional values, then to that extent the court is exercising its power illegitimately.

Judicial restraint is an implied condition of the authority of judicial review. While legislative overreaching may result in the sacrifice of individual protections secured by the Constitution, judicial overreaching may sacrifice the right of the people to govern themselves.

Many believe the courts should act whenever Congress either has not done so or when Congress passes a law with which they disagree. Those who hold these views are intoxicated by the quick, simple way in which the courts can decree what they deem to be desirable social ends. Recourse to the courts avoids the often slow and frustrating effort necessary to analyze the problems, devise precise solutions and develop the political coalition to advance their cause.

In addressing this issue, Chief Justice Burger recently stated:

> This (recent significant change brought about by litigation) has given rise to the alluring prospect that our world can be changed in the courts. I confess it is an intriguing idea. Federal judges in particular need not be troubled by constituents or elections and can therefore concentrate on problems without regard to public opinion. . . .
>
> Those who would look to judges, and especially tenured federal judges, to innovate and reshape our society will do well to ponder what remedy is available if the world shaped by the judicial process is not to their liking. I suggest that this approval be considered against the background of our traditions and history which began with a revolution instituted to overthrow a government that was beyond recall by the votes of the people.

The Chief Justice went on to conclude that—

> It was never contemplated in our system that judges would make drastic changes by judicial decision.

And it is this departure from the traditional role and responsibility of the courts that we must correct.

I believe that by limiting Federal judgeships to a period of 10 years, we can insure that the President and the Congress have an opportunity to evaluate judicial performance and insure that it reflects the needs and mores of our society. At the same time, the length of the judicial term—more than twice that of the President's—would insure the independence and separate nature of our judiciary.

The country urgently needs judges who reflect the tradition of judicial self-restraint as envisioned by the Founding Fathers. Only in this manner can the judiciary maintain its proper role in our constitutional system.

By reducing the tenure of Federal judges from lifetime appointments to a period of 10 years, we can insure that this is done. If, at the end of any 10 year term, a judge is found to be exercising his role as adjudicator in an exemplary manner, the President may reappoint and the Senate may then reconfirm that judge for another 10-year term.

This amendment would apply to any person holding such office prior to ratification of this article.

Mr. President, I ask unanimous consent that the text of my resolution be printed at this point in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 76

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution if ratified by the legislatures of three-fourths of the several States within 7 years after its submission to the States for ratification:

"ARTICLE —

"SECTION 1. Notwithstanding the provisions of the second sentence of section 1 of Article

III of the Constitution of the United States each judge of the Supreme Court and of the inferior Courts of the United States shall hold such office during good behavior, but for a term of not to exceed ten years, unless, at the end of such term the Senate gives its advice and consent to such judge continuing in office for another such term. This article shall apply to any person holding such office prior to ratification of this article by the legislatures of three-fourths of the several States.

"SEC. 2. Judges holding office under section 1 of Article III of this Constitution on the date of ratification of this article shall continue in office until their successors have been appointed and have qualified for office under this article.

"SEC. 3. The Congress shall have the power to enforce this article by appropriate legislation.".

ADDITIONAL STATEMENTS

SEALED BIDDING AND THE BUTTER-VALLEY TIMBER SALE

Mr. DOMENICI. Mr. President, within the next several days, the Senate will consider S. 1360 which is intended to return bidding on national forest timber sales in the West to the traditional oral auction system that has been the practice for some 30 years.

This will correct a chaotic situation in that part of the Nation resulting from the way in which the Forest Service of the U.S. Department of Agriculture has interpreted requirements of the 1976 National Forest Management Act in applying sealed bidding on nearly all its timber sales.

This application is certainly not what Congress intended when this provision was inserted at the last minute in the 1976 act. Western communities and mills dependent on national forest timber are suffering because of the present Forest Service interpretation of this provision and they need relief promptly.

An example of how sealed bidding requirements for national forest timber sales have affected local mills is found in a timber sale recently sold in New Mexico; the Butter-Valley sale on the Carson National Forest. The sale was advertised and bid on February 14 of this year, and involved 9.9 million board feet of timber.

This sale was significant since it represented about half of the regular timber sale program in the Carson National Forest for the 6-month period October 1, 1976, through March 31, 1977.

The Butter-Valley sale was sold by sealed bids, and the high bidder was a firm in far-off Kelso, Wash., which won the contract by bidding more than $150,000 over the Forest Service's appraised value of the timber. The Duke City Lumber Co. in Albuquerque, which needed the sale for its mill in Espanola, N. Mex., also bid on the sale but, of course, was not successful.

Since sealed bids were the method of sale, Duke City had no opportunity to raise its bid to meet the competition, even if it could economically justify such a high bid.

On May 23, Duke City received a letter from the Forest Service advising that "it has been determined not to be in the public interest to award the contract to the apparent high bidder." Duke City was offered the sale but only if it would match the bid by the Washington State operator—at more than $150,000 over the appraised value of the timber. I think it is important to note here that timber in New Mexico is shorter and much thinner than timber in the Northwest, therefore, people who are familiar with our timber crop would know to take this into account in their bid. Duke City was not able to justify paying this high price because the timber was not worth the amount originally bid by the out of State firm.

The Butter-Valley sale is an illuminating example of what can happen in the West when timber is sold by sealed bids. There is no way a dependent local company can protect its employees or its investment in plant facilities under that sale system. Jobs in a local area are jeopardized because timber can be sold, removed, and manufactured at some distant location. As a result of sealed bidding on the Butter-Valley sale, some 135 employees, both direct and indirect, will be adversely affected at the Espanola sawmill operated by Duke City Lumber Co.

The same kind of situation is now magnified many times over throughout the West. It is the little guys—the small sawmills and independent operators that are the backbone of hundreds of small western communities—who are left with no way to protect their plants and communities. With sealed bids they get only one crack at a timber sale they must have to stay afloat. There is no chance to increase their bids to meet the competition—in many instances competition from outside the normal operating area.

Sound legislation to relieve this untenable situation has been approved by the Senate Energy and Natural Resources Committee and the Agriculture Committee. The bill approved by these committees would modify the language of the National Forest Management Act by giving the Forest Service flexibility to return to traditional oral auction methods in parts of the West where it has been used historically. The amendment provides adequate safeguards to handle any cases of suspected collusion, which can occur under either oral or sealed bidding methods.

This bill may seem unimportant to easterners, where sealed bidding for National Forest timber has been the historic pattern. But it is highly important in the West where the National Forests are frequently the only source of timber supply and individual timber sales are large. The bill in its present form has the support of labor and both large and small buyers of National Forest timber. I urge my colleagues to support it when it comes before the Senate for a vote.

U.S. SUPPORT OF ADMISSION OF VIETNAM TO UNITED NATIONS

Mr. THURMOND. Mr. President, it was with a great deal of shock and dismay that I have read in the newspapers of the decision by the Carter administration to support the admission of Vietnam to the United Nations.

To actively support the admission of this Government is a diplomatic and moral blunder. Rather the United States should use its veto power to block admission until there was some evidence that South Vietnamese citizens were being treated humanely.

The Government of Vietnam, and previously the Vietcong and North Vietnam, have repeatedly violated agreements with our Government. Officials in Hanoi continue to hold the remains of U.S. personnel missing in action despite promises over the past years and months that all such remains have been returned.

Furthermore, this Government's record in the area of human rights is a flat zero. This Government murdered citizens of South Vietnam throughout the Vietnam war, as well as some U.S. and allied military and civilian personnel captured during the defense of South Vietnam.

Since seizing South Vietnam by force, reliable reports published in the U.S. and foreign press have revealed that many citizens of our former ally have been murdered, tortured, or imprisoned. Thousands of others have been placed in indoctrination camps to be stripped of all human dignity and free thought.

My confidence in our current Government leaders is greatly shaken by this decision to take positive action in supporting Vietnam's entry into the United Nations. This action tells the world our Nation has placed a seal of approval on the new government in Vietnam, despite the known record of the illegality of that government. This action is also totally inconsistent with President Carter's human rights policy.

The hundreds of thousands of citizens of our country whose sons, husbands, brothers, and other kin died or suffered wounds or served in attempting to help South Vietnam defend itself, must be sick at this development. One year our country asks them to make the supreme sacrifice in the field of combat, several years later we support the admission to a world body of the enemy we asked them to fight.

Mr. President, I deplore this action by the Carter administration which was totally unnecessary and ill-advised. How it is consistent with the President's human rights position I fail to understand.

The one factor that makes the United States of America a beacon to the world is our position on individual freedom that runs throughout our system of government. This position which Americans have fought and died for since our Declaration of Independence is tarnished by such actions as our support of the admission of Vietnam to the United Nations.

Mr. President, I ask unanimous consent that the following newspaper articles on this subject be printed in the RECORD: "United States to Back Seat in U.N. for Vietnam," in the July 19, 1977, issue of the Washington Post; "U.S. Voices Restrained Support for Entry of Vietnam in the U.N." in the July 30, 1977, issue of the New York Times.

There being no objection, the articles

were ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 19, 1977]

UNITED STATES TO BACK SEAT IN U.N. FOR VIETNAM

(By Murrey Marder)

The United States will support Vietnam's admission to the United Nations in a Security Council recommendation that may come today as a sign of the Carter administration's desire to "put the past behind us," administration officials said yesterday.

After North Vietnam's conquest of South Vietnam in 1975, the United States repeatedly vetoed U.N. membership for the unified Vietnam, primarily on grounds that the Hanoi government was failing to account for American servicemen missing in action.

At a meeting in Paris last May with Vietnamese diplomats, the United States said Hanoi was responding with information on MIAs, and it would no longer veto Vietnam's application for membership in the United Nations. Left open was the question of whether the United States would abstain when the issue reappeared or take more positive action.

At the United Nations yesterday, the United States and all other Security Council members, meeting as an admissions committee, recommended Vietnam's acceptance into the world organization. Some reports describe the intended action, to be taken by consensus, as a mean of enabling the United States to avoid a vote in the Security Council.

An administration official, however, said the consensus procedure is not novel, and the fact is that "we joined in a recommendation that Vietnam be admitted" when the U.N. General Assembly convenes in September. Congressional committee chairmen involved had been informed in advance of the administration's intention.

Rep. Lester L. Wolff (D-N.Y.) chairman of the House International Relations Asian and Pacific Affairs Subcommittee, said of the decision on Vietnam: "It may bring them closer to the community of nations."

Wolff has scheduled a hearing today with former Secretary of State Henry A. Kissinger about the disputed postwar reconstruction aid of up to $4.75 billion promised by then-President Nixon to North Vietnam in 1973. Nixon and Kissinger say Hanoi's violation of the 1973 cease-fire in Vietnam wiped out any U.S. aid commitment.

Philip C. Habib, under secretary of state for political affairs, said on Saturday that the United States has told Hanoi it wants "to put the past behind us and make a start on normal working relations."

Speaking to the National League of Families of American Prisoners and Missing in Southeast Asia, Habib said that in the Paris talks conducted in May and June the United States ". . . proposed to the Vietnamese that we proceed at once to normalize our relations, including the exchange of ambassadors. We offered to drop our trade embargo, contingent on the opening of embassies in our two capitals. And we told the Vietnamese we would withdraw our opposition to their membership in the United Nations."

Habib said, "We believe that opening an American mission in Hanoi would further facilitate progress" in getting additional information on MIA accounting and returning the remains of prisoners, beyond agreements reached in May in June.

"Vietnam has not accepted this proposal thus far, on the ground that it fails to provide a U.S. contribution or reconstruction aid for their country, which they claim was envisioned by past agreements."

He said U.S. negotiators have repeatedly told the Vietnamese that the U.S. view is "that we have no obligation to aid them, and that congressional restrictions specifically bar U.S. aid to Vietnam."

He said, "We continue to hope Vietnam will set aside its demand for such assistance and agree to proceed without conditions based on an interpretation of the past which we cannot, and will not accept."

[From the New York Times, July 20, 1977]

U.S. VOICES RESTRAINED SUPPORT FOR ENTRY OF VIETNAM INTO U.N.

(By Kathleen Teltsch)

UNITED NATIONS, N.Y., July 19.—The United States voiced restrained support today for Vietnam's admission to United Nations membership, declaring in the Security Council that it looked forward to a "new era of peace, cooperation and friendship."

However, the United States also used the occasion, the beginning of debate on Vietnam's application, to remind the Hanoi regime that membership also involved duties, such as responsibility to promote respect for human rights.

The statement underscored once again the change in the Vietnam policy of the United States, which for two years had used its veto to block Hanoi's entry.

Approval of Vietnam's admission has been assured, since the United States announced in May that it would no longer oppose membership after Hanoi promised to provide data on American servicemen still listed as missing in the Vietnam war.

However, American officials in Washington in recent days have indicated that the Carter Administration was prepared to go further than simply dropping the veto and to make a good will gesture toward Hanoi by agreeing to support its admission.

"It is another step toward putting the Vietnam War behind us," a United States official here remarked. But he said he would not characterize the statement in the Security Council as having "welcomed" Hanoi's admission.

Delegates, including some of Hanoi's close allies, seemed satisfied with the tone of the American statement, considering the long and bitter conflict that was waged in Indochina, ending in 1975 with Vietnam's defeat of the United States-supported South Vietnam regime.

Donald F. McHenry, the deputy American representative, delivered a 90-second speech in the absence of Andrew Young, the chief delegate, who was in Europe. Mr. McHenry expressed gratification that the entry of another country helped promote universality—a neutral and much-used comment—but he went on to say:

"We look forward to working with Vietnam, as with all other members in this body, to bring about a new era of peace, cooperation and friendship, not only in our bilateral relations but in our work together in the United Nations."

Some observers noted that the American speech, brief as it was, pointedly declared that Vietnam also would be assuming responsibilities as a member to promote peaceful settlement of disputes and to advance human rights. The Hanoi Government has been criticized by private groups and in Congress for its record on human rights. However, American officials seemed to stress instead the speech's emphasis on future improvement in relations.

The United States has had two rounds of talks in Paris with Vietnamese officials and it was at the last meetings, last month, that Hanoi pledged to return the remains of 20 missing Americans within 60 to 90 days. There has been no further development, however, and no date for another round has been set, according to American sources.

The talks have been stalled on other points, with the Vietnamese insisting on an immediate end of the American trade embargo and calling for assistance to heal "the wounds of war."

THE TIME-TESTED FORMULA: THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, the number of paths open to this Government for supporting human rights are countless. During the past few months, new proposals have been presented.

Just recently, Roger Fontaine, the director of Latin American Studies at Georgetown University's Center for Strategic and International Studies, urged Congress to go beyond President Carter's human rights statements to make specific demands. He suggested, for example, that the United States ask for the names and places of incarceration of Cuba's estimated 20,000 political prisoners. He further suggested that the administration demand the admission of a neutral group into Cuban prisons to insure that elementary standards of treatment are maintained. Pressuring the Castro regime to release longtime prisoners when their terms expire and tying the normalization of trade relations to the improvement of civil liberties in Cuba were also included among Mr. Fontaine's suggestions.

Another possibility for the United States to defend the cause of human rights is currently under investigation by the State Department. The Department has suspended an $11 mililon grant to Chile by the Agency for International Development for 1 to 2 months, during which time Chile's human rights record will be reviewed. At the end of this review, the State Department should have a clearer understanding of both the domestic situation in Chile as regards civil liberties and whether action on the part of the United States can influence that situation.

While these new inquiries into how the United States can promote universal freedoms are interesting, it is important that we do not neglect vehicles which are presently available.

The Genocide Convention is just such a vehicle.

It not only allows this Nation to commit itself to the support of fundamental human rights, but it does so with a formula that has been carefully studied for over 25 years. The Genocide Convention has been scrutinized by civil rights groups, by every President since Harry Truman, by the American Bar Association, by the State Department, and by the Department of Defense. It has been the subject of extensive hearings before the Senate Foreign Relations Committee. All agree that the Genocide Convention should be ratified by the Senate

Mr. President, let us continue our search for new ways of improving social conditions around the world, but let us not forget a proposal which has stood the test of years of scrutiny. I urge my col-

leagues to join me in supporting ratification of the Genocide Convention.

AMATEUR RADIO OPERATORS AGAIN RESPOND TO CALLS FOR HELP

Mr. DOMENICI. Mr. President, countless times American citizens have been the recipients of assistance during times of emergency and crisis by the selfless, dedicated amateur radio operator. At a time when our newspapers and television screens are filled with stories of man's inhumanity to man, and we scramble for example's of genuine compassion for our fellow citizen, it is always refreshing to find another instance when the men and women of America rise to meet the challenge of a natural disaster.

Such a case arose several weeks ago when the costly La Mesa fire near Los Alamos, N. Mex., destroyed thousands of acres of land and timber, and threatened residential areas in and around Los Alamos. I would like to bring to the attention of my colleagues portions of a recent letter received from Mr. Barry S. Newberger, a member of the Los Alamos Amateur Radio Club, concerning the club's response to the plea for assistance during the 8 days of this catastrophic disaster:

In the spirit of the Communications Act of 1934 and the FCC's test of public interest, convenience and necessity which all radio services must meet, we wish to call your attention to the communications service provided by the Los Alamos Amateur Radio Club through its club station W5PDO and repeaters WR5AFP, WR5ARO and WR5AEQ (the last three belonging to the Santa Fe VHF Society, Jemez Mountain Repeater Association and the Caravan Club of Albuquerque, respectively).

For over eight days, the club and its volunteer members and friends provided continuous round-the-clock communication service for all the agencies involved in this emergency. The agencies served included the U.S. Forest Service, weather service and the military. All the Forest Service administrative traffic was handled through the radio club, including 145 pieces of priority traffic. In addition, approximately 565 health and welfare phone patches were handled for the firefighters, many of whom had come from California, Idaho, Washington, Oregon, Montana and South Dakota and other states. These men and women, in not a few instances, had to leave pressing personal problems at home to help fight the fire and many would have found it difficult to resolve them without our phone patch service.

We were told by many of the firefighters that they had never before had such a service provided for them and were given a substantial boost in morale for having it.

In all, fifty-five people were involved for a total of nearly 1900 man hours, using their own personal equipment.

I am certain my colleagues will join with me in commending the Los Alamos Amateur Radio Club and the many volunteers who provided this valuable and urgently needed assistance. We are, indeed, fortunate to have this body of competent, disciplined, and dedicated amateur radio operators in times of distress. Our heartfelt thanks go out to all who responded to the call for help.

THE TRANSPORTATION APPROPRIATIONS BILL

Mr. BIDEN. Mr. President, the Senate has adopted the conference report on the Department of Transportation and Related Agencies appropriations bill for fiscal year 1978. This bill will provide funding for many programs of high national priority which I support. In particular it provides financial support for many of the important railroad lines in this Nation including those so vital to the economic stability of the Northeast. It also provides funds for assistance to local mass transit programs that offer one important solution to both our energy and our air pollution problems. And it contains money for many other important national programs as well.

I have one concern about the action we have taken. It does not involve large dollar amounts. It does involve equity. And it involves issues of the fiscal integrity of Federal grant programs. Specifically, I am referring to a provision for funding what are known as railroad-highway crossings demonstration projects. Under this program the Federal Government has provided funds to improve safety where roads cross railroad lines. One area of particular emphasis has been the separation or other improvement of rail-highway crossings for high speed trains in the Northeast corridor. This is an important program for the improvement of high speed rail service and an important program for the safety of those who must cross railroad tracks on which those trains run.

The Federal Government has provided generous financial support for the elimination of grade crossings and I am pleased that my State of Delaware has done its part to carry out this program in Delaware.

However, I am deeply concerned about a provision in this appropriations bill that would authorize the Secretary of Transportation to waive the requirement for local financial participation in this grade-crossing program. The Federal Government would pay all the costs. I believe this represents unsound fiscal policy and an unwise trend in State-Federal fiscal relations. There was a time when grant programs were intended to assist and encourage States and localities to carry out their responsibilities. More and more, when the State fails to meet those responsibilities there is a tendency for the Federal Government to step in and take over.

I am willing to recognize that there may be extenuating circumstances in this case. Certainly the matter of a rapid and efficient interstate rail system is a matter of vital concern to the whole Nation and is not a matter of concern only to the State in which the tracks are located. On the other hand, the basic responsibility for the safety of its citizens rests with the State and should prompt some response from it.

I did not oppose this legislation for two reasons. First, there are too many worthwhile programs in it that need to go forward. Second, I believe that if some city or State is in such dire financial straits that it cannot contribute to grade-crossing problems, then the needs of the interstate rail system are such that the Federal Government should step in and pay for the entire job.

However, I am concerned about how this law will be administered. There are no standards in the bill itself as to the conditions for waiving local contributions. The Secretary of Transportation may waive local contributions "if he determines such action would serve a public purpose." That is a very broad delegation of authority. I hope that as a minimum the Secretary would use the following criteria in making a finding of public purpose:

That the railroad-highway crossing project in question is essential to the development of a safe and rapid national rail transportation system;

That no local unit of government concerned has the financial ability to support the project;

That his decision for complete Federal financing of a project is not inequitable in the light of the many contributions already made toward such projects by some States.

I realize that there may not be many projects that could meet such criteria. There should not be many. I intend to communicate my concern to the Secretary and to request that I be furnished with information about the projects that are totally funded under this provision and the criteria used. If the authority granted him is well used, then the law will have worked. If not, then the Congress should review the issue next year.

RICCARDO VIEWS THE FUTURE OF THE AUTO INDUSTRY

Mr. GRIFFIN. Mr. President, last week the chairman of Chrysler Corp., John Riccardo, delivered a notable address before the Automotive News World Congress in Detroit.

So that his thoughtful observations will be readily available to many who ought to read them, I ask that the text of his remarks be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY JOHN RICCARDO

I'm glad so many people from around the country and from overseas had this opportunity to come here to Detroit for this meeting. It gives you a chance to see our city, and to learn how Detroit is meeting the challenges facing many of America's large industrial cities. The place we're meeting in today, Renaissance Center, is one of many examples of the new vitality and spirit alive in Detroit. This complex represents vast amounts of private capital committed by 51 separate corporate investors, and speaks a lot louder than I can about a conviction that Detroit and the industry that built it are here to stay.

I'm proud of this industry and what it means to the country. Today, three-quarters of a century after the business of building motor vehicles got started, we provide the nation's largest single market for basic raw

materials. We provide a job, directly or indirectly, for one out of every six men and women in the American labor force. We generate 20 percent of the gross national product—head and shoulders above the contribution of any other industry in the country.

Precisely because we're so large and so central to the nation's economy, we're deeply involved in many of the most important issues facing the country today. Because many of these issues are controversial, we get more than our share of the blame for such problems as air pollution, urban sprawl, the energy crisis, and public safety.

As the chorus of criticism has become louder in recent years, it has also become fashionable to suggest that we are seeing the end of America's love affair with the automobile. It has been said that we will have to get the public out of their automobiles, and get the automobiles out of the cities. A consultant to Congress said last month that "Detroit has no place in the 1980's." The Administrator of the EPA said in May that "the automobile . . . will continue to be a noose around the necks of our urban economy." A major bank said the long-run outlook for the auto industry is "clouded", and that "the auto market is pretty well saturated." A stock market analyst said our industry is "coming to the end of an era." Add together enough comments of this type, and the average person begins to believe that the automobile can't meet the needs of a modern technological society.

I'm here to tell you that nothing could be further from the truth. The fact is that the American automobile industry is, and will continue to be, one of the world's great growth industries, and one of the great forces for social good.

Anyone who doubts the vitality and basic strength of this industry should take a look at the events of the last few years.

Pretend for a few minutes that you were a visitor from another planet, and that you were given the assignment to prepare a scenario for undermining the American automobile industry. I have a hunch you might look at the history of what has already been imposed on Detroit and decide that you wouldn't change a thing. But let me just go through the scenario you might prepare.

First—you would pass a series of regulations on our industry that go beyond common sense. You would make the administrative cost of complying with those regulations add $200 to the price of a new car. That's on top of the cost of the hardware.

You would pass an overly stringent emissions law you knew couldn't be met. And then you'd tell the world we were dragging our feet when we said we couldn't meet it.

You'd require us to install an ignition interlock system so you had to buckle up a bag of groceries before you could back out of the garage—and when the public outcry forced Congress to remove it, you'd accuse us of a conspiracy to set back the safety movement.

Then you'd mandate air bags, which your own studies showed were the second-best safety system, and in a prime example of bureaucratic double-think accuse us of callous disregard when we suggest using lap and shoulder belts, which are the best system available.

You would mandate so-called safety bumpers that weighed 130 pounds, had no safety value, and cost too much to repair—and you'd criticize the industry for higher repair costs.

After we were well along on a multi-billion dollar product program to double our fuel economy in 10 years, you'd change the rules in the middle of the game, and propose gas-guzzler taxes that could disrupt an orderly transition towards the goals of the fuel economy law already on the books.

You would have the oil exporting countries slap an embargo on exports and scare people out of the market by threatening gas rationing and shortages, and vastly higher gasoline prices.

You would order up the worst economic slump since the Great Depression. Together with this slump you would bring a high rate of inflation to further destroy confidence, and watch automobile sales nosedive in the sharpest drop in 30 years, as they did in 1975.

You'd make it unpatriotic to buy a family-size car, under the banner of conserving petroleum.

You'd have the person designing New York City's transportation plan say: "My plan was a tool for social change. Very few people grasped that my crusade is not air pollution; it is the (bleeping) automobile and what it is doing to the country."

And when you'd done all this, when you'd prepared your scenario, when you'd put in place roadblocks unprecedented for any other industry, you would have an exact year-by-year description of what we've seen actually happen over the past few years.

And what's happened? The fact is that despite a series of obstacles unmatched in any other period, the American people bought more than 10 million passenger cars in 1976—one of the best years in the industry's history. 1977 is even better, and the long-range outlook is excellent.

The reason is clear—our products meet a fundamental public need. Cars and trucks give men and women, poor and wealthy alike, a freedom of choice, freedom of personal mobility, more equality of opportunity unmatched in history. *Public Interest* magazine, the prestigious magazine of national affairs, summed it up this way: "America has the best mass transportation system in the world. This mass transit system moves people with a speed, convenience, comfort and flexibility quite beyond comparison with other systems. Nearly every country envies us our system, and attempts to imitate it . . . It is the auto-highway system with benefits so manifold they are often forgotten. Every other method of moving people in or between cities is trivial by comparison."

That's why we're such a growth industry, and why we're going to keep on growing in the years ahead.

There's another fact that's often obscured from public view. No other industry has been as responsive in meeting national goals as ours.

We're *for* clean air. We've removed 83 percent of tailpipe emissions, and we're supporting legislation to remove 90 percent.

We're *for* energy conservation. We've increased fuel economy by 40 percent since 1974, and we're working to double it by 1985.

We're *for* public safety. The United States has the lowest auto fatality rate per mile traveled in the industrial world. The major reason is because of innovations like safety door locks, energy-absorbing steering columns, lap and shoulder belts, and safety windshields—all of which were introduced in our cars before they were required by law. We could save an additional 12,000 to 16,000 lives a year starting right now if the government would mandate use of safety belts already in our cars.

We have an enviable record in fighting inflation. The general cost of living in the last 10 years has gone up almost twice as much as the price of new cars.

And we have successfully held more than 80 percent of our market against foreign competition with no trade barriers. The wonder is that more people aren't asking how we've managed to be so successful.

For the past 75 years we've been running ahead of the times anticipating public need and developing the technology to meet that need. That's not going to change. The automobile will continue to be the mainstay of our transportation system and the backbone of our country's economy.

The automobile spreads the gifts of economic growth and mobility through all levels of society. Perhaps that's one of the reasons every developing country wants a car industry of its own. If any mechanical device could ever be called an Engine of Democracy, it would most surely be the automobile.

Most Americans know that the product we make is very much in the public interest. For three-quarters of a century Americans have voted with their dollars, and what they've said is that our product is basic to many of the values of civilization in North America. But they should also know that every time the government adds another item to the automobile, it's the customer who pays. In our judgment, he deserves full value for his money, and we have a responsibility to insist that he gets the value he pays for in government regulation.

Right now, this industry is moving full-speed ahead on the most drastic product change in history. We're committed to meet mileage standards which will double the average fuel economy of our 1974 fleet. We're going to continue to make cars even safer. We're going to eliminate the automobile from the pollution problem in the United States. We're developing new powerplants and new kinds of vehicles to meet new social needs. That sounds to me like an exciting challenge unmatched by any other industry in the world—a challenge with tremendous opportunities for growth.

This industry has a great future, and I for one am proud to be a part of it.

A DEPARTMENT OF EDUCATION

Mr. RIBICOFF. Mr. President, we are all aware of the administration's plans to reorganize the Federal Government.

One particular Department is most in need of reorganization—the Department of Health, Education, and Welfare. It has more than 300 programs and spends more than $160 billion—nearly one-third of the entire Federal expenditures.

One consideration for reorganization of HEW has been the creation of individual secretaries of health, education, and welfare under the umbrella of a "super-secretary." This concept was recently opposed by Senators MAGNUSON and PELL and myself in a letter to Vice President MONDALE, who is considering education reorganization.

Only a separate Department of Education would give education the importance and recognition education deserves. It would improve the coordination and manageability of present Federal education programs.

For over 10 years, various bills have been introduced in the Senate to establish such a Cabinet-level Department. The bill I have introduced this Congress to establish a separate Department, S. 991, has a total of 45 sponsors. Certainly the time has come to remove edu-

cation from the maze of the HEW bureaucracy.

Mr. President, I ask unanimous consent that a copy of the letter to Vice President MONDALE and also an editorial which appeared in Tuesday's Washington Star, entitled "Breaking up HEW," be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

BREAKING UP HEW

Proposals for breaking up the Department of Health, Education and Welfare have come from two senators within the past several days.

Sen. Hubert Humphrey told a National Education Association convention that a new department of education is "long overdue." He argued that a secretary of education would not be "bogged down with the crushing problems of health and welfare, too" and that providing cabinet status would "signify the importance" the administration attaches to education.

Maryland's Sen. Charles Mathias introduced a bill for a department of health. "We need a spokesman for health and health alone in the President's Cabinet, he said. "The nation's health care system is rushing toward economic collapse as a result of uncontrolled health costs. But nowhere in the government today is there a source of knowledgeable, credible leadership that might gain the cooperation of the private health sector in devising a health strategy and a sound regulatory framework for the benefit of the public and the health care system itself."

The new secretary of HEW, Joseph Califano, is against breaking up his department. He thinks it's "manageable" despite its huge size, a position contrary to a good many others in and out of government. One who thinks the department is too big for a single mortal to manage is Sen. Abraham Ribicoff of Connecticut, himself a former secretary of HEW.

Strong arguments for breaking education away from HEW were made last year by Rufus E. Miles, Jr., a former director of administration for HEW, who has been described as possibly the nation's leading expert on HEW's structure. In a study initiated by the American Council on Education and financed by a grant from the Ford Foundation, Mr. Miles said:

"Educational issues are of low priority within a department concerned with the development of complex new health insurance legislation, bringing under control the widespread and costly abuses in the Medicaid program, devising new legislation to federalize welfare or create a new income maintenance program, determining what to do about the excessively rapid growth in the cost of Social Security, coping with interminable problems of food, drug and vaccine regulation, and dealing with scores of difficult civil rights issues. No HEW secretary can devote much time to the exercise of leadership in respect to educational issues, and nobody at lower levels has the leverage to have significant effect. . . . Creating a 'Secretary of Education' in the President's Cabinet would open the opportunity for a higher level of leadership in respect to educational issues than has heretofore been possible."

HEW spends more than a third of the federal budget. It has approximately 130,000 employes. It is involved in nearly every facet of American life. A House Government Operations subcommittee said in a report last year that it took more than five months for the department to provide an accurate count of the number of programs it administers.

Mr. Califano, a chief architect of President Lyndon Johnson's multitudinous "Great Society" programs, likes to have his hands on a lot of handles. He's doing some tinkering with HEW structure but we suspect that even a person of Mr. Califano's capacity and enthusiasm doesn't have enough hands to keep a handle on the bureaucratic giant that HEW has become.

WASHINGTON, D.C.,
June 14, 1977.

The VICE PRESIDENT,
Old Executive Office Building,
Washington, D.C.

DEAR MR. VICE PRESIDENT: We know you are now in the process of considering several proposals to reorganize the education functions of the Federal government, and we congratulate you on your efforts towards seeking to improve the present condition of American education.

We have long recognized the need to reorganize the immense Department of Health, Education and Welfare (HEW) into manageable proportions, especially to give education the priority it deserves and to save controllable education budget functions from an otherwise uncontrollable health and welfare budget.

Your support last year for a separate, Cabinet-level Department of Education was welcomed by educators and students across the country as a pledge that the Federal government would finally provide American education the direction and high priority it rightly deserves.

A separate Department of Education would give education this badly needed attention by consolidating the entire Education Division of HEW and a number of education-related programs scattered throughout the Federal government into a single, effective framework. It would provide a sound organizational mechanism for education policy direction and leadership.

The new Department's budget would be larger than that of the existing Departments of Interior, State, Justice, and Commerce, and the proposed Department of Energy.

Strong support now exists for the concept of creating a separate Department. The bill we have introduced, S. 991, now has 45 sponsors.

As you know, some thought has also been given to restructuring HEW internally and modeling it instead after the present structure of the Department of Defense, with its subcabinets and individual secretaries. However, after careful study, we believe this alternative would be unworkable when applied to the Department of Health, Education and Welfare.

Patterning HEW after the DOD subcabinet model would be little more than a simple facelift, and in the end, do much harm to the overall Federal education effort. Such a reorganization would drastically increase and centralize the HEW Secretary's powers and duties. A Secretary of Education within HEW would only serve as an Administrator—not a policymaker.

The education functions could even be further buried in unnecessary layers of bureaucracy. If the present Department of Defense organization is any indication of what we could expect, the Education "subsecretary" would probably be relegated to a lower position within HEW, under as many as nine assistant secretaries and a deputy secretary in the Office of the Secretary.

Furthermore, the Education Division's budget would continue to be outnumbered, 18 to 1, by HEW's massive health and welfare program expenditures. The HEW Secretary, out of necessity, would continue to be preoccupied with pressing health and welfare concerns. Education would take a back seat, as it has always taken.

An Education Secretary, outside of the present HEW structure, would clearly have more access to the President, and his or her position alone would signify the importance this Administration attaches to the education of the 60 million persons enrolled in public and private education institutions today. Educators would see that they truly have a spokesperson at the highest levels of government, an individual in a position to give constructive policy input on the use of the more than $14 billion the Federal government spends on education every year.

We welcome your support of our efforts to create a Cabinet-level Department of Education. We plan to hold hearings on this issue in the very near future, and we stand ready to work with you on this important project.

Sincerely,

WARREN MAGNUSON,
ABE RIBICOFF,
CLAIBORNE PELL.

COMMUNITIES MISS CLEAN WATER DEADLINE

Mr. STAFFORD. Mr. President, the Senate Committee on Environment and Public Works is continuing to work to present to this body before the August recess our midcourse corrections for the Federal Water Pollution Control Act.

Among the many important and difficult issues before us is the task of improving our Nation's efforts to provide clean water in rural America.

During hearings in Washington and in field hearings across the country, the Subcommittee on Environmental Pollution heard testimony on the problems facing Americans who live in nonurban areas as they strive to develop new ways to treat waste waters.

I chaired one such subcommittee field hearing in Burlington, Vt., earlier this month. Testimony received at that hearing highlighted the special problems faced by rural Americans attempting to achieve clean water under the present law.

An excellent report on the Burlington hearing was written by Chris Braithwaite, of the Barton Chronicle, in the July 14, 1977, issue of that newspaper. I ask unanimous consent that the article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMUNITIES MISS CLEAN WATER DEADLINE

(By Chris Braithwaite)

BARTON. July 1, 1977, was an important deadline for communities all across this country. According to a federal law called the Clean Water Act of 1972, that was the day all municipalities were to stop polluting the nation's waterways with raw sewage.

The voters of Barton Village celebrated the occasion two days early, on June 29, by soundly defeating a $450,000 bond issue which would have covered their share of a $2.8-million sewage treatment plant.

And so on July 1 the residents of Barton went on flushing their toilets into the Barton River. So, for that matter, did the people of Orleans and Glover Village. West Glover residents sullied Roaring Brook, and those of Albany Village further blackened the Black River. All these villages missed the deadline.

Barton's lapse was the most serious, however, because the village was operating under an agreement called an "enforcement compliance schedule letter" which it had signed with the state Agency of Environmental Conservation and the federal Environmental Protection Agency. That schedule called for a favorable bond vote by July 1. Barton missed the deadline by a vote of 39 to 104.

Barton's Village Trustees, the likely target of any state or federal effort to enforce the law, seem to be waiting for the pollution to hit the fan with typical stoicism. Trustee Kenneth Elliott did comment glumly at a recent meeting that the problem isn't like a headache—"it isn't just going to go away."

If voters turn down a second try at a bond vote, state officials warn, the village could face stiff daily fines, or find itself in contempt of court.

In Boston, an EPA official said his agency takes action "if we feel a communnity is thumbing its nose at us." He didn't say exactly what that meant, but prudent Barton residents might keep their hands in their pockets for a while.

LESS PRESSURE ON OTHER VILLAGES

Other villages are under less pressure. Under its "enforcement compliance schedule," Orleans must pass a bond vote by this December 1. Glover and Glover Village have let their projects languish so long, an engineer with the Randolph firm Dubois and King reported this week, that its designs have "lapsed into obsolescence," and will have to be done yet again.

Meanwhile Albany's Selectmen have said "no thank you" to more than $500,000 in state and federal grants, and quietly told some 40 households in Albany Village that they must install septic tanks. Cost of these tanks, according to an informal local estimate, is running as low as $700 each, installed.

Albany's case is instructive, because it points up the enormous cost of the federally-mandated clean-up program. Because there would be so few users, Albany's engineering firm proposed a municipal septic system, rather than the generally prescribed sewage treatment plant. The "cheaper" septic system would have cost an estimated $581,000 or $10,000 for each household on the system.

Between them, the state and federal governments were willing to foot all but $80,000 of this cost. State engineers with the Agency of Environmental Conservation urged the town to adopt the municipal system.

But the local share, plus annual operating and maintenance costs estimated at $3,100 a year, would have cost the villagers $166 a year per household, presumably for ever.

At that rate, an Albany homeowner could pay for a $1,000 private septic system in just over 6 years.

Albany's case also points up an ironic twist in the federal program, where small rural systems are involved. In return for saving state and federal taxpayers half a million dollars, Albany's residents have been left on their own. As long as the Selectmen see to it that household tubs, sinks and toilets are disconnected from the old village sewers that drain into (or close to) the Black River, the state environmental agency is no longer interested in the village. Its regulations deal only with pollution of state waters. A malfunctioning septic tank would come under the jurisdiction of the town health officer.

Indeed there is apparently no agency with any power to insure that Albany's septic systems are adequate, and properly installed. Nor is there any money available to help pay for them. Hypothetically, the environmental agency could dedicate, say, $1,000 per household to help with the systems, and still save hundreds of thousands of dollars.

But from Boston, Ralph Caruso, who is the EPA co-ordinator for Vermont, said that would be out of the question. To qualify for federal grants, he said, any septic system must be municipally owned, and it must serve at least two households. To subsidize an individual homeowner's septic system, he added, "would be almost like welfare."

This suggests a further irony. If Albany's individual septic systems ultimately malfunction, causing problems with seepage and odor, a chorus of "I told you so" will be heard in Montpelier.

At a hearing on the community tank proposal in February, a state engineer warned that Albany's soils aren't suitable for septic systems. They could fail, he added, creating public health problems.

WARNS AGAINST ALTERNATIVES

This attitude seems to pervade the agency. At a U.S. Senate hearing on the Clean Water Act in Burlington last Saturday, Bill Brierley, a senior engineer with the agency, warned against "excessive emphasis on alternatives, sub-surface systems: of sewage disposal. If such alternatives are imposed on small towns, he added, the state may fail to meet its goal of clean water.

Are individual septic tanks an inadequate or unsafe option for rural communities? State and federal laws and regulations appear to beg that question, rather than answer it.

In Albany, the state was willing to spend an astounding $140,000 just on the design of the community septic tank system. With no funds available either to design or build private systems, it should not be surprising if they sometimes fail to work.

Home septic systems did have their supporters at Saturday's hearing, at which Vermont Senator Robert Stafford gathered information and opinion for what he termed a "mid-course correction" in the Clean Water Act. Among them was Michele Frome, who heads a study on alternate community treatment systems for the Vermont Natural Resources Council.

Among her conclusions, Ms. Frome said, are that conventional treatment facilities are too expensive for small communities, and that on-site (or at-home) treatment can be a viable and permanent alternative.

The current clean-up program favors central treatment facilities over on-site systems, she maintained. Environmental officials tend to view septic systems as "temporary," she suggested, because they are too often improperly installed and maintained. Federal funds should be available to share the cost of individual septic tanks, Ms. Frome urged.

PROBLEM OF TIMING

She also touched on the problem of timing. Worried that federal funds now available for conventional treatment systems may dry up, she said, state officials are pushing towns to obey the law. Meanwhile promising alternatives are being developed. But by the time cheaper alternatives are thoroughly tested and approved, communities may have already bought conventional systems.

"We make a mistake if we say there are no alternatives," she told Senator Stafford. "We need to step up research and demonstration projects."

In the meantime, she supported a suggestion from Robert Stewart, executive director of the Vermont League of Cities and Towns, that the deadline be extended until July 1, 1982.

Mr. Stewart's testimony made it clear that Barton is not alone. In Vermont, he said, 63 municipalities are now without the secondary treatment required by the Clean Water Act. Across the country, he added "more than 70 per cent of the municipalities in the United States, most of them rural, are now in violation of the law."

In Vermont, Mr. Brierley said, there are 92 communities which have or need central sewage collection systems. Of these, 49 already have secondary treatment plants, 16 have primary treatment and need secondary, and 27 small communities have no treatment at all.

(The remaining 200 municipalities in the state don't need central collection systems, he added, and would be wise to avoid developing in a way that would make one necessary.)

Most of the 27 communities who don't treat their sewage at all are small, the state engineer said, with under 1,000 households. Many of their residents live on limited incomes, "with economic strains tugging at their elbows." If the systems proposed for such communities carry an annual user cost of more than $150 (Barton's was $156), he said, "it is very difficult to get a positive bond vote."

He warned Senator Stafford against proposed changes in the federal regulations which would make it much tougher to get federal funds for sewer lines, or for any excess capacity designed into a new plant to handle growth. If adopted, he warned, these could push average annual user costs from $150 to $240.

He urged that the planning process be simplified. He noted that there are no funds available to help homeowners hook onto new sewer lines—a process that can cost between $200 and $500. And he urged the EPA to push for installation of new water-saving plumbing devices which would cut down sewage flows, and thus reduce the initial cost and lengthen the life of treatment plants. If the federal share was increased from 75 to 80 per cent in towns where water-saving devices are installed, he noted, the EPA could save money, and the local share could be cut in half.

Mr. Stewart called for more research: "The beginning assumption is made by EPA and by the private consultants seeking to make a living in the field that the only solution to waste water systems is to build a bigger and better treatment plant and lay a lot of lines and develop a great capital expense. . . . Isn't it time that we more seriously considered alternatives?"

RADICAL NEW APPROACH TO SEWAGE TREATMENT

Saturday's most startling testimony came from Maxwell Small, a fast-talking, chain-smoking engineer from Brookhaven National Laboratory on Long Island. He presides over a radical new approach to sewage treatment developed at Brookhaven over the past five years. His testimony is worth quoting at length:

The system consists of a sloping grass meadow, and man-made marshes and ponds. "Raw, unsedimented sewage is spread across the head-end of the sloped meadow; flows down and through the sealed-off grass and root systems into the marsh; through the marsh into the pond; through the pond to its overflow to either re-use or recharge through a vegetated plot."

On its way to the meadow, the sewage is ground and screened, and aerated as much as necessary to eliminate odor.

"The objective is to apply all the degradable parts of sewage, both liquid and solid, into the systems where all of it will be broken down; to create no sludge for separate disposal; and to discharge potable water from the ponds. Both Brookhaven systems have met these objectives, operating on-line, 24 hours a day, seven days a week, continuously for the past two years."

He went on to describe the treatment area as free of flies, odors and disease. The ponds are stocked with fish, the meadow yields immense crops of hay.

Mr. Small estimates that a system big enough to handle 250,000 gallons per day would cost $375,000 to build, and about $37,-500 a year to operate.

Senator Stafford was impressed. He told Mr. Small he would like to send a professional staff member of the Senate subcommittee on environmental pollution to Brookhaven to study the system, a proposal to which Mr. Small readily agreed.

The Brookhaven design is revolutionary from several standpoints. No plant is involved. The only energy required, Mr. Small noted, is the heat from the sun and the force

of gravity. There is no sludge to lug away. (The proposed Barton plant would produce a strongly chemical sludge which would have to be trucked off and buried on a weekly basis.)

Senator Stafford asked how such a system would fare in a severe winter climate. Mr. Small replied that the bacteria which make the system work functioned at 80 per cent efficiency during the rough winter just past.

In the corridor outside the federal courtroom where the hearing was in progress, state Environmental Secretary Martin Johnson was asked if such a system might be worth trying in a place like Barton.

His reply was terse: "The state health board would not permit it—and with good reason." Some things work in some places, and not in others, Mr. Johnson added.

STATE'S ATTITUDE PUZZLING

In the context of Saturday's hearing, the state's attitude to sewage treatment is puzzling. Its key bureaucrats and its staff of sanitary engineers seem to push for local adoption of complex and expensive systems that were really developed for densely-populated cities. Or, as in Albany's case, they push for high-cost municipal septic systems. A handful of engineering firms prescribe these systems for confused town fathers, and claim enormous fees for their design. In Barton's plan, design and supervision costs come to almost $400,000. It would cost federal, state and local governments $150,000 to have Dubois and King engineers supervise the construction of the plant. The firm would charge $8,000 for the plant's operating manual. Similar fees would be extracted by the firm for an almost identical plant, five miles down the road in Orleans.

Meanwhile advocates of simpler, smaller, or less conventional systems seem to wander in a wilderness, without either moral or financial suport.

One is moved towards paranoid speculation. Earlier in this decade, Vermont's pioneering effort in state-wide land use control went down to political defeat. If the attack was orchestrated by developers, it was supported by many Vermonters who saw in the proposal a return towards fuedalism. The natives would live in the villages, and the picturesque Vermont countryside would be preserved for those able to afford 10, 25, even 100-acre parcels.

With the failure on the land use proposition, the state's best handle on a slow, helter-skelter exodous from the towns and villages out on to small country lots is its health regulations.

It is these regulations, not Act 250, which must be satisfied by an individual who seeks to build on an unserviced lot of less than 10 acres. The buyer (or seller) must demonstrate that the lot is suitable for septic sewage disposal, and has an adequate water supply. On most lots—and all lots under 3 acres—that means hiring a soils engineer to make tests and draft a report.

SOIL MUST BE SUITABLE NO MATTER WHAT

The soil must be judged suitable for a septic system, regardless of the method of sewage disposal contemplated. As one environmental agency employee put it, John D. Rockefeller couldn't get a permit to build on an acre of solid ledge if he promised to fly his sewage out by helicopter.

A state-financed program to subsidize the design and installation of good septic systems for homeowners would undermine this control. So would the broad acceptance of composting toilets which use no water, and thus pollute no water.

But if a given Vermont hamlet has an expensive investment in sewage treatment, and if septic and other on-site systems continue to be personally expensive and environmentally unsavory, then it will make sense to concentrate growth in town and leave the countryside alone.

This may be an admirable social goal, or it may not. But if Barton residents are to pay $156 a year for the duration, they should know what they're paying for.

Setting paranoia aside, Vermont is under pressure from the federal government, and it may be sensible to tap the federal purse while it's open.

But Barton's stubborn voters may have shown considerable wisdom at the polls on June 29. If they keep dragging their feet, there may emerge a solution that costs less money, uses less energy and—perish the thought—even turns all that organic matter they produce to good use.

Nate Tufts, a visiting expert from Massachusetts, commented at the hearing that a tremendous quantity of high-priced soil nutrients flow in from California to Yankee patrons in the form of food. "If we can put this high-priced, well-travelled resource back on our rocky fields and sandy forest floors," Mr. Tufts said, "that would be Yankee ingenuity, indeed."

TODAY'S COURTS—ADJUDICATORS OR LEGISLATORS?

Mr. BARTLETT. Mr. President, one of the most disturbing tendencies which I have seen developing in this country is the tendency of some of our Federal judges to involve themselves in making decisions that are properly the province of elected officials. My own State of Oklahoma has been affected recently by Federal court decisions regarding our State penal system and the hiring and admission practices of our State system of higher education. While I certainly do not condone violations of the law or of the Constitution, I think both of these decisions are illustrative of instances in which Federal judges have been all too willing to impose their own view of what is good public policy, rather than leaving such questions to the appropriate executive or legislative branch officials.

Mr. President, one of our colleagues, Senator ROTH of Delaware, recently wrote an article for Trial magazine which is an excellent discussion of the trend toward Federal judicial involvement in legislative policymaking. The article sets out some considerations that we should all keep in mind as we in the Senate consider the nominations of various persons to be Federal judges, that is, the need to assure that our Federal judges are persons who are willing to set aside their personal views of what is best for society and to confine themselves to interpreting the law in accordance with its clear and intended meaning. Senator ROTH's reminder of the need for judicial self-restraint is indeed timely. I, therefore, ask unaminous consent that Senator ROTH's article. "Today's Courts—Adjudicators or Legislators?" be printed in the RECORD for the benefit of all Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY'S COURTS—ADJUDICATORS OR LEGISLATORS?

(By Senator BILL ROTH)

The judicial review of legislation has long been considered a crucial function of our nation's courts. This function historically has been confined to inquiries into whether legislation complies with the mandates of the Constitution. Today, however, we find that with increasing frequency and boldness, judges in our judicial system are intervening into social and political affairs once thought either to be non-justiciable or reserved to the legislature.

The ability of a judge to make law is widely acknowledged. Justice Oliver Wendell Holmes once stated that judges "make law only interstitially." Today the federal bench dictates law wholesale and in rapid order.

In the past 25 years judicial responsibility has vastly expanded. Courts today are involved in decisions that were once thought to be unfit for adjudication. Judicial business now includes educational policy, highway standards, mental health, and auto safety. Courts have handed down decrees which affect hospital administration, penal institutions, child support, registration, and natural resource allocation.

The federal judiciary, by its activist approach to judicial decision-making, has played a major role in eroding our system of federalism and in the reduction of legislative authority. Over the past quarter century there have been many indications that the courts have evolved into an undemocratic and elitist branch of government. This is an alarming signal to a society that was established on and cherishes its democratic traditions. The courts do perform a vital function by curbing abuses in the legislative and executive branches. In addition, they furnish a suitable forum for the resolution of individual conflicts. However, our judicial system was not created to dictate policy to the legislatures of this country or to its citizens, as it now does.

Federal court judges have continued to rewrite the Constitution in the guise of interpreting it. In the process, they have usurped prerogatives properly belonging to the elected representatives of the people. By ruling on the basis of their view of "enlightened" social policy rather than the law, the courts have become a super-legislature responsible to no one. They have become a continuing constitutional convention without elected delegates and, in a very real sense, a judicial oligarchy decreeing to the states and Congress what they must do.

COMMON INTRUSION

The unwarranted judicial intrusion into every facet of our daily life is now common. For example, the real governor of Alabama in many respects is Federal District Court Judge Frank M. Johnson, Jr., an unelected lifetime appointee who can and does regularly defy the legislature and public opinion. By his own court orders Judge Johnson has taken charge of the state's mental health and prison systems, its overall hiring practices, the property tax levy, voting registrations, school desegregation efforts, and even the system of legislative representation.

In Boston, Judge W. Arthur Garrity, Jr., found that certain schools were racially segregated and ordered that a high school be placed in federal receivership. This was an unprecedented move. In the ensuing months, Judge Garrity took unusual interest in the Boston school system even to the point of ordering the school board to pay moving costs for a new principal and determining the quality of tennis balls to be ordered for South Boston High.

Supreme Court Justice John M. Harlan wrote that the "Constitution is not a panacea for every blot upon the public welfare; nor should [the] court, ordained as a judicial body, be thought of as a general haven for reform movements." The judiciary apparently never took Judge Harlan's words seriously. To the extent any court perceives its functions as one of making fundamental value choices for society, while ignoring traditional Constitutional values, then to that extent the court is exercising its power illegitimately.

Judicial restraint is an implied condition of the authority of judicial review. Legislative over-reaching may result in the sacrifice of individual protections secured by the Constitution. Judicial over-reaching, however, may result in the sacrifice of the most fundamental right of the people to govern themselves.

The historical antecedents of judicial restraint are found in the common law on one hand and the constitutionally mandated separation of powers on the other. The Constitution not only separates the three parts of government into separate branches, but also establishes our federal system of separate national and state governments. The concepts were formulated to prevent abuse and concentration of power. James Madison in the *Federalist* papers explained the doctrine as follows:

"The great security against a gradual concentration of the several powers in the same department consists in giving to those who administer each department the necessary constitutional means and personal motives to resist an encroachment of the others . . . Ambition must be made to counteract ambition. The interest of the man must be connected with the constitutional rights of the place. It may be a reflection on human nature, that such devices should be necessary to control the abuses of government. But what is government itself but the greatest of all reflections on human nature? If men were angels, no government would be necessary. In framing a government which is to be administered by men over men, the great difficulty lies in this: you must first enable the government to control the governed; and in the next place oblige it to control itself."

There is no single course of judicial conduct which reflects an abrupt departure from past traditions. There are, however, several features, taken as a whole, which make today's judiciary contrast sharply with the more stable exercise of judicial function in the past.

The recent loosening of requirements of jurisdiction, standing, and ripeness have enabled courts to focus on issues involving great principles. A court need not decide a case on the facts before it, but instead may make broad sweeping generalities which affect society as a whole.

In its rulings and decisions on abortion, the Supreme Court imposed such severe limitations on permissible legislation that no abortion law in the United States remained valid. In these cases, the court did not address the rights or responsibilities of the parties before them but concentrated instead on giving substantive content to the term "liberty" in the 14th Amendment. For example, instead of simply declaring the Texas Criminal Abortion Statute unconstitutional in *Roe v. Wade*, the Court dictated terms to every legislature in the country.

In the *Wade decision*, Justice Blackmun found that the 14th Amendment concept of liberty is "broad enough to encompass a woman's decision whether or not to terminate her pregnancy." A complex timetable followed resembling an intricate piece of legislation detailing at what stages of a woman's pregnancy a legislator could or could not interfere with an abortion. In dissent, Justice Rehnquist stated that the decision "partakes more of judicial legislation than it does of a determination of the drafters of the 14th Amendment." Justice Holmes probably would have agreed for he once wrote, "I think the proper course is to recognize that a legislature can do whatever it sees fit to do unless it is restrained by some express prohibition in the Constitution. . . ."

BROAD POWER

A court has always had the power to compel the performance of affirmative acts. This is not a new principle. But the scope of judicial decrees in affirming the principle has expanded to the point that often remedies prescribed by today's judiciary require the kind of supervision that legislated government programs do. Much judicial activity is sparked, independent of congressional and bureaucratic action, and in many cases contrary to announced policies and laws. Courts have ordered employers to hire persons refused for jobs and in some cases awarded back pay. Government agencies have been ordered to change employment policies to eliminate alleged discrimination. In Chicago, U.S. District Judge Prentiss H. Marshall decreed that the city's police department set up racial quotas in future hiring of officers. Elsewhere in the country, judges have dictated higher property taxes, have reorganized local government agencies, and expanded the rights of the criminal while restricting the rights of the victims. In recent months they have defied executive branch prerogatives by ordering the continuation of the Food Stamp Program and defied Congress by ordering the continuation of federal payments for non-therapeutic abortions.

Alexander Hamilton wrote that the judiciary was "the least dangerous" branch of government. Hamilton conceived the courts as having "neither the force nor will but merely judgment." A benchmark for a proper judicial role in Hamilton's time and in our time is discretion. Judicial restraint consists in the refusal of the judge to substitute will for judgment.

Many believe the courts should act whenever Congress either has not done so or when Congress passes a law with which they disagree. Those who hold these views are intoxicated by the quick, simple way in which the courts can decree what they deem to be desirable social ends. Recourse to the courts avoids the often slow and frustrating effort necessary to analyze the problems, devise precise solutions, and form a political majority to help press their cause.

In addressing this issue, Chief Justice Burger recently stated:

"This [recent significant change brought about by litigation] has given rise to the alluring prospect that our world can be changed in the courts. I confess it is an intriguing idea. Federal judges in particular need not be troubled by constituents or elections and can therefore concentrate on problems without regard to public opinion.

"Those who would look to judges, and especially tenured federal judges, to innovate and reshape our society will do well to ponder what remedy is available if the world shaped by the judicial process is not to their liking. I suggest that this approval be considered against the background of our traditions and history which began with a revolution instituted to overthrow a government that was beyond recall by the votes of the people."

The Chief Justice went on to conclude that "it was never contemplated in our system that judges would make drastic changes by judicial decision." That is, of course, what the legislative function and the rulemaking function is all about.

JUDICIARY LIMITS

The judiciary should not make policy or attempt social change. It can't be held accountable to the people for whom the policy for change is made. Unlike the other two branches of government, the judiciary does not have to face the voters for the decision it reaches. Although this secures some independence for the courts, it does not allow the people for whom the judiciary was fashioned to have a direct input into the decision-making process. Simply stated, the absence of popular control or accountability is antidemocratic because it is a denial of self-rule.

Recent indications point to the continuation of judicial activism. However, lately there have been a number of congressional attempts to limit judicial abuse. Congress in Article III, Section I of the Constitution could curb courts of limited jurisdiction. If it is the considered sense of the Congress that the courts are exercising "will" instead of "judgment," Congress could strip them of this jurisdiction as simply as it established them. If the courts continue their present interference there may be no alternative course other than to limit jurisdiction, to ensure the separation of powers conceived by the founding fathers.

For a judge to become a legislator is repugant to the fundamental tenets underlying our democratic form of government; yet much of the revolutionary change in American law has come from the courts, not the legislatures. This has resulted in a situation where Congress—the elected representatives of the people—has been virtually excluded from the process of decision-making in many areas of profound impact on the nation and the lives of our people.

The country urgently needs judges who are disciplined in the tradition of judicial self restraint—and who have the ability to set aside their personal views of what is best for society and perform their duty in interpreting our laws according to their clear and intended meaning.

CAPTIVE NATIONS WEEK STILL HAS SIGNIFICANCE

Mr. DOLE. Mr. President, I was pleased to learn yesterday that the President had agreed to issue a 1977 Captive Nations Week Proclamation, in line with a tradition established by his predecessors. Earlier this week, I had sent a telegram to the White House urging that President Carter continue this tradition, which was initiated by joint congressional resolution in 1959, and which has been observed annually during the third week in July by every President since Dwight D. Eisenhower.

When the third week of July 1977 arrived, there was no indication from the White House that the proclamation would be issued this year, expressing concern for nations dominated by Communist control. In my opinion, this would have been a particularly poor time to break ths longstanding tradition of encouragement to oppressed nations, as preparations are underway in Belgrade for the conference to review compliance with the Helsinki accord. In my telegram to the President, I suggested that there would be no more propitious time than now to reaffirm his strong commitment to human, religious, and national rights.

PROCLAMATION TEXT DISAPPOINTING

While I am glad that the President responded favorably to the requests for a proclamation this year, it is somewhat disappointing that the proclamation text was not more affirmative in its reference to the plight of Communist dominated nations. President Carter's proclamation, which appeared to be issued more or less as an afterthought, was much more terse and reserved in tone than those issued in previous years. We can hope that this does not signify any lessening of concern for the captive peoples of those nations. Three countries—Laos, Cambodia, and Vietnam—have come under complete Communist domination within the past 3 years. With the continuing threats to peace and freedom in Africa and elsewhere, it is as important as ever before that the United States extend moral support to those who would resist the yoke of Communist oppression.

Mr. President, I ask unanimous consent that the full texts of the Captive Nations Proclamations issued by President Gerald R. Ford in 1976, and by President Jimmy Carter in 1977 be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

A PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES OF AMERICA, CAPTIVE NATIONS WEEK, 1976

This year we mark the beginning of our third century as an independent nation. Two hundred years ago our Declaration of Independence declared that "all men are created equal." It did not say "all Americans" but embraced all men everywhere. Throughout our history we have repeatedly demonstrated our conviction and concern that men and women throughout the world should share the full blessings of liberty.

As we celebrate our Bicentennial, it is important that we let the world know that America still cares, that the torch in the Statue of Liberty still burns brightly. The world should know that we stand for freedom and independence in 1976, just as we stood for freedom and independence in 1776.

For two centuries, the fundamental basis of American policy toward other nations has remained unchanged: the United States supports the aspirations for freedom, independence and national self-determination of all peoples. We do not accept foreign domination over any nation. We reaffirm today this principle and policy.

The Eighty-Sixth Congress, by a joint resolution approved July 17, 1959 (73 Stat. 212), authorized and requested the President to proclaim the third week in July of each year as Captive Nations Week.

Now, therefore, I, Gerald R. Ford, President of the United States of America, do hereby designate the week beginning July 18, 1976 as Captive Nations Week.

I call upon the people of the United States to observe this week with appropriate ceremonies and activities, and I urge rededication to the aspirations of all peoples for self-determination and liberty.

In witness whereof, I have hereunto set my hand this second day of July in the year of our Lord nineteen hundred seventy-six, and of the Independence of the United States of America the two hundredth.

GERALD R. FORD.

CAPTIVE NATIONS WEEK 1977

(By the President of the United States of America)

A PROCLAMATION

Since 1959 the Congress, by Joint Resolution (Statute 73.212) has authorized and requested the President to designate the third week of July as Captive Nations Week.

Our own country was established on a profound belief in national self-determination. Throughout our history we have sought to give meaning to this principle and to our belief in liberty and human rights.

In recognition of this commitment, now, therefore, I Jimmy Carter, President of the United States of America, do hereby designate the week beginning July 17, 1977 as Captive Nations Week.

I call upon the people of the United States to observe this week with appropriate ceremonies and activities, demonstrating America's support for those who seek national independence, liberty, and human rights.

In witness thereof, I have here unto set my hand this 20th day of July in the year of our Lord 1977 and the independence of the United States of America the 202nd.

MENNINGER STATEMENT BEFORE PRESIDENT'S MENTAL HEALTH COMMISSION HEARING

Mr. PEARSON. Mr. President, on June 21, Dr. Walter Menninger presented a statement by his brother, Dr. Roy Menninger, at a hearing of the President's Commission on Mental Health in San Francisco dealing with the vital importance of cooperative relations between private institutions and the Government in providing quality mental health care. This statement is based on the great experience of the Menninger Foundation. The observations and recommendations of the statement are most significant, and I ask unanimous consent that it be printed in the RECORD along with a general statement about the overall mission of the Menninger Foundation.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Statement for President's Commission on Mental Health, Public Hearing—21 June 1977—San Francisco, CA.

On behalf of The Menninger Foundation, Topeka, KS, Roy W. Menninger, M.D., President.

By W. Walter Menninger, M.D., Clinical Director, Topeka (KS) State Hospital, Senior Staff Psychiatrist, Menninger Foundation.

Regarding Coordination of Private and Public Resources in the Mental Health Field.

INTRODUCTION

It is a privilege and honor to present to this Commission our perspective on the coordination of private and public resources in the mental health field. We are indeed proud of our remarkable liaison of private, local, state and federal institutions in Topeka committed to treatment, training, research and prevention of mental illness.

If your experience is parallel to that of the Presidential Commission upon which I served nine years ago, you are receiving much advice about what government ought to be doing to enhance mental health services. You hear much less what individuals and non-governmental organizations are prepared to do. Yet there are clear roles for both.

THE EXPERIENCE OF THE MENNINGER FOUNDATION

My father, Dr. Will Menninger, observed that during the first 20 years of the Menninger Clinic, "We were in private practice as any group of doctors you might know. We had done a little training. . . . It was part of the fun of practice, and we had done a little research work, such as it was, in between times." The situation was changed as a result of World War II, where the loss manpower because of emotional problems exceeded all other lost manpower put together.[1]

Following that war, the Veterans Administration was faced with the reality that 55 per cent of all VA patients were psychiatric, and they did not have the staff to care for them. The VA thus approached the Menninger Clinic with a proposition to establish a model training facility for psychiatrists. Drs. Karl and Will Menninger and their colleagues felt they could hardly say "no" to that proposition, despite the fact it meant giving up private practice as they had known it.

In 1946, that collaboration of a private institution and the federal government created the Menninger School of Psychiatry, the largest training program of its kind ever established.

Two years later, there was a "revolution" in the state mental health system in Kansas. It was prompted, in part, after a state legislator visited the Topeka VA Hospital and wondered, "If you can do this for the federal government, why can't you do this for the State of Kansas?" Thus, the state joined in the collaboration, with an initial objective of "brains before bricks." The result was a substantial improvement in the quality of mental care in Kansas, raising the state from 47th of the then 48 states to the top rank in indices of mental health services. At the request of other states, Dr. Will Menninger then carried the message of the Kansas experience to nearly half of the state legislatures of the United States.

Over the past 30 years, the private-federal-state cooperation in our community has not only been sustained, but expanded. Now some 20 other institutions are also involved, including a state center for delinquent youths, a state penal reception and diagnostic center, the county juvenile court, the city police department, a United-Way-funded Family Service and Guidance Center, local public schools and a county-federal-state supported community mental health corporation.

My own clinical work exemplifies that commitment to collaboration. For the past nine years, I have worked primarily at the Topeka State Hospital, a 433 bed public mental hospital serving 31 counties in central and northeast Kansas. Currently, I oversee the clinical services in that institution as well as the psychiatric residency training.

The staff of the Menninger Foundation have considered it both an honor and a responsibility to respond when government calls upon us for help. And the staff have frequently been called upon to participate in a wide range of local, state and national advisory panels.

SOME LESSONS LEARNED ABOUT COLLABORATION

What have we learned from this collaborative experience? First, *despite problems of meshing systems*—private, state, federal—which operate with different regulations and which sometimes appear to be marching to different drums, *it is possible to develop an effective liaison.* With a common goal of the best quality of care and training, not only can institutions work well together; *the programs of one often supplement and strengthen those of the others.* Indeed, *this is perhaps the strongest reason for developing and maintaining such relationships.*

This is not to say we have always avoided problems. Misunderstandings are inevitable. Successful collaboration takes a commitment of time and effort and a recognition of the benefits which are possible. You must provide for an adequate exchange of information and communication between the institutions. Further, there is a constant need to keep key officials, to whom the institutions are accountable, educated and informed—federal officials in Washington, state administrators and legislators, trustees of the private Foundation.

A second lesson which the private sector has had to face is that the liaison is expensive. Rarely has the government fully paid its own way. The Menninger Clinic had to change its organization in 1946 to become a non-profit foundation, so it could seek help from private philanthropy to cover costs which could not be charged to patients. In recent years, it has been necessary to raise nearly one million dollars annually from private sources to support the educational programs.

Also, we have to accept that the efforts of the private sector are not always appreciated or understood by those in government. In

---

[1] Menninger, William C. *A Psychiatrist for a Troubled World* New York: Viking Press, 1967 "Brains Before Bricks" p. 772.

part, this reflects a reality that taxpayers are not really prepared to pay for mental health care at the level expected as a matter of course in private practice. We are aware that the collaborative contribution of private institutions over the country is less that it might be. However, we remain committed to a cooperative effort, since *the magnitude of the task of mental health services is so great that no single system has sufficient resources to meet the challenge alone.*

ROLES TO BE PLAYED BY DIFFERENT SECTORS

The major contributions of *the private institutions* are *innovative leadership and the role of the conscience, with a commitment to the highest quality of care.* At the same time, the private institution must mobilize private philanthropy to support a fare share of the costs of training and research.

In the 1950's and 1960's, the federal government played a substantial role through the National Institute of Mental Health in support of training and research. Regrettably, this support has declined in the past several years. *Because there is no other substantial resource available to fund training and research, these activities remain an important area to be underwritten by the federal sector.* Presently, there is a reluctance in all quarters to fund training programs. Yet without a continued commitment to sustained top notch educational programs, these programs will atrophy; and other services which depend upon professional personnel will ultimately suffer.

The states have had a long standing commitment to care of the mentally ill in institutions. More recently, states have been asked to assume an increasing role of funding community mental health centers which were initiated with federal support. For those persons who do not have the capacity to pay, *it is reasonable and appropriate to expect service costs to be borne by the state and local governments,* although it is most unfortunate if not impossible when this is expected in the absence of any substantial increase in state and local tax appropriations for mental health care. At the same time, we recognize the significant role played by health insurers in guaranteeing coverage for mental health care, and we urge your careful study of this area, to assure access of all Americans to adequate mental health care.

SOME CLOSING THOUGHTS

From my work as a member of the Violence Commission, I know that the expectations of a national commission must be kept in perspective. While you may have a mandate to prepare certain recommendations to the President, your main task may well be simply one of education about needs and potential directions in this field, to increase the visibility and credibility of mental health issues.

We would hope that *your recommendations take note of the great potential of private-governmental cooperation and encourage increased liaisons between these organizations.* You should recognize that there must be some quid pro quo. While all of us have a responsibility to improve governmental operations in any way we can, it should not be assumed that private institutions can do this strictly as a charitable or altruistic endeavor. Also, there must be a readiness on the part of governmental agencies to keep rules and regulations realistic and not so hidebound or limiting that liaisons are deterred.

Further, we strongly advise against a monolithic management of these affiliated resources. And patients should have a freedom of choice as to their utilization of these facilities.

Finally, may I share with you one additional commitment—that of supporting all institutions in their efforts to expand programs of prevention. As stated by Dr. Roy Menninger, in his "Statement of Our Mission as We Enter Our Second Half-Century," [2]

"The next several decades will witness continuing growth in our work in the applications of psychiatry to a variety of social ills. This is a focus that in turn is based upon the strength and quality of our work in treatment of the mentally ill, in research and in education.

"In a sense, our past is prologue, yet it is our future as well. Our clinical practice, education and research activities must grow—not larger, but stronger, wiser, and more skillful—for it is from these intense areas we derive our knowledge.

"With this strong base from which to work, we will have the resources of talented, skilled people wtih extensive knowledge to reach into communities—into every segment of society—to offer knowledge and understanding which will help people manage their lives and worlds in more effective ways so that individuals may experience a greater sense of their own worth and significance. It is a task worthy of our total commitment."

IN SUMMARY

1. Your recommendations should take note of the great potential of private-governmental cooperation and encourage increased liaison between these organizations. Perhaps the strongest reason for developing and maintaining such relationships is that the programs of one often supplement and strengthen those of the others, and the magnitude of the task of mental health services is so great that no single system has sufficient resources to meet the challenge alone.

2. The private sector should be looked to for innovative leadership and a commitment to the highest quality of patient care. It can serve as a conscience. It can also mobilize the support of private philanthropy.

3. Because there is no other substantial resource available to fund training and research, the financial support of these activities remains a primary responsibility of the federal sector.

4. It is reasonable and appropriate to expect service costs to be borne by state and local governments for those persons who do not have the capacity to pay and who are not adequately protected by health insurance coverage in this area.

STATEMENT OF OUR MISSION AS WE ENTER OUR SECOND HALF-CENTURY

April 21, 1977.

(NOTE.—"The unique thing The Menninger Foundation really accomplished as a clinic was to show that mental hospitals are places where you can get well—not places where you are sent for the rest of your life. Today, The Menninger Foundation is showing people that what has been learned in the mental hospital will help people find out how not to get sick at all—not being sick and getting well, but how not to get sick.

"In this country things flower when groups of people take the responsibility to innovate. Now we are in one of those periods when all over the country we need centers of innovation. That is The Menninger Foundation—a center of innovation." Dr. Margaret Mead, 1976.)

MISSION OF THE MENNINGER FOUNDATION

1. Improving the quality of life by developing, utilizing and disseminating psychiatric knowledge to help people who are ill as well as those who are not ill find greater personal fulfillment and satisfaction through personal autonomy and enhanced capacity to cope with the stresses of life.

2. Continuing professional leadership in the diagnosis and treatment of the mentally ill; educating mental health professionals, front-line caregivers (other physicians, nurses, lawyers, clergy, etc.) and managers of institutions, organizations and government; psychiatric research; applications of psychiatry to social and organizational needs.

3. Promoting better public understanding of the nature of mental illness and its treatment; approaches to the improvement and maintenance of mental health and the management of stress and distress in healthy people who are not patients, for whom this knowledge may function preventively; mental health issues and problems through public advocacy.

The Menninger Foundation is an institution of professional helpers and patients, teachers and students, scientists and scholars, but it is more than a hospital and more than a university. It is a unique American institution.

In its 50-year history The Menninger Foundation has been noted for: willingness to question and innovate; emphasis on quality service; commitment to the discovery and dissemination of knowledge.

Our past is one of accomplishment and pride. We have created an institution that today offers the American people a range of services that is unique in the nation.

The Menninger Foundation maintains a standard of professional excellence in our hospitals for treating the mentally ill that I believe is unexcelled. For many persons who have not been helped at other institutions the Menninger Clinic has proven to be a "court of last resort."

Our research and educational commitments are diverse and extensive—making our institution a national resource.

We are dedicated to developing and sharing—with every segment of society—our knowledge of the nature of mental illness and the qualities of good mental health.

As The Menninger Foundation begins its second fifty years, the environment in which we must work is vastly different from that experienced by our founders.

The Menninger Sanitarium was created in a time when there were few institutions to which people with emotional problems could turn. Psychiatry was little known, and the public mental hospitals of the day were places to which people were committed with little hope of ever leaving. It was a time in which private institutions such as ours had freedom to innovate, to question, to experiment, to change.

While freedom and flexibility still exist in our status as a private institution, developments in the environment have created constraints that will severely limit health care institutions in future years. In the next decade, the health field will find institutional autonomy and flexibility increasingly diminished as the government assumes a dominant role in financing delivery of health services. Historically, The Menninger Foundation has been successful in winning private financial support for our work, so that our institution could remain relatively free of the need for government funds. We believe that true centers of innovation, like The Menninger Foundation, must have freedom to question and experiment, to take a step ahead, to point the way in the mental health field. It may prove comfortable for some institutions to settle for being told how to use their resources as preconceived and directed by the bureaucracy. The Menninger Foundation prefers the challenging, probing question, "How can we best use our resources to help our fellow man?" and to have the freedom to respond with the best that is in us.

---

[2] The full text of Dr. Roy Menninger's statement is appended to provide the Commission with some elaboration on the full scope of activities and goals of The Menninger Foundation.

I. Quality of treatment

From its very beginning, The Menninger Foundation has set the highest standards in treating the mentally ill.

As we enter our Second Half Century, this commitment to excellence continues. It continues in the face of contemporary trends toward short-term treatment and brief hospitalization, largely created by current economics of medicine. We are convinced, however, of the continuing need for longer-term intensive treatment for the severely ill.

The work in the 50-year history of The Menninger Foundation has focused on the value and the worth of the individual. The Foundation's pioneering efforts in the 1930s and the 1940s to apply a sophisticated understanding of human behavior to the treatment of the severely ill patient led to developments in a dynamic hospital psychiatry—using the total environment as a part of treatment—which have become standard practice in psychiatric hospitals throughout the United States, and, indeed, throughout the world. The capacity to develop these unique helping strategies depends upon the maintenance of superior clinical services with people skilled in the treatment of persons with severe emotional illness. We are proud of our reputation for effective treatment of the severely ill. We have demonstrated that timely and skillful therapeutic intervention in the lives of troubled patients in an atmosphere of optimistic expectation and caring can produce results. An active commitment to this philosophy has not only changed many state hospitals around the country from snake pits of earlier years to modern therapeutic institutions, but it has contributed to a reduction in the number of hospital patients. A basic tenet of this philosophy is the absolute necessity of developing a treatment plan that fits the needs of the troubled person, not one that is primarily designed to fit a government bureaucratic directive or to fit the insurance dollars to pay for it. We regard it important to emphasize our commitment to this philosophy in the face of strong economic and political pressures to minimize the need for skillful intensive treatment.

For these reasons, superior clinical psychiatric and neurological services for both children and adults is and will remain the core of our Foundation activities. Our goals will be:

To provide the finest diagnostic and therapeutic care with the highest possible standards of quality; to demonstrate new directions in the care of the mentally ill; to care for patients who have not been helped at other institutions or in private treatment forms by offering intensive hospital experience and psychiatric evaluation not available at other institutions; to maintain an emphasis on a caring environment consistent with our humanistic value systems as opposed to an over-emphasis on technique and method; to be open to incorporating new ideas into established treatment forms, to utilize a broad range of proven treatment modalities, and to seek alternative services and treatment approaches for the less affluent and less severely ill; to encourage shared knowledge of many disciplines—psychiatry, biology, neurology, psychology and sociology.

II. Research

A strong research program contributes to an atmosphere which encourages clinical curiosity and inquiry. The Menninger Foundation is committed to a continuing search for new knowledge in the field of human behavior, for application in Foundation programs and more broadly throughout society.

Research must be a vital part of all of our programs because of our emphasis on learning from what we do. An organization as knowledge-dependent as The Menninger Foundation must have sophisticated methods for developing new knowledge. There is not sufficient understanding of psychological processes to permit us to say we know enough.

Our current research projects are extensive, reflecting our wish to contribute to psychiatric knowledge and to society at large. Our projects underway include research in:

Genetics, to explore whether behavior can be passed genetically from one generation to another;

The nature of mental illness, specifically *schizophrenia;*

Alcoholism—the personality of alcoholics and the relationship between alcoholism and homosexuality;

Brainwave training for mental health, working to develop a non-drug therapeutic technique that may shorten the treatment process in mental hospitals and outpatient clinics;

Child rearing and *child care* practices;

Biofeedback as a method for controlling migraine headache, hypertension, and other *psychosomatic* illnesses;

Hospital treatment follow-up studies.

Our goals in research are:

To emphasize the multidisciplinary, scientific study of mental illness, in order to contribute to the understanding of the causes, the natural history and the treatment of mental illnesses;

To undertake an expanding program of research activities in clinical investigation and program evaluation on a foundation of basic research of relevance to our central focus on mental illness.

III. Education

Training mental health professionals traditionally has been a part of the mission of The Menninger Foundation. The Menninger belief that the mentally ill can and should be helped has been transmitted far beyond the boundaries of Topeka through our graduates, who themselves have assumed prominent roles in universities, institutions and the government. The Foundation's training programs have produced a substantial percentage of the total mental health manpower available in the United States today and our commitment to education continues.

The Menninger Foundation offers a setting and unique program that is a national educational resource. Other institutions offer training in psychiatry and other disciplines, but few institutions match the range of opportunities the Foundation offers in learning to use knowledge in practical settings—consulting in non-clinical agencies and organizations such as industry, schools, churches, civic groups, courts and prisons—where human problems cut across the traditional distinctions between health and illness.

Financing these programs is becoming more difficult; education in general—and certainly specialty training such as ours—face economic hard times. Inflation, the changing patterns of government support for education, and the national demands for philanthropic dollars all contribute to the pressure that holds institutions like ours in a financial vise. We will have to adjust, but our goal of providing quality education will not be diminished.

If we are to have a greater impact on the major social ills in our society, a vast organization of professional talent will be required that will dwarf anything we have yet seen in the social sciences. In the future, psychiatric education will take on broader meaning. It has become increasingly clear that psychiatry is not only a medical specialty but also a part of a whole spectrum of nonmedical professions and disciplines with which its work is coordinated for both practical and theoretical reasons. Sometimes the word "psychiatry" is used loosely and nonprofessionally as a collective name for all the professions, disciplines, methods and programs dealing with the mentally ill, fostering mental health, and improving the lot of man by predominantly psychological methods. Much practical work in psychiatry is done by teams of various specialists; much thinking in psychiatry is influenced by psychology, sociology, anthropology, administrative science and basic research in many different fields. Over the years new applications of psychiatry have occurred to such fields as education, religion, law, and public affairs, and, with each new application, viewpoints and principles derived from these fields in turn influence the theories and practices of the psychiatric professions.

This integrated view of psychiatry—a field with a bio-social-psychological perspective—is under attack by those who insist on a narrow, biologically-based definition of psychiatry as exclusively medical. This view has the virtue of recognizing the importance of our medical origins and biological foundations, but its denial of the psychological and social determinants of illness and health is seriously regressive and must be resisted. Psychiatry is in a unique position to provide this broad perspective to the whole of medicine, itself a prisoner of a narrow, illness-oriented perspective. As so bluntly stated by a respected medical clinician, "Psychiatry now is the only clinical discipline within medicine concerned primarily with the study of man and the human condition." (*Science*, G. Engel, 196–134, 8 April 1977.)

The challenge before us is to bring the mental health professionals from their variety of fields of study together for a part of their training. Beyond this is the larger task of bringing social psychology, anthropology and even political science and economics into the relationship with the mental health sciences.

This is a formidable task, but with programs of special study, an extensive visiting professor program, arrangements for special scholars from other fields of study through our Spencer Foundation grant, we hope to develop affiliations with universities and other centers with parallel interests. Out of this effort may come joint ventures, shared student-faculty exchanges, degree programs, continuing education programs, significant national conferences and other means for expanding our opportunities for collaboration between fields of science.

Our goals in education are:

To provide quality training for a variety of mental health professionals;

To strengthen our affiliations with medical schools and universities to offer a bio-psycho-social view of the needs of patients in medical and psychiatric settings;

To strengthen our clinical affiliations with related institutions in the mental health and medical fields;

To promote dissemination of knowledge by expanding programs of inviting scholars in many other academic disciplines to learn from us and to teach us;

To expand our continuing educational programs for mental health professionals, to become a national center for recertification and relicensure; and

To develop training opportunities for selected students in such fields as leadership, consultation, systems management, psychoanalysis, etc.

IV. Applications of psychiatry: Our work to improve the quality of life

Psychiatry aspires to an understanding of human behavior. Our discipline has acquired a great deal of knowledge in the past 50 years—knowledge that should be shared as

widely as possible through public education about ways to prevent mental illness, to develop positive qualities of mental health and to maintain it.

The Menninger Foundation is uniquely capable in this area of public education because of our experience with public concerns for much of our 50 years. In the 1950s, when the Foundation initiated its seminars for business executives, these were innovative attempts to offer industry an understanding of human nature, knowledge about human motivations, the qualities of leadership and how people can deal better with stress. Today, our work with public groups includes:

Continued alliance with industry through the seminars on a growing scale through unique services: organizational and individual consultations in understanding and managing conflicts; helping industry to develop policies dealing with alcoholism, personnel changes, adjustments to overseas assignments and other human problems.

Our seminars as a means of communication and education have been expanded to reach representatives of many other professions: law enforcement officers, correctional officers, city managers, state and federal government executives, social action agency personnel, nursing home personnel and others. We have established programs within school systems to train school teachers, counselors and principals and instructors in mental health principles, and in pre-school and special education, within the legal system, consulting with law enforcement agencies, courts and attorneys; with religious groups and institutions to train clergy and to offer special programs to lay leaders and entire congregations; for mental health professionals seeking training in family therapy, treatment of alcoholism, group therapy, emergency care, psychopharmacology, mental health administration, mental health and the law, aftercare services, hospital residential treatment of children and adolescents, and a variety of other topics; training sessions for physicians and mental health professionals in biofeedback for control of migraine headaches, and other psychosomatic illnesses; training programs for government personnel and rehabilitation agency employees to work with the hard-core unemployed and prison inmates.

Recently, The Menninger Foundation assumed a leadership role in developing a national model program of group living homes for dependent and neglected children which we hope will replace the outmoded and failed system of placing these children in detention centers and foster homes. There are an estimated one million children classified by the courts as dependent and neglected and assigned to foster care homes; another 400,000 children are in detention centers and jails for such offenses as truancy, stubbornness and smoking in class—assigned to institutions because there was no other way to care for them. Working in partnership with the Community Services Administration of the federal government, the Foundation—supported by a $1.2 million federal grant—will develop the model project, establish the homes in cities across the nation, train the personnel and supervise their operation. It is a very large task, indeed, but an important one that may revolutionize the way Americans care for children in need.

Two other projects of national importance will give the Foundation an opportunity to train hundreds of persons who in turn can help thousands. One project is to train *nursing home employees*—administrators, nurses, physicians and social workers—in the psychological aspects of caring for the infirm. The whole concept of the training is to demonstrate for nursing home personnel that institutional long-term care focusing on the quality of life and living is better than custodial care aimed at death and dying, and how to achieve it. The training project is in partnership with the U.S. Department of Health, Education, and Welfare. The second project, also in partnership with the federal government, intends to develop training for psychologically and physically *handicapped persons* and employers and to place handicapped persons in jobs. Again, this project reflects a unique contribution The Menninger Foundation can make in developing programs which acknowledge and deal with the psychological problems of the handicapped that usually defeat ordinary rehabilitation services.

An important goal at The Menninger Foundation is to contribute to the development of a caring society; one in which people in key community service roles—the "care givers"—have the knowledge and skills to broaden the base of care and prevention of psychological problems caused by the stress of living.

The Menninger Foundation has the unique experience of years of working with a variety of professions, organizations and institutions in identifying problems and in developing specific training and educational programs to deal with them. Our work is to serve as a complementary resource—on a national scale—to the government, to business, to education and to the social agencies to create a caring society.

Specifically, our goals to apply our knowledge in society are:

To continue to expand our consultation, teaching and seminar programs for community care-givers (lawyers, clergy, other physicians, nurses, school teachers and counsellors, law enforcement personnel, etc.) who are society's primary frontline service-providers;

To expand our work with business and industry through seminars and additional metal health maintenance services for employees of major corporations; and

To seek other opportunities to apply psychiatric knowledge to the solution of social organization problems.

V. Conclusion

From the beginning, The Menninger Foundation has set as its goal to be a respected contributor to our society, to offer our unique talents to improving the quality of life for our fellow man. We have remained flexible, absorbing new ideas, meeting the changing times, responding to society's needs and—when necessary—standing our grounds against the tide when we believe that our philosophy was the correct one and therefore there were occasions when we were ahead of our time.

Initially there was Dr. C. F. Menninger's desire to break free of the isolation of the country physician and establish a group practice so the knowledge and skills of many physicians could be combined for the patient's benefit. The decision to purchase a farmhouse for our own hospital, the early emphasis on the importance of thorough diagnosis, the efforts to make a psychiatric hospital a place of treatment, not asylum—all contributed to public acceptance that mental illness is treatable. It was not by chance that following the institution's first decade, Fortune magazine termed it "the outstanding private mental hospital west of the Alleghenies."

In later years, the Foundation developed responses to national needs:

Milieu therapy—use of the patient's environment as part of his treatment—which became the basis for most treatment planned in the nation's mental hospitals.

The Menninger's advocacy of treatment for mental disorders growing out of World War II resulted in the Topeka Veterans Administration Hospital's training program for psychiatrists established by The Menninger Foundation. At the time it was the world's largest psychiatric residency training program, and it became the basis for the Menninger School of Psychiatry.

The Menninger School of Psychiatry became a model for psychiatric training by producing seminars and courses in the social sciences in addition to supervising clinical experiences. Over the years, our educational programs have expanded to include postgraduate training for child psychiatrists, clinical psychologists, social workers and clergy. Currently there are more than 1,400 graduates of the school practicing in 43 states and 22 foreign countries.

Early in the Foundation's development, staff members assumed an advocacy role in promoting positive mental health in a variety of settings. The application of psychiatric principles in industrial settings was of particular interest to Dr. Will Menninger. Dr. Karl Menninger focused public and professional attention on the potential role of psychiatry in rehabilitating criminal offenders.

Until the 1960s, the bulk of inpatient psychiatric services was provided in large state hospitals, remote from the population centers they served. Dr. Will Menninger appeared before over 20 state legislatures to focus public attention on the fact that many public institutions were outdated and unsafe. Dr. Will stressed that changes in the provision of services should be emphasized in addition to replacement of facilities. He argued that debilitating effects of institutionalization could be prevented, supplanting custodial care with active treatment by qualified personnel. Over the next decade, this goal of enabling patients to return to their communities to live as normal lives as possible gained wider acceptance and contributed to the development of community based facilities.

In the 1970s we have worked to share our knowledge and make our services available to a wide range of segments of the society with notable success. Our programs of consultation with industry have tripled.

This is a record of achievement and social involvement of which we are proud. In many ways, however, our work has just begun.

Since the 1920s, when The Menninger Foundation was founded, there have been substantial improvements in health of the American people—but the causes of illness have changed. Gone or greatly reduced are such dreaded diseases as tuberculosis, smallpox, measles, polio, but replacing them have been increased incidence of heart attacks, cancer, accidents, strokes and lung disease. In some ways, America has become a much unhealthier place in which to live. Death rates for cancer, alcoholism, suicide and homicide have risen and more accidents occur than ever before. Our life styles of smoking, poor diet, physical inactivity, alcohol and drug abuse reflect emotional insecurities and contribute directly to illnesses and premature death.

The pressures of living in America today seem much more stressful. At least 10 per cent of the population suffers from some form of mental illness. Only one seventh of these people are receiving psychiatric care. Approximately 80 per cent of the complaints the American people take to their doctors—colds, stomach upset, back pains—are not physiological problems, they are psychological—psychosomatic—reactions to stress. One out of four people are anxious or emotionally tense, complaining of loss of appetite, insomnia, fatigue and difficulty in coping with everyday stress.

It seems we have been programmed by an affluent society—by advertising bombardment, by easy availability of drugs—to seek instant relief for whatever ails us by popping a pill, by running to the doctor for the slightest complaint with a request for a prescription. Just as we are finding that our national gluttony in energy is going to force us to change the way we live, we also will find future availability of health care and the sky-rocketing health costs will force us to take some individual responsibility to change our life-styles to avoid illness. A valuable by-product may be that we can lead happier, more productive, mentally healthy lives. Instead of reaching for a tranquilizer to ease stress that was causing a physical pain, we must learn better coping strategies to relieve or manage the stress that caused the problem. This public education of how to prevent mental illness, how to maintain good mental health, how to lead more fruitful, more fulfilling lives is a goal of The Menninger Foundation for the future.

The next several decades will witness continuing growth in our work in the applications of psychiatry to a variety of social ills. This is a focus that in turn is based upon the strength and quality of our work in treatment of the mentally ill, in research and in education. In this sense, our past is prologue, yet it is our future as well. Our clinical practice, education and research activities must grow—not larger, but stronger, wiser and more skillful—for it is from these intense areas we derive our knowledge. With this strong base from which to work, we will have the resources of talented, skilled people with extensive knowledge to reach into communities—into every segment of society—to offer knowledge and understanding which will help people manage their lives and worlds in more effective ways so that individuals may experience a greater sense of their own worth and significance. It is a task worthy of our total commitment.

S. 1901—BASE CLOSURES

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the text of S. 1901, a bill I introduced yesterday with Senator RIEGLE, be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1901

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Defense Economic Adjustment and Recovery Act".

ESTABLISHMENT OF GRANT PROGRAM

SEC. 2. (a) To assist local communities in recovering from the adverse economic impact of military base closures, the Secretary of Defense (hereinafter in this Act referred to as the "Secretary") shall establish a program to make grants in accordance with this Act to units of local government in any area the economy of which is adversely affected by the closure or major realignment of a military base.

(b) The Secretary shall determine within 180 days after the closure or realignment announcement the unit or units of local government eligible to receive a grant under this Act with respect to the closure or realignment of a particular military base. In making such determination, the Secretary shall take note of areas identified in the final environmental impact statement filed with respect to such base closure under the National Environmental Policy Act of 1969 as being areas the economies of which are adversely affected by such closure.

(c) The Secretary of Defense shall carry out the provisions of this section through existing Federal programs. The Secretary is authorized to supplement funds made available under such Federal programs to the extent necessary to carry out the provisions of this section, and is authorized to provide financial assistance to communities described in subsection (a) of this section to help such communities pay their share of the costs under such programs.

(d) The heads of all departments and agencies concerned shall cooperate fully with the Secretary of Defense in carrying out the provisions of this section. The Federal agencies shall give priority attention to applications from authorized defense impact areas for priority funding within their annual agency appropriations.

APPLICATIONS; ECONOMIC RECOVERY PLAN

SEC. 3. (a) There shall be included as part of any application submitted under subsection (c) of section 2 a comprehensive local economic recovery plan developed by the unit of local government submitting such application. Such plan shall describe the steps being taken or planned to be taken by the local community to recover from the economic impact of the closure and shall include a detailed description of the programs for which the grant will be used. For the application to be approved, the Secretary must find that such use will—

(1) improve opportunities for the establishment or expansion of industrial or commercial activity in the community;

(2) creation of new jobs in the community; or

(3) otherwise alleviate specific economic problems in the community which limit the effective economic recovery from the base closure or realignment.

(b) Eligible units of government may submit an application or applications to the Secretary through the cooperating department and agencies in subsection (c) of section 2 at any time after the final closure announcement.

(c) The Secretary shall review and act upon applications submitted by eligible units of government within 90 days of the date of submission.

AMOUNT OF FUNDS

SEC. 4. (a) The amount of funds made available under this Act with respect to the closure or realignment of a military base shall be ten percent of the total projected savings to be realized by the Department of Defense in the first ten years after the closure or realignment of such military base, as determined by the Secretary at the time of final announcement of such closure. In making such determination, the Secretary shall take note of findings in the final environmental impact statement filed with respect to such closure under the provisions of the National Environmental Policy Act of 1969.

(b) The Secretary of Defense shall submit annually such budgetary requirements for community economic adjustment and recovery, separate from the normal appropriations of the Department of Defense.

(c) The funds authorized to be appropriated shall be available for a period not to exceed 10 years.

ANNUAL REPORTS

SEC. 5. (a) Any unit of local government receiving a grant payment under this Act for any fiscal year shall, not later than 90 days before the end of such fiscal year, submit a report to the Secretary concerning the progress of the local community in recovering from the effects of the base closure and the purposes for which grant money received under this Act was used during such fiscal year. The report shall include—

(1) a revision of the comprehensive local economic recovery plan included in the application submitted under section 3; and

(2) a statement of all expenditures of grant money received under this Act during such fiscal year.

(b) If the Secretary finds that a report submitted under subsection (a) for any fiscal year discloses that the use during such fiscal year of grant money received under this Act by the unit of local government submitting such report was not consistent with the purposes of this Act, the Secretary may suspend any remaining grant payments and terminate grant application eligibility under this Act to such unit of local government until the Secretary receives satisfactory assurances that the use of such grant money in the future will be consistent with the purposes of this Act.

REGULATIONS

SEC. 6. The Secretary shall prescribe general regulations covering the eligibility of units of local government for grants under this Act, the order of priority in approving applications, the terms and conditions for approving applications, determinations of the amounts of grants, and such other regulations as he finds necessary to carry out the provisions of this Act.

DEFINITIONS

SEC. 7. For purposes of this Act: (a) The term "military base" means any camp, post, station, fort, base, yard, facility, or other installation under the authority of the Department of Defense—

(1) which is located within any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, or Guam; and

(2) at which there are authorized to be employed not less than 500 direct-hire or contracted permanent civilian employees of the Department of Defense or at which the total military and civilian personnel loss constitutes more than 2% of the total military and civilian work force for the impacted area.

(b) The term "unit of local government" means, a general purpose unit of local government or other subdivision of a State designated for the purposes of achieving economic recovery in the area impacted by a base closure or realignment.

AUTHORIZATION OF APPROPRIATIONS

SEC. 8. There are authorized to be appropriated, beginning in this fiscal year 1979, such sums as may be necessary to carry out the purposes of this Act.

EFFECTIVE DATE

SEC. 9. This Act shall apply with respect to the closure or realignment of any military installation which is first officially announced on or after January 1, 1977.

CRUISE MISSILE—PRO AND CON

Mr. GOLDWATER. Mr. President, when the President of the United States said that he would not add the B–1 to our strategic inventory, he placed extreme reliability and dependence on the cruise missile. Now the cruise missile is not a new weapon. It is quite old, but while the new cruise missile, in fact, both of them that we are making will fly and fly well, they still have some way to go before we can call them even partially dependable. For example, we have to

have terrain contour matching guidance. This system is not complete. We have to miniaturize warhead technology that we are just beginning to make approaches to. In my opinion, in my long study of this weapon, we are at least 5 years away from achieving these goals and some experts claim 10. There was a good article in "Aviation Week & Space Technology" of July 18 entitled, "Cruise Missile—Pro and Con," which I think should be read by Members of the Congress and for that reason I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRUISE MISSILE—PRO AND CON

(By Robert Hotz)

Anyone relying solely on the daily newspapers and television these days would think the cruise missile was a new wonder weapon that has suddenly popped up over the technical horizon. It is neither new nor a wonder weapon that will solve all defense problems at miniscule cost.

The cruise missile first appeared in 1944 with the German V–1 or "buzz bomb," nicknamed for the odd sound of its pulse jet engine. The U.S. Air Force carried on the cruise missile in the post-war years with the subsonic Northrop Snark that eventually flew from Cape Canaveral to Brazil and the North American supersonic Navaho boosted by rockets with a ramjet cruise engine. The Navy developed the Vought Regulus turbojet-powered cruise missile series for submarine deck launch. But all cruise missile development went into eclipse when ICBM technology took over in the late 1950s. The only U.S. cruise missile survivor in the 1960s was the North American Hound Dog launched by Strategic Air Command Boeing B–52s to knock out air defense systems in the path of the penetrating bombers.

SOVIETS SLOWER TO MOVE

The Soviets were much slower to move into the cruise missile business, starting out in the 1960s with turbojet-powered drones slung under the wings of their longer-ranging bombers and folding-wing, canister-launched cruise missiles designed for launch from submarines and surface ships.

The Soviets have several thousand short-range cruise missiles currently in service, most of which carry nuclear warheads.

The current U.S. revival of the cruise missile is based on major technological strides, many of them the outgrowth of ICBM technology. These include:

Terrain contour matching guidance (Tercom), which makes it possible for the cruise missile to navigate accurately at extremely low altitudes for long ranges and achieve extremely accurate target impact.

Miniaturized propulsion, which provides an extremely lightweight, low-volume, highly efficient turbofan engine that can burn either standard jet fuels or specially thickened mixtures for longer range.

Miniaturized warhead technology that enables a nuclear weapon 10 times more powerful than the Hiroshima bomb to be contained in the small-diameter nose of the new type cruise missiles. Combined with the extreme terminal accuracy, the new cruise missile warheads can do the military mission of much larger ICBMs, albeit at much slower time to target.

All of this combines to produce a weapon that can be procured cheaply and in such affordable numbers that it poses tremendous problems for any new defensive system. The new type cruise missiles, such as the General Dynamics Tomahawk and Boeing ALCM B, would be deployed from land, sea and air platforms in the thousands, compared with the few hundred penetrating bombers SAC has now with the aging B–52 fleet or with the B–1 had it been produced and deployed.

But the cruise missile is still in the early stages of flight testing and will not be ready for deployment in any medium before 1980, with the longer-ranging versions following later in the decade. And it is not a "wonder weapon" that will solve all defense problems. Like all weapons, it has some vulnerability and must operate according to the laws of probabilities. The Soviets are already extending their air defense network with CW radar atop towers several hundred feet high so they can look down on low-flying vehicles and spot them against ground clutter. They have developed a hypersonic interceptor missile to use against the subsonic speed of the cruise missiles. The subsonic attack speeds of cruise missiles also give them much longer exposure to defense systems than ICBM trajectories.

The cruise missile launching platforms are also vulnerable, particularly in the high-altitude air-launch mode. It will be well into the 1980s before standoff range permits launch well outside Soviet territory. To achieve maximum range, the cruise missile must fly at the high altitudes of turbofan efficiency for much of its penetration and during that period is exposed to even current Soviet air defense. Its guidance system must be preprogamed, leaving it vulnerable to a mobile defense system, and it has no electronic countermeasures to confuse an enemy detection and missile guidance system.

SUPPORTING WEAPONS LACKING

The cruise missile originally was designed to be part of a multi-weaponed attacking force, with the rocket-powered supersonic SRAM short-range attack missile to hit heavily defended targets, the cruise missile lightly defended targets and the penetrating bomber following with its massive ECM and heavy megatonnage gravity bombs. Stripped of its supporting weapons, the cruise missile also loses considerable effectiveness.

The modern cruise missile on which President Jimmy Carter is basing so much of this country's future strategic power is still in an early development stage and has many test, production and deployment problems to solve before it is fully effective. In the meantime, we think it extremely wise for President Carter to continue to test and evaluate the B–1 technology as a prudent hedge against the future.

THE SOCIAL SECURITY SYSTEM AND MANDATORY RETIREMENT

Mr. DOMENICI. Mr. President, on Saturday, July 9, the New York Times carried an article by Jess Altman entitled "Social Security: The Worst Is Yet To Come." I found this article to be extremely interesting because it touched upon the interrelationship between two important issues confronting older Americans. The first issue revolves around the fiscal viability of the social security program, and the second is mandatory retirement. According to the 1977 annual trustees report:

Outgo from the combined trust funds (Federal Old-Age and Survivors Insurance and Disability Insurance Trust Funds) exceeded income in calendar year 1975 by $1.5 billion and in calendar year 1976 by $3.2 billion.

The report goes on to say that—

Unless legislation is enacted to provide additional financing, the assets of the disability insurance trust fund are expected to decline until the fund is exhausted in 1979. . . . The assets of the old-age and survivors insurance trust fund are also expected to decline, in the absence of additional financing, until that fund is exhausted in the early 1980's.

Mr. Altman estimated that the abolition of mandatory retirement would "drop" $2.25 billion a year "into the lap of the hard-pressed social security system at no cost to the taxpayer." Mr. President, we all know that $2.25 billion per year would not solve all of the fiscal problems of the social security trust fund, but it would ease the burden.

In addition, the abolition of mandatory retirement would open job opportunities to thousands of older persons who want to continue working. Today our Nation is suffering a substantial loss of wealth from the waste of skill and experience that results from involuntary retirement at an arbitrary chronological age. In addition, there is clinical evidence that forced retirement actually accelerates the aging process in many individuals. Thus we first render a person nonproductive and then increase his or her dependence upon public programs such as social security, SSI, food stamps, medicare, medicaid, welfare, and so forth. This entire process strikes me as an incoherent way of shaping sound humane public policies.

A related but equally important aspect of the relationship between mandatory retirement and social security can be seen in the way it impacts on older women in the work force. Many women do not enter the work force on a permanent full-time basis until their children are grown or they have been widowed or divorced. Compulsory retirement limits the working life of these women and reduces their ability to build up sufficient pension and/or social security benefits.

Mr. President, I am very encouraged by the increased interest in both the House and the Senate for legislation designed to curtail mandatory retirement. I applaud the recent action of the House Education and Labor Committee which approved a bill that will, if enacted, end mandatory retirement in the Federal civil service and protect employees in the private sector of our economy from involuntary retirement below the age of 70. Next week the Senate Human Resources Committee's Subcommittee on Labor will be holding 2 days of hearings on age discrimination in employment legislation. I plan to testify on behalf of my bill, S. 481, at that time. I hope the 95th Congress will act promptly to abolish mandatory retirement at a fixed arbitrary chronological age.

Mr. President, I ask unanimous consent that the text of Mr. Altman's article "Social Security: The Worst Is Yet to Come" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 9, 1977]

SOCIAL SECURITY: THE WORST IS YET TO COME

(By Jess Altman)

A saving of nearly $2.25 billion a year is waiting to drop into the lap of the hard-pressed Social Security system at no cost to the taxpayer. All that needs doing is for Congress to act on a bill that has been kicking around in the legislative hopper for years. The bill, sponsored by Representative Paul Findley, Republican of Illinois, and other Congressmen, would put an end to the widespread practice of mandatory retirement at 65.

The windfall consists of the money Social Security would not have to pay out in benefits to those persons who would be enabled, under the Findley bill, to continue working after reaching the age of 65. Each year, 60,000 workers lose their jobs because of their company's policy of mandatory retirement at 65. According to the Social Security Administration, more than half—34,000 to be exact—would continue working if they had any say in the matter. As of July 1st, the average benefit for a married worker amounts to $361 a month, and for a single worker it is $245 a month. Since 85 percent of the workers who start collecting benefits at 65 are married, the average benefit for all workers entering the Social Security rolls comes to about $340 a month.

If mandatory retirement were abolished, then Social Security would not have to pay benefits to the 34,000 workers who each year choose not to retire. Thus, Social Security would save about $140 million in the first year. Each succeeding year the saving would increase by that amount. At the end of five years, the annual saving would run to $2.1 billion a year. Assuming that most workers would want to retire at age 70, the saving for Social Security would continue at that figure each year.

Furthermore, with benefits due to go up by 5.9 percent annually (whenever the cost of living rises by 3 percent or more), there would be an added saving at the end of five years of $130 million.

Obviously, a reduction of more than $2.2 billion a year in Social Security's operating costs would not end its fiscal crisis. But it would be a big help. Congress should welcome this windfall as a means of avoiding, or at least cutting down on, one or more of the draconian measures proposed by President Carter to rescue Social Security from its financial dilemma.

The question is whether Congress will see fit to end mandatory retirement at 65. Until the current crisis in Social Security, there had been insufficient pressure to get legislative action. Arguments that mandatory retirement was a form of discrimination, that it performed major surgery on a worker's income, that it demoralized unwilling retirees, as well as other charges have failed to pack enough weight to make Congress act. A poll taken by the Louis Harris organization in 1975 showed that 86 percent of Americans between the ages of 18 and 64 favor an end to mandatory retirement. Still, Congress paid no heed. The principal support for mandatory retirement has come from business.

But business now finds itself in a dilemma as the result of President Carter's proposal that Congress remove the wage ceiling on the Social Security tax paid by employers. It is conceivable that, rather than be saddled with this open-end tax, business may consider it more expedient and much less costly—if it is actually costly—to give up mandatory retirement.

The fact is that sooner or later mandatory retirement must bow before the inescapable pressure of demographic change. Today, with a work force of 90 million and a senior citizen population of 33 million, the benefits for each retiree have to come out of the tax on every three workers, and since the current tax is not providing enough revenue, Social Security is in trouble. But the worst is yet to come. By the next century, because of the static birth rate and the growing number of the elderly, the ratio will be two workers to each retiree. If three can't support one today, how can two do it tomorrow? Obviously, drastic measures must be taken to keep Social Security solvent. One such measure, inevitably, will be to increase the work force, and that can only be done by doing away with mandatory retirement. If it has to happen eventually, why not now—and enable Social Security to pick up an annual windfall of approximately $2.25 billion?

Ironically, if mandatory retirement at 65 had been illegal in the 40 years of its existence, Social Security today would fiscally be hale and hearty—and sitting on a hefty nest egg.

THE B–1 BOMBER

Mr. GOLDWATER. Mr. President, there are many reasons why I believe that President Carter made a serious mistake when he decided that the cruise missile would provide this Nation with a cheap alternative to the B–1 bomber. Perhaps the most important reason is that the cruise missile, for all of its value, is strictly a missile. It is unmanned and it has no crew aboard to think or make on-the-spot decisions. It is important to understand that, unlike a manned bomber, the cruise missile cannot be recalled once it is launched. Thus, it can never be launched in anticipation of an enemy attack which might not materialize.

Mr. President, many of the arguments for the B–1 bomber are extremely complex and difficult for the general public to understand. But one of the clearest and most concise arguments for the B–1 was published recently in the Chicago Tribune. The article was written by Peter Reich, a member of the Tribune staff and an acknowledged top expert on aviation and missiles. I ask unanimous consent that Mr. Reich's article, entitled "The B–1 Offers Advantages a Cruise Missile Can't Match," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE B–1 OFFERS ADVANTAGES A CRUISE MISSILE CAN'T MATCH

(By Peter Reich)

I believe President Carter made a serious mistake when he killed the B–1 bomber. I think history will show him penny-wise and pound-foolish.

The President, you'll recall, justified his decision by declaring the B–1 to be too costly and unnecessary to the nation's defense.

He said the cruise missile—a small, pilotless jet plane that is computer-guided to its target—has become an effective, cheaper alternative to the B–1.

I think the President is confusing apples with oranges. Here's why:

The cruise missile is a great new weapon—small, cheap, accurate, and, presumably, reliable.

Flying at 500 miles an hour, some 300 feet above the ground, it can duck in below most radar coverage, following the contours of the terrain, employing the natural cover and concealment of mountains, hills, and valleys.

Antiaircraft guns or missiles would be hard pressed to draw a bead on it.

But the cruise missile is a missile. It's unmanned. It has no crew aboard to think, or make on-the-spot decisions.

You can't call a cruise missile back once it is launched.

A manned bomber, on the other hand, can be called back up to the moment it releases its bombs or missiles. It can be launched in anticipation of an enemy attack—not just in response.

Again, the cruise missile flies at only about 500 m.p.h.—slower than many commercial airliners. The B–1 flies at up to 1,650 m.p.h.

And the cruise missile's range is limited. It can hit targets no more than 2,000 miles away.

The B–1 can hit targets twice that far away, and, with air-to-air refueling, anywhere on this globe.

The cruise missile carries a thermonuclear warhead big enough to destroy almost any target. But the B–1 can carry 24 SRAMs [short range attack missiles], each of which has a thermonuclear warhead the size of the warhead on a cruise missile.

In fact, the B–1 could carry 24 cruise missiles.

There's another point worth considering: A missile is of little value without a nuclear warhead. Ergo, it is not much good in a nonnuclear war.

But a manned bomber is a handy weapon even in a conventional war—as was proven by the B–52, which was designed to carry two huge thermonuclear bombs and wound up carrying regular bombs in the Viet Nam War.

Indeed, the B–52 became the single weapon most feared by the enemy in that conflict.

However—and this is an important consideration—the B–52 first flew in 1954 and the newest B–52 built came off the production line in 1962.

In other words, good as it is, the B–52 is old. Few people feel safe driving a 15-year-old car on the highway. Is it fair to expect our airmen in a future conflict to fly a 15-plus-year-old plane against defenses an enemy has had more than a decade and a half to perfect?

Advances in air defenses come rapidly. For the first several years of the Viet Nam War, not a single B–52 was lost to enemy action; in the final month of B–52 raids against Hanoi, 15 B–52s were shot down.

To think of the aging B–52 as a first-line weapon capable of dealing effectively with the new, sophisticated defenses an enemy will have available during the 1980s, is deluding ourselves.

The low-flying, faster B–1, with its advanced electronic countermeasures equipment, would be capable of dealing with such defenses; the venerable B–52 probably would fare no better than the outmoded American Brewster Buffalo fighter did against the Japanese Zero fighter in the early days of World War II.

In sum, I think the B–1 bomber offers a number of advantages—speed, range, versatility, electronic countermeasures, payload, manned crew—that even the cruise missile, good as it is, can't match. I think our nation would be ill-advised to put all of its eggs in the cruise missile basket.

The stakes in the nuclear deterrence game are too high to take the risk that not building the B–1 involves.

Once the radioactive mushrooms start sprouting (God forbid!) it will be too late to say, "Gee, we should have built the B–1."

The Russians, it is worth noting, are not holding back.

Although they now have many more intercontinental ballistic missiles than we do, and even though they now have many more submarine-launched ballistic missiles than we do, they still are building a supersonic jet bomber called the Backfire.

It looks a lot like the B–1.

VIETNAM IN THE UNITED NATIONS

Mr. DOLE. Mr. President, yesterday the Communist Government of Vietnam scored a major symbolic victory in gaining the U.N. Security Council's approval for membership in the United Nations. The active participation by our own U.N. delegation in the approval is the latest step in the Carter administration's efforts to normalize relations with Vietnam. The significance of that move lies in its departure from previous U.S. policy opposing United Nations membership for Vietnam until it cooperated in accounting for missing American servicemen.

I have no objection to "putting the past behind us," as President Carter so often phrases it. But when it comes to cooperation in accounting for American MIA's, the Vietnamese seem intent upon perpetuating the past. I have seen no efforts on their part to put the past behind them. Instead, they continue to hammer upon a U.S. aid "obligation" stemming from our involvement in the recent war.

In an appearance Tuesday before the House International Relations Subcommittee on Asian and Pacific Affairs, former Secretary of State Henry Kissinger referred to Vietnamese claims as "an absurdity" and "an insult." I fully agree with his assessment that Vietnamese Communist officials forfeited whatever hope they might have had for reconstruction aid when they violated the 1973 peace agreement and launched the invasion of the Republic of Vietnam. Secretary Kissinger maintained that he "would not even consider reconstruction aid until we have a full accounting" for missing Americans in Southeast Asia, and I believe the majority of our citizens feel the same way.

LITTLE PROGRESS IN ACCOUNTING

In the last 2 years, the Vietnamese have accounted for 35 missing Americans within their territory, of the several hundred still listed by the Defense Department as missing in action there. The House Select Committee on MIA's reported late last year that it is reasonable to believe the Vietnamese could account for more than 150 of the missing. Yet we seem to be proceeding "full speed ahead" in our normalization efforts, without due regard to progress on the accounting issue.

Secretary Kissinger, who had numerous contacts with the Vietnamese during his tenure with the Department, advised that Hanoi's leaders "could not believe that the Congress was not a docile instrument of the administration." Their understanding of American Government was naive and simplistic. Yet, it is sometimes easy to see where they get that impression. It is frustrating to me to see congressional efforts blunted which seek to hold Vietnam responsible for an accounting of our servicemen.

Recently, an amendment I offered to discourage aid to Vietnam, Laos, or Cambodia by international monetary organizations passed the Senate on a strong vote of 58 to 32. It would have required U.S. delegates to those organizations to vote "no" on loan applications by these countries, and would have authorized a reduction in U.S. contributions to a monetary organization which granted such aid over our objections. The intent was to keep some pressure on the Vietnamese, the Laotians, and the Cambodians to cooperate in further accounting efforts. A similar amendment had passed the House of Representatives, attached to a different measure.

The amendment was reported from conference committee on Tuesday of this week in a substantially modified form that does not really reflect the will of either the Senate or the House. It directs the monetary institutions to "consider" the responsiveness of the Asian governments on the accounting issue when loan requests are reviewed. This modification, of course, deletes any real force from the measure.

Mr. President, I am convinced that the Vietnamese can do better in their accounting efforts. I am convinced the U.S. Government can do better in persuading the Vietnamese to cooperate. With each additional provision of aid or recognition, the Vietnamese have less incentive to cooperate. For this reason, I regret American participation in approving Vietnam's U.N. membership at this time, and I will continue to oppose formal recognition or aid of any kind until we see much better success in accounting for our MIA's.

INTERLOCHEN: MICHIGAN'S GIFT TO THE MUSIC WORLD

Mr. GRIFFIN. Mr. President, 50 years ago at Interlochen, Mich., near my hometown of Traverse City, the late Dr. Joseph Maddy founded the National High School Orchestra Camp to train promising young symphony orchestra musicians.

The National Music Camp, as it became known, has given many thousands of talented young people the opportunity to study and perform with other similarly gifted young musicians from around the country and the world, under the tutelage of accomplished artists.

Today Interlochen alumni perform with every major and community symphony orchestra throughout the country—and include principals in groups such as the Cleveland Orchestra, the Atlanta Symphony, the Minnesota Orchestra, and the New York Philharmonic.

Interlochen's faculty has included such notables as conductor Guido Ajmone-Marsan, a former camper who now leads the World Youth Symphony; and pianist Van Cliburn, who is an annual participant and has been a member of the board of trustees since 1961. In fact, Van Cliburn will be performing at Interlochen this weekend.

From its modest beginnings, the National Music Camp has grown to accommodate 1,500 students yearly during the 8-week summer session—including some as young as 8 years of age as well as many college students who are earning undergraduate or graduate credits at the University of Michigan.

Once exclusively devoted to music, the curriculum has been broadened to include drama, dance, and the arts.

So successful has been the summer camp that in 1962 the Interlochen Arts Academy was begun to provide full-time instruction in the arts and academic subjects during the school year. The academy is a fully accredited high school, with a current enrollment of about 400 students.

In its half-century, Interlochen has trained thousands of young people from 46 of our 50 States and from 22 foreign countries. I have had the pleasure of assisting in this cross-cultural development by sponsoring legislation that generated foreign student scholarships. And I have had the pleasure of attending concerts performed by these students. Based on the quality of these performances, it is no wonder that the National Music Camp has produced musicians who, at the tender age of 20, already are performing in nationally acclaimed orchestras.

To celebrate its important role in developing symphony orchestra talent over the past half-century, Interlochen has planned a special 50th anniversary celebration which began with the opening of the 1977 National Music Camp season in June and will continue to the end of the summer season. This celebration will feature performances by Interlochen students, guest performances by renowned alumni, appearances by other noted artists, as well as premiers of new compositions.

Mr. President, recently, the Senate paid tribute to Henry Ford by marking the 75th anniversary of the automobile company he founded that did so much to change the course of American society.

Michigan is proud to be the home of Henry Ford and the automobile. But it is altogether appropriate, I suggest, to point out that Michigan is more than automobiles; that leadershp in music and other performing and visual arts is among Michigan's many gifts to our Nation.

My eldest son, Paul, is among the thousands of young people who have been enriched by training at Interlochen—and no doubt the children of many of my colleagues in Congress have also benefited from this unique educational experience.

On this—the 50th anniversary of Interlochen—I would like to say "thank you" to those whose vision made the National Music Camp possible and to the generations of gifted artists who, by benefiting from this training, are filling our land with music.

U.S. NEWS & WORLD REPORT PROPOSES CORRECTION OF SOCIAL SECURITY EARNINGS LIMIT

Mr. GOLDWATER. Mr. President, it is always encouraging to me when one of the most widely read news magazines in the country endorses a proposal that I happen to have been working toward for many years, especially when these editorials appear to be signs that the time has finally arrived for a particular issue.

Today, I am delighted to say that a prominent publication has recently published an editorial supporting correction of the earnings limit on social security

benefits. The call for a change in the earnings ceiling appears in the July 11, 1977, issue of U.S. News & World Report, which explains that many older persons need to receive both their full social security check and to continue working in order to maintain a decent standard of living.

Mr. President, I only note that the editorial places too high a figure on the estimated cost of repealing the earnings limit because it does not distinguish between a repeal only for persons reaching age 65, the traditional age of entitlement to full benefits, and repeal of the test for everyone, including the 11 million persons under age 65.

Actually, repeal of the test for workers 65 and over would be virtually self-financing because most of the persons who would be induced to return to work already are drawing maximum benefits and would not cost the system a penny more. They would, however, pay additional social security and income taxes into the system.

Mr. President, I ask unanimous consent that the editorial entitled "Time for a Fairer Shake" be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"TIME FOR A FAIRER SHAKE"

(By Marvin Stone)

Only a trusting few really believe that Washington has the wisdom to straighten out all the pension inequities in the country, but at least it should try to adjust those it has created. These inequities penalize millions of people. It's a familiar story: Once government takes on responsibility, it seems incapable of resisting the temptation to seize more. The result often is sheer idiocy.

President Carter, having looked at the welfare mess and come away temporarily baffled, deserves credit for now tackling the pension mess. He'll find it rivals welfare in complexity.

On the face of it, is a shame that, if two citizens have rendered equally devoted service to society, one may pass his last days in affluence and the other in want—through no cause except the accidents of our bureaucracy. The problem is to find some approach to equality between military and nonmilitary retirees, government and private employes, persons working in retirement and those not working, husbands and working wives, husbands and homemakers, and endless combinations of these and others.

The President has indicated that his coming surveys will delve not only into federal, but into State, city and private retirement plans. It's an ambitious undertaking.

Most of the flaws in pensions will persist for a long time before remedies are achieved. One that is getting a lot of publicity is "double dipping," by which military retirees draw their pensions and take salaried jobs—even government jobs—as well. The President mentions "quadruple dipping." A beneficiary conceivably can wind up with several pensions. New curbs on this practice are being advanced in Congress.

Opposition to multiple dipping does not stem from hostility to the military, as such, but from adverse comparisons with workers in private life. Retirees on Social Security can earn only a limited amount without losing their SS checks. Since the average Social Security payment is close to the official poverty level, this restriction poses a bitter handicap for low-income retirees still able to work. If they also get company pensions, they come closer to the level of the double dippers; but some 60 per cent or more do not have pensions.

Middle-bracket Americans about to retire feel that they, too, will get it in the neck. They are not going to starve, but if they expect to maintain a decent standard of living by finding part-time work, they are in for a hard time. After the permitted first $3,000 a year of earnings, they may find that the next $3,000 is virtually wiped out by further Social Security taxes; federal, State and city income taxes, and loss of benefits.

A sensible solution would seem to be to let Social Security pensioners earn unlimited amounts. That is not going to happen, principally because it would cost workers and employers an extra 7 billion dollars a year to finance the additional benefits.

Waiting in Congress are more than 100 bills to change Social Security rules. Several would raise earnings limits. In these days of high prices, some increase would not be unreasonable. At the same time, the Administration proposes to save money by knocking out the "monthly test," which lets retirees earn far more than the annual limit in a few months, then quit work and draw Social Security the rest of the year.

This change would hurt the high earners, but they might find it palatable, if not pleasing, if the annual limit were raised somewhat above the present $3,000.

These proposals only ripple the surface of the pension pond. They will be debated in hearings before the House Social Security Subcommittee. Careful attention should be given, because the pension scene is a sorry one and this Administration and this Congress should start cleaning it up.

COMMUNIST CHINA'S DRUG WAR AGAINST THE FREE WORLD

Mr. GOLDWATER. Mr. President, with all the attention being given by this administration and the news media to the issue of human rights, I believe it is of fundamental importance that the American people and those Government officials who are formulating U.S. policy, should concentrate on one of the most vile attacks on human dignity and individual liberty that has ever occurred in the recorded history of civilization. I am referring to the conscious and deliberate effort by Communist China to subvert the physical, mental, and moral fiber of peoples in the Free World by peddling and pushing narcotics.

Mr. President, there has been virtually official silence within the U.S. Government on this subject, but from time to time, documented evidence has arisen which cannot be suppressed confirming the drug war which is being mounted against the Free World by mainland China.

For example, Dr. Harry Anslinger, Commissioner of the former U.S. Federal Bureau of Narcotics, charges in his book, "The Murderers," that: "The use of drugs as a political weapon by the communist forces in America, the Orient, Europe, and Africa is well documented."

Occasionally, reports become known of the capture of opium in the process of being smuggled out of Communist China, and unchallenged facts of this kind, combined with reports by refugees leaving the mainland, prove beyond any question that Red China is the major source of the world's hard drugs. These reports indicate that at a minimum, Communist China's annual income from drug smuggling is $500 million annually.

Mr. President, it is a tragedy that American officials who find it easy to think about the policy of so-called normalization of relations with Communist China, and who at the same time profess to hold a devout and unequivocal concern with human rights, are ignoring the Chinese Communist drug war. Indeed, in this and every other area, Communist China and human rights are as far apart as anything can be.

Mr. President, I would call the attention of my colleagues to a recent booklet on this subject written by Patricia Young, who is a noted Canadian author, lecturer, and syndicated columnist. Patricia Young has collected extensive documentation of the scope of Communist China's activities in hard drug production and smuggling, and I commend her report to the Senate.

Mr. President, so that Senators may judge for themselves the importance of her booklet on this subject, I ask unanimous consent that excerpts from "The Death Peddlers" by Patricia Young be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

[From: "The Death Peddlers—Communist China's Opium War on the West" (1973) By Patricia Young]

PART 1—CHARGES AND COUNTERCHARGES

Of all the billions of words which have been printed throughout the world on the subject of narcotics, opinion appears to fall into two distinct categories. One segment, invariably led by a variety of New Left intellectuals and radical students, will endeavour to make a case for the "legalizing" of drugs (in order to remove the profit motive), for the relaxation of penalties or at least for more programs of "education" and the "treating" of addicts at taxpayers' expense.

At the other end of the scale, the "conservative," "hawk" or "Redneck" will call for tighter laws, and more particularly, for the enforcing of those laws already on the books, which they believe to be grossly abused.

Then there are those who feel that it makes more sense to tackle causes rather than effect; that it is more important to expose the source of the evil rather than expending ourselves in futile battle against epidemic effects. For this reason, the news media has become something of a battleground—not so much for stamping out the horrors of drug addiction—but for "proving" or "disproving" the inherent dangers and just who is behind the vicious drug war upon the Free World. Thus, for upward of twenty years, the will of millions of young people has been slowly sapped and subverted, leaving them ripe for false propaganda, subversion, sloth and even treason.

For example, Dr. Robert Baird, a New York drug expert for the past twenty-four years, testified before a U.S. Congressional Committee hearing in July 1971 that the Chinese Communists were preparing a new offensive to use narcotics to demoralize the North American population, especially the young. He said: "We are being misled into thinking that Turkey is the primary source of narcotics . . . but Communist China produces fifty-five to sixty percent of the world's hard drugs!"

On September 13, 1964, Pravda accused the Chinese Communists of growing and smuggling heroin and opium into the West, netting a profit of $500 million dollars annually. Dr. Harry Anslinger, Commissioner of the U.S. Federal Bureau of Narcotics,

claims, in his book, The Murderers: "The use of drugs as a political weapon by the communist forces in America, the Orient, Europe and Africa is well documented." Charles Airagusa, chief assistant to Commissioner Anslinger, supported this premise and was quoted in the Melbourne Herald of Australia on March 17, 1962, as having said: "The Chinese Communists have launched a plan to turn North America into a race of drug addicts!"

Sean O'Callaghan, whose book, The Drug Traffic was published as far back as 1967, writes: "The Chinese Communist drug ring, with headquarters in Peiping, has become more sinister, more lucrative and more dangerous than the Mafia!"

The Soviet correspondent stationed in Japan whose findings were published in *Pravda* of September 13, 1964, stated: "The Mao regime is the biggest producer of opium, morphine and heroin in the world!"

Fearless journalist Victor Reisel, in his Labor Column in the *Philadelphia Inquirer* of June 21, 1951, reported on large quantities of hereoin being processed in Tiensen for smuggling into North America. He told of the International Confederation of Free Trade Unions (including the AFL and CIO) joining in the fight to unionize plantation workers in the Orient as an anti-communist Labor Federation. He wrote: "These communists are professional killers, working out of official headquarters on North Han Min Road, Canton. Besides smuggling heroin into Hong Kong, the hundred and fifty man operation is used to terrorize anti-communist labor leaders in Hong Kong, Singapore and Macao."

The Fire and Police Research Association of Los Angeles bulletin of November 1971 notes that until five years ago, official records clearly pointed to Communist China as the main source of the world's opium and opium products.

As far back as December 9, 1956, *The Philadelphia Inquirer* reported on the smashing of an international drug smuggling ring at the Canadian-U.S. border in New England which cited a Chinese resident of Boston as being part of the ring which brought narcotics from Communist China via Hong Kong.

Allen C. Brownfield, in his book *The Peking Connection* charges the U.S. "Establishment" with refusing to name Communist China either as a suspect or participant in the heinous narcotic traffic. These charges were read into the *Congressional Record* of the U.S.A. (No. 113, Part 2) of August 17, 1972, by Congressman Waggoner. Yet for all the continuing documentation and photographic evidence from around the world; for all the continuing stories of a "death addicted" generation and the crimes rising out of it, many U.S. Government agencies, while mouthing a commitment to fighting drug abuse, continue to dismiss as "arrant nonsense" any idea of Communist involvement!

For instance, Louis J. Link, Chief of the Public Inquiries Division of the U.S. Department of State, replying to a query on October 27, 1971, stated that the U.S. Government, being made aware of world-wide stories of Communist Chinese drug production and trafficking, had investigated their authenticity and found "no reliable evidence" that the Chinese Communists ever had engaged in or sanctioned the illegal export of opium or its derivatives!

A U.S. citizen, after reading *The Drug Traffic* by Sean O'Callaghan (published in Britain in 1967) wrote to the Strategic Intelligence Office of the U.S.A., only to be told in writing by John W. Parker, Acting Assistant for Strategic Intelligence, that: "Simply stated, in spite of everything that is said, we do not have evidence of Communist Chinese involvement in international naroctic traffic". It should be noted that the head of this Department was none other than William O'Sullivan, fired from the Federal Bureau of Investigation by J. Edgar Hoover after the former had travelled the nation coast to coast contradicting his boss regarding any danger from the communists!

Arthur C. Egan Jr., reporting October 14, 1971, on a Washington Conference on Crime and Justice, states that President Nixon's high government administrators had produced "conflicting" statements concerning Administration suppression of information concerning Communist China's supplying of sixty-five percent of all opium and heroin smuggled into the U.S.A.! While two former commissioners of the Bureau and the former Director of a Washington Research Bureau, charged that Communist China had been heavily involved in subverting North American youth from as far back as 1952, John Finlator, deputy director of the U.S. Bureau of Narcotics and Dangerous Drugs, denied any Communist Chinese involvement, as did Attorney General John Mitchell. Similarly, William D Blair Jr. another Nixon Administration official, said on June 30, 1971: "As far as we are aware, opium is not legally grown in the 'People's Republic of China'—note the official "status" given officially to the illegal regime—"and none is exported by the Chinese Communist authorities!"

While other Bureau of Narcotics officials contacted appeared to squirm with mild embarrassment, one admitted that orders from the White House were that Communist China was not to be criticized! The official was quoted in Arthur Egan Jr.'s report as saying: "I would lose my job in twenty-four hours" if his name were publicly disclosed. Other key narcotic bureau officials connected with the enforcement of laws against drug traffic, charged that they had been "gagged" by the Administration and had been ordered to make no public admissions concerning Communist China's role in exporting opium and heroin to the Free World, especially to the U.S.A! He said: "We cannot even refer to them as Communist China or Red China. We must now say the 'People's Republic of China' because President Nixon wants to establish relations with the Red Chinese!"

And as the youth of North America continues to be swept into the vortex of a man-made hell, so "political expediency" and personal ambition for power and prestige continue to sacrifice the youth of the nation and the heritage of freedom that is their birthright. While crime stalks the street in search of the wherewithal to buy heroin, so the over-burdened taxpayer is forced to dig into his pocket to provide more rehabilitation centres, more jails, more police and more discussion forums which debate everything *except* who is behind the vicious drug war and why it is being directed largely against the Free World!

Yet above the official silence, the voices of angry concern continue to be heard around the world. Stanton Candin, former senior intelligence officer with the British Ministry of Defence, in an interview with *United Press International* on February 9, 1972, following an extensive tour of the Far East, accused the Chinese Communists of smuggling illegal drugs into the United States as a form of "psychological chemical warfare". He adds: "I think the Chinese Communists regard the U.S.A. as an enemy country!"

Candin, who linked the Chinese Communists with the underworld of the Far East, Europe and North America, commented on enormously increased poppy production in the Southern Province of Yunnan noting that while increasing its opium production for illegal export to North America and the Free World, the Peiping regime had "virtually wiped out drug addiction among the Chinese people on the mainland."

Louis J. Link, Chief of the Public Inquiries Division of the U.S. State Department, in a letter to a United States citizen dated October 27, 1971, in response to a query addressed to Secretary Rogers, in effect stated that "investigations" indicated that the drug traffic in Southeast Asia was carried out by "individuals" intent upon financial gain rather than political considerations!

He concludes blandly: "The People's Republic of China has no drug problem of its own. Chinese Communist authorities have for years strictly forbidden private production, consumption and distribution of opium and its derivatives." While admitting that the Chinese Communist authorities authorized "limited" amounts of opium to be produced under strict government control for medical purposes, Mr. Link apparently discounts the massive documentation of Communist China's major foreign export—opium! To be sure, it is not produced "privately". In a Communist State all production is controlled by the State! To be sure drug addiction is controlled in Communist China. Whoever heard of an arms manufacturer encouraging his employees to turn the guns on themselves?

By the same token, Kenneth de Courcy, in the *British Intelligence Digest* of June 1962, revealed that there were forced labour camps in each of Communist China's 2,000 hsien or counties. *The Central News Agency* of Hong Kong reported on December 7, 1972, that a new arrival from Canton on the Chinese mainland told of how some 6,700 convicts had been put to work in one of these camps planting poppies in the mountainous areas of Kwantung (83.5 acres) where tin and granite were once mined! Oddly enough, while the evidence continues to mount around the world, the Chinese Communists continue to protest their innocense. For instance, *The Vancouver Sun* of January 8, 1973, carried a U.P.I. news story out of the Hong Kong Chinese Communist News Agency which called Soviet charges that Red China made a FIFTEEN BILLION DOLLAR-a-year profit of smuggling illegal drugs a "preposterous slander."

And while the "establishment" in the United States appears reluctant to point the finger at the Communists, the evidence continues to pour in. *The Toronto Star* (Ontario, Canada) stated June 23, 1972: "Drug officers are becoming concerned about the increase in the amount of cocaine available across North America. American Intelligence officers in Washington say that they have traced much of the cocaine to the Far East, including Mainland China!"

In his book *Dope International*, author Charles Wighton claims, "The drug trafficking is carried out by a criminal conspiracy and promoted by a political conspiracy closely associated with international communism and centered in Communist China!" Valedin Chu, Hong Kong correspondent for the Australian magazine *Time and Tide*, reported in the January 1963 issue that 65% of the world's illegal drugs originated in Communist China! He further charged that Communist China grossed ONE BILLION dollars annually in gold and currency from drug smuggling to the U.S.A. alone! He added, as have other writers around the world, that the opium was grown and refined in Communist China and then smuggled into the Free World by way of Burma, Thailand, Hong Kong, Cuba and the Philippines.

In 1972, an A.F.C.C. report disclosed that Red China produced over TEN THOUSAND tons of heroin annually, netting a profit of close to $800,000,000 annually!

From Britain comes a report put out by James H. Turnbull, Conservative M.P. for Belper and, as reproduced in the *British Foreign Affairs* booklet titled *Chinese Narcotics*. Documented with photographic evidence of Red Chinese shipments of opium on their way to refineries and raids by the Hong Kong police, Turnbull claims that the Communist Chinese have more than 137,480 acres of land under poppy cultivation which yields more

than TWO THOUSAND TONS of opium annually at a profit of more than FIVE HUNDRED MILLION dollars annually!

This figure is borne out in the *London Weekly Review* of September 20, 1972, which reports on the capture of two caravans smuggling opium out of Peiping. Apprehended on the northern border of Thailand the cargo of opium was estimated as being worth two hundred and fifty million dollars on the streets and that confidential documents confiscated revealed that Communist China's annual income from drug smuggling was upward of FIVE HUNDRED MILLION dollars annually; that Peiping's purpose was to corrupt the morals of the West. The secret document also exposed one Lo Tsing-han as the opium King of Asia, who operated out of Yunnan province close to where the borders of Thailand, Burma and Laos met. The British *East-West Digest* of April, 1972 charges those who defended the use of drugs by Britain's young people as being "stooges" of a foreign power—namely Communist China!

Free China Weekly of September 10, 1972, released figures put out by the Government Information Office of the Republic of China which determined the Chinese Communists as having 9530 acres of land under poppy cultivation with 72 refineries located throughout the entire mainland. Eight major cities of Communist China were used as centres for the exporting of some 10,000 metric tons of opium and opium products annually and which netted the Communist Chinese a profit of $800 MILLION U.S. dollars. L.Z. Chen, also writing in *Free China Weekly* (September 3, 1972 issue) points up the disparities involved in trying to estimate Communist Chinese poppy production. He attributes this to the manner in which the communists intersperse their poppy crops with other, taller crops, thus making it more difficult to detect the opium growing crops from the air. Mr. Chen concludes, as others, that the Chinese Communists have embarked on a cruel and vicious scheme of attempting to destroy the Free World by way of narcotics!

Yet still, an apathetic public allows itself to be lulled to sleep by pseudo-intellectuals, political perverts and Maoist manipulators.

John Chamberlain, writing in *Human Events* of August 8, 1972, charged: *"U.S. should reveal extent of Red China Drug trade"* and compared the "cover up" of Communist China's narcotic smuggling with the "cover up" of the Soviet massacre of Polish soldiers in Katyn Forest near Smolensk during World War II. He referred to an Australian report which corroborated facts contained in *The Peking Connection: Communist China and the Narcotic Trade* by Allan Brownfield.

Human Events of September 30, 1972, asks editorially: "Why Press Blackout on Drug Hearing?" In question was the Senate Internal Security Hearing Subcommittee, during which former Marine General Lewis Walt and Dr. Olav J. Braenddn, Director of the United Nations Narcotic Laboratory, testified on the subject of Communist China's peddling of heroin on the Free World market. *Human Events* charged that General Walt's ten-page report was given only scant and incomplete coverage by the nation's news media. Among other things, General Walt told of the strict measures enacted by Japan when that country first became aware of their problem. That problem became manifest when between 40,000 and 50,000 citizens were found to be addicted to heroin. Japanese authorities promptly instituted a ten year to life imprisonment for convicted drug traffickers!

Yet despite the mounting evidence of a colossal and murderous attack upon North America by the political drug pushers, an alarming number of journalists, politicians and professional do-gooders, sensitive to the "smear" treatment, back off from their duty to investigate, challenge and expose. Instead, they would agonize over the newest drug addiction statistics, putting "society" on the rack for not spending more money on "rehabilitation" centres; for not "legalizing" narcotics so as to take the profit out of pushing and protect their children from being hauled into court for possession! Like lemmings intent upon our own destruction, we would squeal about our plight while refraining from wondering who was driving us into oblivion!

Typical of this attitude was a feature story in *Playboy Magazine* of September 1972, which, while detailing the number of heroin and marijuana users in the U.S.A., together with a full color chart on the names, types, dosage and effects, gave no indication of the main source of the drugs! Indeed, the *Playboy* feature article gave the long term, continued, excessive use of opium and heroin as resulting in: "lethargy, constipation, weight loss, sterility and impotence"!

When thirty-six nations took part in a United Nations Conference on Drugs in Geneva in order to sign a narcotics control agreement, the New York *Times* of March 26, 1972, made a note of the fact that India, Burma and the U.S.S.R. had refused to sign the agreement. What *Time Magazine* failed to point out was that Communist China, the world's biggest opium producer, did not sign the agreement, either!

A March 10, 1970, BNDD Report given before the Appropriations Subcommittee of the U.S. Department of State, Justice and Commerce and the Judiciary and Related Agencies, stated: "The countries of Burma, Thailand, Laos and China (mainly Yunnan Province) are sources of opium which moves to Bangkok, Macao and Hong Kong to be made into heroin which then enters the West Coast of the U.S.A.! There are two main currents of illicit drug traffic in opium and opiates to North America. The Middle East and the Far East, directed to the U.S.A. via Hong Kong and Japan".

Oddly enough, at a December 29, 1971 Press Conference (reported in *The Wanderer* of May 4, 1972) Nelson Gross, senior coordinator for Internal Narcotic Affairs for the U.S.A., told reporters: "We have no evidence that any opium is coming from China at all!" Yet only a few months earlier, Michael Parks, reporting from Vietaine, Laos for the *Baltimore Sun* of March 7, 1972, claimed that U.S. Intelligence operations probing the opium cultivation in Yunnan Province in Communist China had been mysteriously "de-emphasized" by the C.I.A.; that teams of C.I.A. operators had been "reassigned" to merely "tracking" the opium caravans after they left Yunnan Province! This report was given credence by the New York *Times* of July 28, 1971, when it was reported that the U.S. Administration had suspended flights over Communist China by manned and unmanned reconnaissance drones (SR 71's) lest the Chinese Communists find them "provocative"! That thousands of North American parents find the narcotic peddlers, pushers and promoters "provocative" has apparently not got home to the Administration, paid by taxpayers to protect them from those who would destroy them!

However, Nelson Gross's "no evidence" statement to the Press did not go unchallenged. Representative John M. Ashbrook (Republican from Ohio) read into the *Congressional Record*, the U.S. Bureau of Narcotics and Dangerous Drugs report regarding Communist China being a prominent source of illegally smuggled drugs. Similar charges were made before the House Foreign Affairs Committee on February 17, 1972, by Representative Seymour Halpern (Republican from New York). At that time, the U.S. delegate to the U.N. was asked to bring the question to the floor of the U.N.

Yet for all the charges and counter charges—from Hong Kong, Japan, Britain, Australia and the U.S.A.—a *United States Information Service Bulletin* of September 18, 1972, carried a further statement by Nelson Gross, this time based on an appearance before the Internal Security Subcommittee hearing on International Narcotics, held on September 15, 1972. This time, while talking about "co-operation" between Canada and the U.S.A. on drug research, Gross declared: "Most of the heroin entering the United States in recent years has been processed from Turkish opium and morphine bases in Southern France, primarily around Marseilles." He goes on to admit that while West Germany is neither a producer nor processor of opiates, the country is an "important transit country" used as a staging, storage and transit area for hard drugs. In outlining how small quantities of opiates are peddled from Turkey to Hungary, Poland, Czechoslovakia and East Germany (all Communist countries) and in allowing that Turkey is not the world's largest producer of opium, that the 1967 production of opium was not more than 350 tons, decreasing to 210 tons by 1971 (due to government phasing out of opium production). Gross nowhere points to the Number 1 drug smuggling operation—Communist China!

Naming Vancouver on the West Coast of Canada as a "major trans-shipment point" along with the city of Montreal in Eastern Canada, Gross apparently appears reluctant to mention the 10,000 tons of opium grown annually by the Communist Chinese, and as reported by the U.S. Bureau of Narcotics.

In his "cooperation" with Canadian authorities on drug trafficking, one is tempted to wonder just how far this "cooperation" goes; whether Mr. Gross read the statement of Lyle Hawkins, Canadian Immigration Director in Vancouver who is quoted in The Toronto Star of July 22, 1972, as reporting a record number of Chinese seamen from Red China as jumping ship in the Western Canadian seaport of Vancouver. He further charged: "Heroin is being delivered to some members of the Chinese community by the ship jumpers. The drugs then find their way across the Canadian border." (Into the U.S.A.)

Pinpointing Vancouver as Canada's most heroin-addicted city, Readers Digest of July 1972 estimated British Columbia's sales of illegal heroin to gross 150 MILLION dollars annually for 1970 and 1971. The British Columbia Medical Association has estimated the Province's population of 2,247,000 to have 15,000 hard core heroin addicts. Canada's alarm was reported in The Toronto Sun of June 23, 1972, in a news story which concluded: "Drug officers are becoming concerned about the increase in the amount of cocaine available to (drug) users across North America. American Intelligence officers in Washington say they have traced much of the cocaine to the Far East, including Mainland China!"

Who, then, is fouling up the lines of communication—between narcotic agencies in various countries and within departments in the same country? In view of some twenty years of world-wide reports and photographic evidence why the seeming "cover-up" job by so many government officials and the left-leaning liberal press? Why would Life Magazine put out a special supplement in 1962 by publisher John K. Jessop and his Editors titled: Communism: Know Your Enemy, yet remain silent in the face of Communist China's growing drug war upon the Free World?

As far as can be estimated, at the time of the U.N. condemnation of Communist China for its drug smuggling in 1952, the Red death peddlers exported some 2000 TONS of narcotics illegally. By 1958, this was expanded to 8000 TONS a year. By 1971, the figure was estimated at 10.000 TONS annually. The net profit to the Chinese Communist govern-

ment? FIVE HUNDRED MILLION DOLLARS ANNUALLY! This figure has been re-iterated in most concerned nations—including the U.S.S.R. Sovyetkaya Russia of October 19, 1972, (quoted on North America's wire services) which made the charge among others.

Little wonder that a 1970 Senate Report on narcotics addiction among American troops then serving in Vietnam, claimed that the communists had backed up their guns and cannon with hypodermic needles and pills filled with narcotics far more insidious than bombs or bullets!

PART 2—FREE WORLD NARCOTIC ADDICTION

While both doves and hawks agree that we have peaked a "decade of drugs" the debate continues as to the major source of cultivation, the extent of danger to humans using it and methods of coping with the problem in order to stamp it out.

As far back as 1957, the United Nations Commission on Narcotics recognized the problem of opium and its by-products as a potential weapon of genocide, although at that time all that appeared known was that there were refining plants in Turkey, Syria, Lebanon, Italy and France. During the next fifteen years, reports emanating from various commissions and world-wide narcotic agencies have provided much additional information.

Oddly enough, many researchers appear reticent of being accused of "looking for communists under the bed"! *Time Magazine* of September 4, 1972, while publishing a cover story on *The Global War On Heroin* which pointed up international police measures being used to fight the evil, gives little or no indication of the Communist Chinese cultivation of areas of opium poppies or the seventy-two refineries on the Chinese mainland! Instead, *Times* names Turkey, Burma, Laos and Thailand as the main production areas! Even while reporting on a U.S. Narcotic Squad raid which uncovered a twenty-pound cache of pure white heroin worth ten million dollars, the "source" of supply is vaguely referred to as "South East Asia"!

Time Magazine does reveal some 560,000 citizens of the U.S.A. as being enslaved to drugs—ten times higher than in 1960 and double the number addicted in 1970! *Time* estimated the U.S. drug addict as spending $8,000 a year supporting his habit; that there is a drug-oriented community in New York City alone, with fifty percent of all crimes in New York being related to narcotics! New York City recorded 1205 deaths from narcotics in 1971, 237 of them being teenagers. *Countdown* (Canada) of January 1973 recorded 550 babies in New York hospitals as suffering narcotics withdrawal after birth, although officials estimate that a more accurate count might go over 2000. Additionally, while two-thirds of New York hospitals are set up to give special care to babies suffering from heroin withdrawal, more than half of the hospitals release such babies to the care of their heroin addicted mothers! As *Countdown* concludes: "One wonders whether this society is capable of any lower form of barbarism!"

In 1971, the U.S. Bureau of Narcotics and Dangerous Drugs seized $920,200,000 worth of illegally smuggled drugs—a THREE HUNDRED PERCENT increase over 1970. Far from controlling or cutting down on the importation of smuggled drugs, U.S. authorities have noted an increase from 2000 tons annually from 1952 to 1957 to 8000 tons annually from 1957 to 1964 and to over 10,000 tons seized annually from 1964 to 1972.

Yet despite statistics, such publications as *Playboy Magazine* of September 1972 will make light of the situation by lumping sedatives and stimulants together with hard drugs! *Playboy* estimates THIRTY-FIVE MILLION Americans to be in some degree on drugs—ten million of them being regular users of marijuana and between 200,000 and 400,000 on heroin. *Playboy* claims the heroin user requires $50 a day to feed his habit, for which (unless quite wealthy) he would need to steal $100 worth of merchandise daily. Even on the basis of *Playboy's* lowest figure for heroin addicts this would require $7.3 BILLION a year in order to feed their monstrous habit!

In a somewhat "soft-soap" approach to the problem, *Time Magazine* points up that there has been a Hashish Club in London, England, since 1850; that two hundred million people throughout the world use marijuana and that 36 out of 100 educational films on drugs were "inaccurate".

"Accuracy" notwithstanding, the emergency wards of our hospitals are filled daily with the broken minds and bodies which result from drug abuse. Dr. Hardin Jones, professor of Physiology and Medical Physics at the University of Berekely in California, writing in the *National Education Program* bulletin of May-June 1971—more than one year *before* the *Playboy* article—gave almost double the number of Americans hooked on Marijuana—estimating the figure as closer to E GHTEEN MILLION, with two and a half million hooked on barbiturates—one million of them suffering permanent brain damage and another 100,000 who experience recurring hallucinations and mental confusion brought on by drugs.

Canada

While *Time Magazine* claimed Western Europe to have a comparatively small drug addicted population of about 10,000 and Canada to have only 14,000 addicts, the Royal Canadian Mounted Police have estimated the figure to be closer to 50,000 because of the national unregistered addicts.

In October of 1971, Dr. William Craig, one time director of the Non-Medical Use of Drugs Directorate in the federal Health and Welfare Department of the then existing Liberal government of Canada, became so alarmed at Canada's growing drug problem that he called a national symposium on heroin. The 80 delegates recommended that a national advisory board be set up to develop a heroin educational program.

From the outset, the Liberal Government appeared to "shy away" from the committee's recommendations, arguing that they preferred to await the findings of the LeDain Commission, due to be made public in September of 1972 and which (as of February 1973) had not yet been issued.

Meanwhile, the nation's popular magazine writers continue to publish their inadequate pieces, which, while alarming in scope, invariably fail to name the kingpins in the new Opium War on the West—Communist China. For instance *The Canadian Magazine* of February 10, 1973, claims Canada to have some 10,850 heroin addicts, the main drug centres being Vancouver on the West Coast with 5,000 addicts. Toronto with 3,000 and Montreal—another deep-sea shipping port with 1,000.

In 1968, the Royal Canadian Mounted Police estimated there were only 500 heroin addicts in Canada. By 1973, their modest estimate was 10,000 addicts plus 100,000 other "weekend users" who would eventually become completely hooked. In the same article, the Children's Aid of Vancouver, British Columbia was quoted as saying that more than one hundred of their wards would be on heroin at any given time.

Edmonton police authorities have claimed they have had as many as sixteen hundred high school students in the area on heroin, with the figure continuing to mount alarmingly. Toronto in Eastern Canada, with 3000 known addicts, have often found thirteen year old children on heroin.

And while author Paul Grescoe quotes "official" U.S. government sources as saying that much of the drugs "originate" in Thailand, Laos and Burma, he adds that three-quarters of Canada's heroin is Oriental White, brought in from Asia, by passengers on ships and planes as well as by Chinese sailors. Canadian Immigration authorities had added to this, saying that as much as a quarter of a Chinese ship's crew has been known to jump ship, apparently delivering heroin to Chinese contacts in Vancouver for smuggling across the Canadian-U.S. border.

H. F. Hoskins, former director of the B.C. Narcotic Addiction Foundation in Vancouver, in his May 12, 1972, report *Year of Decision* indicated that Canada's massive upswing in narcotic addiction became most obvious in 1964. By 1972, there were 6696 "registered" addicts in the Vancouver, British Columbia area alone.

Reader's Digest of July 1972 re-affirmed Hoskins' figures, outlining how the Western Canadian Province of British Columbia, and particularly the City of Vancouver, had the largest drug addiction problem of all Canada netting the drug pushers some $150,000,000 a year!

Contrary to *Time Magazine's* estimate of 14,000 heroin users throughout Canada, The British Columbia Medical Association itself estimates there to be 15,000 drug addicts in British Columbia alone, most having a $100 a day (or $36,500 a year) habit which is largely supported by way of shop-lifting, prostitution, bank and store hold-ups, break-ins, street muggings and petty larceny!

The *Hoskins Report* further points up Vancouver Police statistics as identifying between thirty and forty new heroin addicts per month in that city! The Vancouver Police discovered a scant 24 new users of marijuana in 1962, 411 more in 1966, 5157 in 1969 and 12,045 new users in 1971!

Commensurate with the increase in drug usage in Vancouver have been the amounts of narcotics seized in police raids, the number of drug deaths, murder of pushers due to internal double crossing, robberies, drug suicides, parole violations and drug smuggling into Vancouver jails.

Between July 1, 1971, and March, 1972, more than thirty pounds of heroin was seized in Vancouver along with 1472 pounds of hashish and 554 pounds of marijuana—all amount to 16,385 individual dose units. In 1971, Vancouver's coroner recorded 111 deaths due to narcotics plus 24 suicides attributed to narcotics. Police reported 3034 individuals having to undergo emergency treatment in hospital due to drug abuse, 335 of them being known users and 65% of them being under the age of twenty-five! Although children under the age of ten have been admitted to Vancouver hospitals because of drug abuse, no figures are recorded because of the inability to identify the type of drug taken and whether the overdose was accidental or intentional.

Needless to say, with Canada's recognition of Communist China in October of 1970 and the opening up of Western ports to ships from Communist China, the smuggling of illegal narcotics into the West became that much easier. Between so-called "diplomatic immunity", trade, cultural and sports missions, not to mention special "selected" visitors to Communist China, narcotic detection authorities could only find their work increased. Between pro-communist "travel bureaus", "arts and crafts" fronts, Maoist bookstores and Canadian-Chinese "Friendship" Associations—not to mention the "China Lobby" within Canadian Universities, keeping track of narcotic smuggling from Communist China became that much more confusing and difficult!

The Royal Canadian Mounted Police, however, were not to be daunted, deterred or frustrated for too long. On October 12, 1972, *The Vancouver Sun* carried a front page story of the smashing of a nationwide drug smuggling ring. In five major undercover operations in Canadian cities, more than 242 traffickers were picked up and held without

bail with other arrests expected. Drugs confiscated in the raids would have had a $96,000 street value if diluted with milk sugar and sold at the Vancouver going price of $15 per capsule!

The expose revealed that as far back as July of 1971, the R.C.M.P. had disclosed that "the majority of heroin distributed locally in Vancouver was arriving from the Orient via Hong Kong, and not as in the past from the Middle East via France and Montreal." Chief Constable John Fisk of the Vancouver police, in claiming that the narcotic problem had reached "epidemic proportions" throughout the entire Province of British Columbia, stated that a total of 617 persons had been charged with the possession of heroin in the first nine months of 1972 and another 151 charged with trafficking—"a huge jump from the 258 possession charges and 93 trafficking charges laid in 1971". Arrests included a number of Chinese accused of "pushing".

From Canada, Japan, Hong Kong, the Philippines and Australia, reports run parallel, inasmuch as they record drug addiction increase and more seizures of narcotics.

Vietnam

One of the cruelest hoaxes in the whole history of military strategy and international conflict was the futile, "no-win" war in Vietnam. Its cruelty was obvious not only by way of the betrayal of those in the South who fought for their survival against the onslaught of the Communist North and Viet Cong infiltrators, but in the manner in which cadres in the Free World were permitted to organize protest marches, meetings and the disruption of troop trains—all cynically in the name of "self-determination" while waving the flag of the Viet Cong and giving the clenched fist salute of international communist solidarity.

The insidiousness of the lengthy no-win conflict was further evidenced by way of the "behind-the-scenes" involvement of both the Soviet and the Communist Chinese blocs. Foremost in the Communist Chinese involvement was the supplying of arms (often disguised as American-made weapons but bearing a "made in China" stamp). More deadly was the Chinese Communist "drug war" upon U.S. soldiers. For instance, the Pacific issue of *Stars and Stripes* of November 7, 1971, quoted the Central Intelligence Agency of the U.S.A. as saying that the Communist Chinese smuggled some ONE BILLION dollars worth of heroin into the South Eastern Asian area between 1966 and 1971 and from which they netted a profit of FIVE HUNDRED MILLION DOLLARS!

Dr. Gabriel G. Nahas, professor of Anesthesiology at the College of Physicians and Surgeons of Columbia University, in his new book *Marihuana—Deceptive Weed*, writing on chemical warfare points out that the abuse of drugs among troops in Vietnam was the most overwhelming psychiatric problem.

In the Fall of 1969, he claims that 50% of the 550,000 soldiers in Vietnam had experimented with *Cannabis* preparations. He reports: "The use of opium and heroin was associated with that of marijuana in a significant number of cases." According to J. H. Kaplan, commanding officer of a neuropsychiatric team in Vietnam in 1971, the standard progression was from marijuana to *Cannabis* dipped in opium and finally to intravenous opiates and methadrine. Drug usage in Vietnam rose from 13 per thousand in 1968 to 24 per thousand in 1969.

The October 30, 1970, issue of the Argentine-English language daily *The Herald*, carried an extensive documentation of drug addiction among U.S. servicemen, which was later submitted to the U.S. Senate Committee investigating the narcotic problem among U.S. servicemen.

In effect, the story not only named Communist China as a source of opium cultivation, but revealed the appalling statistic that some 30 percent of all American officers and troops in Vietnam had used drugs and were addicted in one degree or another!

In revealing the heroin to be between 99 percent and 100 percent pure, the *Herald* documentation indicated that U.S. servicemen were sold the drugs by communist agents in Vietnam for as little as $20 an ounce. It revealed that while an average of two American soldiers died each month from the abuse of heroin throughout 1969, casualties had leapt to two soldiers dying from heroin abuse *each day* between January and October of 1970!

The newspaper claimed that while some 30 percent of all U.S. troops used drugs in 1970, the figure increased to 50 percent by 1971, with a 70–80 percent addiction in some units. The U.S. Defense Department in a December 3, 1970, release to U.P.I., stated that Bangkok was invariably used as a clearing house for the Far East drug trade directed at U.S. servicemen and channelled through Thailand at extremely low prices.

The U.S. Defense Department report revealed how "leftist" elements had infiltrated the management and staff of those hotels frequented by U.S. servicemen. One of the subversive techniques used by these "procurers" was to sell morphine-loaded cigarettes to unsuspecting soldiers who invariably became hooked through no fault of their own.

As had been charged by so many other authorities, the U.S. Defense Department report named Yunnan Province in Communist China as being the ultimate source of the opium which was then smuggled to the communist Pathet Lao or Thailand for transmission to South Vietnam by way of Xieng Khouang. As of 1971, it was claimed by this official source that some 40,000 U.S. servicemen were addicted to drugs—or twelve to fifteen percent of the total number of U.S. troops in Veitnam!

Finally, as if U.S. Defense Department news releases were not sufficient "evidence", North American television viewers of an October 13, 1970, C.B.C. newscast, were able to watch in stunned horror as a group of U.S. soldiers openly used morphine in front of the cameras!

Japan

Before World War II, drug addiction in Japan was comparatively unknown. Today, Tsuxia Sugawara of the Japanese Narcotic Control Committee reveals that the Chinese Communists, as the world's largest opium producers since 1964, smuggle 3000 TONS of opium and opium products into Japan each year! On the streets of Japan, this is worth more than 60,000,000 *yen* (One million, nine hundred and twenty-three dollars).

This charge is further documented in *Red China's Dirty Drug War* by Richard L. G. Deverall. His research was obtained while Deverall was a representative of the A.F.L.'s Free Trade Union Committee visiting Asia. The charge is also found in the Congressional Record of June 18, 1970, (page E5741) when Commissioner Angslinger spoke before a U.S. Senate Judiciary Committee giving evidence of Communist Chinese drug smuggling into both Japan and the U.S.A.

Australia

Stuart Griffin, in a report from Tokoyo to *The Australian* of May 24, 1965, titled Opium War On The West, claims that Australians provide the Communist Chinese with 225 million pounds sterling annually for narcotics smuggled into the country! He claims that much of the money is channelled to local communists, providing them with funds for spying, infiltration, antigovernment demonstrations, propaganda and other subversive activities. Griffin details how Chinese Communist shipments of narcotics have been found packed in wooden cases labelled: "Important Export—Inspection Forbidden!" These are shipped direct from Communist China by The Special Local Products Sales and Transportation Bureau—which is listed in Chinese Communist directories as an agency of the Chinese Communist Government!

Africa

Free China Weekly of December 31, 1972, quotes the *Weekly Review* as reporting quantities of opium and other drug derivatives being distributed in various parts of the African continent by Communist Chinese working on the Tan-Zam railway line linking Tanzania with Zambia. Although African leaders are reticent to speak out, the *Weekly Review* reports on the "undeniable" evidence which is causing many Africans alarm. *Free China Weekly* quotes *Human Events* as also reporting a "sudden" increase in Chinese Communist drug smuggling into Amsterdam and other ports of Holland!

European correspondent Dewitt Copp of *Human Events* is quoted as reporting that the flow of Communist Chinese drugs into Amsterdam and Holland tripled during the last six months of 1972. The December 24, 1972, *Human Events* story described Amsterdam as being a popular spot for U.S. troops stationed in Europe where heroin, morphine and codeine were readily available. The increase in drug availability and addiction was said to be parallel with the sudden increase in the number of Chinese seamen picked up by the Amsterdam police for drug smuggling. These Chinese deck hands were largely from the large Dutch merchant fleet. They were members of the Chinese Seamen's Union in Hong Kong, a strongly pro-communist union.

Hong Kong

The Chinese Communist network of drug production and drug smuggling is, needless to say, denied by Communist Chinese and their dupes and collaborating cadres throughout the Free World. Indeed, with Oriental aplomb, they will protest their innocence by declaring that there is no drug addiction in Communist China! Indeed, with opium growing a major government export; with cultivation of the poppy fields carried out by prison camp labor, the Communist Establishment would hardly encourage any measure of addiction of its own slave masses. To the contrary, a later chapter will describe the strict controls imposed upon those farmers and consumers involved in poppy growing.

Hong Kong and Japan, because of their close proximity to the China mainland, continue to provide much valuable information on Communist Chinese drug production to narcotic authorities in the Free World as well as to official committees of the U.N. Both Japanese and Hong Kong authorities have revealed that the Communist Chinese ship narcotics worth 60 BILLION *yen* into Japan via Hong Kong. Additionally, Hong Kong authorities have revealed the extent to which the drug peddlers go to cover their trails—often shipping to the U.S.A. by way of Europe, Africa and Latin America. In addition to this traffic making wide use of seamen, airline crews and military personnel, the Chinese Communist Yunnan Trading Company illegally ships an estimated 800 TONS of narcotics into Burma annually worth over 120 MILLION dollars U.S. With Rangoon as a major distribution centre it is often erroneously assumed that the opium product is grown in Burma rather than in Communist China! Similarly a Vancouver C.B.C. "documentary" on drugs showed Hong Kong as the "source" of the drug market—apparently oblivious of the size of Hong Kong which in no way could grow a fraction of the amount of drugs being peddled in North America!

From Rangoon, the Communist Chinese narcotics are smuggled into Bangkok, Singapore, Kuala, Lumpur and Djakarta for further shipment to Australia and New Zealand. The shipping route between Communist China and Cuba is another vital link in the

transmission belt as shipments are made to Cuban Communists and organizations for re-shipment and sale to pushers in Central South America. Funds raised in this manner are often channeled to revolutionary groups in Latin America. One such shipment was uncovered off the coast of Mexico early in 1972. An Indonesian language newspaper in Djakarta claimed that 10,000 TONS of Communist Chinese opium was produced annually—half of it distributed via Burma, Hong Kong and South East Asia and the other half by way of Cuba to North and Central America.

Because of the sensitive proximity of Hong Kong to Communist China and the touchy political climate existing between British and Chinese Communist officials, Hong Kong authorities know full well the extent of drug smuggling from Communist China to Hong Kong and nearby Macao. While extremely vigilant, they deal with drug smugglers only on the level of ordinary local crime. In practical effect, this means they basically deal with the narcotic receivers and peddlers rather than the Chinese Communist smugglers from the mainland.

According to a recent survey out of Hong Kong, more than 100,000 Hong Kong drug addicts spend $365,000,000 annually supporting their drug habit. Additionally, drug addiction in Hong Kong is reported to have tripled in only two years!

In the *Hong Kong Star* of January 5, 1971, Police Inspector Teng Ning, gave a more conservative figure of over 80,000 Hong Kong citizens as suffering from drug addiction. He estimated the annual amount of narcotics being smuggled into Hong Kong as ten tons of opium and four tons of heroin. Throughout 1971, Hong Kong police seized 12,500 pounds of opium, 760 pounds of Barbiton, 75 pounds of marijuana and 660 pounds of morphine—all smuggled from the Communist mainland.

The Hong Kong Bureau of Narcotics recently estimated the number of narcotic addicts living in Hong Kong to be around 180,000—more than four times the number addicted in 1955 with only 3% of them being women! In noting that only 11.8% of Hong Kong's drug addicts were under the age of 25 in the 1965 period, youth addiction in Hong Kong leaped to 49.8% in 1968—almost half of the total number addicted!

Dr. Donald F. Louble, assistant professor at Cornell University and head of The New York Drug Rehabilitation Centre, claims that 10,487 inmates in Hong Kong prisons are addicted to drugs.

While the Hong Kong Bureau of Prisons voices alarm at the growing number of young people becoming addicted to hard drugs, the August 1970 annual report of the Hong Kong Police Department indicates that many Chinese Communists living in Hong Kong are known to earn in excess of $1,500,000 EVERY MONTH for their part as narcotic pushers and vital links in the transmission belt which pours the illegal drugs out into the Free World.

The 1970–1971 work report of the Hong Kong Anti-Drug Society states that of 14,033 narcotic charges laid in Hong Kong in 1970, three quarters of them involved heroin pushing and the remainder opium. Drugs confiscated and destroyed by Hong Kong police included 8352 pounds of raw opium, 89 pounds of refined opium, 325 pounds of morphine, 18 pounds of heroin and 15 pounds of barbituates. Of the 14,033 narcotic charges brought before the Hong Kong courts, 12,584 individuals were found guilty as charged.

Typical of the charges brought was that of Tsueng Yim-ng, writer for three Communist newspapers in Hong Kong, the *Ta Kong Pao*, the *Wen Hui Pao* and the *Hsin Wan Pao*. The 1972 news release out of Hong Kong reported on members of the Hong Kong narcotic squad visiting Tsueng at his lodgings. They found a large paper tube containing morphine powder along with quantities of other narcotics wrapped in foil. Further investigation revealed that Tsueng actually was not a journalist but an active agent of the Communist Chinese!

While Shih Teih-pi, chief of the Hong Kong Narcotics Investigation Bureau, estimates that slightly less drugs were smuggled into Hong Kong in 1970 than in 1969, he reckoned that more than eleven million dollars worth of drugs have been smuggled into Hong Kong in recent years. And while drug smuggling into Hong Kong from the mainland appeared to abate during the first half of 1971 due to the combined efforts of the Hong Kong Police, the Narcotics Investigation Bureau and the Hong Kong Anti-Smuggling Squad of the Office of Commerce and Industry, the Chinese Communists soon changed their tactics and began smuggling drugs into Hong Kong via Bangkok at the rate of 100,000 pounds of brand "999" heroin per month!

Today, Hong Kong police authorities estimate that Marxist drug pushers in Hong Kong deposit more than half a million dollars a month in the Hong Kong branch of the Communist Bank of Hong Kong. The funds are used to purchase machinery from the Free World; to pay Chinese Communist agents located throughout the Free World and to fund subversive "fronts" throughout the Free World. More recently, Jolly Buganin, Chief of the Philippines National Bureau of Investigation, reported to the Philippines Congress (September 1972) that the international drug trafficking operation (of Communist China) planned to shift its major distribution centre from Hong Kong to Manila.

Additional evidence was presented at the 23rd meeting of the U.N. International Narcotics Control Board held in Geneva, Switzerland when delegates from the Republic of China (Taiwan) produced photographs published in the Hong Kong *Chen Li Pao*, a communist newspaper. Taken from a Chinese Communist movie being shown in Hong Kong movie houses, the background of several scenes showed vast areas of poppy cultivation!

The Philippines

Philippine authorities, at elsewhere throughout the Far East, have indicated growing alarm at the extent of Communist Chinese drug smuggling and a growing addiction problem among young people.

On April 30, 1966, the Philippine Senate Commission on Labor and Immigration charged that 7.2 million pesos worth of opium, heroin and other narcotic derivatives were being smuggled into the Philippines every year from Hong Kong and Singapore. The Commission reported that a special branch of a Hong Kong narcotic smuggling ring was involved exclusively with smuggling narcotics into Taiwan to corrupt the morals of the Taiwanese people and undermine the national economy and spirit.

Customs officers in Singapore were involved in a drug raid on September 19, 1972, which uncovered an illegal cache of more than 1000 kilograms of opium valued at over eight million dollars! This was discovered to be Communist Chinese grown opium smuggled into Singapore via Yunnan, Burma, Thailand and the Strait of Malacca. Singapore authorities estimate that more than 1,000 tons of illegal drugs are smuggled into Singapore and Malaysia annually—producing some 1,000,000,000 individual injections of heroin, morphine or tablet drug!

The extent of the Philippines "get-tough" policy on drug smugglers and pushers was revealed in a news story from Manila carried in the Vancouver *Daily Province* of January 16, 1973. The U.P.I. story carried a picture of a Chinese businessman living in Manila undergoing public death by firing squad because of his crime of drug traffiking. Lim Seng was one of five people found guilty of being part of an international drug syndicate operating behind the "front" of a Manila printing firm. Lim had moved from China to the Philippines prior to World War II and was a major receiver of drugs smuggled in from Communist China via Hong Kong, Singapore and Bangkok. A crowd of 8000 indignant citizens watched the public execution while others watched on national TV. In delivering a broadside against the "sick society", President Ferdinand Marcos said: "Let this be a warning to all".

While *Time Magazine* lists Burma, Laos and Thailand as the "source" of narcotics, the fact is Chinese raw opium is supplied to the Communist Parties in those countries for as little as $30 a kilogram. Besides their job of transmitting the drugs to contacts in the Free World, the funds raised are used to win support of groups and tribes who can be used in revolutionary activities.

The world then is slowly beginnig to recognize the *Communist Chinese drug war* and its devastating effects upon upon the Free World. According to a January 26, 1972, report by Dr. Peter Chapple of the National Drug Administration and Research Centre in London, England, heroin produced in Communist China is also flooding the cities of London, Liverpool, Glasgow and elsewhere throughout the British nation.

Indonesia

The Indonesian Central Intelligence Agency broke an international drug smuggling ring early in 1972 which had been supplying all of Indonesia's narcotics directly from Communist China. In October of 1972 and January of 1973, Canada's Royal Canadian Mounted Police smashed countrywide drug smuggling rings while confiscating huge quantities of narcotics believed to have come from Communist China.

If, in the face of mounting evidence, any further proof of Communist China's drug war upon the Free World is required, it can perhaps be found in the biography of the late President Gamel Abdel Nasser of Egypt by his close friend Mahammed, Editor of *Al Ahran*, Cairo's most influential newspaper. As reviewed in the Canadian *Toronto Star* of January 15 and 18, 1972, author Heikal, in quoting from Nasser's diary, tells of a Cairo meeting June 23, 1965, between Nasser and visiting communist big-wig Chou En-lai during which the latter told Nasser: "Some of them (U.S. troops) are trying opium, and we are helping them. We are planting the best kind of opium especially for the American soldiers in Vietnam."

When even Nasser indicated his surprise and perplexity, Chou En-lai continued with cynical cold-bloodedness: "Do you remember when the West imposed opium upon us? They fought us with opium. And we are going to fight them with their own weapons. We are going to use their own methods against them. The effect which this demoralization is going to have will be far greater than anyone realizes." Chou En-lai's reference was to the British East India Company trading opium for Chinese goods and services during the 1830's.

That such hatred for the West should have been nurtured for more than one hundred and fifty years is eclipsed only by the nature of the "revenge" being perpetrated upon the Free World, particularly upon young people. To understand this story then, we should perhaps investigate the history of opium in China from the beginning.

* * * * * *

PART 5—THE FREE WORLD FIGHTS BACK!

* * * * *

Throughout the Korean and Vietnam wars, conclusive evidence became apparent that Communist China actively supported the communist side of those conflicts not only by way of arms and "military advisors" but by using narcotics to destroy the minds, will and

physical stamina of U.S., Canadian, Australian and South Korean servicemen.

Part and parcel of this psychological warfare has been the soft-pedalling of the effect of drugs; the endless commissions, studies and lectures by liberal-leftist University professors demanding that narcotics be taken out of the criminal code. Add to this the glamorization of the drug cult through the news media, plays, movies and TV programs and one realizes to just wh..t extent the Cold War has intruded into the lives of millions of people throughout the world—particularly in North America where Communism sees its most powerful enemy.

In effect, this twentieth century psychological struggle is more vicious and far reaching than even the atom bomb since its victims are unaware of their involvement in the "cold war" and the slow technique of genocide being perpetrated upon them.

Thus, while the evidence continues to become more and more apparent, so the "doves" of the world continue to sing their duets of concession and accommodation. While the American taxpayer finds himself having to support massive programs to help the unfortunate servicemen addicted in Vietnam, so they also find themselves taxed further in order to repair the damages of bombing in Vietnam!

Rather than calling for the full implementing of existing laws and recommendations of the world's narcotic bureaus and enforcement agencies or Articles 55, 56 and 57 of Chapter IX of the United Nations Charter—all of which, if adhered to properly are adequate to take firm action against all drug pushers—the "bleeding hearts" of the "permissive" society would continue to make a case for the "legalizing" of narcotics; for lighter sentences for addicts and for the "rehabilitation" of criminals as being more to be sought than the protection of society as a whole.

* * * * *

Basically, we know that international treaties and cooperation concerning the production and distribution of narcotics have existed since as far back as 1925, and we know, too, that the major opium growing countries and the U.S.S.R. have consistently refused to sign any of the Treaties. These International Treaties outline measures each signing country ostensibly is committed to through its national legislative system and administration. Agencies established under such Treaties must review and publicize any instances of where the obligations are not carried out.

Obviously then, since these International controls are world-wide in nature and theoretically represents a concern for all humanity—regardless of membership in the Organization—steps should be taken by the International body and its governments to expose and condemn any nation which does not comply with the world-wide ethic concerning the evils of narcotics. Certainly, if the United Nations feels that it has the right to condemn nations such as South Africa and Rhodesia and impose embargos because of their internal policies, it should equally condemn and impose embargoes for reasons of drug smuggling!

The former League of Nations and the current United Nations have the capability and structural organization to carry out such measures if operated in good conscience for the benefit of mankind—rather than as a political arena for power, pressure and prestige. Just as Article 23 of the Charter of the old League of Nations gave that body the right and authority to overrule even the economic interest of members in the name of world opinion and the betterment of mankind, so the United Nations must be re-organized and strengthened so that it might be able to uphold the highest of ideals and ethics rather than being subject to the pressures of blocs of nations.

Along with INTERPOL (The International Criminal Police Organization) which has a highly organized special department to deal with international drug smuggling, the United Nations has several international agencies concerned with the smuggling of narcotics. There are, most importantly, the U.N. Commission on Narcotics Drugs (which replaced the old League of Nations Supervisory Commission on opium and other drugs) and the International Narcotics Control Board. Of these, the U.N. Commission on Narcotics currently has twenty-four members who are elected to a rotating term of four years. Along with submitting detailed reports on all drug production, the 1925 Treaty stated that abuse of the specific ruling called for embargoes to be placed upon the offender. This ruling has never been implemented.

The 1925 Opium Treaty was followed in 1931 by an Opium Limitations Treaty (ratified by twenty-five nations—including five opium-growing nations) and which applied to non-Treaty countries in some instances.

The United Nations International Narcotic Control Bureau (which operates under the ruling of both the 1925 Treaty and 1931 Treaty) could and should bring pressure to bear upon any country abusing the rulings of the International body. If, however, International Drug Treaties are to be abused or cynically disregarded by Treaty members or those designated to the protection of mankind, then the International Narcotics Bureau must be taken out of the ultra political atmosphere of the United Nations, the World Health Organization and all other partisan influences! Only then, working closely with INTERPOL and Narcotic Agencies throughout the world, could members cooperate with one another to control narcotic smuggling free from political pressures.

Certainly, with the seating of Communist China in the U.N. in October of 1971, in place of Nationalist China, the work of the Narcotic Agency became further frustrated, particularly since the chief delegate of the Chinese Communists was one Chiao Kuan-hua, deputy Minister of Foreign Affairs. Since the drug-smuggling Special Trade Bureau of the Chinese Ministry of Finance is directly under the command of the Ministry of Foreign Affairs, it finds Chiao Kuan-hua involved with both drug production and smuggling as well as the world body intent upon controlling it! Here, if you like, is a case of conflict of interest on a monumental scale. According to the February 1972 Report of The World Anti-Communist League, the role of the Chinese delegation at the U.N. is to infiltrate and influence the three vital U.N. agencies who are attempting to control international narcotic smuggling!

It cannot be argued that the U.N. International Narcotics Control Board is unaware of Communist China's vast opium poppy cultivation and smuggling. This was clearly and emphatically brought out at the 23rd Meeting of the Board in Geneva, Switzerland, when two Republic of China delegates, Liang Chi-kuel and Wu Yung-fa, presented photographic evidence taken from the Hong Kong newspaper *Chen Li Pao* which in turn had taken it from a Chinese Communist movie being shown in Hong Kong. The movie scene clearly showed a field of poppy flowers under cultivation—indicating that opium cultivation in Communist China was so extensive and open as to have become a common background for movie making!

That Communist China is the key to halting the world's drug addiction problem was further illustrated by Secretary-General Jean Neope of INTERPOL at a news conference in 1971 when he revealed that INTERPOL had seized 572 pounds of illegal heroin throughout 1971, most of it emanating from Communist China via Hong Kong and Thailand. A strong warning was issued to Communist China by the U.N. in 1952. Today, with Communist China officially seated in the U.N. drug smuggling has increased rather than decreased!

And so the public at large continues to grope and stumble through a fog of of confusion and cross purposes, unprotected by the people and organizations in places of highest responsibility to serve the public interest internationally. It cannot find its way through the wordy wilderness where everything and everyone is blamed for the evils of heroin—except the Chinese Communists! For instance, while an Editorial in *Time Magazine's* cover story on heroin on September 4, 1972, stated that *Time* writer James Willworth had accompanied U.S. narcotic agents on a New York drug raid involving a high level drug transaction between several Chinese Drug traffickers and a U.S. undercover agent carrying $200,000 in cash for a prearranged purchase of drugs, the magazine made no further comment or observation on this particular "connection" which resulted in New York's biggest heroin haul in 1972.

Additionally, while "researcher" Willworth claims to have travelled to Turkey to interview Turkish opium poppy growers, he makes no mention of ever having travelled to Hong Kong to interview their police or narcotic agents who have published information concerning the hundreds of tons of opium heroin being smuggled into Hong Kong for pushing in North America and other areas of the Free World. Instead, *Time's* two published maps indicate the route of the drugs as coming by way of Italy and France and as originating in the "opium producing" areas of Burma, Laos and Thailand. Neither map indicates any Chinese Communist involvement. Neither does the lengthy article contain any information obtainable from narcotic agents in Japan, Australia, Taiwan, Britain or the Philippines. Indeed, even as *Time* writer Willworth observes one of the pushers of 20 pounds of pure white heroin (worth ten million dollars on the street) he labels its source merely as South East Asia!

The Time Magazine article estimated the U.S. heroin addicted population at 560,000—ten times the level of 1960 and double the level of 1970! And while Time gives Turkey as a major opium growing area, Stefan T. Possony, Senior Fellow at the Hoover Institute on War, Revolution and Peace, points out that in recent years Turkey has reduced its poppy cultivation from 21 to 9 provinces and that all poppy cultivation was forbidden by law in June of 1971. Similarly, Iran has imposed strict bans on opium poppy cultivation, with the death penalty for violation of the nation's drug laws.

When the Australian Citizens For Freedom organization presented a brief, Trafficking in Death at a November 11, 1971, Regional Conference of the Australian United Nations Association, the report was widely distributed to appropriate organs, committees, the Federal and State parliaments of Australia, delegates to the U.S., overseas ministries, press, radio and TV, not to mention contacts in North America.

Unfortunately, the doves and dupes of the liberal-left who appear ensconced solidly in much of the news media, have successfully managed to ignore the story. Just as the truth of the Hungarian Uprising in 1956 was successfully glossed over; just as the communist uprising at Havana University was lauded as a struggle for agrarian reform, with long-time communist Fidel Castro as their knight in shining armor, so they have managed to ignore or bury Communist China's drug war upon the West.

Certainly, the news media, rather than sensationalizing the effects and results of heroin addiction and pushing, would serve the public better by identifying the sources and exposing the motives of those who would wage a secret and horrifying war upon mil-

lions of unsuspecting citizens. If the free press of the western world continues to avoid the facts behind the surface manifestations of the drug trade, the Free World can only flounder helplessly while the foundation of its society is slowly destroyed. Parents will continue to see their sons and daughters change from keen students to dull-eyed freaks devoid of ambition, hope or dignity. Degradation of youth of the democracies will go on to serve the Communist end of ultimate triumph using weapons more deadly than those of violent war.

In the final analysis, only a vast public outcry and effectual action by the political leaders of the United States and Canada and action by the designated agencies of the United Nations can change the course of North America's internal destruction by narcotics and their hideous accompanying evils. Only public indignation and full cooperation with police authorities will bring to bear the necessary exposure of the source and cause of our current drug problem. If we don't, the evil can only spread like a fatal, fast-spreading cancer.

PART 6.—TYPES AND BRANDS OF CHINESE COMMUNIST NARCOTICS

OPIUM

138, Sun-feng, Hung-tiao, Red Star, South Pole, Silver Tripod, 139, Laopeikou, Kang-fu, Golden Pheonix, Golden Elephant, Earth, Ginseng, Ta-chen, Sung-po, Sailboat, Red Gold, Race Dog.

MORPHINE

Tsai-feng, Chin-yin, 999, Red Lion, Silver Dragon, Black Chicken, Huang-shang-huang, Golden Deer, Lung-tzu, Camel, Hsiung-chi, White Dragon Pearl.

HEROIN

North Pole, Lion Ball, Goldfish, OK, Red Gold, Champagne, Hsiang-nan, White Rose, Ying-ting, Golden Deer, AAA, Tsai-huang.

Opium growing areas and refineries in Communist China

Province, number of farms, and refining factories:

Sinkiang, three, one.
Kirin, one, one.
Tsinghai, four, _____.
Sikang, two, one.
Ninghsia, three, _____.
Szechwan, seven, two.
Kansu, twelve, _____.
Chahar, three, _____.
Kweichow, three, one.
Yunnan, twenty-five, two.
Kwangsi, eight, _____.
Hainan, four, one.
Shensi, sixteen, one.
Shansi, six, one.
Hopeh, five, ten.
Honan, six, two.
Hupeh, seven, two.
Hunan, eight, _____.
Kwangtung, twenty-nine, four.
Kiangsi, six, one.
Chekiang, six, two.
Kiangsu, five, four.
Anhwei, eleven, _____.
Jehol, three, three.
Liaoning, eleven, five.
Antung, ten, one.
Heilungkiang, one, _____.
Total, two hundred seven, forty-six.

Points of exit for drugs from Communist China

(from West, South, East and North China)

Loshan, Tingri Dz, Wanting, Yulin, Shechuan, Wenchow, Wusungkou, Weihaiwei, Wahan, Yatung, Cheli, Samkong, Swatow, Ningpo, Lienyun, Dairen, Gartok, Lungchow, Pinghsiang, Chungshan, Amoy, Shanghai, Tsingtao, Moho.

HOW TO BE ETHICAL IN AN UNETHICAL WORLD

Mr. LUGAR. Mr. President, during the 95th Congress there has been much attention focused by this body and by our colleagues in the House of Representatives on the subject of ethics—personal and public.

To contribute to this important dialog, may I call our attention to a fine address by Walter F. Beran, a partner in Ernst & Ernst, one of America's major accounting firms. Mr. Beran's remarks were delivered at the town hall meeting in Los Angeles, and I feel they deserve wide recognition for their perceptive analysis of an issue that is crucial to the future of the Republic.

I ask unanimous consent that portions of Mr. Beran's address—entitled "How To Be Ethical in an Unethical World"—be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

HOW TO BE ETHICAL IN AN UNETHICAL WORLD

(By Walter F. Beran)

How to be ethical in an unethical world? Perhaps no question more deserves the concerned attention of thoughtful people today, for indeed the stakes are high! Our cities are dimmed by human tears, by violence, crime, corruption, pollution, smog, blight, and fiscal bankruptcies. Our entertainment and much of our literature have become corrupting influences. Our national life is poisoned by sewers of pornography. Indictment and imprisonment have visited the highest officeholders in the land.

Businessmen engaged in clandestine corporate payments . . . lawyers violating the laws and going to jail . . . accountants making unreal business transactions look real . . . doctors dishonoring their Hippocratic oath by experiments with dangerous drugs on unsuspecting patients . . . the catalog is endless, and it is pervasive, touching both young and old, rich and poor, the leader and those led.

Certainly, the need for an ethical imperative is primary. So, let's see what that ethical imperative might be.

In an editorial on June 6, 1975, entitled "The Ethics of Business," the Los Angeles Times stated, "American citizens have chosen to make corporate enterprise the economy's prime vehicle for growth, income, and jobs, and they have ample right to expect the best conduct from corporations in return for this broad commitment."

This point of view was reinforced by SEC Commissioner John R. Evans in an address entitled "Truth Or Consequences": "It is argued that even though a corporation detests and condemns such conduct, it becomes a necessary evil because, if the corporation does not engage in such activities its competitors will, and thus the corporation will lose the business. If such an attitude pervades the corporate community and dictates methods of doing business, it results in a situation where the competitor who engages in the most unethical or immoral conduct thereby sets the business standards at the lowest common denominator."

Price-fixing, payoffs, deceit, white and blue collar crime, surreptitious and clandestine acts, shoddy products, sloppy and slothful effort are inimical to a free society.

Yet, I find it most grievous that corporations and corporate executives are vilified, indicted, and imprisoned for violation of laws long ago enacted, but never enforced until enforcement became fashionable and politically expedient. To enact a law and lack the will to enforce it is a fraud upon the citizenry. For, it is not the law, but what is permitted under the law, that becomes the practice of the average citizen. If illegal payments aren't prosecuted, they become accepted as permissible, and soon almost everyone makes them.

When politicians, public officials, and regulators decry illegal political payments, not only when such payments were obvious to them all along, but indeed when many of them were the very recipients of such payments; when the practice of using foreign agents and consultants has had not only the implicit and explicit approval, but also the encouragement, of agencies of the government—I find such masquerading, such Pharisaical, self-righteous, political pontifications, such retroactive judgments, a hollow mockery of the tenets of responsible government. Except for the dances of the young, it still takes two to tango—and so it is with political payments.

While business and businessmen had better get down to the serious business of building a better mousetrap and providing a superior service—and doing it devoid of deceit—politicians and public officials likewise had better accept their servanthood responsibilities and recognize that political expediency is inimical to public service.

If the family, the schools, society, and the church aren't going to issue a call for high moral or ethical standards, then business must. Otherwise, commerce will become a veritable jungle and so will the rest of society.

Indeed, as a matter of self-interest we need to be our brother's keeper. We have reached the point of economic and other limits. Certainly our geographical frontiers are gone, our spaceship earth is becoming overcrowded, and everyone is rightfully wanting to improve his place under the sun. Certainly, the consequences of being ethical or unethical with one person to an acre are quite different from those of 1,000 to an acre. Indeed, the last frontier available to us is the frontier of ethical reserve.

No longer is it—if it ever was—a matter of when in Rome doing as the Romans do. It's a matter of our personal ethics—yours and mine—for in the final analysis, ethics is a matter of what we are, all the time; not where we are, and not what the other person's ethics might be.

There is no escaping the fact that the essence of an individual is his ethics. The more he seeks an ethical path, the more he mirrors the genius of his Creator—the potential of his humanity—of one who is fearfully and wonderfully made. On the other hand, the more he treats ethics with scorn or indifference—with a Cain type of rationalization—the more like the jungle animal he becomes.

To suggest that Americans and American business must submit to less-than-desirable practices in order to do business in foreign countries, while submitting to ethical conduct at home, is totally inconsistent, absurd, and beneath comment. Ethics transcends circumstances. An ethical man is on his good behavior when he is away and not just when he is at home; and so it must be in business and in whatever and wherever humans deal with one another—and that includes the halls of government.

Let's recognize that there is no such thing as a close tolerance between the acceptable and the unacceptable, between what's permissible and what's preferable; that 2 plus 2 still add up to 4, not only in accounting, but in your business and mine, and in everything else in life; and that it's doubtful that anyone will ever come up with a substitute

for the Ten Commandments as a fundamental guide for business or personal ethics.

Even if we can't gain an agreement on a standard of ethical behavior, we can at least generate understanding that illegal and unethical actions are not only wrong—but that they are counter-productive.

But the question is: Where does this leave you and me as individuals? How can one be ethical in what seemingly is an unethical world? Let me suggest what I would do.

I would perceive the moment. Perceiving the moment has always met with an enlightened response by private enterprise. It has always filled the gap by meeting the need demanded of it. Today the primary demand is one of moral expectations. Hence, I would recognize that, while society's passion for dedication may be contaminated by selfishness, laziness, and inconstancy, its ardor for the other fellow's dedication is pure and undefiled, and that today it expects a high standard of conduct from all who would serve it.

So, I would perceive the moment. The natives are restless and they are ready to fry anyone dealing in hanky-panky.

I would believe. For what people believe to be true and important determines the quality of their lives as individuals and as organized groups . . . and that's not rhetoric; that's the gospel truth.

I would believe in the reality of God. Unless a man believes that there is a reality beyond himself to whom he owes the ultimate responsibility, his life will be fraught with ethical compromises. Believing in the reality of God, I must then believe in another fundamental; namely, that all men are of one family, that the highest reaches of mutual concern and respect cannot be achieved unless there is a prior acceptance of kinship. Embracing this, then any act which would put another human being at a disadvantage would be strongly inconsistent and despicable as well.

And, if I believe that men are of one family, then it follows that *I would empathize,* for in the deepest sense ethics are the attitudes and rules we follow in dealing with one another.

And, empathizing includes a disposition toward helping each other.

Somehow in the urbanization of America, in the institutionalization of welfare, we've lost the sense of helping. But it need not be so—we can still reach across—stretch out—and find our greatness, and we can do it short of dulling our competitive edge or compromising on excellence.

Periodically, *I would re-examine myself.* I would get away to the mountains, or the beach, or the garden, or the quiet of my own room, and I would contemplate my values: "Who am I, what am I doing, where am I going?" Search out what your values will be. You'll be prepared to make the ethical choice when the tough decision has to be made. Don't wait until the moment demands it to decide what your value will be. That's too late! And, if you don't have a garden where your house is, then steal away to the garden of your mind.

I would maintain viability. I would keep my options open. Keeping one's options open requires distinctiveness in personal attributes and vocational ability; it requires a constant modifying, a readiness to change and move with the current. It's deciding where one goes from here. And, keeping our options open means fitting ourselves for the constant reeducation necessary to play continuing, changing, useful roles—that we don't find ourselves pressed into an unethical decision because of the insecurity of having no other job or role in life to play.

I would avoid compromising situations and seemingly innocent beginnings. There are many: gambling, conflict-of-interest possibilities, keeping up with the Joneses, romantic peccadillos, highly leveraged investments, to name but a few. The garbage dump is littered with the wreckage of tax shelters which mirror the avarice and greed of most of us—which now leave us holding the economic bag that needs refilling. But how is that bag to be refilled? From what source? Too often, the temptation is to find a quick remedy which puts at risk our personal ethics.

I would avoid becoming an economic parasite. I would be involved in the issues of the greater society, those beyond the immediate confines of my business or profession, those in which the public-at-large has an interest. I would not be a Pharisee, caught up in the repetition of the profit creed, without relating it to what the public conceives as its interest. To do so is simply to be fanning the wind. And if I am not going to be an economic parasite, I can't be running to society—to the government—to bail me out simply because things get tough. For, as Dr. Rhodes Boyson, British member of Parliament and author of several books on classical liberalism, said in a press interview: "Trying to have a free enterprise system without bankruptcy is like trying to have Christianity without hell."

If we are in the business of producing goods and services, and our income is dependent upon people who seek out the best buy they can get, and who are free to choose who gets their patronage and their money, then income becomes a pretty good measuring stick of how well we meet the needs and demands of society.

And if we're proud of profit, let's communicate the economics process to *all* the members of society, so that they understand that "the economic process is what transforms the limited resources of society into goods and services; that the foundations of productivity cannot be taken for granted; that companies are mortal—many die each year; that technological programs and fluctuating consumer needs are relentless taskmasters which punish companies and whole industries that do not keep pace; that business vigilance, perpetually exercised, is essential to the survival and nourishment of economic productivity, to social improvement, and to world stability."

In a similar fashion, I would strive to effect a partnership between government and business. For, if ethics is our primary imperative today, then government-business cooperation is a close second. If we believe greatly in ourselves, in what we do, and how we do it, then it's imperative that we take the time and devote the energy to finding a common vehicle for resolving the great issues and problems of today.

Lastly—it is last because it is so poignant—it may well be the only effective deterrent to unethical behavior . . . lastly, *I would keep uppermost in my mind the historical reality of revelation.* Good deeds may go unnoticed by everyone except God, but bad ones always seem to have an uncanny way of surfacing, of being found out—and certainly the conscience of our mind never lets us forget. The Watergate burglaries, which some might have viewed as mere minor political peculations, once revealed, crumbled a powerful president at the moment of his greatness. If that can happen to presidents, then certainly it can happen to lesser mortals such as we. We should therefore want to avoid doing anything in secret that would be embarrassing or harmful if revealed.

Can we be ethical in an unethical world? I believe we can.

Despite the morass some depict us in, there are conscientious doctors, businessmen of integrity, accountants who "call 'em as they see 'em," lawyers who serve justice, honest public servants, devoted teachers, happy marriages, loyal and industrious employees, clean-living young people, and communities living in peace and order. They are the many, not the few.

Despite corruption, and compromise, and conspiracies seemingly in every corner, I believe we can!

I don't hold with those prophets of doomsday who claim people are no good and that we're rapidly approaching Armageddon. I don't hold with those cynics of despair who say, "It doesn't really matter."

. . . To the contrary, I hold with those who say, "It really *does* matter"—that we must and can find a way to resolve the greater issues of life; that *one can be ethical in an unethical world.*

TRIBUTE TO DR. ALICE PAUL

Mr. BAYH. Mr. President, I rise in tribute today to a very special courageous woman who passed away on July 9. Alice Paul was a special symbol to the women in America. As an early feminist, her fight for women's suffrage and equal rights for women left a legacy which will not soon be forgotten. Many of those who wished to honor this great woman gathered yesterday at the National Cathedral to pay tribute to her memory.

Alice Paul and her work had a very special meaning for me, Mr. President, since I was the Senate sponsor of the equal rights amendment. As the original author of the equal rights amendment, Dr. Paul died sadly before she could witness the last three States ratify the 27th amendment to the Constitution.

Dr. Paul's early life was dedicated to women's suffrage, the results of which gave women the right to vote with the ratification of the 19th amendment on August 26, 1920.

During the 1920's Dr. Paul earned three law degrees from American University, quite an accomplishment for women in that era. She also earned a master's degree and a doctorate at the University of Pennsylvania. A relentless advocate of women's suffrage, Dr. Paul moved to Washington in 1912 where she organized parades and demonstrations to bring to the attention of the Government and the general population that women were being treated as second-class citizens. As a result of her efforts she was imprisoned, went on a hunger strike and was force fed while in prison.

These experiences did not deter her efforts as she founded the National Women's Party in 1913. It has been the National Women's Party that has made sure that the equal rights amendment was introduced in each session of the Congress from 1923 until its passage in 1972. It was the National Women's Party, under the direction of Dr. Paul, which organized the silent vigils outside the White House to urge President Wilson's support for women's suffrage.

Dr. Paul was not only a leader in the women's movement in the United States but in the worldwide women's movement. She was certainly ahead of her time when she lobbied the League of Nations to include a reference to sex in the preamble to the United Nations Charter, which commits member nations to:

Save succeeding generations from the scourge of war . . . to reaffirm faith in fundamental human rights, in the dignity and

worth of the human person, in the equal rights of men and women and of nations large and small, and . . . to promote social progress and better standards of life in larger freedom.

Although the women's movement, and those of us working for women's equality, will miss Dr. Paul, not only as moral support but as a living symbol that progress can be made. We will go on, as she would have done, working and striving for the day when women will receive the equality of treatment.

CAPITAL FORMATION: A BUSINESSMAN'S VIEWS

Mr. PERCY. Mr. President, Reginald H. Jones, chairman of the board of the General Electric Co., made an address to the American Assembly of Columbia University that should command our attention.

We have heard a great deal from economists and politicians in recent months about the existence or nonexistence of a capital formation shortage, but considerably less from those whose day-to-day work is affected by this factor. Mr. Jones also serves as chairman of the Business Roundtable Committee on Taxation and as a vice chairman with AFL-CIO President George Meany on the President's Labor-Management Advisory Group, both of which give him added insight into this problem. His speech, "Capital Formation: A Businessman's Views" gives us this perspective, in straightforward and concise terms.

Earlier this year, the distinguished Senator from Minnesota, Senator HUMPHREY, and I introduced the Investment Policy Act of 1977. The purpose of this legislation is to lift our Nation's capital needs to the same level of attention and concern given other major factors in our economy. The fact that we are unable even to agree that a capital formation problem exists is one of the single greatest arguments in support of this proposal. As Mr. Jones points out:

> The problems that require increased business investment—unemployment, inflation, energy problems, international competition, cities in trouble—these problems are here now, and we cannot forever postpone the changes that will improve the climate for investment.

Mr. President, I ask unanimous consent that the full text of "Capital Formation: A Businessman's Views" be printed in the RECORD and I commend it to my colleagues.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CAPITAL FORMATION: A BUSINESSMAN'S VIEWS

(By Reginald H. Jones)

We are all grateful to the American Assembly of Columbia University for the initiative that put together this distinguished symposium on capital formation. And of course I am honored by the invitation to be one of the evening speakers.

Reading the background papers, I noticed that there was wide disagreement among the economists as to the nature of the problem, or whether there really is a problem; and everyone seems to have his own pet solution to the problem or non-problem, as the case may be.

So I think it best to present my qualifications and limitations right at the beginning. I am a businessman, not an economist. And like many of you here tonight, my view of the issue is a highly pragramatic one, growing out of the need to make investment decisions affecting our company—and our country—five, ten, or twenty years from now.

CAPITAL NEEDS

The question is this: Will business in the United States be able to make the investments required to meet the nation's needs and aspirations? And if not, how can we restore the climate for vigorous and productive business investment?

Many studies have been made by respectable economists of many persuasions, to examine this problem. Some, including General Electric's, see the needs outrunning the ability of business to fund them, unless we have changes in national policy. Some say we can meet our capital needs—just barely—provided we reach full employment and federal surpluses in the next three or four years.

Still others say there may be nothing to worry about. Our market system always provides the funds for projects that are really worth doing, and lets the rest go undone. The question, of course, is what we want to leave undone. What national objectives are we willing to forego: full employment? environmental clean-up? greater energy independence? expansion of our basic industries? expansion of our export trade? productivity improvement? restoring the cities? All these require *increased business investment*.

Some economists point to the notoriously unreliable figures on unused capacity and say that we may even have overinvested in the past. This is a temporary illusion. As any businessman can tell you, much of that so-called unused capacity is obsolescent and noncompetitive. Much of it was built in the days of cheap energy, and will have to be replaced by energy-efficient equipment. Much of it will not meet today's stiff environmental standards and will have to be modified or replaced. All this takes capital.

Furthermore, there seems to be no recognition that our energy and raw materials supplies are becoming much more capital intensive as we use up the richer and more easily available sources. It takes far more tons of ore to produce a ton of metal these days, and that takes capital. It takes far more capital to bring oil out of the Arctic than it does to drill a hole in Texas. It takes far more capital to build a nuclear power plant than a simple oil-fired plant. And we haven't even considered the capital costs of developing synthetic fuels or solar power or the hydrogen economy. As our technology develops, we need materials that do not exist in nature—engineered plastics and materials with special characteristics. These require huge capital investments. The world can solve its limitations of energy and raw materials, but this will require capital.

Regardless of what our more optimistic economists may say, businessmen know from daily experience that our capital needs are increasing and the means and the incentives to meet those needs are declining. So there is a growing consensus that something must be done to assure a high and sustained level of business capital investment. This can no longer be taken for granted.

Rather than take you through one more set of projections into the 1980's—these are all subject to legitimate question and debate—let me, instead, deal with three topics tonight.

First, the universality of this problem of capital formation. It is not confined to the United States, but is common to all the industrial democracies.

Second, the problems facing business executives today when they try to make their capital investment decisions.

And third, the basic options available to this country with respect to capital formation.

PROBLEMS OF INDUSTRIAL DEMOCRACIES

First, the universality of the problem.

The world is emerging from the worst inflation and recession in the past quarter century. We made it—but not without damage. In spite of the good pace of recovery, virtually all the industrial democracies are now plagued by relatively high rates of inflation and unemployment.

This is very perplexing because the stimulative policies by which governments traditionally reduce unemployment would only make the inflation worse; and inflation, as we know, stunts investment and growth, and produces even worse unemployment. So governments are obliged to walk a very narrow tightrope with inflation on one side and unemployment on the other—and an angry public threatening to cut the rope and drop them out of office if they don't come up with solutions.

What can be done? Some governments have clamped controls on the economy, trying to nullify the laws of economics and force wages and prices to hold still. Our experience with economic controls in the United States, most recently in the early 1970's, indicates that this is counterproductive. Pressures built up and distorted the economy in many damaging ways, and most people feel that the ensuing inflation and recession were actually intensified by President Nixon's ill-fated program of controls. Let's hope we do not again resort to such destructive controls, or their innocent-appearing equivalent, an "incomes policy."

The most effective way to combat inflation and unemployment is to encourage business investment in new technology, new equipment, and new business ventures. This fights inflation by increasing productivity and industrial capacity, so that supply can match demand. And it increases employment by stimulating the whole economy, making it more productive in real terms, and providing the added capital equipment that is a necessary prerequisite for industrial jobs.

THE LAG IN CAPITAL INVESTMENT

Most government policy-makers know this, and they are hopefully waiting for the capital investment boom that normally follows a consumer spending boom—the traditional sequence of events in a recovery period. But it's not happening. Businessmen around the world are not investing.

An article in *Business Week* last month reported that, "In the United States, capital spending is still running some 9 percent below the peak reached more than 2½ years ago, in the second half of 1973. In Japan, capital spending is some 24 percent below the rate of this later 1973 period. In the four major industrial countries of Western Europe—Germany, Britain, France, and Italy—the shortfall is some 11 percent. And if the United States seems to be mounting the most successful capital spending recovery of any of the advanced countries, growth in *it* is slower this year than in any of the five earlier postwar recoveries."

Why is this?

Businessmen are not holding back out of cantankerousness. They are not investing because they do not have, under today's conditions, either the confidence or the incentives to invest.

DECLINING PROFITABILITY

Consider the prospects that face the U.S. businessman today. (See Chart 1.) The profit figures this year look very encouraging compared with the depths of the recession, but there has been a basic, long-term decline in corporate profitability. Reported profits *after* taxes fell from 5.4 percent of GNP in 1965 to

3.7 percent in 1975. Bad enough, but Chart 1 shows what happens when you adjust for inflation. Removing phantom inventory profits and underdepreciation, we see that profits after taxes have actually dropped from 5.3 percent of GNP in 1965 to a disheartening 1.6 percent in 1975. Preliminary indications are that this ratio will rise to about 2 percent this year, a year of strong profit recovery. Hardly enough to trigger a capital investment boom.

Or consider the incentive aspect. Chart 2 shows how return on investment has deteriorated. Adjusted after-tax profits expressed as a percentage of the *replacement* cost of the stock of plant, equipment, and inventories have plummeted from 9.9 percent in 1965 to 2.4 percent in 1975. This is the real return on new investment in industry today, and it is not much of an incentive for further investment.

Underdepreciation has also been a major depressant of the funds available for investment. Because capital recovery allowances are based on historic original costs rather than the inflated cost of replacing obsolete plant and equipment, the Commerce Department estimates that industry was shortchanged by as much as $21 billion in 1975.

With internally generated funds declining, industry has turned to outside sources for capital funds. There, as you know, the choice is either to issue new equity shares or go into debt.

DEBT VS. EQUITY

As indicated on Chart 3, over the past twenty years, new equity shares have provided only 3.5 percent of the total new funds raised by non-financial corporations. New debt, on the other hand, has been used to meet a growing share of corporate financial needs, averaging 42 percent during the past five years compared with 33 percent during the first half of the 1960's. Why the preference for debt?

For one thing, with profit margins and return on investment declining, savers prefer to lend their money instead of risking it in equities that offer a small and uncertain return. But there is also strong bias in the tax structure. Interest and dividends are both costs of capital—fees paid to people for the use of their savings. But interest is tax-deductible, and dividends are not. Hence the tax structure is pushing corporations into debt.

As the result of the excessive debt and the drying up of internally generated funds, corporate balance sheets place greater restraints on corporate investment. Chart 4 shows that in 1955, the liquid financial assets of the non-financial corporations were 63 percent of their current liabilities. By 1965 that ratio had fallen to 41 percent, and by 1975 it was down to 32 percent. The recovery in profits this year and next is going to improve that picture temporarily. But in 1978 to '80, as profits level off or even fall, and capital spending continues under prior commitments, we can expect the long-term liquidity problem to reassert itself.

WILL NEEDED INVESTMENTS BE MADE?

In these circumstances, can we expect that corporations are going to make the risky long-term capital investments that some economists so confidently expect? Inflation has eaten into their real capital and reduced their real return on investment to very uninspiring dimensions. Debt capital is available today, but most executives and directors remember the recurrent periods of tight money supply. Will they be willing to risk their bond ratings and go even deeper into debt, when they should—in all prudence—keep some cushion in their debt-carrying capacity, to get through future credit crunches and liquidity crises? And with the threat of above-normal inflation and further adventures into price controls, can they count on recovering the costs of a risky investment in new technology or expanded facilities? Or can they hold off, and make do with what they've got? These are the real questions faced by businessmen today, and their individual decisions just might not add up to the level of capital investment so confidently expected by our more optimistic economists.

This is why we say that, regardless of the theoretical arguments presented to prove that there is no capital formation problem, a problem does exist because the individual business managers simply do not have sufficient means or incentives to make the needed investment decisions.

One is reminded of that wonderful bit of nonsense:

"As I was going up the stair
I met a man who wasn't there.
He wasn't there again today.
I wish, I wish he'd stay away."

The problem is there, appearing and disappearing in the dips and rises of the economic cycle, and it will not go away until some changes are made.

OPTIONS

Let's examine the options.

Can we let things drift, and settle for a low-investment, low productivity economy if the needed investment is not forthcoming? That might satisfy our zero-growth advocates, but it would not satisfy a public that rightly expects advancing standards of living—particularly those who are still in the back of the economic bus.

Can we count on the old Keynesian formula—stimulation of the economy through increased government spending and putting more people on the public payroll? No, we are too far down that road already.

Hudson Institute Europe recently completed a study of 19 industrialized nations in Europe, North America, and the Pacific, and the conclusion is this: the larger the public sector of the economy, the slower its real growth. There are other factors besides this to account for differences in growth rates, but this study strongly supports the proposition that large and growing public spending actually causes slower economic growth. The reason is basically that government growth crowds out productive private investment. This and other studies suggest that the toll taken by the expanding government sector in Western industrialized countries has been massive—cutting attainable growth rates by as much as one-third in the past fifteen years.

One would hope that these lessons will not be ignored, and we will have the courage to reverse the tide toward ever-increasing government takeover of the economy.

From those who accept the seriousness of the capital formation problem—and I believe these are in a majority today—there have been many proposals for action. Some have been quite utopian, looking to a drastic and revolutionary revision of our tax system. These proposals deserve thoughtful study, but besides the political problems involved, I think it would be best to look before we leap. There may be unexpected side effects that would nullify the original intention, and just possibly overwhelm the world's most productive—and most intricately balanced—economic system.

MODEST PROPOSALS

To improve the climate for investment quickly—in time enough to help solve the problems facing our country in the years immediately ahead—we might take a few modest, politically practical steps.

First we should try to restore some of the purchasing power that has been lost by both individuals and business firms.

Individual families are boosted, by inflation, into ever higher income tax brackets. The government is getting an unlegislated tax increase every year. That money should not be spent on new or expanded government programs. It should be returned to the working people who earned it, in the form of further individual tax cuts. This will provide economic stimulus where it is needed—in the private sector.

And business also has had its purchasing power cut and its effective tax rate increased, through the effects of underdepreciation. This money, too, should be returned to the businesses that earned it rather than provide an annual windfall for our tax-hungry government. The Congress should legislate a capital cost recovery program which will allow producers to adjust their depreciation or capital allowances to compensate for the ravages of inflation. This has already been done for inventories by allowing LIFO accounting, so why not also for capital cost recovery?

Another step is to eliminate the bias against new equity by making dividends deductible to the corporations, just as interest is deductible today. This too would have to be phased in to minimize the revenue impact, but it would have a powerful effect in stimulating our equity markets, and would bring the debt-to-equity ratios of American business back into a much more healthy balance.

Other changes would be helpful. We should have more rapid cost recovery for government-mandated pollution control expenditures. The threat of economic controls, a source of great uncertainty in investment decisions, should be decisively removed. Regulatory bodies should concentrate on ways to accelerate, not slow down, the use of new technology. Inflation—the greatest single source of business and consumer uncertainty—must be brought under control at its source, which is excessive government spending.

But most important of all is the will to address this challenge of capital formation. The problems that require increased business investment—unemployment, inflation, energy problems, environmental problems, international competition, cities in trouble—these problems are here now, and we cannot forever postpone the changes that will improve the climate for investment.

For too long, the nations of the West have been eating their seed corn. Now it is time to replenish our stock of capital, build up our productive resources, and take thought for the morrow.

If our leaders have the courage to ask this of the people, I am sure they will respond—with a fervent and resounding, "Yes!"

LAW OF THE SEA CONFERENCE

Mr. STEVENS. Mr. President, Ambassador Elliot L. Richardson delivered an address yesterday following the conclusion of the current negotiating session of the Third International Conference on the Law of the Sea. Ambassador Richardson's remarkably candid statement documented the gloomy prospects for a successful conclusion of that conference.

The description which Ambassador Richardson portrayed of the new Law of the Sea text is most distressing to those of us who have followed the Law of the Sea Conference for many years. In Ambassador Richardson's words:

The substance of the text on this issue (deep sea bed mining) and the lack of fair and open process in its final preparation (meaning the text) require me to recommend that the United States undertake a

most serious and searching review of both substance and procedures of the conference.

The failure of the Law of the Sea Conference to resolve the contentious issues related to deep seabed mining should not be taken as a reflection of Ambassador Richardson's prowess as a diplomat. To the contrary, Mr. President, Ambassador Richardson has provided the United States with the finest representation that we have ever had at the Law of the Sea Conference.

Ambassador Richardson's statement has provided the American public with its first open and candid assessment of the progress made at the Law of the Sea Conference. It is self-apparent from Ambassador Richardson's statement that the United States must reevaluate its position on that international negotiation. It is time the Congress of the United States met this contentious and difficult situation head on. We must assess the problem of deep seabed mining and pass unilateral legislation which would allow American industry to exploit the resources of the deep ocean bottom. An American deep seabed mining industry which landed its ore in the United States would reduce the reliance of the American economy and our defense systems upon the importation of strategic minerals from foreign nations. Deep seabed mining is an issue of strategic national importance, as well as economic freedom of the seas.

The newest Law of the Sea Conference text, according to Ambassador Richardson, would not give the United States a "reasonable assurance of access" to deep seabed mining resources when it is needed. The United States cannot accept a Law of the Sea Treaty in which we are not guaranteed access to strategic minerals which we vitally need. Further, the present treaty could be interpreted to mandate joint ventures with Third World nations. If the United States is to spend billions of dollars developing a capability to mine the deep seabed's strategic minerals, we cannot place ourselves in the position where we will be forced to conduct our mining operations in cooperation with foreign nations, who could prohibit the landing of those resources in our country. We must have the right to mine, and control the disposition of, strategic resources of the deep seabed.

The new text also provides that an artificial limit on seabed production may be established. Not only would this make financing of operations difficult for artificial control of mining operation, will reduce profit levels to the point where investors would not care to participate in deep seabed mining, but it is also antithetical to the United States defense interests. If the United States is to rely upon deep seabed mining operations as a source of supply for strategic minerals, we cannot allow a cartel of lesser developed nations to dictate to us how much of that strategic mineral we can mine. Minerals needed to maintain the defense readiness of the United States cannot be placed under the control of a cartel of foreign nations.

Mr. President, to date no deep seabed mining bill has been filed in the Senate. Congressmen MURPHY and BREAUX, however, have seriously been evaluating deep seabed mining legislation in the House. I would commend Congressmen MURPHY and BREAUX for their foresight and urge the Senate to develop, as soon as possible, unilateral deep seabed mining legislation, which would allow deep seabed mining corporations to conduct their operations under conditions which are economically sound and consistent with the defense needs of the United States.

Mr. President, we all share a great concern for the future of the Law of the Sea Conference. That negotiation has the potential to be one of the greatest achievements of modern international diplomacy. It is obvious, however, from Ambassador Richardson's statements that progress at the conference is at a standstill. I would urge each of my colleagues here in the Senate to carefully evaluate their past positions on deep seabed mining legislation in light of Ambassador Richardson's new report. It is time the United States took the unilateral action which we now find to be necessary.

I ask unanimous consent that Ambassador Richardson's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY AMBASSADOR ELLIOT L. RICHARDSON

The Informal Composite Negotiating Tax resulting from this session of the U.N. Law of the Sea Conference evidences real progress on vital issues relating to international security and freedom of navigation. At the same time it substantially sets back prospects for agreement on an international regime for the conduct of seabed mining. Both the substance of the text on this issue and the lack of fair and open processes in its final preparation require me to recommend that the United States undertake a most serious and searching review of both the substance and procedures of the Conference.

It is with a sense of considerable frustration that I make this accounting. For true progress was made during the past session:

New provisions were negotiated to clarify the legal status of the new 200 mile economic zone. They seek to safeguard traditional high seas freedoms within this zone except for specific resource-related rights accorded coastal states by the Convention. These provisions are a marked improvement over previous texts and may help prevent erosion of high seas freedoms by coastal state attempts to extend their sovereignty over ocean space.

We successfully retained the generally satisfactory previous texts on passage of straits which a determined minority sought to change. At the same time we found a way to accommodate the real need for environmental protection in straits, particularly in areas such as the Straits of Malacca.

The provisions of the text dealing with sceintific research were improved. An effort by some delegations to increase the degree of coastal state control of scientific research in the economic zone was defeated. In the new text, the conditions for conducting scientific research are set out clearly, and are likely to be copied into national laws, thus regularizing what has until now been a capricious situation. Also, we successfully eliminated a clause that could have obliged the U.S. to restrict publication of scientific data after the fact and without the consent of scientists, which was highly offensive to our concepts of free science and free speech. Now the coastal state, in granting consent, must indicate in advance if it wishes to impose such a restriction, and if so the scientist can decide whether he wishes to proceed with the project under such circumstances.

We were successful in eliminating texts that could have prevented us from imposing rules in our territorial sea to prevent pollution from foreign ships. At the same time, we retained our right to fix strict environmental conditions—including construction, manning, equipment and design regulations—for entry into U.S. ports. These changes bring the text into full harmony with the Administration's anti-pollution program.

Continued progress was made in the design of a comprehensive system for peaceful settlement of disputes relating to ocean uses.

Under the fair and judiciary's leadership of Minister Jens Evensen of Norway a responsible and effective discussion of seabed issues took place. This discussion and the texts formulated by Minister Evensen offered real prospect that the impasse on seabed mining issues could be resolved on terms acceptable to both the developed and developing nations.

Regrettably, however, the new "composite" text concerning the system of exploitation and governance of the deep seabed area (Part XI) is now fundamentally unacceptable. It deviates markedly from the proposed compromise text which had been prepared on the basis of full, fair and open discussion under Minister Evensen's leadership.

The Evensen text, although not without problems, was generally viewed as a useful basis for further negotiation. The newer text—produced in private, never discussed with a representative group of concerned nations, and released only after this session of the Conference terminated—cannot be viewed as a responsible substantive contribution to further negotiation. Indeed, the manner of its production—treating weeks of serious debate and responsible negotiation as essentially irrelevant—raises an equally serious procedural problem: whether the Law of the Sea Conference can be organized to treat deep seabed issues with the seriousness they, and the Conference which depends upon their satisfactory resolution, demand.

Among the serious points of substantive difficulty in the latest deep seabeds text, and the system it would define, are the following:

It would not give the reasonable assurance of access that is necessary if we and others could be expected to help finance the Enterprise and to accept a "parallel system" as a basis of compromise.

It could be read to make technology transfer by contractors a condition of access to the deep seabed—subject, at least in part, to negotiation in the pursuit of a contract.

It could be read to give the Seabed Authority the power effectively to mandate joint ventures with the Authority as a condition for access.

It fails to set clear and resonable limits on the financial burdens to be borne by contractors; indeed, it simply combines a wide range of alternative financial burdens, as if such a combination could be a compromise—when, in fact, it is likely to prove a compound burden sufficient to stifle seabed development.

It would set an artificial limit on seabed production of minerals from modules—which is not only objectionable in principle; it is also far more stringent than would be necessary to protect specific developing country producers from possible adverse effects, and is incompatible with the basic economic interests of a developing world generally.

It would give the Seabed Authority extremely broad new, open-ended power to

regulate all other mineral production from the seabed "as appropriate."

It would appear, arguably, to give the Authority unacceptable new power to regulate scientific research in the Area.

It would fail adequately to protect minority interests in its system of governance and would, accordingly, threaten to allow the abuse of power by an anomalous "majority."

It would allow the distribution of benefits from seabed exploitation to peoples and countries not party to the Convention.

It would seriously prejudice the likely long-term character of the international regime, by requiring that—if agreement to the contrary is not reached within 25 years—the regime shall automatically be converted into a "unitary" system, ruling out direct access by contractors, except to the extent that the Authority might seek their participation in joint ventures with it.

With this unfortunate, last-minute deviation from what had seemed to be an emerging direction of promise in the deep seabed negotiations, I am led now to recommend to the President of the United States that our Government must review not only the balance among our substantive interests, but also whether an agreement acceptable to all governments can best be achieved through the kind of negotiations which have thus far taken place.

THE BALTIC STATES

Mr. DECONCINI. Mr. President, an anniversary has quietly come and gone—the anniversary of two tragic events in the history of the Baltic States of Estonia, Latvia, and Lithuania. The independence of these three republics was destroyed in mid-June of 1940 when they were invaded and occupied by the Soviet Union—the first step of what became their forceable annexation to the Union of Soviet Socialist Republics.

One year later began the first of many mass deportations of these peoples to wastelands of Siberia. Only in the late fifties were some of those who survived the ordeal allowed to return to their homelands. Some are still the victims of involuntary exile from their native lands. Since that time there have been numerous and wide reports of exploitation, deportation, and the suppression of human rights and national freedoms.

The United States has never recognized the Soviet Union's occupation of the Baltic States. As recently as 1976, in Senate Resolution 319, the Senate affirmed that notwithstanding any interpretation which the Soviet Union or any other country may give to the Helsinki agreement of 1975, the U.S. policy of nonrecognition of the illegal seizure and annexation of the three Baltic nations of Estonia, Latvia, and Lithuania has not changed. The House passed a similar resolution.

On the eve of the Conference on Security and Cooperation to be held in Belgrade this October, I believe the history of these Baltic States offers us food for thought. I encourage our negotiators to relay the message of our strong and unshakeable commitment to the basic values of human rights and urge further that all possible steps be taken to insure that all signatories of the Helsinki Accord comply with both its spirit and its written word.

PLANNING FOR THE RETIREMENT YEARS

Mr. PERCY. Mr. President, the average American is living a longer and healthier life than ever before in the history of our Nation. This social phenomenon—an aging population that is enormously vigorous and ambitious in anticipating the opportunity to enjoy the rewards of retirement years—demands our immediate attention.

As a democratic people, we are currently in the process of reexamining not only our laws, but also our attitudes about older citizens as well. A great deal of effort must be focused on recognizing the needs, abilities, and desires of this newly emerging political, social, and economic force in our society. Both the Government and private industry must address themselves to understanding the significance and the issues concerning this transition.

According to U.S. Commerce Department estimates, the total U.S. population is expected to increase 22 percent by the turn of the century. The over-35 age group will increase by almost 50 percent, and the over-65 age group will climb by 34.4 percent. In contrast, the 20 to 24 age group will increase by a mere 1.9 percent.

As a nation, we can be proud of the social progress that leads to these longevity statistics. Improved nutritional standards, widely available health care, improved labor conditions, social welfare programs, and availability of broad educational opportunities are all contributing factors to our increased vigor as individuals.

However, this increased life expectancy has brought with it challenging new problems. Among the less advantaged, these concerns are obvious. The issues of available health care to the senior citizen, inadequate housing, and fear in the cities continues to occupy much of our thoughts. These problems are well covered by the media and will continue to be the targets of our efforts for improvement of the lives of senior citizens.

The current debate on the subject of enforced retirement, on the financing of the social security system, and additional programs for the aged are also of great concern.

It is important to realize that, while statistically the actual strength and good health of individuals continues well into the retirement years, it has been found that a significant number of people consider the retirement years as a time of weakening health and ability.

Further, the very subject of retirement can be fraught with anxiety. After a lifetime of work-oriented days, the thought of time stretching endlessly, unstructured, into the future may bring on enormous tension.

Among the problems confronting senior citizens are the stresses that come with the loss of good feelings about oneself when one is no longer productive in the old, established ways; the fear of boredom; the possible loneliness as one no longer chooses among coworkers for friendship; and the difficult transition of relocation often chosen by retirees.

In recognition of these problems, a rapidly increasing number of publications and organizations have come into being in response to the needs of the elderly.

One such organiaztion is the National Retirement Council. Inc., which is located in New York. The goal of the council is to focus attention on the complex areas of retirement planning. Its primary function is to provide a forum where pre- and post-retirees can gather to discuss, explore, receive guidance, and otherwise resolve some of the problems they face regarding retirement.

The first "How, When, and Where To Retire Show," sponsored by the council, was held at the Palmer House in Chicago, Ill., from May 12 to 16, 1976. The late Mayor Richard J. Daley performed the opening ribbon-cutting ceremony for the event, which represented a joining of industry and local, State, and Federal agencies with public service organizations for the purpose of dealing with retirement problems. More than 29,500 people attended the show.

This year's "How, When, and Where To Retire Show." will be held at Chicago's McCormick Place, from September 7 to 11. It will once again combine exhibits with representatives from public service agencies to provide many answers to retirement problems. Besides films, seminars, and panel discussions, the show will feature a health fair at which attendees may receive various diagnostic testing and health information; craft and hobby exhibits in which they may actually participate, and a "retirement and information center" where they can get practical answers to their personal questions about retirement. The show is expected to attract more than 100,000 people.

It is appropriate that in the week following Labor Day we should celebrate pre- and post-retirement years, for they are but another aspect of the total labor picture, another emphasis for the fully experienced life.

OLYA MARGOLIN: A VERY FINE HUMAN BEING

Mr. PERCY. Mr. President, I would like to draw the attention of my colleagues to the fact that our friend Olya Margolin, the Washington representative of the National Council of Jewish Women, has been presented the Hannah G. Solomon Award for outstanding community service by the council's District of Columbia section.

Those of us who know Olya Margolin personally can attest to her outstanding service on behalf of the members of the council and, in a broader sense, to all Americans. For Olya Margolin's dedicated efforts in the development and promotion of social legislation have been remarkably successful for over two decades. She is a thinker as well as a doer. Her work is a credit to the National Council of Jewish Women and a blessing to the disadvantaged people of this Nation.

It is a pleasure to work with Olya Margolin whose ideas are practical,

prudent, and sound, and who brings to her work the seasoning of great experience and the concern of a very fine human being.

DISASTER AVERTED IN SHERIDAN, WYO.

Mr. WALLOP. Mr. President, today I would like to draw the attention of the Senate to the brave and outstanding performance of the Forest Service, the Sheridan County Sheriff's Office, Wyoming Game and Fish Department and numerous private citizens in Sheridan, Wyo. Early Monday morning tragedy struck the Sheridan area when a large twin engine DC-3 involved in grasshopper spraying crashed into a steep canyon. The plane burst into flames as it crashed into Big Goose Canyon, killing the pilot and copilot.

Amidst the shock and sadness of this tragedy, nearby ranch hands, the Forest Service and the sheriff's office reacted quickly to avert another disaster. Ranch hands rushed to the scene of the crash hoping to rescue the pilots. They discovered that there was no hope of saving the victims and turned their attention to the fire that began raging around the scene of the crash. As men from the sheriff's office and the Forest Service joined the effort, it became apparent that the men were encountering another danger in addition to the flames and deadly smoke of the forest fire. The plane had been carrying a load of the insecticide malathion which burned amid the wreckage and timber to form a poisonous gas. Many ranch hands had been overcome by the smoke from the fire and were hospitalized.

The insecticide not only endangered those fighting the fire, but it was feared that a heavy rain storm could have washed large quantities of this chemical into the nearby Sheridan water intake system. The agencies and men involved with this situation had little information regarding the nature of malathion, and moved to coordinate information with the Wyoming and U.S. Departments of Agriculture, the Environmental Protection Agency and the Wyoming Insecticide Agency. The forest supervisor, Jack Booth, and the sheriff in Sheridan, Bill Johnson, did an outstanding job of coordinating this information and organizing their men and resources to put out the flames and treat the chemicals before they affected the city water system. I think that this is an example of how the Nation's public servants, Federal, State, and local, can work together in an emergency situation to the benefit of us all. I would like to express my thanks to these men and women who met this challenge and worked diligently to prevent any further harm to the environment or the people of Sheridan.

DR. DANIEL BOORSTIN: A LOOK AT HIS TWO YEARS AS LIBRARIAN OF CONGRESS

Mr. PERCY. Mr. President, in July of 1975, I had the pleasure of introducing Dr. Daniel Boorstin at the Rules Committee hearing for his confirmation as Librarian of Congress. At that time his nomination had generated a great deal of controversy.

A recent Washington Star article demonstrates that the charges made were unfounded. Dr. Boorstin has proven that he merits the confidence that many, including myself, expressed in him at that time. At his confirmation hearing I said:

> Just as Dr. Boorstin brought his particular brand of energy and creativity to the Directorship of the Smithsonian's Museum of History and Technology, making it an especially vital and accessible place; so, he will tap the full potential of the 175-year old institution that is the Library of Congress, establishing it as never before as a center of culture, learning and enlightenment for the nation.

I feel that my faith in Dr. Boorstin has been justified and I would like to share with my colleagues the article from the Star which underlines some of the highlights of his 2 years as Librarian.

I ask unanimous consent that the Washington Star article by Ruth Dean, "A New Look at the Library, and the One Who's Leading It," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEW LOOK AT THE LIBRARY, AND THE ONE WHO IS LEADING IT

(By Ruth Dean)

The green-domed Library of Congress, sitting with stately, perhaps forbidding grace, across the park from the U.S. Capitol, suddenly has a new look.

It's inviting. It has activity.

Flowers sprout from boxes leading up the grand stairway to the library's great main doors, now open for the first time in years. Wooden tables and benches are a new sight on the plaza and stair landing. Striped green-and-white umbrellas provide shade for people chatting, eating lunch, catching up on the latest paperback, or just listening to the water splash in the Neptune Fountain, turned on after long disuse.

An even more startling sight awaits the visitor entering the great doors. The Great Hall, with its beautifully inlaid marble floor and muraled ceiling, now looks like a gigantic drawing room. Gold draperies are swagged back from the tall, arched windows. Small potted trees soften the severity of the hall's classic architectural lines. Velvet settees afford a place to rest. At a prominently-placed information desk, a library staffer welcomes visitors and ascertains whether they are tourists who'd like a look at the reading room from the second floor gallery, or scholars seeking use of the reading room directly in front of them.

Down a private corridor just off this scene of public activity, in a quiet, spacious, gold-carpeted, high ceilinged office festooned with murals at the cornices and floor-to-ceiling bookshelves, sits the man responsible for this change.

He is Daniel J. Boorstin, 12th Librarian of Congress, historian, Rhodes scholar, prolific author. His trilogy, "The Americans," won numerous awards, including a Pulitzer Prize for the last segment, "The Americans: The Democratic Experience."

He knows his subject. He writes of it well—in eloquent cadences that sweep the reader through pages of engrossing historical detail. At intervals, he punctuates his recitative with kudos for the go-getters. His father, who as a child was brought to this country by Russian-Jewish immigrant parents, was one—a self-made man who worked his way through the University of Georgia, and practiced law in Atlanta before moving his family to Tulsa, Okla.

Dan Boorstin is a go-getter too: degrees from Harvard and Oxford; teaching assignments at Yale Law School, Harvard, Harvard Law School and the University of Chicago, where he was on the history faculty for 25 years; visiting lecturer, four years director, then senior historian of the Smithsonian's National Museum of History and Technology; author of 17 scholarly works.

He's also a paradox—a dash of contradictions and a smidgen of controversy have followed him right up the library steps. He is quizzically amused when you tell him so.

You remind him of the Senate Rules Committee hearings two summers ago, when his White House nomination to succeed L. Quincy Mumford engendered much heat before winning final approval. The heat then centered around his qualifications for the job, which now pays $50,000 a year, and came from three directions: the library community, which felt one of its own should have the job because of the complex computer technology to which the world's largest library is converting its archival and retrieval systems; senators and congressmen, who wondered if the esteemed scholar would give the maximum of his working time to the library when past performance (at the Smithsonian) indicated a conflict between his job and his writing; and union representatives of the library employes, who expressed apprehension about the "racist" views in some of his books.

The hearings also made passing mention of his brief and youthful flirtation with the Communist Party and his subsequent recanting of its principles, a fact that's been a matter of public record since 1953 and has been bulwarked by the security clearances he's gotten for other high government positions.

"I've forgotten all the things that were said against me; in fact I think the hearings were a great experience, although I think newspaper accounts of them were out of focus," he says, looking sharply at his visitor through horn-rimmed glasses.

"Yes," he says emphatically, as if recalling only too well the senators' admonition that he use no Library time or personnel (as he did at the Smithsonian when writing his last prize-winner), "I am doing all my writing on my (new) book at home.

"Yes, I'm at my typewriter by 6 a.m., and into the office around 8:30 a.m.—earlier if I have a breakfast scheduled with members of Congress."

And yes, he acknowledges, he uses the Library's research materials "like any other American citizen," exercising his library staff member privilege to check books out for home use.

He recalls with some amusement the conversation he had with former Librarian of Congress and poet Archibald MacLeish (whose nomination as first scholar/librarian also generated much heat), when the latter called to congratulate Boorstin on his getting the job.

"How much sleep do you need?" MacLeish asked. "I need eight hours."

"Did you get any writing done?" Boorstin asked. "Not a word," replied MacLeish. That, Boorstin later learned turned out to be a modest understatement: "I looked up the record, and he published three volumes of essays while he was here."

At least one fellow historian, Lawrence W. Towner, director of the Newberry Library in Chicago, thinks the government restriction that Boorstin confine his writing to his own time is "ridiculous." It's "a grave error by Congress to say he can't," Towner argues,

"because it's his scholarly qualifications that give (him) the job clout."

According to Towner, scholars who use the Library are already seeing the effects of that clout. "He's shaking up the place, and we're heartened the library is taking a leading role in preservation of library materials—the rapid deterioration of books printed since 1840 is one of our major worries in the library field everywhere."

Dr. O. B. Hardison, director of the Folger Shakespeare Library just across the street, also thinks Boorstin is doing "a superb job." He noted the Library of Congress has shown an interesting pattern, in its leadership, of alternating between "people immersed in the library world and scholars of international distinction" like Boorstin. It is a pattern Hardison believes works to the Library's advantage.

The American Library Association has gotten over its initial opposition to Boorstin's appointment, and a new era of cordial relations has been ushered in. This peaceful coexistence has been prompted, in part, by Boorstin's initiatives to make the library a more welcome place for librarians, including plans for "a common room" for their exclusive use.

Boorstin also considers congressional contact an important adjunct of his job. "The Librarian's relationship to Congress should be frequent and constant," he says. "They're one of the most unappreciated and misunderstood branches of government." After all, he stresses, all 535 members of Congress are literally the library's trustees and should be treated as such. "It gives democracy emphasis. I think it's good, though I can't say it never creates problems."

He swells with pride on learning of a new perk to his job. "I only found out the other day I have the privilege of both floors of Congress. I'm part of their staff. I didn't know that when I took the job. I'm the Librarian of Congress"

He leans forward intently and gestures as he describes the plans he has for expanding the library's reputation and resources as a national cultural center, an international mecca for scholars, and, just as importantly to him, a reading and study home for the public. He administers approximately 5,000 employees and an annual budget in the millions—$160 million for fiscal 1978, as finally approved by Congress this week. The newly voted expenditure is $18.5 million more than last year and reflects inflationary increases.

The Library's collections are incredibly diverse. According to the latest published figures, the library has more than 18 million books (two-thirds of which are in foreign languages), 30 million manuscripts, a quarter of a million phonograph records, 100,000 reels of motion pictures and endless cases of maps, photographs, volumes in Braille, rolls of microfilm, payroll, magnetic tape and every other form of preserved thought. To accommodate this mammoth mass of material, 12 rented locations off Capitol Hill are required.

The tendency in the past was to keep the public out, Boorstin says. Now "we want them to come in, to welcome them, to share our treasures because they belong to them." he says, with quickening enthusiasm. Hence, the opening of the great doors ("you wouldn't invite guests into your own home through the back door, would you?"); and the refurbishing of the Great Hall.

But what impact has all this had on the library staff, whose quiet efforts are now interrupted by the babble of tourists' voices in the hall? How will they react to the changes that are expected to come from a reorganization, now being spurred by a 73-page task force report, drawn from a year's study of 500 employe suggestions made at the librarian's request?

The winds of change—or more accurately, *expected* change—have caused turmoil, anxiety, morale problems and, as might be expected, rumors.

The librarian bridles with indignation when asked about two of these: Does his wife have an office at the library to do research, and does the fact that McGraw-Hill held a private party in the Great Hall portend the opening of a book store like the Smithsonian's, contracted to the same publishing house?

"My wife does *not* have an office in the library," he says flatly, adding, "I don't say she doesn't come to the library as any other American citizen, because she loves libraries. She was a docent at the Folger long before I took this job. She is my lifelong intellectual companion as well as my wife and mother of my children. She's never been my researcher or typist; she's my collaborator and editor." But not, he concedes, co-author: "She doesn't write; I'm a better writer," he answers matter-of-factly. Then: "She has a probing, poetic mind, with a wonderful feeling for words. I've been very lucky. She's one reason why I believe in God. We've shared our life very intimately." The dedication of his last book is to her. It reads simply, "For Ruth."

As to the book store rumor, he says "the innuendo is scandalous and entirely without foundation. The truth of the matter about the Smithsonian book store is that we offered it to at least three other publishers and they wouldn't take it. McGraw-Hill was the only one willing to do it."

But the use of the Great Hall for receptions has become a symbol of discontent to some library employes. Their dissatisfaction is evidenced in a recent professional employes union publication contrasting pictures of the refurbished hall with others showing peeling ceiling plaster and overcrowded working conditions in the Jefferson annex building—a situation which the eventual move into the not-yet-completed Madison Building is expected to ameliorate.

Other employes think the library is a better place in which to work. A GS-7 in the new acquisitions department voiced a typical observation. "They've gotten rid of the dead wood, and appointed imaginative administrative personnel whom everyone likes. And where else could you get the equivalent of the free tuition program the library offers so you can advance to higher job positions and pay?"

A veteran custodial employe, who greets the librarian every morning when he pulls up in his yellow Volvo, said he and his family have enjoyed the monthly folk concerts on the library steps—another Boorstin innovation.

Boorstin, given a rundown on the complaints, will say your sampling is "highly impressionistic and a rather skewed view," not an accurate barometer of employe morale.

"My impression is that the morale has improved," he said. "We're giving them a sense of participation, a sense that what they say makes a difference. Certainly a number of people are going to be unhappy. I can't say that the morale when I came in was at an all-time high. I think we've done pretty well. Consider the existence of the unions. We never had them before. That's an improvement right there, even if they don't agree with the (library's) administration. We'd have no need for democracy, for unions, if everyone agreed. It gives people a chance to express their opinions." (The American Federation of State, County and Municipal Employes has had representation in two unions at the library for the last five years, according to a union spokesman.)

Through his task force, chaired by John Y. Cole, Boorstin said he is very much aware of overcrowding, and dead-end jobs. "This library is like a supermarket of ideas. There are nearly 80 million items here. Yes, I realize there are very unrewarding jobs like alphabetizing the catalog. But we're trying to reduce these through the computer. I can't make every job interesting, but I have the power to help people get more education, vary jobs. We're trying."

Boorstin is also proud of the fact he's set in motion the library's first administrative reorganization in 40 years—the first since MacLeish's overhaul in the Roosevelt era. This includes the library's first planning office, headed by veteran staffer Charles Goodrum, and appointment of the library's first outside advisory groups in 25 years.

And what of his much-publicized "racist" views? "We have absolute, ruthless equality here," he says adamantly. "No one will be discriminated against in the library while I'm here. That's what I've written about. That's what I believe in."

He reiterates, however, his opinion about quotas. "Quotas are illegal; they're against the law. I don't believe in quotas, for white, for blacks, for men or for women. That's what made this country great."

NATIONAL FOREST TIMBER SALES

S. 1360

Mr. WALLOP. Mr. President, the issue of whether the bidding method for sale of national forest timber in the West should be by sealed or oral auction has been clouded by considerable rhetoric. Proponents of sealed bidding have alleged that it is more difficult to prove collusion when the oral auction method is used than when sealed bidding is the mode. This allegation is untrue.

I think it would be helpful to review the litigious history on this issue. Oral bidding methods have historically been the practice in most parts of the West for national forest timber sales for 30 years. In all these years, there has only been one conviction for collusive bidding. In this case, United States against Champion International Corp., the Department of Justice obtained its only criminal conviction for collusion in the timber industry. Advocates of sealed bidding argue that, since this case involved bids at oral auctions, the conviction shows that oral bidding causes or promotes collusion. The court's opinion shows quite the opposite to be true. The court found that the defendants made tacit and illegal agreements concerning their conduct at upcoming timber sales at meetings held prior to the sales. The collusive activity that took place in this case could also take place in a sealed bid setting by competitors meeting before sales and agreeing on bidding behavior. It is apparent that those people inclined to collude will do so under any bidding mechanism.

Proponents of sealed bidding contend that collusive bidding is very difficult to discover and prove in court, because it is necessary to have an informer or other direct evidence of a conspiracy. This is untrue. Since the 1939 case, Interstate Circuit Inc. against United States, it has been clear that circumstantial evidence rather than direct evidence, is sufficient to sustain a finding of an unlawful conspiracy to violate the antitrust laws. In the Champion case, the Ninth Circuit Court of Appeals ruled that no direct evidence of a collusive agreement is necessary for conviction.

The court of appeals noted that it is not necessary for the Government to show that the defendants knowingly entered into a conspiracy or that they had a specific intent to restrain trade. This directly refutes allegations that it is necessary to have an informer or direct evidence of a conspiracy in order to obtain a conviction.

It should also be noted that the Forest Service closely monitors timber sale bidding patterns to help identify possible collusion. The Chief of the Forest Service, John McGuire, testified on May 18 at hearings held by the Senate Energy and Natural Resource Committee's Public Lands Subcommittee that collusion in the timber industry is "relatively rare and isolated."

I think these points have important bearing on the bill, S. 1360, that the Senate will consider shortly. The law on this issue is precise and the legal history is clear. I urge my colleagues to vote for enactment of S. 1360.

ATTORNEY GENERAL GRIFFIN BELL

Mr. PERCY. Mr. President, Columnist Carl T. Rowan recently assessed the job being done by Attorney General Griffin Bell and concluded that he was increasingly satisfied with his original decision not to oppose Judge Bell's confirmation. As one who did vote against confirmation, and who has formally commented on some of the Attorney General's achievements since he has been in office, I am pleased to bring Mr. Rowan's comments to the attention of my colleagues.

Mr. President, I ask unanimous consent that the text of the column, which was published in the Washington Star, be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

GRIFFIN BELL STILLS SOME CRITICS

(By Carl T. Rowan)

The more I see of Atty. Gen. Griffin Bell, the more I like the man. And the happier I am that I refused to join in efforts to deny him Senate confirmation.

I like the fair-minded way in which he listens to Drew Days III and Solicitor Gen. Wade McCree before the department takes a position on school busing controversies in Dayton, Ohio, Wilmington, Del., and other cities. It is significant that in this regard Bell has won praise from the NAACP, which so vehemently opposed his nomination.

I like the way Bell has pushed to get blacks of unquestioned ability into key slots in the law enforcement machinery. In a long interview with him the other day, he said: "I figure that if I can get some minorities into top slots, they'll see that justice is done in handing out lower jobs."

He confided that he is about to name a black to the second-ranking job in the Law Enforcement Assistance Administration and that he had recommended to President Carter the appointment of a black federal judge in the South and of two black U.S. attorneys, one in the South.

"I think you'll be surprised by at least one of these appointments," he said in his soothing Georgia drawl.

But more than the appointments of blacks, I like the following two things most about Bell:

1. He has moved vigorously to rein in the FBI and other elements of the nation's police network so as to provide reasonable assurances that we will not again have the abuses of the 1960s and early 1970s.

2. He has proposed or endorsed some far-reaching changes in our laws to give the unprivileged something close to equal justice with the privileged.

Judge Bell knows that sentencing procedures in America are so discriminatory as to be a national disgrace. He wants any recodification of federal criminal statutes to include clear guidelines for sentencing, with rights to appeal any sentence where a judge violates those guidelines.

Bell knows, also, that the second level of egregious unfairness relates to the parole system. The wealthy, educated inmate with political clout and powerful friends has a far greater chance of gaining early parole than does the average citizen. Bell has proposed that, once the laws are changed so as to bind judges to give fair sentences, paroles be abolished.

You commit your crime, you get a proper sentence and you serve your time. Period! No matter who or what you are!

That's easier wished for than achieved, but it makes one hell of a lot of difference when an attorney general of the U.S. who has the ear of the President is demanding it.

Griffin Bell is one of the most disarmingly candid persons ever to hold a powerful post in this town. Ask him a question and he answers—unless it's about a pending court matter where it is obviously inappropriate for him to sound off.

I asked him whether he ever harbored resentment over the efforts to deny him confirmation.

"Yes," he said. He resented them forcing him to give up membership in those lily-white clubs in Atlanta. He figures they were imposing a double standard on him because he is a Southerner.

"But I thought about it, Bell said, "and I knew that an attorney general has no business belonging to clubs that bar blacks or any other Americans. So I stopped being resentful."

My kind of man.

ERDA FUNDING FOR THE CLINCH RIVER BREEDER REACTOR

Mr. BROOKE. Mr. President, this week I voted in support of the President's policy of closing out the Clinch River liquid metal fast breeder reactor demonstration project. Of course, my primary reason for so doing was that I felt the Congress should send a signal to foreign nations that the American people support President Carter's goal of nuclear nonproliferation. Like many of my colleagues, I have some doubts as to whether the method the administration has chosen to express this country's firm commitment will, in fact, be effective. But I feel we must give the President the tools, powers, and bargaining ability he says he requires so that his proposed strategy may be fully tested.

However, I could not have voted to cut our funds for this demonstration had I not felt that we have technologically sound alternatives to the construction of this particular breeder reactor at this time. Clearly, several forms of breeding technologies should continue to be pursued. And the nearly half-billion dollars the Senate has voted for basic breeder reactor research and development will pay for real progress along these lines.

I am persuaded that there is a good chance of discovering breeder innovations which stretch our future fuel supply while producing fuels more resistant to the threat of proliferation and use as weapons than the proposed LMFBR. The denatured uranium-thorium fuel cycle clearly deserves immediate study for example.

Second, the administration has made a strong case that the technology that Clinch River would demonstrate is not sufficiently advanced to proved the needed answers to tough questions about the feasibility of breeder commercialization.

And, finally, I believe the United States has the potential to control and moderate the growth of our demand for energy by vastly increasing the efficiency of our present use of fuels. I expect that by so doing we can give ourselves a great deal more time than estimated in the pessimistic projections on which ERDA initially based the breeder program timetable.

Of course, the defeat of the administration's move to end the Clinch River demonstration effectively means that we will pursue all breeder program options simultaneously. After the defeat of the administration's position, I supported the amendment to reduce the program budget to $75 million both because of my opposition to the full program and because I am sure the funding can produce some new knowledge that will doubtless be useful as we start to move to alternative programs.

In the long run, Mr. President, we all fervently hope we can move to nonnuclear technologies which pose no threat of global destruction. But for the present period of transition from a petrochemically fueled economy I intend to keep supporting research and development of a wide variety of nuclear fission technology options.

PRIME FARMLAND RECLAMATION

Mr. PERCY. Mr. President, I would like to express my sincere appreciation to the conferees on the Surface Mining Control and Reclamation Act for their final approval of the amendment I cosponsored with Senator CULVER and others requiring the restoration of prime farmlands used for mining purposes.

This amendment was designed to reconcile the legitimate need to increase our domestic coal production with the equally pressing need to protect prime farmlands—one of our most valuable natural resources. I believe that both purposes will be adequately met by the final draft of the bill.

The bill originally enacted by the House of Representatives contained a provision to require certain soil separation and reclamation procedures to be carried out by mine operators following any mining activity on "prime agricultural lands." I supported the intent of this provision without hesitation, but found three problems with the precise language of the legislation.

First was the inconsistency between the bill's definition of "prime agricultural lands" and the Department of Agriculture's longstanding "prime farmlands" designation.

Our amendment incorporated the Department's definition into the bill. The definition is based on such factors as moisture availability, temperature regime, chemical balance, permeability, surface layer composition, susceptibility to flooding, and erosion characteristics. This definition is published in the Federal Register.

The second major drawback was the limited effectiveness of the reclamation measures required by the House bill. Soil separation procedures alone provide no guarantee of meeting the objective of restoration to full productivity potential.

Under the provisions adopted by the House, conversion of prime farmland to nonfarm uses subsequent to mining would have been permissible, although this process effectively destroys such land's potential for agricultural use.

Our amendment required that prime farmland be restored "to a condition at least fully capable of supporting the uses which it was capable of supporting prior to any mining."

A study by the Office of Management and Budget indicates that 12 million acres of prime farmland in 14 major agricultural States are potentially affected by strip mining, because they are underlain with strippable coal reserves. These 12 million acres are a substantial share of the 28 million acres of prime farmland in these 14 States.

Without the additional protection afforded by this amendment, we run a high risk of losing permanently a substantial portion of one of our most precious natural resources, simply because it is cheaper to reclaim land for other uses.

Finally, neither the reclamation requirement itself nor the performance bond required by the House bill provided sufficient assurance that the soil separation procedures would be carried out when the mining operation was terminated.

Our amendment required that mine operators demonstrate that they do have the capability, in terms of technology, equipment, and financial resources, to restore the land to its original condition before a surface mine permit can be issued. Once the land has been damaged, a requirement that a company pursue various reclamation procedures is of no use if the company does not have this capability.

We do have the technology to comply with this safeguard. We are not imposing an undue burden on mining companies by requiring that they demonstrate that they are capable of applying effective land reclamation technology. We have not placed a moratorium on surface mining, but the value of prime farmland to the Nation's future food production is too great for us to allow for any possibility of its irresponsible destruction.

In short, Mr. President, I believe that the provisions of the amendment, as contained in the final bill, will be of the greatest possible benefit to the American public. We have avoided a tradeoff between two of our highest priority needs, energy supplies and food production, by designing a system to service both needs from the same land.

I again thank the conferees and Members of both Houses for their support for this important provision.

EUROCOMMUNISM, DÉTENTE, AND HUMAN RIGHTS

Mr. JAVITS. Mr. President, during the period of May 27 to June 4, I was a U.S. delegate to three international conferences in Western Europe: the North Atlantic Assembly in Brussels; the Conference on International Economic Cooperation—CIEC—in Paris; and International Labor Organization—ILO—annual meeting in Geneva. The first part of this report focuses on the deliberations at the North Atlantic Assembly, supplemented by additional conversations in London and Paris on the themes of Eurocommunism, détente, and human rights which were the preeminent political theme at the North Atlantic Assembly. The second part of this report deals with the ILO.

There will be a report separately to the Senate concerning the Conference on International Economic Cooperation—CIEC—jointly with Senator RIBICOFF and Representative BINGHAM who were the other congressional members of the U.S. delegation to that historic "North-South Dialogue." Also, I have already discussed here on the Senate floor the economic situation as it developed in the CIEC Paris meetings, on June 16, 1977, CONGRESSIONAL RECORD, page 19432.

NORTH ATLANTIC ASSEMBLY

The North Atlantic Assembly of the parliamentarians of the NATO nations, held its annual spring meeting in Brussels May 26–28. I participated in the meeting of the assembly's political committee on May 27 and, as the alternate U.S. member of the assembly's standing committee, or governing body, I also participated in the standing committee meeting on May 28. Following this, I had meetings with British leaders of both parties in London on May 29 and 30.

I attended the CIEC meeting in Paris from May 31 to June 3 and then flew to Geneva on June 3 to attend the ILO conference and to receive a briefing on the SALT negotiations from Ambassador Earle.

EUROCOMMUNISM

The political topic of greatest interest and controversy at this year's meeting of the North Atlantic Assembly was "Eurocommunism." In this regard attention was focused particularly on the situation in Italy, France, and Spain, in the general context of the implications of Eurocommunism for the North Atlantic Alliance and the East-West balance.

In the North Atlantic discussions there were marked differences of opinion about the real nature of Eurocommunism and its significance and implications in the broader west European and global contexts.

There was considerable interest in U.S. attitudes respecting the Eurocommunism question, particularly as to differences in emphasis and tone between that of the Carter administration and the previous Ford-Kissinger policy. The April 6, 1977, pronouncements of the State Department spokesman had been studied and were commented upon. Subsequently, on June 9, former Secretary of State Kissinger gave a major speech on the subject in Washington entitled "Communist Parties in Western Europe: Challenge to the West." The State Department spokesman again addressed the subject on June 10, in response to the speech of Dr. Kissinger, and on June 18 the State Department released the text of Secretary of State Vance's remarks on Eurocommunism in an interview with the Washington correspondent of Il Tempo, an Italian newspaper published in Rome. The text of the April 6 and June 10 remarks of the State Department spokesman and Secretary Vance's Il Tempo interview, together with the text of Dr. Kissinger's speech of June 9 are provided in full as appendices to this report. In addition, there is also provided as an appendix the text of an astute paper on Eurocommunism presented to the political committee of the North Atlantic Assembly on May 27, 1977, by Dr. Heinz Timmermann of the Federal Republic of Germany.

The position of the Carter administration on Eurocommunism, according to the June 10 remarks of the State Department spokesman, "might be regarded as some change in tone" from the position previously articulated by then Secretary of State Kissinger and reiterated by him on June 9. The Kissinger position is a clear and forceful statement of U.S. opposition to the participation of West European Communist parties in the governments in NATO and other democratic nations of Europe. It is based upon the belief that the so-called Eurocommunist parties—particularly of Italy, France, and Spain—have not given up their historic allegiance to Moscow and their antidemocratic methods and objectives.

The position which has been spelled out by Secretary Vance is characterized by an attempt to balance a posture of U.S. "noninterference" in European elections with a clearly stated "preference" for governments there without Communist participation. Moreover, according to the view expressed by Secretary Vance, the difficulties that would be posed to the Atlantic Alliance by Communist participation in a NATO government might be offset by the " schismatic" effect of Eurocommunism within the Soviet bloc.

Differences within Europe, as evidenced by the discussions at the North Atlantic Assembly, are even sharper and more pronounced than in the United States on the issue of Eurocommunism. As a rough generalization, I found a sharp dichotomy of view between the Democratic-Socialist parliamentarians of Scandinavia, Benelux, and France, and the Conservative parties' parliamentarians. The views of the British and West German Socialist parties tended to fall somewhere in the middle.

The emphasis of the "socialist view" is on the changes which have taken place within the Eurocommunist parties of Italy, France, and Spain on the issues of independence from the Soviet Union and adherence to democratic norms of

conduct and organization. This view sees the Eurocommunist parties as passing the point of no return on the path of evolution toward democratic socialism. Moreover, this view perceives the rapid Eurocommunist evolution as having highly portentous implications for the Communist parties and peoples of Eastern Europe and perhaps the Soviet Union itself. In this context of radical evolution, the threat posed by Eurocommunist electoral victories to the security and integrity of democratic Europe are perceived to be small in comparison to the potential gains.

The "conservative view" is one of deep suspicion and alarm over the growth of Communist party electoral strength in Italy and France and over what it views as complacent and naive attitudes respecting the true nature and objectives of the so-called Eurocommunist parties. The conservative view sees a direct threat to the integrity of NATO and the European community being posed by the potential advent to power of the Communist parties of Italy or France, where the issue is ripest. This has led some advocates of the conservative view to call for a coordinated campaign against the electoral efforts of the so-called Eurocommunist parties within the NATO countries.

The situation in France is perhaps even more ambiguous than in Italy where the minority Christian Democratic government remains in power through the abstention of the Italian Communist Party in parliament where it holds the second largest bloc of seats. In France, the Communist Party is the junior partner in an electoral alliance with the Socialist Party. The victory of the Socialist-Communist alliance in the recent French municipal elections, and current public opinion polls, have made the Socialist-Communist alliance the frontrunner in the parliamentary elections scheduled for March of 1978.

The sincerity of the self-professed conversion of the Communist Party of France—CPF—to the tenets of Eurocommunism is more widely suspect than that of the Italian Communist Party—CPI. However, it is clear that the CPF is the weaker, junior partner of its electoral alliance with the French socialists and many observers believe that the Socialists are continuing to gain at the expense of the Communists through the perpetuation of the alliance. Confidence that the Socialists are more than a match for the Communists has contributed to the rallying of significant numbers of middle class white collar workers and professionals to the Leftist alliance.

Leaders of the Gaullist movement in France do not believe that the Socialist Party could maintain its dominance over its Communist partners once in office. They cite the superior organization and discipline of the Communist Party, its strength in the labor unions and its capacity—and penchant—for conspiratorial subversion. Moreover, the Gaullist leadership believes that a Socialist-Communist government—in their view inevitably dominated by the Communists—would extinguish democratic freedoms and terminate free elections. Accordingly, the electoral strategy of the Gaullists, under the leadership of M. Jacques Chirac, is to convince the voters of France that the issue in the parliamentary elections is a choice between French freedom and tradition, or communism.

Some overt tensions have developed within the leftist alliance between the Socialists and the Communists, while M. Chirac appears to be bringing unity, organization and enthusiasm to his organizationally rejuvenated Gaullist movement. Moreover, under the peculiarities of the French electoral law it is possible for the Gaullists to win a parliamentary majority with about 48 percent of the vote. Nonetheless, public opinion polls show the Leftists Alliance as commanding about 53 percent of the vote, and professionals and white-collar workers, eager for social and economic reforms, are claimed to be supporting the Leftists Alliance in greater numbers than ever before.

The attitude of the Soviet Union to "Eurocommunism" has been somewhat ambivalent. However, in a major article in New Times, a Soviet periodical with wide international distribution, the Soviets unleashed a venomous attack on Eurocommunism, under the guise of a review of a book extolling Eurocommunism by the leader of the Spanish Communist Party. To assure that the article would get the attention desired, it was carried in full and disseminated by Tass, the Soviet news agency. The article harshly denounces Eurocommunism as a betrayal of international Communist discipline and unity. The test of the New Times article as distributed by Tass is enclosed as an appendix.

Clearly, the Eurocommunist phenomenon is a reality and as such it must be addressed by U.S. foreign policymakers. In its potential implications—posing as it does profound risks for the Soviet system of hegemony over European communism—are varied, subtle and portentous. Inasmuch as Eurocommunism seeks to express itself in parliamentary form, the Congress of the United States has, in my judgment, an obligation to inform itself in detail about this new political-ideological phenomenon. Accordingly, I am writing to the chairman of the Senate Foreign Relations Committee to request that a comprehensive hearing on "Eurocommunism" be scheduled at an early date.

DÉTENTE AND HUMAN RIGHTS

The related issues of détente and human rights commanded equal attention to Eurocommunism in the political discussions among the NATO parliamentarians at the North Atlantic Assembly meeting. I found that European attitudes on détente and its relationship to the human rights offensive of the Carter administration to be similar in substance to attitudes in the United States. Nonetheless, there were perceptible differences in tone between the predominant attitude among the Europeans and those prevalent in the United States. There are reservations in Europe about the tone and tactics that have been adopted by the President and his spokesmen.

Concern over the Carter administration's human rights posture is probably most pronounced in the Federal Republic of Germany. The FRG leadership has been engaged in delicate diplomatic exchanges with the U.S.S.R., Poland and East Germany concerning human rights questions and in particular the emigration to the West of ethnic Germans. There is concern that what is seen as the aggressiveness of the Carter human rights offensive will have the reverse effect of hardening the human rights attitudes and policies of the Soviet bloc governments and jeopardizing emigration opportunities. There is a significant degree of feeling in Western Europe and Germany in particular, that more in actual practice could be accomplished by a moderation of public statements on the issue.

There are misgivings in Europe over what is perceived to be a hardening of East-West relations across the board. In the military field, the predominant attitude is one of firm response through a greater NATO effort. Nonetheless, in the political realm, I detected a preference for some tempering of Western public diplomacy. The upcoming Belgrade Conference to review the working results of the Helsinki "Final Act" accords has provided a focus for NATO political attitudes. The European preference appears to be for firm but more low key insistence upon Soviet compliance with the "basket three" human rights provisions of the Helsinki agreements. The European approach seems to stress the pragmatic and practical over the ideological.

Notwithstanding the differences in emphasis respecting tone and tactics, and notwithstanding the palpable misgiving over the risk of straining détente "too far," I detected in Western Europe a favorable attitude toward President Carter personally and an acceptance of his leadership in the Western alliance. The emphasis which President Carter has placed upon the "European connection" in U.S. foreign policy is particularly welcomed. Strong U.S. leadership in the fields of energy policy and Western economic and monetary coordination is regarded as essential. President Carter's spring visit to London and Brussels was a popular triumph.

Prevalent in European attitudes is a self-image sense of vulnerability, particularly in the economic sphere but also in political and social institutions. The Western European democracies do not seem to be overconfident. Indeed, there is an undertone of brooding over the possibilities of a breakdown in the economic system, which could quickly place heavy stresses on the political and social balances which prevail now and which are precarious in some countries.

This apprehension of vulnerability on the part of the Western European democracies undoubtedly is a factor in Western Europe's more cautious approach to the human rights question as it bears on relations with the Soviet bloc. Moreover, perceptible Western European uneasiness over deterioration in détente, and the threat of heightened East-West tensions in Europe, can be traced to the same source.

Successful U.S. leadership of the West-

ern position on human rights and détente obviously must take into consideration the attitudes and preferences of our NATO allies based on a sympathetic understanding of the European posture. This does not mean that President Carter should jettison the positions and statements he has already adopted. Rather, it requires a sensitivity to the nuances of the situation in Europe, and rethinking of tactics to assure the greatest success in practice of the joint goals respecting human rights which we share with our European partners.

INTERNATIONAL LABOR ORGANIZATION (ILO)

At the ILO I met with Francis Blanchard, the director general, deputy director General John McDonald, Francis Wolf, legal advisor of the ILO and Daniel Horowitz, special assistant to the secretary of labor for ILO matters and chief U.S. delegate to the ILO. Since this meeting early in the annual conference this year, I continued to monitor the progress of events at the ILO to its conclusion on June 25.

The events of this year's conference are critical in that they represent the culmination of U.S. efforts during the past 2 years to restore the ILO to its fundamental purposes of improving working conditions throughout the world and developing international labor standards. On November 5, 1975, then Secretary of State Kissinger formally gave notice of the intention of the United States to withdraw from the ILO. In that letter he said:

> Rather than express regret at this action, I would prefer to express confidence in what will be its ultimate outcome. The United States does not desire to leave the ILO. The United States does not expect to do so. But we do intend to make every possible effort to promote the conditions which will facilitate our continued participation. If this should prove impossible, we are in fact prepared to depart.

This letter went on to recite the fundamental concerns of the United States which gave rise to the notice: the erosion of tripartite representation by workers, employers and governments; the selective concern for human rights through a practice of setting double standards based on political factors on such key issues as freedom of association for workers and forced labor; disregard for due process, particularly in the practice of condemning governments for alleged violations of basic human rights without regard to due process under the ILO constitution; and the increasing politicization of the organization reflected by consideration of political issues beyond the competence and stated purpose of the organization.

The U.S. position expressed in the letter of November 5, 1975, was reaffirmed by the Secretaries of State, Labor and Commerce on February 16, 1977 and by President Carter on May 27 of this year. Secretary of Labor Marshall personally conveyed these views, and expressed his hope that the ILO would reestablish its basic purposes, in an address to the conference on June 13, 1977.

Now that this year's ILO conference has concluded, and no further action by the organization will take place between now and the effective date of the withdrawal notice on November 5, 1977, the U.S. Government is in a position to review the events of that conference as they affect the decision on whether to withdraw the notice or allow it to take effect on schedule. That record, in my judgment, regrettably permits no other conclusion than that the U.S. efforts to see reform in the ILO during the past 2 years has been deeply disappointing.

Every point raised by Secretary Kissinger in the withdrawal notice, despite short term gains during the 2 years before this year's conference, was essentially rejected last month on every important issue considered.

Two issues, in particular, warrant this judgment:

First, the conference considered a recommendation of the ILO Governing Body to amend article 17 of the standing orders of the conference to withhold conference action on any resolutions which condemn or criticize member States for allegedly pursuing policies in violation of ILO standards which have not been investigated under established ILO procedures. The intent of this amendment was to screen out resolutions which condemn nations without meeting fundamental elements of due process. The committee of experts on the application of ILO conventions and recommendations, an independent quasi-judicial body which investigates and reports on the extent to which ILO standards have been complied with among all member States should be referred all charges of violations before any action by an ILO conference is taken. Normally, when violations are found by the committee of experts, the matter is taken up by the ILO conference on the application of conventions and resolutions—CACR. Particularly offending nations are included on a "special list" of nations not in compliance with conventions.

In 1974 a particularly egregious flaunting of ILO due process occurred when the conference adopted a "Resolution Concerning the Policy of Discrimination, Racism and Violation of Trade Union Freedoms and Rights Practised by the Israeli Authorities in Palestine and in Other Occupied Arab Territories." The adoption of this resolution was clearly motivated solely by political considerations. Just so, also, was the granting of observer status to the PLO in 1975—which prompted the U.S. delegation to walk out. This blatant failure to follow its own procedures had a great deal to do with the decision of the United States to issue its notice of intent to withdraw.

We must, of course, expect a certain amount of polemics in any international organization which deals with sensitive economic and social issues. It has become clear, however, that actions in the ILO conference have reached such completely unjust and discriminatory levels as to be totally unacceptable.

In this context, the proposed amendment to article 17 stood as a key test of the willingness of the ILO to eschew rampant politicization in the future. On June 3, the conference failed to adopt the article 17 amendment by failure to receive sufficient votes to constitute a quorum—a technique all too often used by opponents to reject proposed resolutions.

In March of this year, the ILO governing body attempted to bring an end to the continuing problem caused by the 1974 anti-Israeli resolution by relieving the director general of the responsibility imposed by that resolution to investigate and report on Israeli labor practices in the occupied territories. In effect, the governing body's action meant that alleged violations by Israel would be left to investigation by the committee of experts under established ILO procedures.

Although the original advocates of the 1974 resolution did not directly attempt to pass another resolution undoing the governing body's decision, a "compromise" was attempted by which director-general Blanchard, in a letter to the President of the conference, suggested that the committee of experts would pursue the investigation, but confirmed that he also would report in 1978 and 1979 "on steps taken to give effect to the resolution adopted in 1974 . . ." So once again the ILO failed to take steps to resolve its own principles of due process.

The Freedom of Association Convention is generally regarded as one of the most important of all the ILO conventions. Its key provision is article 2, which provides:

> Workers and employers, without distinction whatsoever, shall have the right to establish and, subject only to the rules of the organisation concerned, to join organisations of their own choosing without previous authorisation.

Each year the conference on the application of conventions and resolutions—CACR—selects cases from the comprehensive report of the committee of experts for presentation to the conference. In prior years it has been the selective drawing of only certain nations for inclusion in the report that has given rise to the charge of the ILO's using a double standard in judging member nations. At first, this year's action by the CACR was encouraging; it included particular criticism of eight nations representing governments across the political spectrum: Argentina, Bolivia, Chile, Czechoslovakia, Liberia, Ethiopia, Uganda, and the U.S.S.R. Only Ethiopia was singled out for inclusion on the special list and remarkably light-handed criticism of the U.S.S.R. was expressed. In fact, the strongest sentence to be found in the committee's report states that the committee "asked the [U.S.S.R.] government, when reviewing the new draft constitution, to examine the points made by the committee of experts and the conference committee to see whether changes could be made to bring the legal position more closely into conformity with the convention."

The report of the CACR could also have been commended for recommendations with respect to investigations of alleged Israeli violations of ILO convention No. 111 on discrimination in employment, to wit, that the committee of experts, and not the director general, review and assess the detailed Israeli reply to the 1974 resolution, that it continue

to investigate the situation and that the government of Israel continued to cooperate and answer any further inquiries. But, despite the encouraging action by the CACR, the ILO conference in plenary session again demonstrated its refusal to accord due process to member nations by failing to adopt the report by a vote of 135 to 0, and 219 abstentions. The quorum requirement is 227 votes, so the resolution was not adopted.

These failures present the United States with a difficult decision as to whether to carry out its letter of intent to withdraw at the end of this year. Although not generally appreciated in the United States, the ILO has the capacity for improving working standards and promoting human rights worldwide. The ILO has made a major effort to provide human rights assistance for the developing countries, not only to raise standards of living, but also to establish basic skills necessary for industrialization.

Moreover, the ILO's many conventions and resolutions have had demonstrable effects on legislation in both developing countries and developed countries in such diverse areas as human rights, labor administration, minimum wages, occupational health and safety, and social security.

The United States could not lightly abandon pursuit of these important goals and principles through the one international organization available to pursue them. The consequences of withdrawal are difficult to assess: Without the United States the organization may continue its present trend for many years to come, or it may dissolve itself in a sea of political debate and abdication of its original purposes.

On the other hand, to contemplate remaining in the ILO in view of the events of the past 2 years, and particularly of last June, would call into question U.S. credibility not only in the ILO, but in all of the other specialized agencies of the United Nations, as well. Perhaps 1 more year of continued membership and pressure from within would produce some progress, but this unfortunately is not possible under the ILO constitution. The United States must either carry out its withdrawal on November 5 of this year or remain and serve still another 2-year notice of intent to withdraw. During the weeks remaining to resolve this issue we in the Congress, the President, the employers—represented by the Chamber of Commerce, and the workers—represented by the AFL–CIO, must give serious consideration to the basic U.S. purposes served by membership in the ILO and to the fact that fair play and equal treatment—due process—are being outraged by the majority in the ILO making it extremely difficult for us to stay in the organization even after all these years of membership and activity.

Mr. President, I ask unanimous consent that the various items of material referred to be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

QUESTIONS TAKEN AT NOON BRIEFING, APRIL 6, 1977

Q. When was the last time a ranking Embassy officer in Rome was in contact with a ranking member of the Italian Communist Party?

A. It is the custom in Italy for a new Ambassador to call on the President of the Senate and the President of the Chamber of Deputies, among others. The latter is now a member of the Communist Party. Ambassador Gardner paid a courtesy call on him in his official capacity and the meeting had no political significance.

Q. Is there a change in the policy enunciated by former Secretary Kissinger that "until a Communist Party actually comes to power in Europe, there would be no contact with it"?

A. Most of our embassies in Europe have maintained contact in various ways and at various levels depending on the local situation. Our embassies in Paris and Rome, for example, have maintained working level contacts with the communist parties for some years.

Q. What is the U.S. view of "participation" of a communist party in a western European government as opposed to "domination" of a government by that party?

A. It is impossible to answer this question in the abstract. Our view would depend on future developments which cannot now be accurately read or predicted.

Q. What does our statement mean by "traditions" of a party; does this mean that a party cannot change its mind?

A. It refers to the ideological bases and governing practices of a communist party. We do not intend to address situations which have not arisen.

DEPARTMENT OF STATE DAILY BRIEFING, APRIL 6, 1977—COMMUNIST PARTICIPATION IN WESTERN EUROPEAN GOVERNMENTS

A. Our position on the question of the Palestinian matter—PLO and Palestinian—remains the same as in our last formulation.

Q. You were going to provide that for us.

A. Marvin, that is on its way to you, the request. It's coming down and it will be provided to you.

Q. There has been a report in an Egyptian paper this morning that President Sadat and President Carter have agreed upon the establishment of a Palestinian state, the need for the establishment of a Palestinian state. Can you confirm that?

A. I have not seen the article and I have nothing on that whatsoever, but I think that in President Sadat's remarks this morning and in the joint statement yesterday, there was absolutely no reference to anything of the sort.

Q. Hodding, do you have anything to say today about the American position toward the prospect of communist participation in friendly Western European governments?

A. Yes, I do. We believe that the position of a communist party in a particular country is a matter to be decided by the people and government of the country concerned. We do not propose to involve ourselves in the processes by which they reach their decisions on it. This does not mean that our attitude is one of indifference. We attach great importance to our ability to work with the countries of Western Europe on matters of vital interest.

Our ability to do so could be impaired if these governments came to be dominated by political parties whose particular traditions, values, and practices are alien to the fundamental democratic principles and common interests on which our relations with Western Europe are based.

Q. Is that the end of the statement?

A. That is the end of the statement.

Q. May I ask a question about it? You talk about "political parties whose particular traditions . . .", does this rule out the possibility, then, that a communist party in Western Europe might now say that it has taken a different viewpoint from what its traditions had been concerning the possibility of pluralistic government in changes of future governments by free elections?

A. Henry, I'm not prepared to go beyond the statement.

Q. One point of clarification: You speak about the domination of these governments by such parties. Well, the question in many places is participation, not domination.

A. Again, I'll have to refer to the statement itself.

Q. Hodding, are there any new guidelines for U.S. diplomats overseas on whether or not to have contact with Communist officials?

A. In so far as I know, the same procedures are in effect as have been in effect before.

Q. And before this Administration came into power?

A. I know of no changes.

Q. Hodding, on both Henry's question and Roy's, can you take those questions and get us answers rather than just simply refer us to these words that need clarification in our minds?

A. What I will do is, I will attempt to do it without suggesting that I can, but I'll be glad to try, and I will.

Q. Hodding, on your last response on the guidelines, recently something was made of the fact that the Ambassador to Rome met with Ingrao. Could you research the last time a U.S. Ambassador in Rome, or any ranking member of the Embassy in Rome had contact with a ranking member of the Communist Party? Would you?

A. Yes, I will.

Q. Just as a point of interest, Hodding, is it a matter of policy now to provide visas to members of Communist parties who want to visit the United States?

A. I don't have anything on that.

Q. Will you take that, because President Carter has, on a number of occasions, said that he is removing those restrictions.

A. I know that our entire policy in this area is under review and I do not believe that that review has been completed. And I think until it is, we don't have anything on that.

Q. Hodding, if you will excuse me, there seems to be—this statement of yours seems to be basically, internally contradictory:

On the one hand you say that we are not going to do anything about it. On the other hand, you say: It is a matter of great importance to this country.

If it is, indeed then, a great matter of importance what is the United States going to do about it?

A. I believe that the statement, in itself, answers your question. We are indicating that our attitude is not one of indifference, and we are indicating that we believe that it would be—our ability to continue to work with the countries of Western Europe would be impaired if these countries came under domination of political parties and so forth, as it says.

Q. Yes. And that being the case, and you are not going to involve yourself, the Government, in the process—what, then, are you going to do about it?

A. Well of course the statement that we are not involving ourselves in the process is a statement of national policy and is a reiteration of what this Administration has said a number of times.

What we are doing is indicating that our attitude is not one of indifference to the possibilities raised.

Q. Of domination?

A. Of domination.

Q. But can you take the question of: Is there indifference to just participation? Be-

cause as someone said earlier, that is where the big debate was, last year in this country. Not on domination. Everyone was against Communist domination.

A. I will see if I can get any further clarification on the statement.

Q. In that context, Hodding, also, it appeared to be a policy, at least unwritten, perhaps, that there would be no contact between officials of this country and members of the Communist parties in Italy, France and so on. Has that policy changed?

Q. At the Ambassadorial level?

A. I think that I have already—

One question may answer that. I have already taken a question of: When was the last time there was contact?

Insofar as policy goes, I will check into that.

Q. Hodding, would it be the policy of our Ambassadors, say, to deal with the members of the Communist parties?

A. I understand.

Q. In the background we are working against is a statement by Kissinger, on several occasions—[request to speak up.]

The background we are working against, is a statement that Kissinger made on several occasions; that until Communists actually came into power, there would be no contact with them; and I would like to find out whether that has been changed.

A. All right, I will find out.

Q. Can you find that?

Q. Hodding, did this question come up in the meeting this past weekend, between President Giscard and the Secretary?

A. I don't know.

Q. The previous Administration followed the practice of warning potential governments—quietly. You seem to have adopted the opposite policy by warning them here.

Is it a fair inference to draw that what you have read constitutes a warning?

A. What this constitutes is what it says.

Q. Hodding is this being conveyed in any other way, apart from this room, today?

A. This message has been made known, and will be made known to our various Embassies.

Q. Change the subject?

I noted in the transcript yesterday—I was somewhere else during the briefing—I noticed you answered my question about the public Soviet commitment on discussing SALT in Geneva. I appreciate the answer.

I also noted in one of the dispatches from Moscow published this morning, a statement that diplomatic sources, I believe it said Western diplomatic sources in Moscow, said in fact there is no Soviet commitment.

What you have said previously—what Vance has said previously on the subject—seems to contradict this directly, but I would like to raise the question again whether you feel there is a Soviet commitment to discuss SALT at Geneva next month.

A. Yes, I will stand on what I said yesterday.

Communist Parties in Western Europe: Challenge To The West

(Remarks by the Honorable Henry A. Kissinger)

Ladies and Gentlemen: The cohesion of the industrial democracies of Western Europe, North America, and Japan has been for thirty years the bulwark of peace and the engine of global prosperity.

This unity has been the keystone of our foreign policy in every Administration from President Truman to President Carter. The first permanent peacetime security alliance in American history was with the democratic nations of the Atlantic Community; it was soon followed by our commitment to the security of Japan. Since then, the agenda of cooperation among the industrial democracies has spread from collective defense to common action on energy policy, economic recovery, the international economic system, relations with the Communist countries, and with the Third World. This cohesion rests not simply on material considerations of wealth and power but on a common moral foundation as well—on the shared conviction that the consent of the governed is the basis of government and that every individual enjoys inalienable rights and is entitled to constitutional liberties.

It is ironic that at the moment when the industrial democracies are most cohesive in their opposition to external threats, at a time when our cooperative efforts cover a broader range than ever, the unity developed with so much effort and imagination over a generation should be jeopardized by an internal danger—the growth of Communist Parties and the danger of their accession to power in some of the countries of Western Europe.

In Italy, in the parliamentary elections of June 1976, the Communist Party obtained 34% of the vote, strengthening its position as the second largest party and as a powerful rival of the Christian Democratic Party which has governed Italy throughout the post-war period. The Communists' growth since the 1972 election has been primarily at the expense of the democratic socialist groups, and is part and parcel of an increasing and dangerous polarization of Italian politics. The Communists have already achieved a virtual veto over government programs in the Italian Parliament.

In France, in the Presidential election of April 1974, a coalition of the Communist and Socialist Parties came wtihin one percentage point of victory on the final ballot. A majority for this coalition in the parliamentary elections which must take place by March 1978 would bring Communist leaders into key ministerial positions. It would do so, moreover, in conditions of constitutional crisis, for the Constitution of the Fifth Republic has not yet faced the test of a President and a Prime Minister from different parties.

In the Iberian peninsula, where hopeful steps are being taken towards democracy, Communist Parties have fought with ruthlessness and disciplined organization to increase their already considerable influence. Portugal is a member of NATO; Spain is strategically crucial and tied by special agreements to the United States. Communist participation in the government of either country would have serious consequences for Western security.

And these Communist challenges do not exist in isolation from each other. There is no doubt that a Communist breakthrough to power or a share in power in one country will have a major psychological effect on the others, by making Communist Parties seem respectable, or suggesting that the tide of history in Europe is moving in their direction.

Most of the causes of this phenomenon are indigenous to the individual countries. And by the same token, the response to this challenge must come in the first instance from European leaders and voters who are persuaded that democracy is worth the effort. America cannot make their choices for them or decide the outcome of free elections.

But America must recognize the significance of what may lie ahead. We must not delude ourselves about what the accession of Communist leaders to executive power will mean to the most basic premises of American foreign policy. We must not confuse either our own people or those in allied countries who take our judgments seriously about the gravity of the threat. We must not weaken their resolve either by treating a Communist victory as inevitable—which it is not—or by imagining that a Communist electoral victory would be an accidental, transitory or inconsequential phenomenon. The ultimate decisions are for the voters of Europe to make. But they—and we—would be indulging in wishful thinking if we all did not acknowledge now:

That the accession to power of Communists in an allied country would represent a massive change in European politics;

That it would have fundamental consequences for the structure of the post-war world as we have known it and for America's relationship to its most important alliances;

And that it would alter the prospects for security and progress for all free nations.

THE COMMUNIST PARTIES AND WESTERN DEMOCRACIES

Those who take a less grave view of these prospects often claim that the European Communist Parties are independent of Moscow, that they have been effectively democratized and assimilated, and that they therefore pose no international issue in the broader East-West context.

It is true enough that the centrifugal and polycentric tendencies in the Communist world are one of the most striking developments of our age. These schisms, moreover, are made doubly intense by the passions of a quasi-religious battle over what is true dogma and what is heresy. Symptomatic is the fact that the Soviet Union has used military force in the post-war period only against other Communist countries—in East Berlin, in Hungary, in Czechoslovakia, and on the Sino-Soviet border. The Sino-Soviet conflict may indeed be the most profound and potentially explosive current international conflict. Nor is there a serious observer who disputes that the Communist Parties in Western Europe have in fact occasionally demonstrated some degree of independence from the Soviet Union.

But this hardly exhausts the issue. For we must ask: In what sense and on what issues are they independent? And what are the objective consequences for the West of their policies and programs?

We are entitled to certain skepticism about the sincerity of declarations of independence which coincide so precisely with electoral self-interest. One need not be a cynic to wonder at the decision of the French Communists, traditionally perhaps the most Stalinist Party in Western Europe, to renounce the Soviet concept of dictatorship of the proletariat without a single dissenting vote among 1700 delegates, as they did at their Party Congress in February 1976, when all previous Party Congresses had endorsed the same dictatorship of the proletariat by a similar unanimous vote of 1700 to nothing. Why was there not at least one lonely soul willing to adhere to the previous view? Much was made of this change as a gesture of independence. Now it turns out that the new Soviet Constitution, in preparation for years, drops the phrase as well.

Throughout their existence, the guiding principle of the Communist Parties has been their insistence that a minority had to seize power as the vanguard of the working class and impose its views on the rest of the population. This disdain for democratic procedures—whether it is presented in the traditional form of the "dictatorship of the proletariat" or wrapped in Gramsci's more elegant phrase, "the hegemony of the working class"—is precisely what has historically distinguished the Communist from the Socialist Parties. I find it hard to believe that after decades of vilifying Social Democracy and treating it as their mortal enemy, especially in every Communist country, Communist Parties have suddenly become Social Democrats. Whether or not they are independent of Moscow, Communists represent a philosophy which by its nature and their own testimony stands outside the "bourgeois" framework of Western constitutional history; they are a movement that appeals to a different tradition and uses a largely misleading vocabulary.

To be sure, the French, Spanish, and Italian Communist Parties have all recently declared their resolve "to work within the pluralism of political and social forces and to respect guarantees and develop all individual and collective freedoms." Enrico Berlinguer and Georges Marchais pledged their devotion to national independence and political pluralism at a conference of Communist Parties in East Berlin in June 1976.

But can we take these declarations at face value? After all, Marchais has listed Bulgaria, Poland, and East Germany as countries having a "pluralistic" party system. As recently as 1972, French Communist doctrine was that "there can be no return from Socialism to Capitalism." And a few weeks ago, to the great irritation of their Socialist allies, the French Communists estimated the cost of the economic program of the two parties at over 100 billion dollars. The Communist program—by definition—calls for the radical transformation of society; by the very nature of their beliefs Communists will be driven to bring about institutional changes that would make their ascendance permanent.

Moreover, are these professions of the national road to Communism and of devotion to democratic principle really so new? Let me read some quotations from European Communist leaders:

First: "The crux of the matter, and we Marxists should know this well, is this: every nation will effect its transition to Socialism not by a mapped-out route, not exactly as in the Soviet Union, but by its own road, dependent on its historical, national social, and cultural circumstances."

That was from a speech by Georgi Dimitrov, leader of the Bulgarian Communist Party, in February 1946.

Second: "We take the view that the method of imposing the Soviet system on (our country) would be wrong, since this method does not correspond to present-day conditions of development. . . . We take the view rather that the overriding interests of the . . . people in their present-day situation prescribe a different method . . . namely the method of establishing a democratic anti-Fascist regime, a parliamentary democratic republic with full democratic rights and liberties for the people."

That is from a proclamation of the (East) German Communist Party in June 1945.

Third: "The great national task facing the country cannot be solved by either the Communist Party or by any other party alone. The Communist Party holds that it does not have a monopoly, and it does not need the monopoly, to work among the masses for the reconstruction of the new (nation). The Communist Party does not approve of the idea of a one-party system. Let the other parties operate and organize as well."

That is a statement by Erno Gero, Communist Party leader of Hungary, in November 1944.

Fourth: "In (our country) there is a division of functions, and State power is based on parliamentary democracy. The dictatorship of the proletariat or of a single party is not essential. (Our country) can proceed and is proceeding along her own road."

That is from a speech by Wladyslaw Gomulka, Communist Party leader of Poland, in January 1946.

Fifth: "The Communist Party seeks to attain Socialism, but we are of the opinion that the Soviet system is not the only road to Socialism. . . . The coalition of the Communists with other parties is not opportunistic, a temporary limited coalition, but the expression . . . of all strata of the working people. . . . We seek at present to make certain that our new democratic parliamentary methods . . . be expressed in constitutional law. If you want the view of the Communists, I can only say that they will be the strictest guardians of the new Constitution."

That is a statement by Klement Gottwald, Communist Party leader of Czechoslovakia, in January 1947.

Sixth: Marchais speaks of "Socialism in the colors of France." But in 1938, George Orwell described French Communist strategy as "marching behind the tricolour."

In short, what the leaders of the Western Communist Parties are saying today about their affection for the processes of democracy is not significantly different from what East European Communist leaders declared with equal emphasis in the 1940's—before they seized the total power which they have never relinquished since.

Certainly Communist Parties are willing to come to power by democratic means. But could they permit the democratic process to reverse what they see as the inevitable path of "historical progress?" Would they maintain the institutions—press, parties, unions, enterprises—that would represent the principal threat to their power? Would they safeguard the freedoms that could turn into instruments of their future defeat? No Communist Party that governed alone has ever done so, and the vast majority of those democratic parties which entered coalitions with European Communists are now in the indexes of history books rather than in ministries or parliaments.

The Italian Communist Party, to be sure, left the government following its disastrous defeat by the Christian Democrats in 1948. But the situation today is greatly changed. In 1948, the Communists were a far smaller party, with little regional or municipal power. They had to contend with a younger and more united Christian Democratic Party, a strong Socialist Party, and a determined Western Alliance alarmed by Stalin's adventures in Greece and Czechoslovakia. Today, Italian Communists participate in the governments of most major cities and regions, have enormous trade union strength, substantive support from intellectuals and the popular culture, and have reduced the strength of the Socialists to a fraction of what it was three decades ago.

The French Communists were similarly removed from the government in 1947, following the intensification of the cold war. But, just as in the Italian case the following year, the popular revolt against the Communists took place within the framework of a united West with a clear perception of an external and internal threat to its survival. By contrast there are now many people on both sides of the Atlantic who have permitted themselves to be convinced that European Communism is only Social democracy with a Leninist face.

We cannot know, with certainty, whether a fundamental change has occurred in these parties' traditional goals and tactics. But their internal organization and management speak against such a view. It is not democratic pluralism but the stern Leninist precept of "democratic centralism" which continues to guide the internal structure of all European Communist Parties. This is a doctrine of iron discipline, not a principle of free and open dialogue. It is a system of dogma, of a "party line", of authority and obedience, of suppression of dissent and purge of dissenters. There are too many recent instances of resorts to violence, attempts to censor newspapers and broadcasting, and efforts to control the functioning of universities to be optimistic about their character.

Only in Western Europe and the United States are there still illusions about the nature of Communist Parties. In Eastern Europe, boredom, intellectual emptiness, inefficiency, and stultifying bureaucratism have been obvious for decades. Countries which used to be leading industrial powers have been reduced to mediocrity and stagnation; nations with long democratic traditions have seen the destruction of civil liberties and democratic practices. The countries of the West would mortgage their future if they closed their eyes to this reality. Societies that try to avoid difficult choices by making comforting assumptions about the future win no awards for restraint; they only speed their own demise.

COMMUNIST PARTIES AND THE ATLANTIC ALLIANCE

It is sometimes asked: If the United States can deal with Communist governments in the Soviet Union, China, Eastern Europe, and even Cuba or Vietnam, why can we not accept and learn to deal with Communist Parties seeking power in Western Europe? Is not the Soviet Union uneasy about the prospect of new Communist regimes that they may not be able to control?

These questions miss the central point. There is a crucial difference between managing conflict with the adversaries and maintaining an alliance among friends, particularly when the prospects for stable East-West relations depend vitally on the cohesion of the Western Alliance. And even if some West European Communist Parties should prove more difficult than the better disciplined satellites of East Europe, and thus pose new problems for Moscow, they would pose far more serious problems for the West.

For the key issue is not how "independent" the European Communists would be, but how Communist. The dynamics of the Communist Parties and the program on which they would be elected suggest that their foreign and domestic policies are not likely to be consistent with the common purposes of the Atlantic Alliance.

The solidarity of the great industrial democracies has maintained global security for thirty years. Western collective defense provided the shield behind which the United States, Western Europe and Japan developed the institutions of European unity and the progressive world economic system. All these relationships would be severely jeopardized if Communists came to power in allied governments.

Specifically:

The character of the Alliance would become confused to the American people. The signatories of the North Atlantic Treaty pledged in 1949 that "they are determined to safeguard the freedom, common heritage and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law." If Communists entered governments in allied countries, the engagement to help maintain the military balance in Europe would lack the moral base on which it has stood for a generation. The American people would be asked to maintain their alliance commitment on the basis of two highly uncertain, untested assumptions: that there is a new trend of Communism which will in time split from Moscow, and that the West will be able to manipulate the new divisions to its advantage.

Both of these propositions are open to the most serious doubt. No major Communist split has ever been generated or maintained by deliberate Western policy—in fact the Soviet Union's disputes with Yugoslavia and with China had been festering for months and even years before the West became aware of them.

But even such a split—which would surely take years to develop—would hardly diminish the danger to current Allied relationships. By the time it occurred, the damage to the NATO structure would probably have become irreparable. And the character of the Atlantic relationship would be totally transformed, even should the United States, for its own reasons, eventually decide to support a revisionist Communism. While the United States can never be indifferent to the extension of Soviet hegemony to Western Europe,

the permanent stationing of American forces in Europe could hardly be maintained for the object of defending some Communist governments against other Communist governments. Such a deployment could be justified only on the crudest balance of power grounds that would be incompatible with American tradition and American public sentiment.

This is not a personal recommendation as to a desirable policy, but a judgment of stark reality. Significant participation by Communist Parties in West European governments will over time undermine the moral and political basis for our present troop deployment in Europe.

The effect on Alliance cohesion generally would be disastrous. The Western Alliance has been held together by a system of close consultation based on shared goals and compatible philosophies. President de Gaulle cherished France's independence from the United States, but in major crises, over Berlin or Soviet missiles in Cuba, he stood firmly with his allies. By the same token, Communist governments in Western Europe, however independent of Moscow they may be on intraparty issues, can be expected to demonstrate their basic Communist convictions on major international issues.

If Communist Parties come to power in Western Europe, significant divergences on foreign policy would be bound to develop between Europe and the United States, and between European states in whose governments Communists participate and the others.

In February 1976, Italian Communist leader Berlinguer stated to a London Times interviewer that "the Soviet Union's peace policy is in the general interest of mankind." The Italian Party newspaper denounced NATO last year as "one of the fundamental instruments for American manipulation of the politics and economy of our country and Western Europe," and urged that "the relations between the countries of Western Europe and the two superpowers must be rediscussed." A leading member of the Italian party's Central Committee was asked in a recent interview with Radio Free Europe: If the French and Italian Communist Parties were in power, what would you do in the event of "a grave international crisis between the Soviet Union and the West?" He answered: "We would choose the Soviet side, of course." Such "support" of NATO as is expressed is explicitly tactical, and rests upon a distortion of detente. It is coupled with the proposition that a Soviet threat against Western Europe is inconceivable. No European Communist Party suggests that it wishes to be part of a Western Alliance to withstand Soviet expansion. And, indeed, how could Leninist parties dedicate themselves with any conviction to a military alliance whose primary purpose was and remains to counter Soviet power?

To be sure, these parties have had their differences with the Soviet Union, but in practically every case it has been on a matter of relations within the Communist movement. They have rarely, if ever, diverged from the Soviet position on an international issue. The Italian Communist Party has hailed the Cubans in Angola as "freedom fighters," condemned the Israeli rescue of hostages at Entebbe as an "intolerable violation of Uganda's national sovereignty," applauded Soviet policy in Africa and denounced America's diplomatic efforts in Southern Africa as an attempt to "save the neocolonial and military-strategic interests of imperialism."

At best, West European Communist Parties can be expected to steer their basic policies closer to the so-called nonaligned bloc and in an anti-Western direction. Yugoslavia—whose independence from Moscow on East European issues is by now traditional—has emerged as a champion of anti-Western and anti-American positions on most international issues outside of Eastern Europe. Why should we expect that Communist parties in Western Europe would be more friendly to us than the most independent East European state which has been engaged for nearly three decades in an open dispute with Moscow and whose government the Kremlin has sought repeatedly to undermine?

The strong role our allies play in defending Western interests in many regions of the globe—such as President Giscard's courageous actions in Zaire—could not be expected from a nation where Communists share power. In the Middle East, in Southern Africa, in relations with the third world, on Berlin, on arms control and European security, the parallelism of views that has existed between the United States and its European allies would almost certainly be eroded. On the contrary, active opposition especially in regions of traditional European cultural and political influence is probable. In our common efforts to improve the world economy and stimulate progress in both the developed and developing worlds, in the OECD, in the Paris Conference on International Economic Cooperation and at Heads of Governments Summits, divisions would soon be apparent. How could Atlantic unity possibly be maintained in such circumstances, even on the security issue?

The military strength and unity of NATO would be gravely weakened. The Communist Parties of Western Europe pay lip service to NATO. In fact, it is hard to visualize how the present NATO structure could continue, with its exchange of highly classified information, its integrated military planning and political consultation, if Communists had a significant share of power.

The participation of Communist Parties in West European governments would force a major change in NATO practices, as occurred temporarily with Portugal, which had to exclude itself from classified discussions within the Organization when its own political future was in doubt. These parties are unlikely to give NATO defense a high budgetary priority. Communist Parties would surely use their power to diminish the combined defense effort of Western Europe and inevitably sap our own will to pay the costs of maintaining U.S. forces in Europe.

Furthermore, if Communists participate in a significant way in the governments of key European countries, NATO may turn by default into a largely German-American alliance. This specter could then be used in other West European countries to undermine what remains of Atlantic cohesion. With NATO thus weakened, while the Soviet Union continued to increase its strategic and conventional strength and maintained its grip on the Warsaw Pact, the essential equilibrium of power between East and West in Europe would be fundamentally threatened. The freedom of many European countries, allied or neutral, to chart their own future would be diminished in direct proportion as the fear of Soviet power grows. Eventually, massive shifts against us would occur, not because a majority freely chose such a course, but because the upsetting of the overall balance left them no alternative.

The hopeful progress toward European unity would be undermined. The French and Italian Communist Parties opposed the creation of the European Common Market as a conspiracy of monopoly capitalism. Until quite recently, they have consistently fought progress toward European unity. Lately they have come to accept the European Community as a fact of life; they now say they seek to make it more "democratic" and to transform it, by "a process of innovation . . . in the spheres both of institutions and of general orientations," as Berlinguer expressed it. They can be counted on to re-orient the Common Market towards closer relations with the state economies of Eastern Europe and toward the more extreme of the Third World's demands for a "new international economic order." It can be assumed that they will not encourage European political unity to foster cooperation with the United States; rather they will urge it, if at all, to encourage Third Force tendencies. And over time either governments with Communist participation will pull the others towards them, or deep fissures will open up between the traditional Atlanticists and the "New Left" in the European Community. Either outcome would be destructive of European unity and Atlantic solidarity.

Thus whatever hypothesis we consider, Communist participation in governments of Western Europe will have a profound impact on the international structure as it has developed in the post-war period. We cannot be indifferent or delude ourselves that the advent of Communists to a significant share of power in Western Europe would be less than a watershed in Atlantic relationships.

THE AMERICAN RESPONSE

The attitude of the United States towards such developments must of necessity be complex. The crucial role must be that of European governments; the final decision must be that of the European voters. We cannot substitute for either.

In the end, the Communist Parties in Western Europe find their opportunities less in their inherent strength than in the demoralization, division or disorganization of their opponents; they succeed only when the democratic system seems unable to solve the social problems of the day; when the center does not hold and societies become polarized. Violence—such as that currently tormenting Italy—drives many to support Communism in desperation, convinced that drastic remedies are required to end a state of siege which has now spread to the press and other media.

The basic causes of Communist gains thus go deep and are not easy to remedy. In many European countries disillusionment with democratic government and democratic leaders is pervasive. In an era of peace, in a world of bureaucracy and mass production, there is no galvanizing crisis and little opportunity for heroic performance. A relativist age debunks authority and puts nothing in its place as an organizing principle of society. Massive impersonal bureaucracy disillusions the citizens with the responsiveness of his government, and simultaneously makes the task of elected officials more difficult. In too many democratic countries the young are offered too little inspiration; their elders too often have lost confidence in their own values. Too frequently democratic leaders are consumed by winning and holding office and are unable to demonstrate the force of conviction and philosophical self-assurance of their radical opponents.

The very success of Western societies in maintaining prosperity at a level undreamt of even forty years ago sometimes contributes to their malaise. Intellectuals condemn society for maternialism when it is prosperous and for injustice when it fails to insure prosperity. The widespread economic difficulties of the last four years—recession and inflation unparalleled in a generation, to a large extent induced by the extraordinary increase in oil prices—fuel the frustration of all whose hopes for economic advancement are rebuffed. The interdependence of economies causes inflation and recession to surge across national boundaries, compounding the sense of individual impotence.

And yet, with all these difficulties, the democratic forces of the West have it in their power to determine whether the Communist Parties have opportunities to succeed. They

have the capacity to put their economies on the path of steady non-inflationary expansion. They have the intellectual capital and the resources to usher in a new period of creativity. Anti-Communism is not enough; there must be a response to legitimate social and economic aspirations, and there must be a reform of the inequities from which these anti-democratic forces derive much of their appeal. With able leadership—and Western cohesion—the democracies can overcome their challenges and usher in a period of dramatic fresh advance.

In this process it is vital that the United States encourage an attitude of resolve and conviction.

First of all, we must frankly recognize the problem that we will face if the Communists come to power in Western Europe and we must understand the practical decisions this will impose on us as a nation. We must avoid facile projections which seek to escape difficult choices by making the most favorable assumptions about what might happen. We must have a program for encouraging the forces of moderation and progress in this critical period and for rallying them should a Communist Party nonetheless prevail.

Second, we must avoid giving the impression that we consider Communist success a foregone conclusion by ostentatious association or consultation with Communist leaders or by ambiguous declarations. Communist success is not a foregone conclusion; United States hesitation or ambiguity can, however, contribute to it. Communist Parties are riddled with weaknesses and internal strains, and marked by a fundamental flaw: parties that do not speak for the humane values which have inspired the peoples of the West for centuries are unlikely to appeal to a majority in a Western nation except in a moment of unsettling crisis. In no Western European country has the Communist Party ever fairly won more than about a third of the vote. Their most powerful weapons are fear, distrust and discouragement; their principal asset is the myth of their inevitability. Therefore, we do our friends in Europe no favor if we encourage the notion that the advent of Communists and their allies into power will make little or no difference to our own attitudes and policies. I am talking less of formal statements—which depend on tactical judgments difficult for any outsider to make—than of a clear and unambiguous U.S. attitude.

Some have argued that such a policy would be counterproductive, that it would encourage Communist protest votes. I believe the opposite to be true. On balance, I consider it important that Europe know of America's interest and concern. Many voters in allied countries value the friendship of the United States and appreciate the security supplied by the Atlantic Alliance. We should not ignore them, or demoralize them, or undercut them. The gradual gains scored by the Communist Parties over the past years occurred—by definition—at the margin, among voters who had not voted Communist before; who did not vote by anti-American reflex; who for one reason or another were persuaded that the Communists have now become acceptable or indispensable.

There is no evidence that voters are influenced to vote Communist by American attitudes. On the contrary, the real danger may well be the other way; many usual opponents of the Communist Parties may be lulled by voices, attitudes and ambiguities in this country implying that our traditional opposition has changed. Paradoxically, we even weaken whatever moderate elements may exist in Communist movements by settling too eagerly for verbal reassurances.

If the United States has a responsibility to encourage political freedom throughout the world, we surely have a duty to leave no doubt about our convictions on an issue that is so central to the future of the Western Alliance and therefore to the future of democracy. Human rights is not an abstraction concerned only with judicial procedures and unrelated to basic questions of political and geopolitical structure. We cannot fail to reckon the setback to European freedom that will result if Communist minorities gain decisive influence in European politics; we must not close our eyes to the effect on freedom throughout the world if the global balance tips against the West.

Thirdly, the United States should conduct its policies toward its allies in a way that strengthens the moderate, progressive and democratic governments of Western Europe. We must, on the one hand, avoid demands or lecturing which, whatever the intrinsic merit, magnify domestic fissures in European countries or the sense of impotence of European governments. At the same time, the United States can contribute to a sense of accomplishment by offering vigorous cooperation in joint efforts to solve common problems in the fields of diplomacy, arms control, energy and economic growth. This was the purpose of the economic summits among Western leaders begun by President Ford at Rambouillet and Puerto Rico, and continued so successfully in London by President Carter.

The unity and cooperative action of the democracies is crucial to all that America does in the world. Western unity defends not only our security but our way of life and the most basic moral values of our civilization. On this we cannot be neutral. To foster these principles deserves the same dedication and commitment that inspired the most imaginative periods of American diplomacy.

The stagnant societies of the East to which I have referred serve as both a warning and a hope. They remind us that the West's latent intellectual and political vitality, even more than its material prosperity, is the envy of the world. The winds of change are ultimately blowing from the West. The men and women of Eastern Europe are certainly aware that the West, for all its doubt and sense of spiritual dilemma, is the vanguard of modernization, the vital source of learning and of much of modern culture, and the haven of the free human spirit. The developing countries yearning for progress also turn to the West, not the East, for assistance, support, and the measure of what man can achieve when he aspires. Our technology, our creativity, our unequaled economic vigor, not some bureaucratic doctrine of economic determinism, are the forces that will shape the future if we mobilize the energies of free peoples.

This is not the time for resignation or acquiescence. It is a time for confidence, determination and hope. The power of free men and women and free nations acting in concern, confident of their strength and of their destiny, cannot be matched by any totalitarian regime or totalitarian movement. The spirit of freedom can never be crushed. But freedom can be lost gradually. Such a danger exists today in Western Europe, and that threat could have consequences not only in Europe but throughout the community of democracies and the world.

If we cherish freedom, we will face the peril, marshal joint efforts to overcome it and begin a period of new fulfillment for our peoples. Western Europe, our closest partner and the cradle of much of our civilization, is too precious to us for us to do otherwise.

Thank you.

DEPARTMENT OF STATE: TRANSCRIPT OF DAILY NEWS BRIEFING FRIDAY, JUNE 10, 1977, 12:35 P.M.

Mr. CARTER. Good afternoon. For your information, the camera crew in the briefing room today is shooting silent film of you hardworking correspondents at hard work.

I notice from the wires that Ken Freed, a regular correspondent here, is going to be a Neimann Fellow this year at Harvard, enjoying academe's sweet caresses for nine months. And my congratulations on that. [Applause.]

Q. Whose cameras are shooting?

A. Whose cameras are shooting?

Mr. MEDEIROS. ABC's.

Mr. CARTER. ABC's.

We have a press release on Lawrence S. Eagleburger being sworn in as United States Ambassador to the Socialist Federal Republic of Yugoslavia.

Available today in the Press Office is a statement by Philip Habib, Under Secretary for Political Affairs, before the International Security and Scientific Affairs and the Asian and Pacific Affairs Subcommittees of the House International Relations Committee.

We also have a statement of Louis Nosenzo, Deputy Assistant Secretary for Nuclear Energy and Energy Technology Affairs before the Subcommittee on Energy Research and Development of the Committee on Energy and Natural Resources.

Both of these June 10th.

I have an announcement.

A survey team will leave for Havana on Sunday, June 12th, headed by Mr. Bob Gershenson, the Executive Director for Management of the Inter-American Bureau. The team will remain in Havana about one week. The purpose is to survey the buildings and look at housing requirements in preparation for establishing our interests section.

Q. Is that Robert?

A. Robert.

Q. Is a Cuban survey team coming in?

A. The team will have seven members—ours will have seven members, most of them engineers and architects. All of them are from the Department of State. Unfortunately, I don't have anything on the Cuban survey team at this time.

Q. Maybe you have done this, Hodding, but how many people are they going to be surveying for?

A. As I recall, it is going to be a dozen or less. It is a max of a dozen. This is the projection we have right now.

There is a press release from ACDA, which you may or may not have seen, that was posted and that I will read.

"Pursuant to agreement reached in the course of the talks during the visit of Secretary of State Cyrus Vance to Moscow in March 1977, bilateral consultations on comprehensive nuclear test ban issues will be held in Washington beginning June 13, 1977.

The U.S. team will be headed by Paul C. Warnke, Director of the U.S. Arms Control and Disarmament Agency. The Soviet team will be headed by Dr. I. D. Morokhov, first Deputy Chairman of the State Committee on Atomic Energy of the U.S.S.R.

These bilateral consultations will also consider non-proliferation issues."

I, unfortunately, do not have beyond this press release a list of other participants on our side in the negotiations. I think that ACDA could and would provide them for you.

I have a little more information on this subject, since there are other working groups, to try to give you some idea of where we are coming on that.

Working group meetings on chemical warfare and radiological warfare were held in Geneva from May 9 to May 16, and we have been through that. A meeting on a comprehensive test ban will begin, as I have just announced, on June 13.

As for the other groups, work is proceeding on getting them underway, and these working groups include those on pre-notification of missile launches, civil defense, anti-satellite systems, conventional weapons transfers and the Indian Ocean. But I have no further information about the times or the places for those working groups to commence.

Q. Hodding, I'd like to ask you about what is now called Eurocommunism—

A. Yes.

Q. —having in mind Henry Kissinger's speech last night and also having in mind the paper you people put out April 6th or 7th.

A. 6th.

Q. Would you say there is a divergence in views between this administration and the last one on the threat that communists might post to the Alliance and to the structure of France, Italy, et cetera?

A. I think that we have repeatedly stressed our view that we believe that the coming to power of parties which do not share our democratic values and traditions and our adherence to certain democratic principles would be just the opposite of a cause for indifference, that we would, as the President has said, "We prefer that the governments involved in our many contacts in Western Europe continue to be democratic, and that no totalitarian elements become either influential or dominant." I am, in fact, quoting directly from the President's statement on the subject. "We prefer that the governments involved continue to be democratic, and that no totalitarian element become either influential or dominant, and I would hope that the democratic parties would prevail during the coming years in the struggle for political authority." Or as the State Department statement of April 6th said, "We attach great importance to our ability to work with the countries of Western Europe on matters of vital interest. Our ability to do so could be impaired if these governments came to be dominated by political parties whose particular traditions, values and practices are alien to the fundamental domocratic principles and common interests on which our relations with Western Europe are based. Our attitude is not one of indifference."

Q. What's the answer to the question?

A. The answer is that we do not feel that there is substantial disagreement between our positions at this time on Eurocommunism—

Q. Well,—

A. And, getting more specific, since this is not prompted by a vacuum but by an event, we do not view former Secretary of State Henry Kissinger's remarks as in any way marking a sharp departure or difference of opinion with the approach that we have to Euro-Communism. And I would be glad to match you text for text on what he had to say as opposed to what we say.

Q. With your good journalism background and your late government training, it is evident in your remarks, because you talk about a sharp change and you talk about "substantial agreement," but I'd rather you attack or address the subject of subtle differences. Is there—take away "substantial"——

Do you feel there is any disagreement at all, I mean, any hesitation by this administration to speak out? I know you both wish that communists didn't come to power in Western Europe. It would be amazing if you did wish them to come to power. But do you disagree in the tactics and the strategy?

A. I think you have to view both approaches, that enunciated by the former Secretary last night and by the Administration in the total context. Mr. Kissinger said last night precisely what we say in the first half of our policy. "The response to the challenge of Euro-Communism must come, in the first instance, from European leaders and voters who are persuaded that democracy is worth the effort." He went on to say, "America cannot make their choices for them or decide the outcome of free elections."

I might also add what he also said, which is almost a direct paraphase one way or another of our own policy. "In the end, the communist parties in Western Europe find their opportunities less in their inherent strength than in the demoralization, division, or disorganization of their opponents. They succeed only when the democratic system seems unable to solve the social problems of the day, when the center does not hold and society becomes polarized."

The President of the United States, speaking on the same subject: "I believe that the best way that we can prevent the enhancement of communist political strength in Europe is to show that democratically controlled governments can function effectively and openly and with humaneness, and a genuine and continuing comprehension of what people need and expect from government. To the extent that we fail as democracies, as democratic leaders to live up to the ideals that exemplify our own commitments, to that extent we open the opportunity for communist parties to be more successful."

I would suggest to you that that half of the statement is almost identical, and insofar as the second half is gone, I repeat, "This Administration does not view with indifference," and is concerned about, as we have said, the accession of power of parties which do not share our democratic background, heritage and commitments.

Q. Let me ask one last thing and I will give up.

Last April when you did put out your statement it was generally interpreted as a change of tone and as a statement of a hands-off policy.

Leaving the second part away, if you like, didn't that represent a change in tone or a change in approach from the previous administration? Isn't Henry Kissinger back now restating what it is that you have veered away from?

A. I think the former Secretary effectively dealt with what he viewed as a number of counsels and a number of viewpoints, none of which he identified with this administration, calling for indifference to Eurocommunism, calling for an acceptance of it as inevitable. Well, none of that is in Administration policy to begin with and they were not straw men, but for the sake of this discussion, the issues that he raised do not have to do with the Administration policy. The basic concerns that he had simply have nothing to do with the policy that we have enunciated.

I am not interested in going into a discussion of that, although it is an interesting subject.

But as far as our policy is concerned, I think that to answer your question fairly, the emphasis is on balance. That is, on the one hand, we cannot interfere in the internal affairs of another nation and, on the other hand, we are not indifferent to what happens there, might be regarded as some change in tone, but I think our basic concern about this matter is not changed.

Q. Maybe the question or a question that can be put is: are you less worried about the advent of Eurocommunism than perhaps the former Secretary?

A. Ken, I don't think I can deal with that because I don't know everything that is in his mind. I can only at this point go back—I think I have to go back at this point and simply restate what we have said: that we are not indifferent to the question, that we place great value on our ability to deal with parties that share our viewpoints and, as the President said—and the sequential here—that we prefer that the governments involved continue to be democratic and that no totalitarian elements become either influential or dominant.

That is a statement that is then followed by, "I believe the best way we can revert the enhancement of communist political strength in Europe is to make sure that our system works."

Now, I think that is pretty clear.

Q. Hodding, in Secretary Kissinger's remarks he was criticizing the practice of having high-level consultations and contacts between this government and communist leaders in Europe, rather than just the idea in general. I don't know if it was specifically directed. He said we must make our attitudes clearly known and understood not necessarily through formal statements but by practice.

Now, wasn't this directed at the administration because there was some criticism of the embassy in Paris, for example.

A. Yes. I think at that point.

That what?

Q. There was some criticism of the embassy in Paris, for example.

A. For having low level contacts.

Q. For having contacts with the French.

A. Yes. I think you would have to ask the former Secretary whether he meant that to be a direct criticism of this administration.

Q. But, you do not take it as such?

A. I do not consider the former Secretary's speech to be a criticism of this administration's policy.

Q. Can you tell us the status of the Panama negotiations?

A. To the extent that there is one at this point, Ken.

We are at this point without a negotiating session scheduled. I don't know when we are going to have a new one scheduled.

I am not suggesting that the thing has collapsed. I simply don't have any information on the next negotiations.

Q. Are the Panamanians still in Washington?

A. I understand that they are, but I am not positive.

I notice that the Panamanian Ambassador is coming in this afternoon which, as a matter of fact, is not sequential to what you are asking me. He is paying a courtesy call because Mr. Vance was not in the country when he first presented his credentials here.

Q. I am sorry I asked.

A. Yes. That makes two of us, as a matter of fact, since I don't have very much to give you.

Q. Is there a press conference Monday?

A. No. There is not a press conference Monday.

There will probably be a press conference down in Grenada, I think on Thursday morning.

Q. Will you pipe it in on the only telephone you have?

A. We will make sure that there is some kind of distribution on it.

Q. I have heard that the Secretary's speech to the OAS is going to be closed to the press.

Is that true?

A. That is true.

These meetings have operated traditionally both informally and in closed meeting, but the text, however, of any remarks he makes will be made available.

I am not so sure, Ken, that it is all that formal a speech, if you want to know the truth, at this point.

Q. Well, in the past at least, some of the OAS Meetings, the Secretary's—the American Secretary's speech has been open.

A. Yes, I would say that if it is possible for it to be open, we would certainly like it to be open. It is simply an understanding, as I have learned, that these things are generally held in what they consider to be informal and closed sessions.

Q. Hodding, can I take you back to the Euro-Communism for a second?

A. Yes.

Q. Kissinger last night talked about the need for European countries to be able to count on the moral and political support of the United States as they resist communistic political advances. What do you itemize, from the Carter Administration's point of view, as some of the moral and political support elements?

A. I think that what is integral for this question is the efforts that we were making to see that:

(1) The economic system in which we are

all jointly bound is effective and efficient and healthy. And that that was the major purpose of our participation in the London Economic Summit.

(2) That the alliance, through NATO, be kept vigorous and, where necessary, improved. And we have dedicated a great deal of time and have pledged a great deal more to that end.

We have worked extremely closely, as you know, and consulted actively with the leaders of Western Europe on almost every initiative we have undertaken—to the end that we have a common policy, and where we have differences that they can be resolved with something less than public acrimony.

I think that in every way we can devise we are in the process of strengthening the institutions that bind us and improving the conditions, both economic and political, in which we all live.

Q. Hodding, can there be a vigorous alliance if there are communists sharing power in France and/or Italy?

A. I think we have said before that we would find that—to repeat the policy which I have been reading here—that we think that it would be more difficult, obviously, to have to work with parties or governments which do not share our principles and our commitments.

Q. Hodding.

A. Yes, sir.

Q. Could you elaborate on, let's say on the extent of the eventual domination or influence of the totalitarian elements?

A. I don't really think there is any elaboration necessary there.

I have noted that the President has also said in this context that we are extremely happy to see that all the nations in NATO today are in fact run by democratically elected governments. And we are committed to a system in which democratic rule is a predominant thing.

I think that the President's statement also deals with the heritage and assumptions of parties as well as their public professions.

I can talk about what "totalitarian" means at some length, but I don't know if it would be very useful.

Q. Well, does this mean that you regard the Italians, the Spanish, the French Communist Parties as totalitarian or aiming at the totalitarian system in their respective countries?

A. I think that in this respect I can only point you to two things, which is what the parties say they are aiming for and what the philosophical underpinning of their philosophy says they are aiming for—and not go beyond what the President said.

Q. Hodding, something else?

A. Yes.

Q. The Moyers report on CBS tonight says that the Cuban exiles who have been operating out of Miami are now using Nicaragua as some sort of base. There was an interview with General Somoza.

Is the State Department concerned that people will be going from Miami to Nicaragua in order to promote anti-Cuban terrorists or other campaigns? Do you know anything about it?

A. Well now wait, why don't you ask me a different question because, Juan, I don't know anything about Cubans going from Miami to Nicaragua.

If you want to ask me whether we are cancerned about terrorism——

Q. Well, are you concerned about a new connection—a Nicaraguan connection to the——

A. Well since I don't have anything on the Nicaraguan connection, I——

Q. Well what do you have?

Do you have anything on——

A. I simply——

Q. Wait a minute. Wait a minute. Don't ask yourself your own questions.

A. I am simply telling you that I have nothing on a Nicaraguan connection, and that's an interesting story. I am sure that when we get to watch it tonight we will have some comment on it. But we haven't had a preview showing.

But insofar as a question of terrorism is concerned, particularly the question of whether or not the terrorists use American bases for terrorist activities elsewhere, we have expressed our concern to the Justice Department about that and there is no secret that we have.

Q. Have we had any contact with the Costa Ricans, since the President of Costa Rica said he wants Mr. Vesco to leave? Can we still extradite him, or——

A. I saw that story and was expecting something on it which I don't have.

I do not know of a contact that we made directly with them since that speech that he gave.

You are talking about that fifteen minute speech that he gave yesterday?

Q. Yes.

A. I don't have anything on any further contacts. We were interested in what he had to say.

Q. Do you have anything on a decision as to what the Department is going to do about the Rhodesian Information Office?

A. I have nothing beyond where we were when I was gone, and the Deputy Spokesman dealt with this issue.

Do you have something new on it?

Mr. TRATTNER. Murrey, if you want to see me afterward I think I can give you some answers.

A. Well, do you have it?

Mr. TRATTNER. I don't have it with me, no.

A. In that case, if we have something that is postable, we will post it. And if not, we will try to put it in a form that is.

Q. Thank you, sir.

INTERVIEW OF THE HONORABLE CYRUS R. VANCE, SECRETARY OF STATE

QUESTION. First of all, I appreciate your attempt to strike a balance. I see that the United States gets to be accused of many things, as I have seen for many years. But it is a little bit ironic that you get accused, on one side, of intervention in the internal affairs of countries and accused of indifference to the internal affairs of other countries. It's a political moral dilemma. Sort of squaring the circle. My question is, how do you deal with this dilemma in the United States policies?

Secretary VANCE. Well, do you want to take it, say in a specific country, or how would you like to—

QUESTION. Well, obviously the accusation of intervention came from the East with respect to human rights, whereas some western countries which are threatened by "Eurocommunism", by the ascendence to power of the communists, would like to have some sort of American interest in a more tangible way—a more tangible fashion. How do you view this dilemma?

Secretary VANCE. Let me start and talk about the question of "Eurocommunism" and then move into the question of American policy with respect to the Eastern bloc and how we deal with that.

Insofar as Eurocommunism is concerned, we have tried to make clear from the outset that we believe it is not for us to tell any country who they should elect in the way of their political leaders. That is their responsibility and their right. On the other hand, that does not mean that we are indifferent to who is elected and who serves in the government of any country. As we have said on a number of occasions, we would obviously prefer those who have the same kind of views with respect to fundamental values and precepts; and therefore we clearly prefer those who have a democratic backdrop. And we would believe that this is clearly preferable from our standpoint.

But again, you have to draw the balance between this and the right of any country to elect whom they choose. Now I think that by expressing our views in this way—namely, clearly—that we do have a preference. On the other hand, we think that the fundamental, ultimate decision has to be made by the people of the country. It is a reasonable way of dealing with this very, very difficult problem.

QUESTION. Senator Church said the other day that he shares the pessimistic view, this scenario so to speak, of profound consequences in the relationship between the United States and Europe should the communists have a degree of participation. I think much of the quibbling now is over whether it should be significant or decisive—these are two terms used.

Secretary VANCE. Yes, we have used those terms.

QUESTION. Your spokesman on April 6 told us that the ability of the United States to work together with European democracies would be impaired by the coming to power of the communists in a dominant way. So this was taken as a change of tone.

Is it really a matter, therefore, of tactics rather than strategy?

Secretary VANCE. No, I don't think it's a question of tactics. I think it's a question of strategy, basically, because the question of dominance is a fundamental question because it really does affect the basic structure and therefore the ultimate policies which will be developed by a particular country. So I would not call the issue a tactical issue. I would call it one of fundamental or strategic importance.

QUESTION. We face the graduality of accession to power of communists in some countries today. Take the Italian Communists. They have said that they will not take power altogether, even if they had a 51 percent majority. So it would have to be a gradual process. Where does the indifference end when, say, they move from a subcabinet level post to a higher cost, to greater participation in the government. How would you erect a wall in the cabinet, vis-a-vis a Communist member of the cabinet?

Secretary VANCE: Again, there I think you are crossing the line. Because for us to suggest what the wall should be, would be inappropriate. That would be interfering with the internal affairs of the given country. That is for a particular country to decide for itself. But that does not mean that we should be indifferent to the result.

QUESTION. In other words, there would be consequences. For instance, as to the question of stationing of American troops—do you think that the presence of communists in some governments would erode the moral basis for the presence of American troops in Western Europe? Would it have such a consequence?

Secretary VANCE. Let me say, I think it could.

QUESTION. It could.

The question also has been raised as to what the United States could do in terms of moral support, and President Carter said that he would go to France to meet with President Giscard d'Estaing, with a view to helping him. Do you see this as a practical way of making your concern felt in France and elsewhere in Europe?

Secretary VANCE. I had forgotten the precise words that he used in that connection, but was this in the interview that he had with the European correspondents?

QUESTION. No, this was after London when it was announced that he would go and would pay a state visit to France. My implication is—do we have to assume that he will be there at a time when his presence as a moral show would have the maximum benefits for democracy in France and elsewhere?

Secretary VANCE. Well, I think we're getting into something there which is not yet de-

finite enough to comment on with respect to timing and the like. Therefore, I would not like to get into that at this point because I think that would give implications.

QUESTION. Some people have found the juxtaposition between the position of the previous administration and your administration a bit relevant. Perhaps, it has been pointed out, it is simply a change of tone. You have discussed this before. What would you think in terms of the contacts that you should have with European communists, whereas before there was a very low-level type of communication with communists in Europe? Do you think that a way could be found to communicate with the communists without altering or jeopardizing your basic principles and fundamental attitudes?

Secretary VANCE. I think we should continue generally along the lines that we've been using in the past, and that is the way I would expect that we would be moving in the future.

QUESTION. You were not quoted, but it was reported that you felt that perhaps the rise in Eurocommunism implied some advantages for the democratic nations insofar as it would create problems in the Eastern bloc and that perhaps these problems would more than outweigh the damage that Eurocommunism could bring to the NATO structure. Are you still of this opinion?

Secretary VANCE. I would say that I think that this is a possibility. I think it depends on how Eurocommunism develops. I think one has to watch and see what the development of the process is in the various countries of Western Europe. And so, therefore, it is too early to draw any final conclusion with respect to this.

QUESTION. The point, however, has also been made that we are not really in the best position to take advantage of turmoil and problems in the Eastern world. It took us a long time to find out about the Chinese-Russian split and that pertained to state relations. Do you think that we would be in a position to better profit out of the continuing apparent discussion among Eastern European countries? Would we really be able to benefit in terms of a schism or series of small schisms within the Soviet-communist bloc?

Secretary VANCE. I think that this could have a meaningful effect, yes.

QUESTION. If I can turn to Belgrade, you said that the U.S. objective in Belgrade is to avoid polemics. And yet you also said that the West would be ready to subject the Eastern countries to a critique on issues like human rights. Do you see incompatibility between these?

Secretary VANCE. No, not at all.

QUESTION. Could you expand on that?

Secretary VANCE. Yes, I'll be delighted to expand on this. It seems to me that our principal task—and when I say "our," I mean all of the participants to the Belgrade conference—is to review the implementation of the Final Act of Helsinki. One of the areas in which we would be conducting this review is that of Basket 3. This of course raises the question of human rights. I think what we have to have is a frank and straightforward review of what has taken place. We will find, in my judgment, some progress in certain areas, lack of progress in others and in others there will be some retrogression.

And I think it's in the interests of all of us that we do in a straightforward way. Now, if one, on the other hand, went into this process with the objective of ending up in confrontation, that, I think, could affect the benefit that could be derived from this review process. And, I think, in the end, all of us would be the losers if that were the case.

Therefore, I say that we will eschew polemics but will insist upon a straightforward and frank review of the facts, whatever they may show.

QUESTION. What is at issue here is really the principle of accountability of nations.

Secretary VANCE. That's right.

QUESTION. Where does, however, the moral and justified concern of one nation end and interference begin?

Secretary VANCE. Well, this is obviously a very difficult question. One has to take a look at the document itself. The Helsinki Accords indicate that human rights is one of the fundamental issues for the nations which were signatories to the Helsinki document. Having recognized this as a critical and important area, it is therefore incumbent upon us to determine how well each of us has lived up to the principles which are set forth there. And accordingly, I think that each one of us should be willing and prepared to have our own conduct scrutinized.

QUESTION. On a general plane, do you think it is realistic to draw conclusion that some kind of linkage exists between political and strategic questions on one side and moral questions on the other?

Secretary VANCE. Well, I think that basic moral questions like the questions of human rights are intertwined within the strands of foreign policy. And this is clear from documents such as the United Nations Charter, the Helsinki Accords and other international documents. And therefore, to that extent, obviously there is a connection between political and economic and moral. I think the use of the word "linkage" is probably not a good choice of words because linkage has been used in a different sense, so I would shy away from using that word.

QUESTION. Should we say connection? Some people obviously put the choice very squarely and I think in unrealistic terms, between a showdown and a backdown with the Soviet Union. But they also seem to fear that you are on a collision course. What is your feeling on this?

Secretary VANCE. I don't think it's necessary to have things in such stark black and white terms. I don't think it has to be either a showdown or a backdown. I think that both of us can approach this in a constructive way which can lead to a result which is useful to the world community, and therefore I do not accept these stark contrasting approaches and think the answer lies more in the middle.

QUESTION. On SALT, some people also feel that it is going to be nearly impossible to reach an agreement by October. So the question is, what will you do? I would like to ask you another thing. In this negotiation, something seems to be missing. The United States and the Soviet Union go on improving their land-based missiles. Have you come to an understanding with the Soviet Union on the concept of strategic deterrence? Do the doctrines mesh on this? At one point, somebody said, "What in the name of God is strategic superiority?" What about an understanding with the Russians on strategic deterrence as the build-up of land missiles continues and becomes a destabilizing factor?

Secretary VANCE. Well, you've asked a very broad question. Let me try and answer it. And if I haven't done it completely, why then, please ask me additional clarifying questions.

I think that both of us recognize that the concept of a nuclear war is unacceptable to either of us as a nation. A nuclear war could result in the destruction of the world as we know it, and therefore it is something that both the Soviet Union and we will obviously do everything within our power to seek to avoid.

As to whether or not we agree on such refinements as strategic deterrence as opposed to counterforce and the like, those are much more difficult questions. But I think the broad important point to make is that both of us recognize that we must do everything within our power to avoid nuclear war, and therefore, we must take the necessary steps to stop the arms spiral and to begin to move along the road toward real nuclear disarmament. And that is the reason that we came forward in our trip to Moscow with our proposal for a so-called comprehensive plan. The objective of this was to try and take a major step forward in moving toward real disarmament.

Prior to now, agreement has been reached with respect to certain matters such as putting a cap upon the total number of strategic delivery vehicles and such as limiting any ballistic missile systems. These were necessary and important first steps. But it seems to us that from here on forward we really have got to take major steps that not only look to reducing the number of strategic weapons that each has in its arsenal, but also beginning to get a grip upon the qualitative problem as well.

It is only when we start moving in this direction that we will really be taking significant steps along the road.

QUESTION. How would you assess this movement at the current stage? Are you optimistic that it will go on to a successful conclusion before October?

Secretary VANCE. I don't want to put any guesses as to time on the table because I simply don't know the answer to that. I would say, however, that the most important thing is not the time at which an agreement is reached, but whether it's a good agreement.

And therefore I don't think we should feel ourselves under any specific time pressure to complete an agreement by a given date. The important thing is that we try and reach a good agreement—an agreement that really advances us along the road of nuclear deterrence and disarmament.

QUESTION. A quick change to China. You are about to go to China. Do you see any real possibility for a significant change in the relationship between the United States and the People's Republic of China?

Secretary VANCE. As the President has indicated, our conduct with respect to the People's Republic of China is and will be governed by the principles of the Shanghai Communique.

Our objective is normalization of relations, but the questions of pace and the modalities still have to be worked out. And this would obviously be a very important subject that has to be discussed with the leaders of the People's Republic. And that will be one of the main items, obviously, that we will wish to discuss when we sit down together.

QUESTION. The time frame has not changed substantially, then?

Secretary VANCE. Well, as I said, the questions of time and modalities are both things which will have to be discussed between us and it is too early before we've sat down to talk to them about this to make any predictions.

QUESTION. You have long been involved in Cyprus negotiations. Do you see a new initiative now on the horizon as a result of the Turkish political elections?

Secretary VANCE. Well, let me say I hope very much that progress can be made in Cyprus. I think it's of great importance that that long-festering problem can be resolved. I think we have to wait and see what kind of a government is formed as a result of the recent elections. I still believe that it is possible to make progress in the matter of Cyprus and I hope that this can be and will be an item of importance and high priority on the agenda once the new Turkish government comes to power.

QUESTION. Is there a possibility that the United States will take again an initiative in resolving the dispute?

Secretary VANCE. Well, what we've said on this is something that perhaps I should repeat. This problem is a problem that has to be resolved by the parties. We are willing to do whatever we can to assist, should they

wish us to do so, within the framework of the overall negotiations which are being conducted under the auspices of the Secretary General. We are not going to intrude ourselves into those discussions, but we stand ready and willing to help the parties should they wish us to do so.

QUESTION. One question about Andy Young, Ambassador Young. Do you think that in some ways he is hurting the cause of American diplomacy?

Secretary VANCE. I think Andy has made great contributions to foreign diplomacy. I think there is a much better understanding of the United States in the Third World as a result of Andy's work. I know that this is the case in Africa, and I believe it is also the case in other parts of the world as well. So therefore, I would say that I think Andy has made a major contribution and will continue to make major contributions to our diplomacy.

QUESTION. To conclude, one more question, if I can go back one second to the hard question of the American presence. Isn't it true that sometimes when the United States abstains from doing something, that is also a form of intervention? How do you really strike the balance in moral terms of American presence in the world—not only in Europe where we do have a large peril, but all over the world?

How would you see this question of America abstaining from doing certain things, and therefore practically intervening in a negative sense in foreign affairs?

Secretary VANCE. Well. I'm not sure I accept your premise, and I think stated that broadly, I would not agree with the premise. But if you have in mind any specific case, I would be delighted to discuss that specific case.

QUESTION. The specific case could be, for instance, a country in Europe with a communist problem, where a large part of the people who are democrats, who are concerned, look at the United States as the source of some encouragement, of moral support, in a more concrete, tangible way. Obviously, non-intervention is a basic principle that we accept. So, how would you think that the United States could go about maintaining credibility, maintaining the hope and the trust of people who look at the United States for moral leadership and for support should things go wrong?

Secretary VANCE. Well, I would say that you do this by the conduct that one demonstrates in the way that we handle ourselves both at home and abroad.

I think we'll be judged by the actions that we actually carry out. Therefore, I think that people will be watching what we say and do, and many times what we say will be of great importance. But we have to balance that, as you indicated earlier, by non-intervention. And I would say that in a given situation that depends upon the particular facts of that situation and it, as in so many cases, is a mistake to try and over-generalize and apply rather complex general principles without putting them in a factual framework. I'm afraid if one tries to draw, overly draw generalizations, sometimes this leads to mistakes in this interpretation.

QUESTION. A pragmatic policy and the proof of the pudding of course would be in real situations.

Secretary VANCE. That's right.

QUESTION. I appreciate this. Finally, I know that when President-elect Carter introduced you, he said that your amount of traveling would be fairly minimal, if I remember correctly. You have been traveling a great deal. Are you now beginning to slow down?

Secretary VANCE. It is an interesting and difficult thing. For a number of reasons, it has really become almost expected that foreign ministers will participate in a great variety of international meetings. In fact, if the foreign minister does not appear, it is considered to be a slight on the other participants in the meeting.

As a result of that, it is being, I think, generally accepted that foreign ministers are going to have to travel much more than they ever did in the past. And I think this comes about because more and more as the global problems and the regional problems become more complex and more difficult, it's necessary to deal with them in regional or in global forums.

This requires more and more international meetings and, whether we like it or not, the foreign minister is going to have to participate.

QUESTION. I hope we'll have your trip to Italy and to Europe by the end of the year, perhaps.

Secretary VANCE. Well, I hope so, too, because I have a great affection for Italy and its people. I have been there many times.

QUESTION. You are confident about the political choices that they will make?

Secretary VANCE. I have great confidence in the Italian people. I really do. I have a great admiration for them and I have confidence that their ultimate judgment will be wise.

QUESTION. Thank you very much, Mr. Secretary. It's been a pleasure to talk to you.

EUROCOMMUNISM

(By Dr. Heinz Timmermann)

In recent years the "Eurocommunists"—that is the Communist Parties of Italy, France, and Spain—have been developing new outlooks, at least as far as the declared contents of their programmes are concerned. The essence of this new trend is that the Eurocommunists have been emancipating themselves more and more from the ideological and political conceptions held by Moscow and orientating themselves more and more towards the specific conditions and traditions prevailing in their own countries and in the Western European region. The following points were at the centre of this development:

1. The Eurocommunists refuse to accept Soviet Socialism as the model on which to base the new social order which they are striving to achieve. For them, Soviet Socialism is the result of specific historical conditions peculiar to the USSR and is not a valid solution for the countries of Western Europe.

2. The Eurocommunists are no longer prepared to accept internationalism in the traditional Soviet version of "proletarian internationalism" because, in effect, the CPSU associates this concept with a claim by Moscow to a position of ideological-political leadership within the world Communist movement and also links this indistinguishably with the interests of Soviet reason of state. For the Eurocommunists, internationalism is conceivable only as "comradely, voluntary co-operation and solidarity" between all forces struggling for national and social emancipation.

3. The Eurocommunists accept the pluralism of political and social forces; they no longer reject the basic rights and political freedoms of bourgeois democracy as being merely "formal", but now credit them with a certain basic value and regard them as an integral part of their own model of Socialism. Furthermore, the Eurocommunists want to obtain the support of a wide consensus of the population at every stage along the road to Socialism—an intention based on the lessons they have learned from the course of events in Chile and Portugal, but also in Eastern Europe. Member of the politburo of the CPF Kanapa even went so far as to describe the form of society envisaged by his party expressly as a "democratic Socialism", to distinguish it from Soviet Socialism which was marked by "serious misrepresentations of the past" and by "continued shortcomings in democratic progress".

4. Recently, the Eurocommunists' foreign policy concepts have also been detaching themselves more and more from their traditional internationalist system of reference and have been taking on a dimension of their own, orientated towards their national interests and towards the conditions prevailing in the region. The concepts of policy towards the EEC and NATO now held by the CPI, for example, can hardly be reconciled with Soviet policy at all.

We in the West may look upon these developments as presenting dangers, or, perhaps, opportunities—according to whether we regard them only as subtle maneuvers skillfully engineered to cover up for the Eurocommunists' designs to seize power, or as a long-term strategy with which they intend to build up a democratic Socialism. I, for my part, would call for caution against thinking in such extreme alternatives—categories of thought which do not do justice to the dynamic nature of the transformation process which the Eurocommunists are going through, nor to the complexity of the problems involved.

II

However, we are not concerned today with the Western but with the Eastern and, in particular, the Soviet reaction to the transformation in the ranks of the Eurocommunists. For this process of change presents opportunities and dangers to Moscow and its followers, too, whereby, in my view, the Soviet side feels that the dangers are on the increase and the opportunities are on the decrease. How does the Soviet leadership account for this course of events, what defensive strategy has it developed to combat it, and in what perspective does it view its relations with the Eurocommunists?

As far as an analysis of the causes for this transformation amongst the Eurocommunists is concerned, the Soviet politicians and ideologists have proved themselves to be unable, and probably not even willing, to undertake a thorough and realistic appraisal of the motives involved. They prefer to look for apparent but fictitious reasons in their attempts to evade a realistic analysis with its ideological and political implications.

The Soviet analysts proceed on the assumption that the transition amongst the Eurocommunists is not rooted amongst the parties themselves but is something which is imposed upon them by external factors. The motive behind this approach is the intention—directed primarily at the public in their own sphere of influence—of emphasising the inviolability of the nucleus of Marxist-Leninist ideology, strategy and tactics ("universal laws") and of imputing that only certain unreliable elements within these parties are susceptible to the "softening-up" policies followed by the West. The Soviet politicians use a number of different, arbitrarily permutable argument patterns along these lines. They maintain for example:

1. The vacillations among the Eurocommunists can be attributed to a large extent to the fact that the rapid growth of these parties has swelled their ranks with forces of primarily petty-bourgeois origin—forces which have not yet been ideologically and politically consolidated and which are now putting pressure on their party leaderships to further their reformist concepts.

2. The Eurocommunists have succeeded, in the wake of détente, in consolidating their national foothold; they are assuming more national responsibility. In this situation they are tempted to give national interests priority over international considerations.

3. The difference in outlook between the governing parties of Eastern Europe, on the one hand, and the Eurocommunists, on the other, are occasioned by the time lag between the two groups in the transition from capi-

talism to socialism and disappear when seen from a historical perspective. The fulfillment of the historic mission of the working class and its Communist Party are based on identical universal laws, which, admittedly, are not all developed and applied at the same time.

The Soviet view concedes that there can and will be differences of opinion between and non-governing Communist Parties on a number of specific questions. However, these differences must not be allowed to go beyond a certain limit. There are three main provisos on which Moscow makes the continuation of normal relations with the Eurocommunists conditional:

1. The Eurocommunists must not look upon their own specific conceptions as a long-term strategy with which they intend to build up a democratic Socialism, but must regard them merely as a tactical approach towards the seizure of power. For, in Moscow's eyes, as we have seen, the fulfillment of the historic mission of the working class lies in identical universal laws—which have attained their most advanced state of development in the Soviet society.

2. The Eurocommunists must refrain from offensively trying to exert their own concepts upon the USSR and its Eastern European forefield. For it would be absurd to attempt to turn a society such as the Soviet one, which in the opinion of the Secretary of the CPSU and candidate member of the Politburo Ponomarev embodies "in a concentrated, generalized form, the essential nature and the living countenance of mature socialism", back to the level of stages of development which it has long surmounted.

3. The Eurocommunists must support Soviet foreign policy in its basic lines, even when this demands certain sacrifices from them in the short term. For in Moscow's eyes the strengthening of the Soviet Union and the Socialist Community is an essential precondition if the policy of détente, to which the Eurocommunists owe their present room to manoeuvre in the field of domestic policy in the first place, is to be continued, indeed, Soviet strength is essential to the strengthening and propagation of Socialism throughout the world.

When the Soviet leaders compare all this with the central points in the re-orientation of the Eurocommunists, as we discussed in our introduction, they must ask themselves whether these three provisos for their dealings with the Eurocommunist parties are still being met in their entirety. They consider the effects of Eurocommunist conceptions on their Eastern satellites to be particularly dangerous, especially since reformist communist forces in these countries are pointing to the Eurocommunist example more and more frequently and, together with the large circle of the civil rights movements, are increasingly receiving moral support from the Eurocommunists.

Moscow rightly fears that this, in conjunction with the potential effects of Basket 3 of the Helsinki agreement and with economic straits in some countries of the Eastern bloc, could, in the long term, bring the system into jeopardy. At any rate, as Helsinki and East Berlin showed, the two conferences were unable to fulfil the function which Moscow had originally envisaged for them—that of securing and legitimating Soviet predominance in important fields of international politics.

How is Moscow reacting to the Eurocommunist challenge? On the one hand, nobody in the Kremlin appears to have any intention of making any concessions to the Eurocommunists in fundamental matters of ideology, for this would have unforeseeable consequences for its own sphere of hegemony in Eastern Europe and even in the Soviet Union itself. On the other hand, there are many indications to the effect that there are differences of opinion within the Soviet leadership as regards the better tactical approach towards the Eurocommunists—differences between advocates of a hard line (Suslov, Ponomarev, Saradov) and supporters of a more flexible course (Brezhnev himself and his confidants such as Sagladin).

Thus the reaction of the Soviet leadership in the face of the new challenges is typical of its behaviour in complicated situations: it tries to keep all its options open for as long as possible and tries to evade decisions on matters of principle again and again, especially since this could mean breaking with the Eurocommunists, a step which, for a number of reasons, Moscow would be reluctant to take, at least for the time being. On the other hand, a further disintegration of the Communist movement would, in the long run, undermine the CPSU's legitimation basis in its own country and in its Eastern European sphere of hegemony and would vindicate those (for example the Chinese) who describe Soviet policy as Great Power politics. Indeed, according to Brezhnev it is precisely the "comradeship-in-arms of the Marxist-Leninist parties" which forms the "sound foundation" and the "cementing force" of the Socialist community.

There is also the fact that any Soviet plans for a break with the Eurocommunists would probably meet with serious reservations or even opposition from some of their sister parties in Eastern Europe. For the Hungarian and the Polish—and, to a certain extent, even the East German—communists are interested in countering a one-sided integration into the Soviet-dominated Eastern system by cultivating relations with their strong Western sister parties, in order to maintain a line of communication with the West, one which is becoming increasingly important.

On the other hand, there are foreign-policy reasons which keep the Soviet leadership's interest in maintaining relations to the Eurocommunists alive. For it still lays great store by the support which the Eurocommunists continue to give to Soviet foreign policy in a number of fields of central importance. Here the Soviet leadership is counting primarily on being able to employ these parties as a pressure group in favour of Moscow's policies of state interests in the field of East-West relations, and to use them as political factors in its policy of "peaceful co-existence" and détente, which is thought of as a dynamic process and is designed as an aid to extending Soviet influence in Western Europe. Thus the prime aim of the Communist Conference held in East Berlin in June 1976 was, in Moscow's eyes, "to link up the peace policy of the Socialist states with the movement of the working class, its parties, and the widest masses of the peoples" of the world (Ponomarev).

This, of course, is where the classic dual nature of Soviet foreign relations—simultaneous cultivation of good relations both on an inter-party and on an inter-state level—takes on a new dimension for the CPSU, a dimension which is becoming increasingly difficult to control, since this duality now also affects its relations with the parties themselves. On the one hand, the CPSU has no choice but to take steps to combat the ideological revisionism of the Eurocommunists and to prevail upon them to follow the fundamental laws of Marxist-Leninist thought. On the other, some of these parties are already so strong on the national level that the Soviet leadership is obliged to recognise their importance as serious factors affecting Soviet relations with other states and to treat them accordingly, i.e. with due consideration. It is in this multi-level Moscow approach that we find the explanation for the CPSU's, at first glance, remarkable combination of ideological attacks on and political concession towards the Italian communists.

IV

It is not surprising, in the light of the complexity of the Eurocommunist problem which Moscow, too, has trouble in unravelling, that the Soviet leadership should have no finite and consistent overall strategy and should be more or less at a loss as to how to tackle the whole affair. Contrary to widespread opinion, the Soviet communists and their satellite parties in Eastern and Western Europe are ideologically on the defensive rather than on the offensive.

The revolutionary impetus and the ideological attractivity of the early years of Soviet power are gone, and the hopes of the Khrushchev era and the days of the first sputniks, hopes of catching up with and even overtaking the West economically and technologically, have not been fulfilled. The only instrument left open to Moscow with which to consolidate its influence in Eastern Europe and, if possible, to extend it to Western Europe, too, is, in the end effect, political power built upon military strength—a political power which, like every imperial entity, depends on ideological trimmings and backing to legitimate its rule.

Nevertheless, Soviet replies do reveal a number of common basic feaurtes:

1. The Soviet leadership is sparing no effort to make the ideological-political integration of the Socialist community under the domination of the USSR more complete and to intensify it still further. It is in this context that we should see the restoration to acclamation of Andrei Zhdanov, a development which must have been nothing less than a provocation to the Eurocommunists, since it was Zhdanov, a man with a Russian nationalist tinge, who, by order of Stalin, had stood godfather to the Cominform in 1947—an institution which was encharged with the missions of welding together the Socialist states under the banner of the "Two Camp Theory", of taking offensive countermeasures against attempts by the "bourgeois ideology" to gain influence, and of re-converting the CPI and CPF into pro-Soviet propaganda parties.

False as the conclusion might be that Moscow intended with this step to signal its reversion to the Cominform policy of totally screening off eastern Europe and of confrontation with the West, it is probably true to regard this measure as expressing an increased desire for security on the part of the Soviet Union, as well as its intention to safeguard Eastern Europe more reliably against ideological-political influences from the West. A series of conferences with these aims, which had begun in December 1973 with the meeting in Moscow of the Secretaries responsible for international and ideological affairs in the Central Committees of the ruling parties of the USSR, Poland, the GDR, Czechoslovakia, Hungary, Rumania, Bulgaria, the Mongolian People's Republic, and Cuba, was also continued and intensified.

Politicians from these countries have met twice in the course of the past few months in Sofia: first leading Party ideologists and social scientists on 16th and 17th December 1976 and then, on 2nd and 3rd March, 1977 (parallel, by the way, to the Eurocommunists' Madrid summit), the Secretaries of the Central Committees responsible for Ideology and International relations. In both cases, the agenda of these meetings included the appraisal of the extent to which the "Eurocommunists" were jeopardizing the Eastern European system and the elaboration of a co-ordinated counter-strategy.

2. The Soviet leadership has been sharpening its tone towards the Eurocommunists. Thus the Bulgarian head of State and Party Zhikov characterised Eurocommunism to-

wards the end of 1976, no doubt in close consultation with Moscow, as an attempt to replace the "inherent laws and universal characteristics of revolutionary experience by local peculiarities" and thus as pursuing a "basic line of ideological diversion against proletarian internationalism". The leadership of the CPSU took the CPF even more vehemently to task by singling out the Party historian Elleinstein, a close associate of the Party leader, Marchais, as representing the whole reform-orientated fraction of the leadership of the CPF, and accusing him of casting doubts on "the revolutionary doctrine of Marxism-Leninism and its significance for Communism" and of defaming the Socialist democracy and the political system of the Socialist countries. His writings were hardly distinguishable in parts "from that that which obviously reactionary journalists" write.

3. All this does not by any means imply that East-West relations must also automatically take a turn for the worse. On the contrary: both sides are interested, beyond the realms of ideological differences and processes of internal transformation, in preserving the policy of détente and co-operation. Both the USSR and the USA (cf. the Sonnenfeldt doctrine) seem to show a certain understanding for the other Power's desire to keep developments in its own sphere of influence under control.

There are, however, three cases in particular in which an alteration to this situation could not be completely excluded. Firstly, if a Communist Party were to become a dominant factor in a Western government, reversing the traditional "philosophy" of European integration and admitting more influence for Soviet power policy. This could be true especially if the leftists were to win in France, and, above all, if the French communists who are opposed to integration were to take a leading position in a government of the left.

Such a development would have adverse consequences for East-West relations in general, for it would impel the West to submit its relations to Moscow to critical scrutiny. Secondly, if Eurocommunist conceptions had so strong an influence on Eastern Europe that the Soviet Union found it difficult to keep control over its Eastern European forefield: in this case Moscow would submit its relations to the west to critical scrutiny. Both cases are conceivable, thougn not very likely.

Nevertheless, the Soviet leadership will continue its endeavours to find a modus vivendi with the Eurocommunists on the basis of mutual non-interference in internal affairs for as long as at all possible. These tactics have proved successful to date insofar as the leaders of the Eurocommunists refrained at their summit conference in Madrid in March 1977 from incorporating a direct condemnation of measures taken by Eastern European countries to suppress civil rights movements into their concluding statement. To be sure, this meant, on the one hand, giving way, to some extent, to Soviet pressure. On the other hand, it gave those parties in Eastern Europe which would like to see European Communism come to rest the opportunity of preventing open criticism of the Eurocommunists being voiced at the parallel meeting in Sofia, as had been the intention of the CPSU and its Bulgarian and Czechoslovak followers.

Finally, it is certain that the determination not to provide ammunition for those who have been using the violation of human rights in some countries of Eastern Europe as an excuse to polemize against the policy of détente also played a certain role. For as sharply as they have come out against such violations on a number of occasions, the Eurocommunists are just as vitally interested in seeing détente policy continued, the policy which paved the way for their emergence from isolation in the first place.

For the rest, the CPSU and most of the other Communist Parties of Eastern Europe appear to be of the opinion that the real test for the Eurocommunists and for the holding capacity of their conceptions will not come until they have taken over governmental responsibility. Only "practical experience" was the "test of the rightness or wrongness of this or that thesis", as Brezhnev stated at the summit conference of the Communist Parties in East Berlin. Moscow is obviously of the opinion that the realities of day-to-day government will eventually force the Eurocommunists to take recourse to the traditionalist inherent laws and action patterns of Marxism-Leninism—for example to the dictatorship of the proletariat in one form or another—and to draw on the solidarity and material aid of the Socialist community.

Should the dynamic forces inherent in the transformation of the Eurocommunists, as described in our introduction, continue to act, and perhaps even gain further strength, after a Eurocommunist party had assumed governmental responsibility, i.e., should the CPSU one day realise that the Eurocommunists' conceptions and activities were, in the long run, more detrimental than beneficial to Moscow's interests, e.g., as a result of intensified emanation towards Eastern Europe, then the Soviet leadership could reconsider the situation.

It could, for example, endeavour to "Finlandize" the Eurocommunist parties, i.e., to support groups loyal to Moscow within the ranks of the Eurocommunists, as it has already done in Finland, in order to exercise pressure on the party leaderships or even to force these to resign. That this is more than mere speculation is proved not only by experience in Finland but also by the events in the CP of Greece (the split in 1968, the CP of Spain (various Soviet attempts to split up the party since 1969), the CP of Norway (the replacement of a reform-orientated leadership by one loyal to Moscow in 1975) and the Left Party Communists in Sweden (the split in 1977).

Admittedly: apart from the fact that the CPSU regards such a step only as an ultima ratio measure—it is nevertheless far from certain that the Soviet leadership is still in a position to use such a lever on the Eurocommunists at all (if so, then most probably in the case of the CPF). It is possible that such a measure would have precisely the opposite effect to the original intention with which it was taken.

New Times Editorial Refutes Carrillo on Eurocommunism

Concerning the book "Eurocommunism and the State" by Santiago Carrillo, general secretary of the Communist Party of Spain:

Ours is a time of momentous social change. The process of the transformation of society is moving ever forward to the benefit of all mankind. More and more countries, peoples and social groups are taking their place under the banners of socialism, democracy and national liberation.

The motive force of this epochal evolution today is plain for all to see. It is the socialist countries, the international working class, and the fighters for national and social emancipation, among them the participants in the non-aligned movement in Asia, Africa and Latin America. Of paramount importance for successful struggle for peace, democracy and socialism is the alliance of these three basic revolutionary forces, and of that alliance the international communist movement is the embodiment and the moving spirit.

Clearly, the greater the unity and cohesion of this movement, the more effective a factor it is in bringing together all the anti-imperialist, revolutionary forces. "From the sum total of the experience of class struggle the communists of all countries draw the conclusion that the most important precondition of the solution of the difficult, multiform problems facing them is the strengthening of the comradeship, unity and active cooperation among all the fraternal parties of the world," Leonid Brezhnev has stressed. "Only by acting as a united international movement can world communism attain its great goals."

Basic to this is unity between the communist parties that have already achieved the overthrow of the capitalist system and have taken the lead in the construction of the new society and the fraternal parties functioning in the non-socialist world. That durable alliance and cooperation between these two groups of parties is a powerful force in the defense of the workers' interests and of peace and progress has been demonstrated time and again over the past sixty years.

This is vividly evident also in European developments. The important changes that have taken place on our continent are the direct result of cooperation between the communists of both the Eastern and the Western parts of Europe.

Recall if only [as received] the militant union of Europe's communists in the struggle against fascism during World War Two; the active, effective support rendered one another by the communist and worker's parties during the cold war; the joint actions in support of Vietnam; the resolute joint struggle waged by the communists of both parts of the continent for detente and co-operation among all the countries of Europe, and the broad, truly world-wide campaigns of solidarity with the victims of imperialism and reaction.

It must be noted, however, that the more the political positions of monopoly capital are shaken and the more influential the communist and workers' parties become, the more insidious and cunning the actions of the enemies of communism aimed at disuniting the anti-imperialist forces and splitting and undermining the communist movement.

The imperalist strategy of division of course meets with a vigorous rebuff on the part of the fraternal parties. Of cardinal significance in this respect was the Berlin Conference of the Communist and Workers' Parties of Europe, which reaffirmed the communists' fidelity to the principles of internationalist solidarity.

Regrettably, however, views essentially running counter to these principles have been voiced even by members of the communist movement. A case in point is the public pronouncements of Santiago Carrillo, general secretary of the Communist Party of Spain, and primarily his book "Eurocommunism and the State," which appeared in April this year.

The problems dealt with in Carrillo's book could be classified in two groups. The first relates to the strategy and tactics of the West European communists.

There is no doubt that there are indeed interesting and serious problems here which it is the communists' direct duty thoroughly to study. Considering that these problems are complex, multi-faceted and have both theoretical and practical implications, exchanges of views on these issues between representatives of different communist parties are unquestionably of great interest. But they are a subject in themselves and we shall not go into them in the present article.

The second group of problems relates to the present international situation, characterization of the socialist countries and their policy, and the unity and cohesion of the communist movement.

These questions have a direct bearing on the interests of practically all the fraternal parties, including, naturally, the Communist

Party of the Soviet Union. Consequently, we consider it our right and duty to state our views on these questions.

First, about "Eurocommunism."

To begin with, it should be noted that in the matter of "Eurocommunism," as, incidentally, in many respects, Carrillo has undergone a truly staggering metamorphosis. Only a year ago, at the Berlin conference, he said that there was no such thing as "Eurocommunism." Today he proclaims himself not simply a Eurocommunist, but something of an apostle of this new concept and sets out to formulate its basic dogmas for the benefit of the whole world. And it must be said that he makes his understanding of "Eurocommunism" quite plain.

Objective analysis of what Carrillo says in his book on this subject leads to the inevitable conclusion that he uses and propounds the term (or concept) for the following purposes.

First, in order to counterpose the communist parties of the European capitalist countries to the communist parties of the socialist countries.

Second, in order to discredit existing socialism, that is, the countries that have already created the new society, and primarily the Soviet Union.

Third, in order to renounce all the conclusions jointly drawn by the communists of Europe and the aims they have set themserves in the struggle for the interests of the working class and all other sections of the working people, for peace, democracy and social progress. Against these conclusions and aims he sets an altogether different programme, one that essentially leads not only to the perpetuation of the division of Europe into opposing military blocs, but, moreover, to the strengthening of the aggressive NATO bloc.

That this approach accords neither with the interests of peace nor with the interests of socialism is surely self-evident.

But before going into Carrillo's concepts, it is perhaps in place to dwell briefly on the term "Eurocommunism" itself and its different interpretations.

The term first cropped up comparatively recently. It was originally coined by bourgeois political theorists and since then has been bandied about in one form or another depending on who uses it and what interpretation is placed on it.

Our interpretation originates among the left, including the communist parties. Some, while pointing out as a rule that the term is not a communist one, that it was not thought up by the communists, using it in reference to the common features characteristic of the present strategy of the communist parties of the developed capitalist countries, the strategy of their struggle for democracy and socialism.

True enough, the strategies of a number of West European parties, and on a broader plane, of the parties of the capitalist countries at a high level of socio-economic development, do have common basic premises. This is a widely known fact that was recognized long ago. Ever since Lenin's time, the CPSU has always underscored the need to take into account, when working out the strategy of revolutionary struggle, the specific conditions in which a party functions. The communist parties of the developed capitalist countries, as all other communist parties for that matter, naturally seek to take account of the national and historical context in their countries.

But even this interpretation can be objected to on the following grounds:

First, the developed capitalist countries are not only European. They include the United States, Japan, Canada and Australia, which means that from this standpoint "Eurocommunism" is too narrow a concept.

Second, lumping together all the communist parties, even if only the West European, is an over-simplification of the actual state of affairs. After all, even the West European countries are by no means identical, not only as regards natural conditions but above all economically and socially. Britain is one thing and Spain is another; Greece is one thing and Norway is something entirely different. Greater still is the difference between their historical traditions, customs, etc. Hence, with all the similarity of some, even basic approaches to the struggle for socialism, the strategies of the various West European parties differ substantially in many respects.

Last but not least, the concept of "Eurocommunism" is erroneous also because it affords grounds for assuming that what is in question, as has been rightly underscored in many documents of communist parties, is not some specific features of the strategy of the communist parties of some countries, but some sort of specific brand of communism.

Yet there is only one communism—if we speak of true, scientific communism—namely, that whose foundations were laid by Marx, Engels and Lenin, and whose principles are adhered to by the present-day communist movement.

There is, however, another rather widespread interpretation of "Eurocommunism" given it from the very outset by spokesmen of the capitalist world. For instance, the Italian journal L'EUROPEO, in an article in its April 25, 1976, issue, made it quite plain that "Eurocommunism" is, first, an instrument for the "pluralization" of communism, i.e., for splitting communism into separate parts opposed to one another. Second, it is a political trend according (for these very reasons) with the interests of "international political stability," i.e. maintenance of a political status quo consonant with the aims of imperialism, in particular, the United States.

Bourgeois ideologues of different countries have on more than one occasion explained what they mean by "Eurocommunism." In the final analysis all these explanations have boiled down to a very simple thing. What they want is that the communist and workers' parties in Western Europe should cease to be communist parties, that they should come out against the scientific communism founded by Marx, Engels and Lenin, and—more important still—that they should sever all ties with the communist and workers' parties of the socialist countries of Europe and enter into confrontation with them.

It should be mentioned that roughly the same line has been adopted by spokesmen of a number of social democratic parties. For instance, Austrian Socialist Party Chairman Bruno Kreisky, addressing a meeting of functionaries of his party in Alpbach last year, set forth his views on what "Eurocommunist parties" should be like. His advice amounted to this: These parties should renounce socialist revolution and working-class power, renounce proletarian internationalism and primarily friendship and solidarity with the Soviet Union and other socialist countries.

Writing not long ago in the Hungarian NEPSZABADSAG, Ference Varnai rightly said: "Making the concept of 'Eurocommunism' an issue in political struggle is obviously a maneuver aimed at diverting attention away from the anti-monopoly struggle, at presenting those West European communist parties which are labelled 'Eurocommunist' as being anti-Soviet, stirring up a controversy between fraternal parties, in particular between those in power and those still fighting to win power."

Reading Carrillo's book, it might seem at first that what is in question are differences between the strategy and tactics of communist parties of different countries. He treats of rather widespread views on certain specific features of communist strategy in developed countries, etc. In Carrillo's opinion, "Eurocommunism is an independent strategic concept" applicable, he maintains, to "any developed country," although it is based primarily on European experience.

But that is only the initial impression. Further on the book strikes a very different note, as Carrillo proceeds to expound an interpretation of "Eurocommunism" that coincides precisely with the meaning attached to it by the imperialist opponents of communism.

Indeed, Carrillo's "discovery" is that "Eurocommunism" could exercise a "decisive influence" on the creation of a "united Europe" capable of "playing an independent role in a balanced world now broken up into regional groupings." Further it turns out that essentially the reference is not to Europe, but only to Western Europe.

Judging by the book, the concept of "Eurocommunism", as Carrillo sees it, is a concept of setting the West European countries apart as a "force" opposed primarily to the socialist countries.

The author may object that nowhere in his book does he say anything of the kind. True enough, so as not to come out as an open protagonist of Atlanticism and an opponent of socialism, he does speak of socialism, at time even advocating the building of socialism in the West European countries. But how does this tally with some of his other statements, as, for instance, when he talks about a "definite stage in the organization of defence on the European level"? Everybody knows what "organization of defence on the European level" implies. It means the continuation of the imperialist policy of arming Western Europe against world socialism, a policy of alliance between European and American reaction. Surely it is clear that ideas of this order are very remote indeed from the building of socialism.

It will be in place here to recall that only a short time ago Carrillo favoured the entry of Spain into NATO, that most aggressive bloc, whose main purpose it is to prepare for war against the Soviet Union and the other socialist countries.

There is no mention in the book of this more than strange stand. But what there is in it is quite enough. For it makes it plain the underlying idea is the "union" of Western Europe on what is in effect an anti-Soviet platform. No wonder Carrillo's projections of this kind meet with approbation on the part of bourgeois propagandists and ideologues.

The idea of establishing a "united Europe," a Europe "independent of the USSR and the U.S.A.," has also another angle. It implies the division of the democratic forces and the communist movement on the continent into two parts, a division that would channel the West European democratic and communist movement to some highly dubious "third" or "middle" road, somewhere between capitalism and socialism. One cannot but note that this is very reminiscent of the ideas voiced by leaders of the socialist international in Geneva last November.

It must be said that the idea of division in the European communist movement, the idea of splitting it, is evidently very dear to Carrillo's heart. At any rate, he propounds and expounds it with a tenacity worthy of a better cause. For instance, as far back as December 1975 he told an interviewer from the Italian LA STAMPA that "there can be no common line between the communist parties of the capitalist countries and the parties of the countries of Eastern Europe . . . We (who?—ed.) are thinking of revising the principles of internationalism so as to base it on the coordination of our actions with the actions of the other forces of the labour movement in Western Europe. Contacts, relationships of cooperation, may be preserved with the parties of the countries of Eastern Europe, but the West must come first."

Needless to say, it is not only the right but probably the duty of the communist parties of Western Europe to coordinate their actions if only because the West European capitalists have long been waging an offensive against the working-class movement in what is essentially a united front. But what is unclear is why in order to give effect to such coordination of action, it should be necessary to renounce cooperation with the communist parties of the socialist countries, and, more than that, to revise the principles of internationalism"? After all, hitherto—and for many years—cooperation among the communist parties of the Western part of the continent has developed successfully alongside all-European communist cooperation.

There can be no doubt that Carrillo's interpretation of "Eurocommunism" accords solely with the interests of imperialism, the forces of aggression and reaction. If applied in practice, it would have serious negative consequences, the full impact of which would be felt primarily by the communists in the capitalist countries, including, of course, Spain. It would, lastly, lead to a split in the international communist movement, i.e., the very goal the reactionary, imperialist forces have aspired to for so many decades.

In Carrillo's postulations "Eurocommunism" is closely linked with his escalating anti-Sovietism. In characterizing the policy of the Soviet Union and the activity of the CPSU, he has latterly spoken of our country and our party in terms which even the most reactionary writers do not often venture to use. In this respect too Carrillo has gone through an astounding "evolution" in recent years.

There was a time he stood on positions of solidarity with the party of Lenin and the world's first socialist country and the tenor of his pronouncements was altogether different. In his report to the 6th Congress of the Communist Party of Spain in January 1960 he said: "We are guided by the principles elaborated by Marx, Engels and Lenin taught us by the experience of struggle and drawn from the example of the great Communist Party of the Soviet Union."

At the 7th congress of the party in August 1965 he said: "The strongest pillar of strength for the peoples in their movement towards liberation is the Union of Soviet Socialist Republics born of the Great October Socialist Revolution."

In September 1970 he declared at a plenary meeting of the Central Committee of the Communist Party in Spain: "It is impossible to conceive of socialists who would regard the USSR and, even more so, the Soviet form of socialism as their enemy."

It is perhaps in place in this connection to recall the communique published on the talks held in Moscow in October 1974 between a delegation from the Communist Party of Spain led by Santiago Carrillo and a delegation of the CPSU.

"The delegation of the Communist Party of Spain," the communique read, "expressed profound satisfaction with the achievements of the Soviet Union and welcomed the growth of the prestige of the USSR in the world arena. The CPS supports the Soviet policy of peace and peaceful coexistence of states and of assistance to the peoples fighting against imperialism and for national independence. It gives a high appraisal of the role of the CPSU in the implementation of this policy and its important contribution to the development of the world revolutionary process."

One cannot help but ask: Do all the present statements made by Carrillo signfly that he is now officially and completely disavowing what the delegation of the Communist Party of Spain he headed only a little more than two years ago officially and fully endorsed? To any unbiased observer it is plain that Carrillo has revised many of the assessments made by his party only recently.

The fact is that in the course of 1976 Carrillo repeatedly declared that the Communist Party of Spain "has no connection with the USSR as a state or with its policy." And in an interview he gave to the American UPI agency in January this year, Carrillo, continuing his "evolution," added:

"We are not in solidarity with the present policy of the Soviet Union." This is a complete departure from what he said only recently.

It is precisely these new views that are developed further in the book "Eurocommunism and the State." How does he characterize the Soviet Union in it? In his opinion what has been accomplished in the USSR does not accord with the ideas of Marxism-Leninism. Carrillo contends that the October Revolution gave rise to a state of a type which "while not being a bourgeois state, at the same time cannot be considered a workers' democracy where the organized proletariat is the ruling class."

This is said of a country where the working class is the leading force in society, where it wields, together with the peasantry and intelligentsia, the totality of power. This is said of a country where more than half of the state administration are people who directly belong to the working class; of a country where political leadership is exercised by the CPSU, a party that was created by the working class, reflects its views and interests, and is leading the country toward communism; of a country whose every step is oriented on the interests of the working people, and above all, the working class; a country that places all its activity at the service of the workingman's interests.

Is Santiago Carrillo not aware of all this? He of course knows all this full well, just as do the thousands of Spanish communists living in the Soviet Union who, together with the Soviet people, fought against Hitlerism and through the years since then have been taking part in the building of a communist society.

As regards Carrillo's recommendations to "Soviet comrades," for transforming the Soviet state, it should be noted, first, that he contradicts himself in urging in effect the weakening of the Soviet Union, the might of which, as he himself has to concede in earlier passages of his book, played so important a role in combating imperialism and in changing the world balance of strength. Second, such recommendations can only be qualified as interference in the internal affairs of another party, all the more so since they are accompanied by assessments that are not only erroneous but insulting to the Soviet people.

No, it is not because he does not know any better that Carrillo castigates socialism, our country. It is rather a matter of conscious anti-Sovietism.

This is particularly evident from his latest public pronouncement—an interview to the West German DER SPIEGEL in which he not only denies our state the right to be called a socialist democratic state, but actually demands its "transformation," calls for struggle against the existing system of government. That these disquisitions are profoundly hostile towards our country is obvious.

How, other than anti-Soviet, can one qualify Carrillo's monstrous statement that the Soviet Union is the "superpower" to blame for the arms race and that it pursues great power objectives? What other interpretation can be given to his slanderous allegations that the Soviet Union makes use of the class struggle and internationalism as an instrument for the achievement of precisely such aims?

The record of all the sixty years of the existence of the Soviet land conclusively gives the lie to such allegations. Never in all these six decades has the Soviet Government or the party leadership used the strength of the USSR in pursuit of egoistic objectives to the detriment of the cause of peace and socialism or the national interests of other countries. Never in all this time has the Soviet Union evaded its internationalist obligations. On this score there is the weighty evidence given for the whole world to hear by the leaders of countries such as Vietnam and Laos, Cuba and Angola, the leaders of national liberation movements in southern Africa and Latin America, and the patriots of Chile and Uruguay. More, there is the witness borne by the Spanish patriots, the Spanish communists, whose own experience demonstrates the Soviet Union's fidelity to internationalism.

The question naturally arises: Why has Santiago Carrillo chosen to take such a stand towards socialism, towards the Soviet Union? Where do the roots of this stand lie? Perhaps in time the answer to this question can be formulated more precisely, but some of the angles have already been made quite clear by Carrillo himself.

We have cited above what he says about his intention to "revise the principles of internationalism." Moreover, he has repeatedly declared that internationalism is a "hangover." In February 1976 he went even farther, declaring that he would "revise Marxist-Leninist theory." A somewhat curious occupation for a communist? Carrillo himself threw light on the subject in July last year when a U.S. newsman asked him why, considering his views, he called himself a communist. Carrillo replied without hesitation: "It's only a name."

No person in possession of his facilities could, on reading a statement like this (and as far as we know Carrillo has not denied it), interpret it as anything but a renunciation of Marxism-Leninism, of the basic principles of the revolutionary teaching of scientific communism.

Seeking somehow to vindicate his unsavory position, Carrillo devotes several pages of his book to a rather clumsy attempt to prove that to be a revisionist is nothing short of an honour. To be able to draw this paradoxical conclusion, he had to make it appear as if Marx, Engels and Lenin too were revisionists. Carrillo apparently assumes that his book will be read by simpletons unable to distinguish between creative development of Marxism-Leninism and revisionist repudiation of its fundamental, basic ideas. Let him think so. The likelihood, however, is that his readers will see through his ideas to their true character.

If Carrillo considers the lofty title of communist to be "only a name," that is his private affair. But it ceases to be that when he begins to exhort all Europe's communists to follow his example.

It is noteworthy that bourgeois propaganda is giving wide publicity to Carrillo's views. Not infrequently the view is expressed that the ideas he has put forward latterly have been prompted by a desire to win at all costs "respectability" in the eyes of the Spanish bourgeoisie, to persuade them magnanimously to accept him as one of their "own," as not presenting any threat to their domination and privileges. However, life has demonstrated time and again, as was pointed out at the 25th Congress of the CPSU, that "a concession to opportunism may sometimes yield some temporary advantages, but will utimately be damaging to the party."

To renounce internationalist positions and, for the sake of temporary tactical advantages, to jettison principles and adopt positions obviously unfriendly to the world's first socialist country is to do a good service to the class enemy, who, incidentally, actively coordinates his anti-Soviet actions on international scale.

Who gains by this? Santiago Carrillo would do well to give thought to this question,

bearing in mind the weighty warning given by Lenin as far back as 1904 in his classical "one step forward, two steps back." Stressing that the enemies of the working-class movement always welcomes "every swing towards opportunism, even the slightest and most temporary," he wrote: "You can tell a man's mistakes by the people who praise him."

The bourgeois press readily gives space to Carrillo's pronouncements, and this once again shows whose interests these pronouncements serve.

The Communist Party of the Soviet Union and the Communist Party of Spain were linked for many years by bonds of friendship and solidarity, mutual aid and support. The memory of those who sealed the friendship of our parties and peoples with the blood they shed on the fields of the Asturias and in the trenches of Stalingrad will be cherished forever, both by Soviet people and, we are confident, by our Spanish comrades.

Today too the Soviet people and the Communist Party of the Soviet Union stand in solidarity with the struggle waged by the communists and all the left forces of Spain for democratic reforms in that country, for the rights and interests of its people. Today too the CPSU holds that the highroad of relations between our parties is the road of friendship, cooperation and joint struggle. However, Carrillo's crude anti-Sovietism is plainly causing considerable damage to these relations. Responsibility for this rests fully with him.

The world communist movement, including the communist movement on the European Continent, has achieved much in recent years. From the positions it has now reached it will be able confidently to move forward to new victories in the struggle for peace, security, cooperation and social progress. Realizing this, the imperialist forces are doing everything in their power to halt the steady advance of the forces of democracy and socialism. But at this stage of historical development, too, defeat awaits the enemies of socialism and communism.

Needless to say, no victories in the class struggle come about of themselves. So it is in the given case as well—victory will be won in struggle against both the bourgeois carriers of division and those who would insinuate divisive ideas into the communist movement. That victory is sure to come, for the communists of Europe, who have gone through so many severe trials in the past, will be able to cope also with the latest attempts to split their ranks.

Closely co-operating with another, building international solidarity while refraining from all interference in one another's internal affairs, truly respecting one another, creatively applying Marxism-Leninism and elaborating new ways and means of revolutionary transformation consonant with our epoch and taking into account the specific national features, the communist parties of our continent are successfully working towards their jointly defined aims in the struggle against imperialism, for a Europe of peace and social progress.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

James K. Robinson, of Michigan, to be U.S. attorney for the eastern district of Michigan for the term of 4 years, vice Philip M. Van Dam.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Thursday, July 28, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Edward F. Harrington, of Massachusetts, to be U.S. attorney for the district of Massachusetts for the term of 4 years, vice James N. Gebriel, term expired.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Thursday, July 28, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

HOUSE OF REPRESENTATIVES—*Thursday, July 21, 1977*

The House met at 10 o'clock a.m.

The Reverend Herman C. Frankland, pastor, Bangor Baptist Church, Bangor, Maine, offered the following prayer:

Almighty God, as we bow in Your presence, how cognizant we are of our need of Your leadership. How our hearts are stirred and challenged as we consider the blessings and benefits You have bestowed upon our beloved America. We do not deserve them and only because of Your beneficence can we have the liberties that are ours today.

We beseech Thee, in Jesus' name, to guide our leaders and turn their hearts withersoever Thou will. Cause each one to realize life's ultimate goal is to know God and accept Him as Saviour. Place within our hearts the earnest desire to put God first in all our decisions.

If it be Thy sovereign will, please grant us continued freedom and the privilege of life, liberty, and pursuit of happiness. For we ask these things in Jesus' matchless name, and for His sake. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate has passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 291. Concurrent resolution to authorize certain corrections in the enrollment of H.R. 6138.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 2) entitled "An act to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of surface coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 4746) entitled "An act to extend certain authorities of the Secretary of the Interior with respect to water resources research and saline water conversion programs, and for other purposes."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7557) entitled "An act making appropriations for the Department of Transportation and related agencies for the fiscal year ending September 30, 1978, and for other purposes," and that the Senate agreed to the amendments of the House to the amendments of the Senate numbered 13, 34, and 39 to the foregoing bill.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 1474) entitled "An act to authorize certain construction at military installations, and for other purposes."

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 7933. An act making appropriations for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 7933) entitled "An act making appropriations for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. McCLELLAN, Mr. STENNIS, Mr. MAGNUSON, Mr. PROXMIRE, Mr. INOUYE, Mr. HOLLINGS, Mr. EAGLETON, Mr. CHILES, Mr. SASSER,

Mr. YOUNG, Mr. CASE, Mr. STEVENS, Mr. SCHWEIKER, and Mr. BROOKE to be the conferees on the part of the Senate.

The message also announced that the Senate had passed bills and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S. 658. An act to designate certain lands for inclusion and potential inclusion in the National Wilderness Preservation System;

S. 1859. An act to amend the Act of July 31, 1946, as amended, relating to the United States Capitol Grounds; and

S. Con. Res. 39. Concurrent resolution authorizing technical corrections in the enrollment of H.R. 2.

THE REVEREND HERMAN C. FRANKLAND

(Mr. COHEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. COHEN. Mr. Speaker, it is with a strong sense of local pride and personal thanksgiving that I joined Rev. Herman C. Frankland in prayer as he opened this morning's session of the House.

Reverend Frankland is a friend and constituent of mine, who has come to Washington from my hometown, Bangor, Maine, to lead us in prayer. Reverend Frankland is the pastor of the Bangor Baptist Church, a parish he founded in 1967. In the decade since he established his congregation, Reverend Frankland's church has flourished. It is today the largest Baptist church in all of New England.

Reverend Frankland is a great spiritual and moral leader whose influence extends far beyond his own community and State. He organized the Northern New England Baptist Bible Fellowship, an organization of independent Baptist churches across our region, and served as president of the group for 4 years. He also organized the Bangor Christian Schools in 1970, now one of the largest Christian schools in New England.

I am very proud that such a distinguished Maine clergyman has been given the opportunity to lead the House in prayer. I want to thank you, Mr. Speaker, and the House Chaplain, Edward G. Latch, for your generous cooperation in making Reverend Frankland's appearance here today possible.

Reverend Frankland's charge to us should guide us all as we proceed with our legislative mission in this Chamber. We in the House are signally honored to have been able to hear Reverend Frankland deliver the opening prayer today.

PERMISSION FOR SUBCOMMITTEE ON NATIONAL PARKS AND INSULAR AFFAIRS OF COMMITTEE ON INTERIOR AND INSULAR AFFAIRS TO MEET TODAY

Mr. PHILLIP BURTON. Mr. Speaker, I ask unanimous consent that the Subcommittee on National Parks and Insular Affairs of the Committee on Interior and Insular Affairs may be permitted to meet this morning.

The SPEAKER. Is there objection to the request of the gentleman from California?

Mr. CEDERBERG. Mr. Speaker, reserving the right to object, has the gentleman cleared this with the ranking minority member of the subcommittee?

Mr. PHILLIP BURTON. No; I have not, because I have not seen him as yet today. I will not proceed immediately. At any point, when he tells me that he does not desire it, I would not proceed. I would prefer to get the authority, but I will not go forward if the ranking minority member tells me that I should not.

Mr. CEDERBERG. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

PERMISSION TO FILE CONFERENCE REPORT ON H.R. 7558, AGRICULTURE AND RELATED AGENCIES APPROPRIATION ACT, 1978

Mr. MAHON. Mr. Speaker, I ask unanimous consent that the managers may have until midnight tonight to file a conference report on the bill H.R. 7558, making appropriations for Agriculture and related agencies for the fiscal year ending September 30, 1978, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

APPOINTMENT OF CONFEREES ON H.R. 7933, DEFENSE DEPARTMENT APPROPRIATION ACT, 1978

Mr. MAHON. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 7933) making appropriations for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. ADDABBO. Mr. Speaker, reserving the right to object, I take this time to ask the chairman of the full Committee on Appropriations and the Subcommittee on Defense a question in reference to the funding for the B–1 bomber. The Senate has deleted the funds. The House, by a narrow margin, defeated my motion to delete the funds. Is it the chairman's intention that if the House conferees cannot agree with the Senate provision, the matter will be brought back to the House in disagreement so that there will be a separate vote in the House on that question?

Mr. MAHON. Mr. Speaker, if the gentleman will yield, we have, of course, appointed conferees, and we have not conferred; but it seems to me inescapable that the House will have an opportunity to vote on the B–1 matter. In what form, I have not considered it personally, and I have not discussed it with any member of the subcommittee, but I would think the House would have an opportunity to work its will.

Mr. ADDABBO. Mr. Speaker, on that basis, I withdraw my reservation of objection on the appointment of conferees.

The SPEAKER. Is there objection to the request of the gentleman from Texas? The Chair hears none, and appoints the following conferees: Messrs. MAHON, SIKES, FLOOD, ADDABBO, MCFALL, FLYNT, GIAIMO, CHAPPELL, BURLISON of Missouri, EDWARDS of Alabama, ROBINSON, KEMP, and CEDERBERG.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Chairman, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves, pursuant to rule XXVIII 6(a) of the House rules that the conference committee meetings between the House and the Senate on H.R. 7933, the fiscal year 1978 Department of Defense appropriation bill, be closed to the public at such times as classified national security information is under consideration, provided however, that any sitting Member of Congress shall have the right to attend any closed or open meeting.

The SPEAKER. The Chair recognizes the gentleman from Texas (Mr. MAHON) for 1 hour.

Mr. MAHON. Mr. Speaker, the object here is to comply with the rules and procedures of the House. The conference will be open if the motion is agreed to, except for the consideration of classified material. Classified material may arise from time to time in the conference. It will be possible to arrange for the classified material to be discussed under circumstances which will permit most of the conference to be an open conference.

Mr. GIAIMO. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the distinguished gentleman from Connecticut (Mr. GIAIMO).

Mr. GIAIMO. I thank the gentleman for yielding.

Mr. Speaker, I would like to explore this just a bit with the chairman of the committee, because this is a serious matter. It is a new rule under which we are operating. The thrust of this is to have open conference meetings, whenever possible, particularly in the area of defense, where there is a great deal of give and take—I will not say "logrolling," but it has been known to happen in the past—except in areas where national security requires a closed conference. In the past, to my recollection, there have always been totally secret conferences on the defense appropriation bill.

Is it the gentleman's intention to change this procedure substantially so that we will in fact have open conferences, except for those areas where because of the real needs of national security we will require closure of the conferences? And would the gentleman explain to us the manner in which he intends to conduct this conference?

Mr. MAHON. Mr. Speaker, it would be my purpose, as the head of the House conferees, to work out an arrangement in the conference whereby it will be agreed that wherever there are classified

materials we can try to discuss them at one particular time and not have classified material intermingled constantly with the discussion otherwise on the bill. I think that can be done and should be done. In the past, I know of nothing improper that has ever taken place in the conference with the Senate on a defense bill, and I have had considerable experience in that area. But as a matter of convenience, we have moved to close the conferences because there is so much classified material, and we cannot always tell when the material may arise for discussion.

But if we are forewarned, as we are, about what the situation may be, then we can consolidate the classified items and conduct the conference in an orderly way. As has been pointed out, any Member of the House can attend any of the conference sessions.

So I would hope this would be completely acceptable to my friend, the gentleman from Connecticut (Mr. GIAIMO), and to the Members of the House generally.

Mr. GIAIMO. Mr. Speaker, will the gentleman yield further?

Mr. MAHON. I yield to the gentleman from Connecticut.

Mr. GIAIMO. So it would be the gentleman's intent to try to conduct the conference in a segmented fashion? In other words, those portions which would require closure of the meetings or of the conference sessions would be handled at one point and those that did not require closure for national security reasons could be conducted in the open and in the sunshine?

Mr. MAHON. That would be our intent. We have never had any experience previously in this field.

Mr. GIAIMO. I know that.

Mr. MAHON. But, for example, if we are discussing the National Guard and the Reserves or questions involving operations and maintenance—and this would include many other subjects—there would be no need whatever to have a closed meeting.

So, Mr. Speaker, I think we will have no problem whatever. The gentleman from Connecticut (Mr. GIAIMO) will be a member of the conference committee and will have an opportunity to express his views.

Mr. GIAIMO. I understand that, but it is because we have never conducted a conference in this fashion in the past that I am concerned that we abide by the spirit of this House rule, which provides that we have openness wherever possible so the public will know what we are doing in our conferences.

Mr. MAHON. I will say further to my friend, the gentleman from Connecticut, that we will have a preconference meeting, at which time all members of the committee will have an opportunity to exchange ideas, and we can make plans for the posture we will assume when we meet with the Senate conferees.

Mr. DODD. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Connecticut.

Mr. DODD. Mr. Speaker, I thank the gentleman for yielding.

I merely intended to echo the concerns of my colleague, the gentleman from Connecticut (Mr. GIAIMO), and I am delighted to hear the comment of the committee chairman that he will conduct this conference in the open and in a segmented fashion and in such a way that Members of the House would have the right to participate in the conference, at least as observers.

Mr. MAHON. The right of the membership to attend the meetings has been there in recent years.

Mr. DODD. Mr. Speaker, if the gentleman will yield further, I would point out that over the years that right has not always been extended in every case. But I am delighted to hear the chairman of the committee say he feels strongly that the membership ought to be allowed at least to observe the proceedings of the conference. I think this is a fine step forward.

Mr. Speaker, I thank the gentleman for yielding.

Mr. MAHON. Mr. Speaker, I thank the gentleman for his contribution.

Mr. Speaker, I move the previous question on the motion.

The previous question was ordered.

The SPEAKER. The question is on the motion offered by the gentleman from Texas (Mr. MAHON).

Mr. FLYNT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Under the provisions of rule XXVIII, clause 6(a), the yeas and nays are considered as ordered on this motion.

The vote was taken by electronic device, and there were—yeas 376, nays 0, not voting 57, as follows:

So the motion was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

APPOINTMENT OF CONFEREES ON S. 1019, MARITIME APPROPRIATION AUTHORIZATION ACT FOR FISCAL YEAR 1978

Mr. MURPHY of New York. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (S. 1019) to authorize appropriations for fiscal year 1978 for certain maritime programs of the Department of Commerce, and for other purposes, with a House amendment thereto, insist on the House amendment, and agree to the conference asked by the Senate.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York? The Chair hears none, and, without objection, appoints the following conferees: Messrs. MURPHY of New York, BIAGGI, METCALFE, and ZEFERETTI, Ms. MIKULSKI, and Messrs. RUPPE and Mr. MCCLOSKEY.

There was no objection.

REQUEST FOR PERMISSION FOR AD HOC COMMITTEE ON OUTER CONTINENTAL SHELF TO SIT TODAY DURING 5-MINUTE RULE

Mr. MURPHY of New York. Mr. Speaker, I ask unanimous consent that the Ad Hoc Select Committee on the Outer Continental Shelf may be permitted to sit this afternoon during the 5-minute rule.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

Mr. ROUSSELOT. Mr. Speaker, I reserve the right to object, and I yield to the gentleman from New York (Mr. FISH).

Mr. FISH. Mr. Speaker, I thank the gentleman from California for yielding.

Mr. Speaker, several members of the Ad Hoc Select Committee are vitally interested in amendments that will be before the House in the course of the consideration of the Agriculture bill and feel they should be here and not have their time divided.

I would appreciate it, if the objection is about to be made, if we could have 10 of my colleagues stand as I make this objection.

Mr. ROUSSELOT. Mr. Speaker, I have the time.

Mr. Speaker, I reserve the right to object.

Can the gentleman from New York tell us why this is so crucial that we have to divide ourselves between the consideration of the Agriculture bill and this committee?

Mr. MURPHY of New York. Mr. Speaker, if the gentleman will yield, that is not what I want to do. What I want to do is congratulate the minority on their cooperation this year and I hope we will have their cooperation in marking up the Outer Continental Shelf Lands Act bill before the August recess.

Mr. ROUSSELOT. Mr. Speaker, I further reserve the right to object and yield to the gentleman from New York (Mr. FISH).

Mr. FISH. Mr. Speaker, I just want to make the record straight that in the past week the chairman of the ad hoc committee has canceled three markup sessions.

Mr. ROUSSELOT. My goodness, that is difficult to believe that the chairman canceled the committee meeting three times.

Mr. Speaker, I further reserve the right to object.

Mr. MURPHY of New York. Mr. Speaker, if the gentleman will yield further, the reason for the cancellations of those sessions was to effect some compromises with the minority and other members of the committee to expedite the markup of the OCS bill.

Mr. ROUSSELOT. Mr. Speaker, I object.

The SPEAKER pro tempore. The Chair will advise the House it takes 10 Members to object.

Mr. FISH. Mr. Speaker, I object.

Mr. LUJAN. Mr. Speaker, I object.

Mr. BAUMAN. Mr. Speaker, I object.

Mr. ASHBROOK. Mr. Speaker, I object.

Mr. DEVINE. Mr. Speaker, I object.

Mr. SYMMS. Mr. Speaker, I object.

Mr. SAWYER. Mr. Speaker, I object.

Mr. FINDLEY. Mr. Speaker, I object.

Mr. JOHNSON of Colorado. Mr. Speaker, I object.

Mr. STEERS. Mr. Speaker, I object.

The SPEAKER pro tempore. Objection is heard.

CONFERENCE REPORT ON H.R. 6714, INTERNATIONAL DEVELOPMENT AND FOOD ASSISTANCE ACT OF 1977

Mr. ZABLOCKI. Mr. Speaker, I call up the conference report on the bill (H.R. 6714) to amend the Foreign Assistance Act of 1961 to authorize development assistance programs for fiscal year 1978, to amend the Agricultural Trade Development and Assistance Act of 1954 to make certain changes in the authorities of that act, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore (Mr. BOLAND). Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of July 14, 1977.)

Mr. ZABLOCKI (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The SPEAKER pro tempore. The gentleman from Wisconsin (Mr. ZABLOCKI) and the gentleman from Michigan (Mr. BROOMFIELD) are recognized for 30 minutes each.

The Chair recognizes the gentleman from Wisconsin (Mr. ZABLOCKI).

Mr. ZABLOCKI. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the conference report on H.R. 6714, the International Development and Food Assistance Act of 1977, is relatively the same as the bill passed by the House in May.

The bill authorizes $1.6 billion for U.S. bilateral economic assistance abroad in fiscal year 1978, and institutes a number of improvements in Public Law 480, the Food for Peace program.

It is a measure which focuses on helping poor nations and the poor populations within those countries. It promotes the interests of the United States by providing a means for aiding our relationships with the nations of the Third World and by helping to reduce causes of tension due to their poverty. At the same time, by assisting in raising their economic levels, it increases their ability to buy American exports.

Technically there were about 60 issues of difference between the House and Senate versions of H.R. 6714. The Senate measure, however, was comparable to the House version in its basic respects and the conferees were able to resolve all differences essentially in two sessions.

Mr. Speaker, the major resolutions reached by the conferees are as follows:

The total authorization in the House bill was $1.681 billion for fiscal 1978, while the Senate figure was $1.606 billion. The $1.647 billion in the conference report is approximately half way between the two, slightly closer to the House total than the Senate's.

The largest reduction was in the food and nutrition amount, for which the House bill had provided $613 million with the intent of allowing some $61 million of this authorization for a resumption of U.S. bilateral assistance to India. The conferees agreed to a food and nutrition amount of $33 million below the House figure, but adopted a Senate provision requesting the President to commit up to $60 million for storage facilities and other food and nutrition assistance for India. This reflects, of course, the approval expressed by Members of both Houses over the recent restoration of democratic principles and political freedoms in India.

The largest single monetary increase over the House bill in the conference report is in the item for relief and rehabilitation for the victims of the recent earthquakes in Italy. The House figure for this purpose was $20 million. The Senate had $35 million. The conferees agreed to $30 million for disaster assistance for Italy.

Both provisions in the House bill encouraging greater integration of women into the national economies of developing countries were accepted by the Senate conferees.

On human rights, the conferees agreed to a Senate provision requiring the Ad-

ministrator of AID to consider specific actions which have been taken relating to multilateral or security assistance because of human rights violations, and to strengthen the existing reporting requirement. The conferees also adopted the House provision earmarking $750,000 for encouraging increased adherence to human rights in developing countries.

In the field of energy, compromise language was adopted incorporating both House and Senate for promoting renewable and nonnuclear energy sources in developing countries. Also, an executive branch study looking toward further options in this field was authorized, for submission to the Congress by next January 31.

The House managers accepted several Senate provisions which were not in the House bill. These included extension of the existing housing guaranty program for Israel, Portugal, and Lebanon; a $42.5 million ceiling on the U.S. contributions to the United Nations Relief and Works Agency for Palestinian refugees in fiscal 1978; and a provision against "double dipping" by AID consultants. Mr. Speaker, your conferees believed these provisions would be acceptable to the House membership.

The Senate managers agreed to a number of House provisions not in their bill, including the provision abolishing the Office of Inspector General, Foreign Assistance.

In title II of H.R. 6714, which deals with the food-for-peace program, the House and Senate versions had very similar provisions providing for liberalization of the 75/25 percentage formula on Public Law 480 sales to developing countries and on the application of human rights criteria to the food aid program.

On provisions to encourage the use of food for development purposes in poor countries, the conferees agreed to the Senate provision to establish the Food for Development program as a new title III of Public Law 480, and to the House provisions setting minimum percentages for this program and for granting waivers under this program for the very poorest countries.

The conference report adopts the House version for raising Public Law 480 title II humanitarian grant program annual minimum from 1.3 to 1.6 million tons in fiscal 1978, with the Senate increases which raise the minimum to 1.7 million tons by 1982.

The Senate conferees were strongly opposed to the House provision banning tobacco from Public Law 480 title I shipments, insisting instead on the Senate provision which gives priority to food and fiber commodities while not specifically prohibiting tobacco.

Finally—and this provision covers the whole act, both for economic aid and for Public Law 480—the conferees agreed to a combination of the House and Senate provisions prohibiting aid to certain countries.

The House had voted to prohibit the use of funds under this act for aid or trade with Cuba or Vietnam. The Senate had voted to bar aid or reparations to Vietnam, Cambodia, or Laos.

Since trade with these countries is already prohibited under other statutes, the conferees took the Senate amendment and strengthened it by adding Cuba to the list. We also agreed to a provision directing the President to continue to take all possible steps to obtain a final accounting of all Americans missing in action in Vietnam.

Mr. Speaker, the House managers on H.R. 6714 believe that the overall result of the conference report is to maintain the principal features of the bill as originally passed by the House and, in some respects to improve it by including modifications that will be favored by this body.

I urge that the conference report be approved.

Mr. BROOMFIELD. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of the conference report on H.R. 6714, the International Development and Food Assistance Act of 1977. The agreement reached by the House and Senate conferees on our respective differences is a sound one.

The conference report would authorize a total of $1,646,800,000 for the various important U.S. development and food assistance programs. This figure is a reasonable compromise. It is $34.4 million below the total amount originally provided in H.R. 6714 as it passed the House, but it is some $40.7 million more than the amount contained in the Senate amendment.

The funds authorized in this legislation will provide for the operation in fiscal year 1978 of U.S. assistance programs to the neediest countries in the general areas of food and nutrition, population planning, health, education, and human resources and technical assistance. The conference agreement also authorizes funds for international disaster assistance in general as well as providing specific authorizations for relief, rehabilitation, and reconstruction assistance for the victims of recent earthquakes in Italy and Turkey. Similarly, the legislation authorizes funds for the U.S. share in commencing the long-term, multidonor aid program for the impoverished people of the drought-stricken Sahel region in Africa.

The conference agreement on H.R. 6714 makes some administrative policy improvements in U.S. development assistance programs. The conference text provides for abolishing the position of Inspector General, Foreign Assistance, in the Agency for International Development, a largely redundant office whose functions overlap substantially with those of the Inspector General, Foreign Service. The legislation also permits limited transfers of program funds by the Agency for International Development to its operating expenses account. More importantly, perhaps, from the standpoint of general policy on U.S. foreign assistance efforts, this legislation substantially revises section 640B of the Foreign Assistance Act of 1961, as amended, to require a comprehensive and coordinated review and report on the effects of all our policies and programs which have a major impact on the developing countries. Specifically, this coordinated review will seek to analyze the effects of these programs and policies on the quality of life for the poor majority of the people in these recipient countries, those at whom U.S. bilateral assistance was to be particularly targeted under the "new directions" policy which Congress adopted for our foreign aid programs in 1973. Additionally, this review would assess the effects of our development assistance programs on the U.S. economy.

Lastly, the conference agreement on H.R. 6714 amends the food for peace program, Public Law 480. Among other things, this legislation would increase the minimum amount of commodities for distribution under the Public Law 480, humanitarian grant programs. This bill would also continue the recent inclination of the House to insist on consideration of human rights conditions in countries receiving U.S. assistance. In this regard, human rights requirements would now apply to concessional sales of commodities under title I of Public Law 480. The conference agreement, moreover, provides for an essentially new "food for development" program in Public Law 480 to further encourage self-help development projects in recipient countries directed at agricultural and rural development, nutrition, population planning, and health.

This is by no means an exhaustive explanation of this significant legislation. I have rather touched on a number of important aspects of the conference agreement on H.R. 6714 which I considered particularly worthy of mention. I can assure my colleagues that the House and Senate conferees thoroughly scrutinized every provision of this legislation and I urge the House to adopt the conference report on H.R. 6714.

Mr. Speaker, at this point I yield such time as he may consume to the gentleman from Kansas (Mr. WINN).

Mr. WINN. Mr. Speaker, I would also urge the House to approve the conference report on H.R. 6714, the proposed International Development and Food Assistance Act of 1977. As most of us are well aware, this legislation authorizes funds for U.S. development assistance for fiscal year 1978 to fund programs intended to help the poor majority of the people in the less developed countries to meet their basic human needs in the fundamental areas of nutrition, health, population planning, and education, for example. This legislation also makes substantive revisions, reforms, and amendments to certain policy aspects of U.S. development assistance programs and our Public Law 480, food for peace programs.

After thorough discussion and consideration of the differing authorization levels in the House and Senate bills for the various functional development assistance programs, the conferees reached what I feel most of us will concede are reasonable and appropriate compromise funding levels. The total authorization provided for fiscal year 1978 in the conference agreement is $1,646,800, slightly less than the level in the original House bill, and somewhat more than the Senate's original figure.

In the interests of saving time, I would

merely like to note a few of the significant provisions in this legislation. Recognizing the persistent problem of continuing energy shortages in most of the world, the bill provides for up to $18 million for cooperative programs for developing appropriate renewable and unconventional energy sources and for energy conservation. In particular, decentralized, small-scale, renewable energy sources suitable for rural areas will be emphasized.

The conference report contains language which would add a new section to the Foreign Assistance Act of 1961, as amended, authorizing the use of U.S. assistance to help recipient countries to develop and strengthen their capacity to protect and manage their environments and natural resource bases. Particular attention is intended to be given to resources necessary for the economic growth of those countries and the well-being of their people.

This legislation further recognizes the importance which Congress attaches to human rights considerations. It strengthens the human rights requirements and reporting provisions in existing law which relate to U.S. development assistance programs.

The bill likewise applies human rights requirements to Public Law 480, title I, concessional commodity sales.

Of course, the bill authorizes funds for well-established U.S. aid programs to increase the agricultural productivity of the many small farmers in recipient countries, to help provide integrated health care and family planning programs, and educational and technical assistance. In addition, the conference report reemphasizes AID's mandate to give attention to its programs, projects, and activities which tend to integrate women into the national economies of their developing countries.

Lastly, the conference report contains several prohibitions or restrictions applicable to our foreign aid program. Significant among these is the prohibition on the use of any assistance to fund involuntary sterilizations or to coerce or provide any financial incentive for such practices. A second notable restriction prohibits the use of any funds authorized in H.R. 6714 for assistance or reparations to Cuba, Vietnam, Cambodia, or Laos.

Certainly there are a number of other important provisions in this legislation equally worthy of mention if time permitted. In conclusion, let me merely say that the compromises reached by the conferees after diligent efforts have resulted in a sound and balanced piece of legislation. I therefore recommend that the House adopt the conference report on H.R. 6714.

Mr. BROOMFIELD. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio (Mr. ASHBROOK).

Mr. ASHBROOK. I thank my colleague for yielding to me. I think it is time to ask some questions of the chairman, my good friend from Wisconsin, and head of the managers on the part of the House.

Mr. Speaker, I would like to inquire as to information regarding the amendments which were placed in the bill last May which related to the prohibition of aid to Vietnam and Cuba. I will say that I believe the conferees endeavored to prevent aid to Vietnam and Cuba, but I am just wondering, and I ask for the record and the history of this legislation, whether or not, under the existing language which was adopted in the conference report, indirect aid could go to Vietnam, Cuba, or Laos through multilateral organizations.

Mr. ZABLOCKI. Mr. Speaker, will the gentleman yield?

Mr. ASHBROOK. I yield to the gentleman from Wisconsin.

Mr. ZABLOCKI. Mr. Speaker, the limitation on the use of funds states that none of the funds authorized to be appropriated by this act may be used for assistance to or reparations for the Socialist Republic of Vietnam, Cambodia, Laos, or Cuba. I interpret that to mean that not even indirectly could any of the funds provided for in this conference report be used for aid or assistance to Vietnam, Cambodia, Laos, or Cuba.

Mr. ASHBROOK. Mr. Speaker, I thank my colleague for his reply. It was my hope that that is what he would indicate, but I was not certain, under the language, whether this would be the case. So, for the record, it is the understanding of the conference committee bringing this bill back to this body that, even though the language was changed substantially from that which we adopted on May 12, the purpose, as the gentleman understands it, is still carried out by the Senate by the language which the gentleman agreed to, and that is to prevent direct or indirect aid to these countries.

Mr. ZABLOCKI. If the gentleman will yield, that is my understanding.

Mr. Speaker, I will advise the gentleman that I think the conferees strengthened the gentleman's amendment which was adopted in the House.

Mr. ASHBROOK. I thank my colleague. I know the gentleman indicated on the floor what the position was, and I think he has held true to those convictions, even though once we ran up against some problems in dealing with the other body.

Mr. ZABLOCKI. Mr. Speaker, I yield myself such time as I may consume.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. ZABLOCKI. I yield to the gentleman from Texas.

Mr. HALL. I thank the gentleman for yielding.

Mr. Speaker, on May 12, of this year, the gentleman from Wisconsin (Mr. ZABLOCKI) and I engaged in a colloquy—and I am referring to the CONGRESSIONAL RECORD of that date, on page 14483—concerning a $25 million amount that would be set aside for voluntary sterilization programs for certain foreign countries. Does the gentleman recall that?

Mr. ZABLOCKI. The gentleman is reading from page 14483?

Mr. HALL. Yes, sir.

I believe at that time I asked the chairman a question.

Mr. ZABLOCKI. The set aside for voluntary and involuntary sterilization?

Mr. HALL. Yes, sir. I asked the question of the chairman:

> Mr. Chairman do I understand from the gentleman from Wisconsin that one-fifth of the $25 million is set aside for voluntary sterilizations?

And the chairman's answer was:

> The $25 million is the worldwide, total amount for this program, including the voluntary sterilization program. Of that $25 million, $5,900,000 is for development and support of voluntary surgical contraceptive programs, including training of surgeons, biomedical research, and information and education.

Then this follows:

> Mr. HALL. We are setting aside $5 million for contraceptives in foreign countries?
>
> Mr. ZABLOCKI. No, more than that.

My question, Mr. Speaker, is this: When the conferees met concerning this problem, was anything done toward reducing that amount that was being spent by the U.S. taxpayers to purchase contraceptives for people in foreign countries?

Mr. ZABLOCKI. In conference we did not reduce that amount which could be used for contraceptives specifically although the overall authorization for population programs was reduced below the authorization that was included in the House bill. Furthermore, the issue of contraceptives was not a conference issue.

However, I do want to point out that not any of this money can be used for the involuntary use of contraceptives or involuntary sterilization.

In the conference report, on page 27—and I am reading from the report—this language appears concerning the contraceptive supply program:

> The committee of conference therefore expects that any reallocations of the population account caused by appropriations lower than the authorized amount will be made by reducing AID's centrally managed contraceptive distribution service. The committee of conference does not intend that AID reduce, below the amounts programmed in AID's fiscal 1978 presentation, its grants to either the U.N. Fund for Population Activities or to private groups working in the population field.

But I do want to point out that not any of the funds can be used for programs where the recipients would be coerced or where involuntary sterilization would be practiced.

Mr. HALL. Mr. Speaker, looking at page 27 of the conference report, it appears that where we were talking about $25 million back in May, the conference report, at the top of page 27, indicates that:

> More than $40 million has been proposed by AID for the contraceptive delivery program for fiscal year 1978, despite evidence that in some cases contraceptives are piling up in warehouses abroad and many are not being distributed to or used by people in developing countries.

Let me ask the committee chairman, do I understand that this is the situation that exists today in foreign countries or in warehouses, and that money like this is being spent for this type and character of activity?

Mr. ZABLOCKI. I am sure there may be circumstances where this does occur. That is one reason we reduced the amount for population planning programs. The $40 million that the gentle-

man refers to is what the AID agency had programed for the contraceptive delivery program in fiscal year 1978. The conferees did reduce the authorization for population programs. For example, the House bill provided for $181 million, and the Senate bill provided for $160 million. The agreement of the conference was that the amount for population programs be reduced to $167 million or $14 million below the amount authorized by the House in May.

Mr. HALL. Mr. Speaker, if the gentleman will yield further, I notice further on page 27 of the conference report the last sentence of that first paragraph is as follows:

> The committee of conference does not intend that AID reduce, below the amounts programed in AID's fiscal 1978 presentation, its grants to either the U.N. Fund for Population Activities or to private groups working in the population field.

So I take that to mean the $40 million as proposed by AID is the amount the conferees agreed upon?

Mr. ZABLOCKI. That is the amount that AID has requested for the contraceptive delivery program, but it may not necessarily use the entire amount. Rather, the conferees showed their intent that any valuations in appropriations for the population account be applied against the contraceptive delivery service. This particular language in the statement on the part of the managers or the agreement of the conferees was the Senate language, and I want to point out to the gentleman that what we are providing for is far better than to have any of our money used for abortion, for example, or for less desirable population control programs.

Mr. Speaker, I think the conferees did an excellent job in carrying out what the gentleman had intended in the colloquy that we had in May when the bill was before us.

Mr. HALL. Of course, the intent of my colloquy in May was that the conferees, would stop it altogether because I do not believe that the people of this country favor the U.S. Government spending money to purchase contraceptives for people in foreign countries.

Mr. ZABLOCKI. If the gentleman will yield further, the gentleman from Wisconsin is in agreement with the gentleman. However, I am sure the gentleman realizes as well as I do that our views are not that of the majority of this Congress.

Mr. HALL. I would hope not.

Mr. Speaker, I thank the gentleman.

Mr. BROOMFIELD. Mr. Speaker, I yield 1 minute to the gentleman from Kentucky (Mr. CARTER).

Mr. CARTER. Mr. Speaker, I thank the distinguished gentleman for yielding this time.

I want to say that I strongly support our efforts at population control. Actually, I believe it is the best form of foreign aid we could have. It actually means that there are fewer mouths to feed and that there are fewer starving children in the world as a result of our efforts toward contraception.

Mr. Speaker, I want to compliment the distinguished chairman and the ranking member for including this program in the bill. In the future it might be wise for us to rely upon the use of contraceptives or methods such as this to contain population. As we well know, in Africa and also in South America the population is growing by leaps and bounds; and youngsters are starving. This effort will help to prevent that.

Mr. ZABLOCKI. Mr. Speaker, I yield 2 minutes to the gentleman from Oklahoma (Mr. WATKINS).

Mr. WATKINS. Mr. Speaker, I thank the gentleman for yielding.

I want to ask a question: Is this the bill which finances water projects for foreign countries? The agency which gives out the money to build water projects in foreign countries, is it?

Mr. ZABLOCKI. Mr. Speaker, if the gentleman will yield, the funds in this program could be used for wells in areas where the people have a lack of water.

Mr. WATKINS. And for dams?

Mr. ZABLOCKI. There have been some in the past, but the larger programs are no longer being continued.

I would say to the gentleman that where there is a need, a very small portion of this amount which the gentleman is concerned about would be provided.

Mr. WATKINS. This is the bill that actually funds the agencies that provide the $50 million for water projects such as in Romania; is it not?

Mr. ZABLOCKI. No. There is no money in this bill for Romania.

Mr. WATKINS. I know that there is not any money for any particular country directly, but the money goes to the agencies which provide for the water projects; does it not?

Mr. ZABLOCKI. There is nothing programmed for Romania, as I understand it, not in this bill.

Mr. WATKINS. The question is with respect to the funds provided to the agencies under this bill.

Mr. ZABLOCKI. If it were a fund, for example, under the United Nations, or if we had an authorization, that might be so; but we do not have any in this bill for that purpose.

A project of the type which the gentleman talks about, in Romania, could be funded under the Ex-Im Bank program or under some other lending program. However, I must reiterate that there are no funds in this bill for any existing program for Romania.

Mr. WATKINS. Mr. Speaker, I thank the chairman for yielding.

Mr. BROOMFIELD. Mr. Speaker, I yield 2 minutes to the gentleman from Florida (Mr. YOUNG).

Mr. YOUNG of Florida. Mr. Speaker, I thank the gentleman for yielding.

I would like to inquire of the chairman of the committee with respect to the question of population control. How many of these agencies will be supporting the use of abortion or will promote abortions for population control?

Mr. ZABLOCKI. If the gentleman will yield, there is not a dime in this program for abortion.

Mr. YOUNG of Florida. That was not my question. My question was, How many of these agencies that we will be supporting do promote abortion and suggest abortion as a method of population control?

Mr. ZABLOCKI. There are agencies that are promoting abortion as a population control method and using their own funds. We have no control over their own funds, but none of these funds can be used for that purpose.

Mr. YOUNG of Florida. However, is it not true that some of these funds are going to the very same organizations that, in fact, promote abortion, so what the gentleman is saying is that U.S. dollars are over here and somebody else's dollars are over here; but it is really sort of phony, as we know, because we are, in fact, supporting these agencies with dollars; are we not?

Mr. ZABLOCKI. It is impossible, of course, to prohibit any agency, voluntary or foreign governmental agency, from promoting abortion if they so desire.

As long as these particular funds are not used for that purpose, there is no way of prohibiting that sort of use.

Mr. YOUNG of Florida. But our funds are going into the same pot that other funds are going into, and the abortion funds are coming from that pot; is that not so?

Mr. ZABLOCKI. It is my understanding that if an agency benefits from these funds, they must use them for the purpose we intended they be used.

Mr. YOUNG of Florida. This is very much like the World Bank. In spite of the fact that most of the money comes from the United States, U.S. dollars are not used for their employee loans; they use somebody else's money.

In all these international agencies and these multi-lateral banks, and all these agencies promoting population control—which I support, by the way—we are finding it very difficult to get an accounting of what is being done with the American dollars. We are finding that American dollars are being put in a pot with somebody else's money, and that money is then being used to perform certain functions that many of us do not like, and then we are told, well, it is not U.S. dollars that are being spent but some other country's money.

I believe these international agencies and banks owe us a better accounting for our dollars.

Mr. ZABLOCKI. I agree.

Mr. CARTER. Mr. Speaker, if the gentleman will yield, I have visited many of these birth control clinics throughout these countries and I have never seen abortions being performed or any proposed performance of abortions, rather they were using the IUD and the so-called pill for population control. I strongly support their efforts in this direction.

Mr. ZABLOCKI. I might state in reply to the statement of the gentleman from Kentucky (Mr. CARTER) that we have requested a report and the General Accounting Office has advised us that they have no evidence that the U.S. funds are being used for abortions.

Mr. YOUNG of Florida. Mr. Speaker, I respond by reading from page 469 of part 2 of the hearings before the Appropriations Subcommittee on Foreign Operations.

> Mr. YOUNG. Are you saying IPPF does participate in pregnancy termination with other funds?

Mr. FURMAN. They are providing funds from other countries to some organizations and countries where such programs are permitted.

Mr. YOUNG. Doesn't that get a little phony to say they are not using our funds for the purpose of abortion but they are using other funds?

Mr. ZABLOCKI. As I said before, none of the funds in this bill can be used or are being used for abortions.

Mr. GRASSLEY. Mr. Speaker, I see on page 38 of the conference report that the amendment I submitted which was unanimously accepted by the House was left out of the final Senate-House agreement.

That surprises me because it was an inclusion of language previously in law and supposedly left out by oversight by the original committee bill.

It merely called for a congressional review of a Presidential determination that more than 25 percent of the food for peace ought to go to the more affluent nations.

This was put in when we had a Republican President by a Democratic Congress which argued there ought to be congressional involvement in Presidential decisions of that nature and to guarantee this program was used for humanitarian, and not political purposes.

The situation is no different in 1977 than it was in 1975. Or is it? Could it be that we have a Democratic President today and the Democratic Congress is willing to trust their own more willingly?

In fact the situation is no different. The circumstances and need calling for such review in 1975 are prevalent today. The constitutional involvement of the Congress in a question like this is as demanded today as then. Whether there is a Republican President or a Democratic one should make no difference. What is good for the goose should be good for the gander.

GENERAL LEAVE

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report on the bill H.R. 6714.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. ZABLOCKI. Mr. Speaker, I have no further requests for time, and I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. BROOMFIELD. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 254, nays 158, not voting 21, as follows:

NOT VOTING—21

Ambro	Chisholm	Holland
Badillo	Dent	Luken
Bolling	Dickinson	McKinney
Brademas	Flippo	Murtha
Brown, Calif.	Ford, Mich.	Steed
Burke, Mass.	Guyer	Teague
Butler	Harrington	Wilson, C. H.

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Mr. Brademas for, with Mr. Steed against.

Mr. Ford of Michigan for, with Mr. Murtha against.

Mrs. Chisholm for, with Mr. Butler against.

Mr. Badillo for, with Mr. Dickinson against.

Mr. McKinney for, with Mr. Guyer against.

Until further notice:

Mr. Dent with Mr. Flippo.

Mr. Ambro with Mr. Luken.

Mr. Charles H. Wilson of California with Mr. Harrington.

Mr. Brown of California with Mr. Holland.

Mr. JONES of North Carolina and Mr. BROOKS changed their vote from "yea" to "nay."

Mr. McCLORY changed his vote from "nay" to "yea."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERSONAL EXPLANATION

Mr. KELLY. Mr. Speaker, this morning when the House took up the vote on rollcall No. 446, I was not present because of being unavoidably detained on official business. Had I been here, I would have voted "aye."

ANNOUNCEMENT OF HEARING ON DIPLOMATIC PRIVILEGES AND IMMUNITIES IN SUBCOMMITTEE ON INTERNATIONAL OPERATIONS OF COMMITTEE ON INTERNATIONAL RELATIONS

(Mr. FASCELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FASCELL. Mr. Speaker, I just wanted to announce that the hearing on diplomatic privileges and immunities in the Subcommittee on International Operations of the Committee on International Relations will continue right after the vote on the next conference report.

PERSONAL EXPLANATION

Mr. OTTINGER. Mr. Speaker, on rollcall No. 446 I was absent, unavoidably detained at a meeting with Prime Minister of Israel Begin. Had I been present, I would have voted "aye."

CONFERENCE REPORT ON H.R. 6884, INTERNATIONAL SECURITY ASSISTANCE ACT OF 1977

Mr. ZABLOCKI. Mr. Speaker, I call up the conference report on the bill (H.R. 6884) to amend the Foreign Assistance Act of 1961 to authorize international security assistance programs for fiscal year 1978, to amend the Arms Export Control Act to make certain changes in the authorities of that act, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of July 15, 1977.)

Mr. ZABLOCKI (during the reading). Mr. Speaker, I ask unanimous consent to dispense with further reading of the statement.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The SPEAKER pro tempore. The gentleman from Wisconsin (Mr. ZABLOCKI) and the gentleman from Michigan (Mr. BROOMFIELD) are recognized for 30 minutes each.

The Chair recognizes the gentleman from Wisconsin (Mr. ZABLOCKI).

Mr. ZABLOCKI. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the conference report on H.R. 6884 authorizes the appropriation of funds to finance U.S. international security assistance programs for fiscal year 1978. It is a measure which the committee of conference recommends to the House without reservation.

As agreed to by the conferees on June 29, the report authorizes an appropriation for international security assistance for fiscal year 1978 of $3,195,900,000. This is a reduction of slightly less than $7 million from the $3,202,085,000 authorized by the House on May 24. The amount authorized also represents an increase of $1.2 million in the Senate figure and a reduction of over $53 million in the amount requested by the executive branch.

The specific authorizations contained in the bill are as follows: $228.9 million for grant military assistance; $31 million for military education and training; $1 billion, 890 million for security supporting assistance programs; $677 million for foreign military sales financing. This amount will finance the sale of $2,102,035,000 worth of defense articles and defense services during fiscal year 1978, $5 million for the contingency fund; $25 million for the Middle East special requirements fund; $300 million for a loan to the Government of Portugal; and $39 million for international narcotics control programs.

In addition, the conference report:

Authorizes the assignment of military personnel to perform military advisory duties as defined in section 7 of the conference report in 15 countries. Military personnel assigned to Iran, Kuwait, and Saudi Arabia, however, are to be on a fully reimbursable basis;

Authorizes the assignment of three- to six-man teams to perform accounting and other management functions in those countries where management teams are not specifically authorized;

Limits the number of personnel to perform these duties to 865 in fiscal year 1978; and

Permits defense attaches to perform overseas management duties if the President determines that the use of such personnel is the most economical and efficient means of performing such functions.

Mr. Speaker, H.R. 6884 is an important piece of legislation because the programs to be carried out under its authorities will contribute to the security of the United States and to the peace and economic well-being of people in all parts of the world—particularly in the Middle East and in Africa.

With respect to Africa, the bill retains the House approach to the southern Africa special requirements fund, although the authorization was reduced from $100 to $80 million. Nevertheless, it will be possible for the President to implement assistance programs in this critical area of the world, particularly in Botswana, Lesotho, and Swaziland.

Furthermore, these funds can also be used to provide assistance to African refugees and persons displaced by war and internal strife in southern Africa.

The House prohibition on assistance to Mozambique, Angola, Tanzania, and Zambia was retained.

Mr. Speaker, perhaps the most volatile region in the world today is the Middle East.

Nevertheless, the prospects for a lasting peace seem to be better today than at any time in the last 25 years.

In an effort to help in this process toward peace, the conference committee recommends the use of $1,738 million.

Of this amount $785 million is earmarked for Israel, $750 million for Egypt, $93 million for Jordan, $90 million for Syria, and $20 million for Lebanon.

Furthermore, to insure that Israel continues to have access to the defense articles and defense services needed to survive, the bill contains a policy statement that U.S. policy restraints on arms transfers shall not impair Israel's deterrent strength or undermine the military balance in the Middle East.

Mr. Speaker. H.R. 6884 also contains limited authority for the President to sell defense articles or defense services to Turkey in fiscal year 1978. By extending the partial lifting of the embargo on the sale of arms to Turkey, the committee of conference hopes to encourage the Government of Turkey to pursue a less rigid negotiating position with respect to Cyprus.

Mr. Speaker, this is a good conference report. In the judgment of the conferees, it combines the best features of both H.R. 6884 as it passed the House and the amendments which were made by the Senate during its consideration of the bill.

I urge my colleagues to approve the conference report.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. ZABLOCKI. I will be glad to yield to the gentleman from Maryland.

Mr. BAUMAN. I thank the gentleman for yielding.

Mr. Speaker, during the debate on this legislation the gentleman and I discussed the general prohibition against aid to Communist countries which already exists in statutory law. When the House considered this bill, and again in the conference report, we have a provision that pretends in its language to ban aid to Mozambique and Angola, among other countries, but allows the President, upon notice to the Congress, based on foreign policy interests of the United States, to waive this prohibition and to give aid to these countries.

The gentleman and I have discussed this privately. My question to the gentleman is: Are we not in fact repealing, insofar as these named countries are involved, the general prohibition against aid to any Communist country, in the sense that we let the President determine whether aid will go to such countries. Does not this weaken the basic law?

Mr. ZABLOCKI. That is not the interpretation that I would give to the provisions which are contained in this conference report and the bill which we passed in the House in May. I believe it is H.R. 6884, as I stated earlier, which prohibits any assistance to Mozambique, Angola, Tanzania, and Zambia. By having this provision, I do not believe that it in any way alters the existing basic language with respect to the prohibition on aid to Communist countries.

Mr. BAUMAN. But the gentleman will concede that the language which is now before us in the conference report allows the President to waive that prohibition on his own will? The point I want to make is that this language weakens the general prohibition already in the stat-

ute which forbade any aid to Communist-dominated countries.

Mr. ZABLOCKI. There is a provision in the basic law which permits the President to waive the restrictions if he finds it is in our national security interest, but he still would have to report to the Congress that he is waiving the prohibitions on assistance to a Communist country as contained in section 620 of the Foreign Assistance Act.

Mr. BAUMAN. The gentleman is refering to section 620(f)?

Mr. ZABLOCKI. That is correct.

Mr. BAUMAN. I do not read the impact as the gentleman does, but I appreciate the gentleman's response.

Mr. MILFORD. Mr. Speaker, will the gentleman yield?

Mr. ZABLOCKI. I yield to the gentleman from Texas (Mr. MILFORD).

Mr. MILFORD. I thank the gentleman for yielding.

Mr. Speaker, when H.R. 6884 was on the floor, I introduced, and the House approved, an amendment instructing the President to undertake a review of regulations relating to arms control for the purpose of defining and categorizing lethal and nonlethal products and establishing the appropriate level of control for each category.

When the other body had this bill before it, the Senator from Georgia (Mr NUNN), introduced, and the Senate passed, a similar amendment, but with more specific directions to the President, and specifying a deadline of 120 days for the President to issue new regulations.

The conference committee adopted my language that was in the House bill.

Mr. Speaker, I now direct the chairman's attention to page 31 of the conference report, with special attention to the last paragraph. It reads, in part, as follows:

> The committee of conference adopted the House provision. The committee of conference understands that the purpose of this review is to determine the feasibility of establishing a distinction between lethal and non-lethal products and appropriate levels of control and procedure for each. Further, the explanation of the purpose of the review in the provision is not intended to presuppose the results of the review.

My first question is this: Where did the conference committee get the idea that the language in either the House or the Senate versions of the original bills in any way asked the President to "determine the feasibility of establishing a distinction between lethal and nonlethal products"?

Mr. ZABLOCKI. Mr. Speaker, I may say to the gentleman that proviso is not in the conference report; it is in the statement of the managers.

I can understand the gentleman's concern. I want to emphasize to him that the conferees indeed retained his amendment entirely and intact. The gentleman's amendment will become law if this bill is signed. But as the gentleman has stated, the Senate introduced an amendment, and the problem the conferees faced was one of how to accommodate the different provisions in the two versions.

The conferees adopted the gentleman's amendment, with the understanding that certain Senate concerns would be taken into account, and those concerns are included in the statement of managers. The conferees, for example, used the opportunity provided for in the explanatory statement to declare their expectations that the President would make every effort to comply with the Senate's desire that the report be made expediently to Congress, that is, within 120 days.

This statement again will not be binding in law, as will the language as proposed by the gentleman from Texas (Mr. MILFORD). The gentleman's language will be binding, but the Senate language will not. The Members of the other body insisted that the Senate language be included in the report, although that is not necessarily binding. Therefore, it does to some extent preserve an intention of the Senate.

Any conference between the Senate and the House has to consider conflicting views, and a compromise must be made to accommodate them. In this case the Senate insisted that their acceptance of the Milford amendment was conditioned upon a compromise to allow for the inclusion in the joint statement of the language. That is why the paragraph on page 31 of the conference report to which the gentleman refers was included, and it was insisted upon by the Senate conferees.

Mr. MILFORD. Mr. Speaker, will the gentleman yield further?

Mr. ZABLOCKI. I yield to the gentleman from Texas.

Mr. MILFORD. So that we may pursue this further, my second question concerns the language in the conference report which says in part:

> Further, the explanation of the purpose of the review in the provision is not intended to presuppose the results of the reviews.

Since the language of the amendment clearly states that the "President shall undertake a review of all regulations" and further describes what he shall review and what he shall establish, how, then, can the conference committee justify the statement in the report that the law is "not intended to presuppose the results of the review"?

Mr. ZABLOCKI. Again, this was included in the report at the insistence of the Senate conferees. Certainly we cannot presume to determine what the Presidential report or finding will contain, and, therefore, the Senators insisted that the explanation of the purpose of the review in the provision is not intended to presuppose the results.

Mr. MILFORD. Mr. Speaker, since there appeors to be some purpose to interpret the intent of the amendment and since I am the author of the amendment, I would like to register clearly for the record the intent of the amendment to H.R. 6884 concerning the review of arms sales controls on nonlethal weapons.

Mr. ZABLOCKI. Mr. Speaker, I join with the gentleman in his intent.

Mr. MILFORD. Mr. Speaker, I would like to clearly register, for the record, the intent of my amendment to H.R. 6884 concerning review of arms sales controls of nonlethal weapons. The amendment was passed unanimously by this House. A similar amendment was passed by the Senate as presented by Senator NUNN.

My amendment clearly expressed its intent:

> SEC. 21. The President shall undertake a review of all regulations relating to arms control for the purpose of defining and categorizing lethal and non-lethal products and establishing the appropriate level of control for each category.

Senator NUNN submitted and the Senate passed:

> SEC. 27. In defining and providing regulations for the control of exports of major defense articles and significant combat equipment and defense articles the President shall in categorizing such exports consider whether the subject items are lethal or non-lethal, and the President shall develop methods and procedures for the expeditious consideration of request for exports of items determined to be non-lethal. The President shall submit to the appropriate committees of the House and Senate within 120 days of date of enactment of this act a report setting forth the procedures and regulations that shall be applied to those systems determined to be non-lethal.

I believe that these two clearly establish the need and intent of both Houses to direct the administration to produce some commonsense rules for Government and industry that will relieve the impasse in foreign trade that threatens the entire industrial structure. In turn, it offers the administration the avenue to sensibly pursue its arms control policy.

Now the House/Senate conference committee report in its words of explanation goes far outside the mandate of these amendments.

The House amendment was adopted and became the letter of the legislation under consideration. The conference report—page 31, last paragraph—states:

> The committee of conference adopted the House provision. The committee of conference understands that the purpose of this review is to determine the feasibility of establishing a distinction between lethal and nonlethal product and appropriate levels on control and procedure for each. Further, the explanation of the purpose of the review in the provision is not intended to presuppose the results of the review.

I take strong exception to this interpretation as totally thwarting the intention of the amendment in the legislation.

For the record, the argument and intent of both Houses was to direct the President to review the arms control regulations for the purpose of defining and categorizing lethal and nonlethal products and establishing appropriate levels of control for each category.

I take exception to the idea of "feasibility" as a result and I take exception to the device that the provision does not presuppose the results.

There is no question and the evidence is overwhelming that the arms control regulations and their implementation have far exceeded the intent of Congress. I have said again and again on this floor that many products not designed and produced for destructive intent are being blocked for export under the guise of

arms control. The burden on industry is becoming a major deterrent.

I insist upon this House pondering this thought:

Because of the inappropriate method of assigning products to the munitions list, we have falsely labeled this country as the leading arms merchant of the world.

That is just not the truth. The National Security Council reports that, in arms, Russia is by far the leading exporter. The bulk of what this administration lays on our back as "merchants of death" are peaceful goods and services in keeping with our role of benefactor.

I must register my resentment in behalf of every thoughtful American at being a victim of a false bureaucratic definition of "arms." My amendment clearly states and instructs the administration to right this wrong and bring some American commonsense to our common cause.

The United States could make a lot of headway toward repairing its reputation as "arms merchant of the world" if we would stop calling navigation systems we use on our domestic airliners "lethal weapons" when we sell them overseas, much of our so-called "arms sales" are not really arms, because of Government regulations they are classified as arms by our own Government.

For example, it is my understanding that perhaps only one-third of what we classify as "arms" sold overseas are actually lethal weapons designed to cause death and destruction.

Perhaps another one-third is in the form of spare parts for these weapons or in the form of services which might or might not be for weapons.

A final third would come in a gray area of commercial items which have both military and nonmilitary uses.

I believe we got ourselves into this situation for two reasons:

One is our good intentions.

Since the enactment of the Mutual Security Act of 1954, Government regulations controlling the export of munitions have been repeatedly amended in a piecemeal fashion, to the point where they are obscure and are no longer directly responsive to the central issue. I think all of us in Congress are acutely aware that once a regulation is promulgated, it is awfully difficult to get it depromulgated.

A second reason we face this problem is the rapid rate of our development of technology. Today's high technology item is often old fashioned tomorrow, literally. Many of these technical items should be taken off our "sensitive lists" long before they are, but the listkeepers are bureaucrats with little, if any, technical expertise.

My amendment very simply asks that we mean arms when we say "arms," to keep from unfairly identifying ourselves as "merchants of death" when so much of our so-called arms exports are truly useful, nonlethal, peaceful goods. Providing a country with those items which strengthen their economy and stabilize their position in the international community is a peaceful and humanitarian endeavor.

I submit that we need many definitions in this sphere: What are arms? What is advanced technology? Who defines the legitimate needs of a sovereign nation?

Let me give you a good example where our humanitarian enthusiasm has boomeranged and burdened good, peaceful, safe, humanitarian products in common use around the world with the "arms" stigma.

Inertial navigation systems in common use by the world's airlines are now classified as munitions and require special State Department license when they are sold as a part of commercial aircraft. Inertial navigation contributes enormously to the safe and efficient flow of peaceful civil traffic. By what tortured reasoning do we inhibit or deny free access to that technology?

There are other dramatic examples of this same kind of reasoning:

The C–130 transport aircraft sold for any use whatsoever is considered a lethal weapon under current practice.

Satellite communications systems built in this country and launched from this country under contract to a foreign country, but never physically delivered to that foreign government, are on the munitions list.

It is these items and many others like them which I sincerely hope could be reclassified off the "lethal weapons" list and on to some other list where they more truly belong.

Mr. Speaker, I must insist that the language in the conference report, found in the last paragraph of page 31 is the private opinion of the 18 members of the conference committee and not the opinion of the House or the Senate.

The wording of the law clearly speaks to the intent of the law. Should anyone have remaining doubt, the content of this speech should make the matter clear.

Mr. BROOMFIELD. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I fully endorse the comments of my distinguished colleague, Mr. ZABLOCKI. The conference report on H.R. 6884 preserves the principal provisions of the security assistance legislation initially passed by the House and warrants our support.

The results of the conference reflect a compromise and a concern for reducing the amount of the initial House authorization for fiscal year 1978. The conferees, for example, lowered the initial House authorization by almost $7 million. Moreover, the conference authorization is $53 million less than the amount requested by the executive branch.

The conference sustains the Congress desire to reduce grant assistance and grant military training wherever possible. Although the conferees accepted five other countries as eligible for military assistance advisory groups on a 1-year basis, three of these five—Kuwait, Iran, and Saudi Arabia—will be fully reimbursable and will cost the American taxpayer nothing. By allowing for these oil-rich countries to pay for American military services, the Congress can better allocate its resources for other programs, while at the same time saving the taxpayer considerable money.

As for security supporting assistance, the conferees agreed to meet "new directions" objectives—that is, involving the poor in development while at the same time avoiding large-scale assistance projects requiring substantial capital such as highway building and improvement. In particular, the committee of conference reduced the southern African special requirements fund from $100 to $80 million. The conferees also retained the prohibition on the use of the funds in the southern African countries for military and paramilitary purposes. Just as importantly, the conference sustains the initial House prohibition on the use of African special requirements funds for certain countries with Marxist or Socialist governments. Furthermore, the conference prohibits any military assistance to Ethiopia. As for the Zimbabwe development fund, the committee on conference supports U.S. participation, but deletes any reference to specific amounts of money that the United States may contribute to the fund.

Through various conference provisions including several that were added by the Senate, the Congress will be able to seek new and better ways to provide for national and international security. In particular, the conference sustains an initial House provision providing for a comprehensive interagency review of the implications of international transfers of technology. The committee of conference also included the Senate suggestion of a report requirement on the impact of U.S. arms sales and transfers to U.S. defense readiness and national security. Just as importantly, the conference also provides certain initiatives for the maintenance of international security. In particular, the conferees adopted a Senate amendment, which had no counterpart in the House, that would terminate the sale of defense articles and services to any country granting sanctuary to international terrorists.

In conclusion, I believe that the committee of conference retains a majority of provisions initially voted upon and passed by the House while at the same time providing for the achievement of important national and international security objectives. For these reasons, I urge my colleagues to approve the conference report to H.R. 6884.

Mr. Speaker, I yield 2 minutes to the gentleman from Illinois (Mr. DERWINSKI).

Mr. DERWINSKI. Mr. Speaker, I rise in support of this conference report.

Mr. Speaker, I would like to point out that over the years the military assistance program, the grant military assistance, the military sales provision, military training, and many other programs have been gradually cut. Of the funds in this bill of approximately $3.2 billion, 40 percent are earmarked for the State of Israel, which is a practical commentary on the situation in the Middle East. There are substantial sums for Egypt, and that investment, we hope, is an investment for peace.

So this particular program is, I point out, one which has been cut. It has been brought under tight control.

I support it, since I feel it is essential

to our conduct of foreign policy and our international defense obligations.

I would like to point out that as I understand the issue to be involving the southern Africa special requirements fund. As the chairman properly noted, we took the other body's figure of $80 million, as opposed to the House figure of $100 million, and we keep the specific restrictions.

It is certainly the intent of Congress that none of these funds be provided to Mozambique, Angola, Tanzania, or Zambia. That is clearly the intent of Congress, and clearly the intent of the conferees as indicated in this section of the bill.

Mr. BROOMFIELD. Mr. Speaker, I yield 2 minutes to the gentleman from Kansas (Mr. WINN).

Mr. WINN. Mr. Speaker, I thank the gentleman from Michigan (Mr. BROOMFIELD) for yielding.

Mr. Speaker, with respect to this conference report on H.R. 6884, I again want to compliment the chairman, the gentleman from Wisconsin (Mr. ZABLOCKI), and the ranking Republican, the gentleman from Michigan (Mr. BROOMFIELD), for the many hours they put in.

Mr. Speaker, the conference report to H.R. 6884, which we have before us today, maintains many of the provisions of the security assistance legislation initially approved by the House in late May.

The conferees expressed a concern for compromise on several issues, including the conference authorization, which is $7 million less than the initial House authorization. Overall, the conferees agreed on many issues by which the United States can better provide for not only worldwide security but also its own national security.

The conference report reflects many of the concerns that the Congress has expressed in relation to "give-away aid programs" and the transfer of technologies vital to U.S. national security. For these reasons, I urge my colleagues to adopt the conference report to H.R. 6884.

Mr. ZABLOCKI. Mr. Speaker, I yield 1 minute to the gentleman from Tennessee (Mr. ALLEN).

Mr. ALLEN. Mr. Speaker, I thank the gentleman for yielding.

I wanted to ask the distinguished chairman a couple of questions.

How much in military assistance does this conference report provide for Israel?

Mr. ZABLOCKI. If the gentleman will yield, there is $1 billion for military sales credits, of which $500 million is to be forgiven; and then there is $785 million for Israel for security supporting assistance.

Mr. ALLEN. How much is there for Egypt?

Mr. ZABLOCKI. There is $750 million for Egypt.

Mr. ALLEN. How much for Jordan?

Mr. ZABLOCKI. As I had stated earlier in my remarks, there is, I believe, $93 million for Jordan; $90 million for Syria; and $20 mililon for Lebanon.

Mr. ALLEN. Does that include all of the money appropriated for the Arab nations?

Mr. ZABLOCKI. It does not. This is an authorization bill and not an appropriation.

Mr. ALLEN. For military assistance?

Mr. ZABLOCKI. For security assistance.

Mr. ALLEN. For security assistance?

Mr. ZABLOCKI. This is not only military assistance. This bill authorizes funds for other international security assistance programs.

As the gentleman knows, security assistance consists of three elements that is, grant military assistance, security supporting assistance, and funds for the foreign military credit sales program. Security supporting assistance is not military assistance, but economic assistance designed to support economic and political stability in the recipient country.

I should also point out that although there are no funds in this bill for any assistance to Saudi Arabia and Iran that cash sales of defense articles to those countries can be made under the authority of the Arms Export Control Act.

Mr. ALLEN. Mr. Chairman, what I am trying to get at is, How many American taxpayers' dollars will be used for military aid or security assistance, or call it what you will, for Israel, as compared with all the American taxpayers' money that will be used for security assistance and military aid for the other various Arab nations?

Mr. ZABLOCKI. Mr. Speaker, as the gentleman I am sure knows, we have military sales, or so-called cash on the barrelhead sales which do not cost the taxpayers anything. But, the total authorized in this bill, as I said before, is $3,202,085,000. If we take the entire amounts earmarked and programed for assistance to the countries in the Middle East, the total would be $2,849,500,000. Of this amount, $1,785,000,000 is for Israel and $1,064,500,000 would be for Egypt, Jordan, and Syria. As far as the taxpayer's dollar being expended, the gentleman from Tennessee must understand that the bulk of this program is under the military sales credit program. Therefore, the U.S. Government will be reimbursed for the credit sale of defense articles.

Mr. ALLEN. We are extending the credit of the U.S. Government?

Mr. ZABLOCKI. That is right.

In the case of Israel we not only extend credits but we also make a forgiveness on those credits.

Mr. ALLEN. How much is the total amount it will cost the American taxpayers for military assistance and military sales to the Arab nations?

Mr. ZABLOCKI. To the Arab nations alone?

Mr. ALLEN. That is correct.

Mr. ZABLOCKI. Jordan is the only country to which the United States sells defense articles. And that amount is $75 million in military credits for fiscal year 1978.

Mr. ALLEN. Did not the gentleman say there was something else?

Mr. ZABLOCKI. One billion for Israel.

Mr. ALLEN. And a large amount also for Egypt?

Mr. ZABLOCKI. Egypt receives security supporting assistance, it is not military sales.

The gentleman from Tennessee must understand that the cash sales are not in this bill. What is in this bill is the foreign military sale programs under credit terms or a security supporting assistance program which is in part economic assistance. It does not, however, include cash sales.

Mr. SOLARZ. Mr. Speaker, will the gentleman yield?

Mr. ZABLOCKI. I yield to the gentleman from New York.

Mr. SOLARZ. Mr. Speaker, I think I might be able to clarify this for my good friend, the gentleman from Tennessee (Mr. ALLEN). As I understand it, in this bill there is about $1.785 billion for Israel, military and economic assistance, and for the Arab countries, and this includes Egypt, Jordan, Syria, and Lebanon, there is approximately about $1 billion in economic and security supporting assistance.

Mr. ALLEN. That would be either appropriated or authorized to be appropriated out of the taxpayers' pockets?

Mr. SOLARZ. Authorizing and credits, precisely.

Mr. ALLEN. Or credits, in which we are underwriting the credits?

Mr. SOLARZ. That is right.

Mr. ALLEN. I thank the gentleman.

Mr. BROOMFIELD. Mr. Speaker, I yield 5 minutes to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Speaker, earlier in the debate the distinguished chairman of the committee, the gentleman from Wisconsin (Mr. ZABLOCKI) referred, glancingly, to the Southern Africa Special Requirements Fund which this bill establishes. It is worth noting, before we vote on this conference report, the full implications in the establishment of this fund, both for the United States and its future involvment in Africa.

It is this Member's opinion that, just as the Balkans prior to World War I and Southeast Asia in the last decade were tinderboxes of potential world conflict, Africa has that potential now.

During the debate on the creation of this fund it has grown to $80 million. It has been improved somewhat by the language added by the other body, but in fact, its establishment could mean that substantial American taxpayers' aid will be going to Communist dominated countries in Africa if the President of the United States so decides. The assurances given me by the gentleman from Wisconsin (Mr. ZABLOCKI) and others, stated that they were quite certain that the President and the State Department would not abuse the discretion that this bill creates for the funds use in Africa.

I am told by my colleagues that I should have faith that the President will use this fund wisely and well. But faith on this issue is impossible to have in a President who is willing to retain Andrew Young as United Nations Ambassador, embracing by implication his radical views.

And what countries might benefit from this fund? In Angola, which virtually was turned over to the Communist dictator Neto by this Congress refusal to act, we see a Cuban base of operations for the entire African continent. In Mozambique, another Communist dictator, Machel, with his own citizens in concentration camps, allows Soviet weapons to be shipped in for attacks against Rhodesia. All of the black leaders in southern Africa have put aside the future best interests of their own people and instead have endorsed bloodshed and guerrilla warfare as the only solution to the future of Rhodesia and South Africa. And by our support of these regimes we cast our lot with these same Communist dictators and endorse that bloodshed.

Only, yesterday, we had a Department of State official, John Trattner, admitting that Fidel Castro over the last month has increased the number of Cuban armed forces in Angola by 5,000 men to a level of approximately 19,000. There can only be one reason for that. It is not just to maintain the dictatorship that the Communists have established in Angola, but it is far more likely that these troops will be used to attack Rhodesia as part of the concerned guerrilla warfare that could throw all of southern Africa into war within a matter of months.

So what are we doing today in this pending conference report? We are handing a blank check to the President of the United States to aid these very countries that will be attacking Rhodesia, countries that have already sided with the Communist Patriotic Front forces as opposed to the moderate black Nationalist forces in Rhodesia. We might very well in the next few months see American aid going for purposes described in the bill, refugee relief, transportation links, and so on. But just as my good colleague, the gentleman from Florida (Mr. YOUNG), remarked a few moments ago, while we are told it will go only for these purposes, that will allow other funds to be diverted for the military guerrilla. So we are financing war.

I think we are fading into very deep and dangerous waters. This will only encourage the most radical forces in southern Africa. It is a mistaken view of what ought to be done in the area, and it will certainly not bring about rights to the majority of the people black and white, whom we say we wish to assist.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Ohio.

Mr. ASHBROOK. I thank the gentleman for yielding.

I think we should listen very carefully to what my colleague, the gentleman from Maryland, has said. I think every one of us down deep knows that what he has indicated is exactly right. I think many of us in this body are often inclined to point the finger to someone else. Many times we have a double standard in this body. We take a very strong position. Then it is watered down by allowing the President to waive our position if he deems it in the national interest. He waives it, and then legislators travel around and say, "Isn't it awful what the President did?"

I think the American people know better. They know the President's actions are rooted in the laws we pass. He cannot accomplish any of his objectives without the approval of the Congress. Yet most of us are looking for an escape. We want someone else to do it. We want someone else to pull the trigger. We want someone else to light the fuse. Then we can say, "Oh, no, we had nothing to do with it."

I think what the gentleman from Maryland (Mr. BAUMAN) is indicating is that the Members of this body are in effect pulling the trigger, are lighting the fuse, the moment we agree to this bad provision in the conference report. I do not say this in a partisan sense because I think we have done precisely the same thing regardless of the administration, whether it is a Republican or Democratic administration.

Mr. BAUMAN. I certainly agree with the gentleman's estimates of the situation. I would just note that the proof of what he has said here is contained in this conference report. When this bill left the House, there was no provision in it, as there is in this conference report, for a million-dollar study of what the needs of southern Africa really are. We are providing a million dollars to study what the United States ought to do in southern Africa to protect American interests in the future; yet we go right on and establish this multimillion-dollar fund and prejudge what that study will show. We do not know apparently—at least, I do not think this administration does—what the best course is in this area. But it is incomprehensible to me that we should side with the Communists in southern Africa and attempt to bribe them away from the Communist orbit, which already is giving them not only money, but guns, troops, and tanks to assure dictatorships in that unfortunate part of the world.

It is absolutely incomprehensible to me and for that reason, although I support some other parts of the conference report, including aid to Israel, I must oppose it.

Mr. ZABLOCKI. Mr. Speaker, I yield such time as he may consume to the gentleman from Utah (Mr. MCKAY).

Mr. MCKAY. Mr. Speaker, I rise in support of the conference report.

Mr. ZABLOCKI. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. BROOMFIELD. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 262, nays 147, not voting 24, as follows:

NOT VOTING—24

Ambro	Chisholm	Holland
Applegate	Dent	Luken
Badillo	Dickinson	McKinney
Bedell	Dingell	Montgomery
Brademas	Flippo	Murtha
Brown, Calif.	Ford, Mich.	Roe
Burke, Mass.	Guyer	Steed
Butler	Harrington	Teague

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Mr. Brademas for, with Mr. Guyer against.

Mr. Harrington for, with Mr. Dickinson against.

Mr. McKinney for, with Mr. Butler against.

Mr. Murtha for, with Mr. Steed against.

Ms. Chisholm for, with Mr. Montgomery against.

Until further notice:

Mr. Badillo with Mr. Holland.

Mr. Ambro with Mr. Luken.

Mr. Flippo with Mr. Roe.

Mr. Dingell with Mr. Dent.

Mr. Ford of Michigan with Mr. Bedell.

Mr. Applegate with Mr. Brown of California.

Mr. DUNCAN of Tennessee and Mr. CORNWELL changed their vote from "nay" to "yea."

Messrs. GRASSLEY, EVANS of Georgia, BEVILL, and STARK changed their vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ZABLOCKI Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report just agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

PERMISSION TO FILE CONFERENCE REPORT ON H.R. 7589, MILITARY CONSTRUCTION APPROPRIATION ACT, 1978

Mr. McKAY. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tonight to file a conference report on the bill (H.R. 7589) making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Utah?

There was no objection.

TAX EXEMPTION FOR WORKMEN'S COMPENSATION FUND ASSOCIATIONS

(Mr. PICKLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PICKLE. Mr. Speaker, I am today introducing a bill to amend section 501 of the Internal Revenue Code of 1954 to provide tax exemption for an association operated exclusively to provide workmen's compensation for State and local employees. I am introducing this bill to encourage other States to follow Texas' lead, although I want to make it clear that I do not want any inference drawn that such associations would be taxable today.

Texas was the first State to establish the Texas Municipal League's Workmen's Compensation Joint Insurance Fund. This unique plan went into effect after the Texas State Legislature in 1973 passed some of the most far-reaching and comprehensive amendments to the workmen's compensation law of Texas that had ever been enacted and included for the first time coverage of all governmental employees in one form or another. In order to provide a fund for payment of benefits under these statutes, it was decided that if several political subdivisions joined together they could share the cost and reduce the reinsurance costs. Since only political subdivisions can belong to the joint insurance fund, all of the members of the fund are tax-exempt participants. Accordingly, any savings are being returned only to the tax-exempt participants.

Larger cities around the country have already successfully self-insured for workers' compensation. This method has worked for municipalities too small to individually self-insure. By joining together they have accomplished the same result and saved the taxpayers money. My bill would simply make clear that these associations are tax exempt.

AGRICULTURAL ACT OF 1977

Mr. FOLEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 7171) to establish more responsive programs for the benefit of farmers and consumers of farm products; to extend and improve the programs conducted under the Agricultural Trade Development and Assistance Act of 1954, as amended; and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Washington (Mr. FOLEY).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further cnsideration of the bill H.R. 7171, with Mr. EVANS of Colorado in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee of the Whole rose on Wednesday, July 20, 1977, title I of the bill had been considered as having been read and open to amendment at any point. Pending was an amendment offered by the gentleman from Indiana (Mr. FITHIAN).

AMENDMENT OFFERED BY MR. FINDLEY AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. FITHIAN

Mr. FINDLEY. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. FINDLEY as a substitute for the amendment offered by Mr. FITHIAN: In lieu of the language proposed by the gentleman from Indiana (Mr. Fithian) insert the following:

Page 2, line 3, insert "SUGAR," immediately after "FEED GRAINS,";

Page 2, line 13, add a new paragraph as follows:

"(2) The total amount of annual payments which a producer may receive under any program established under the Agricultural Act of 1949, as amended, for sugar shall not exceed $50,000."

Mr. FINDLEY. Mr. Chairman, last night the amendment offered by my good friend, the gentleman from Indiana (Mr. FITHIAN), was the subject of considerable discussion, and in the process the intent of the amendment became quite garbled. My purpose in offering this substitute is to clarify the intent that I believe the original Fithian amendment had, and that is to establish a limitation of $50,000 on payments that can be made to a single sugar producer in any year. That, I believe, was the intent of the Fithian amendment. It became so garbled that I think this clarification is needed.

In the debate yesterday the gentleman from Hawaii (Mr. HEFTEL) told us about the AMFAC "family farm" in the State of Hawaii.

I would like to tell the Members a little bit about the AMFAC "family farm."

According to Standard & Poor's, AM FAC owns hotels, restaurants, machinery facilities, drugs, and financial services, as well as sugar production facilities.

If AMFAC wants to "grow" commodities like banks, restaurants, and hotels, more power to them. I am all for it. But I am not for giving that firm a multi-

million-dollar subsidy to make its bank account a little bit fatter. According to Standard & Poor's Register, AMFAC had a total revenue of $1.13 billion in the last year for which information is available.

A corporation doing $1 billion worth of business, under the payment program which the administration recently announced would have been eligible for payments of $14 million.

Mr. Chairman, I am not opposed to corporations. I am not opposed to big corporations. I just do not think that farm subsidy programs should benefit such operations.

The issue is clear, in my opinion. If the Members vote against this substitute, they will be voting to keep the road clear or, in effect, to authorize big multimillion-dollar payments if a new payment program should come forward from the administration.

Mr. Chairman, according to Congressional Research Service, just 40 of these giant corporations would eat up 40 percent of all payments, whatever the nature of the payment program as set up by the administration. I cannot imagine that this committee would elect to authorize payments in excess of $50,000 to any producer.

My good friend, the gentleman from Washington (Mr. FOLEY), suggested that the Fithian amendment was mischievous. I suppose his reason was that we do not presently have in the Federal Register a payment program for sugar producers. That is true, but I would submit that what is mischievous is what the administration has been saying and doing about sugar during the past few months. It seems to me mischievous for the administration to consider a payment program of $230 million a year that has not been the subject of any hearings whatsoever.

To add to my concern, Mr. Chairman, I read that Mr. Strauss, the chief trade negotiator, said yesterday that he does not know what new program for sugar will be proposed by the administration.

Then I noted that on the same date, yesterday, Secretary Bergland said, and I quote from a wire service dispatch, the following:

> Secretary Bergland tonight reaffirmed the Carter Administration's commitment to assure domestic sugar producers 13.5 cents a pound, but made it clear we do not need legislation to accomplish this goal.

Mr. Chairman, where are they going to turn for a means of guaranteeing the 13.5 cents a pound, to a negotiated trade agreement, perhaps, or some other plan they may draft.

Mr. Chairman, that sort of thing requires a great deal of cooperation from a lot of different nations, which may not be forthcoming.

What surprise then will the administration propose with respect to a new payment program or subsidy program?

The CHAIRMAN. The time of the gentleman from Illinois (Mr. FINDLEY) has expired.

(By unanimous consent, Mr. FINDLEY was allowed to proceed for 1 additional minute.)

Mr. FINDLEY. To continue, Mr. Chairman, we do not know what is ahead. We have the assurance of the Secretary of Agriculture that the Administration does not want nor need new legislation. We have the statement of Mr. Strauss today that he does not know what the administration is coming up with as far as a new program is concerned, so I think it is prudent for this committee to establish a $50,000 limit on payments under any sugar program that may be forthcoming. That sum, surely, is enough money in any one year for any producer of sugar.

Mr. BLOUIN Mr. Chairman, will the gentleman yield?

Mr. FINDLEY. I yield to the gentleman from Iowa.

Mr. BLOUIN. Mr. Chairman, I would like first to commend the gentleman from Illinois (Mr. FINDLEY), as well as the gentleman from Indiana (Mr. FITHIAN), for their efforts jointly to create equity in a segment of agriculture that very desperately needs it.

I do not think it is any great secret that the corn syrup industry is in trouble as well as the sugar industry, and I believe that the amendment which both the gentleman from Illinois (Mr. FINDLEY) and the gentleman from Indiana (Mr. FITHIAN) cooperatively are proposing, or their combination of amendments, goes a long way toward creating that equity.

Therefore, Mr Chairman, I would urge the adoption of the gentleman's amendment.

Mr. FINDLEY. Mr. Chairman, I thank the gentleman.

Mr. CONTE. Mr. Chairman, I move to strike tne last word, and I rise in support of the amendment offered as a substitute by the gentleman from Illinois (Mr. FINDLEY) for the amendment offered by the gentleman from Indiana (Mr. FITHIAN).

Mr. Chairman, the substitute seeks to set a limit of $50,000 for the producers of sugar. I submit that this is a far better approach to the problems of the sugar segment than the administration-supported proposal of paying a subsidy of 2 cents per pound to domestic producers through the processors. I oppose this program for several reasons: First, it discriminates against the corn sweetener industry to the tune of about $150 million annually; second, it will cost taxpayers $240 million a year and will provide no relief to consumers; third, it is of questionable legality; fourth, it is not budgeted and has not even been the subject of congressional hearings; fifth, it will not solve the long-term problems of U.S. producers and may in fact make problems worse by creating artificial incentives to increase sugar production at a time of world surplus; sixth, it could aggravate the Nation's balance-of-payments problem by restricting the market potential of corn sweeteners worldwide; and seventh, it is destructive of the family farm and may have a serious anticompetitive effect within the sugar industry by helping to finance the demise of small sugar farms at the hands of gigantic grower-processors. If the Congress adopts the proposal of the administration, there are five major grower-processors in the States of Hawaii and Florida who will be especially grateful. These five majors will stand to pocket over 20 percent, or $50 million of this amount. In addition, the 2-cent proposal will benefit an additional 43 growers and processors to the tune of at least $1 million each.

The Members of this body should realize that these payments are a "bailout" of the sugar industry. The industry, riding high on the record prices for their product 3 years ago, embarked on a massive program of expansion. However, the laws of supply and demand prevailed, and the hoped-for demand never materialized. Now the industry is asking the Congress to "make good" their faulty judgments, and provide the required money. I do not believe the Government should be in a position of bailing out each industry that falls into this predicament. Further, I believe that it is up to the Congress to restore some rationality to this situation. For this reason, I am supporting the amendment offered by my good friend from Indiana, as a better alternative than the 2-cent subsidy approach.

Mr. Chairman, the amendment seeks to limit these Federal payments to $50,000 annually. This is a concession on the part of the sponsors to the unique financial situation that the sugar producers face as compared to other crops. It also is a recognition of the fact that the corporate farming practice is gaining control of our sugar production. This amendment will benefit the small producer of sugar, whose livelihood is directly dependent on the annual receipts rather than falling back on the accumulated income reaped from the "good years" of the past. This amendment will limit the amounts the major producers and growers will receive and also afford the small producer a competitive edge from this ever-growing threat to his existence. I do not believe this payment limitation will, in itself, save the small farmer from this threat, but it is an important step for the Congress to take in recognizing their particular plight.

Mr. Chairman, I have heard the pleas of the large growers and processors that this amendment will cripple their industry, that unemployment will skyrocket, and that the economic status of several key States will suffer. However, I am not convinced that the majors will simply "close up shop" and go to another product if this amendment is adopted, rather I believe that the adoption of this amendment will serve as a signal to this industry and others that the Congress is not in a position of bailing out bad judgments. And for this particular segment, I believe the sugar prices of 60 cents per pound, that the consumer was forced to pay a few years ago, should have provided ample financial cushion to carry them through this current, but transient situation.

Mr. Chairman, in the interest of fiscal responsibility and rationality, I urge the adoption of this amendment.

Mr. Chairman, not once—not once—

did I see any of those people who were reaping that fantastic harvest, at the price to the consumer of 60 cents a pound, ever come forth and say, "Look, you are really carrying a heavy load, little housewife. We are going to give you back some of that money." They stuffed it in their pockets, and now they are hurting, and now they want the taxpayers to come in and bail them out. I say No! No! No!

Mr. KINDNESS. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Ohio.

Mr. KINDNESS. I thank the gentleman for yielding.

I would like to associate myself with the gentleman's remarks and express my appreciation for the clear comments which he has made on the substitute. The gentleman from Indiana and he both deserve our support, and I hope the Members support them.

Mr. HUCKABY. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Louisiana.

Mr. HUCKABY. I thank the gentleman for yielding.

Is this an attempt to make this $50,000 limitation also apply to loans?

Mr. CONTE. No; it does not.

Mr. TRAXLER. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Michigan.

Mr. TRAXLER. I thank the gentleman for yielding.

I have the greatest respect for the gentleman in the well. We serve on the committee together. Let me say I would not want him to think that this 2-cent program is worth 2 cents. To my growers it is not. The solution to the sugar problem lies more in the approach that the de la Garza amendment will be taking tomorrow when we amend title IX. I appreciate the gentleman's comments, and I will ask him for his support of the de la Garza amendment.

Mr. CONTE. I thank the gentleman, and I will say that we will cross that bridge when we come to it and find out what the final effects of the amendment are.

Mr. HEFTEL. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, what we were saying yesterday has not changed today, and for the people whose jobs would be absolutely eliminated, it matters little what the terminology of the amendment reads like. But I think most important of all, the Members of this august body, who were somehow convinced on June 4, 1974, that the Members should discontinue the 40-year-old Sugar Act, are the same individuals who are trying to tell us we should have a ceiling on sugar payments per producer. Ironically, that 60-cent price was a product of the elimination of the Sugar Act.

What we are talking about today is guaranteeing a future price for the consumer of 60 cents a pound. When the domestic production of sugar in America goes from its present 57 percent to 40, when we eliminate Hawaii, and down from there, we then become dependent upon the foreign sugar market. We do not have to have anyone tell us what happens to the price of any commodity when we are dependent upon a foreign market.

This idea that some giant companies are going to put money in their pockets is untrue and fallacious. We are talking about the difference between losing $65 million and $25 million. These payments would make the difference between a loss of $65 million and $25 million. There is no profit involved or available, but again if we are worried about profits, it would be so simple to enact legislation which stipulates that if we accept any support payments from the Federal Government, we will be obligated to earn no more than a 5-percent return on invested capital, subject to a 90-percent excess profits tax.

And so we are really talking about a program which if decimated would mean that we would go back ultimately to the 60-cent price for that individual pound of sugar bought by the consumer.

It is also interesting to note that the point was made that this limit applies only to payments, not to loans. What devastation we would bring about in the agricultural community of America if we now try to apply this same philosophy and concept to the loan program. None of us wants to devastate any of us and I do not believe we will ever help each other in any manner that makes sense if we try now to come up with programs which incorporate the total destruction of the agricultural community.

I am hoping that my colleague, the gentleman from Hawaii (DAN AKAKA) will speak to us today because I would like to have him talk about those people in Hawaii who will just simply have no way to become anything but burdens on society if we go ahead with this kind of crop limitation.

Mr. JOHN L. BURTON. Mr. Chairman, will the gentleman yield?

Mr. HEFTEL. I yield to the gentleman from California (Mr. JOHN L. BURTON).

Mr. JOHN L. BURTON. Mr. Chairman, I commend the gentleman from Hawaii (Mr. HEFTEL) for his remarks.

I would like to have my colleagues think about what the welfare costs will be to the people of America in the State of Hawaii whose economy is based upon this industry and think about what the welfare costs would be to the taxpayers of America for the Commonwealth of Puerto Rico and other States if this limitation goes through.

They do not have family farms in the State of Hawaii but they do have a situation where the workers share in the profits of the crops over there.

As was stated yesterday by my colleague, the gentleman from California, the gentleman from San Francisco, they have worked without a contract for more than a year, I believe, because the industry was in such bad shape.

If we want to deal with this on a dollars and cents basis and say this program is going to cost, I think my friend, the gentleman from Massachusetts, said it would cost $245 million or something, think about what the welfare costs are going to be in dollars, if not what welfare costs as against the dignity of working and earning a wage means to the human family fabric.

I would urge a "no" vote on the substitute amendment and on the amendment.

The CHAIRMAN. The time of the gentleman from Hawaii (Mr. HEFTEL) has expired.

(By unanimous consent, Mr. HEFTEL was allowed to proceed for 2 additional minutes.)

Mr. HEFTEL. Mr. Chairman, I would like to quickly point out that the income from sugar to the United States is $187 million. The cost differential is actually $53 million. But more significant, the cost of unemployment for 1 year for 10,000 workers would be $40 million and for 30,000 workers it would be $120 million.

So my colleague has made a very apt point concerning the fact that there are no savings available to us in this amendment—only losses, losses in many different directions.

Mr. AKAKA. Mr. Chairman, I rise in opposition to the substitute amendment and I move to strike the requisite number of words.

Mr. Chairman, I stand here today as the first native Hawaiian to have a vote in Congress. I stand here also as a person who feels greatly the honor that has been bestowed upon me. And I stand here to appeal to the Members of this House to help the people of Hawaii continue to live in dignity and in good support of their families.

My colleague, Mr. HEFTEL, mentioned me, because the gentleman is a person who has lived in Hawaii for 12 years. In the time the gentleman has been there, he has come to understand the problems of Hawaii.

We both understand that we cannot carry on the sugar industry with small farms. The producing unit for Hawaiian sugar cane must be large to be efficient. Under Hawaiian conditions, many millions of dollars of capital investment have been required to prepare land for cultivation, to install irrigation systems, to build roads, to build raw sugar mills, to provide equipment needed for cultivation and harvesting. In most of Hawaii it is simply not feasible to grow sugar cane in small units. The structure that the Hawaiian sugar industry has developed, can you imagine, over a period of 140 years, since 1837. Long before Hawaii was annexed as the Hawaiian territory it had been established that large production units were required in Hawaii for efficient operation. The existing pattern of production existed when Hawaii was given statehood. The large producing units which are found in Hawaii are a Hawaiian solution for Hawaiian problems.

Hawaii, as we know, is an isolated community. It is subtropical in character. It has a limited population, which makes it necessary for Hawaiian agricultural products to be shipped to the mainland for sale. The cultivation of sugar cane is one of the very few crops which Hawaiian agriculture is able to produce on an economic basis.

Mr. Chairman, no one will get rich from this program. It will, however, allow the domestic sugar industry in Hawaii, as well as the continental United States, to exist until the market price reaches 13½ cents per pound. It will keep our country's sugar industry in business, so that thousands of workers will not be laid off—and I repeat, thousands of workers will not be laid off.

If the Fithian amendment, and also the substitute by the gentleman from Illinois (Mr. FINDLEY) passes, it will have the effect of destroying the President's program completely and it will force one of our Nation's largest domestic industries into bankruptcy and cause the rolls of Hawaiian unemployment to grow.

Any payment limitation will work a particular hardship on one particular State, and that is Hawaii. Without assuming payment of the full 2 cents per pound for a full year, Hawaiian producers would receive $40 million. A $50,000 ceiling would limit the Hawaiian total to $750,000. Almost all Hawaiian sugar is produced by only 15 producers. Hawaii's unique situation, being 2,400 miles away from the nearest market, requires large corporate farming. A $50,000 payment, whether to the producers or to the processors, which may assist a family farmer to stay in business, will be of no benefit to the corporate farm.

The CHAIRMAN. The time of the gentleman from Hawaii has expired.

(By unanimous consent, Mr. AKAKA was allowed to proceed for an additional 2 minutes.)

Mr. AKAKA. Mr. Chairman, as a result, they will no longer be able to stay in business, and tens of thousands of workers will have to be laid off. Passage of the substitute and the amendment would be devastating, as I said, to the State's economy, since the sugar industry, now losing money, is the third largest industry in Hawaii.

We cannot accept a $50,000 ceiling, whether it is for the producers or for the processors, as in Hawaii we have a unique setup for the sugar industry. Payments finally go to the workers.

Mr. Chairman, I urge my colleagues to defeat the substitute and the amendment.

Mr. KINDNESS. Mr. Chairman, will the gentleman yield?

Mr. AKAKA. I yield to the gentleman from Ohio.

Mr. KINDNESS. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I do not quite understand the process that is involved in reasoning this thing out as to why the workers would be unemployed. Could the gentleman explain that? There has been a reference to bankruptcy. Is the gentleman contending that all 15 producers would go bankrupt in the absence of this program?

If so, I think I can understand the argument. But otherwise, could the gentleman explain the process by which the unemployment occurs?

Mr. AKAKA. Yes. The producers in Hawaii are considered to be the growers, and of the growers, we have 500-plus independent growers. They plant and cultivate the sugarcane. The processors are those who come in to harvest the cane and mill the cane into raw sugar. The raw sugar is then transported, in our case, to the mainland. It is refined there by refiners into marketable products.

The CHAIRMAN. The time of the gentleman from Hawaii has again expired.

(On request of Mr. KINDNESS and by unanimous consent Mr. AKAKA was allowed to proceed for 2 additional minutes.)

Mr. AKAKA. After it is refined into a marketable product, it is sold here on the mainland, and even in Hawaii. And so, the payments that would be received from this program then would go to the refiners, processors, to the producers, and the sugarworkers.

Mr. KINDNESS. Would the gentleman yield for another question? Is the gentleman contending, then, that the producers are all so capitalized that they do not have the resources to survive 1 bad market year?

Mr. AKAKA. Well, let me put it this way: If the processors were to go out of business, the producers would too. They would have no place to send their sugarcane.

Mr. KINDNESS. Is it the gentleman's contention that the processors, all 15, would be out of business on the basis of 1 bad year?

Mr. AKAKA. That would be true. They would be out of the sugar business.

Mr. KINDNESS. That is without exception?

Mr. AKAKA. That is right.

Mr. KINDNESS. I thank the gentleman for his answer.

Mr. HUCKABY. Mr. Chairman, I move to strike the last word, and I rise in opposition to the amendment.

Mr. Chairman, I rise in opposition to the proposed amendment. I think we need to look at what is happening to the American sugar industry. And why is it happening?

We are importing nearly 50 percent of our sugar today. This sugar is being dumped into the United States at costs far below what it costs to produce it in those countries that we are importing from, because we no longer have sugar agreements. This country, since the first of the year, has been trying to negotiate new sugar agreements, without any success. Secretary of Agriculture Bergland stated earlier this week that if something is not done, our entire sugar industry will probably collapse within 2 years.

Think what will happen to us. It should be perfectly obvious that a sugar cartel will be formed, just as an oil cartel has been formed. The price of soft drinks will, in 2 years, be 50 or 75 cents instead of the 30 cents it is today. It is time that Congress recognized what is happening to the sugar industry.

The President has proposed a 2-cent supplement—and it is up in the air now—whether or not the 2-cent supplement can be implemented. If this approach is used—and I do not believe it is the best approach, but I surely believe we should keep the opportunity open to us to maintain that flexibility, we are going to have a 37-percent reduction, if the Findley amendment is adopted, in the Government payments going to the sugar industry. Simple laws of economics tell us that if you cannot cover your variable costs, you cease operations. And, this is what is going to happen to the sugar industry after this year's crop if something is not done.

Hopefully, if we could enter into trade negotiations to prevent dumping, the price of sugar will probably go up to around 15 cents, and the industry could continue to survive. In lieu of this, I think the de la Garza amendment is a much better approach. But if that fails, I would certainly like to have open this third option. I think the Fithian amendment significantly reduces the third option and we would promptly go ahead and see the demise of the sugar industry.

Mr. Chairman, for these reasons I must urge the defeat of this amendment.

Mr. FOLEY. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the substitute amendment.

Mr. Chairman, the gentleman from Illinois (Mr. FINDLEY) has said that the substitute does clarify some of the issues involved in the amendment offered by the gentleman from Indiana (Mr. FITHIAN). But the same problems exist with reference to the operation of the substitute and the original amendment with respect to, for example, the production of sugar in Hawaii, as both gentlemen from HAWAII (Mr. AKAKA and Mr. HEFTEL) have explained to the House.

What we are trying to do is look at a condition of the American sugar industry which has reached a disastrous state, in terms of low prices. The gentleman from Illinois (Mr. FINDLEY) pointed out that it was not too long ago, a couple of years ago, that American consumers were paying 60 cents for sugar. We were paying 300 percent more than we are paying today. And we had that situation because we were dependent on international sugar supplies that were in tight condition.

Almost every country in the world has some form of sugar production program; and we had one, indeed, from 1934 until 1974. But after that, we became dependent upon an open world market where there is a relatively small so-called free market. When that so-called free market becomes short, sugar prices rise dramatically. When there is a surplus condition, prices dip dramatically. Therefore we have seen both enormously high sugar prices and then sugar prices below the cost of production, which we are now experiencing. The administration is presently negotiating at the International Sugar Meetings in Geneva right at this very time. There is no sugar legislation in this bill. I would hope that we would at least give the administration an opportunity to carry on these negotiations and put in place any program that is available to them, without amendments which would make the flexibility of that program severely limited and would actually make it totally inoperative with respect to major sugar-producing States, such as Hawaii.

The $50,000 payment limitation will simply not work in the State of Hawaii, and I do not think anyone here would contend that it would. Thousands of Hawaiians are going to lose their jobs when their industry is destroyed, unless some temporary help can be found through a broader international program or through some domestic legislation.

Although the substitute clarifies some of the issues, it is in itself a wrong direction for this House and this Congress to take, as is the basic amendment for which it is offered as a substitute. I would hope that the committee would reject both of them and we could proceed to attempt to resolve one of the most serious agricultural problems facing any sector of American agriculture today, the problem of the American sugar industry.

Mr. BLOUIN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, there are two points I want to make.

There has been talk about the unfairness of the $50,000 limitation. There is a $35,000 limitation on corn and other grains; that is in the bill already. If there were a question of equity involved, I would think that $50,000 in terms of a payment to the producer himself is more than fair.

On the question of jobs; the loss of jobs and the impact of this on the economy of Hawaii is a real problem, and I am concerned about that. But there is also the other side of the coin, and that relates to the fact that prices are depressed today. The cost of the depression, if you will, in the price of sugar and the spinoff effect on the corn syrup industry has the unemployment of a tremendous number of people all over this country.

I have one plant in my district that has already closed and not just temporarily. It has not rolled back just for a few months or effected a cutback on production; it has closed its doors. The impact on the economy of that community is devastating, with 400 or 500 families out of work.

There is also the impact felt from another corn syrup plant in another section of my district that is on the brink of considering layoffs, and that will be devastating to the economy of that area.

That is just one section of one State. So there is an economic problem, no matter where we look.

I would say that probably the fairest way to approach this problem is to eventually adopt the de la Garza amendment which will be offered later on during this debate. However, we are now confronted with what well might be considered a fair compromise between what has yet to be debated and where we find ourselves right now. I would think that the compromise we should accept is a combination of the Fithian and Findley amendments. That is by far the fairest balance we could ask for as we approach the problems of the sugar and corn syrup industries and try to minimize economic loss and improve economic conditions wherever possible.

Mr. Chairman, I think it makes eminent sense to move in that direction.

Mr. MOORE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, a moment ago the gentleman from Indiana (Mr. FITHIAN) asked me on the floor if there would be any problem with Louisiana sugarcane growers if we accepted the Findley substitute imposing a $50,000 limitation on payments to producers. That set me to thinking. I have done some figuring.

The answer is: yes, it would do damage. I would like to explain that now and explain why I cannot support the amendment.

First of all, we have to realize that $50,000 sounds to the average consumer and taxpayer in this country like a lot of money. I certainly agree with that. But that figure must be considered in relation to what it is we are trying to protect and what it is we are trying to accomplish.

Fifty thousand dollars means nothing if a farmer is going to lose $200,000; it means that he is just $50,000 less in bankruptcy, but still out of production and in bankruptcy. Fifty thousand dollars might mean something if that is about all he is going to lose, or if that is about 80 percent or 90 percent of what he is going to lose.

So we must consider the $50,000 figure in relation to what can happen and what we are trying to accomplish. What we are trying to accomplish with the administration's proposal and later, in a better way, with the de la Garza amendment which I cosponsor, is some sort of protection for sugar growers so that we can keep them from going out of business and so we can prevent this country and its consumers from being subject to the international sugar market. I think that is a laudable and a worthwhile goal.

This $50,000 limitation would, I think, hurt or limit the ability of the administration's program to accomplish that goal, and let me explain why.

Right now in Louisiana, according to a July 1977 Louisiana State University report, the rock-bottom cost of production to a cane farmer—and let us remember that Louisiana is second only to Hawaii in the production of cane—is 14.82 cents a pound. The administration is talking about supporting sugar farmers up to 13.5 cents a pound.

Therefore, if the payment the administration anticipates is made, a Louisiana cane farmer will still lose 1.32 cents a pound, no matter what the administration pays him, since the cap is 13.5 cents a pound.

What I am about to show now is that the $50,000 limit causes a further loss. Right now the price of sugar has dropped well below the administration's figure. When they consider the 2-cent payment, which is what it would have then taken to bring the average producer up to 13.5 cents. The price of sugar today has been hitting around 9 to 9.5 cents. It is believed by many that the price may well hit 8 cents a pound this year.

If the administration then determines that it still wants to pay the difference between 8 cents and the 13.5 cents it states it wants to get the payment up to, then we are going to find that the average cane farmer in Louisiana who has 300 acres of sugar cane, should get a payment well over the $50,000 limit. A 300-acre farm produces 1,275 pounds of raw sugar at 5.5 cents per pound price support results in a total in excess of $70,000. Therefore, he loses on two counts. He loses because it costs him 14.82 cents, not 13.5 cents, as the administration estimates; and second we hit him because we are cutting off the figure at $50,000 when his losses have been greater than that.

So we get back to the original proposition of what are we trying to accomplish? If we do not want to keep sugar growers in business then vote for this limit as we will not be helping them stay in business. If we want to try to help farmers, we do not need this limitation. If we really do not want to help the sugar farmer, but we just want to look good to the taxpayers, then let us put the $50,000 limit on; and we will see many of the sugar farmers, not only in Hawaii, go out of business.

Mr. FITHIAN. Mr. Chairman, will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Indiana

Mr. FITHIAN. Mr. Chairman, I thank the gentleman for yielding.

I would ask the gentleman if he is aware of the cost of production of corn in the corn belt, which is something in excess of $2, $2.10, or something of that nature. Is the gentleman aware that we are talking about something around $1.75 for the remainder of this crop year in terms of yield level and price supports?

I would suggest that the gentleman can see the inequity of what we are doing here. The gentleman can see that we are treating one sweetener at the disadvantage of another.

Mr. MOORE. Mr. Chairman, I would like to reclaim my time.

I understand the gentleman's arguments. I have been supportive of corn and wheat in the full committee and will be on the floor. However, it is not a valid reason to injure the sugar industry simply because we feel that corn has been mistreated.

Mr. WAMPLER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I have just been handed a CNS wire story dated July 21, Washington, D.C.; and I will read it into the record because it is applicable to the debate on this amendment. It is as follows:

ADMINISTRATION OPTS FOR OPEN-ENDED SUGAR PAYMENT

WASHINGTON, July 21.—Administration officials have decided to do away with their proposed maximum 2 cent sugar payment to domestic producers and institute an open-ended subsidy plan instead, to assure producers 13.5 cents per pound for their sugar, according to Government sources.

The administration's approach to sugar payments was changed Wednesday in order to draw support from congressional efforts to

include sugar payment provisions in omnibus farm legislation now being debated in the House, according to sources.

Administration officials' decision to implement an open-ended subsidy was evident late Wednesday following a top-level White House meeting when Agriculture Secretary Bob Bergland announced the administration is committed to assuring domestic sugar producers 13.5 cents per pound. A Government source said, however, that President Jimmy Carter did not attend the meeting, and the new payment plan is still subject to his approval. Attending the meeting were the U.S. special trade representatives, members of the domestic council staff and representatives of the Council of Economic Advisers and the Departments of State, Treasury, and Agriculture.

According to a source, the open-ended payment plan means, for example, if sugar prices drop to 8.5 cents per pound, the Federal Government would provide a 5 cent subsidy, the difference between 8.5 and 13.5 cents.

In his Wednesday statement, Bergland said: "The administration still believes that the best long-term solution to sagging sugar prices is an international agreement with other producing countries." He urged Congress not to impose sugar policy on the U.S. Government without the benefit of thorough study and public hearings.

Mr. Chairman, we have heard a great deal of debate on subsidies for sugar producers. As the distinguished chairman of the Committee on Agriculture has said, there is perhaps no segment of American agriculture that finds itself in more dire financial straits than do the domestic sugar producers.

Mr. Chairman, I was among those who stood in the well of the House in 1974 and urged an extension of the then existing Sugar Act; but the House chose not to do so. Since that time we have had nothing but chaos in the sugar industry.

I believe consumers, by and large, have suffered from that action. We are relying more heavily on the importation of foreign sugar, or at least if we see the continuing price deterioration on domestic sugar, we will have to rely more heavily on imports of foreign-produced sugar.

Mr. Chairman, I would respectfully ask the Members to vote against the Findley substitute and the Fithian amendment. There will be other amendments offered during the debate of this bill that will address this very serious situation affecting domestic sugar producers.

I point out that this is a matter of urgency—a matter of survival for many domestic sugar producers. It seems to me that while the amendment offered by my friend the gentleman from Illinois (Mr. FINDLEY) is designed to achieve worthwhile purposes, I believe it will be counterproductive. We have an opportunity here today to give at least some temporary relief to the domestic sugar producers until we have an opportunity for full hearings and can proceed in a more orderly manner.

Moreover, as the CNS wire story indicates, the Carter administration is intent on helping the sugar producers and on the surface of the situation it appears that help is warranted because of the devastation that is occurring to domestic producers and U.S. sugar prices because of foreign "dumping" on our market.

I thought that we should have extended the Sugar Act in 1974. It had worked well for nearly 40 years, it guaranteed adequate supplies of sugar to the United States, it provided sugar at reasonable prices to consumers, and it did not cost the taxpayers any subsidy costs but gave some support to domestic producers. I say let us give some support to producers this year and then hold hearings to determine whether or not to have a Sugar Act in the future.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

Mr. WAMPLER. I yield to my colleague the gentleman from Louisiana.

Mr. MOORE. Mr. Chairman, I thank the gentleman for yielding to me.

Mr. Chairman, the distinguished ranking member, the gentleman from Virginia (Mr. WAMPLER), has just confirmed by this dispatch that he read, what I was describing in a hypothetical form a moment ago that could happen and would make the Findley-Fithian amendments unworkable. Now we see the administration today saying that they acknowledge the price of sugar may go as low as 8 cents a pound and that they will pay the difference to 13.5 cents. Therefore, the average sugar farmer in Louisiana with 300 acres should get a payment if this program goes through, as suggested by the administration, of well over $50,000, and he will still be losing money because he is spending 14.8 cents now to produce it and the Government is going to give him a payment of 13.5 cents, so he will lose on both ends, and you will see them going out of business. The whole point of the program will be circumvented by this amendment and we will have done nothing to keep them in business.

Mr. WAMPLER. Mr. Chairman, I believe that the example of the gentleman from Louisiana is correct.

I would urge the Members to vote down the amendments.

Mr. KOSTMAYER. Mr. Chairman, I move to strike the requisite number of words and rise in support of the amendment offered as a substitute by the gentleman from Illinois (Mr. FINDLEY) to the amendment offered by the gentleman from Indiana (Mr. FITHIAN).

Mr. Chairman, I must respectfully disagree with the chairman of the Committee on Agriculture, my distinguished colleague, the gentleman from Washington (Mr. FOLEY). I rise in support of the Findley substitute because I believe that a no vote favors some of the most expensive Washington lawyers hired to lobby on behalf of the sugar interests. A no vote would make the sugar interests the beneficiaries of a multi-million-dollar windfall in the domestic sugar industry, whereas an aye vote, on the other hand, is a vote to halt this abuse and still afford adequate protection to the families of the sugar farmers.

So, Mr. Chairman, I am going to vote aye, and I hope my colleagues will do likewise.

Mr. FITHIAN. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the Findley substitute.

Mr. Chairman, I realize that this debate has gone on quite long enough. I believe that we only need to underscore the main portions that we have under consideration.

I believe the gentleman from Iowa (Mr. BLOUIN) probably said the most important thing that has been said in the entire debate, and I would like to underscore that.

We are, my friends, talking about equity versus inequity. We are talking about the support of one sweetener at the expense of another. We are talking about a farm bill which in one case limits corporations who might have a little corn and wheat operation, and there are many, to a $35,000 limit on payment. This will affect some of the Kansas wheat farmers and this will affect some of the Washington wheat farmers.

The point is, if we are going to establish the concept that we limit the amount of taxpayers' dollars that go out, irretrievably go out this year and do not return, then we ought to apply it with some basis of equity.

Therefore, Mr. Chairman, I welcome the Findley amendment because it has clarified the legal mumbo-jumbo which was created on the floor yesterday, brought on through a lot of the arguments which had nothing to do with the basic issue contained here.

I must say also that as we go down through this bill it will become patently clear to those of you who follow the debate that we are treating one commodity after another very differently in comparison to the basic commodities of corn and wheat.

If we are to argue that sugar producers must have their cost of production back, why should we not argue that the corn producers should have their cost of production back? Yet, as I pointed out to the gentleman from Louisiana, we are not willing to do that in this bill. If we are going to argue a guarantee of a profit for peanuts, why, then, are we not going to argue at least for the cost of production for the wheat growers? We could go on and on.

I walked out of this Chamber last night, and I was very disturbed. I had to stumble my way through more sugar lobbyists than I thought existed.

Mr. Chairman, we can vote for this amendment and support the de la Garza amendment, if that is the Members' choice. We are simply saying that when we pay the money to the producer, AMFAC, or whatever the processor is, they cannot pay it out in individual chunks to individual growers at greater than $50,000. That is all this amendment means.

If I read correctly what the distinguished ranking minority member of the committee just shared with us, I would like to say that my figures for yesterday are not correct. With this new open-ended commitment by the Secretary last night that the payments will be whatever are necessary to hold the price of sugar at that level, then what we are talking about is not a $14 million payment to AMFAC, of which they will keep a certain percentage, but we are talking about a $35 million to $40 million payment. Where is the equity in that?

I would point out to the Members again that not long ago, as the distinguished chairman said, sugar was selling in this country for 60 cents a pound. What, I ask the Members, were they doing with the profits during that time? Look at the holdings they picked up during that time. Look at the growth of the conglomerates. One can go back for 100 years in the history of this country and look at what the sugar trusts have done to and with this country. The fundamental reason why we have a Sherman Antitrust Act is that people before us a century ago stood in the well of this House and argued that public interests ought not to manipulate the people's Treasury. We are in exactly the same position today.

I will support my friend, the gentleman from Hawaii, if he is concerned about keeping them afloat with a loan rate. I would be the first one in the House to support the gentleman from Hawaii (Mr. HEFTEL) if he says they need a loan rate of 15 cents, because a loan is to help them over these tough times. We are not laying it out at no return. I would support a loan rate if it is necessary for the sugar industry. But I urge the Members to join us in not laying out money irretrievably that cannot ever come back.

As the gentleman from Massachusetts (Mr. CONTE) said, we did not see anybody rushing into the public domain and arguing that they ought to return some of the 60-cent profits. If they had done that, I could have some sympathy.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. FITHIAN. I yield to the gentleman from Illinois.

Mr. FINDLEY. I thank the gentleman for yielding.

I hope the members of the committee listened when the gentleman from Virginia (Mr. WAMPLER) read the Commodity News Service Report on what the administration has in mind for sugar. Let me read just the first paragraph.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. FINDLEY, and by unanimous consent, Mr. FITHIAN was allowed to proceed for 2 additional minutes.)

Mr. FINDLEY. If the gentleman will yield further, CNS is a reputable news service. It does not engage in gossip. I have never heard it charged with such. Let me read the first paragraph of the CNS report just off the wire:

> Administration officials have decided to do away with their proposed maximum 2-cent sugar payment to domestic producers and institute an open-ended subsidy plan instead, to assure producers 13.5 cents per pound for their sugar, according to government sources.
>
> * * * * *
>
> According to a source, the open-ended payment plan means, for example if sugar prices drop to 8.5 cents per pound, the Federal Government would provide a 5 cent subsidy. The difference between 8.5 and 13.5 cents.

This means there surely is nothing mischievous in this amendment. We are dealing with the reality. The administration has already cooked up a payment plan to which a limitation must be affixed.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. FOLEY and by unanimous consent, Mr. FITHIAN was allowed to proceed for 2 additional minutes.)

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. FITHIAN. I yield to the gentleman from Washington.

Mr. FOLEY. I will say to the gentleman from Illinois (Mr. FINDLEY) that I think exactly the opposite point is the one to be taken. If the administration carries out a program of more than 13.5 cents a pound raw value on sugar, as the gentleman believes this news report indicates, then the $50,000 payment limitation that the gentleman from Illinois wants to impose will cripple that program, because for every cent of support the Government has to pay, a $50,000 payment limitation interferes with the goal of 13.5 cents.

The gentleman knows that. So we are back to what I was saying last night. The first amendment offered by the gentleman from Indiana means that this is not a payment limitation in terms of the program. If this story on the wire is correct, this is a crippling amendment to destroy the administration plan.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. FITHIAN. I yield to the gentleman from Illinois (Mr. FINDLEY).

Mr. FINDLEY. Mr. Chairman, what will happen if this new payment program becomes effective will be a swift reorganization of the sugar holdings in Hawaii. They will be broken up into small units, and we will at long last have a farm family situation in Hawaii which will deserve support. AMFAC will get not $13 million but $50 million annually and I think that is an outrage.

Mr. FITHIAN. Mr. Chairman, I would like to respond by saying that those Members who were on the floor last evening will recall the chairman said he had assurances no payment would be made unless a legal foundation were found for it. When I walked out Secretary Bergland was at the bottom of the stairs and he handed me a release of his assuring that one way or another they would support the 13½-cent payment.

What has now just been released said the very opposite of the chairman, which is, yes, of course it is going to limit payment and going to be more harmful to the large conglomerates, and if you need a low loan rate then let us arrange that.

But what is really happening here, what this statement really says is that following a White House meeting yesterday the decision has been made to implement an open-ended subsidy. I ask the Members to remind themselves. An open-ended subsidy simply means all the arguments we were making yesterday about the amounts of money are by the boards in one way or another, despite the Comptroller General's ruling yesterday, one way or another the administration is going to support sugar at 13½ cents. That is the way it has got to be read and Secretary Bergland's statement last night was to that effect.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

(On request of Mr. FOLEY, and by unanimous consent, Mr. FITHIAN was allowed to proceed for 1 additional minute.)

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. FITHIAN. I yield to the gentleman from Washington.

Mr. FOLEY. Mr. Chairman, I will not take much time. The reason I do that is because I know the Members want to vote and I am sure the gentleman would not want to leave a misapprehension with the House and with the Committee. The open ended is modified by 13½ cents. It is not open ended to any figure. It is open ended to 13½ cents.

I am sure the gentleman understands the commitment of the Secretary that no such program will go forward until the final form of the program is approved, in the full range of the law, by the Attorney General of the United States. That statement still holds.

Mr. FITHIAN. And if I may add, they are going to find a way to do this regardless of what the Attorney General of the United States said. That is where we are.

I urge support of this amendment as the only way in which we could take just one way to reach reality and I challenge the gentleman from Hawaii to offer a better amendment.

Mr. CORNWELL. Mr. Chairman, family farms have long been the backbone of American agriculture. In recent years, giant corporate farms have begun to seriously threaten these smaller farms. If we are to encourage and promote family farms, the U.S. Government must begin to limit payments to individual producers. One clear place to begin is with the payments to sugar producers.

The amendment introduced by Congressman FLOYD FITHIAN will limit payments to $50,000 to individual sugar producers. By instituting this $50,000 limit, we will stop the large payments to a few major corporate sugar producers. The agriculture legislation we are considering today should assist the average farmer and not enrich a few sugar producers through multi-million-dollar payments. Furthermore, by limiting payments to sugar producers, we will not be affecting most sugar producers because they do not even start to approach the size of corporate producers.

I strongly urge the House to act favorably on this amendment.

Mr. McCORMACK. Mr. Chairman, I rise in opposition to the substitute and the amendment.

Mr. Chairman, I would like to urge the Members of the House who have been confused on this question, and anyone who thinks that $50,000 is a legitimate ceiling, to consider a little basic mathematics with respect to this subject. At a subsidy of 4 cents per pound, which is about what it would be today for sugar beet growers, a farmer raising sugar beets on 320 acres would be losing money under this substitute or the amendment.

That is, he would be entitled to more than the $50,000.

In other words, 320 acres, which is a common size of a typical reclamation farm in the West, producing 20 tons of beets per acre, yields 6,400 tons of beets, which would produce more than the 625 tons of sugar. At 4 cents a pound, this would call for a subsidy more than $50,000, the limit under the substitute and the amendment. At a higher sugar yield, which is likely, or a higher cost of production, which is likely, this average farmer would be losing money raising sugar beets.

I certainly sympathize with those who are concerned with huge billion-dollar conglomerates. They present a problem, but a $50,000 limit will lead farmers on reclamation land throughout the West to not raise sugar beets, further exacerbating the shortages we have experienced in this country. The substitute, and the amendment, gut the bill. If we are serious about keeping the price of sugar down for the people of this country, we will vote against the substitute and the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. FINDLEY) as a substitute for the amendment offered by the gentleman from Indiana (Mr. FITHIAN).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. FITHIAN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 167, noes 241, not voting 25, as follows:

[Roll No. 449]

NOT VOTING—25

Badillo	Burke, Mass.	Dent
Bolling	Chisholm	Dickinson
Brademas	Conable	Emery
Flippo	Ichord	Murtha
Ford, Mich.	Luken	Steed
Guyer	McKinney	Teague
Harrington	Meyner	Whitten
Holland	Mitchell, Md.	
Hollenbeck	Montgomery	

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Mr. Dickinson for, with Mr. Harrington against.

Mr. Guyer for, with Mr. Montgomery against.

Mr. Hollenbeck for, with Mr. Mitchell of Maryland against.

Mr. McKinney for, with Mr. Brademas against.

Messrs. HOWARD, GLICKMAN, and STRATTON, Mrs. HOLT, and Messrs. BROWN of Michigan, BRODHEAD, YOUNG of Texas, and BROWN of Ohio changed their vote from "no" to "aye."

Mr. LEHMAN changed his vote from "aye" to "no."

So the amendment offered as a substitute for the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana (Mr. FITHIAN).

The amendment was rejected.

AMENDMENT OFFERED BY MR. GRASSLEY

Mr. GRASSLEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GRASSLEY: Page 2, after line 13, insert the following new section:

"SEC. 102. Section 101 of the Agricultural Act of 1970, as amended, is amended by adding at the end thereof the following new paragraph:

"(5) The Secretary shall obtain from each recipient of payments made under sections 101(g), 103, 105, and 107 of the Agricultural Act of 1949 which apply with respect to the 1978 through 1981 crops of rice, cotton, feed grains, and wheat, respectively, the following information:

"(A) the citizenship and country of permanent residence of the recipient, and, if applicable, the status of such recipient under the provisions of the Immigration and Nationality Act;

"(B) the status or capacity in which the recipient receives each such payment, including, but not limited to, receipt of payments as—

"(i) an individual;

"(ii) a member of a partnership, joint venture, tenants-in-common, joint tenants, or similar arrangement;

"(iii) an estate, a trust, or a person or other entity acting in a fiduciary capacity on behalf of individuals, partnerships, corporations or other entities;

"(iv) a club, society, fraternal or religious organization, or similar group or organization; or

"(v) a corporation or similar entity;

"(C) the nature and type of any recipient corporation and the purpose for which it was organized, and if available—

"(i) the number of stockholders of the corporation;

"(ii) the information described in subparagraph (A) of this paragraph with respect to each stockholder of the corporation;

"(iii) the status or capacity in which such stockholder owns the stock of such corporation, including, but not limited to the categories delineated in clauses (i) through (v) of subparagraph (B) of this paragraph; and

"(iv) the number of such stockholders actively engaged in the production of crops to which payments are related;

"(D) the nature, type and purpose of any recipient estate, trust or similar entity or arrangement acting in a fiduciary capacity or serving as an intermediary, on behalf of heirs, beneficiaries or beneficial owners of such estates, trusts or similar entities or arrangements, and, if available—

"(i) the number of heirs, beneficiaries or beneficial owners of such estates, trusts or similar entities or arrangements;

"(ii) the information described in subparagraph (A) of this paragraph with respect to each heir, beneficiary or beneficial owner of such estate, trust or similar entity or arrangement;

"(iii) the status or capacity of each such heir, beneficiary or beneficial owner in terms of the categories delineated in clauses (i) through (v) of subparagraph (B) of this paragraph; and

"(iv) the number of such heirs, beneficiaries and beneficial owners actively engaged in the production of crops to which payments are related;

"(E) the information described in subparagraph (A) of this paragraph with respect to the owner or owners of the land on which the concerned crop is produced, and the status of such owner or owners in terms of the categories delineated in clauses (i) through (v) of subparagraph (B) of this paragraph;

"(F) the interest of the recipient in the land and the crop involved; and

"(G) whether the recipient is actively engaged in the farming operations to which the payments are related.

The Secretary shall summarize the information obtained under this paragraph, including amounts of payments, remove identification of specific persons or entities, and present such summary in an annual report to the House Committee on Agriculture and the Senate Committee on Agriculture, Nutrition and Forestry."

Mr. GRASSLEY (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

Mr. FOLEY. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk concluded the reading of the amendment.

Mr. GRASSLEY. Mr. Chairman, following the reading of this long amendment it might appear to be very complicated. The point is that it asks for information and requires that that information be summarized and the information be submitted to the Congress.

If you would harken back to the debate yesterday on the Nolan amendment, for those members who were present in the Committee of the Whole, and, additionally those members of the Committee on Agriculture, if you would remember some of the debate we had on an amendment that I offered in the Committee on Agriculture dealing with denying government payment to aliens, you will realize, in both instances, that the arguments were brought forth that we really do not know what impact these amendments will have and how far reaching they might be, and without our knowing that at the time we vote against them.

The point of the matter is simply this. Let me say, parenthetically, that this amendment was drawn up more than a week ago prior to the debate on the Nolan amendment yesterday, and I was going to offer it regardless of what happened to the Nolan amendment. But if the Members will remember, back at the time of yesterday's debate the points were made that we do not know the impact of some of these amendments, and I think some of us are willing to admit that point of view, hence, the reason for my amendment to gather information so that when we do want to make public policy in this area, we will have some basis in fact, for doing it.

One of the difficulties is the lack of information as to the extent to which large corporations, nonresident aliens, investment trusts, and other nonfarm interests are moving into agriculture. If we are to deal with this problem in a meaningful way, we must have better information than is now available.

I might say as an aside that I am trying to avoid a lot of the issues that were raised yesterday on the Nolan amendment so that we will not have to repeat those and take a lot of time of the House. But it seems to me that if we are going to provide commodity program payments to these nonfarm interests, we should have more adequate data on how extensive they are. We should be able to find out, for example, how many nonresident aliens will receive deficiency or disaster payments. We need to know how many trusts and corporations will get payments, and what kind of trusts and corporations these are, what type of members, and what their numbers are. We need to know just how many recipients of commodity program payments act in a fiduciary capacity for others, and what kinds of entities these others are. When we have this kind of information, we will have a better base from which to shape our farm programs to focus on the people whom we are really trying to help—the family farmer and the folks who depend on agriculture as a source of income.

We should also have a better understanding of what is happening to the structure of agriculture generally throughout this country and perhaps a better justification for asking that other laws be changed to help prevent U.S. agriculture from becoming something that would not be in the best interests of either the farmers or the consumers.

The amendment I offer would require the U.S. Department of Agriculture to compile this information and make it available to the Congress in annual reports. In order to avoid making anyone a public target, the reports would not identify specific persons or entities but would be summaries of the detailed information collected by the Department. In closing, I would remind the chairman of the committee, the gentleman from Washington (Mr. FOLEY) as well as other people who heard his point of view expressed yesterday, that on three occasions he suggested that we did need a study in this area.

Mr. SEBELIUS. Mr. Chairman, will the gentleman yield?

Mr. GRASSLEY. I yield to the gentleman from Kansas.

Mr. SEBELIUS. I thank the gentleman for yielding.

On the subject of having any reservations, looking at this 3-page document, I would say to the gentleman that as a farmer he should have written more of it and not had some lawyer put so many requirements in it because they would scare anyone off. I think the information the gentleman is seeking is good. As far as the recipients of payments, they can surely take a little time to provide who is going to receive the money. I commend the gentleman for his amendment. If we go to conference on this, we can certainly simplify it a little bit.

Mr. GRASSLEY. Let me add that it is not as complicated as it looks, and some of this information is already being required.

Mr. SEBELIUS. If the gentleman will yield further, there is no question about that. We do need it if we are going to intelligently respond to such as the Nolan amendment that was before us yesterday and defeat it.

Mr. JOHN L. BURTON. Mr. Chairman, will the gentleman yield?

Mr. GRASSLEY. I yield to the gentleman from California.

Mr. JOHN L. BURTON. I thank the gentleman for yielding.

I just wondered if there is anything in this amendment that would prevent any Federal employee from receiving any of these Federal agricultural subsidies.

Mr. GRASSLEY. There is nothing in this amendment that would prevent anybody from receiving any subsidies.

Mr. JOHN L. BURTON. A Member of Congress would be able to receive agriculture subsidies?

Mr. GRASSLEY. This amendment has nothing to do with qualifications for or denying benefits to anybody under any law in this country. It requires the giving of some information at the time of qualifying for payments. That is all. It is an information gathering amendment.

Mr. DERWINSKI. Mr. Chairman, will the gentleman yield?

Mr. GRASSLEY. I yield to the gentleman from Illinois.

Mr. DERWINSKI. Mr. Chairman, I commend the gentleman from Iowa for giving the gentleman from California some long overdue education on farm issues.

Mr. JOHN L. BURTON. I was worried about congressional pay raises.

Mr. FOLEY. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I rise in opposition to this amendment.

I want to say first to my friend, the gentleman from Iowa (Mr. GRASSLEY), that I did not object to his request, to consider the amendment as read, out of any discourtesy to him, and I feel very close to him as a member of our committee. Frankly I wanted to demonstrate that it took 5 minutes and three pages of text merely to describe—merely to describe—the kinds of information that every farmer would have to give when he becomes eligible for any payments under this program.

Many of us talk about how much pa-

perwork the Federal Government is involved in. We have a Commission designed to reduce the level of Federal paperwork. And every business and small business that I know complains about the forms that have to be filled out to get the simplest decision out of the Federal Government.

Now what the gentleman from Iowa would have us do is require every single farmer or rancher who participates in any of these programs to fill out a whole series of information about his personal family, with whom he might be in a family trust, about who the stockholders are in any corporation of which he is part, and what their business is. It goes on and on. We could not design a form with less than 50 pages, in my judgment, to even touch the questions that have to be answered by the amendment offered by the gentleman from Iowa.

I am in favor, and I said it yesterday, of a study to determine the impact on some of our programs from participation by corporations. But this amendment is not a study. This is a census of the most involved kind which I am sure would cause many people to go to family lawyers for help in answering the questions.

I think to impose on every American farmer or rancher who participates in Government programs this kind of multipage questionnaire for personal information for insertion into computers is unreasonable. The gentleman said the Government would sanitize the information and eliminate the names in the summary, but the Secretary of Agriculture will be accumulating all of this personal data in his files and computers under this gentleman's amendment. I think some of us on both sides of the aisle and each side of the political spectrum, whether conservative or liberal, have raised some questions about how many Government computers ought to be delving into personal information about American citizens. This amendment if carried out will require everyone as a condition of payment to give the Secretary of Agriculture, who does not want to have it in the first place, the kind of detailed personal family financial information that only the IRS gets in the collection of taxes.

I would be amazed and surprised if Members, whether they consider themselves conservatives or liberals, would want to give that kind of power, indeed mandate it, to an agency of the Federal Government.

This is at least the kind of harassment that will be forced on the farmers when they go into the county ASCS offices to get the loan payments and they will have this requirement put on them by mandate of the Congress.

We can get this information by samples. We do not have to ask every American to give this kind of basic information as a condition of receiving any payment.

I am in favor of doing studies, but this is not a study. Every single recipient must provide this as a condition of receiving payments. We do not do that in any other Government program of which I know. We do not demand that kind of personal information for a small business loan. We do not require it for any other Government programs. This amendment would require it only of the farmers and ranchers of America.

I am amazed that anyone coming from a rural area would want to single out farmers and ranchers for this kind of information.

Mr. THONE. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Nebraska.

Mr. THONE. Mr. Chairman, I would like to associate myself with the remarks of the chairman. Of all the people to be asking another Federal report from, the rural people are certainly the ones who object the most strenuously. The farm census is a good case in point.

Mr. Chairman, I would strongly oppose this amendment.

The CHAIRMAN. The time of the gentleman from Washington has expired.

(By unanimous consent, Mr. FOLEY was allowed to proceed for an additional 2 minutes.)

Mr. GLICKMAN. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Kansas.

Mr. GLICKMAN. Mr. Chairman, I tend to agree with you, but I would like to remind the chairman that on the vote yesterday on the Nolan amendment there was great resounding feeling by this body against corporate ownership of land. I do, however, sense some agreement about this horrendous paperwork obligation. How specifically can we get this information, by committee hearings in our committee on the subject? Is there a workable, positive way to get the kind of information we need to make these judgments?

I might personally feel we ought to vote against this amendment because of the immense paperwork; but I would like to get the information somehow, because I think it is serious. I commend the gentleman from Iowa for at least bringing up the issue.

Mr. FOLEY. Well, to respond to the gentleman, I think there is a critical difference again between the method of getting it. I think there are ways of getting the information by samples, by voluntary cooperation. There is a lot of information the Government would like to have. There are a lot of agencies that will tell us they can do a lot of good if they know every single relevant fact about every American, because we would know, for example, how many very serious problems exist in every family. That touches on social-politicism. I do not want to get into that in this amendment. I think we can do it by hearings, by other ways, but not by census.

Mr. GLICKMAN. Mr. Chairman, if the gentleman will yield further, I would ask the gentleman if in the future the gentleman would hold such hearings?

Mr. NOLAN. Mr. Chairman, I want to ask the gentleman from Iowa (Mr. GRASSLEY) a couple questions. I would like to ask the gentleman from Iowa (Mr. GRASSLEY), if this reporting legislation is similar to some of the reporting legislation that has been adopted by a number of States throughout the country in an effort to get the information they need to know to pass the strong anticorporate farm legislation?

Mr. GRASSLEY. Yes; it has been done in some States.

Mr. NOLAN. Mr. Chairman, I thank the gentleman for that information. That is also my understanding. There are a good half dozen States around the country that have good strong anticorporate farm legislation, simply because they support the family farm system. Because they believe in the important economic, social and ecological values that go with the family farm system we need this reporting amendment to answer the questions asked by the distinguished chairman of the committee and other questions raised in committee and the floor of this House.

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. NOLAN. I yield to the gentleman from Iowa.

Mr. GRASSLEY. In answer to one of the comments made by the chairman, Mr. FOLEY, 98 percent of the people would get by with answering just the first question.

Second, I would say that there are several people in this House, I am sure, whether farmers or not, who have gone in under old programs to sign up to qualify for certain payments, and they are asked questions each time they go in, depending upon what information the Department wants in a certain year.

Third, much of this information is already asked for by the Department, required by Congress under the limitations of payments provision and the rules and regulations adopted thereto. A lot of the language in this amendment is existing language that is already in the departmental rules and regulations, so there is not a lot of new jargon we are throwing out here for consideration by the Department.

Mr. NOLAN. I think the gentleman is quite correct. Quite frankly, I am a little bit surprised that some of the people in the committee and here on the House floor who have consistently raised questions about peculiar corporate arrangements and ask what impact an anticorporate farm bill would have on them, now rise in opposition to the very vehicle we need to find out that information.

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. NOLAN. I yield to the gentleman from Iowa.

Mr. HARKIN. I am just wondering that perhaps an easier and better way to get this kind of information might be to have all the corporations in the United States file these kinds of reports on how much agricultural land they have.

Mr. NOLAN. If the gentleman is prepared to offer such an amendment, I am prepared to support it, but we have to have some kind of amendment to get this knowledge and information we need. Practically everyone on the floor yesterday said that they were in tune with the spirit and purpose of my amendment to prohibit farm payments to nonfarm corporations. Most who said they supported the concept but opposed the amendment because of uncertainties about some of the implications of it.

Mr. GRASSLEY gives us a way to find out about those uncertainties, and some of the same people now rise in opposition. I am quite surprised.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. NOLAN. I yield.

Mr. FOLEY. I think that in fairness the gentleman would not suggest that everybody who spoke against the Nolan amendment was only opposing it because of uncertainty. There were arguments that because there would be reduced set-aside compliances it would defeat the purposes of the program with respect to overall production controls. There were several other reasons as well.

Mr. JOHNSON of Colorado. Mr. Chairman, I move to strike the last word. I rise to speak against the amendment.

I would like to point out to the Members of the House that every time a farmer dies, and he has his land thrown into an estate or a trust, the estate people who are working on it have to go through this form. It is going to require an additional amount of cost in the probating of an estate or the handling of a trust, affecting small farm estates.

If we look at the kind of information required, such as name and address, type, purpose, the trust goes on and on and on. A corporation has to provide the number of stockholders, the citizenship and permanent residence of each shareholder. Think of the detailed information we are requiring corporations to provide to the Department of Agriculture.

And, what will we possibly do with it? What possible interest is it? It is going to be buried away and we are not going to pay any attention to it. We will accumulate miles of paperwork. This will cost a lot of money to prepare and we are going to ignore it after it is collected.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield.

Mr. FOLEY. As I read the amendment, it requires the Secretary to obtain from each recipient of payments under sections 101(g), and so forth, with respect to the 1978 to 1981 crop years. That means that every year from 1978 to 1981, all the farmers in the country participating in the program are going to have to go through this same form on every little crop on which they receive a payment.

Mr. JOHNSON of Colorado. Every little trust department and every little bank will be spending time on it.

Mr. FOLEY. The suggestion is that there is no way to find out how much corporate farming there is in the country unless we do this. There are many ways of trying to get a judgment on that question. One of the most simple would be for us to make some requirement on corporations, but we are requiring every recipient, whether a corporation or an individual, to go through this long list of questions.

I have visions of what the form is going to look like once the department is involved. I do not say this with any disrespect, but once the department lawyers draft a form and the regulations are in place, I think it will horrify Members who vote for this amendment to see what they are imposing on citizens.

Mr. JOHNSON of Colorado. I agree with the chairman.

Mr. SEBELIUS. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentlen an from Kansas.

Mr. SEBELIUS. Mr. Chairman, I want to comment on the subject of estates and heirs. As we know, when the gentleman comes in to collect the check and the estate owns it, you can name who the heirs are. We all know it. We are country lawyers. The language in here was drawn up by city lawyers, not by country lawyers. I admit that. If we find out a few facts, from the recipient when he comes to get the check I think that can be done. I hate paperwork as much as the gentleman does, but I do not think it is that rough.

Mr. HUCKABY. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentleman from Louisiana.

Mr. HUCKABY. Mr. Chairman, I just want to say that big brother is getting bigger every year. If you are for big brother, vote for this; if you are against big brother, vote against it.

Mr. PANETTA. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I do not think there is any disagreement with regard to the need for additional information in this area. We really do not know how much nonfarm corporate investment has gone on in this country. It is essential to try to develop information in that area if we are going to develop the protection for family farmers. So I think there should not be any disagreement to the thrust of getting more information. But there is a legitimate concern as to how we get that information and how it is used. Having worked in the Department of Health, Education, and Welfare. I can tell the Members that forms were developed which were stuck in boxes in rooms and never used, or information was gathered which was totally unrelated to the problems we were dealing with.

Hopefully, this year we will have a series of eight hearings in the Subcommittee on Family Farms and Rural Development, and we intend to look at this problem and, hopefully, one of the conclusions we will make is what kind of information we need, how to assemble it and what use the Department makes of it.

For those reasons, I oppose the amendment. But I certainly am not against the eventual attainment of relevant information which will help our family farmers.

Mr. GLICKMAN. Mr. Chairman, will the gentleman yield?

Mr. PANETTA. I yield to the gentleman from Kansas (Mr. GLICKMAN).

Mr. GLICKMAN. I thank the gentleman for yielding.

Mr. Chairman, I would like to echo the remarks of the gentleman. I think if this amendment passes that there will be a revolution among farmers. The argument has been made before that since Food Stamp recipients also have to comply with these horrendous kinds of forms, that this is another reason why we should place this burden on farmers. Ridiculous. The American people will not stand for more paperwork. There also has been mention made that we can clean this up in conference. We should not vote on legislation which must be cleared up in conference. It should be cleared up here on the floor of the House. I agree that we should conduct full and detailed hearings on this subject this year.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. GRASSLEY).

The amendment was rejected.

AMENDMENT OFFERED BY MR. HARKIN

Mr. HARKIN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HARKIN: Page 2, line 4, insert "(a)" after "Sec. 101."

Page 2, after line 13, insert the following new subsection:

(b) Section 101 of such Act is amended—

(1) by redesignating paragraphs (3) and (4) as paragraphs (4) and (5), respectively;

(2) by inserting "or loans" after "payments" each place such term appears in paragraph (4), as redesignated in paragraph (1) of this subsection;

(3) by striking out "earned" each place such term appears in paragraph (4), as redesignated in (1) of this subsection and inserting in lieu thereof "obtained";

(4) by striking out "payment reduction" in paragraph (4), as redesignated in paragraph (1) of this subsection, and inserting in lieu thereof "payment or loan reduction";

(5) by inserting "and loans" after "payments" in paragraph (5), as redesignated in paragraph (1) of this subsection; and

(6) by inserting after paragraph (2) the following new paragraph:

"(3) The total amount of loans which a person obtains under one or more of the annual programs established under the Agricultural Act of 1949 with respect to the 1978 through 1981 crops of wheat, peanuts, feed grains, soybeans, rice, and cotton, respectively, shall not exceed $100,000 with respect to each of the 1978 through 1981 crops of such commodities.

Mr. HARKIN. Mr. Chairman, what this amendment does is this: It addresses itself to a limit on the amount of loans any producer can get in any year on one or more crops that he may raise.

I know that this body yesterday turned down the Findley amendment that provided payment limitations of $20,000. However, we do have a payment limitation provided in the House bill, and we have one a little higher than that that was put in the Senate bill. So the principle is established. We have the principle of setting some type of limit on the amount of money the Government puts out to producers. My amendment covers only loans.

Let me make it very clear at the beginning that this amendment says that a producer can receive a maximum of $100,000 per year on one or more crops. That does not mean that he can only receive a maximum of $100,000.

In other words, if a farmer produced a crop of grain and put it in storage after the first year, he could get $100,000 on that. If he resealed it the next year and he grew another crop the next year, he could get $100,000 the next year. This provides for just an annual limitation on any one or more crops.

I believe this amendment will have the following effects: No. 1, I believe it will aid small farmers indirectly because the large producers can only get $100,000 in annual loans. Right now large producers can borrow millions of dollars a year from the Government—and I wish the Members would listen to this—at 6 percent interest and turn around and use that money for whatever purpose they wish.

If anybody wants to give me $1 million a year at 6 percent, I will take it any time they want to offer it to me.

Another thing this amendment will do will be to limit these large producers, again in the amount of loans they can get, so we can use the Government's money that we have for loans to go more to benefit the smaller and medium-sized farmers. In other words, the large producer will either have to dip into his own reserves to grow his grain or he will have to go out to the private banks.

That could afford another benefit. We are going to spur some economic activity among our local banks, our small banks out in the countryside. So I believe this will give a boost to private-sector lending.

Mr. Chairman, the second effect this will have is that the Government is going to save money. How is the Government going to save money? Because there will not be as many loans going out as there would be under the present bill, so we will reduce our loan outlays. That in itself will not save the Government money because those loans are repaid. But then, under this bill and perhaps later under the grain reserve amendment, if that is carried, after the first year a producer can reseal that grain, and at that time the Government will begin to pay the producer storage rates of 1 cent per bushel of grain per month and waive the interest charges.

In other words, a large producer can get $1 million 1 year, he pays 6 percent on the money that year, and at the end of that first year he reseals the grain and he pays no further interest rate on it. He has free money from the Government for the next year, and he gets that for 1 year beyond that under the present situation in the bill.

Is this loan limit too low? I do not believe so. I will give the Members an idea of the number of acres that would be covered for each of the commodities.

For wheat, at a loan rate of $2.35 an acre, at 28 bushels an acre, this $100,000 loan will cover all the wheat that can be grown on 1,509 acres. That is a much larger average wheat acreage than the normal wheat farmer in America has.

On corn, it is 566 acres; on soybeans, 896 acres; on peanuts, 191 acres; on rice, 342 acres; and on cotton, 439 acres.

Remembering that this is for just one year, let me point out that in the second year he can get another $100,000 loan on that same amount of acreage.

So I think that the $100,000 loan is well within the ballpark if we are to keep this geared again really toward the large producers.

Two arguments are going to be raised against this amendment. No. 1, some are going to say that this amendment will discourage compliance by large producers with the set-aside program, if we have a set-aside. I do not believe that argument washes, because if the market price is so low that we have to move to a set-aside, the large producers will probably not go to all-out production. They have enough money and wherewithal that they can go into something else; they can plant another crop or not plant at all. They are very much unlike the small producers who have to plant every year.

The second argument that may be used is that this will destroy the Commodity Credit Corporation and force market prices below loan rates.

Again, I do not think this argument will wash because, No. 1, this will affect only a small part of the total production in the United States. That is the first reason.

The second reason is that the large producers will not be forced to dump their grain all at the same time. They are, No. 1, going to have the amount of money in their own reserves to store it and market it later on or, No. 2, they can go to the local lender for money.

The CHAIRMAN. The time of the gentleman from Iowa (Mr. HARKIN) has expired.

(By unanimous consent, Mr. HARKIN was allowed to proceed for 1 additional minute.)

Mr. HARKIN. As I was saying, Mr. Chairman, they could either dip into their own reserves and pay for their own storage, or they could go to their local bank and borrow the money at going interest rates and use that money to store their grain. They are not going to be forced to dump it all at one time to drive the market price below the local rates.

Therefore, Mr. Chairman, I think if we are going to have some meaningful amendments in this farm bill to limit the amount of money that goes to the really big operators, this is the one place at which we can really have an effect.

I urge the adoption of the amendment.

Mr. HAGEDORN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in strong support of the amendment of the gentleman from Iowa (Mr. HARKIN). As with target price payments, I believe that a reasonable ceiling is appropriate on the commodity loan program. H.R. 7171 does not establish such a ceiling, in my opinion. The ceiling set by this amendment, $100,000, is sufficient to cover the production of a family farm while placing limitations upon the ability of the largest farms to avail themselves of Federal loan payments.

In my own district, one in which acreage yields are substantially above national averages, a farmer would still be able to produce in a crop year 476 acres of corn, 888 acres of wheat, or 714 acres of soybeans before the $100,000 ceiling would be approached—assuming that the loan level is the floor price on the commodity. Based upon national acreage yields, a farmer would be entitled to produce at least 588 acres of corn, 1,430 acres of wheat, and 416 acres of cotton before losing further eligibility for payments.

Mr. Chairman, a $100,000 limitation, I think, is a fair figure in a program to help the needy and not the greedy.

I would urge the House to adopt this limitation and to try to do something that would set an economic and social policy for rural America which would give the younger people and the family farm operators a chance.

If these bigger operators continue to grow and continue to take over the whole countryside, the Government does not have the responsibility of assisting them in the cost of production or even of guaranteeing them the world market price.

Mr. Chairman, a $100,000 limitation, in my opinion, sets a reasonable balance between the legitimate needs of the large and small farmer, as well as those of the taxpayer. I urge that the House accept this figure and provide some reins on this program.

Mr. FOLEY. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I think of all of the amendments that could do serious damage to an orderly agriculture program, the gentleman from Iowa (Mr. HARKIN) has the distinction of offering one of the most effective disturbers of the peace in terms of an effective agricultural program that has so far been offered.

Mr. Chairman, this is not just an amendment to limit loans to $100,000. It is an amendment that effectively destroys the coordination of a variety of important programs in agriculture. It would weaken the set-aside program authority that the Secretary of Agriculture has, which may be announced this year for wheat and possibly even for feed grains. The set-aside regulations authorize that when any kind of limitations are imposed, the producer has a lesser requirement under the set-aside than he did before and because the eligibility for loans and payments will be the chief means by which the set-aside is effected.

Second, any price-support programs are dependent upon loans and purchases, and limitations on loans weaken the effectiveness of the price-support system.

Finally, Mr. Chairman, it seems to me, surprisingly, that some of my colleagues think that small farmers are helped, on the theory that big farmers are harmed. There is not going to be a dollar more available to the small farmer if we cut off the opportunity not for large farmers, but for moderate-size farmers to utilize the loan program to help in financing their production of crops.

It does not take a very big farm in the commercial sense these days to obtain and need a $100,000 loan. There are some people who are living a little bit in the past with respect to that.

I think that this amendment would be extremely damaging from that standpoint.

Also with respect to the reseal program, where we have a kind of reserve in the bill as well as a more orderly marketing situation, the farmer would be hampered by the $100,000 limit from participating in the reseal.

I also cannot quite understand how one who is a small businessman can be-

come eligible for a $500,000 loan from the Small Business Administration, but a small farmer is cut off at $100,000.

I do not understand how we can have virtually an unlimited loan for a small businessman, when it is a disaster loan or a regular loan, where it can go to half a million dollars before you are a big businessman, but you are automatically a big farmer if the amount of the loan is over $100,000. I think that is discrimination against the American farmers, and they are businessmen fully as much as the small businessmen are. I cannot quite understand the logic that sets up a standard that gives a small businessman five times the amount of a loan as a farmer. I think it is an insult to the farmers when we deny them equal treatment.

I would hope this amendment would be categorically and absolutely defeated.

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Chairman, I might state to the gentleman from Washington (Mr. FOLEY) that recently the Small Business Administration regulation has been changed and the farmer just as the small businessman is now eligible for those SBA loans.

I just wanted to clear that up that they are eligible for those SBA loans.

Mr. FOLEY. If that is true, then why should we not suggest that our small farmers in this country go to the SBA with the additional price of an SBA loan, those who want to, in addition to their agricultural loans that they normally would get, their $100,000?

Mr. HARKIN. Because they cannot get an SBA loan for storing crops like from the Commodity Credit Corporation.

Mr. FOLEY. Mr. Chairman, the other gentleman suggested in his colloquy that maybe it would be nice for some of these farmers to go to their commercial banks and get a loan, and maybe this would stir up a little activity in the local banks.

I have had discussions with the commercial banks in small towns and they tell me that there is a credit crunch in the farming country, and that we will have banks collapsing because they do not have any money to loan. The only way they can loan money is by setting up a government loan program in order to do it, and this would put more pressure on the fragile situation in the rural areas than what we are trying to resolve by this bill.

Mr. MOORE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to echo the statements expressed by the chairman of the full committee, the gentleman from Washington (Mr. FOLEY). The gentleman from Iowa in his argument presented from the well of the House showed a decreasing amount of acreage that would be covered by the $100,000 limit as he talked about different commodities. When he got down to rice there was less acreage covered there than was in his first example of wheat.

There is a reason for that because there is a different cost factor involved in producing different crops. For instance, wheat costs $139 an acre to produce, soybeans $164, corn $221, and rice $387 an acre to produce.

That is what is wrong with these CAP figures of $100,000 because it is ignoring the fact of what it costs to produce a crop. We are simply saying that those who will have over $100,000 in debt to the Federal Government are not eligible to continue business. But the average rice farmer in Louisiana does not have 377 acres, it is more like 1,000 acres. That is what it takes to make a living. They are family farmers, not corporate farmers. And what you are telling them is that if you have a 1,000-acre farm and it costs $325 an acre to put in the crop, that all the Federal Government will allow you to borrow is the $100,000 limit of the $325,000 needed and then if small rural banks could not loan you the rest of the money, which they probably could not, then you just plant less or go out of business.

So one plants the 387 acres, in rice, or whatever it is the gentleman from Iowa figures that his amendment would allow, and one cannot make money growing rice being small, so one just does not grow rice. We have in fact discriminated against that crop and put it out of business.

Another example is I have dairy farmers in my district. An operational loan for 1 year on a 400-acre farm is $100,000. We are going to put them out of business if they cannot get money from another source. These are small family operated dairy farms with the kids doing the milking—no hired hands.

These caps are totally unrealistic when one considers the reality of what it costs to farm. This is not the way to go about it. If the gentleman is disturbed that we have got millionaire farmers or corporate farmers getting money from the Federal Government, let us have hearings and look into it. Let us not adopt an amendment on the floor to hurt family farmers and discriminate against certain crops.

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Iowa.

Mr. HARKIN. I thank the gentleman for yielding.

The reason the figures come out this way is because the amount of money that it takes to have an economic unit of that size differs with different crops. I understand the average rice farm in the southern part of the United States is less than 342 acres. The gentleman from Louisiana can correct me if I am wrong. I am sure there are rice farmers larger than that, just as I said corn would be 566 acres. Certainly I have farmers in my district that have more than 566 acres of corn, but the average corn farm in my district is way below that, just as I think the average rice farm in the gentleman's district would be way below 342 acres.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Washington.

Mr. FOLEY. I thank the gentleman for yielding.

Mr. Chairman, I hate to see divisions in agriculture based upon different crops, but the fact of the matter is that this amendment would have a severe impact on many commodities such as wheat, rice, and others. It has less impact on the corn area because they do not often market corn as a grain; they market it as livestock. They feed it to livestock and market it as livestock. So for many corn farmers in the Midwest who market it as livestock, the need for these loans is reduced.

I think the gentleman from Louisiana stated very well what the problem is. The family farm is no longer an institution that can be described in terms of 100 acres or 200 acres. When we talk about family farms, we mean farms operated by a single farm family, and many of those have gotten to a size where a $100,000 loan actually is normal. These are not enormously large and rich farms as sometimes they have been described on the floor. So I hope the Members will reject this amendment.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. FOLEY, and by unanimous consent, Mr. MOORE was allowed to proceed for 1 additional minute.)

Mr. FOLEY. If the gentleman will yield further, it seems to me it proceeds again from the unusual theory that somehow taking a whack at what is supposed to be the big guys is going to help the small farmers. Exactly the opposite occurs, because to the degree that we put additional pressure on credit, to the degree that we deny compliance with various set-aside programs and reseal programs to our larger producers, we make the program less effective for the smaller producer.

Mr. BOWEN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in opposition to the Harkin "boom and bust" amendment. Certainly that is precisely what it is, because it certainly will throw massive quantities of crop on the market at the harvesttime of the year, exactly when it should not be thrust into the marketplace, when it should be placed in warehouses and bins for sale at a later time in order to moderate a boom-or-bust cycle, which we are addressing in this legislation.

The fact of the matter is that in certain key crops, for example, in the case of rice, in the case of cotton, about one-half of the national production of these crops will be outside of the area of loan coverage. These massive amounts of production would be ineligible for the CCC loan and therefore would have to be dumped on the marketplace at the time of harvest. This is certainly not in the interest of the small growers. If we throw the product on the market at harvesttime, when the price is under pressure already, we are going to push the price down. We are going to depress it for the small grower as well as for the large. We are going to create a far greater likelihood of deficiency payments. We are going to cost the Government a great deal more in deficiency payments if we put this kind of artificial ceiling on the loan.

The loan after all is a marketing tool and involves repayment by the farmer. He is paying the Government back for this. The crop is being sold and the cost of the loan is covered. This amendment would result in a situation in which possibly some of the biggest of the growers can obtain the credit they need through private banking sources but the middle-sized grower is the man who is caught in the squeeze. Just as the distinguished chairman of the committee has pointed out, we have a national farm credit crunch; private credit facilities are not available to vast numbers of our farmers. The only way they can finance their crop and hold it off the market until they get a better price for it is to use the Commodity Credit Corporation loan. It is there to facilitate orderly marketing, moderate market fluctuations, and minimize the cost of the farm program to the taxpayers of this country.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. BOWEN. I will be happy to yield to the distinguished gentleman from Texas, the vice chairman of the committee.

Mr. POAGE. Mr. Chairman, I wonder if the gentleman would agree that the loan is not the tool we use to guarantee farmer income. The loan is the tool we use to protect the Government from unnecessary losses. The target price assures the farmer of his return. The loan in every instance is below the target price but it is there to keep the market from going too low because the Government has to take the loss below that figure.

Mr. BOWEN. The gentleman is quite right.

Mr. POAGE. And is it not true that to the extent we keep agriculture crops out of the loan that we force that production on to the market and drive the price down. If a large producer cannot get a loan on the crops of more than $100,000 will that not force commodities onto the market and depress the market to the extent that that commodity comes on the market, whether it is cotton or corn or wheat?

Mr. BOWEN. The gentleman from Texas is quite correct. It is a depressant on the market.

For some who might have for some reason voted to limit deficiency payments yesterday, this amendment has nothing to do with saving the Government money. This is a loan mechanism for orderly marketing. If we put an artificial ceiling on of this kind it will cost the Government more because it will depress the price and we will have more deficiency payments to make, and certainly the price drop will hurt the small grower more than anybody else.

It is certainly an unreasonable amendment and I urge all the Members to vote against it.

Mr. NOLAN. Mr. Chairman, will the gentleman yield?

Mr. BOWEN. I yield to the gentleman from Minnesota (Mr. NOLAN).

Mr. NOLAN. Mr. Chairman, we learned in our studies that a lot of the big oil companies and banks and investment corporations were moving into agriculture and usually what they do is write their losses off against their other income and they gain appreciably from the increase in the value of the farmlands that is taking place. They are getting a million dollar loan under this guarantee loan program at subsidized rates like a small farmer could.

Mr. BOWEN. The program is designed so that anybody who qualifies to borrow money is eligible to do so. We are in trouble when we start setting ceilings and cutoff points and say we will penalize farmers of this size and act against farmers of that size. The issue is not to look after the well being of a particular farmer or group of farmers but after the well being of the economy, and if we attempt to favor the small farmers and sock it to the large ones, we penalize the whole economy in my opinion. This attempt to punish and penalize larger farmers does not help small and middle-sized farmers, just the opposite. It hurts them, it hurts the taxpayers, and it hurts the consumers of this entire Nation.

Mr. NOLAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to point out that a company could come in and get a million dollar loan and while they are writing whatever losses they may have off on other profitable areas of operation they may have, they are gaining from the acceleration and appreciation that is taking place in the land values.

I think this amendment provides us one more way—I know we have been defeated on a number of efforts—but this amendment provides us one more way of taking away the benefits and incentives that large wealthy corporate enterprises in this country have for getting into farming and agriculture. It is the small farmer who needs the price protection. These disastrously low prices are catastrophic for them. It forces them out of business. And every time someone is forced out of business there is another wealthy entrepreneur or big corporation that is just waiting at the door and ready to snap up and buy the land and maybe move in and get some subsidized low-interest loans from the Federal Government.

They are making money, but by farming the land, they are milking our price support programs. They are milking our tax structure and they are milking the American people. We have an opportunity to take just one more of those benefits we have away from them.

Mr. Chairman, I hope that the amendment is passed and adopted by this committee.

Mr. KREBS. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to the amendment.

Mr. Chairman, my good friend from Minnesota (Mr. NOLAN) in his articulate remarks just a few minutes ago made a pitch against large corporate farming. I joined my friend from Minnesota (Mr. NOLAN) yesterday afternoon when we voted on the gentleman's amendment. I share his concern with reference to the large corporate farming and I have tried to support the concept of the family farm. There is nothing in this amendment that I can see, and maybe my friend, the gentleman from Minnesota, could point out, where this amendment is limited to corporate farming. It is not. It starts out with the idea or concept that a $100,000 loan in today's agricultural economy involves large corporate farming and nothing else. This is not true. It may be true in some parts of the country, but it is not true in many other parts of the country.

Mr. Chairman, I would appreciate if the gentleman from Minnesota could point out where in the amendment this restriction proposed is limited to corporate farming.

Mr. HAGEDORN. Mr. Chairman, will the gentleman yield?

Mr. KREBS. I yield to the gentleman from Minnesota.

Mr. HAGEDORN. Mr. Chairman, could the gentleman describe the impact that a corporation that farms 10,000 acres has in a small community, in comparison to a partnership of two brothers that farm the same amount of land? The result is many young farmers will not have an opportunity to farm.

I think the impact is the same. Would the gentleman agree?

Mr. KREBS. First of all, I want to make clear that I share the gentleman's concern, as I pointed out earlier, about the need to let young people get into agriculture and about keeping large corporate entities out since such entities really have no concern for the future of agriculture in this country; but what I feel the amendment really does is throw the baby out with the bath, and for that reason I am opposed to it.

Mr. HAGEDORN. Mr. Chairman, if the gentleman will yield further, it seems to me when we bankroll these large operations, it does not make any difference whether they are a corporation or an individual, they are forcing young people off the farms by bidding up the rent because they have a Government guarantee on the loan level which approaches the cost-of-production level, consequently we encourage this whole thing.

There have been many farms bought in my part of the country simply due to Government support programs where farmers have stored grain for years and collected the storage payment.

Mr. KREBS. Mr. Chairman, I agree with the thrust of the gentleman's remarks, with one basic exception the chairman articulated; namely, that a $100,000 loan today in today's agricultural economy in many parts of the country no longer represents the large farming operations, forgetting about corporations, that I think my friend from Minnesota has in mind.

Mr. HAGEDORN. Mr. Chairman, if the gentleman will yield further, does the gentleman from California have a figure in mind that the gentleman thinks would be appropriate to protect the family farmers?

Mr. KREBS. I am sure we could develop this in hearings.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. KREBS. I yield to the gentleman from Washington.

Mr. FOLEY. Mr. Chairman, the

assumption that there is a way to help the small farmers by putting a limit on loans is, in my judgment, basically wrong. The reason I am opposed to this amendment is that it hurts the small farme rbecause it hurts the ability of programs to function and denies not only the moderate size farmer in many States from operating, but also makes it impossible to carry on the operation of the set-aside, the reseal programs and others that we are trying to develop. To associate the $100,000 farmer with the program does not help the small farmer. It hurts him. I think this amendment would damage the small farmer. That is not the intention of the sponsor of the amendment, but that is what is happening.

Mr. WATKINS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to state that farming is big business today. The family farm is a big business.

I agree with the Chairman here that if we want to damage the farmer today, we put a $100,000 limit on him. Then, we have nearly driven him completely out of business.

I know the farmers in the State of Oklahoma, instead of trying to have just a limit on the loan, they are trying to search adequate loans in order to do business, just to stay in business. I truly believe that if we place a $100,000 loan limit on the farmer, a lot of them would be out of business tomorrow. So, I rise in opposition to this amendment because I truly think that if we want to harm the family farmer today, we tie his hands at a time, Mr. Chairman, when they are hurting worse economically than ever before since the 1930's.

I think we should be looking at a method of trying to ease the means of making loans so that they can stay in business.

Mr. POAGE. Mr. Chairman, I move to strike the last six words.

Mr. Chairman, again I want to call attention to the philosophy behind this bill. These loans are not the device by which we maintain farmer income. The target price is the device that maintains farmer income. If the target price on cotton is, say, 55 cents, it does not make much difference to the farmer what the loan price is, because he gets the difference between the market and his 55 cents. The loan can go down to 5 cents and the farmer's income is not changed.

The loan is there to protect the U.S. Treasury. The loan is there to keep these programs from becoming too expensive to the United States. The loan is there to attempt to hold up—it is not a perfect device—but to attempt to hold up the market price. It takes off of the market a surplus that otherwise would break the market and cause the market price to go down.

When the market price goes down, the cost to the Government to pay the target price becomes greater. So, all this proposed amendment does is to add to the cost of the U.S. Government, and it does not add a dime to any farmer's income.

Now, I do not question but what those who have supported this do so in good faith, but I do suggest that if they are acting in good faith, they have not studied the philosophy on which the farm program is based. The farm program works by guaranteeing an income to the farmer in the form of a target price.

Now, it does not make any immediate difference to the small farmer what that loan is, but if we take away from some of the large producers the opportunity to put that crop in the loan, there is not but one place their crop can go. It has to go on the market. It cannot go on the market without breaking the market. When the largest producers in the United States put their products on the market, they are going to break the market.

That is going to cost the U.S. Government hundreds of millions of dollars, and we are not going to add a thing in the world to the income of our farmers.

Mr. WATKINS. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Oklahoma.

Mr. WATKINS. I thank the gentleman for yielding.

Mr. Chairman, the private market is more nervous today than ever before because of the problems we are having in the agricultural industry today and the problems the farmers are having.

Mr. POAGE. Mr. Chairman, certainly I think if we look at the market—I do not keep up with the daily market—but every day this debate goes on, we will find the market for cotton, wheat, and corn going down because of what this Congress is doing. Such amendments as the one we have before us right now are already costing the American farmers a decline in the American market, and if this amendment is adopted—and I am sure it will not be—it would cost the U.S. Government hundreds of millions of dollars to make up that difference.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. HARKIN).

The amendment was rejected.

The CHAIRMAN. Are there further amendments to title I? If not, the Clerk will read title II.

The Clerk read as follows:

TITLE II—DAIRY AND BEEKEEPER PROGRAMS

DAIRY BASE PLANS

SEC. 201. Section 201(e) of the Agricultural Act of 1970, as amended, is amended to read as follows:

"(e) The provisions of this section shall not be effective after December 31, 1981, except with respect to orders providing for class I base plans issued prior to such date, but in no event shall any order so issued extend or be effective beyond December 31, 1984.".

TRANSFER OF DAIRY PRODUCTS TO THE MILITARY AND VETERANS HOSPITALS

SEC. 202. Section 20 of the Agricultural Act of 1959, as amended, is amended by striking out "1977" in subsections (a) and (b) and inserting in lieu thereof "1981".

DAIRY INDEMNITY PROGRAM

SEC. 203. The Act of August 13, 1968 (Public Law 90-484; 83 Stat. 750), as amended, is amended as follows:

(a) Section 1 is amended by adding after the first sentence the following: "The Secretary is also authorized to make indemnity payments for milk, or cows producing such milk, at a fair market value to dairy farmers who have been directed since the date of enactment of the Agricultural Act of 1977 to remove their milk from commercial markets because of the presence of products of nuclear radiation or fallout if such contamination was due to no fault of the farmer.

(b) Section 3 is amended by striking out "June 30, 1977" and inserting in lieu thereof "September 30, 1981".

DAIRY PRICE SUPPORT

SEC. 204. Section 201 of the Agricultural Act of 1949, as amended, is further amended as follows:

(a) Subsection (c) is amended by striking out the second sentence and inserting in lieu thereof the following: "Notwithstanding the foregoing, effective for the period beginning with the date of enactment of the Agricultural Act of 1977, and ending on March 31, 1981, the price of milk shall be supported at not less than 80 per centum of the parity price therefor.".

(b) A new subsection (d) is added as follows:

"(d) Effective for the period beginning with the date of enactment of the Agricultural Act of 1977 and ending on March 31, 1981, the support price of milk shall be adjusted by the Secretary at the beginning of each semiannual period after the beginning of the marketing year to reflect any estimated change in the parity index during such semiannual period. The Secretary is further authorized to adjust the support price of milk at the beginning of each remaining quarter in the marketing year to reflect any substantial change in the parity index during such quarterly period. Any such adjustment shall be announced by the Secretary not more than thirty days prior to the beginning of the period for which it is applicable.".

BEEKEEPER INDEMNITY PROGRAM

SEC. 205. Section 804(f) of the Agricultural Act of 1970, as amended, is amended by striking out "December 31, 1977" and inserting in lieu thereof "September 30, 1981".

Mr. FOLEY (during the reading). Mr. Chairman, I ask unanimous consent that title II be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

The CHAIRMAN. Are there amendments to title II?

AMENDMENT OFFERED BY MR. CONTE

Mr. CONTE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CONTE: Page 5, strike out lines 5 through 7 and insert in lieu thereof the following new section:

SEC. 205. Effective December 31, 1977, section 804 of the Agricultural Act of 1970 is repealed.

Mr. CONTE. Mr. Chairman, I rise in support of my amendment to kill the sweetest subsidy of them all, the beekeepers indemnity program. Ever since it was created, this program has been a honey of a rip-off for a select swarm of beekeepers, while the taxpayers have been getting stung. To put it short and sweet, the question now before us is, to bee or not to bee.

Back in 1906, A. W. Mitchell wrote the "Song of the Bumble Bee and the Maid", which serves as an apt allegory of this program. The song goes like this:

A bumble bee once left his hive, to be a robber bold,
And on the way, he met a maid upon a lonely road,

Said he to her, "Hold up your hands, and give to me your money,"
Said she, "Just kiss my lips instead, you'll find them sweet as honey,"
And as the bee, kissed her sweet lips, where once he'd thought to sting,
This strange young pair, they fell in love, and she began to sing,

(Chorus)

Don't leave me my honey bee, let's linger in love's bow'r,
I know a fairy, who'll change me in to your favorite flower,
In May I'll be your hyacinth, in June I'll be your rose,
I'll be the flower you love the best, the fairest one that grows.

The image of the bumble bee as a robber, is a good way of looking at this beekeepers indemnity program, since so far we have been held up to the tune of $19.8 million. This legalized robbery by only 1.8 percent of the Nation's beekeepers, has set me buzzing with waspish dismay, and I suspect my colleagues' constituents would have bees in their bonnets, as well if they knew what was going on.

Out of more than 211,000 beekeepers in the United States, only 1,191 or 0.6 percent received an indemnity payment in 1976. Only 48 keepers made a beeline for this payment of $20,000 or more in a single year, between 1973 and 1976. Between 1973 and 1976, those 48 beekeepers collected almost $4 million, and have received about 35 percent of the total program's payments, over the years.

That little song I mentioned earlier, also illustrates the relationship between the beekeepers and the administrators of the program.

In the song, the maid seduced the bee with sweet words of endearment and a kiss of honey, and that is exactly what has happened in this program.

We have examples of scandalous relationships between beekeepers and inspectors, including one instance where an inspector not only falsified reports, but assisted beekeepers in devising ways of deceiving behaving behive inspectors into believing pesticide damage had occurred. The program lends itself to this sort of sweetheart relationship, and it is time we stopped it.

Mr. Chairman, back in 1970, this program was created to reimburse beekeepers who lost bees through no fault of their own, due to massive Government sponsored pesticide programs. That crisis has long since passed, and the program has become simply a subsidy to offset the normal costs of doing business, or as one beekeeper told me, they will die at the drop of a hat, or as in this case, at the drop of a Federal subsidy. But they are also dying of old age, arthritis, too much high living, bent stingers, and the too-frequent ingestion of the sweet nectar of fermented clover blossoms. No matter the cause of death, the taxpayer is getting stung.

When you look at the list of major recipients of these funds, you have to wonder why the same 50 or so beekeepers keep losing so many bees year after year. The only possible conclusion is that their poor bees have become more valuable dead than alive. We have placed a bounty on their fuzzy little heads.

Mr. Chairman, we should be encouraging beekeepers to keep their bees alive, rather than let them die. Let us get the sticky fingers of the beekeepers, out of the Federal honey jar. The administration supports the objectives of this amendment. I urge the adoption of this amendment.

Mr. ROSE. Mr. Chairman, I rise in opposition to the amendment.

In my brief three terms in this body, I believe that I have heard this speech by my distinguished friend, the gentleman from Massachusetts (Mr. CONTE), at least twice. He has improved it somewhat from the last version that I heard; but as chairman of the Subcommittee on Dairy and Poultry, I think what he has had to say is utter nonsense.

Mr. Chairman, in the Subcommittee on Dairy and Poultry we have jurisdiction over the beekeeper indemnity program; and in May of this year we held extensive hearings into the impact of certain regulations and certain pesticides on the dairy, poultry, and honeybee industry. We discovered, to the contrary from what the gentleman from Massachusetts (Mr. CONTE) has said, that there is a very new crisis facing the beekeepers of this country.

Mr. Chairman, the gentleman from California (Mr. KREBS) will, in a few minutes, refer to some of the more pertinent points of the beekeeper indemnity program and about those who keep bees in his State of California.

Mr. Chairman, there are some 60 crops in this country that must be pollinated by honeybees. There are some 90 other crops that are partially pollinated by honeybees.

We had testimony in our subcommittee from Roger Morse, professor of agriculture in the department of entomology of Cornell University, who told us that in 1976 a new formulation of a new pesticide has produced a crisis within the beekeeper industry, and that crisis is because of microencapsulated methyl parathion.

Pesticides are being produced in tiny pellets which are being used in the fields of this country. The honeybees are picking up these small capsules of methyl parathion on their fur, which my colleague finds very humorous, and bringing it back into the hives, killing off the entire family of bees.

Mr. Chairman, bees are an important part of agriculture. The almond industry could not exist if it were not for bees.

In our subcommittee we are trying to encourage more and better research into ways to keep pesticides from injuring the honeybee colonies of this country. The honeybees are necessary. The honeybee indemnity program is necessary.

Mr. Chairman, I urge my colleagues to join me in defeating this amendment because we are carefully watching this program. I can assure all of my colleagues that my subcommittee will engage in careful oversight over the way the program is administered.

Mr. KAZEN. Mr. Chairman, will the gentleman yield?

Mr. ROSE. I yield to the gentleman from Texas.

Mr. KAZEN. Mr. Chairman, I want to commend the gentleman from North Carolina (Mr. ROSE) for his remarks and I want to associate myself with them.

I think this is a very serious question, not to be made light of in the way the gentleman from Massachusetts (Mr. CONTE) has done through the years.

Mr. Chairman, it is a tribute to this Congress that the majority of the people here understand the role of the bee in agriculture.

Again, Mr. Chairman, I commend the gentleman for his remarks.

Mr. ROSE. Mr. Chairman, I thank my distinguished colleague, the gentleman from Texas (Mr. KAZEN).

Mr. JEFFORDS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I too rise in opposition to this amendment. I believe the good gentleman from Massachusetts, Mr. CONTE, really did not take it far enough as to what we are going to kill off here if we do away with bees, as the gentleman seems willing to do. What would we do to replace these bees that result in 90 percent of the flowers of this world through seed production in California. With no bees consequently we will have no flowers. With no flowers we would have no birds. With no birds and no bees, I do not know where we would be, or what we would have to talk about.

So it is not a light matter that the gentleman from Massachusetts, Mr. CONTE, likes to talk about. We are talking about a serious matter here.

Bees are important, bees are necessary. I suppose that there are other alternatives, like running from flower to flower and pollinating them. I suppose some might suggest this as a solution to the youth unemployment program. But, I do not believe that that is an economical way to handle this life necessity when we can do this very simply and very reasonably just by trying to keep the bees in production. This program to protect bees costs only one-twentieth of a percent of the good work they they do. There is an $8 billion business that these bees actively pollinate and are responsible for.

The importance of this rather small but highly essential beekeeping industry to the rest of the agricultural economy cannot be overemphasized. Many major fruit, nut, and seed crops are entirely dependent on honey bees to provide the pollination necessary for production of economically sound yields. From the lists of these crops set forth below you will readily determine that unless the beekeeping industry is maintained in a viable and effective position our Nation will soon be relegated to a diet of grains and fish. While a healthy beekeeping industry providing adequate pollination will not only assure a continuing supply of essential fruit, nut, and seed crops, it can also be an important factor in lowering basic food costs by substantially increasing the yield of many other crops which may not be entirely dependent on insect pollination.

During the 1960's and continuing up to the present time, the ever increasing use of herbicides and pesticides has eliminated for the most part, many of the wild natural pollinators and their nesting sites. Other modern agricultural practices such as the trend to larger acreages by farm operators have, by elimination of fence lines and more intensive cultivation, further reduced nesting places and habitats of these natural pollinators and honey bees. Growers of many major crops are forced to rely on honey bees for their pollination requirements.

Those crops dependent on pollination have an estimated value of nearly $4 billion with those benefiting from pollination having an almost equal value. The total value of agricultural production totally or partially dependent on pollination would therefore approach $8 billion. USDA scientists have conservatively estimated that presently, due to the above mentioned factors—pesticides, herbicides and other modern agricultural practices, honey bees perform 85 percent of the total pollination service provided to the agricultural arena.

This very vital beekeeping industry has suffered a serious decline in colony number nationwide, from 5.1 million colonies in 1962 to a low of 4.1 million in 1972. From 1972 through 1976 there has been a small increase in colony numbers, reaching a 4.3-million-colony level in 1976. This small increase may be at least partially attributed to "indemnity" payments which have encouraged some beekeeping operations to restock colonies previously destroyed by pesticides.

Specific instances to point up the low colony count seriousness of this include the State of Washington where more than 100,000 acres of apples, pears, and cherries of bearing age are dependent on honey bees for pollination. There are an additional several thousand acres of recent plantings. There were only 95,000 colonies available for pollination services in 1976, far short of the two colonies per acre recommended. Honey bees are also used in California to produce 75 percent of the Nation's vegetable seed and 90 percent of the world's flower seeds. Acreage of crops requiring bees for pollination is increasing and growers are using more colonies per acre to assure adequate pollination of crops. The number of colonies in California declined to a low of 500,000 in 1974, a reduction of 65,000 colonies in the short period between 1970 and 1975 while the pollination requirements have been steadily increasing.

The need for pollination service is increasing while the expanding use and application of pesticides and herbicides is a major factor in the number of available honey bee colonies as pollinators. This ever-increasing use and application therefore continues to pose a serious threat to the welfare of the industry and discourages the expansion needed to provide adequate pollination.

Beekeepers have no control over the application or use of pesticides or herbicides or the foraging habits of their bees, thus presenting a very complex problem. Some relief in a few areas on specific crops has been provided by the newer pest management control programs. For the most part, they are successful in reducing colony losses where they operate, yet the total acreage under such control programs is so small that no major impact is visible toward increased colony count. Expansion of the pest management control program and research on other less harmful methods of insect control, as well as additional assistance from EPA, where they are in a position to be helpful, has and should be urged.

Estimates are that outlays are decreasing from 4.2 billion in 1976 to under 4 billion in 1977 and 1978 fiscal years.

Every beekeeper in this country would rather have his bees alive, healthy, and serving as effective and efficient pollinators of the many crops involved and producing honey rather than have them damaged or destroyed. At the same time there are relatively few areas where their colonies may be placed without being exposed to the hazard of pesticide application at some time during the growing season.

Undoubtedly, expansive and extensive research into the many facets of pesticide application and methods of protecting colonies of bees, along with a forceful educational program would be helpful in alleviating the serious losses encountered in so many areas.

The indemnity program, in operation now for a 7-year period, has provided some relief to this perplexing problem at a very nominal cost to the Government. These payments have enabled some beekeepers, who for all practical purposes were bankrupt, to revitalize their operations, to repair badly deteriorated equipment and to restock part of the colonies destroyed by pesticides. We are hopeful the declining colony count in progress through 1972 has been at least slightly reversed and with continuation of the "indemnity program," as an industry aid, more pollination service can be made available to supply that ever-growing need.

The program can in no way be alluded to as a handout or giveaway. The regulations as now set up are stringent and require absolute proof and documentation of losses, as well as proof of application on fields adjacent to the apiary site, where the losses occurred, to the extent that in most cases, claims for major losses only will be filled.

Beekeepers in most cases are not aware of pesticide application until they arrive at the apiary site and find their colonies damaged or destroyed. There is very little they can do to minimize their losses. Several methods of protection have been tried with little apparent success.

Honey bees are the only major pollinator for more than 60 important fruit, nut, and seed crops. Increased acreages and the use of more colonies per acre to provide adequate pollination require substantially more colonies while the total number available has declined from over 7 million colonies in 1958 to the present 4.3 million colonies with the low point in 1972 being 4.1 million colonies.

Pesticide use is increasing and poses a continuing hazard to the viability of the industry.

In summary, I realize that the indemnity program is not the solution to the problem but until other effective means and methods can be devised and put into practice to alleviate the losses, the beekeeping industry desperately needs this program. I feel the program has been a benefit to the beekeepers of the United States, providing some relief for sustained losses.

I feel the funds needed are a very small price to pay to help insure the continuation of this industry which is all important to the entire agricultural economy and ample food supplies at the most efficient and economic level. Adequate pollination is one of the keys to lower food prices and abundant production.

I urge my colleagues to maintain the beekeeper indemnity program section 205 of H.R. 7171, the Agricultural Act of 1977.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. JEFFORDS. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I do not want anyone in this chamber to think that this is a facetious amendment. After 19 years in this Congress some things are so ridiculous that the only way we can defeat them, if you can not do so by being serious, is to try to use satire. That is what I have done here .

Furthermore, Mr. Chairman, indeed the payments have not gone down. In fact, in 1975 they were $2.8 million and in 1976 they were $3.5 million. That is not going down.

Furthermore, Mr. Chairman, I do not want anyone to take this lightly. Let me say that when we get back into the House I will put things into the RECORD, items from the newspapers on this bee situation, newspaper articles on the scandal between some inspectors of these bees and the beekeepers relative to some of these payments.

Furthermore, I might say to the gentleman from Vermont that I have a farm in Massachusetts, and my son-in-law has beehives there, so I know something about bees and their value. If you look at the payments you wonder, you wonder why some of these same people can keep getting payments year after year, the same people in the same part of the country.

Mr. JEFFORDS. I can only say that if we should do away with every program in this country that is subject to some sort of abuse that we would have to do away with every program in this country and we could go home. I believe some of my colleagues on this side of the aisle would approve of that.

But, I consider that this is an important matter, and if there is an issue of future abuses then I believe that we should take after those people, ferret

them out, but not to say that we should eliminate the program because there are instances of abuse, or abuses in certain areas. That is not a correct approach and that is not a responsible approach. The question here is whether the program performs a legitimate and worthwhile function and this one has proven to be one that does just that. So, the fact that some people may take advantage of it or try to, then I say we should ferret those people out and prevent them from destroying this program.

Mr. CONTE. Mr. Chairman, will the gentleman yield further?

Mr. JEFFORDS. I yield further to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, will the gentleman from Vermont agree on the fact that I presented that the program was initiated back in 1970 because of certain bans that we made on certain pesticides, and the consequent use of certain other pesticides, and therefore we did have a problem at that time?

Mr. JEFFORDS. The answer is yes, and I still believe we do have a similar problem. We are still experimenting with various pesticides. I will certainly agree that some of the problems are not as dramatic now as they were then. But we still must prevent the destruction of our farmers' crops by insects and we do this through the use of pesticides. Yet when those crops are nearby or on the other side of the beekeeping neighbor they kill the bees.

Yet it encroaches upon the rights of neighbors and kills bees. If it is no fault of the beekeeper, then he gets reimbursed. If there is a way to go back and get reimbursed by the neighbor, then he can go after him or the department if his use was improper. It is a good program. The amendment should be defeated.

Mr. SISK. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I hesitate to take the time of the Committee, but my good friend, the gentleman from Massachusetts (Mr. CONTE)—if I could have his attention—has really become the outstanding comedian in the House. I always enjoy his speeches. He seems to be improving in connection with his poetry and some of the material that he is digging up. I have great respect for my colleague, the gentleman from Massachusetts, but let me say as one of the original cosponsors of the honeybee program, along with the very distinguished Congresswoman and former Member from the State of Washington, Catherine May—and I believe it is Catherine Bedell now—this program started as a very serious program. It is still, as far as I am concerned, a very serious program. It is serious because of the fact that there are hundreds of millions of dollars at stake in connection with commodities that are totally dependent upon an adequate supply of honeybees.

The certified seed industry, which is a multihundred-million-dollar industry in this country, is totally dependent upon an adequate supply of honeybees. In my own particular area—and I understand my colleague, the gentleman from California (Mr. KREBS) will be speaking on the subject because we do share some of the areas—we are totally dependent upon the fact that we can keep an adequate supply of honeybees. Because of the rules and regulations outlined by EPA, and in connection with the limitation of use on pesticides, insecticides, and rodenticides, we really were facing a crisis. I recognize the concerns many of us have had through the years about DDT. There was a funny thing about DDT. As long as we used it, we used it rather extensively on many things. The bees thrived on it. I still sometimes get a little concerned with some of my scientific friends, because this was a peculiar situation. As long as we were using DDT on the fields and on the crops, the bees got along fine on it. They seemed to love DDT. In spite of that, of course, we know that DDT has been generally outlawed. Those pesticides and insecticides that have come along to take its place have been of a type that have literally destroyed in many cases not only millions but I suppose billions of bees, if we take them individually, and it certainly has destroyed thousands of hives.

Let me conclude, Mr. Chairman, only on this note, because this is a very small program. In fact, the figures cited by my colleague, the gentleman from Massachusetts, are infinitesimal in comparison with the amount of good they do, the very small amount. I think the highest figure he quoted for an annual cost of the program is something like $3 million, and that is literally a drop in the bucket compared to the amount of good that they do and the fantastic industry that is dependent upon an adequate supply of honeybees.

If there is a misuse of funds, if there are those who have abused this program, then let us do something about it. Certainly the law should be so enforced as to take care of that. But let us not destroy what otherwise is a good program.

Mr. Chairman, I urge that this amendment be defeated.

Mr. KREBS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, first of all I was not here during some of the past performances of my good friend, the gentleman from Massachusetts (Mr. CONTE). I do however in his defense have to say that in my opinion he has one of the better senses of humor in the House. I am however bitterly disappointed that although he repeatedly off the floor of the House in the past few days promised he would sing, I am indeed disappointed we were not given an opportunity to watch that performance.

Mr. CONTE. The gentleman has been spared.

Mr. KREBS. Let me point out to members of the Committee that the information our friend from Massachusetts gave us about the 48 beekeepers who benefited during 1976 simply, with all due respect to him, is not accurate to say the least. We just checked with the Department of Agriculture in the last few minutes to make sure we were on solid ground and were told that in fiscal year 1976, the last year for which we had the information, a total of 1,191 beekeepers received indemnity payments. If we round out the figures this would come to approximately $3,000 per beekeeper in indemnity payments.

Let me say I am not a farmer. I am indeed privileged to represent an agricultural district which happens to be an agricultural district that has not only one of the highest productions in this country but also happens to be highly diversified and so for that reason we have all sorts of agricultural commodities requiring pollination.

It is for this reason that I have had an opportunity to become rather familiar with the need for bees in our agricultural economy.

Beyond this, however, I also practiced law for 17 years before I came to the House and I handled any number of crop loss cases involving bees. I can therefore assure the Members there is no more tragic case than that of a beekeeper who was unfortunate enough to have lost his beehive overnight because of insecticide activity in close proximity to where he had to place the bees in order for them to do their job.

We furthermore have this year a new factor introduced in California and I assume this is true in other parts of the country, and that is the element of the drought. In my district the beekeeper can no longer remove his bees to the foothills of the San Joaquin Valley where he removed them to in the past because of the drought conditions. As a result the susceptibility to loss from insecticides has increased dramatically.

Mr. Chairman, I certainly hope that I do not have to belabor the point. I certainly appreciate the concern that my friend, the gentleman from Massachusetts, has shown. I certainly admire his tenacity. I frankly do not know what stung him but I do want to give him an opportunity for rebuttal.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. KREBS. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I did not hear the gentleman's last statement, I am sorry.

Mr. KREBS. I was just saying that I did not know what stung the gentleman.

Mr. CONTE. What stung me is that the poor old taxpayer is getting stung and if somebody does not fight for him out here he will wind up with empty pockets.

I said there were 48 beekeepers who received $20,000 or more and in 1976 they received $1,280,278 of the $3,535,248 program payment.

Mr. KREBS. I certainly agree with the gentleman's last figure of $3.5 million. I disagree or differ with him on his figure of participation, because that is not the figure of participation we received.

Mr. CONTE. I got it from the USDA and I will submit it for the RECORD and I will hand the gentleman a copy when he gets through speaking.

Mr. Chairman, the material I referred to is as follows:

BEEKEEPERS RECEIVING PAYMENT OF $20,000 OR MORE, 1973–76

Name	1973	1974	1975	1976
Wright Bee Farm, Ala			$23,655	
Bechtel Apiaries, Ariz	$20,220	$35,025	22,650	$19,155
Beckner, Guy, Ariz	11,710	21,630	16,387	21,780
Emmons, Chas., Ariz	39,745	40,380	37,102	36,697
Safford Honey Co., Ariz	11,400	25,537	24,225	20,520
Smith, James R., Ariz	49,165	71,047	76,380	57,195
Dickinson, Wm. H., Ark	10,710	17,265	21,262	19,402
Harrison SDA, Church, Ark	10,755	22,762		
Wilson, Vaughn, Ark	2,280	21,562	14,277	
Clement Apiaries, Calif	14,035	17,295	5,880	26,970
Fairchild, Clarence, Calif	5,220	16,012	12,607	26,085
Hall, Aaron & Sons, Calif	27,965	31,575	6,202	7,357

DISCOVERED: MASSIVE BEE INDEMNITY ABUSE

(By Mike Merritt)

A Yakima Herald-Republic investigation has uncovered evidence of massive abuse of the federal Beekeeper Indemnity Program, a program that has paid Yakima County apiarists more than $2 million since 1971.

False indemnity claims over the past five years could total hundreds of thousands of dollars in addition to three earlier years, 1967–70, when retroactive payments were made.

The program, designed to reimburse beekeepers for bees killed by pesticide spraying, instead prompted some beekeepers to intentionally damage hives and kill bees to boost indemnity payments.

The Herald-Republic's investigation was aided by student reporters of the Campus Crier at Central Washington State College who first heard reports of the abuses.

It was also learned that a Washington State beekeeper, owner of one of the nation's largest apiaries, is under investigation by the U.S. Department of Agriculture involving his claims under the indemnity program.

The beekeeper's claims are involved in a civil suit stemming from the government's refusal to pay portions of the apiarists' claims.

One beekeeper received more than $200,000 in annual indemnity claims for several years.

U.S. Agricultural Stabilization and Conservation Service officials charged with administering the program, admit the program was open to abuse in its early years—from 1971 until last year.

But the officials also say use of Washington State bee inspectors—many of whom were friends, relatives and former employes of beekeepers they were assigned to inspect—has been eliminated. Since last year, officials said, full time federal inspectors have been hired.

Troy Monholland Jr., a Washington State bee inspector during the summer of 1972, told the Herald Republic he "doctored" hundreds of spray-damage reports for one Washington beekeeper. Estimates of indemnity claims submitted over Monholland's signature range as high as $200,000 for that summer.

Monholland detailed his experiences with the beekeeper.

"In the summer of 1972, I was working as a beekeeper . . . I talked with Gene Bregden (the state's chief apiary inspector) and he said he needed inspectors. It was hard to find people experienced in the business. My first job for the beekeeper took me down to Klickitat County.

"There I found a bee yard located in a cherry orchard. He had spray damage, there was no doubt. This was the 27th of June. By the middle of June you should be set up in the honey producing areas . . . A beekeeper knows that an orchard has to be sprayed, yet the bees continued to sit right there. It was a chance for the beekeeper to see what type of an inspector I was.

"Well, on my charts I marked up 168 hives severely killed. But I marked, no, I didn't feel the beekeeper had taken reasonable care of his bees."

"Under the inspection program, a beekeeper would receive no indemnity payments if he failed to properly protect his hives against pesticides.

"In a day or two I had a frantic call from him. He wanted to know why I had put down 'no reasonable care.' He came over to my house, we drove all the way down there for a reinspection. This never did go through proper channels . . . We stopped and had dinner in Goldendale, had a couple of drinks . . . So I changed my inspection sheets. The copy where I had put 'no reasonable care' was destroyed and in return replaced with another copy."

From that day in June until August, Monholland said, hundreds of inspection reports were made without actual examination of hives.

"I saw real thin splits (non-productive bee colonies). You wouldn't set up your equipment like that. No, these things were set up for the indemnity," Monholland said.

"But I didn't want to put that down, not for him, not for any beekeeper."

Monholland said he didn't receive a share of the beekeeper's indemnity payment—although he admitted the beekeeper paid him mileage and inspection fees for trips in the Yakima Valley and Columbia Basin he never took.

According to normal procedure, Monholland forwarded the fees and mileage payments paid by the beekeeper to the state Department of Agriculture and was later reimbursed.

The inspector said on one Sunday afternoon in August he falsified reports covering perhaps 12,000 hives, most of them marked as severely killed and eligible for $15 per hive indemnities.

Monholland said he was not asked by other beekeepers to falsify their inspection reports.

"There was no asking for doctored reports, but all were hoping for a favorable report," he said.

All beekeepers needed help. They were getting torn apart by spray damage . . . I thought I was doing it for the beekeepers," Monholland said.

Prior to becoming a bee inspector under contract to Washington State, Monholland said he and some other beekeepers tried to devise methods of deceiving inspectors into believing spray damage had occurred.

"I know other inspectors went through the same thing I did. But I think the other inspectors were a little scared of what might happen if it were found out. But I think overall the inspectors gave the benefit of the doubt to the beekeeper," Monholland said.

The indemnity program—approved by Congress to help beekeepers survive losses caused by pesticides—instead forced a reliance on government programs. Officials acknowledge this.

"It just destroyed the business. It was a business of strongly independent people but this just shook the foundations," Monholland said.

The admissions of Monholland have been confirmed by ASCS officials.

"We think there were cases, definite cases, where beekeepers were taking advantage of the program," said Keith Townsend, Yakima County ASCS director.

"When the program first came out it was very, very, poorly put together. Legislation was passed, retroactive payments were made without proof—it was just a fright to administer. I've never seen anything like it in 20 years," Townsend said.

"We got tossed with it, and most of us didn't know anything about bees. We were wide open to be taken for a ride," he said.

Federal legislation authorizing the program—which has paid more than $18 million in claims nationwide since 1971—was vague and provided few guidelines for administrators, Townsend said.

Washington State contracted with independent bee inspectors, Townsend said, because local ASCS officials couldn't perform inspections. The inspectors were drawn from Yakima Valley beekeepers, a tightly knit group of mostly family operations.

"We could see we weren't controlling the inspectors. But we were paying out hundreds of thousands of dollars on somebody's signature that we had no control over, he said.

"It took us two or three years to get on top of the program and see some of the loopholes," he said. "The first thing we did was to get rid of the state inspectors.

"We heard rumors and rumbles for years. We have a lot of honest beekeepers. But they don't want to do anything that will jeopar-

dize the program. They try to police their own ranks," Townsend said.

Townsend said he and other state ASCS officials complained about the laxity of the program's guidelines to USDA officials—without much results.

"I tell you. I got up on my high horse and wrote letters to Washington and screamed like mad on this. It was about two years before I could get anybody to listen to me," he said.

Robert Deife, state ASCS administrator, was asked whether his agency was satisfied with Washington State's inspectors. His reply was: "We hired our own inspectors."

Kenneth Frick, ASCS head in Washington, D.C., admitted the program "was a very difficult thing to handle," adding the USDA resisted passage of the program in 1971 and is still opposed to continuation of indemnities.

"We're sorry we didn't listen a little more carefully to Yakima," Frick said. "I'm sorry they didn't push a little harder."

GRAND JURY TO HEAR EX-BEE INSPECTOR

(By Mike Merritt)

A former Washington State bee inspector who admitted falsifying hundreds of federal Beekeeper Indemnity Program reports has been called to testify before a federal grand jury, the Yakima Herald-Republic has learned.

Troy Monholland Jr., whose admissions of abuse in the indemnity program were reported earlier by the Herald-Republic, was subpenaed to testify before the grand jury next month in the Tri-Cities.

Monholland told the Herald-Republic that during the summer of 1972 he "doctored" hundreds of indemnity claims at the request of a Washington State beekeeper—claims that led to more than $200,000 in payments to the beekeeper.

Assistant U.S. Atty. Robert Linnell declined to name others who might testify before the grand jury during the session.

The disclosures of abuse in the program, designed to reimburse beekeepers for bees killed by pesticide spraying, brought admissions from federal officials that the program was vulnerable to abuse.

Federal Agricultural Stabilization and Conservation Service officials, charged with administering the bee program, said the program was poorly designed. And ASCS authorities were saddled with a program affecting an industry they knew little about, officials admitted.

ASCS officials also said the long suspected abuses led to severing a contract with Washington State for the use of apiary inspectors and hiring full-time federal inspectors.

Despite program abuses, however, state beekeepers have defended the program. They said beekeepers—hit hard by agricultural spraying that's destroying up to a third of their hives—were able to survive only because of indemnity payments.

"We had gotten to the point where we were just hanging on by our fingernails," said Elwood Sires, a Union Gap apiarist and vice president of the state beekeepers association.

"If it hadn't been for the advent of the indemnity program we would have been out of business," Sires said.

In the 1960s and early 1970s, beekeepers said, the market price for honey was depressed. At the same time, increasing use of pesticides was destroying hundreds of hives and weakening thousands of others, beekeepers said.

"The money I got from the indemnity has gone right back into my business," said Sires, who has been echoed by most other state beekeepers.

"For the first time in 30 years it's finally a sound operational business," he said "I feel it is necessary. I'm not a bit ashamed of being involved."

But Sides also acknowledged he had suspicions of abuse in the program from its earliest days.

"In 1973 or so I heard that some other beekeepers were operating an indemnity type of operation. But this was not in any way true of the majority," Sires said.

Estimates of false claims filed under the indemnity program total hundreds of thousands of dollars since the program was approved in 1971. Retroactive payments extending to 1967 also were made.

The Herald-Republic also has learned Washington State's program for certifying bees as disease-free is under criticism from California agricultural officials.

"We do not trust out-of-state certificates from Washington because of past problems," said one California county agricultural commission official who asked that his name not be printed.

"It would appear that, from my point of view, the state allows the beekeeper to do his own inspecting. I have seen the certificates—signed certificates—where it appears the beekeeper's own handwriting is on there. Anytime a man gets to do his own inspecting there's bound to be hanky-panky," the commissioner said.

In a 1974 incident, more than 140 colonies of Washington bees rented for California almond orchard pollination were found to be infected with American foul brood. The colonies, which were destroyed, had been certified as healthy by Washington State.

Mike Tanner, a Merced County bee inspector who discovered the infested bees, said, "I don't see how it could have been missed."

Leo Vanderpool, head of California's agricultural disease control agency, said his state is concerned about importation of diseased bees. Stronger nearby bee colonies will rob hives weakened by disease—thus carrying the foul brood to other hives.

Shasta County Commissioner Bruce Wade said the practices of one large Washington beekeeper—who had shipped his bees into the state in a manner making * * * beekeepers to make the hives more accessibe for inspections.

"I don't intend this as an indictment of all beekeepers," Wade said.

Transporting bees to California was rare until recently for Washington State beekeepers because of the high shipping expense. Local apiarists increasingly are traveling to California, however, because Northwest winter conditions are taking a heavy toll on bee colonies weakened by pesticide spraying.

Colonies gain strength in the milder California winters, although the cost of transporting barely is met by California pollination fees.

Gene Brogdem, Washington's chief apiary inspector, rejected charges that local beekeepers are allowed to inspect their own bees before shipment.

But he acknowledged beekeepers sometimes are able to avoid the inspections—because of a lack of state manpower to inspect the more than 180 state commercial beekeepers.

"That is the problem, it's a lack of money," Brogden said. "We should have a man in each area of the state."

His agency's budget of less than $20,000 allows only about $4,000 to hire part-time inspectors for all state beekeepers, he said. Brogden, 65, said he personally inspected more than half the 29,000 colonies examined by state authorities last year.

Stewart Bledsoe, director of the state Department of Agriculture, also admitted "there could be some slippage" in the state's inspection programs, but he agreed with Brogden that the problem is mainly financial.

"Is our program adequate? No," he said. "We have made requests of the legislature, but with the fiscal crunch in Olympia right now the money wasn't there."

Bledsoe said, however, the state is making efforts to increase the number of its bee inspectors.

[From the Sunday Oregonian, Feb. 8, 1976]

FALSE INDEMNITY REPORTS SAID MADE FOR BEES "KILLED" BY PESTICIDES

YAKIMA.—State bee inspectors aided beekeepers in filing false indemnity claims for reimbursement under a federal assistance program, the Yakima Herald has reported in a copyrighted story.

The Herald said false indemnity claims over the past five years could total hundreds of thousands of dollars in addition to three earlier years, 1967–1970, when retroactive payments were made.

The program, designed to reimburse beekeepers for bees killed by pesticide spraying, prompted some beekeepers to intentionally damage hives and kill bees to boost indemnity payments, the paper said.

U.S. Agricultural Stabilization and Conservation Service (ASCS) officials, charged with administering the program, admit the program was open to abuse from its inception through last year.

But these officials say the problem should be eliminated because inspections are now performed by full-time federal employes instead of local state employes. The newspaper said many of the former state employes were friends, relatives and former employes of beekeepers they were assigned to inspect.

Troy Monholland Jr., a state bee inspector during the summer of 1972, told the newspapers he "doctored" hundreds of spray-damage reports for one Washington beekeeper. Estimates of indemnity claims submitted over Monholland's signature range as high as $200,000 for that summer.

Monholland gave this description of the summer:

"My first job for the beekeeper took me down to Klickitat County. There I found a bee yard located in a cherry orchard. He had spray damage, there was no doubt. This was the 27th of June. By the middle of June, you should be set up in the honey producing areas. A beekeeper knows that an orchard has to be sprayed, yet the bees continued to sit right there. It was a chance for the beekeeper to see what type of an inspector I was.

"Well, on my charts I marked up 168 hives severely killed. But I marked, no, I didn't feel that beekeeper had taken reasonable care of his bees."

Under the inspection program, a beekeeper would receive no indemnity payments if he had failed to properly protect his hives against pesticides.

"In a day or two I had a frantic call from him. He wanted to know why I had put down 'no reasonable care.' He came over to my house, we drove all the way down there for a reinspection. This never did go through proper channels. We stopped and had dinner in Goldendale, had a couple of drinks. . . . So I changed my inspection sheets."

From that day in June until August, Monholland said hundreds of inspection reports were made without actual examination of hives.

"I saw real thin splits (nonproductive bee colonies.) You wouldn't set up your equipment like that. No, these things were set up for the indemnity," Monholland said. "But I didn't want to put that down, not for him, and for any beekeeper."

Monholland said he didn't receive a share of the beekeeper's indemnity payment—although he said the beekeeper paid him

mileage and inspection fees for trips in the Yakima Valley and Columbia Basin he never took.

According to procedure, Monholland forwarded the fees and payments paid by the beekeeper to the state Department of Agriculture and was later reimbursed.

He said beekeepers didn't ask for false reports. "But all were hoping for a favorable report."

He said that prior to becoming a bee inspector he had worked with beekeepers to devise methods of deceiving inspectors into believing spray damage had occurred.

"I know other inspectors went through the same thing I did," he said. "But I think the other inspectors were a little scared of what might happen if I were found out. But I think over-all, the inspectors gave the benefit of the doubt to the beekeeper."

"We think there were cases, definite cases, where beekeepers were taking advantage of the program," said Keith Townsend, Yakima County ASCS director.

When the program first came out it was very, very poorly put together. Legislation was passed, retroactive payments were made without proof—it was just a fright to administer. I've never seen anything like it in 20 years, Townsend said.

INVESTIGATION REVEALS BEE INDEMNITY ABUSE

(By Mike Merritt)

A Yakima Herald-Republic investigation has uncovered evidence of massive abuse of the federal Beekeeper Indemnity Program, a program that has paid Yakima County apiarists more than $2 million since 1971.

False idemnity claims over the past five years could total hundreds of thousands of dollars in addition to three earlier years, 1967–70, when retroactive payments were made.

The program designed to reimburse beekeepers for bees killed by pesticide spraying, instead prompted some beekeepers to intentionally damage hives and kill bees to boost indemnity payments.

The Herald-Republic's investigation was aided by student reporters of the Campus Crier at Central Washington State College who first heard reports of the abuses.

It was also learned that a Washington State beekeeper, owner of one of the nation's largest apiaries, is under investigation by the U.S. Department of Agriculture involving his claims under the indemnity program.

The beekeeper's claims are involved in a civil suit stemming from the government's refusal to pay portions of the apiarists claims.

One beekeeper received more than $200,000 in annual indemnity claims for several years.

U.S. Agricultural Stabilization and Conservation Service officials, charged with administering the program admit the program was open to abuse in its early years—from 1971 until last year.

But the officials also say use of Washington State bee inspectors—many of whom were friends, relatives and former employes of beekeepers they were assigned to investigate has been eliminated. Since last year, officials said, full time federal inspectors have been hired.

Troy Monholland Jr., Washington State bee inspector during the summer of 1972, told the Herald-Republic he "doctored" hundreds of spray-damage reports for one Washington beekeeper. Estimates of indemnity claims submitted over Monholland's signature range as high as $200,000 for that summer.

Monholland detailed his experiences with the beekeeper:

"In the summer of 1972, I was working as a beekeeper . . . I talked with Gene Brogden (the state's chief apiary inspector) and he said he needed inspectors. It was hard to find people experienced in the business. My first job for the beekeeper took me down to Klickitat County.

"There I found a bee yard located in a cherry orchard. He had spray damage, there was no doubt. This was the 27th of June. By the middle of June you should be set up in the honey producing areas . . . A beekeeper knows that an orchard has to be sprayed, yet the bees continued to sit right there. It was a chance for (the beekeeper) to see what type of an inspector I was.

"Well, on my charts I marked up 168 hives severely killed. But I marked, no, I didn't feel the beekeeper had taken reasonable care of his bees."

Under the inspection program, a beekeeper would receive no indemnity payments if he'd failed to properly protect his hives against pesticides.

"In a day or two I had a frantic call from him. He wanted to know why I had put down 'no reasonable care.' He came over to my house, we drove all the way down there for a reinspection. This never did go through proper channels. . . We stopped and had dinner in Goldendale, had a couple of drinks. . . . So I changed my inspection sheets. The copy where I had put 'no reasonable care' was destroyed and in return replaced with another copy."

From that day in June until August, Monholland said, hundreds of inspection reports were made without actual examination of hives.

"I saw real thin splits (nonproductive bee colonies). You wouldn't set up your equipment like that. No, these things were set up for the indemnity," Monholland said.

"But I didn't want to put that down, not for him, not for any beekeeper."

Monholland said he didn't receive a share of the beekeeper's indemnity payment—although he admitted the beekeeper paid him mileage and inspection fees for trips in the Yakima Valley and Columbia Basin he never took.

According to normal procedure. Monholland forwarded the fees and mileage payments paid by the beekeeper to the state Department of Agriculture and was later reimbursed.

The inspector said on one Sunday afternoon in August he falsified reports covering perhaps 12,000 hives, most of them marked as severely killed and eligible for $15 per hive indemnities.

Monholland said he was not asked by other beekeepers to falsify their inspection reports.

"There was no asking for doctored reports, but all were hoping for a favorable report," he said.

"All beekeepers needed help. They were getting torn apart by spray damage . . . I thought I was doing it for the beekeepers," Monholland said.

Prior to becoming a bee inspector under contract to Washington State, Monholland said he and some other beekeepers tried to devise methods of deceiving inspectors into believing spray damage had occurred.

"I know other inspectors went through the same thing I did. But I think the other inspectors were a little scared of what might happen if it were found out. But I think overall, the inspectors gave the benefit of the doubt to the beekeeper," Monholland said.

The indemnity program—approved by Congress to help beekeepers survive losses caused by pesticides—instead forced a reliance on government programs. Officials acknowledged this.

It just destroyed the business. It was a business of strongly independent people but this just shook the foundations," Monholland said.

The admissions of Monholland have been confirmed by ASCS officials.

"We think there were cases, definite cases, where beekeepers were taking advantage of the program," said Keith Townsend, Yakima County ASCS director.

"When the program first came out it was very, very, poorly put together. Legislation was passed, retroactive payments were made without proof—it was just a fright to administer. I've never seen anything like it in 20 years," Townsend said.

"We got tossed with it, and most of us didn't know anything about bees. We were wide open to be taken for a ride," he said.

Federal legislation authorizing the program—which has paid more than $18 million in claims nationwide since 1971—was vague and provided few guidelines for administrators, Townsend said.

Washington State contracted with independent bee inspectors, Townsend said, because local ASCS officials couldn't perform inspections. The inspectors were drawn from Yakima Valley beekeepers, a tightly knit group of mostly family operations.

"We could see we weren't controlling the inspectors but we were paying out hundreds of thousands of dollars on somebody's signature that we had no control over," he said.

"It took us two or three years to get on top of the program and see some of the loopholes," he said. "The first thing we did was to get rid of the state inspectors.

"We heard rumors and rumbles for years. We have a lot of honest beekeepers. But they don't want to do anything that will jeopardize the program. They try to police their own ranks," Townsend said.

Townsend said he and other state ASCS officials complained about the laxity of the program's guidelines to USDA officials—without much results.

"I tell you, I got up on my high horse and wrote letters to Washington and screamed like mad on this. It was about two years before I could get anybody to listen to me," he said.

Robert Dette, state ASCS administrator, was asked whether his agency was satisfied with Washington state's inspectors. His reply was. "We hired our own inspectors."

Kenneth Frick, ASCS head in Washington, D.C., admitted the program "was a very difficult thing to handle," adding the USDA resisted passage of the program in 1971 and is still opposed to continuation of indemnities.

"We're sorry we didn't listen a little more carefully to Yakima," Frick said. "I'm sorry they didn't push a little harder."

GRAND JURY TOLD OF BEE $ FRAUD

(By Mike Merritt)

A former Washington State bee inspector has told federal grand jurors he falsified hundreds of Beekeeper Indemnity Program claims for a large Washington beekeeper.

Troy Monholland Jr., who was employed under federal contract to make inspections for the indemnity program in the summer of 1972, repeated in grand jury testimony details of false claims reported earlier by the Yakima Herald-Republic.

During that summer, Monholland told the newspaper, he "doctored" claims totaling an estimated $200,000 for the beekeeper.

Also testifying under subpoena before the grand jury this week in Richland was Vinay Sheel Pandey, a longtime employe of Jim Bunch, owner of Jim's Valley Apiaries in Sunnyside.

Bunch, whose beekeeping operations are among the nation's largest, has filed suit to claim $219,000 in indemnity claims the government has approved but not paid.

Bunch has received more than $1 million under the indemnity program since the program's birth in 1970, according to government sources.

The Beekeeper Indemnity Program was

begun to reimburse beekeeper for bees killed by pesticide spraying. More than $18 million has been paid nationwide to beekeepers for bee losses.

Monholland, in his admissions to the Herald-Republic, said hundreds of claims made over his signature were filed without the required inspections of hives for spray damage.

And at the request of the beekeeper, Monholland said, he changed reports that the beekeeper had not adequately protected his hives from drifting sprays as required under the indemnity program.

The U.S. Department of Agriculture is conducting an investigation of indemnity program abuses.

Federal Agricultural Stabilization and Inspection Service officials said that since evidence of abuses in the program was uncovered, claim procedures have been tightened. Those program changes include hiring full-time federal inspectors to replace Washington State Department of Agriculture apiary inspectors formerly hired under contract.

Federal officials would make little comment on the grand jury proceedings.

Mr. KREBS. Mr. Chairman, I appreciate that. But even if the gentleman's figures are correct, and I do not concede that they are, it really does not make any difference because basically we are talking about an indemnification program designed to indemnify somebody against loss.

Mr. PRESSLER. Mr. Speaker, I move to strike the requisite number of words.

Mr. Chairman, let me say that there are excellent reasons for continuing the beekeeper indemnity program. In fact, the need for this program is greater now than in the past.

A current trend in pesticide technology is threatening honey producers' colonies with contamination and destruction. This trend is capsulization of pesticides which provides a timed release of these chemicals into the ground. Unfortunately, the capsules are so minute that they are similar to pollen in size.

Bees pick up the encapsulated pesticide, carry it back to the hive and store it. The stored pesticide is then eaten by newborn bees, and death results. Or the capsule melts inside the hive, thus fumigating the colony.

These new encapsulated pesticides have come on the market within the last 2 years, and I can assure the gentleman from Connecticut that these new pesticides are far more of a threat to the honey industry than DDT ever was.

The cost of this program—$3.5 million per year—is minimal when one considers that bees are responsible for pollinating an estimated $8 billion worth of crops each year. Fruit, nut, and vegetable crops are dependent on pollination, and milk and meat production benefits from pollination as well.

American beekeepers have few of the advantages other agricultural producers enjoy. They do not have price supports for their product; the Government has not been buying surplus honey, and honey does not have the import protection extended to other agricultural products.

I oppose my colleague's amendment, and hope that it is defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts (Mr. CONTE).

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. CONTE. Mr. Chairman, on that I demand a recorded vote.

A recorded vote was refused.

So the amendment was rejected.

The CHAIRMAN. Are there further amendments to title II? If not, the Clerk will read title III.

The Clerk read as follows:

TITLE III—WOOL AND MOHAIR

SEC. 301. Section 702 of the National Wool Act of 1954, as amended, is amended to read as follows:

"SEC. 702. It is hereby recognized that wool is an essential, strategic, and energy-efficient commodity which is not produced in the United States in sufficient quantities and grades to meet the domestic needs; and that the desired domestic production of wool is impaired by predatory animals and by depressing effects of wide fluctuations in the price of wool in the world markets. It is hereby declared to be the policy of Congress, as a measure of national security and to promote the general economic welfare, a positive balance of trade, and the efficient use of the Nation's resources, to encourage the continued domestic production of wool at prices fair to both producers and consumers in a manner which will assure a viable domestic wool industry in the future.".

SEC. 302. Section 703 of the National Wool Act of 1954, as amended, is amended as follows:

(a) Subsection (a) is amended by striking out "1977" and inserting in lieu thereof "1981".

(b) Subsection (b) is amended by striking out "1977" and inserting in lieu thereof "1976", and by inserting immediately before the period at the end thereof the following: ": *And provided further*, That for the marketing years beginning January 1, 1977, and ending December 31, 1981, the support price for shorn wool shall be eighty-five per centum (rounded to the nearest full cent) of the amount calculated according to the foregoing formula".

(c) Subsection (c) is amended by striking out "1977" and inserting in lieu thereof "1976".

Mr. FOLEY (during the reading). Mr. Chairman, I ask unanimous consent that title III be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

The CHAIRMAN. Are there amendments to title III? If not, the Clerk will read title IV.

The Clerk read as follows:

TITLE IV—WHEAT

SEC. 401 Effective for the 1977 through 1981 crops of wheat, section 107 of the Agricultural Act of 1949, as amended, is amended to read as follows:

"SEC. 107. Notwithstanding any other provision of law:

"(a) The Secretary shall make available to producers loans and purchases on each crop of wheat at such level, not less than $2.25 per bushel for the 1977 crop and $2.35 per bushel for the 1978 through 1981 crops, nor in excess of 100 per centum of parity, as the Secretary determines will maintain its competitive relationship to other grains in domestic and export markets.

"(b) If a set-aside program is in effect for any crop of wheat under section 379(c) of the Agricultural Adjustment Act of 1938, as amended, payments, loans, and purchases shall be made available on such crop only to producers who comply with the provisions of such program.

"(c) Payments shall be made for each crop of wheat to the producers on each farm in an amount determined by multiplying (i) the amount by which the higher of—

"(1) the national weighted average market price received by farmers during the first five months of the marketing year for such crop, as determined by the Secretary, or

"(2) the loan level determined under subsection (a) for such crop

is less than the target price per bushel times in each case (ii) the allotment for the farm for such crop (but in no event on a greater acreage than the acreage actually planted to wheat), times (iii) the projected yield established for the farm with such adjustments as the Secretary determines necessary to provide a fair and equitable yield. The target price shall be $2.65 per bushel for the 1977 crop, $3.00 per bushel for the 1978 crop, and for the 1979 through 1981 crops the target price shall be the target price for the previous year's crop adjusted to reflect any change in (i) the average adjusted cost of production for the two crop years immediately preceding the year for which the determination is made from (ii) the average adjusted cost of production for the two crop years immediately preceding the year previous to the one for which the determination is made. The adjusted cost of production for each of such years shall be determined by the Secretary on the basis of such information and data as he finds necessary and appropriate for the purpose and shall be limited to (i) variable costs; (ii) machinery ownership costs; and (iii) general farm overhead costs allocated to the crops involved on the basis of the proportion of the value of the total production derived from each crop. If the Secretary determines that because of drought, flood, or other natural disaster, or other conditions beyond the control of the producers, the total quantity of wheat which the producers are able to harvest on any farm is less than the result of multiplying 50 per centum of the projected yield established by the Secretary for the farm for such crop during the current year times the acreage planted to harvest for such crop in such year, the Secretary shall make a farm disaster payment at a rate equal to 80 per centum of the target price for the crop to the producers of such crop for the deficiency in production below 50 per centum of the projected yield on the acreage planted to harvest for the crop. If the Secretary determines that the producers on a farm are prevented from planting any portion of the acreage intended for wheat to wheat or other nonconserving crops because of drought, flood, or other natural disaster, or other condition beyond the control of the producers, he shall make a prevented planting payment on the smaller of (1) the acreage intended to be planted to wheat or (2) the average acreage planted to wheat for harvest (including any acreage which the producer was prevented from planting to wheat or other nonconserving crop), in the immediately three preceding years, multiplied by 75 per centum of the projected yield established by the Secretary for the farm for the current year times a payment rate equal to 20 per centum of the target price per bushel for wheat. In the case of the 1977 crop, disaster payments for wheat shall be computed as provided in this section as amended for the 1974 through 1977 crops by the Agriculture and Consumer Protection Act of 1973. The total quantity on which a target price payment is due a producer for any crop shall be reduced by the quantity on which any disaster payment is paid to such producer for the crop. The Secretary

shall provide for the sharing of payments made under this subsection for any farm among the producers on the farm on a fair and equitable basis.".

ALLOTMENT AND SET-ASIDE

SEC. 402. Section 379b (a), (b), (f), and (h) of the Agricultural Adjustment Act of 1938, as amended, shall not be applicable to the 1974 through 1981 crops of wheat.

SEC. 403. (a) Section 379b (c), (d), (e), (g), and (i) of the Agricultural Adjustment Act of 1938, as amended, effective for the 1974 through 1981 crops of wheat.

(b) Effective for the 1978 through 1981 crops, section 379b(c) of such Act is further amended by—

(1) in subsection (c)(1), striking out the second and third sentences and inserting in lieu thereof the following: "If a set-aside of cropland is in effect under this subsection (c), then as a condition of eligibility for loans, purchases, and payments on wheat, the producers on a farm must set aside and devote to conservation uses an acreage of cropland equal to a specified percentage, as determined by the Secretary, of the acreage (i) planted to wheat (including any set-aside or diverted acreage) in the preceding crop year, as adjusted by the Secretary to correct for abnormal factors affecting such acreage in the preceding year, or (ii) planted to wheat in the current crop year. The Secretary may limit the acreage planted to wheat on the farm to a percentage of the wheat planted to harvest in the previous crop year. Such limitation shall be applied on a uniform basis to all wheat-producing farms."; and

(2) in subsection (c)(3), striking out "1974 through 1977" and inserting in lieu thereof "1974 through 1981".

SEC. 404. Effective for the 1978 through 1981 crops, section 379c of the Agricultural Adjustment Act of 1938, as amended, is further amended to read as follows:

"SEC. 379c. (a) The Secretary shall proclaim the national wheat acreage allotment and any set-aside program not later than August 15 of each calendar year for the crop harvested in the next succeeding calendar year. The national wheat acreage allotment for such crop shall be the number of harvested acres the Secretary determines (on the basis of the weighted national average of the farm program payment yields for the crop for which the determination is made) will produce the quantity (less imports) that he estimates will be utilized domestically and for export during the marketing year for such crop. If the Secretary determines that carryover stocks are excessive or an increase in stocks is needed to assure desirable carryover, he may adjust the national wheat acreage allotment by the amount he determines will accomplish the desired increase or decrease in carryover stocks.

"(b) The Secretary shall determine farm acreage allotments by allocating the national wheat acreage allotment to farms producing wheat on the basis of an allocation factor. Such allocation factor shall be determined by dividing the national wheat acreage allotment by the number of harvested acres as determined by the Secretary each year for such crops: *Provided*, That in no event shall such allocation factor be more than 100 per centum or less than 80 per centum of the acreage of wheat harvested on the farm in the current crop year. The farm acreage allotment for wheat shall be determined by multiplying the allocation factor by the acreage of wheat harvested on the farm in the current crop year. An acreage shall be considered harvested on the farm if it was planted to wheat but not harvested because of a drought, flood, or other disaster or condition beyond the control of the producer.".

NONAPPLICABILITY OF PROCESSOR CERTIFICATE REQUIREMENTS

SEC. 405. Sections 379d, 397e, 379f, 379g, 379h, 379i, and 379j of the Agricultural Adjustment Act of 1938 (which deal with marketing certificate requirements for processors and exporters) shall not be applicable to wheat processors or exporters during the period July 1, 1973, through May 31, 1982.

SUSPENSION OF MARKETING QUOTAS AND CONFORMING AMENDMENTS

SEC. 406. Sections 331, 332, 333, 334, 335, 336, 338, and 339 of the Agricultural Adjustment Act of 1938, as amended, shall not be applicable to the 1978 through 1981 crops of wheat.

SEC. 407. Sections 378, 379, and 385 of the Agricultural Adjustment Act of 1938, as amended effective for the 1971 through 1977 crops of wheat, are amended to be effective for the 1971 through 1981 crops of wheat.

SEC. 408. Public Law 74, Seventy-seventh Congress (68 Stat. 905) shall not be applicable to the crops of wheat planted for harvest in the calendar years 1978 through 1981.

YIELD CALCULATIONS

SEC. 409. Section 708, Public Law 89-321 (79 Stat. 1211), as amended, effective for the 1974 through 1977 crops of wheat, is amended to be effective for the 1974 through 1981 crops of wheat.

SEC. 410. Section 301(b)(13)(K) of the Agricultural Adjustment Act of 1938, as amended effective for the 1974 through 1977 crops, is amended to be effective for the 1974 through 1981 crops.

APPLICATION OF TERMS IN THE AGRICULTURAL ACT OF 1949

SEC. 411. Section 408(k) of the Agricultural Act of 1949, as added by the Agricultural Act of 1970, as amended effective for the 1971 through 1977 crops, is amended to be effective for the 1971 through 1981 crops.

Mr. FOLEY (during the reading). Mr. Chairman, I ask unanimous consent that title IV be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

AMENDMENT OFFERED BY MR. FOLEY

Mr. FOLEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FOLEY: Page 7, line 23, strike out $2.65 per bushel for the 1977 crop" and insert in lieu thereof "$2.90 per bushel for the 1977 crop".

Mr. FOLEY. Mr. Chairman, the effect of this amendment would be to increase the level of the target price for wheat from $2.65 to $2.90 for the crop year of 1977 only.

The Committee on Agriculture adopted an amendment which increased the earlier proposed levels of the committee bill to $2.65 for wheat and made other changes in the provisions of corn and wheat for the crop years 1977 to 1981.

The overwhelming character of that amendment, offered by the gentleman from Texas (Mr. POAGE), has my full support. Indeed, I think that those levels of the committee reported bill for the years 1978 to 1981 are crucial in obtaining administration support for any final bill that we might present. I intend personally to resist any changes in the committee reported bill for the crop years 1978 to 1981. I say that with the greatest emphasis.

I do not think there is a more important work for this committee to do than to sustain the Committee of Agriculture with respect to the crop years 1978 to 1981; but the committee bill provides for a tagret price of $3 for wheat in 1978. The gap between the 1977 crop target price and the 1978 crop price is a 35-cent gap, from $2.65 in the present committee bill to $3 next year.

I have been persuaded for some time that the gap needs closing. The amendment that I have offered makes the bill parallel to the Senate figure for 1977.

I want to repeat, that there are strong and overwhelming reasons why we should not accept the Senate figures for the crop years 1978 to 1981; but in this instance, I think a 1977 $2.90 target price is justified. The price of wheat has fallen 40 percent in the last year. The income needs of wheat farmers are desperate in many parts of this country. The cost of this amendment is not insignificant, but the need is not insignificant, either. The cost of this amendment I am offering is about $470 million. I realize that that is a significant item in the budget; but we also have to consider the plight of wheat growers in the United States that are suffering from disastrously low prices and, in some cases, disastrous crop conditions as well.

I will also say so that when we reach title V, I intend to offer an amendment to raise the target price on corn to $2 for the 1977 crop and to raise the loan rate on corn to $2 in 1977.

Thus that amendment, along with this one, will comply with the proposed amendments so far as 1977 is concerned that I think have been discussed on the floor by Members. They are often identified as the English amendment, the English-Sebelius-Thone-Harkin amendment, and a number of other Members have been associated with it.

But, I believe we do need an adjustment for the target price of wheat in 1977 and target in loans in 1977 on corn. I believe the adoption of this will go a long way for providing some real income help to American farmers this year. Later on in the discussion of this bill, I intend to support an amendment which will be offered by the gentleman from Illinois (Mr. FINDLEY) with respect to adjustments on the loan rate under certain circumstances. We will reach that later, but I hope all Members who have expressed concern, a very justified and real concern, about the income for grain farmers in 1977 will give overwhelming support to this amendment.

I hope that by doing that, by adopting the amendment, we can close the gap on what is a serious, disastrous income problem for thousands of our farmers.

The CHAIRMAN. The time of the gentleman from Washington has expired.

(On request of Mr. HARKIN and by unanimous consent Mr. FOLEY was allowed to proceed for 2 additional minutes.)

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Iowa.

Mr. HARKIN. I thank the committee chairman for yielding to me. I am just wondering, since the gentleman in the well, the chairman of the committee, is going to be introducing the same amendment on feed grains, I am wondering if we could not get unanimous consent to consider that amendment and this amendment en bloc, and save a lot of time. They both do basically the same thing. I am wondering if we could not get unanimous consent to do that.

Mr. FOLEY. I am a little concerned, I tell the gentleman, about opening up different titles of the bill, but I give him my assurance that if this amendment is adopted, as I believe it will be, I will offer the amendment he mentioned on the corn section. That is the first amendment to the corn section, the feed grain section.

Mr. HARKIN. I thank the gentleman.

Mr. ENGLISH. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I want to thank Chairman Foley for the opportunity to speak for my amendment. On behalf of myself and the other cosponsors of this amendment, I am honored to accept the distinguished chairman of the Agriculture Committee as a sponsor of this effort.

Two years ago, the Congress enacted the emergency farm bill of 1975. That legislation was considered by the Agriculture Committee to be absolutely essential if we were to avoid wholesale bankruptcies among farmers in ensuing years. As most of my colleagues are aware, the farm legislation adopted in 1975 set the target price for the 1975 wheat crop at $3.10 per bushel—when wheat was selling for $3.75 per bushel. Under the provisions of the same bill, target prices for 1977 would have been $3.82 per bushel. Unfortunately, President Ford did not heed the warnings of many Members of this body, and vetoed the emergency farm bill.

Now the predictions of 1975 are becoming the realities of 1977, and thousands of farmers are on the verge of financial ruin. This disaster can be averted if my colleagues see fit to adopt my amendment raising the target price on the 1977 wheat crop to $2.90 per bushel—a level far below the price approved by this body in 1975.

Mr. Chairman, if it was right for the Congress to pass the 1975 emergency bill, think how wrong it will be if the Congress rejects this modest amendment in 1977.

Secretary of Agriculture Bob Bergland, then a Member of the House of Representatives felt so strongly about farm problems in 1975 that he filed additional views in the Agriculture Committee's March 11 report to accompany the 1975 farm bill, and I quote Mr. Bergland:

> Current law provides price protection at levels far below current production costs, and if grain markets continue to tumble, wholesale farm and agribusiness bankruptcies will follow.
>
> In no way will the grain sections increase food costs. To the contrary, ample food supplies can only be assured if there is some minimal protection against financial ruin and the resulting economic backlash.

In my opinion, Congressman Bergland was right in 1975—but little did he realize that the wholesale farm and agribusiness bankruptcies he forecast might occur in his first year as Secretary of Agriculture. But Bob Bergland obviously did recognize that 72,000 farmers could be in severe financial trouble today and that 24,000 of those could be bankrupt before the end of 1977, as projected by his own Department.

Mr. Chairman, the reason Bob Bergland was able to so accurately forecast this problem is due to the fact that Earl Butz called on farmers to plant fence to fence and guaranteed them the foreign markets to consume all they could produce. After the farmers responded, they did not find the markets to buy their product because the Federal Government imposed embargoes and moratoriums on foreign grain sales, causing domestic markets to become glutted, and prices to plummet.

In requesting your vote for this amendment, I ask not only that you give food producers a chance to survive—and a chance is all this $2.90 target price will provide—but that you also give the Nation a chance to avoid the second half of Bob Bergland's 1975 forecast—an economic backlash which can wreck our total economy.

Mr. Chairman, I am fortunate to be joined by a bipartisan group of 48 of my colleagues in offering this amendment. This group includes a broad crosssection of the House of Representatives, and I include a list of additional sponsors of my amendment to be printed in at this point in the RECORD:

COSPONSORS OF THE ENGLISH-SEBELIUS-HARKIN-THONE AMENDMENT

Glenn English, Keith Sebelius, Tom Harkin, Charles Thone, Richard Nolan, Jack Hightower, Dan Glickman, James Abdnor, Mark Andrews, Max Baucus.

Edward Beard, Berkley Bedell, James Blanchard, Bob Carr, John Cavanaugh, Thad Cochran, David L. Cornwell, Butler Derrick, John Duncan, Mickey Edwards,

Frank Evans, Hamilton Fish, Charles Grassley, Tennyson Guyer, Tom Hagedorn, George Hansen, Ken Holland, Carroll Hubbard, Jim Johnson, Jim Jones,

Martha Keys, Bob Krueger, Marilyn Lloyd, Ron Marlenee, William Natcher, Stephen Neal, James Oberstar, Larry Pressler, Frederick Richmond, Ted Risenhoover, Neal Smith,

Virginia Smith, Arlan Stangeland, Tom Steed, Ray Thornton, Bruce Vento, William Wampler, Wes Watkins, Jim Weaver, and Ed Jones.

Mr. GLICKMAN. Mr. Chairman, will the gentleman yield?

Mr. ENGLISH. I yield to the gentleman from Kansas.

Mr. GLICKMAN. I thank the gentleman for yielding.

Mr. Chairman, I want to commend the gentleman from Oklahoma (Mr. ENGLISH) for the work he has done on what I consider to be a survival amendment. We voted many times here on the floor of the House to help the elderly people pay their utility bills because it was survival. The issue is the same here. We have a ground swell in this Congress that believes that higher target prices are necessary for the survival of American agriculture, particularly in wheat producing areas, and we have witnessed coalition of consumer, labor, business and farm support. It is to the gentleman's credit, as well as to my colleague from Kansas (Mr. SEBELIUS), particularly, that we have succeeded in this.

The CHAIRMAN pro tempore. The time of the gentleman from Oklahoma (Mr. ENGLISH) has expired.

(On request of Mr. HIGHTOWER and by unanimous consent, Mr. ENGLISH was allowed to proceed for 1 additional minute.)

Mr. HIGHTOWER. Mr. Chairman, will the gentleman yield?

Mr. ENGLISH. I yield to the gentleman from Texas.

Mr. HIGHTOWER. I thank the gentleman for yielding.

Mr. Chairman, the target price for wheat has been one of the most controversial aspects of this legislation. To farmers in Texas and other wheat producing States, it is by far the most vital. With the country elevator price often running under $2 per bushel, we are seeing the worst farm credit crunch in years. A special survey of 400 bankers in 9 States conducted this April showed a desperate situation. Income and credit at that time were major problems for over one-third of the farmers borrowing from those banks. This translates into about 73,000 farmers in trouble.

The situation has gone downhill since then. The near record harvest and low, low, prices have clearly indicated to producers and bankers alike the severity of the problem. In my State of Texas alone, it was found that over 11,000 family farmers would have to refinance, sell part of their assets, or just could not repay their current loans.

These are not just statistics, as I pointed out to you in my opening remarks on this bill. These are people, families that are going broke because of rapidly increasing production costs and dropping prices in the marketplace.

I have compromised on this subject more than a lot of my people feel I should have gone. To most of the farmers in the 13th Congressional District of Texas the figures in the Senate bill represent levels far below what it costs them to produce a bushel of wheat.

I agreed to try and raise only the 1977 target price because I felt it was an attainable goal. Farmers in my district need help today. Many of them will not be in business in 1978 if we do not help now. The $2.90 target price we speak of here is close to a dollar below the cost of production. It will put some added cash flow into the farmers pockets. It will buy some time for farmers and their creditors to work out of this situation.

We are not giving anyone anything. We are preserving a continuing supply of food and fiber for this country. By keeping some of our people in business, we are assured that our family farm system will continue. I have said before,

this bill must speak to the needs of our farmers during the times when they need help. We cannot turn away just because that is the time when the bill may cost some money. I only hope the target price we pass will be enough to keep these families in the business they love, producing food and fiber for this country and the world. The country cannot afford to push the wheat farmer over the brink. I believe this amendment will help save many who otherwise would be lost.

Mr. SEBELIUS. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I really appreciate this opportunity to stress my strong support for what would have been the English-Sebelius amendment.

First, let me say I appreciate the bipartisan effort by those in support of this amendment. I suspect those of us who have been trying to alert Washington and this body to the economic crisis now taking place in farm country and working to provide enough assistance to enable wheat producers to stay in business will feel a kinship to Gen. George Custer at Little Bighorn by the time farm bill deliberations have been completed.

I have a very special interest in this amendment other than being a coauthor. I am privileged to represent 57 rural counties in Kansas, a district that produces more wheat than any other State. We just harvested our third largest wheat crop on record. As a member of the House Agriculture Committee, I have been saying for the past 6 months that we have had two problems facing us in farm country.

Back during the month of March, in remarks before this body, I warned that if emergency action of some sort was not taken, we could face an agri-tragedy in wheat producing country. I said the House Agriculture Committee should take immediate action on several proposals and then we could proceed with deliberation in writing a good, long-term farm bill.

Mr. Chairman, we have certainly deliberated. We have just about deliberated the farm bill to death. And, now we face a situation where the economic situation in high plains wheat producing country is such that it takes precedence over establishing farm policy over the next 4 years. Simply put, if the farmer cannot earn at least the cost of production and goes out of business, this new farm bill will be academic.

I cannot stress enough to my colleagues the seriousness of our current economic situation. In a survey conducted in my behalf, 309 Kansas banks reported that 45 percent of their farm customers are in serious trouble. A new report from the Kansas Department of Revenue shows 1 month retail sales have dropped over $4 million this year from last in 25 southwest Kansas counties. The attitude of farmers, farm organizations, farm wife groups and now our businessmen and women and financial institutions has turned from concern to fear.

This amendment, Mr. Chairman, represents the best and most practical way to assist these folks: to signal to their financial lenders that help is on the way; to allow them to stay in business and weather the current price and surplus problem and to enable them to do the job they do best—produce food for this Nation and a troubled and hungry world.

I mentioned I have a special interest in this legislation. Let me also stress that contrary to what many may think, raising the target price for 1977 wheat is not special-interest legislation. To be sure, this amendment is parochial in terms of assistance but in terms of effect we are talking about the national interest. When farm income declines it effects the rest of the economy as well. The farmer's income dollar represents a tremendous catalyst to the rest of our economy. Conversely, if he can no longer stay in business, not only do we lose that production capability but in turn the economic activity within our transportation, processing, packaging, manufacturing, wholesaling and retailing industries also goes into a tailspin. This is happening throughout farm country today.

Mr. Chairman, this amendment failed by only one vote in committee. It failed because the leadership has stated it will be vetoed by President Carter due to budgetary concerns.

The point that I would like to make is that while the President's figures may look good on a budget chart down at the Office of Management and Budget, wheat and grain producers are in their hour of greatest need. We budget billions to finance a growing social welfare state and $20 billion for an economic stimulus program. This amendment represents a bare minimum level of support that we should provide for farmers. What sense does it make to increase spending for food stamps and deny assistance to the man whose job it is to produce food?

A little over 2 years ago, 259 Members of this body supported a farm bill that would have pegged the target price for wheat at $3.73 today. Since that time, three things have happened:

The wheat farmer's cost of production has escalated.

The price of wheat has dropped 44 percent and the farmer's annual income has dropped a shocking 57 percent.

And, we have a surplus of wheat that represents 944 loaves of bread for every man, woman, and child in America.

Since that time we have had 2 years of inflation and 2 years of declining farm prices. In introducing this amendment, we are simply asking our colleagues to approve a target price that is actually lower than the target price that was approved back in 1975.

Mr. Chairman, this amendment can be justified in term of need, expenditure, and the positive contributions that will result throughout our economy. To prove this point, I only need to remind this administration what President Carter said when he was a candidate; that crop support prices at least equal to the cost of production will give the determined farmer a chance to stay in business. I would remind my colleagues the $2.90 figure we are recommending falls below the cost of production for wheat.

Our former colleague and present Secretary of Agriculture said two years ago that farmers cannot bear the enormous risks being forced upon them by the administration's policy. Secretary Bergland was arguing in behalf of legislation that would have pegged the target price today at $3.73. This bill provides much less to farmers and represents a much lower cost for taxpayers than what Bob Bergland advocated in 1975.

Let me also point out our esteemed colleague, the chairman of the House Agriculture Committee, urged this body back in 1975 to approve a more generous farm bill saying it was bipartisan in nature. So is this amendment. Chairman FOLEY stated the bill would not raise prices to consumers; neither will this amendment. Mr. FOLEY stressed the bill would provide protection for full production and revise the target price so that farmers would be within the range of the cost of production. That is precisely what this amendment would do. I am glad that the chairman can now join us and offer the amendment. I urge its adoption.

Mr. ANDREWS of North Dakota. Mr. Chairman, will the gentleman yield?

Mr. SEBELIUS. I yield to the gentleman from North Dakota.

Mr. ANDREWS of North Dakota. Mr. Chairman, this is obviously not the time when it is necessary to recount the plight of the wheat farmer. I will not try to do that, but I think a few words of commendation are in order for my good friend, the gentleman from Washington (Mr. FOLEY), the chairman of the committee.

This proves once again that the gentleman is not only a perceptive politician but that he can count, and that is good. The wheat farmers are going to be very happy about this amendment.

I think a pat on the back is in order also for my good friend, the gentleman from Kansas (Mr. SEBELIUS). I have been joining the efforts of Members on both sides of the aisle, including the gentleman from Iowa (Mr. HARKIN), and Members of the Subcommittee on Livestock and Grains. There has been a whole host of meetings held in different places around here in this building during the past 5 or 6 days, but those meetings would not have resulted in success for the American wheat farmer if my colleague, the gentleman from Kansas (Mr. SEBELIUS), had not voted a solid band of Republicans for a better price for wheat in the committee.

Although they were beaten by a bunch of proxies from the other side of the aisle and lost by a one-vote margin, the gentleman from Kansas kept the heat on in the committee. We continued to put the heat on to tell the story of the Amer-

ican farmer's needs and obviously the administration, through the chairman of this committee, has just now accepted it. We are grateful for that, and I want to congratulate my friend, the gentleman from Kansas, for keeping the pressure on, and I want to congratulate my colleagues on the other side of the aisle for coming around to our way of seeing things.

Mr. Chairman, this action is going to serve the wheat farmer and the consumer very well in the months ahead.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. SEBELIUS. I yield to the chairman of the committee.

Mr. FOLEY. Mr. Chairman, I do not wish in any sense to bring a mood of discord and disagreement into this, because I agree with 99.44 percent of what the gentleman from North Dakota (Mr. ANDREWS) has said, but I want to point out that this is not the amendment that was offered in committee.

The amendment that was offered in committee would have changed the target prices and set loan rates for the entire 4-year period of the program. Again I repeat that I would not want to do that. I am trying through this amendment to deal with the very severe problems of this crop year.

Mr. ANDREWS of North Dakota. But, Mr. Chairman, if the gentleman will yield further, my colleague knows that the administration bill had nothing in it for 1977, and certainly this amendment speaks with the flavor of the effort that we have been carrying on for the American wheat farmer.

Again I want to congratulate my friend, the gentleman from Kansas (Mr. SEBELIUS) for the hard work he has done.

Mr. THONE. Mr. Chairman, will the gentleman yield?

Mr. SEBELIUS. I yield to the gentleman from Nebraska.

Mr. THONE. Mr. Chairman, this is the administration of the born-again Christian, and with that in mind, frankly, I would like to say to our beloved and respected chairman of the committee, the gentleman from Washington (Mr. FOLEY), welcome back. Praise the Lord and welcome back.

I congratulate the gentleman for offering this amendment, which is essential to American agriculture, if it is to survive.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. SEBELIUS. I yield to the gentleman from Washington.

Mr. FOLEY. Mr. Chairman, I believe it is said that the Lord praised the one who returned more than the 99 who were lost.

Mr. ENGLISH. Mr. Chairman, will the gentleman yield?

Mr. SEBELIUS. I yield to the gentleman from Oklahoma.

Mr. ENGLISH. Mr. Chairman, I certainly want to commend the gentleman from Kansas (Mr. SEBELIUS). He has fought all the way in this effort. This has been an ongoing effort for the past 4 months.

The gentleman from Kansas is my neighbor to the north, and I thank him for his assistance and for the bipartisan support we have had for this amendment. Without that effort, I do not believe this would have been possible today.

Mr. SEBELIUS. Mr. Chairman, I thank the gentleman from Oklahoma (Mr. ENGLISH).

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. SEBELIUS. I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Chairman, I associate myself with the remarks made by the gentleman from Oklahoma (Mr. ENGLISH). I, too, want to congratulate the gentleman in the well.

This has been one of the very few nonpartisan efforts that we have had, with a lot of Members getting together in the House.

If it had not been for the diligent efforts of the gentleman in the well and certainly of my neighbors, the gentleman from Nebraska (Mr. THONE), as well as the gentleman from North Dakota (Mr. ANDREWS), and others, we would not be in the position that we are today. So I commend the gentleman from Kansas (Mr. SEBELIUS) for what he has done. It has been truly a magnificent effort on his part.

Mrs. KEYS. Mr. Chairman, will the gentleman yield?

Mr. SEBELIUS. I yield to the gentlewoman from Kansas.

Mrs. KEYS. Mr. Chairman, I would like to associate myself with the remarks of the gentleman from Iowa (Mr. HARKIN) and the gentleman from Kansas (Mr. SEBELIUS) and thank him for all of his efforts. I also thank the gentleman from Oklahoma (Mr. ENGLISH) for his efforts, as well as the gentleman from Kansas (Mr. GLICKMAN) and all the rest of the Members.

Mr. Chairman, I do not want us to forget many of the people from the grain belt, from Kansas and from other States, who found their way to Washington to sit endlessly in our offices and in the offices of the administration to make the true plight of the wheat farmer known. I believe we should thank them today, too, for their efforts in this matter.

Mr. SEBELIUS. In closing, Mr. Chairman, I want to extend heartfelt thanks to the chairman, the gentleman from Washington (Mr. FOLEY), and to all of the others who have worked so hard on this bill.

The CHAIRMAN. The time of the gentleman from Kansas (Mr. SEBELIUS) has expired.

(On request of Mrs. SMITH of Nebraska and by unanimous consent, Mr. SEBELIUS was allowed to proceed for 1 additional minute.)

Mrs. SMITH of Nebraska. Mr. Chairman, will the gentleman yield?

Mr. SEBELIUS. I yield to the gentlewoman from Nebraska.

Mrs. SMITH of Nebraska. Mr. Chairman, I rise to commend the gentleman in the well, the chairman, Congressman THONE, and all those out in our congressional districts who have worked so diligently to bring the plight of farmers to the attention of Washington. Those of us who represent farming districts have been trying all year to impress upon the Congress the necessity of addressing both the short-term and the long-range needs of the agricultural economy.

There are sections of this economy, especially the wheat farmers, who have their backs to the wall. They are suffering from what some people have descriptively called the "double whammy"—low commodity prices and high inflationary costs.

In economic terms, the economist-writer, Elliott Janeway, describes the situation thus:

> The Farm Belt credit crunch is the result of a double pinch. Inflation of costs is accounting for only half of the damage; deflation of incomes for the other half. This one-two punch from cost inflation and income deflation takes a crueler toll of its victims than the familiar rhetoric of "stagflation" would suggest.

It seems ironic that the 5 percent of the people who provide the food and fiber for the 95 percent are the ones who are taking it on the chin. But that is exactly what is happening. The credit crunch which Janeway and other economists talk about is very real.

A Department of Agriculture survey conducted earlier this year among bankers from a nine-State area—Nebraska, Kansas, Oklahoma, Texas, Colorado, South Dakota, North Dakota, Minnesota, and Montana—confirmed what the Members of Congress from these States have been discussing over the past few months—there are many farmers who are unable to pay their debts, and many more who either have had to refinance or dispose of assets.

Since the survey was published, further deterioration has set in. As many as 40 percent of the farmers cannot make payments on their operating loans. Many rural banks are carrying loads up to 80 percent of their limits and are experiencing liquidity problems. Some farmers who have purchased land in recent years cannot generate enough income to service their debts and are falling farther behind. Even farmers in the most favorable situations and with the very best management practices are making barely enough to pay the interest on their loans.

What we do in the farm legislation before us can be the key in making it possible for them to weather the crisis. Assistance is needed in 1977 before we even think of 1978 and the other years covered by the bill.

This morning, the elevator price for wheat in my hometown of Chappell, Nebr., is $1.79 per bushel. This is far below the cost of production, and the costs involved in determining the farmer's cost of production continue to escalate. No wheat farmer can be blamed for not selling his wheat at these prices. He hopes to hold on and survive until prices are better.

In addition to a price problem, we have a storage problem. With prices as low as they are, most of this year's crop will go into storage. Present storage programs are designed to encourage a farmer-held

national wheat reserve. It is vitally important to farmers that any reserves be kept in their own hands and under their control.

This sentiment was made clear to me in the results of the special questionnaire for farmers I included as part of my annual opinion poll this year. The following is the question and the responses on storing surplus grain: Do you favor maintaining supplies of surplus grain:

	Percent
(a) In the hands of farmers without government controls	89
(b) Under control of U.S. government	9
(c) Under control of international organizations	2

In debating this farm legislation, then, Mr. Chairman, we must keep in mind the current crisis which faces the farm economy. It is a situation which cries out for immediate help. We cannot play politics with it. We have the obligation to deal with it effectively and forthrightly. We must help improve the cash flow of the farmer and get him through this credit crunch. If we fail, the consequences will be felt through the entire economy. We know what happens when the farm economy starts to slack off. Almost everything starts to slack off as well. We have been through this kind of situation several times in the Nation's history. Because so many people get hurt, we should not let it happen again. We can do something about it by passing the right kind of a farm bill. I urge all my colleagues to support the English-Sebelius amendment.

Mr. HAGEDORN. Mr. Chairman, will the gentleman yield?

Mr. SEBELIUS. I yield to the gentleman from Minnesota.

Mr. HAGEDORN. Mr. Chairman, I would like to commend the gentleman from Kansas (Mr. SEBELIUS) for his diligent work. I also commend my colleague, the gentleman from Oklahoma (Mr. ENGLISH), and I certainly want to praise the chairman of the committee for his wisdom in accepting this amendment today so that we can move forward to the grain amendment later.

Mr. Chairman, I rise in strong support of the Foley amendment to increase 1977 target prices to $2.90 per bushel for wheat and $2 per bushel for corn. The amendment would only affect crops already planted this year and would not affect House figures set for the remaining 3 years of this bill. Despite the relatively limited impact, it is an amendment critical to the well-being of a large segment of American agriculture, and ultimately to the American consumer.

In 1975, when wheat was selling for nearly $4 per bushel and corn at nearly $3 per bushel, both down from earlier highs, the House Agriculture Committee proposed target price levels of $3 and $2.25 for wheat and corn respectively, essentially the same as in 1973. Two years later, during which wheat prices have dropped by nearly 50 percent and corn prices by about one-third, the committee proposes to reduce target prices just enough so that farmers will continue to receive nothing from this program.

The strategy seems to be to call for high target prices when farm prices are high and low target prices when they are low, so that target prices are established just high enough to insure that no farmer will need their protection. I am sympathetic to the need to reduce Federal spending wherever possible—although many supporters of the committee figures seem to focus almost all their cost-cutting attentions on the farmer—but it is a hoax on farmers to adjust target prices in the manner that this bill does. Farmers, and indeed any beneficiaries of Federal insurance programs, should be entitled to an expectancy that the rules of their game will not be changed in midstream, and that eligibility standards will not continually be adjusted whenever program beneficiaries threaten to satisfy those standards.

While farm prices, particularly wheat and feed grain prices, have fallen precipitously in recent years, farm production costs have continued to soar. The current prices for wheat and corn are well below their costs of production. In effect, this means that the more wheat or corn farmers produce, the more money they lose. The huge surpluses of wheat that we are currently experiencing are not affecting only wheat prices, of course; they are having a severely depressive effect upon all grain prices. If we are going to forestall accelerating trends in this country toward concentration of farm holdings and protect thousands of small family farms from financial ruin, I believe that an emergency measure such as the English amendment is necessary.

It is necessary to give the farmer an opportunity to adjust his plantings, the Government an opportunity to analyze shortcomings in its supply management policies, and an opportunity for exporters to develop new markets.

Mr. Chairman, the farmer cannot continue to lose $1 to $1.50 per bushel of wheat and remain in business. While this amendment is going to result in slightly increased costs, the long-term benefits to the country in keeping these farmers in existence will far outweigh this. The wheat farmer is currently facing the worst economic crisis in nearly four decades, and extremely vulnerable to erratic world grain supplies and demand. By increasing target prices simply to levels established by the Senate, and below levels proposed by the administration during its preadministration days, we can at least give the farmer a fighting chance to keep his head above water.

Mr. POAGE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I do not rise to make a political speech or to claim that either party is responsible for the language that has been brought before us because I do not believe that is true. I think this has been worked out on a bipartisan basis. I do not think that it was, as some Members have suggested, the work of either of the parties.

I think we have seen the gentleman from Oklahoma (Mr. ENGLISH), the gentleman from Kansas (Mr. SEBELIUS), the gentleman from Nebraska (Mr. THONE), the gentleman from Texas (Mr. HIGHTOWER) and a dozen others from various States and representing various political parties all working to try to do something to meet the immediate needs of our grain farmers. I congratulate these Members. They have each exhibited intelligent and effective leadership.

Mr. Chairman, I am one of those who have felt that we must not make this program too expensive, that we must not offer a bill that would invite a veto, because I do not think that a vetoed bill ever helped anybody except in a political way. In order to help the farmers, I think that we have to have a bill passed and signed. We have for some time understood, and I think properly understood, that the President felt he could not go to the figures that the other body has used. We now recognize that the problem is immediate. It is on our doorstep this year; and this amendment takes care of this year and does not add to the cost of future years.

Therefore, Mr. Chairman, I think that there is no reason to expect that this amendment would meet with executive disapproval. I have no commitment from the President, but I think that this amendment can meet with his approval.

For that reason, I expect to support the amendment; but I do want to call attention to the fact that we cannot load this bill down with 4 years of expense greater than our ability to pay and expect to get anything out of it.

I hope, Mr. Chairman, that we will go along, take care of the problem which confronts us in the year 1977, and then hold fast on a reasonable set of figures for the succeeding years.

Mr. ENGLISH. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I gladly yield to the gentleman from Oklahoma.

Mr. ENGLISH. Mr. Chairman, those of us who are the "outlaw 50" are delighted that we have made it possible for those of you who have not always been with us to join with us today.

I hope we will have a big vote in favor of it.

Mr. POAGE. I appreciate the gentleman's welcome. I accepted, and in turn I am delighted to nave the gentleman from Cklahoma and his distinguished associate join with those of us who have long recognized that we must keep the cost of the total program low enough to secure Presidential approval else we will have done no more for our farmers than all of nothing.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I believe we have seen here in the last few minutes how the poor old taxpayer has gotten stung and now all of the honey is flowing all over the floor of this chamber. And zappo for the poor taxpayer.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. FOLEY and by unanimous consent, Mr. POAGE was allowed to proceed for 1 additional minute.)

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to my chairman the gentleman from Washington.

Mr. FOLEY. Mr. Chairman, let me state to the gentleman from Massachusetts that I do not wish to deny to the gentleman that this amendment has a heavy cost. As I said before, the corollary amendment which I intend to offer to the corn section, the feed grain section, which raises the target price for corn will have a budget saving, at least it will reduce the exposure of the budget with respect to the corn program. So the package is not all risk to the budget.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I would inquire of the gentleman from Washington, my good friend (Mr. FOLEY) did the gentleman oppose this amendment up until today?

Mr. FOLEY. I am sorry, I did not hear the question of the gentleman from Massachusetts.

Mr. CONTE. The gentleman did oppose this amendment up until today, did he not?

Mr. FOLEY. No, I did not ever speak in opposition to this amendment.

Mr. CONTE. Did the gentleman ever speak in favor of it?

Mr. FOLEY. I said I was in favor of adjusting the target prices and the loan prices for corn and wheat at some stage of the legislative development.

Mr. CONTE. Will the gentleman tell us what this is going to cost in dollars and cents?

Mr. FOLEY. The cost is estimated to be $470 million for this amendment. I will also tell the gentleman something further.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. FOLEY and by unanimous consent, Mr. POAGE was allowed to proceed for 1 additional minute.)

Mr. FOLEY. Mr. Chairman, if the gentleman will yield still further, I would tell the gentleman from Massachusetts that the committee bill has a $1.75 loan rate for corn and the $1.85 target price. If we should have a disastrous drop in corn prices that could, in fact, result in a $600 million payment on corn. The amendment that I am going to offer, which is an amendment sometimes known as the Harkin amendment, would raise the target price and loan rate up to $2.

Mr. POAGE. Mr. Chairman, I would like to point out that by emphasizing the importance of following the philosophy of this farm bill under which the farmer's income is guaranteed by the target price, so that the loan price is there to protect the Government and does not change the farmer's income.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. QUIE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to engage the chairman of the committee, the gentleman from Washington (Mr. FOLEY) in a colloquy.

The gentleman indicates that by raising both the loan rate and the target price on corn to $2, it will not cost the taxpayer any money. What about the target price on wheat?

Mr. FOLEY. In deficiency payments?

Mr. QUIE. In deficiency payments.

Mr. FOLEY. It will result in some taxpayer costs, but most of these costs, of course, are returned with interest.

Mr. QUIE. The gentleman is talking only about this fiscal year?

Mr. FOLEY. That is correct.

Mr. QUIE. What if there is another 6 billion bushel corn crop next year? We would have a large carry-over, so that the cost to the taxpayer will then start going up because of keeping all of that grain in storage. The wheat program with a $2.25 loan and $2.90 target price will be expensive in this year but the crop will move because of the lower loan and not remain to glut the markets and hold down prices in future years.

Mr. FOLEY. I think the problem the gentleman addresses as to whether we have another 6 billion bushel corn crop, and another 2 billion bushel plus wheat crop, will have to be considered very shortly after the crop reports of August are available in terms of some possible set-aside on those crops. I think it is relatively necessary to have a set-aside on wheat if we are going to continue to have these 2 billion bushel plus wheat crops as we did in 1975 and in 1976. We will have to adjust to it.

Mr. QUIE. I would say, Mr. Chairman, that we would have a better feed grain program if the Chairman had done something similar with feed grains as he is going to do now with wheat in that the target price would be higher than the loan price.

Mr. FOLEY. If I may tell the gentleman what is contemplated in the committee bill, in 1978, starting next year, the target price on corn in the House committee was $2.10 and the loan price was $2.

Mr. QUIE. That is right.

Mr. FOLEY. The $2 target price and $2 loan rate would apply to 1977. Next year it would be $2.10 in corn on target and $2 on loan.

Mr. QUIE. I would say we would have a better program in the gentleman's proposed amendment if they had gone to a $2 target price and let the loan be at, say, $1.90.

Mr. FOLEY. That is an item that could be considered in conference when we get to the conference committee, because the Senate provision in this respect in 1977 has a target price of $1.70 and a loan rate of $1.75. They have a rather interesting situation with the target price lower than the loan rate. There will be sufficient opportunity for some adjustment in conference.

Mr. QUIE. Mr. Chairman, I will say that I will not disagree with that amendment when it comes up, but I just want to leave this note of caution with the members of the committee that they may be causing severe trouble in the future by taking this way out now, not to cost the taxpayers any money this year on the feed grains could cause major budget and market problems in the years ahead.

Mr. WATKINS. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I would like to stand and commend my colleague, the gentleman from Oklahoma (Mr. ENGLISH), for the tremendous hard work and effort he has made in organizing a lot of people to put in a lot of long hours, along with our colleagues on the other side who also provided a tremendous amount of energy to see that this amendment was adequately presented here today. I say "adequately presented" but I would like to say to our chairman, the gentleman from Washington (Mr. FOLEY), that he surely changed the tone of debate today, because a lot of us have gone to a lot of work—and it was not in vain—but I would like to say it did change.

Also I would like to commend the Members of this House, because as I visited with the wheat farmers in my district of Oklahoma, I recognized that many of them were discouraged and many of them were bitter. Many of them had refinanced their land, and many of them had outright auctioned and sold their land off. I commend this House for having a feeling and realizing that the farm community of this Nation was in a crisis, a crisis that was developed by a farm program that encouraged the farmer to plant from fence row to fence row. Then there was the decision made by the Government to place embargoes and not provide adequate markets for the wheat. Then when they produced another wheat crop, it not only filled the bins but ran them over, and they still did not have the market which was promised them.

I think that we have heard the cry from the people in our farming communities expressing their concern, and I think today that the action of this House has restored a great deal of faith in the Members of this House. It is great to see Members who will listen and who will heed the words of people who need their help.

I want to commend the chairman, the gentleman from Washington (Mr. FOLEY), for his position, and also the Members on the other side of the aisle, and also our colleague, the gentleman from Oklahoma (Mr. ENGLISH), for the tremendous job he has done.

Mr. BAUCUS. Mr. Chairman, will the gentleman yield?

Mr. WATKINS. I yield to the gentleman from Montana.

Mr. BAUCUS. Mr. Chairman, I thank the gentleman from Oklahoma for yielding.

I too want to thank the chairman, the gentleman from Washington (Mr. FOLEY). He has demonstrated his commonsense and wisdom by recognizing what is possible here today.

Second, I would like to say a few words to the gentleman from Connecticut (Mr. GIAIMO), the chairman of the Budget Committee, whom I see lurking in the wings and whom I suspect will be

giving us some words of doom in a few moments. I want to pass on a story about a little red hen in my State:

Once upon a time, this little red hen found some kernels of grain in the barnyard. The little red hen decided it would be nice to grow some wheat and make some bread for all the other animals in the barnyard.

So the little red hen asked, "Who will help me plant?"

"Not I," said the cow.

"Not I," said the duck.

"Not I," said the pig, "but when you do plant, be sure to plant fence to fence."

So the little red hen planted her wheat fence to fence. She went to great expense to make sure she grew only the finest wheat for all the other animals. They, meanwhile, enjoyed a steady stream of income, and grew fat, for the little red hen bought all of her equipment from them, even fuel oil.

When the wheat was ripe, the little red hen went to harvest. And she asked, "Who will help me harvest my wheat?"

"Not I," said the cow.

"Don't know how," said the duck.

"Just let me inspect it when you're done and make sure it conforms to my regulations," said the pig.

So the little red hen harvested her wheat all by herself in the hot sun. When she was done she had a bumper crop and should have been very proud. But she had produced so much wheat that she couldn't even get back her cost of production. So she came to the other animals as they were enjoying a loaf of bread made from her scrumptious wheat and she asked, "Who will help me sell my wheat?"

"Anti-Consumerist!" bellowed the cow.

"Fiscal Junky!" quacked the duck.

"Budget buster!" oinked the pig.

And they all slapped an embargo on the little red hen so that she couldn't sell any of her wheat outside of the barnyard.

The little red hen soon went out of business. She was replaced by a big gruff rooster named General Mills. And the next year food prices in the barnyard soared, the cow and the duck grew thin, and the pig lost his job.

If you have followed this parable up to here, then the moral is obvious. No one gets the fruit of another man's or woman's labor without paying for it—sooner or later.

We can save some tax dollars this year by keeping the target price for wheat at $2.65. Of course, by doing so, we will be putting several thousand family farmers out of business. But we will be saving money. Or will we?

I can say to you, with absolute certainty, that as efficient family farms sell out to inefficient conglomerates, food prices will rise. I can say, with absolute certainty, that unemployment will rise, and not just in rural districts. And I can say, with absolute certainty, that as a result of rising food prices and growing unemployment, the loss to the Federal Treasury will be much greater than any increase in spending we pass today.

The only vote for cheap food, for the consumer, and for balanced budgets, is a vote for this amendment.

Again I thank the chairman, the gentleman from Washington (Mr. FOLEY). I think the President, too, has seen the wisdom of this amendment.

Mr. NOLAN. Mr. Chairman, will the gentleman yield?

Mr. WATKINS. I yield to the gentleman from Minnesota.

Mr. NOLAN. Mr. Chairman, I rise in support of the amendment. While I believe the support prices should be higher to fulfill the needs of farmers and keep faith with the President's campaign promise to support wheat and feed grains at cost of production levels. This amendment is nevertheless a substantial improvement over the committee bill and will stand a very good chance of becoming law by avoiding the veto that has been threatened by the President.

Mr. Chairman, I want to close by thanking the chairman, Mr. FOLEY, for supporting this amendment and compliment Mr. ENGLISH, Mr. HARKIN, Mr. BAUCUS, Mr. SEBELIUS, and Mr. THONE for many hours of hard work and determination that have made passage of this amendment possible.

Mr. FITHIAN. Mr. Chairman, will the gentleman yield?

Mr. WATKINS. I yield to the gentleman from Indiana.

Mr. FITHIAN. Mr. Chairman, I thank the gentleman for yielding.

I commend the chairman and all the Members on both sides of the aisle who have worked for this.

Mr. Chairman, I think that it is appropriate for us to examine today, as we grind our way through deliberations on the omnibus farm bill, what direction this legislation will take us in our Nation's agricultural policy.

Agriculture is truly the United States greatest industry, employing 2 out of 10 people in the private sector. The productivity of our 2.8 million farms is admired worldwide, for only in America can a farmer produce enough to feed himself and 55 other people. We are, indeed, the world's breadbasket.

Yet, for all that agriculture means to our Nation and the world, we face a number of problems in farm production today—problems which may dramatically alter what we now take for granted as a part of the agricultural scene.

We have been unable to solve the puzzle of the proper role of Government in agriculture. I, for one, believe deeply in free market agriculture, and I believe that our farm economy thrives when the functioning of the marketplace without restraint is permitted. But because of the pressures of the world economic scene, we have been forced to accept the necessity of limited Government involvement in supporting commodity prices and assuring that American farmers will not go broke. It appears that the legislation which we now have under consideration succcessfully walks the fine line between overinvolvement in agriculture by the Government—which has been shown to produce only economic chaos—and total withdrawal from agricultural policy by the Government, a tactic which in tough times on the farm such as now is simply impossible to defend.

This summer is a difficult time for the average farmer. Corn and wheat prices are plummeting, and the outlook is bleak. USDA estimates that we will have a record corn crop of 6.3 billion bushels and a wheat harvest of 2.04 billion bushels, the third largest on record. This tremendous grain glut will continue to depress prices, meaning that we must take action immediately in this Congress to assure American farmers that they will not utterly fail financially in the marketplace. Action to raise price support levels through this farm bill will temporarily shore up prices and enable thousands of farmers who otherwise would go broke to survive. But it is not a long-term solution to the crisis facing American farmers today.

I believe that the future stability of the farm economy and future farm produ tion can only be assured through an aggressive agricultural export policy on the part of the U.S. Government. Let a bit of history speak of the importance of farm exports:

Not too many years ago, farm programs cost the Government $3.4 billion annually, as we tried to keep land out of production to keep our markets from being depressed by a glut of grain. The farmer's income was "stabilized" at a level two-thirds that of urban citizens. By last year, that situation had changed.

In 1954, American farmers harvested 346 million acres. Of that amount, we exported only 17 million tons of grain—the produce of 37 million acres. In 1975, however, American farmers harvested approximately the same number of acres, but we exported more than 103 million tons of grain—more than one-third of the crop, representing the produce of 100 million acres. With that type of demand for our agricultural produce, is it any wonder farm income increased over that time?

Today, world demand for our grain has diminished. We no longer have the great volume of grain going to the Soviet Union or China that we had in recent years due to crop failures and drought in other parts of the world. Too much grain remains in this nation. And that means trouble on the farm.

One job in eight in this Nation depends on farm exports, in terms of indirect income to the economy. Every dollar in farm exports creates another 90 cents of ouptut, sending a series of widening ripples throughout our economy. As farm exports fall off, our entire economy is hurt.

What our Government must commit itself to today is a new, more aggressive agricultural export policy. Only then can we restore health to our farm economy.

First, we need to assure federal assistance to all commodities with export potential—not just the limited number of commodities involved in our farm exports today.

Second, the Government should make matching assistance available to any organization—large or small—which completes certain approved market development activities. Currently we have too few private organizations working in cooperation with the Government to develop overseas markets for our farm products.

Third, we must strengthen our market intelligence and marketing assistance efforts. This can be done by stationing more Food and Agricultural Service per-

sonnel abroad to expand the reporting of export opportunities, and by adding FAS personnel in this Nation to assist exporters in taking advantage of those possibilities. I am heartened in this regard by the fact that we succeeded in adding $3 million to the FAS budget this year—in the Agricultural Appropriations Act which is now in conference committee—for this very purpose.

Fourth, we should extend market development to additional nations, instead of limiting our contacts to relatively few big markets. That will involve a major commitment of manpower to parts of the world where our farm markets are not now developed, but I think that the money we spend on this will be well worth it.

Fifth, we should step up our highly successful "buyer visit" program, by which foreign buyers come to America to become acquainted with our market system and the high quality of agricultural produce which is available here.

And finally, we need tough enforcement of grain inspection regulations, as contained in the law passed by the last Congress, to assure foreign buyers of the integrity and quality of U.S. farm products. We must do this to guarantee that we will never again face the dangers that confronted us last year, when foreign buyers were seriously questioning whether or not they could count on the United States to supply adequate quantities of good-quality food and feedstuffs.

I believe that all of this is possible. And I believe that the Congress and this administration will be remiss in our responsibilities to the American farm community if we fail to act in this direction.

Mr. Chairman, the farm bill that we act upon this week is a beginning. It addresses itself to the immediate problems facing American agriculture, but our work is cut out for us if we are to shape an agricultural policy that will keep our domestic market free of interference and keep our foreign markets strong and healthy as we move toward the next century. I urge my colleagues to join me in accepting the challenge we face in this area.

Mr. GIAIMO. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I hate to cast a sour note here in this love feast, but I think I should. We ought to know what we are talking about, in terms of money, because we are talking about billions of dollars that the American taxpayers are going to pay.

Let me just say this to the Members. I recognize the problem affecting agriculture this year. I believe there is an obligation and a commitment on our part in the Congress to concern ourselves with the problem, particularly with the problem of bumper crops in wheat and corn.

But I think there is a line beyond which we should not go. The reason is that what we are going to be doing is encouraging additional production and additional storage costs and additional costs for American consumers and taxpayers.

We started out this year with a budget proposal by the President on February 22 of $2.3 billion for agricultural outlays. We in the Congress knew there was a crisis at that time. In the following months, we cooperated with the Agriculture Committee and added an additional $2 billion for agriculture in our budget resolution. We added an additional $2 billion in outlays for fiscal year 1978, bringing it up to $4.3 billion. And, if the Members will abide a pun, that is not hay we are talking about; that is $4.3 billion.

Things then got a little worse. And the Agriculture Committee, under the able leadership of the gentleman from Washington, Congressman FOLEY, came out with a bill which went beyond that by, I believe, an additional $360 million, putting us about $2.3 billion over the President's budget, for a total for fiscal year 1978 of about $4.6 billion.

To that, we must add a new entitlement program for sugar, which will cost about $200 million; an additional $70 million for agricultural research; and reestimates under existing law of about $300 million. Now, an amendment on wheat that will cost $475 million. Later, we will get an amendment on sugar. May I ask what that will cost?

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Washington.

Mr. FOLEY. Mr. Chairman, the gentleman is correct and, as I said before the gentleman took the well, the estimated cost of the amendment I offered on wheat, raising the target price to $2.90 is $472 million in fiscal year 1978. The gentleman is right on that.

Mr. GIAIMO. For the 1977 year crop?

Mr. FOLEY. For the 1977 year crop. On the other hand, it cannot encourage more production, as the gentleman said, because the wheat crop is already planted in 1977.

Next year the target price on wheat goes to $3.

The amendment I intend to offer on the feed and grain section raises both the target price and the loan rate, to $2 and has a potential saving of $600 million, if the corn price were to drop to the loan level of $1.75. It will result in additional outlays for loans, but it will save, in my opinion, at least $300 million, because there would be no deficiency payments on the 1977 crop.

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

(By unanimous consent, Mr. GIAIMO was allowed to proceed for an additional 4 minutes.)

Mr. GIAIMO. Mr. Chairman, what I am trying to stress here is that we must understand the magnitude of the funds we are putting into agriculture at this time. I think the gentleman from Washington will agree that it is mere speculation to predict what will happen to corn prices; whether, in fact, we will save money; or what in fact, this amendmnet will cost. It is conceivable that there could be huge outlays in this area. We are really not sure at this time, because it is a particularly volatile situation; but if we add all of this up, what we are going to have is an agricultural function with outlays of approximately $5.5 billion in fiscal year 1978.

I submit that while the argument is made that this amendment will not encourage additional production, because the crops are already planted, the fact is that when we advise people, whether they are in agriculture or business, that they are going to be bailed out, there is not as much incentive for farmers to rationalize their efforts. I suspect we are going to have additional problems in subsequent years.

I want to see the votes of this House when we have the city of New York and its problems come up; I want to see the votes when our urban people come up here with their very pressing problems. It is all well and good to talk about the romance of agriculture and the agricultural way of life. We understand that and we are trying to be reasonable and we are trying to be helpful.

I just think we have gone a little too far. I am not saying we should not do anything about the problems that are facing people with the present crop; but I am saying I think we have gone a little too far with this amendment. We are adding roughly about half a billion dollars more to an agriculture budget that is going to be well in excess of $5 billion in outlays. When we bring the next budget resolution up, I want to see how this House votes when we present these huge deficits, which are going to be somewhere in the neighborhood of $60 billion. I will be very interested in what happens at that time.

Mr. BURLISON of Missouri. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Missouri.

Mr. BURLISON of Missouri. Mr. Chairman, I think we need to put some of the figures that have been mentioned into perspective. The gentleman has suggested that we could approach something near $5 billion in this program.

Mr. GIAIMO. Sure, we are.

Mr. BURLISON of Missouri. Mr. Chairman, if the gentleman will yield further, let me point out to the gentleman that way back in 1969 we spent $5.7 billion on farm programs and here we are, 8 years later, complaining about a program that may cost a billion or $2 billion or $2.5 billion less than that, while during these 8 years we have seen the defense budget, for instance, balloon to over $110 billion.

We have in this bill before us almost $6 billion for food stamps alone.

The CHAIRMAN pro tempore. (Mr. RONCALIO). The time of the gentleman from Connecticut has expired.

(On request of Mr. BURLISON of Missouri and by unanimous consent Mr. GIAIMO was allowed to proceed for 2 additional minutes.)

Mr. GIAIMO. Not in the $5 billion I am talking about.

Mr. BURLISON of Missouri. We are speaking of the farm commodity programs.

Mr. GIAIMO. Right.

Mr. BURLISON of Missouri. And we

are getting to the food stamps later, and food stamps alone come to approximately $6 billion. That is a miniscule segment of the welfare program in this country. Here we are now, this year, in the farm commodity programs of 1977 with expense to the Government less than $2 billion when we have got a $5 or $6 billion food stamp program.

So, I sympathize with the point the distinguished chairman of the budget committee is making, but I think we have got to keep in mind, and the President has got to keep in mind, that we have got a segment of our society now, of our economy now, that is in desperation. Let me say to my friend that in recent years when we were spending less for a farm program, we were in a highly prosperous period for many commodity farmers. We do not have that prosperity now. We have a recession, and we ought to be able to change our outlook in order to confront that problem.

I appreciate my friend yielding.

Mr. MARLENEE. Mr. Chairman, I rise in support of the Foley amendment. I know it has been mentioned here before about the hundreds, indeed thousands, of people who made the long trek here to Washington to try to tell this Congress about the financial problems of the wheat farmer. I, myself, visited with hundreds of these farmers and some of them had to wait outside my office for considerable periods of time before I could see them.

I had hoped, Mr. Chairman, that we could have settled this matter in committee so those proud men and women could have been reassured that this Congress was not going to abandon them. We knew before we heard the testimony that our wheat farmers were in trouble. Throughout the testimony one thing was certain, if financial help is not provided for the 1977 crop, nearly one-third of the farmers will be bankrupt by 1978. Nothing has changed since the committee hearings, except that the price of wheat has continued to drop and is now below $2 a bushel. Action cannot be delayed for another day, or another hour. The wheat farmers of America must know that we will help them in 1977. Even this week, delegates from my State of Montana were visiting Washington trying to assist in efforts to pass what would have been the English-Sebelius amendment.

Thinking back to the amendment in the full Agriculture Committee to raise target prices and loan rates, which was defeated by a vote of 23 to 22, I recall that every Republican on the committee lined up on the losing side—that of favoring higher prices. We knew that with a target price of $2.65 for 1977, that the real losers would be our wheat farmers.

I have been laboring for many weeks under the impression given me by the chairman that the President would veto any price over the $2.65 per bushel voted out of committee. And I have been working extremely hard with my colleagues to insure passage of what was then the English-Sebelius amendment.

I wish that we had known earlier that the chairman was going to offer this amendment so our hard-pressed farmers could have saved their money spent for trips and phone calls to Washington. However, I commend my colleague, Chairman FOLEY, for not abandoning our wheat farmers and for offering this amendment.

Mr. KRUEGER. Mr. Chairman, I move to strike the last word, and I rise in support of the amendment.

Mr. Chairman, recently one of my constituents went to the grocery store with a bushel of wheat. He was unable to trade it for a pound of coffee, because the price of wheat had descended to such an intolerably low level.

We realize that a person in agriculture is in a very peculiar position compared with any other kind of business. The person in agriculture has no control, basically, over the time at which his product is ready for sale, whether it be wheat or animals. He simply has to bring his product to the market, and cannot really effect the price that he receives for his product. A businessman judges his inventory, and has flexibility to enlarge or lessen his inventory as he estimates what the market may be. A farmer has no such flexibility. He usually must accept the price offered. But that price, we hope, will be one that will allow him to stay in business.

What we now find is that our wheat farmers in this country are faced, having been encouraged earlier to produce the maximum levels, with prices far below their own production costs. They were advised by the Department of Agriculture, several years ago to plant large crops for export. They took that advice. Having taken it, they now find that at the same time they are facing higher local taxes because of very substantial increases in land values, increases related not to the productive capacity of the land, but to value of land to speculators, they are unable to meet their bank loans on their crops. Some of the most productive people in this country, and one of the most productive and capable areas of our whole economy, wheat farmers and agriculture, are faced with possible financial ruin. It is for that reason, it seems to me, that the amendment offered by the distinguished chairman to raise the price of wheat to a tolerable level is in the long-run interest of all the citizens of our country.

It is going to be in the long-run interest of consumers, because the farmer only gets about 5 cents for his wheat out of that cost of the price of a loaf of bread. If we do not have those farmers continuing, all of us in this country are going to suffer.

This is not a long-term program. It is an attempt at a short-term, one-time price increase, and this increase is intended to help keep solvent our wheat farmers so that they can help feed our citizens today, and will be able to produce for tomorrow. I urge that the committee support the Foley amendment by a decisive margin.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. FOLEY).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. HARKIN

Mr. HARKIN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HARKIN: Line 16, page 9, after the words "disaster payments" insert the words "for prevented planting."

Line 19, page 9, strike out the period and insert the following: "and disaster payments for low-yield shall be made as provided in this section: *Provided*, That no disaster payments for low-yield for such crop shall be made under this section prior to October 1, 1977: *Provided, further*, That in the event any producers have received disaster payments for low-yield for the 1977 crop under prior law, they may retain such payments and if such payments are less than the amounts to which they are entitled under this section, the Secretary is authorized and directed to pay to such producers such additional amounts as may be due them under this section."

AMENDMENT OFFERED BY MR. HARKIN

Mr. HARKIN. Mr. Chairman, I offer another conforming and similar amendment to the amendment just read. I ask unanimous consent that the amendments may be considered en bloc.

The Clerk read as follows:

Amendment offered by Mr. HARKIN: Line 25, page 17, after the words "disaster payments" insert the words "for prevented planting."

Line 3, page 18, strike out the period and insert the following: "and disaster payments for low-yield shall be made as provided in this section: *Provided*, That no disaster payments for low-yield for such crop shall be made under this section prior to October 1, 1977: *Provided, further*, That in the event any producers have received disaster payments for low-yield for the 1977 crop under prior law, they may retain such payments and if such payments are less than the amounts to which they are entitled under this section, the Secretary is authorized and directed to pay to such producers such additional amounts as may be due them under this section."

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. HARKIN. Mr. Chairman, in the words of Secretary Bergland, the present disaster program, which has been operating for the past few years, is a disaster in itself. There are total inequities in the present program. But the new farm bill which we passed out of committee is a quantum leap forward in making the disaster program more equitable and more fair.

Mr. Chairman, right now there are at least three inequities in the present program. No. 1, there is a snapback provision. If you get less than 66⅔ percent, for example, of your established yield, then you get full payment back up to 100 percent of your yield. But if you get one bushel over that 66⅔ percent, you do not get anything. That is a total inequity.

Also, in the present program the disaster payments only go to alloted acres.

Third, the disaster payments are made at the rate of one-third of the target price.

And fourth, as a result of these inequities, the fact is that the more one plants and the larger disaster he has,

the more he is penalized. It is just absolutely opposite to what it ought to be.

For example, if one plants twice his allotment, he will get no disaster payment at all until his disaster reduces his yield to at least one-third of the total yield.

This new bill is good, and it changes these provisions. No. 1, there is no snapback provision.

Second, the payments are made not on the basis of one-third of the target price but 80 percent of the target price.

Third, the payment is made not on allotted acres, but it is made on all planted acres.

There is one difference, however. Under the old program one had to have less than two-thirds of the established yield to qualify for the disaster program; under this program one has to have less than 50 percent. But under this program one can have less than 50-percent yield, as applied to his established yield for that farm, and he is paid at the rate of 80 percent of the target price from that disaster level up to 50 percent of the established yield.

Let me give the Members an example of just how this would work, as compared to the old program. Under the old program, for example, let us take a farmer who has a 100-acre base and he has 135.4 acres planted. Now I use that figure because the national average of overplanting above the allotment is 35.4 percent. So if one had 100 acres and he had planted 135.4 acres, and then if he had a yield, let us say, of 30 bushels per acre, under the current system his total payment for that disaster would be about $4,358.

Under the new system, if he had that same yield, 30 bushels on that same farm, his payment would be about $5,139. There is not a heck of a lot of difference right there, but as the disaster becomes worse, under the new program the payments go up at a faster rate.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I yield to the chairman of the committee.

Mr. FOLEY. Mr. Chairman, I want to say that I think the amendments are good amendments. Speaking personally, I would accept them and urge the Members to vote for the amendments considered en bloc relating to both the wheat and feed grain sections.

I might say also that the Department of Agriculture supports the adoption of the gentleman's amendments. They will not disadvantage any farmer, and they will assist many farmers with more meaningful and relevant disaster payments for 1977.

Mr. Chairman. I hope we can adopt these amendments.

Mr. HARKIN. Mr. Chairman, I thank the chairman of the committee.

Mr. EVANS of Georgia. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I yield to the gentleman from Georgia.

Mr. EVANS of Georgia. Mr. Chairman, I rise in support of the amendment. I commend the gentleman from Iowa and the chairman for introducing this amendment which I also sponsor.

During the July district work period I traveled extensively throughout my district surveying the condition of the crops. While all crops were suffering from lack of moisture, the corn crop in particular was devastated. All 26 counties in my district have been declared emergency drought impact areas eligible for Federal assistance. Credit to farmers by local lending institutions is at full capacity.

The emergency condition that exists on this crop extends to parts of Iowa as well as areas in most of the Southeastern States, and perhaps other areas.

Mr. Chairman and my colleagues, the occupation of farming is particularly unique and full of great risk. Requiring tremendous investments in land, equipment, fertilizers, pesticides, herbicides, and labor, the farmer faces the elements and produces our food and fiber. Once produced, the farmer would have to accept what he could get for his harvest but for our various Government programs.

In the farmer's constant fight against the uncertainties involved in his vocation, he often loses. This year, the corn farmers in the affected areas have lost.

The need to insure that they remain on the farm to fight another day—another crop year, is imperative when we look at the trends in this country.

At the turn of the century 29.9 million people lived on farms representing 42 percent of our population. In 1950 this figure had dropped to 23 million people representing 15 percent of our population. The latest figures in 1975 reflected that 8.9 million people lived on farms representing 4.2 percent of our population.

I talked to Secretary Bergland about this amendment this morning. In stating his support of this amendment Secretary Bergland stated that there was no reason not to extend the corn program included in this bill to the 1977 corn crop.

Mr. Chairman, this relief in no way approaches full compensation for the $150 to $250 per acre invested by the farmer. It may be the margin that permits him to remain on the farm for another crop season. I urge your support.

Mr. MATHIS. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I would be glad to yield to the gentleman from Georgia.

Mr. MATHIS. Mr. Chairman, I would like to state my support for the amendments as to both wheat and feed grains, and I commend the gentleman for offering them.

Mr. HARKIN. Mr. Chairman, I just wish to state that the gentleman from Georgia (Mr. MATHIS) has done a lot of work with me on these amendments. I know that the gentleman has seen a severe drought in his area.

The farmers who have been hit by this severe drought in the gentleman's area can be very thankful for the diligent efforts the gentleman from Georgia has put forth on these amendments.

Mr. COLEMAN. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I yield to the gentleman from Missouri.

Mr. COLEMAN. Mr. Chairman, I support the gentleman's amendments.

All of us in the Midwest know of the tremendous drought that has been going on. Our farmers cannot wait until next year. We have worked on this in committee, and I am glad to see that the full committee is agreeable to adopting these amendments. I thank the gentleman for his work and his efforts in working out this critically needed amendment.

Mr. HARKIN. Mr. Chairman, I thank my neighbor to the south, the gentleman from Missouri (Mr. COLEMAN).

Mrs. FENWICK. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Chairman, I thank my colleague for yielding.

I just want to ask one question. What will this cost?

Mr. HARKIN. Mr. Chairman, I will be glad to respond to that question by reading a portion of a letter from the Department of Agriculture.

The CHAIRMAN. The time of the gentleman from Iowa (Mr. HARKIN) has expired.

(By unanimous consent, Mr. HARKIN was allowed to proceed for 2 additional minutes.)

Mr. HARKIN. Mr. Chairman, the letter to which I referred says in part:

It is difficult to estimate the additional cost under provisions of this amendment. Although payment is based upon planted acres rather than allotment and the payment rate would be increased from one-third to 80 percent of target price, this may be offset by the fact that a substantial smaller number of producers would be eligible for payment and payment would be made on only the difference between actual yield and one-half the farm yield rather than on 100 percent of the farm yield.

I do not think the cost would be too much different from that in the present program. What we are doing is targeting this to the farmer who is hurt by the drought.

Mrs. FENWICK. How does it happen that a fewer number of farmers will be eligible?

Mr. HARKIN. That is because under the present program, in order to be eligible all one would have to have would be less than 66⅔ of his established yield to qualify for the disaster funds. Under this program one would have to have less than 50 percent to qualify for the disaster funds.

Mrs. FENWICK. Mr. Chairman, I thank my colleague for his answer.

Then we have no estimate of the cost?

Mr. HARKIN. No, we do not.

Mrs. FENWICK. Mr. Chairman, I thank the gentleman.

Mr. HARKIN. Mr. Chairman, at this point I include the letter from the Department of Agriculture to which I referred previously. I include also a list of corn disaster payments per planted acre for the 1977 crop.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., July 19, 1977.

Hon. JOHN W. JENRETTE, Jr.,
House of Representatives.

DEAR MR. JENRETTE: This is in response to your request for the Department's analyses and position on your proposal to amend H.R. 7171 to provide that the low yield disaster

payment provisions of H.R. 7171 apply to the 1977 crop of feed grains.

Although implementation of the provisions of this amendment for the 1977 crop of feed grains would, of course, result in considerable additional administrative workload by county ASCS employees, the Department has no objection to adoption of this amendment to H.R. 7171.

This amendment would provide that low yield disaster payments for the 1977 crop of feed grains be made on the basis of planted acres rather than on the basis of feed grain allotments. The production level at which producers would be eligible for crop loss compensation would be reduced from 66⅔ percent to 50 percent of the established farm yield times planted acres, but the rate of payment would be increased from one-third of the target price to 80 percent of target price. This amendment would also provide that payment be made only on the difference between harvestable production and one-half the farm yield times planted acres. This amendment provides that in the event a producer has received a disaster payment on a 1977 crop loss prior to enactment of this amendment he shall be entitled to receive the higher of payment computed under this amendment or provisions of prior law.

It is difficult to estimate the additional cost under provisions of this amendment. Although payment is based upon planted acres rather than allotment and the payment rate would be increased from one-third to 80 percent of target price, this may be offset by the fact that a substantial smaller number of producers would be eligible for payment and payment would be made on only the difference between actual yield and one-half farm yield rather than on 100 percent of the farm yield.

Therefore, the only additional cost may be those cases where claims already paid prior to enactment are larger under provisions of prior law.

Feed grain disaster payments made through July 14, 1977 totaled about $40,000.

Sincerely,

DALE E. HATHAWAY,
Assistant Secretary.

Corn disaster payments per planted acre—1977 crop

(Assume $1.85 target price and Iowa average ASCS program yield of 111.3 bu./acre and that the farmer has overplanted his allotment by 35.4 percent—the average in Iowa.)

Yield (Bu./A.):	Current system	Harkins amendment
0	$50.69	$82.36
10	44.52	67.56
20	38.36	52.76
30	32.19	37.96
40	26.03	23.16
50	19.86	8.36
54	17.39	2.44
55	0	0.96
56	0	0

Mr. STANGELAND. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

I, too, would like to commend the gentleman from Iowa (Mr. HARKIN) for this amendment.

It is very similar to an amendment I have, which I intended to offer. However, I defer to his amendment.

Mr. Chairman, I would like to point out to the body that when I first arrived here on the first of March, one of the first bills I introduced was a piece of legislation dealing with the disaster program, eliminating the historic allotments as the guide for disaster payments.

As the gentleman has stated, the disaster program for the American farmer is a disaster. The Department recognizes it, the farmers recognize it.

Mr. Chairman, part of my district has gone through 3 years of drought. Parts of the district had a year of flood followed by a year of drought. We are facing further disaster there because of the high cost of production of our farm products and the price that we are receiving.

It is absolutely essential that we have this kind of disaster program to assure that the farmers, the people responsible for production on the land, are protected when these severe weather disturbances occur.

Mr. JENRETTE. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I want to take a minute to thank the gentleman from Iowa (Mr. HARKIN) for his very fine work.

Mr. Chairman, there are a few things we should keep in mind regarding the amendment offered by TOM HARKIN and myself:

First. The USDA has been consulted and does not oppose administration of the new provisions for 1977. We have the letter from the administration.

Second. The budgetary impact will be minimal.

Third. The new crop disaster provisions are more equitable and more responsive to today's agriculture; there should, therefore, not be any opposition to implementing them a year earlier. More equitable, the current provisions are based on allotments. Any young farmer who does not have an allotment does not get any disaster coverage. Also, a farmer who overplants totally dilutes any payment he might deserve. More responsive, farmers have been encouraged to plant fencepost to fencepost, thus overplanting allotments. The new provisions are based on planted acreage, and will not go into effect until the producer has at least 50-percent crops loss.

Fourth. Computation of disaster payments. One must note that under the current system, a producer can collect payments if he has a one-third shortfall. Some have criticized this figure as being a bailout for marginal producers, which led the House Agriculture Committee to place the crop loss figure at 50 percent before payments are computed. Furthermore, a producer will be paid 80 percent of his loss below 50 percent, which means those most at the bankruptcy stage will receive emergency relief.

Example: A producer lost 60 percent of his corn crop. He will receive 80 percent of the loan rate on that portion of his loss which is under 50 percent, or in this case, 10 percent. On that particular 10 percent he will only get disaster payments, not target price payments as well, thus further insulating the system from abuse.

Fifth. The Senate differs on the computation system. However, Senator TALMADGE inserted a bill making new disaster provisions applicable to the 1977 crop. If the House passes this amendment there is virtual assurance that it will be accepted in conference

Sixth. There is already severe crop loss in Alabama, Georgia, Florida, and the Carolinas as well as all of the Midwest. We, therefore, need not wait, we know what the results are.

Seventh. To avoid budgetary problems, your amendment requires that no payments be made to producers until after the beginning of the 1978 fiscal year, October 1, 1977. This corresponds to the normal payment schedule for corn—normally in the fall.

Eighth. One hangup which might be brought up is that the feed grain provisions in H.R. 7171 applies to both low yield and to prevented plantings. Payments for prevented plantings have already begun and may imply recomputation by the USDA. According to ASCS in Columbia, there is only one such case in South Carolina, and that was for cotton. The USDA cannot see that this will be an overwhelming problem, as evidenced by their position on the amendment.

Ninth. There are producers in South Carolina and elsewhere who did not know they would be eligible for any payments such as proposed. Remember, the biggest change advocated is to apply crop disaster payments to planted acreage rather than to allotments.

With these basic facts I think it very important to the American farmers that this very helpful amendment be passed.

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. JENRETTE. I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Chairman, I made a gross omission when I was in the well.

The gentleman from South Carolina (Mr. JENRETTE) indeed was one of the first persons to go into this matter and, in fact, to make a query of the Department of Agriculture as to whether or not they would support it. He has worked very closely with me on this amendment.

Mr. Chairman, I regret the omission, but I want to thank the gentleman from South Carolina for the help he has given on this amendment.

Mr. JENRETTE. Mr. Chairman, I thank the gentleman.

Mr. FUQUA. Mr. Chairman, right now there are 35 counties in Florida which have been declared eligible for feed crop drought relief aid. There are also numerous counties in Georgia, Alabama, and West Virginia that have qualified and I understand assistance will be requested for South Carolina, North Carolina, Virginia and, perhaps, other States as well. Farmers in these areas have turned to us in Congress to assist them in recovering from the ravages caused by the recent drought and we must not let them down.

Feed grain farmers need our help but, unfortunately, under the existing law any help we may provide will be too little, perhaps too late.

The present structure of the relief program was established using allotments created in the 1950's. Almost all farmers today plant more than the 1950's allotment and many plant double or triple that figure. They will only be able to receive assistance based on the allotment and this works a severe hardship on all farmers, especially the young farmer who may not even have been

around to receive an allotment at the time.

The Agriculture Committee is to be commended for recognizing the problem and reporting out legislation that will change and better the existing law. The only drawback is that this change will not come in time to help with relief for the 1977 crop drought.

Mr. HARKIN and I have proposed an amendment to remedy this problem. Under the amendment, the standards established for 1978 crops will be applied to 1977 feed grain crops. Procedurally, the payments will not be made until the beginning of the 1978 fiscal year. This is a relatively minor change in the bill but it will mean so much to these farmers.

Recently, Senator CHILES, Senator STONE, and I viewed firsthand the drought conditions in Florida. The devastation is, in some counties, complete. No one could witness the withered crops and not be moved by the plight of these farmers and I, for one, feel very strongly about the need to modify this legislation.

Secretary of Agriculture Bergland, on a visit to my district, indicated the support of the administration for efforts to provide this relief and I feel certain that if we provide the funding, the Agriculture Department will move swiftly to help these farmers.

The need for this feed crop drought relief assistance is immediate and it is real. Anyone who has seen the destruction wrought by the drought knows the drastic situation facing these farmers. We have it within our power to help them and I truly hope that the House of Representatives will not turn its back on these people.

Mr. SPENCE. Mr. Chairman, I rise to urge the adoption of this amendment. It will mean the difference between "hanging on" and "selling out" for many corn producers in my district.

Estimates by local agriculture officials indicate that one county in my district alone—Orangeburg—has already suffered upward of $7.5 million in corn crop losses. Losses for the State of South Carolina as a whole are estimated now at over $100 million on this year's corn crop, and those losses are increasing at the rate of $1 million per day. Total crop losses for the State are currently estimated at more than $300 million.

Mr. Chairman, corn allotments were made in South Carolina at a time when corn production was substantially more limited than it is today. In recent years corn growing in my district has expanded rapidly on acreage which has no history of corn allotments.

This is especially true for many young farm families who have found it impossible to earn an adequate living on the acreage that once sustained their parents. They have had to diversify and expand their operations or go out of the farming business entirely. I believe it is in the very best interests, not only of the farmers of South Carolina and the Southeast, but of the corn producing areas throughout the country and, perhaps most importantly, of the consumers of America in general that we not allow the present unusual and severe drought conditions to drive these folks off the farm.

Under the provisions of the bill, it is my understanding that we will go to a planted acreage basis for determining deficiency payments next year anyway. I am sure some of you take the position that going to planted acreage formula this year is just too costly, but I ask you to consider the cost to the economy and to your own consumers in the long run if large numbers of food producers are driven out of business. If we were talking about damage to one of our metropolitan areas from a major earthquake, no one would be counting the cost. What is more important, today's farmers have not been able to prepare in advance for the possibility of drought—as we always expect them to do—because the profits of recent "good years" have been eaten up by Government fueled inflation. Production costs continue to spiral, out of all proportion to crop price increases.

Mr. Chairman, all seven of the counties in my Second District have recently been declared disaster areas. The farmers in these counties need emergency assistance, and I am confident they will get it. But they need and want more than relief. They want an agriculture policy on the part of Congress which will enable them to produce their commodities and market them at a reasonable profit within the framework of our free enterprise system. And in this age of great prosperity at home and great demand for food both at home and abroad, our farmers need and want—and, indeed, have a right to expect that—their Government will assume a role in mitigating the boom and bust cycle to which the agriculture industry has by its very nature always been especially susceptible, without imposing upon them regulations and controls that reduce them to economic captives or servants of the state.

In an era when farmers have been peculiarly victimized by Government-fueled inflation we in Congress cannot sit by in a time of natural adversity and say, "Isn't it too bad about the weather?"

The farmers of our country may need substantial help to overcome the effects of this drought, coming as it does atop an era of increasing but as yet unaccomplished economic stability in agriculture. Much was accomplished during recent administrations to restore agriculture to a profitable, free enterprise basis, but, I repeat again, rampant inflation, for which Congress must assume major responsibility, has negated much of the benefit of these policies. It is simply imperative that action be taken now to relieve the plight of our Nation's farmers.

I am hopeful that the legislation now before us will move us further down the road toward the goal of stable, profitable, free enterprise agriculture. I am convinced that the amendment just offered to permit grain producers, this year, to count planted acreage, rather than allotted acreage, as the basis for obtaining disaster relief will serve that purpose. It will do so by countering the disruptive effects of a drought that is rapidly taking on the proportions of a national calamity.

Mr. Chairman, cattlemen in my district are already selling out, because they cannot obtain feed supplies. The pastures are drying up, peanut plants are blistering, much of the watermelon crop is finished when it should be at its peak and, if the dry weather pattern continues, the substantial soybean crop could be wiped out. More help is desperately needed than is represented in this amendment, but it is an important first step. I strongly urge its adoption.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Iowa (Mr. HARKIN).

The amendments were agreed to.

AMENDMENT OFFERED BY MR. FINDLEY

Mr. FINDLEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FINDLEY: Page 7, line 2, delete the period after the word "markets" and insert in lieu thereof the following: ": *Provided*, That if the Secretary determines that the average price of wheat received by producers in any marketing year is not more than 105 per centum of the level of loans and purchases for wheat, the Secretary shall reduce the level of loans and purchases for wheat for the next marketing year by the amount necessary to maintain domestic and export market for grain."

Page 8, line 7, delete the period after the word "made" and insert in lieu thereof the following: ": *Provided*, That in the event the Secretary adjusts the level of loans and purchases for wheat in accordance with the proviso in section 107(a) of this Act, the Secretary shall provide emergency compensation by increasing the target price for wheat by such amount as may be necessary to provide the same total return to producers as if the adjustment in the level of loans and purchases had not been made; *Provided further*, That any such increase in the target price shall not be included in the payments subject to limitation under the provisions of title I of the Agricultural Act of 1970, as amended."

Mr. FINDLEY. Mr. Chairman, this amendment deals with a critical problem of foreign market access for wheat.

In 1962 President Kennedy said we must trade or fade. That wise statement should ring in our ears today.

The amendment I have offered will enable the United States to keep trade, keep selling grain abroad, keep earning the foreign exchange so essential to our very lifelines.

In the last 10 years our exports of farm products have risen from $6 billion to $22 billion. Without that grain market expansion, the United States would today be in a terrible depression.

We must keep these market doors open. We must keep selling grain at undiminished levels.

Unfortunately this bill fixes loan rates high enough to threaten these markets because they make our grain uncompetitive in world markets. Ever since President Ford raised loan rates last October to $2.25, overseas selling of wheat has been sluggish, and under this bill, House or Senate version, either way, the situation may get worse.

The United States now has an alltime record high supply of wheat. The excess supply is partly due to the loan rate being too high for world markets. Unless

an amendment of this sort is adopted the situation will get worse, wheat will pile up at great cost to our Government—probably for years—hang over markets, depressing prices for years to come.

Corn faces about the same prospect. A 6-billion-bushel crop is in prospect. It is already apparent that a $2-loan rate will make corn uncompetitive in the near future. Corn will pile up at great cost to the Government—probably for years—hang over markets, depressing prices for years to come.

Few Members of this body have been here long enough to remember the agony of getting the Government out of the grain business. Only three members of the committee—BOB POAGE, BILL WAMPLER, and myself—served on the committee even 12 years ago.

This amendment will correct the problem for wheat, and a comparative amendment will solve the problem for feed grains. This amendment will assure that wheat remains in a competitive position, no matter what happens to world market prices

It will do so without hurting farmer income 1 single cent.

Here is how it works:

At the end of each marketing year the Secretary will examine the relationship of the loan rate to world market prices. If the loan rate is within 5 percent of the market price, he will adjust the loan downward enough to keep grain competitive in domestic and world markets. How much, of course, will be up to the Secretary. It will be his responsibility.

He will also be directed to take measures to protect the products fully against income loss in the event of loan rate reduction.

This protects the farmer's income and at the same time guarantee that his produce will remain competitive.

We have heard repeated references to the importance of international markets for U.S. agricultural products. The levels of the price support loans for our commodities are the key factor in our continued competitiveness in these markets. An inflexible, legislatively mandated price support loan structure could prove extremely detrimental to U.S. agriculture in the future.

We have had two consecutive favorable weather years for production of crops in this country and the world, generally. We cannot predict the weather for any year in the future. We could conceivably have continued favorable weather in the near future resulting in continued abundant production.

If these conditions should obtain, we run the very real danger of again creating the chronic conditions we experienced in the 1950's and 1960's. Legislatively specified formulas for loan level adjustments or relatively high specified minimums could easily result in levels above world market prices. Continued abundant production and loan levels above world market prices could result in—

Decreased competitiveness of U.S. exports in world markets. As our loan levels are above world prices, we would again become the residual supplier for wheat and would be effectively supporting the world market price for feed grains. This would encourage expanded production of feed grains in competitor countries and a further erosion of our markets.

Increased domestic production of crops already in excess supply as producers respond to the misleading loan levels rather than to market prices. This would tend to produce a chronic situation of overproduction and severely depressed farm incomes.

Presently, with wheat and feed grains competitively priced, we are seeing record rates of wheat feeding. Loan levels that are inflexible will lead to an artificial price spread between grains and eliminate this market for wheat, much needed when it is in excess supply.

A mechanism adjusting loan levels consistent with world supply and demand conditions would preclude occurrences as noted above.

At the same time my amendment will hold harmless producers from any income loss if the loan is reduced.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. FINDLEY. I am happy to yield to the gentleman from Washington.

Mr. FOLEY. Mr. Chairman, speaking only personally, I think this is a good amendment and I support it. I compliment the gentleman from Illinois (Mr. FINDLEY) for offering it. I believe it does offer some flexibility in the administration of the loan program to avoid situations where a too high loan rate might actually inhibit the marketing of crops and diminish the Nation's full capacity.

The gentleman also has incorporated in his amendment recognition that the farmer will be compensated, in effect, on the target price adjustment, if the loan rate is reduced.

I hope the amendment is adopted by the committee.

Mr. Chairman, I would suggest further that perhaps the gentleman from Illinois (Mr. FINDLEY) would wish to make the same request that he has already made on this amendment with respect to a similar amendment to title V. If so, I would not object to a similar application to title V.

Mr. GLICKMAN. Mr. Chairman, will the gentleman yield?

Mr. FINDLEY. I yield to the gentleman from Kansas.

Mr. GLICKMAN. Mr. Chairman, I thank the gentleman for yielding, and I wish to commend the gentleman from Illinois (Mr. FINDLEY) for offering his amendment. It recognizes that regardless of what we do here to increase the loan and target price nothing is going to improve the world marketplace for wheat and feedgrains and help our ability to sell these commodities except to get to the fundamental reason on why we cannot sell wheat overseas. This amendment will assist in doing so.

Further, Mr. Chairman, some people in my district have asked me a question.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. GLICKMAN, and by unanimous consent, Mr. FINDLEY was allowed to proceed for 2 additional minutes.)

Mr. GLICKMAN. Mr. Chairman, if the gentleman will yield further, they have asked me if this is equivalent to an export subsidy, in terminology or in semantics.

Mr. FINDLEY. It has the same ultimate effect, in that it assures access to foreign markets. It is far preferable from the standpoint of the executive branch in negotiating with other countries on reduction of trade barriers. It holds harmless the producer from any loss of income if, under this provision, the Secretary reduces the loan rate. But it assures that the price of our commodities will be competitive in world markets and we will be able to continue to compete and to hang on to this $22 billion overseas market and hopefully expand it.

Mr. GLICKMAN. I think it is an excellent amendment.

ADDITIONAL AMENDMENT OFFERED BY MR. FINDLEY

Mr. FINDLEY. Mr. Chairman, I ask unanimous consent that the committee consider en bloc at this time an identical amendment to the feed grain section, identical except for the substitution of the word "corn" for "wheat" as it occurs in the amendment now pending.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The CHAIRMAN. The Clerk will report the second Findley amendment.

The Clerk read as follows:

Amendment offered by Mr. FINDLEY: Page 14, line 22, delete the period after the words "United States." and insert in lieu thereof the following: ": *Provided*, That if the Secretary determines that the average price of corn received by producers in any marketing year is not more than 105 per centum of the level of loans and purchases for corn, the Secretary shall reduce the level of loans and purchases for corn for the next marketing year by the amount necessary to maintain domestic and export markets for grain."

Page 16, line 13, delete the period after the word "made" and insert in lieu thereof the following: ": *Provided*, That in the event the Secretary adjusts the level of loans and purchases for corn in accordance with the proviso in section 105(a)(1) of this Act, the Secretary shall provide emergency compensation by increasing the target price for corn by such amount as may be necessary to provide the same total return to producers as if the adjustment in the level of loans and purchases had not been made: *Provided further*, That any such increase in the target price shall not be included in the payments subject to limitation under the provisions of title I of the Agricultural Act of 1970, as amended.

Mr. FINDLEY (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. FINDLEY. Mr. Chairman, may I ask my friend, the chairman of the House Committee on Agriculture, the gentleman from Washington (Mr. FOLEY), if his attitude is the same on the corn, that is the feed grain amendment, as he just expressed in regard to the wheat amendment?

Mr. FOLEY. If the gentleman will yield, the gentleman is correct.

Mr. FINDLEY. I thank the gentleman.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Illinois (Mr. FINDLEY).

The amendments were agreed to.

The CHAIRMAN. Are there further amendments to title IV?

AMENDMENTS OFFERED BY MR. GLICKMAN

Mr. GLICKMAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GLICKMAN: On line 11, page 12, delete the period, insert a colon and add the following proviso: *"Provided,* That the wheat acreage eligible for payment shall not be further reduced by application of the allocation factor if (i) the producers reduced the planted acreage of wheat on the farm from the previous year by at least the percentage recommended by the Secretary in announcing the national wheat acreage allotment, or (ii) if a set-aside program is in effect for wheat, the producers on the farm have complied with the provisions of such program. In carrying out the foregoing provision the Secretary shall provide fair and equitable treatment for producers on farms on which the acreage planted to wheat is less than for the preceding year, but the reduction is insufficient to exempt the farm from the allocation factor. In establishing the national allocation factor for wheat, the Secretary is authorized to make such adjustment as deemed necessary to take into account the extent of exemption of farms under the foregoing provisions."

Mr. GLICKMAN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. GLICKMAN. Mr. Chairman, this is an amendment to the wheat section. I also have an identical amendment to the feed grains section that I am going to make the similar request on that the gentleman from Illinois (Mr. FINDLEY) did. It concerns the issue of set-asides. The department has expressed support for this amendment.

The Secretary of Agriculture must announce by August 15 the national wheat acreage allotment for next year. Similar announcements on feed grains would be announced. He is also required to announce by August 15 any set-aside for the next year, and farmers must comply if they are to qualify for target-price payments.

After the harvest for next year is known, the Secretary then computes what percentage the national wheat acreage allotment announced the previous August 15 is of the actual bushels harvested. That percentage is what becomes the individual farm's allocation factor for determining what percentage of the wheat crop will qualify for target-price payments. It is similarly true for target-price payments on feed grains.

This amendment, which is again recommended by the administration, would insure farmers—that is, it is a protective amendment at no cost whatsoever—that if they voluntarily reduce their planted acreage based on the August 15 announcement of the national wheat acreage allotment, or comply with the set-aside that might have been announced on August 15, they will receive target payments on 100 percent of what they actually planted.

So without this amendment, farmers who complied with the set-aside or voluntarily cut back planting would be further penalized by receiving target payments on only a certain percentage of their harvest based on their allocation factor. This is a protective amendment, and for that reason I offer it at this time.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. GLICKMAN. I yield to the gentleman from Washington.

Mr. FOLEY. I thank the gentleman for yielding.

I think this is a good amendment. I am happy to support it personally. I want just for the record to indicate that the Department has some question about the inclusion of the language given in the set-aside. This is a matter that is not contained in the Senate bill. It is a matter we could consider in conference. I am glad to support the gentleman's amendment in its complete form. But just for the record, the Department does not communicate its support for that particular portion of the gentleman's amendment. But I hope it will be adopted.

Mr. GLICKMAN. I thank the Chairman.

Mr. Chairman, there is also a similar amendment on page 19, line 12, which is entitled title V of the bill, which has similar and actually identical provisions for feed grains, except it applies to feed grains as opposed to wheat.

Mr. Chairman, I ask unanimous consent that the amendment be considered with this amendment en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Kansas?

There was no objection.

The Clerk read as follows:

Amendment offered by Mr. GLICKMAN: Page 19, line 12, delete the period, insert a colon and add the following proviso: *"Provided,* That the feed grain acreage eligible for payment shall not be further reduced by application of the allocation factor if (i) the producers reduced the planted acreage of feed grains on the farm from the previous year by at least the percentage recommended by the Secretary in announcing the national feed grain acreage allotment, or (ii) if a set-aside program is in effect for feed grains, the producers on the farm have complied with the provisions of such program. In carrying out the foregoing provision the Secretary shall provide fair and equitable treatment for producers on farms on which the acreage planted to feed grains is less than for the preceding year, but the reduction is insufficient to exempt the farm from the allocation factor. In establishing the national allocation factor for feed grains, the Secretary is authorized to make such adjustment as deemed necessary to take into account the extent of exemption of farms under the foregoing provisions."

Mr. GLICKMAN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. GLICKMAN. Mr. Chairman, I urge the amendment be adopted.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Kansas (Mr. GLICKMAN).

The amendments were agreed to.

AMENDMENT OFFERED BY MR. MADIGAN

Mr. MADIGAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MADIGAN: H.R. 7171 is amended as follows:

Title IV, section 401, is amended by striking the word "If" as it appears on page 8, line 15, and page 9, line 2, and insert in lieu thereof the following: "Effective only with respect to the 1978 and 1979 crops of wheat, if";

Mr. MADIGAN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD at this point.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois (Mr. MADIGAN)?

There was no objection.

The CHAIRMAN. Does the gentleman's amendment confine itself to title IV?

Mr. MADIGAN. Mr. Chairman, it does. The same amendment also applies to titles V, VI, and VII, and it is my intention at this point to make the unanimous-consent request that those amendments be consider en bloc. It is a very simple amendment and it applies in all the sections.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. MADIGAN:

Title V, section 501, is amended by striking the word "If" as it appears on page 16, line 23, and page 17, line 10, and insert in lieu thereof the following:

"Effective only with respect to the 1978 and 1979 crops of feed grains, if";

Title VI, section 602, is amended by striking the word "If" as it appears on page 26, line 20, and page 27, line 1, and insert in lieu thereof the following:

"Effective only with respect to the 1978 and 1979 crops of cotton, if"; and

Title VII, section 704, page 32, line 5, immediately after the semicolon, insert the following new paragraph (6) and redesignate existing paragraph (6) as paragraph (7):

"(6) striking the word 'If' in the third and fourth sentences in paragraph (4) and insert in lieu thereof 'Effective only with respect to the 1978 and 1979 rice crops, if' ".

Mr. MADIGAN (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendments be dispensed with and that they be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. MADIGAN. Mr. Chairman, the amendment applies to wheat and feed grains and cotton equally and of course

the rice crop by terminating at the end of the 1979 crop year the present disaster programs that we have.

This afternoon and again yesterday as well everybody who has made any reference to the disaster programs has referred to them as being disasters in and of themselves. Secretary Bergland also referred to them in that way when he appeared before the Agriculture Committee.

It is my intention along with the gentleman from Tennessee (Mr. JONES), the chairman of the Conservation and Credit Subcommittee, to see ultimately, and we hope within the next 2 years, adoption of an all-crop, all-risk insurance program that will take the place of the present disaster programs. I believe we are going to be able to do that. The gentleman from Tennessee (Mr. JONES), the chairman of the Conservation and Credit Subcommittee, has introduced a bill which I am cosponsoring, which has the support of the Department of Agriculture as well as the major farm organizations; the purpose of which is to write an all-crop, all-risk Federal crop insurance program.

I think that continuation beyond 1979 of the present disaster program is not necessary. To change this bill as I would change it by these amendments will make the bill exactly the same in this regard as the bill produced by the other body. In their action they took this position because they said it would provide the necessary incentive to see that within the next 2 years we would do away with these disaster programs and write an all-crop, all-risk insurance program.

I think we are going to be able to do that. It provides the incentive to do that and, hopefully, to do away then with this terrible program we have had, I have offered this amendment. I would very much appreciate the support of the committee.

Mr. BEDELL. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from Iowa.

Mr. BEDELL. Mr. Chairman, I agree with the gentleman's remarks and certainly I agree if we could go to an insurance program, as in our present disaster program, that would be preferable. I presume the gentleman would hate to see us eliminate all types of aid for disaster. I presume if we have this amendment and if there is not adequate legislative activity or for some reason we cannot pass an insurance program to cover it, we could then come back and renew this for another 2 years, if it seems necessary to have another program; is that correct?

Mr. MADIGAN. Mr. Chairman, no problem could exist during the 1979 crop as a result of this amendment. Because we have bipartisan agreement working very well on a new crop insurance program, I do not think there will ever be a problem; but if there would be, let me say this to the gentleman from Iowa, another thing we would have done here would be to create a situation where we have to after the 1979 crop year take a look at the disaster program and that in itself would be a very good exercise, because if they are going to be contingent, they could be improved in major ways.

Mr. BEDELL. Mr. Chairman, if the gentleman will yield further, I think the gentleman has offered a constructive amendment and I certainly support it.

Mr. STANGELAND. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I wonder if the gentleman from Washington, the chairman of the Committee on Agriculture, would anwser a few questions. Would the gentleman agree that the problem of wheat right now is overproduction of wheat and that is why we are suffering depressed prices?

Mr. FOLEY. Mr. Chairman, it is either overproduction or undermarketing, whichever way we look at it.

Mr. STANGELAND. Mr. Chairman, the way it appears to me, it is overproduction.

Is this bill at all intended to help the farmer curb that overproduction?

Mr. FOLEY. The bill contains authority that was in the existing law for a set-aside program by the Secretary and gives additional authority to the Secretary to extend loans and regional programs.

I personally believe it is almost inevitable that the Secretary would call for a wheat set-aside next year. The bill does contain that authority for such a set-aside.

Mr. STANGELAND. I would anticipate we will have a set-aside.

The bill also provides the Secretary will set an allotment for wheat in August.

Mr. FOLEY. The time for the Secretary to set the allotment for wheat is August 15.

Mr. STANGELAND. August 15?

Mr. FOLEY. Yes.

Mr. STANGELAND. In setting the allotment, I would like to give the gentleman some figures and have the gentleman tell me whether I am correct or incorrect on these; these are just round figures for easy figuring.

Supposing for this year we have 1 million acres planted in wheat and by all projections at this time that we are looking at, we have a 1.1-billion-bushel carryover now. Very well, after this harvest season is over we will have in the neighborhood of 1.6 or 1.7 billion bushels for a carryover to next year.

We have 1 million acres, so the Secretary determines that the allotment for next year should be 800,000 acres and the law says he can go no lower than 80 percent of this year's harvested acres, is that correct?

Mr. FOLEY. No. It does not say he can impose a set-aside of more than 80 percent. That is not correct.

Mr. STANGELAND. I am not talking about a set-aside. I am talking about national allotment. When he determines the national allotment, it says he can go no higher than 100 percent and no lower than 80 percent.

Mr. FOLEY. He can adjust the national allotment according to the projected needs for domestic and import purposes.

Mr. STANGELAND. But no lower than 80 percent of this year's harvested acres.

Mr. FOLEY. There is no 80-percent limit on establishing the national allotment.

Mr. STANGELAND. What does it mean where it says on page 12, line 6:

Provided, That in no event shall such allocation factor be more than 100 per centum or less than 80 per centum of the acreage of wheat harvested on the farm in the current crop year.

Mr. FOLEY. What you have read provides the basis for factoring of the harvested acreage of wheat for deficiency payment purposes.

The adjustment of the allocation of the farmer's entitlement to target price or agency payments on his harvested acreage can be no lower than 80 percent.

Mr. STANGELAND. Let us suppose he sets 800,000 acres as the needed number of acres, and then his allocation factor would be 20 percent. Would that be correct? Then, that allocation factor is to be placed on next year's harvested acres. But, suppose for an example we have an average farm growing 200 acres of wheat and say 5,000 farms raise 200 acres of wheat. That is a million acres this year. So, next year the farmers plant, in round figures, 400 acres of wheat as an average. Now, we have 2 million acres planted. The allocation factor is 20. Is it not conceivable that the cumulative total of those farm allotments could substantially exceed the Secretary's national wheat allotment?

Mr. FOLEY. Yes, that is conceivable.

Mr. STANGELAND. And so this bill is not really doing much, then, to help the farmer try to curb——

Mr. FOLEY. The national allotment, I would say to the gentleman, a set-aside is possible. A specific set-aside can be announced by the Secretary.

Mr. STANGELAND. Well, I understand the point of the set-aside. The problem of the set-aside is that generally we get the poorest land set aside. The farmer leaves his poorest land idle. He is not going to be paid for the set-aside. As a result, really that set-aside does not do all that much in reducing production.

Mr. FOLEY. I will tell the gentleman that there are inducements to meet the set-aside requirement because that is the condition for receiving loans or payments, and if the producer does not comply with the set-aside, he is not going to get any target price payments at all. He is not going to get any loan authority payments or loan authorizations at all.

Second, the Secretary has the additional authority to apply the set-aside requirement against last years seeded acreage.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

(On request of Mr. FOLEY and by unanimous consent Mr. STANGELAND was allowed to proceed for 1 additional minute.)

Mr. FOLEY. Those farmers who voluntarily comply with the national allotment, will be eligible for full payments. If a farmer does not comply, he does not

get protected. I think the combination of those programs will give some production control emphasis to this program.

Mr. STANGELAND. Well, I question perhaps that price will have a greater factor in production than the bill will. I thank the gentleman for yielding.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Illinois (Mr. MADIGAN).

The amendments were agreed to.

The CHAIRMAN. Are there further amendments to title IV?

If not, the Clerk will read.

Mr. FOLEY. Mr. Chairman, I ask unanimous consent that notwithstanding the passing of the reading of title IV, when that occurs, and the presumption of consideration of title V, the gentleman from Iowa (Mr. BEDELL) may be authorized to offer an amendment to title IV.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

Mr. BAUMAN. Mr. Chairman, reserving the right to object, that is very unusual procedure.

Mr. FOLEY. Mr. Chairman, I withdraw the unanimous-consent request.

The CHAIRMAN. The Chair will state that title V has not been read, so title IV is still open to amendment.

AMENDMENTS OFFERED BY MR. BEDELL

Mr. BEDELL. Mr. Chairman, I offer amendments, and I ask unanimous consent that they may be considered en bloc, inasmuch as they apply to both title IV and title V.

The Clerk read as follows:

Amendments offered by Mr. BEDELL: Page 12, line 5, after the word "year", insert: "'or in such previous years as determined by the Secretary."

Page 12, line 11, after the word "year", insert: "or in such previous years as determined by the Secretary".

Page 19, line 6, after the word "year", insert: "or in such previous years as determined by the Secretary".

Page 19, line 12, after the word "farm", insert: "in the current crop year or in such previous crop years as determined by the Secretary".

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. BEDELL. Mr. Chairman, what these amendments do is simply give the flexibility to the Department in regard to the determination of the allotments. As it is worded in the bill, it requires that the allotments be determined by the current year's plantings, and these amendments simply say that they may be determined by the current year's plantings or they may be considered from past years' plantings.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Washington.

Mr. FOLEY. Mr. Chairman, I think the gentleman has correctly stated that it just adds a little more flexibility to the Department in this area. I have no objection to the amendments, and I think the amendments do provide a little more flexibility.

Mr. WAMPLER. Mr. Chairman, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Virginia.

Mr. WAMPLER. Mr. Chairman, we have examined the amendments. I think, as the chairman of the committee has indicated, they do provide the Department with more flexibility, and I have no objection to them.

Mr. THONE. Mr. Chairman, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Nebraska (Mr. THONE).

Mr. THONE. Mr. Chairman, I do not know whether I fully understand the implication of these amendments. In other words, USDA can go with historical averages here as well as current plantings; is that the thrust of the gentleman's amendments?

Mr. BEDELL. Yes, it is. The previous amendment mandated that they have to go to current year's plantings. These amendments say that they may go to current year's plantings or previous years' plantings, in their discretion.

Mr. THONE. If the gentleman will yield further, does this amendment have the support of the Department?

Mr. BEDELL. That is correct. That is one reason we are a little bit late. We wanted to be sure the Department did not object to it, and they do not object to it.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Was this bill ever before a committee? I am beginning to wonder.

Mr. BEDELL. It certainly was.

Mr. ASHBROOK. I am beginning to think it is the Education and Labor Committee.

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Iowa.

Mr. GRASSLEY. Mr. Chairman, I know that in committee the gentleman was very interested in having a 3-year average. Is the gentleman's amendment opening it up so we can have allotments figured out over a much longer period of time than the 3 years the gentleman was thinking about?

Mr. BEDELL. The problem is this: There was great concern, and I had the concern, too, that if we go to current year's plantings, there could be some serious problems. The Department plans to go by current year's plantings. That is their definite plan. That is what we expect them to do.

The purpose of these amendments is simply this: If they find themselves in a jam, as they may well do because of this mandate, it gives them the flexibility to go to previous year's plantings.

Mr. GRASSLEY. If the gentleman will yield further, I would like to know, in the gentleman's own mind does he anticipate that the depth would spread out their figure over a longer period of time than 3 years?

Mr. BEDELL. I absolutely do not. I question whether they will even go to previous year's plantings. But if they find themselves in trouble, it seems to give them a safety valve.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. I thank the gentleman for yielding.

The fact of the matter is that without this amendment, and being required to take only one year's plantings, it will work a hardship on those persons who happen to have had an unusual year. If they have a lower acreage that year than normal, they will find they cannot plant as much the next year and participate in the program. If they find that to be the case, they will probably stay out of the program completely and plant fence to fence, which could result in increased production at the very time we want reduced production.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Iowa (Mr. BEDELL).

The amendments were agreed to.

The CHAIRMAN. Are there further amendments to title IV?

If not, the Clerk will read title V.

The Clerk read as follows:

TITLE V—FEED GRAINS

LOAN RATE AND TARGET PRICE

SEC. 501. Section 105 of the Agricultural Act of 1949, as amended effective for the 1974 through 1977 crops, is amended to be effective for the 1974 through 1981 crops and such section is further amended—

(a) effective for the 1977 through 1981 crops, by amending subsections (a) and (b)(1) to read as follows:

"(a)(1) The Secretary shall make available to producers loans and purchases on each crop of corn at such level, not less than $1.75 per bushel for the 1977 crop and $2.00 per bushel for each of the 1978 through 1981 crops, as the Secretary determines will encourage the exportation of feed grains and not result in excessive total stocks of feed grains in the United States.

"(2) The Secretary shall make available to producers loans and purchases on each crop of barley, oats, and rye, respectively, at such level as the Secretary determines is fair and reasonable in relation to the level that loans and purchases are made available for corn, taking into consideration the feeding value of such commodity in relation to corn and other factors specified in section 401(b), and on each crop of grain sorghums at such level as the Secretary determines is fair and reasonable in relation to the level that loans and purchases are made available for corn, taking into consideration the feeding value and average transportation costs to market of grain sorghums in relation to corn.

"(b)(1) In addition, the Secretary shall make available to producers payments for each crop of corn, grain sorghums, and, if designated by the Secretary, barley, computed by multiplying (1) the payment rate, times (2) the allotment for the farm for such crop (but in no event on a greater acreage than the acreage actually planted to such feed grains), times (3) the yield established for the farm for the preceding crop with such adjustments as the Secretary determines necessary to provide a fair and equitable yield. The payment rate for corn shall be the amount by which the higher of—

"(1) the national weighted average market price received by farmers during the first five months of the marketing year for such crop, as determined by the Secretary, or

"(2) the loan level determined under subsection (a) for such crop

is less than the target price per bushel. The target price for corn shall be $1.85 per bushel in the case of the 1977 crop, $2.10 per bushel in the case of the 1978 crop, and for the 1979 through 1981 crops the target price shall be the target price for the previous year's crop adjusted to reflect any change in (i) the average adjusted cost of production for the two crop years immediately preceding the year for which the determination is made from (ii) the average adjusted cost of production for the two crop years immediately preceding the year previous to the one for which the determination is made. The adjusted cost of production for each of such years shall be determined by the Secretary on the basis of such information and data as he finds necessary and appropriate for the purpose and shall be limited to (i) variable costs; (ii) machinery ownership costs; and (iii) general farm overhead costs allocated to the crops involved on the basis of the proportion of the value of the total production derived from each crop. The payment rate for grain sorghums and, if designated by the Secretary, barley, shall be such rate as the Secretary determines fair and reasonable in relation to the rate at which payments are made available for corn. If the Secretary determines that because of drought, flood, or other natural disaster, or other conditions beyond the control of the producers, the total quantity of feed grains which the producers are able to harvest on any farm is less than the result of multiplying 50 per centum of the yield established by the Secretary for the farm for such crop during the current year times the acreage planted to harvest for such crop in such year, the Secretary shall make a farm disaster payment at a rate equal to 80 per centum of the target price for the crop to the producers of such crop for the deficiency in production below 50 per centum of the established yield on the acreage planted to harvest for the crop. If the Secretary determines that the producers on a farm are prevented from planting any portion of the acreage intended for feed grains to feed grains or other nonconserving crops because of drought, flood, or other natural disaster, or other condition beyond the control of the producers, he shall make a prevented planting payment on the smaller of (1) the acreage intended to be planted to feed grains or (2) the average acreage planted to feed grains for harvest (including acreage which the producer was prevented from planting to feed grains or other nonconserving crop) in the immediately three preceding years multiplied by 75 per centum of the yield established by the Secretary for the farm for the current year times a payment rate equal to 20 per centum of the target price per bushel for feed grains. In the case of the 1977 crop, disaster payments for feed grains shall be computed as provided in this section as amended for the 1974 through 1977 crops by the Agriculture and Consumer Protection Act of 1973. The total quantity on which a target price payment is due a producer for any crop shall be reduced by the quantity on which any disaster payment is paid to such producer for the crop.".

(b) Effective for the 1978 through 1981 crops, by amending subsection (b) (2) and (3) to read as follows:

"(2) The Secretary shall proclaim the national feed grains acreage allotment for each feed grain crop not later than December 30 of each calendar year for the crop harvested in the next succeeding calendar year. The national feed grains allotment for such crops shall be the number of harvested acres the Secretary determines (on the basis of the weighted national average of the farm program payment yields for the crop for which the determination is made) will produce the quantity (less imports) that he estimates will be utilized domestically and for export during the marketing year for such crops. If the Secretary determines that carryover stocks are excessive or an increase in stocks is needed to assure desirable carryover, he may adjust the national feed grains acreage allotment by the amount he determines will accomplish the desired increase or decrease in carryover stocks.

"(3) The Secretary shall determine farm acreage allotments for each crop of feed grains by allocating the national feed grains acreage allotment to farms producing feed grains on the basis of an allocation factor. Such allocation factor shall be determined by dividing the national feed grains acreage allotment for each crop of feed grains by the number of harvested acres as determined by the Secretary each year for each crop: *Provided*, That in no event shall such allocation factor be more than 100 per centum or less than 80 per centum of the acreage of each feed grain harvested on the farm in the current crop year. The farm acreage allotment for feed grains shall be determined by multiplying the allocation factor by the acreage of feed grains harvested on the farm. An acreage shall be considered harvested on the farm if it was planted to feed grains but not harvested because of a drought, flood, or other disaster or condition beyond the control of the producer.".

(c) Effective for the 1978 through 1981 crops, amending subsection (c) by—

(1) in paragraph (1), striking the second and third sentences and inserting in lieu thereof the following: "Any such set-aside shall be proclaimed by the Secretary not later than February 15 of the year in which the crop is harvested. If a set-aside of cropland is in effect under this subsection (c), then as a condition of eligibility for loans, purchases, and payments on corn, grain sorghum, and if designated by the Secretary, barley, respectively, the producers on a farm must set-aside and devote to conservation uses an acreage of cropland equal to a specified percentage, as determined by the Secretary, of the acreage (i) planted to such crops (including any set-aside or diverted acreage) in the preceding crop year, as adjusted by the Secretary to correct for abnormal factors affecting such acreage in the preceding year, or (ii) planted to such crops in the current crop year. The Secretary may limit the acreage planted to feed grains on the farm to a percentage of the feed grains planted to harvest in the previous crop year. Such limitation shall be applied on a uniform basis to all feed grain producing farms."; and

(2) in paragraph (3), striking out "1974 through 1977" and inserting in lieu thereof "1974 through 1981".

Mr. FOLEY (during the reading). Mr. Chairman, I ask unanimous consent that title V be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. FOLEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FOLEY: Page 14, line 18, strike out "$1.75 per bushel for the 1977 crop" and insert in lieu thereof "$2.00 per bushel for the 1977 crop";

Page 16, line 4, strike out "$1.85 per bushel in the case of the 1977 crop" and insert in lieu thereof "$2.00 per bushel in the case of the 1977 crop".

Mr. FOLEY. Mr. Chairman, this is the amendment of which I spoke with respect to corn when I offered the amendment to change the target price on wheat from $2.65 to $2.90.

This would have the effect of increasing the target price on corn from $1.85 per bushel, which is the figure in the committee bill, to $2 a bushel and increasing the loan rate on corn for 1977 from $1.75 to $2 a bushel.

The impact of this amendment on the budget is probably that it will result in a saving of budget outlays, since we have in the committee bill a 10-cent spread between the target price and the loan rate on corn, and this amendment would make them identical.

This increases the target price and the loan rate, but it reduces to zero the variance between those two. We could, if we had a very large corn crop and if we had a very soft price for corn, possibly incur as much as $600 million obligation to the Treasury.

The gentleman from Illinois (Mr. FINDLEY) has offered an amendment which I supported and which has been adopted by the committee. That amendment authorizes the reduction of loans in certain circumstances where the loan rate is considered by the Secretary to result in building up stocks or inhibiting exports. I would hope that we could accept this amendment, which does increase the loan rate on corn somewhat substantially, with the understanding that the Findley amendment also applies.

I believe that we do need to strengthen the loan rate on corn, considering the possibly very large corn crop that is coming on.

I am not going to engage in extended debate on this amendment, except to say that the amendment is popularly known in the halls and the cloakrooms of this House as the Harkin amendment. I think all the Members who have recognized it in that form and have agreed to support it will support this amendment, which is identical in language.

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Chairman, I thank the chairman of the committee for yielding. I want to congratulate the gentleman for offering this amendment.

I know there is a deep feeling toward the corn farmers and a recognition of the plight they are in this year. This modest increase in loan rates and target prices will insure that these corn farmers are indeed able to weather the lowest prices this year that they have seen in almost 7 years.

Mr. Chairman, I want to thank the gentleman in the well, the chairman of my committee, and I commend all the Members who have supported this amendment, especially my neighbor to the west, the gentleman from Nebraska (Mr. THONE), who also gave this amendment a great deal of support.

Mr. JOHNSON of Colorado. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. Mr. Chair-

man, I thank the committee chairman for yielding.

There ought to be some discussion about this proposal, which is a departure from our traditional target price-loan level approach; we have always had a spread between the target price and the loan level.

There has always been a purpose in having the spread. Now that the gentleman is bringing the two together, I think there should be some discussion about this so that we do not inadvertently lead ourselves into a trap later on that, in effect, does away with the target price-loan level spread which will, in effect, do away with the target price concept which I support.

I agree with the $2 figure as the target price. As a matter of fact, as the gentleman knows, I offered those figures originally in subcommittee; but I do have some qualms about the $2 loan level at the same time that we have that kind of target price.

I believe there should be some record made as to the justification for this and as to what the chairman's intention is with respect to bringing them together.

Mr. FOLEY. Mr. Chairman, I think the gentleman from Iowa (Mr. HARKIN) would like to respond to that question.

Mr. HARKIN. Mr. Chairman, if the gentleman will yield, I would like to respond to the gentleman's remarks.

Number one, this is for the year only. Next year, under the present bill, the target price impact will move up; and there will be a spread.

This is just for this year. Therefore, it will have no effect on the plantings or anything else this year because everything is already in the ground.

Mr. JOHNSON of Colorado. I understand that, but I would like to have the chairman comment on his attitude toward the traditional spread between the target price and the loan level.

Mr. FOLEY. The traditional spread is not always followed. The Senate bill, for example, had $1.70 target and a $1.75 loan rate. The target price is below the loan rate.

The CHAIRMAN. The time of the gentleman from Washington (Mr. FOLEY) has expired.

(On request of Mr. JOHNSON of Colorado and by unanimous consent, Mr. FOLEY was allowed to proceed for 2 additional minutes.)

Mr. FOLEY. Mr. Chairman, as I was saying, the target price is below the loan rate.

There are some problems with raising the loan rate on wheat. In fact some people would like to see the wheat loan at $2.90 or higher. However, at that point, I think the gentleman would agree, we would have severe problems in marketing wheat, and we would wind up with acquiring stocks.

I do not think that is going to occur with a $2 corn loan rate. The corn export market is dominated more by the American corn price than is the international wheat market by the American wheat loan rate, so I think there are differences between these two corps. They are not actually always symmetrical in the way that they relate one to the other, especially in the international market.

I do not think there is anything particularly harmful in having a loan rate identical with the target price; but there is, inferentially, a benefit to the Treasury if they are identical.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Illinois.

Mr. FINDLEY. Mr. Chairman, I would like to ask the gentleman for a little clarification of what he said about the effect of the amendment that I offered on loan rates.

Am I correct in understanding that the gentleman feels that the formula of my loan rate amendment could be applied to the 1977 feed grain corp?

Mr. FOLEY. No; I am not in agreement with that. I beg the gentleman's pardon. The amendment that the gentleman offered related to the 1978 crop and the crop of successive years.

Mr. FINDLEY. The further question I would ask is: What effect will this have on the Government's owning the feed grain?

The CHAIRMAN. The time of the gentleman from Washington (Mr. FOLEY) has expired.

(On request of Mr. FINDLEY and by unanimous consent, Mr. FOLEY was allowed to proceed for 2 additional minutes.)

Mr. FINDLEY. To continue, Mr. Chairman, there seems to be in prospect a $6 billion corn crop. The blazing sun out in the Midwest may change that, but I just talked to the Department; and there is concern that there might be almost a total takeover of the corn crop if the loan rate is $2, the Government being the merchant of the entire corn crop.

Will the gentleman comment on that prospect and the possibility that we might require some adjustment of the loan rate level when we go into conference.

Mr. FOLEY. I would say to the gentleman that I would personally be concerned if I thought that the $2 loan rate was going to result in the Government taking over the entire corn crop. I do no believe that. I can assure the gentleman that when we go to conference, if this amendment is adopted, we will have flexibility between the House and Senate figures on the 1977 loan rate. There will be a flexibility of between $1.75 and $2 on the loan rate on corn, which, I think the gentleman would agree, is to our benefit.

Mr. FINDLEY. Mr. Chairman, I thank the gentleman for his reassurance.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Minnesota.

Mr. QUIE. Mr. Chairman, just to continue on with the colloquy I had with the gentleman earlier, I am pleased that the chairman of the committee will look at this problem when he goes into conference.

I hope he will be as sympathetic with the idea of a difference between the target price and the loan rate as possible under the constraints of what we have adopted here. I am going to vote for the gentleman's amendment because I do not believe we can resolve it here, and in order to give the gentleman as much latitude as possible in the conference.

Let me point out that at a $1.75 loan rate a lot more corn will get fed up, I am not talking about overseas, but here, that if we have a $2 rate. So if we look at it for longer than this year, and the problem this year, I believe one would be disposed to have a lower loan rate than $2 in order that more of this corn might be fed up.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. FOLEY and by unanimous consent, Mr. QUIE was allowed to proceed for 1 additional minute.)

Mr. QUIE. As I was saying, that more of the corn might be fed up and not be a glut on the market in subsequent years. Every year all corn that is not fed up is carried over to the next year and this adds on to the depressant on the price in the next year's crop.

Mr. FOLEY. Mr. Chairman, I understand the concern of the gentleman from Minnesota (Mr. QUIE).

I would like to point out, also, as I said to the gentleman from Illinois (Mr. FINDLEY) that it will be before the conference, and we will discuss it. Next year the target price goes to $2.10 per bushel and the loan rate to $2 per bushel and the spread between the two rates is maintained in both the House and Senate bills.

Mr. QUIE. You will have less likelihood next year to have this opportunity if the corn is fed up in this marketing year rather than next year.

Mr. HARKIN. Mr. Chairman, I move to strike the last word.

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I yield to the gentleman from Iowa.

Mr. GRASSLEY. Mr. Chairman, I rise in support of the Foley amendment. I thank the good chairman of the Agriculture Committe for offering this amendment in the spirit of compromise, but also in recognition of the real desperate needs of the feed grain producers of America. Parenthetically, I would like to add that I feel it is also recognition on Mr. FOLEY's part as to the groundswell of support that was building for this move being made by other Members.

Most farmers in my district will support these higher loan rates. A few will feel they are not high enough.

But there is one faction of farmers—and it is probably a higher percentage than most Congressmen realize—who would oppose higher feed grain loan raises out of fear the Government will be encouraging overproduction and that it—the Government—will be getting back into the grain storage business. This faction obviously remembers the decades of the fifties and sixties and the low grain prices—albeit stable the prices were that accompanied the Government ownership of grain since that oversupply was a constant depressant on the market.

I listen to this faction, because I, too,

do not want to return to the days of the fifties and sixties with their stable, low prices and Government bins full of corn when bureaucrats in Washington had more to do with farming than they should. Our markets oriented farming of the seventies is much preferred by me.

But, I would like to relieve some of these people's fears by saying I do not feel a $2 loan rate will return us to those days, because $2 corn would not encourage anyone to overproduce—there is no profit at $2 a bushel.

Consequently, support for this amendment is support for the philosophy that the farm program should protect farmers against catastrophic drops in prices. This amendment will do no more than that.

Mr. HARKIN. Mr. Chairman, I rise in strong support of this amendment. However, I must admit that I am somewhat disturbed by some of the implications that may have been left by my distinguished chairman, the gentleman from Washington (Mr. FOLEY).

Do I understand the chairman that with the $2 loan and the $2 target price, we are going to find that it is his intention to go lower than that in the conference? There was a strong implication left in your remarks as to that.

Mr. FOLEY. Mr. Chairman, if the gentleman will yield, let me say that no, I have no intention of going lower, personally, and at this time let me say that I do not have something else in mind for the conference. I fought for the amendment and I certainly mean that seriously and I will hope to sustain that in the conference unless there are some circumstances or facts that develop that we do not have before us today.

Mr. HARKIN. In other words the chairman will give us his assurances that he will fight strongly in the conference for the $2 target price and the $2 loan price?

Mr. FOLEY. I will certainly support my own amendment.

Mr. HARKIN. I thought there was a strong implication otherwise.

Mr. FOLEY. I do not want the gentleman to imply that. I want to make it clear that the $2.90 target price which was adopted for wheat is not in the conference. The Senate has the same position. The gentleman from Illinois (Mr. FINDLEY) and the gentleman from Minnesota (Mr. QUIE) have asked if there was any possibility of considering the corn supports in conference. Of course it is possible to have it brought up in conference.

Mr. HARKIN. But I would point out to the chairman that the conference is locked in on the target and loan rates on wheat.

Mr. FOLEY. The gentleman is right.

Mr. HARKIN. That is absolutely correct. The ratio between wheat and corn ought to be maintained. If that corn price is dropped down then this ratio will be thrown out of kilter and we will see a great disturbance in the market place ratio between corn and wheat.

Mr. FOLEY. Mr. Chairman, I want the gentleman from Iowa to know I am not opposing this amendment. I have no ulterior motives of going to the conference and trying to reduce it. I am one of the conferees. I am not able to say what the conference will do. But I tell you that, personally, it is my present intention to stand by the amendment that I have just offered.

Mr. HARKIN. I thank my chairman for his assurances. I again want to support this amendment.

Further, I want to thank especially my colleague, the gentleman from Nebraska (Mr. THONE) who worked so diligently and hard on this issue. It was again truly a bipartisan effort on both sides of the aisle.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I will be glad to yield to the gentleman from Washington.

Mr. FOLEY. I thank the gentleman for yielding.

I share with the gentleman those expressions of congratulation. I would just like to say that I made a mistake, I think—at least my counsel indicates we may have made a mistake—in my response to the gentleman from Illinois (Mr. FINDLEY), when I said that the Findley amendment to adjust the loan rates did not apply to 1977. I am told by counsel that it appears that the amendment does apply to 1977, as well as 1978, 1979, 1980, and 1981. I want to make that clear in the record. I thank the gentleman.

Mr. HARKIN. I thank the gentleman.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I yield to the gentleman from Minnesota.

Mr. QUIE. I thank the gentleman for yielding.

I hope the gentleman from Iowa will give serious consideration to what the carry-over of corn at $2, with no difference between the target price and the loan price, is going to do to the year thereafter. I have agreed with the gentleman that we need to raise the price so that the farmer can get a better income. Conceivably he is going to get his income with the target price. I believe he is going to have that protection. I would ask him to look seriously again at that.

Mr. HARKIN. I think since it only applies to this one crop year, what it enables these farmers to do is to be able to store that grain and to be able to market it in an orderly fashion when the prices go up, instead of dumping it in the fall. I think that is going to be the benefit at this $2 loan rate this fall. I also hope that in subsequent years the target price will be higher than the loan rate, and I am sure it will be because of the market figures that are present in both the Senate bill and the House bill.

Mr. QUIE. If the gentleman will yield further, I would also add that when we look at the loan on wheat next year as compared to the $2 loan that was placed in the House bill on feed grain, that we also look at that in comparison with the $2.25 this year in wheat and what the loan ought to be.

Mr. HARKIN. I understand.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent Mr. HARKIN at the request of Mr. SMITH of Iowa was allowed to proceed for an additional 2 minutes.)

Mr. FOLEY. Mr. Chairman, may I say that unless we can conclude this vote in 2 minutes at which time I will move that the Committee rise, I would have to object. I have a commitment to the leadership, and I will have to ask that the Committee rise at that time. I will let this request for these 2 minutes stand. Unless we can reach a vote at that time, however, I am going to move that the Committee rise.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. SMITH of Iowa. If the gentleman will yield, I just want to point out that just because more corn is fed when it is $2 than when it is $3 does not mean more will be fed at $1.75 than at $2. The economists tell us when it is so low, an even lower price does not increase feeding. What it would do, if we have $1.75 on corn, would be to cause the substitution of more corn in place of wheat. Total tonnage of feeding would probably be about the same. With corn at $2 compared to a $2.25 loan on wheat would result in more wheat being fed where it is located nearer to the feeder.

Mr. HARKIN. I appreciate the dean of our delegation for clearing that matter up, and I appreciate the comments of my colleague, since he is the real expert in this body on that subject.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. FOLEY).

The amendment was agreed to.

Mr. DICKS. Mr. Chairman, I want to take this opportunity to extend my compliments to the distinguished chairman of the House Agriculture Committee, my colleague, Mr. FOLEY.

As a fellow member of the Washington delegation I know the difficulty of his decision on the target price for wheat. Perhaps more than any other Member of this body he sincerely desires the Agriculture Act signed into law. He has worked long and hard in negotiating with the administration on this issue and has exerted extraordinary effort to reach a mutually acceptable compromise.

I also know that the distinguished chairman is extremely sensitive to the needs of this Nation's farmers. The plight of the wheat farmer across the United States is well known to the Members of this body. I will not recite the figures on the decline in prices and the tens of thousands of farmers facing bankruptcy. Numerous other Members have done an ample and admirable job of this during debate on the bill.

Each and every American is dependent on the health of the agricultural sector of our economy, whether it is through food processing, transportation, or marketing. In offering the amendment to raise the target price for wheat to $2.90 for the 1977 crop year the chairman performed a service not only to farmers but to the Nation as a whole. It was a

courageous decision and it was the right one.

It is my hope that the President will again reexamine his position on this issue. I recognize and support his strong efforts to balance the Federal budget and I commend him for his efforts. It is my belief, however, that this is not the place to make cuts in the budget, and in the long term inadequate levels of target prices will come back to haunt us.

Mr. FRENZEL. Mr. Chairman, H.R. 7171, the omnibus farm bill, is a piece of legislation badly in need of repair. It does not provide necessary assistance to the most hard pressed of our agricultural producers, but it furnishes overgenerous support to others.

The signal injustice in H.R. 7171 is the target price of wheat. For some reason the committee and the administration have singled out wheat producers as whipping boys. The bill's target price for this crop year is $2.65, well under the cost of production.

I applaud the administration's desire to reduce expenses, and to balance its budget by 1981. I will make all reasonable efforts to help the administration reach that goal. But, we cannot be silent while the administration showers benefits on other segments of our society, yet invokes fiscal responsibility as an excuse for injustice to wheat producers.

I shall support the amendment to raise wheat target prices for this year to $2.90. It will be expensive—perhaps as much as $500 million. But we encouraged these producers to expand their production. They did so and are now being penalized. They deserve some special assistance.

Politically, this is a strange situation. Two years ago, this Congress laid on the desk of a Republican President a bill calling for a wheat target price of $3.10. After 2 years of severe inflation and rising costs, this Congress, at the request of the Democrat President, is considering a $2.60 figure. Somehow, perhaps magically, a change in the Presidency has made $2.60 a fair target, when $3.10 was fair 2 years ago.

One can only wonder at a situation in which wheat producers have become mere pawns in some large political drama. The wheat producers will wonder, too, since they were promised target prices equal to their cost of production by the current President during the last campaign.

It is sometimes said that increasing the costs of wheat simply increases the price of bread for all American consumers. I am advised that the wheat in a loaf of bread cost just a little over 2 cents. Since the wrapper on a loaf of bread costs more than the wheat in it wheat prices would seem to be insignificant compared to the total cost of the loaf. Two years ago, when wheat was selling at nearly twice its current price, the cost of bread was lower than it is today. Obviously there is not much correlation.

Also, opponents of farm subsidies worry that the price supports may be the cause of over production. Since the amendment to raise the target price of wheat to $2.90 applies only to this year's crop, which is already planted, and since it is well under the cost of production, the target price can hardly be an incentive to anybody to overproduce.

In general, I am not a great fan of agriculture subsidies. I much prefer a free-market approach. But, unfortunately, we are in one of those difficult situations in which there is no other alternative. Equity demands the $2.90 target price.

One of my objections to this bill is inclusion of the food stamp section. I voted against the rule partly because of the inclusion of that generally nongermane food stamp section, and partly because of the various waivers that were required by the rule. Food stamps is a disorderly program. The USDA has proved its ineptitude in managing this welfare program. It should be cashed out and made part of our regular welfare program.

One other aspect of this bill is important to me. That is the section dealing with sugar. With world sugar supply far exceeding demand, domestic producers have been put in great jeopardy. President Carter, I think, has reacted sensibly by refusing to set sugar quotas, which would be extremely disruptive to our entire trade situation. I think the Congress would be well advised to give a little more help to our sugar producers so that they can either ride through the low-demand period, or, preferably, begin to switch to other crops.

I strongly support the increased funding under title 13, the National Agriculture Research, Extension and Teaching Act. If our farms and farming methods and equipment are to remain the best in the world, our research and development programs must not lag behind, as they have in recent years. I also feel our food for peace program deserves the committee's suggested improvements, although I still question the need for the inclusion of tobacco in this program.

In the past, I have felt that a world food reserve was an idea whose time had come. I still do. However, I fear the United States may take on the role of world food banker and warehouseman without commitments from other countries for participation in the program. Also, I would oppose a plan in which the Government, instead of the individual farmer, would hold the grain. With total crops yields expected to reach new highs this year, I support the international reserve in the Senate bill, with the hope that a small program, with Presidential support, will encourage other nations' participation, and that from that base can grow a truly worldwide food reserve.

Mr. LEGGETT. Mr. Chairman, I would like to take a minute to address provisions in this bill dealing with disaster assistance to rice producers. As you are undoubtedly aware, the recent drought in California has had a debilitating affect on all agricultural production in my State. The severity of this situation demonstrates conclusively the need to retain disaster assistance measures with regard to all major crops.

Congress has long been concerned with the plight of the small farmer. Although the farming population of the United States is only a small segment of the population as a whole, the fact remains that agriculture is our largest industry. Taking into consideration all the industries, firms, and individuals to whom farmers sell and from whom they buy, every segment of our society is affected by agriculture. Consequently, the economic well-being of our farming population is of importance to all Americans.

In recent years, soaring production costs and increased competition with domestic and foreign agribusiness have seriously limited and threatened the economic stability of our family farms. The adverse weather conditions experienced throughout the Nation, and California in particular in the past year, have further compounded this already disastrous situation. In California alone, economists are predicting a gross loss of $1.3 billion for 1977 in the agricultural sector due to the continuing drought. Directly associated with the dire agricultural problems is a corresponding decline in the revenues of many small businesses that support the family farmers in the State. A recent survey of these businesses indicated a 50–percent decline in sales in the last 2 years. These are only two of many devastating examples of California's drought. Today we face an agricultural disaster, the effect of which will be a general depression of the economy as a whole. Only by continuing to extend disaster payments to these stricken farmers can we hope to avert such a trend.

As evidence of the need to continue disaster assistance programs, I would like to briefly address my comments to the situation in California with regard to rice production. California rice is instrumental in Federal export programs such as the food for peace program, Public Law 480. As much as 50 percent of the rice exported through the Public Law 480 program is grown in California. Many growers in California depend almost 100 percent on export to disperse their crops. The recent drought, however, is decreasing California's rice exportation abilities, affecting not only the producer, but the State and national economies as well.

According to USDA figures, acreage planted to rice in my State has decreased 19 percent this year—345,000 acres in 1977 as compared to 421,000 acres in 1976. This decrease in planting is only one of the factors affecting a projected low yield for 1977. An unexpected cold spell at the beginning of the rice planting season prevented proper germination of the crop, further reducing yield probabilities. Present estimates of the Rice Growers Association of California reveal a projected 25- to 30-percent reduction in yield as a direct result of the drought and cold weather conditions.

In 1976, disaster payments to California ricegrowers totaled $281,917 as compared to a national total for rice disaster payments of $462,789. Due to the increased severity of the drought, these figures are expected to increase notably for 1977.

We all hope, of course, that the drought situation will be alleviated this winter. Should this be the case, large-scale disaster assistance will not be necessary. However, the possibility of a continued drought cannot be ignored. California ricegrowers must be assured of a rea-

sonable rate of compensation against such a natural disaster in order to be able to continue production of this vital commodity. Such assurance has been available to the ricegrower since the passage of the Rice Production Act of 1975, and must be maintained in the legislation now under consideration.

I also support the only modification of the previous disaster assistance provision for rice, which would allow a grower to receive disaster assistance for land on which he is unable to plant as a result of a natural disaster. Due to the methods of production common only to rice, it is virtually impossible for a ricegrower to plant acreage to other crops if a natural disaster prevents planting of rice. For this reason, growers unable to plant their acreage should be afforded comparable compensation to those who suffer a depressed yield.

I would like to commend the Agriculture Committee, under the chairmanship of Mr. FOLEY, for its careful deliberation of this bill. It is encouraging that the committee has taken the uniqueness of rice production into consideration in determining disaster assistance provisions. I support and applaud the committee's decision to maintain disaster assistance provisions for rice, as well as all major crops. The continued existence of our small family farms depends to a large extent on the future availability of disaster assistance. I urge my colleagues' support of the distinguished Agriculture Committee and the small farmers of this country in retaining this vital aspect of the measure under consideration.

Mr. FOLEY. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. BROWN of California) having assumed the chair, Mr. EVANS of Colorado, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 7171) to establish more responsive programs for the benefit of farmers and consumers of farm products; to extend and improve the programs conducted under the Agricultural Trade Development and Assistance Act of 1954, as amended; and for other purposes, had come to no resolution thereon.

GENERAL LEAVE

Mr. CORCORAN of Illinois. Mr. Speaker, I ask unanimous consent that all Members may nave 5 legislative days in which to revise and extend their remarks on the Agricultural Act of 1977, H.R 7171.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 4544, BLACK LUNG BENEFITS REFORM ACT OF 1977

Mr. LONG of Louisiana, from the Committee on Rules, submitted a privileged report (Rept. No. 95-512), on the resolution (H. Res. 702) providing for the consideration of the bill (H.R. 4544) to amend the Federal Coal Mine Health and Safety Act to improve the black lung benefits program established under such act, and for other purposes, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 6951, COUNCIL ON WAGE AND PRICE STABILITY ACT OF 1974 EXTENSION

Mr. LONG of Louisiana, from the Committee on Rules, submitted a privileged report (Rept. No. 95-513), on the resolution (H. Res. 703) providing for the consideration of the bill (H.R. 6951) to amend the Council on Wage and Price Stability Act to extend its termination date, and for other purposes, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION TO ESTABLISH A SELECT COMMITTEE ON POPULATION

Mr. LONG of Louisiana, from the Committee on Rules, submitted a privileged report (Rept. No. 95-516), on the resolution (H. Res. 70) to establish a Select Committee on Population, which was referred to the House Calendar and ordered to be printed.

PERMISSION FOR SUBCOMMITTEE ON IMMIGRATION, CITIZENSHIP, AND INTERNATIONAL LAW OF COMMITTEE ON JUDICIARY TO SIT TOMORROW DURING 5-MINUTE RULE

Mr. EILBERG. Mr. Speaker, I ask unanimous consent that the Subcommittee on Immigration, Citizenship, and International Law of the Committee on the Judiciary may be permitted to sit tomorrow during the 5-minute rule.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

CONFERENCE REPORT ON H.R. 2, SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977

Mr. UDALL. Mr. Chairman, I call up the conference report on the bill (H.R. 2) to provide for the cooperation between the Secretary of the Interior and the States with respect to regulation of surface coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of July 12, 1977.)

Mr. UDALL. Mr. Speaker, this today will end I hope the legislative action on a bill that has been before us for 6 long years now. This is a good sound bill that we bring back from conference. The basic provisions of the House bill are in order. We made the necessary compromises with the Senate on a number of matters that are explained in the joint statement.

To those who say this bill is not needed, to those who have learned from the slick television and newspaper ads of Mobil, ARCO, Exxon and the rest, that strip mining is not a problem any more, let me say this—If you ask the people who must live with strip mining you will get a different message. Here are petitions to the President signed by citizens from all over the country—over 6,000 citizens and if you look at their addresses you will see that they live in areas affected by strip mining; places like Pennington Gap, Va., Huntington, W. Va., Hancock, Md., Barbourville, Ky., Big Stone Gap and Jonesville Va., and they are from States like Ohio and Tennessee and Utah. These people care about jobs, and a strong local economy and the other concerns expressed by the foes of this bill. But these people do not merely want to impose strong reclamation standards on strip mining, they want to ban strip mining because they have lived with inadequate State laws all these years and they do not believe that you can strip mine coal and still protect the land. I do not agree with them, I believe that reclamation can be achieved, but if you want to know if this bill is needed you can listen to the oil companies and the coal associations who are still calling for defeat of H.R. 2 or you can listen to these people who live with strip mining who have quite a different view.

I am inserting here in the RECORD a copy of one of these petitions. Also, I am sending copies of all the petitions to the President so the administration can feel the degree of concern that many citizens still have about strip mining and the need for substantially improved regulation:

To: The Honorable Jimmy Carter, President of the United States of America:

We, the undersigned, Citizens of these United States of America, hereby declare our opposition to strip mining of our land for coal. We ask that the massive rape of the earth for profit and the accompanying destruction of human health and welfare be brought to an end. It is time that Citizens recognize the shortsightedness, the recklessness, the unnecessary destruction of the land for a few years of so-called "cheap" energy.

It has been shown that the vast bulk of our coal reserves can only be mined by underground methods. It is in the national interest to intensify efforts to mine these vast deep reserves thereby stopping the ruination of valuable land. Underground mining provides more jobs, cleaner and better quality coal and is virtually non-destructive to surface land. The time for action to stop strip mining is NOW. We are saying no to strip mining and ask for your supportive action in our behalf.

SUMMARY OF CONFERENCE ON H.R. 2

Following is a summary of the major changes in H.R. 2 made during conference along with related legislative history:

MAJOR CHANGES DURING CONFERENCE AND LEGISLATIVE HISTORY

ALLUVIAL VALLEY FLOORS

H.R. 2 stated that no mines were to be located on "alluvial valley floors" in the West, nor were such mines to materially damage the quantity or quality of water in grounds surface systems which supply the valley floors. However, surface coal mine operations producing coal in commercial quantities in the year preceding enactment of this act and were located on or adjacent to an alluvial valley floor were exempt from this constraint. Similarly, those mines which already obtained specific permit approval to conduct mining in an alluvial valley floor were also excluded.

The Senate passed the "Melcher" amendment which provided for new mine operations on alluvial valley floors under limited circumstances. Mines that would interrupt, discontinue or prevent farming on alluvial valley floors when such farming is part of the farm's agricultural production would not be approved. Undeveloped rangelands are excluded as well as those developed or farmed lands which are so small as to have a negligible impact on the farm's agricultural production. The exemption to this provision for existing or permitted mines is essentially the same as that in H.R. 2.

The Senate also passed the "Wallop" amendment which provided authority for the Secretary of Interior to lease Federal coal deposits as an exchange of a Federal coal lease for coal underlying an alluvial valley floor which could not be mined. Such an "exchange" would be limited to those operators who had made a "substantial legal and financial" commitment to mine such coal prior to January 1, 1977. Similar exchange authority under section 206 of the Federal Land Policy and Management Act of 1976 was granted the Secretary with respect to privately owned coal under alluvial valley floors. Both of these authorities are discretionary on the part of the Secretary.

The House receded to the Senate provision with a few changes. The phrase "not interrupt, discontinue or prevent farming" was modified to "not interrupt, discontinue or preclude farming" in order to assure that farmable lands that may or may not be farmed at the time of permit application would be covered by this amendment. Further, the conferees did not want a change in surface use of valuable agricultural lands to qualify an area for surface mining. Thus, we do not allow a coal company to buy alluvial valley floor farmable lands, take them out of production; then qualify for a permit to surface mine. If developed lands on alluvial valley floors were "of such small acreage as to be of a negligible impact on the farm's agricultural production" they may be included in a mine plan. The phrase "not adversely affect" with respect to off-floor operations was changed to "not materially damage." The conferees also stipulated that the Secretary develop and carry out a coal exchange program for fee coal located in alluvial valley floors under the provisions of section 206 of the Federal Land Policy and Management Act of 1976. Conferees also recognized that if developed lands on alluvial valley floors were of "such small acreage as to be negligible impact on the farm's agricultural production" and are to be included in a mine plan, that farming on the mine site must be temporarily interrupted during the mining and reclamation process.

PRIME FARMLANDS

The conferees worked long and hard to come up with a workable and meaningful provision to protect prime farmlands. The provision in the conference report is a good, workable provision. It is not a moratorium. All existing operations are grandfathered. New permits can be issued for mining prime farmland provided that the regulatory authority make a written determination—based on existing data, past operator performance, and agricultural studies or experimentation with comparable soils—that the operator has the technological wherewithal to restore the land to levels of yield which equal those found on nonmined farmland. This provision does not impose an undue burden on State regulatory agencies.

The language in the conference report is intended to insure that prime farmlands will not be mined without some assurance that the operator has the ability to restore the land to full productivity after mining. The provision is reasonable, protective, and workable.

Concern has been expressed about the impact of the permit approval or denial test pertaining to prime farmlands on existing operations.

The exclusion pertains to existing mines, permits or renewals thereof after the date of enactment.

This is a different type and extent of exemption than that granted in section 506(d)(2) which pertains to boundary extension of existing mines operating on alluvial valley floors.

A specific summary of the prime farmland provisions in H.R. 2 follows the summary of H.R. 2.

SMALL OPERATORS

The House bill provided assistance to small operators through authorizing State regulatory agencies to have developed, at no cost to the operator, some of the hydrologic and geologic information necessary for mine permit applications. Small operators also were to comply with interim standards within 9 months of enactment.

The Senate bill provided this same authority concerning hydrologic and geologic data as well as granting a 24-month period for complying with interim standards.

The conferees agreed that some small operators be given some additional time, 9 months, for compliance with all of the interim program. However, this extension of time does not apply to the interim provisions pertaining to spoil handling and operators are prevented from continuing to push spoil downslope below the mine bench during the interim program.

Retaining the downslope spoil prohibition provision and requiring all operators to comply with it within 9 months after the date of enactment will substantially reduce the environmental impacts from mountain strip mining. Siltation, landslides, unstable slopes—all of these impacts of present mining will be mitigated. If the operator can not push the spoil over the mountain edge, he will have to transport it laterally along the mine bench. This may require significantly more energy and equipment and thus the operator will probably tend to backfill the material immediately adjacent to where he is removing the coal. This should result in backfilling the highwall.

I further understand that the small miner exemption in section 502(c) may be interpreted by some as a potentially broader exemption than was contemplated during the conference markup.

The exemption states, in part, the following:

Provided, however, That surface coal mining operations in operation pursuant to a permit issued by a State before the date of enactment of this Act, issued to a person as defined in section 701(19) in existence prior to May 2, 1977 and operated by a person whose total annual production of coal from surface and underground coal mining operations does not exceed one hundred thousand tons. . . .

"Person," as defined in the report, means "an individual, partnership, association, society, joint stock company, firm, company, corporation, or other business organization."

Therefore, a "person" may have five coal companies under his ownership, or control five corporations, each producing 90,000 tons of coal each. The aggregate total of coal produced by that "person" may be 450,000 tons annually, but each company—the definition of "person"—produced less than 100,000 tons, and is exempted.

In the case of providing an exemption from requirements set forth in the interim program, the term "person" is not taken to mean a coal company but refers, instead, to an individual who owns or controls or has controlling interest in coal mining operations whose aggregate production does not exceed 100,000 tons of coal annually. I realize that an individual may control more than one coal company and still be producing less than 100,000 tons. He would be considered a small operator whom the conferees intended to help by providing additional time in which to come into compliance. However, those persons whose coal companies produce an aggregate of more than 100,000 tons would not have the right to such an exemption.

The conferees deliberated this provision and adopted it with some reluctance among the House conferees. The debate was always focused on small operators which Senator FORD reminded us, would suffer hardships if the compliance deadline were not extended. However, small operators were looked upon as individuals who have invested their life savings in mining equipment in order to open a small mine or several small mines to produce coal. It was never intended that this exemption apply to individuals who own more than one company or control or have controlling interest in more than one company if the aggregate production from all those companies exceeded 100,000 tons annually. That individual

would not qualify for an exemption under this act.

The production must be combined, regardless of the business forms an operator chooses. If, for example, an individual owns or controls corporation A, which, in turn, owns or controls corporation C and corporation D, their separate production must be combined; and if together they produce more than 100,000 tons, none of the three corporations, or the individual, are entitled to the exemption.

There are many combinations and permutations of ownership and control: part ownership, partnership and joint ventures. In this area of concern, we expect the Secretary, as we stated in the conference report, to adopt regulations for the qualification of small operators based on the principal of tracing the patterns of ownership, control or corporate relationship to insure that only genuinely independent operators whose total production is under 100,000 tons annually, are qualified.

VARIANCE TO APPROXIMATE ORIGINAL CONTOUR

Both the House and Senate bills provided for regarding to approximate original contour including the complete backfilling of the highwall.

The Senate bill however provided a variance to the approximate original contour and backfilling highwalls completely for a wide range of post mining land uses. In addition, if "sound engineering technology" indicated that the highwall cannot be completely backfilled, then the operator would have been required to reduce the highwall to the maximum extent consistent with "sound engineering technology" and develop a revegetation plan that is "reasonably calculated" to screen the remaining highwall within 5 years.

The conference report includes a modified variance to the approximate original contour standard which requires however that in every instance all highwalls are to be completely backfilled. This amounts to a variance from the "configuration" aspects of the approximate original contour regrading standard. This gives an opportunity for a potential range of postmining land uses from those operations which would result in a very wide bench accommodating both the stable and complete backfilling of the highwall as well as additional areas for the planned land uses. This variance however is only for developed land uses such as industrial, residential or commercial sites. Agricultural, open space and similar types of land uses do not qualify. This variance procedure in section 515(e) contemplates only one variance procedure for the entire subsection which is conditioned by the constraints discussed above including the complete backfilling of all highwalls.

SPOIL ON THE DOWNSLOPE

The Senate amendment to H.R. 2 contained the provision from H.R. 25 pertaining to spoil placement downslope from the bench on steep slope mining operations. S. 7 stated that—

. . . no debris, abandoned or disabled equipment, spoil material, or waste mineral matter be placed on the downslope below the bench or mining cut, except that where necessary soil or spoil material from the initial block or short linear cut of earth necessary to obtain initial access to the coal seam in a new surface coal mining operation can be placed on a limited and specified area of the downslope below the initial cut if the permittee demonstrates that such soil or spoil material will not slide and that the other requirements of this subsection can still be met.

In consideration of H.R. 2 at the committee level the House modified this provision by deleting the capability of placing spoil from the initial short cut below the bench and the H.R. 2 provision reads as such:

(1) Insure that when performing surface coal mining on steep slopes, no debris, abandoned or disabled equipment, spoil material or waste mineral matter be placed on the downslope below the bench or mining cut: *Provided,* That spoil material in excess of that required for the reconstruction of the approximate original contour under the provisions of paragraph 515(b)(3) or 515(d)(2) or excess spoil from a surface coal mining operation under subsection 515(c) may be permanently stored pursuant to section 515(b)(11).

The committee noted that downslope spoil placement is one of the major sources and causes of landslides, siltation, erosion and unstable fill areas.

Since the committee adopted specific standards pertaining to surplus spoil disposal it was decided that these standards would apply to all spoil that was not to be kept on the mine bench. It should be noted that the surplus spoil disposal standards do not allow the dumping or pushing of spoil downslope of the bench. These standards require controlled placement of the spoil. Spoil must be transported—hauled by truck or other vehicle—placed and compacted at the exact location of its permanent disposal. This controlled placement concept is essential to the long term stability of the spoil.

The conferees adopted the House approach with strengthening amendments, specifically rejecting the approach in S. 7.

I, nor did the other conferees, intend that this provision be used or interpreted to allow the continuation of dumping spoil downslope below the mountain mine bench. Suitable disposal areas must be found. It would seem that solid portions of old mine benches would be most suitable since they would offer the best foundation for stability. Basic to the bill though is the understanding that if the environmental protection standards cannot be met in one site, then mining should be shifted to sites where such standards can be met.

Let me include here as part of my remarks the following summary of the bill as approved in conference:

SUMMARY OF H.R. 2—SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977

TITLE I—STATEMENTS OF FINDINGS AND POLICY

This title sets forth a number of the principles upon which the bill is based.

TITLE II—OFFICE OF SURFACE MINING RECLAMATION AND ENFORCEMENT

This title establishes a special Office in the Department of Interior with the responsibility of implementing the regulatory and reclamation program provisions of the bill.

TITLE III—STATE MINING AND MINERAL RESOURCES AND RESEARCH INSTITUTES

This title establishes an eight year program for funding mineral resource research institutes at a number of qualified public colleges or universities. The training of mineral engineers and scientists are the primary purposes of the Institutes and the research funded by the program complements this activity. Funds are provided on a matching basis for establishing and supporting the institutes. Research funds are also provided in addition to these institutional support grants.

TITLE IV—ABANDONED MINE RECLAMATION

This title creates a mined land reclamation program. Funds for this program are derived from a reclamation fee on every ton of coal produced starting upon enactment of the legislation. The fee is 35c/ton for surface mined coal; 15c/ton for underground mine coal; and the lesser of 10c/ton or 2% of the value of lignite mined in any way.

Lands eligible for reclamation are those mined for coal and inadequately reclaimed prior to the date of enactment and for which there is no continuing legal responsibility for reclamation. Waters impacted by such mining are also eligible. After coal mined lands have been reclaimed in a state, some of those funds can be used for reclamation of non-coal mined lands. Funding of energy development impact assistance is subsequently possible, but this is discretionary on the part of the Secretary and also would depend on the availability of other funds to meet the impacts. Thus, coal mined lands in any state are eligible. Non-coal mined lands are eligible only in states where reclamation fee revenues are being derived.

States may develop their own reclamation program and when approved by the Secretary 50 percent of the funds resulting from the fee derived in that state will be allocated to that state for its program. State programs are only funded if the state has an approved permanent regulatory program for active surface coal mine operations (Title V).

The Secretary of Interior is to administer the balance of the program and direct funds to areas of greatest concern or need. These reclamation projects can be funded directly by the Secretary or as a supplement to an approved state program.

The Secretary of Agriculture is provided a rural lands program. Up to 20 percent of the total funds generated by the fee can be allocated to this program.

Both private and public lands can be reclaimed, however expenditures on private lands under the Interior and state programs will result in a lien on the property for the increased value due to reclamation expenditures. Liens are to be payable to the federal reclamation fund.

Indian tribes have the same status as do states in programs authorized by this title.

TITLE V—CONTROL OF THE ENVIRONMENTAL IMPACTS OF SURFACE COAL MINING

This title establishes a program administered by the Secretary of Interior and the several states to regulate surface coal mining and the surface impacts of underground coal mines in an environmentally acceptable fashion.

An interim program is provided which addresses the most critical environmental problems and includes standards on: planning; regarding to approximate original contour; prohibition of pushing spoil downslope below the mine bench; hydrology; blasting; top soil segregation; and revegetation. These standards apply to all new mines six months after the date of enactment. Small operators (up to 100,000 tons/yr from all coal operations) may be extended an additional nine months for compliance on existing permits depending upon state law, with the exception of the prohibition of dumping spoil

downslope. Enforcement during the interim program is by both state and federal officials. Federal inspections of each mine are at least once every six months or when otherwise triggered by successive violations during state inspections or by citizen request.

States are encouraged to develop a permanent regulatory program within 24 to 30 months containing at a minimum all of the environmental standards and other provisions of this title. Such a program would include specifications for: application for mining permit; reclamation plan requirements; criteria and authortiy for permit approval or denial; environmental protection standards; inspections and monitoring; penalties; bonding and phased release of bonds and operator liability; enforcement; administrative and judicial review; public notice and hearings; citizen suits; and authority to designate areas unsuitable for mining. The detailed environmental protection standards include: planning criteria; post-mining land use specifications; regarding to approximate original contour; complete and stable backfilling of all highwalls; top soil segregation; soil reconstruction of highly productive soils; engineering criteria for impoundments; controls on auger mining; full protection of surface and subsurface waters; surface disposal of mine waste; regulation of surface and underground mines in close proximity; blasting controls; access roads; revegetation and differing periods for operator responsibility; surplus spoil disposal; protection of fish and wildlife resources; and control of mountaintop and contour mining. The standards also apply to the surface impacts of underground mines with appropriate modifications to assure compatibility with the protection of the health and safety of underground miners.

Citizen participation

The procedures and processes established by H.R. 2 include citizen participation in every major step and such citizen involvement is essential to the successful implementation of this Act. Major citizen participation provisions include: participation in the development regulations for the interim and permanent programs participation in the permit approval or denial process as well as the reclamation review and bond release activities; participation in enforcement of the environmental protection provisions during the interim and permanent programs; and participation in citizen suit activities if necessary.

This title also includes authority for a Federal lands program which makes the provisions of this Act applicable to all Federal lands.

TITLE VI—DESIGNATION OF LANDS UNSUITABLE FOR NON-COAL MINING

This title provides authority to the Secretary of Interior for the designation of some Federal lands as unsuitable for all or certain types of mining. This designation of authority is provided in order to protect existing surface uses and values pertaining to residential and related purposes. Procedures concerning the development of information, hearings, designation, and appeals are provided. The designation process can be initiated by the Secretary, requested by a Governor or triggered by a citizen with submission of a factual petition.

TITLE VII—ADMINISTRATIVE AND MISCELLANEOUS PROVISIONS

This title includes a number of items such as: definitions, relation to other Federal laws, employee protection, research studies, authorization for appropriations, Indian lands authorities; experimental practices; and surface owner protection.

Authorization for the administration of the regulatory program includes: reprogramming up to $2 million for the current fiscal year; $30 million for fiscal year 1978; $40 million for fiscal year 1979 and 1980 and whatever funds are needed in subsequent years. In addition, $10 million is provided for developing hydrologic and geologic data to be used in mine applications by small mine operators.

The Indian lands program includes a study of the jurisdictional and administrative problems of implementing a full regulatory program on such lands. However, the environmental standards identified in the interim program in Title V apply to surface coal mine operations on Indian lands during the conduct of the study.

Surface owner consent for strip mining is required prior to additional leasing of federal coal if the surface is in private ownership and the owner qualifies since his principal source of income is from agricultural use of the land.

TITLE VIII—UNIVERSITY COAL RESEARCH LABORATORIES

This title authorizes the creation of 10 coal research laboratories, one in each of the major coal provinces. Research projects at these laboratories are to focus on the development of coal resources, coal conversion and related environmental problems. Authorizations include up to $5.5 million to establish each laboratory (facility construction and equipment) and $7.5 million for research. This program is administered by ERDA.

TITLE IX—ENERGY RESOURCE GRADUATE FELLOWSHIPS

This title establishes a fellowship and research program in applied science and engineering related to the production, conservation and utilization of fuels and energy. Up to 1,000 fellowships per year for FY '78 through FY '83 are authorized. Fellowships may be for a two-year period. Allowances to both the school and the applicant are provided. Annual authorizations are set at $11 million. This program is administered by ERDA.

This title also includes a program for research and demonstration of alternative coal mining technologies which will also result in reduced environmental impacts. Both surface and underground technologies are included. This is a five-year program, administered by the Secretary of Interior, funded at $35 million per year.

SUMMARY OF PROVISIONS TO PROTECT PRIME FARMLANDS, H.R. 2

Mine Application Requirements: Sec. 507 (b) (16).

This provision requires that the applicant conduct a reconnaissance of the area to be included in the application and if such inspection suggests the existence of prime farmlands, then a detailed soil survey must be conducted to confirm the exact location of such lands.

Mine Reclamation Plan Requirements: Sec. 508(b) (5).

This provision states that the reclamation plan must contain a plan for the soil reconstruction, replacement and stabilization of prime farmlands.

Permit Approval or Denial: Sec. 510(d).

This provision pertains only to permits issued after the date of enactment for new mining operations. The provision states that if the application contains prime farmlands, then the permit can only be granted if the regulatory authority finds in writing that the operator has the technical capability to restore such mined areas, within a reasonable time, to equivalent or higher levels of yield as non-mined prime farmlands in the surrounding area and can meet the soil reconstruction standards of the Act. This is in addition to the more general tests in Sec. 510(b) which also require that the operator can "affirmatively demonstrate" that the reclamation required by this Act can be accomplished.

Environmental Protection Performance Standards: Sec. 515(b) (7).

These provisions specify:

(a) segregation of A horizon and stockpile separately and protect from erosion;

(b) segregation of B horizon, or combinations of the B and C horizons, so that sufficient subsoil is available to create in regraded areas a root zone comparable in depth and quality to pre-mine conditions. This must also be stockpiled separately to protect against erosion.

(c) replace seperately the root zone material and top soil with appropriate degrees of compaction to meet pre-mining conditions.

(d) if the applicant can show that other material from the mine operation is more suitable for the soil reconstruction and meeting the various tests including that of productivity, then the regulatory authority may allow such a substitution.

Release of Performance Bonds: Sec. 519 (c) (2)

This provision specifies that the remaining portion of the performance bond cannot be released until soil productivity for prime farmlands has returned to equivalent levels of yield as comparable non-mined farmlands in the same area under equivalent levels of management practices.

ROLE OF SECRETARY OF AGRICULTURE

The Secretary of Agriculture is to establish standards for the soil survey required in Sec. 507. The rules and regulations issued by the Secretary of Interior concerning Sec. 510 and 515 will include the Secretary of Agriculture's concerns with respect to prime land protection provisions.

The Secretary of Agriculture is to publish in the Federal Register the definition of prime farmlands as required in Sec. 701(20) of H.R. 2.

ADDITIONAL LEGISLATIVE HISTORY

The Conferees have reduced some of the administrative burdens on the regulatory authority in H.R. 2. Mandatory public hearings are no longer required for every single permit, or for every frivolous or whimsical objection. Informal conferences may now be held when requested by interested parties who have filed written objections. This procedure does not prejudice the appeals or hearings rights of any objector. The informal conference procedure contemplated by the Conferees is not intended to be a private, closed-door "back room meeting", but rather a serious public forum, similar to Congressional hearings with full notification accorded the public, which addresses all objections and questions, and whose proceedings are recorded and made an open public record. This compromise takes away the expense and overkill of a public hearing at every turn, but preserves the rights of objectors and retains a necessary forum for public involvement.

Another point should be made about the nature of the public hearings pursuant to 521(a) (5) in or near the mine after the issuance of a cessation order and this public hearings' relationship to the formal adjudicatory "public hearing" to which the operator is entitled. The public hearing provided for in 521(a) (5) may be an informal hearing akin to a management review by an inspector's supervisor of the order closing part or all of the mine. Section 525(b) provides for a formal adjudicatory hearing and a final Secretarial decision within 30 days of receipt of the application for review where the appeal is from a cessation order. This right makes a formal mine-site review clearly unnecessary. I might add that it was our intent in adjusting the various hearing requirements in conference that the regulatory authority have the flexibility to structure the hearing procedures to provide for less formality than formal adjudication unless the Act specifically requires such formal adjudication.

A question has been raised about possible overlap between Sec. 515 performance stand-

ards, which are a part of the interim program, and performance standards which are only part of the permanent program. A specific example is whether the bill requires the Secretary of Interior to deal with the hydrologic consequences of roads on the mine site, a source of serious disturbance to the hydrologic balance, in the interim program under Sec. 515(b)(10) even though the more extensive regulations dealing with roads in Sec. 15(b) (17) and (18) are only part of the permanent program.

The answer is that Sections 501 and 502 were designed to expedite the issuance of regulations during the "interim period" to control the more serious, adverse, environmental impacts of mining, both deep and surface. These impacts may fall into more than one of the categories we have established in Sec. 515(b). Thus, there may be overlap between standards in the interim program and those in the permanent program. In the case of such overlap we expect the Secretary of Interior to implement fully the interim standards, regardless of whether by doing so the interim regulations have an impact on areas of concern reserved for the permanent program. The example I gave is appropriate. It will be necessary for the Secretary to address the hydrologic impacts of access and haul roads and any other activity associated with mining in the context of Sec. 515(b)(10) in the interim program.

As the House knows, H.R. 2 in this Conference Report addresses the surface impacts of underground mining and the interim program applies to surface impacts of underground mining in States that regulate any such impact. Section 502 requires compliance with the interim regulations by "coal surface mining operations" which is defined to include the surface impacts of underground mining. If a State presently regulates any surface impact of underground mining, then the interim regulation adopted under Sec. 501 and the program under Sec. 502 would apply in that State.

I should also mention the concept of State-Federal cooperation has been basic to the entire bill throughout the legislative history. We expect full cooperation from the implementation of the interim program through the permanent program and this cooperation may well take many forms. I expect the States and the Secretary will exchange information, inspection reports and share those administrative services, such as aircraft or aspects of program implementation where legal and appropriate.

I reserve the balance of my time.

Mr. BAUMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, today marks the final step in what has been a long struggle for the proponents of this all-too-familiar piece of Federal strip mine legislation. It has been long because it has taken nearly 7 years and costly because it has already cost the American taxpayer over $150,000 in printing costs alone during this time. The cost to the American taxpayer, however, is not over but instead is just beginning.

I have been asked whether this bill is indeed better than its predecessors. I have to respond that several improvements have been made since this bill's introduction at the beginning of this Congress. Some of these improvements have made it less onerous. However, I remain convinced that this bill will undoubtedly violate States' rights, destroy many small businesses, invite endless litigation, increase the Federal bureaucracy many times over, increase consumer electric costs, and in the short-term will bring about a reduction in coal production as well as employment.

The proponents of this measure have in the past, and continue to do so even today, taken exception to the potential adverse impacts of this type of Federal legislation. For example, they would argue that this bill will create a net increase in jobs.

I doubt that this is true but one should look closely at the type of jobs that will be created. First, because of the numerous regulations that will be promulgated, an army of Federal bureaucrats will be employed for the purpose of drafting these regulations.

Second, the bill requires Federal inspections of surface mining operations wherever they occur. Keep in mind that these inspections will require the hiring of new Federal inspectors that will be in addition to the 1,500 Federal inspectors presently employed by the Mining Enforcement and Safety Administration.

Third, the abandoned mine reclamation program provided for in this bill will be carried out by the U.S. Corps of Engineers and require the hiring of even more Federal employees. The estimated cost of this modest project will range from a low of $7 billion up to a high of $10 billion. The funds for accomplishing this project will be derived from a fee levied on every ton of coal produced in the United States. The reclamation fee along with the other costs imposed by this bill will be borne by the coal producers who will then pass them along to the electric utility companies who will ultimately pass them on to the individual consumer.

Fourth, the Secretary of Agriculture, through the Soil Conservation Service, will have the responsibility of implementing the rural lands program as provided for in this bill. Thus, more Federal bureaucrats will have to be employed to accomplish this program.

Last, but not least, are the Federal bureaucrats that will be employed to staff the new Office of Surface Mining Reclamation and Enforcement in the Department of the Interior. This will include not only those actually based in the Interior Department but the vast number that will be located in its regional, district, and field office tentacles throughout the United States. So again I would say to the American taxpayer—the cost to you is just beginning.

To the small coal mine operator and his family I would simply say that when you lose your present job, do not despair because you may qualify for one of the new Government jobs created by this measure.

To the members of OPEC, the unidentified absentee cosponsors of this measure, I would simply say—keep those oil tankers coming. This will certainly be necessary in the short-term as a result of production losses inherent in this bill.

The proponents of this measure also argue that there will be no losses in production but the ICF, Inc., report of January 24 tells us that there probably will be significant losses in production as well as future coal reserves. ICF predicted that an immediate coal production loss of 54 million tons in Appalachia alone, assuming the increased reclamation costs this bill imposes. Furthermore, the ICF report projects that Federal coal reserves on the order of magnitude of 800 million to 8½ billion tons may be removed from future production by the surface owner consent provision of this bill alone. Significant losses are likely to result from the citizen suits provision, the provision for designating lands unsuitable for surface coal mining, the steep slopes provision, and the losses that are likely to result from litigation that will be necessary to resolve the numerous ambiguous features of this bill.

In a recent draft analysis of the proposed national energy plan prepared by the Office of Technology Assessment, the statement is made:

> The Plan's goal of expanded coal use is not likely to be reached. Utilities and industries are not likely to convert to coal to the extent the Plan expects because of stringent environmental standards, and uncertainties about the reliability of pollution-control equipment.

I believe that if the provisions of this bill were factored into the analysis of the national energy plan, the OTA would agree that the goal of expanded coal use will not be met.

When all these factors are considered objectively, how can any of us return home and explain that we voted in favor of a bill that will severely hamper coal production and will remove billions of tons of coal from ever being mined? This would be sheer hypocrisy and your constituents who need heat, light, and jobs, I believe will share my view.

Make no mistake, I want to protect the environment as I know all conscientious Americans want to do. In the absence of this bill, strip mining will still have to take that proper and important concern into full account because of existing Federal and State law. I urge my colleagues to join me in voting against this measure.

I include at this point in my remarks a statement from the American Mining Congress and the National Coal Association.

[Mailgram]

MIDDLETOWN, VA.,
July 20, 1977.

HON. ROBERT E. BAUMAN,
House Office Building,
Washington, D.C.

Many Members of the House and Senate labored long and hard in trying to produce a workable surface mining bill. Clearly the diligent and untiring efforts of Members of both Houses to obtain a workable formula are deserving of high commendation.

The American Mining Congress and the National Coal Association continue to have serious doubts as to the need for Federal legislation, because the States are doing the job. Thirty-eight States have moved aggressively to insure that surface mining is done in an environmentally sound fashion, and existing Federal regulations cover Federal lands, so that virtually all surface coal mining is currently regulated for reclamation.

The differences between the States and their regulatory formulas are proper and are consistent with the differences between the mining circumstances found in the various States.

We continue in the view that the States are and remain the logical place for the administration of a workable surface mining formula which will help insure the availabil-

ity of the coal, meet the needs of the differing climate, terrain, and geology of the coal mining areas, and help prevent the imposition of unnecessary restrictions without significant environmental benefit.

Despite the labors of both the House and the Senate to come up with a bill that is workable within the 50 States, the result has been legislation which still contains prohibitions in the guise of regulation. The Federal formula is not workable in the 50 States and the prohibitory provisions coupled with the invitation for unlimited litigation and the opportunity for bureaucratic stagnation will seriously impair the industry's ability to provide the increased coal production which the Carter administration has asked the coal industry to produce.

It is the belief of the National Coal Association and the American Mining Congress that this surface mining legislation and the regulations to be promulgated thereunder, together with the constraints of the Clean Air Act will seriously jeopardize this Nation's ability to achieve its energy objectives.

We are, therefore, impelled to urge you to vote to reject the conference report on H.R. 2, the Surface Mining and Reclamation Act of 1977.

J. ALLEN OVERTON, Jr.,
President, American Mining Congress.
CARL E. BAGGE,
President, National Coal Association.

Mr. UDALL. Mr. Speaker, I yield to the distinguished gentleman from Ohio (Mr. SEIBERLING) 2 minutes.

Mr. SEIBERLING. Mr. Speaker, I thank the gentleman from Arizona for yielding.

Mr. Speaker, I would like to congratulate the chairman of the Interior and Insular Affairs Committee, who also acted as chairman of the conference on this bill. It has been a real privilege to work with him over the long years it took to get a meaningful, workable strip mining law. His leadership, skill, and patience through numerous hearings, markup sessions, two Presidential vetoes, and three House-Senate conferences are finally bearing fruit in an outstanding piece of legislation. While it represents the collective effort of many people, if it is a monument to any one person, that person is the gentleman from Arizona, our distinguished colleague, MO UDALL.

Mr. Speaker, I would like to address a question to the gentleman from Arizona to clarify what I believe could be a misleading impression created by the explanatory statement accompanying the conference report.

Subsection 510(b)(6) of the bill contains an important provision covering situations where land is in private ownership but the surface is owned by one person and the subsurface coal is owned by another. In many cases, subsurface rights were purchased for a pittance, generations ago, when strip mining of coal was hardly known. The result has been much injustice, hardship, and inequity to the owners of the surface, who have been ousted from their farms or homes and their land laid waste by huge earthmovers. Many others have found themselves unable to sell land on which they have paid taxes over the years.

Let me quote from a letter I received from a resident of Stoney Fork, Ky., shortly after the conference committee completed its work. It graphically illustrates the kind of situation that has arisen for hundreds of small property owners:

DEAR SIRS: I wholeheartedly applaud your stand in the "Broad-Form" deed issue.

We have some property in Harlan Co. Ky. that's been in my family since 1853, through grants from the then governor. Unfortunately, great grandfather sold the mineral rights around 1897.

That old deed didn't mean much up until recently and now we find ourselves in the strange position of owning a few hundred acres of land that we've paid our taxes on (I don't think the mineral owners have ever paid any) and yet we find that we don't really "own" it; we are afraid to improve any part of the land or build a house since you never know which way the bulldozer might come.

We have a housing shortage in Harlan Co. but I can't sell anybody a house seat, they too are afraid of the uncertain future under the broad-form deed.

I just hope and pray that enough of your honorable colleagues will understand the logic you are trying to establish. We will in the meantime continue to pay our property taxes and hope that the rights of the surface owner are made equal to the rights of the mineral owner prior to the coming of the bulldozer. Best regards.

To remedy this kind of situation, I offered the amendment that was incorporated in the House version of section 510(b)(6), the purpose being to require the owner of the subsurface coal, before he could get a permit to strip mine, to show that he had the express written consent of the surface owner or an instrument clearly evidencing that the deed under which he owned the coal was intended to permit mining of it by the strip-mining method.

In the conference, I agreed, after considerable debate, to modify subparagraph (C) of this subsection to incorporate the language shown on page 42 of the conference report which reads as follows:

(C) if the conveyance does not expressly grant the right to extract coal by surface mining methods, the surface-subsurface legal relationship shall be determined in accordance with State law.

I understand this to mean that conveyance will be construed in accordance with State law. However, the explanatory statement on page 106 of the conference report does not follow the terminology of the bill. Rather, it states that in such cases, "the determination of whether or not the private mineral estate owner or a successor-in-interest has the right to mine the coal by surface methods shall be made in accordance with applicable State law."

By not mentioning the word "conveyance," the explanatory statement places an unfortunate gloss on the language of the bill and implies that the right to mine by the subsurface method need not be based on the construction of the conveyance but only on the general law of the State. While the conferees did not intend to override State law as to the effect of such instruments, I believe that they did intend to require a showing that there is a deed or other instrument of conveyance and that, under the applicable State law, it is construed to authorize surface mining.

Does the chairman agree with my statement of the intention of the conferees on this point?

Mr. UDALL. Yes, the gentleman has made a correct interpretation and, while it may not make any practical difference in many cases, the language of the explanatory statement does lend itself to an interpretation different from the intent of the conferees on this one point.

Mr. SEIBERLING. I thank the Chairman, and am gratified that his understanding accords with my own on this point. I would like to note, however, that the language in question could make a significant difference. In the case of *Commerce Union Bank* v. *Kinkade*, 540 S.W. 2d 861 (1976), the Supreme Court of Kentucky concluded that conveyances which granted the right to mine coal under the land and gave grantees the right to such surface space as necessary for mining did not grant the right to mine by the surface mining method nor did they indicate that it was intended by the parties to the conveyance that the mineral owner's right to use the surface would be superior to any competing rights of the surface owner.

As pointed out by Justice Stephenson in a concurring opinion, the court's decision constituted a basic departure from an earlier Kentucky Supreme Court ruling, *Buchanan* v. *Watson*, 290 S.W. 2d 40 (1956), even though the decision did not formally overrule the Buchanan case. Justice Stephenson states that Buchanan was part of a line of cases basing the right to surface mine on a doctrine of dominance of the subsurface or mineral estate. He states, "Buchanan clearly holds that if strip mining is the only feasible means of removing the coal, then the mineral owner has the right to strip unless the mineral deed prohibits strip mining," 540 S.W. 2d 861 at page 865.

It is apparent, in view of the conflicting approaches exemplified in these Kentucky Supreme Court opinions, that the language on page 106 of the explanatory statement, if construed so as to refer to general State law rather than to the State law governing mineral conveyances, might, in some cases, make a significant difference. That is why I feel it important to point out that the intent of the conferees was more precise than the language of the explanatory statement seems to imply.

Mr. UDALL. Mr. Speaker, I yield 2 minutes to the gentleman from Nevada (Mr. SANTINI).

Mr. SANTINI. Mr. Speaker, the principal virtue of my observation will be brevity; but I would like to engage the chairman of the full committee in colloquy.

I should like to inquire of the chairman of the House committee whether the conferees' version of the surface owner consent provision, which is section 714, has any effect on the right of the holder of a prospecting permit to the issuance of a Federal coal lease by the Secretary.

Mr. UDALL. Mr. Speaker, my answer, if the gentleman will yield, is that it does not. As the gentleman no doubt is aware, in amending the Mineral Leasing Act last year by the Coal Leasing Act amendments, Congress put an end to the prospecting permit system which had obtained under section 2(b) of the Mineral

Leasing Act of 1920. One who has obtained such a permit was, as the law read prior to its amendment, "entitled to a lease" if he found coal in commercial quantities within the limits of the permit area and during the permit's life. In terminating that system by amending section 2(b) of the Mineral Leasing Act, Congress preserved "valid existing rights" that might have arisen under then outstanding permits.

In reporting out H.R. 25 in the 94th Congress, the strip mine bill which President Ford vetoed and which we fell only 3 votes short of overriding, our committee stated in its report (H. Rept. 94-45) at page 123, that the surface owner consent provision was not intended to deprive the prospecting permittee of any property right if such right existed as a matter of fact and of law.

The surface owner consent provision adopted by the House in H.R. 2 was, in that respect, unchanged. The conferees' version likewise effected no change in that aspect, but deals solely with the offering of Federal coal for lease, in circumstances where the prospecting permits, to the extent that they did confer rights under the old system, are not involved.

Mr. SANTINI. I thank the distinguished chairman for his explanation.

Mr. UDALL. Mr. Speaker, I yield 2 minutes to the gentleman from West Virginia (Mr. RAHALL), who played a very important part in this legislation and really distinguished himself and who is a member of the conference committee.

Mr. RAHALL. Mr. Speaker, I rise in strong support of this conference report on H.R. 2. I also would like to commend the distinguished chairman of the full committee, the gentleman from Arizona (Mr. UDALL) for the excellent job he has done in the 6 or 7 years he has been involved in this legislation.

As a freshman member of the Conference Committee, I thoroughly enjoyed my work. I want to commend the other members of the Committee on Interior and Insular Affairs, both the minority and the majority, for their work with this bill. I find the bill to be an excellent one; a strong bill, requiring the return of our land to its approximate original contour after strip mining; yet, realizing that there are better post mining uses that sometimes can be developed. This bill allows that to occur.

The problem of the small operator is also addressed. A percentage of reclamation funds is set aside to provide cash assistance to him to allow the small operator to meet the requirements of this bill. States are allowed to administer and enforce their own programs if they are found to meet the minimum guidelines of this bill.

Mr. Speaker, since the conferees completed consideration of H.R. 2 on June 30 and the subsequent filing of the conference report on July 12, several mining industry newsletters have summarized the resolution of the differences which existed between the two bills.

While much of this reporting is accurate and credit is due the compilers of the newsletters, it is difficult to accurately report on each and every provision without the benefit of having the printed conference report at hand.

In one instance, both the newsletters of the major mining associations erroneously described the substance of the conference report provision pertaining to reclamation and backfilling of highwalls. Both newsletters reported that in instances when postmining land uses are to be residential, commercial, industrial or recreational that "highwalls must be reduced to the maximum extent consistent with sound engineering technology."

This is just not the case. The conference report provides that a variance to the concept of "approximate original contour" may be granted but even in these instances all highwalls must be completely backfilled in every instance. As discussed in the joint explanatory statement of the committee: "This gives an opportunity for a broad range of postmining land uses on those operations which would result in a very wide bench accommodating both the stable and complete backfilling of the highwall as well as additional areas for planned land uses."

The joint statement further went on to state, "conferees did not adopt the 'sound engineering technology' provision of S. 7." Thus the reference to and intent of the provision in the Senate bill and reportedly included in the conference report, was in fact specifically rejected by the conferees.

Overall, I am very pleased with this bill and was very happy to have been a conferee and to have had the opportunity to play a significant role in its development this year. Again, I want to commend the distinguished chairman for his excellent work and the long years he has put in, and I am happy that we do have a President who has said that he will sign this bill.

Mr. SEIBERLING. Mr. Speaker, will the gentleman yield?

Mr. RAHALL. I yield to the gentleman from Ohio.

Mr. SEIBERLING. Mr. Speaker, I would just like to say that even though he was a new member of the committee and a new member of the conference, the gentleman from West Virginia made some very, very excellent contributions to our deliberations and to our work, and added a great deal to our success in developing a workable bill. I appreciate very much the help he gave us.

Mr. RAHALL. I thank the gentleman from Ohio, and commend him for his excellent work.

Mr. UDALL. Mr. Speaker, will the gentleman yield?

Mr. RAHALL. I yield to the gentleman from Arizona.

Mr. UDALL. Mr. Speaker, I want to associate myself with the remarks the gentleman from Ohio (Mr. SEIBERLING) just made.

Mr. Speaker, I yield 2 minutes to the gentleman from Massachusetts (Mr. TSONGAS), also a member of the conference committee.

Mr. TSONGAS. Mr. Speaker, I would like to address the chairman of the full committee.

As a member of the conference committee responsible for H.R. 2, I would like to make some additional and clarifying remarks pertaining to H.R. 2 and the accompanying managers statement.

The conference provision for evaluating operator capability for mining in prime farmland areas is a good provision. The final language for this provision was subject to much careful debate during conference. It was certainly contemplated by the conferees, as indicated in the managers statement, that the regulatory authority would play a crucial role in evaluating whether a particular operator had the technological capability to restore prime farmlands to their full productive potential. The decision of the regulatory authority in making its determination in regard to this provision was never contemplated by the conferees to be a discretionary or arbitrary evaluation, but rather, one founded on fact, past operator performance, and existing agricultural studies, data, and experimentation—all of which clearly support, and provide the factual basis for a positive written finding.

The "expert opinion of the regulatory authority" indicated in the managers report, and the written finding required of the regulatory authority, are those formulated and founded upon the expert, substantive information and fact relevant to the question of a technological capability to restore prime farmland. And, as indicated in the managers statement, "This does not mean that mining and restoration must have taken place in the surrounding area, but simply that the operator show"—and I might add, that the regulatory authority affirmatively find in writing—"by agricultural school studies, or other data for comparable areas, that equivalent levels of yield can be obtained after mining."

A second point of clarification pertains to the prime farmlands grandfather provision. While the conferees agreed "to assure continued operation of ongoing mines" by exempting "permits issued prior to the date of enactment of this Act, . . . revisions or renewals thereof, or . . . existing surface mining operations for which a permit was issued prior to the date of enactment of this Act . . .", the conferees never contemplated that such grandfathered operations would be given the right of contiguous or noncontiguous expansions that were not specified or authorized in the originally approved and grandfathered permits. If such were the intent of the conferees, they would have included and enumerated such operations in section 506(d)(2) of H.R. 2. No such action was ever taken by the conferees. In addition, ancillary permits—those not pertaining to the actual approval and beginning of the mining activity itself—were not specified in either the conference or managers report as being included under this grandfather proviso.

Mr. UDALL. I believe your understanding is correct and is also shared by the majority of House conferees. The

conference report is clear on this matter and the explanatory statement on the part of the managers is accurate.

The exclusion pertains to existing mines, permits or renewals thereof after the date of enactment. This so-called "grandfather" is different than the one conferees adopted for mining on alluvial valley floors.

Mr. TSONGAS. I thank the gentleman.

Mr. UDALL. Mr. Speaker, I have no further requests for time.

Mr. BAUMAN. Mr. Speaker, I yield 2 minutes to the gentleman from Idaho (Mr. SYMMS).

Mr. SYMMS. Mr. Speaker, I would only say that we know of the proverbial bad day at Black Rock. This era in our history will probably be remembered as a bad day for Black Rock. It is amazing and incredible to me and to many people that for those who have access to as much technology as we have, we have an administration that says it would like to help the American people solve the energy crisis, so its solution is that we will not use the technology we have in nuclear power. The Secretary of the Interior is trying to interfere with offshore oil leases. The administration refuses to deregulate the price of oil and natural gas. The solution is to ration gasoline, which leaves a lower standard of living for all.

Now, when it comes to coal, that is going to be the big lifesaver. We are going to burn coal. We are going to make it harder to mine it. We will have much more redtape and much more cost. As the gentleman from Maryland pointed out, it is going to cause the consumers to pay a higher cost for every piece of coal they burn.

It is incredible to me. And I know that the little green men in the army of the environmentalists feel that they have scored a significant victory today. I only hope they are as happy when they are freezing to death in the dark as they are today.

Mr. BAUMAN. Mr. Speaker, I yield 5 minutes to the gentleman from Virginia (Mr. WAMPLER).

Mr. WAMPLER. Mr. Speaker, I rise in opposition to the conference report on H.R. 2, the Surface Mining Control and Reclamation Act of 1977. Acceptance of this proposal will take hundreds of thousands of tons of readily available coal out of our energy supply and fossil fuel inventory. I cannot understand how, in all good conscience, we can take such action at this critical point in our Nation's need for energy and the fuel to supply this need.

A vote for the conference report is a vote for higher fuel costs, and higher costs to the consumer of the numerous products depending upon coal or derived from coal. It is also a vote in favor of increasing our dependence on oil, which we can hardly afford in our current economic situation.

I realize the conferees have spent many long hours trying to compromise on this legislation, and I admire their efforts in struggling with this regulatory measure that seems destined to become a bureaucratic nightmare.

In title V of this measure, the conferees agreed on language to allow surface mine operations permitted in a State prior to the date of enactment of this act until January 1, 1979 to meet the interim Federal environmental standards, except for the prohibition of pushing spoil below the bench on the downslopes. However, this is only for those operators who annually produce not more than 100,000 tons from surface and underground mines combined. While it would appear that this language gives the small operator a break, the production limit is not large enough, nor the time extension long enough to include the majority of small operators and allow them sufficient leeway. It will merely give them some extra months in which to arrange for the liquidation of their operations. Tonnage and time limits aside, the prohibition of spoil on the downslope from the first cut itself will raise the basic question of how such operations can begin. What are the operators supposed to do with the spoil from the first cut? I have received suggestions for answers to this question, but I feel it would probably violate the rules of the House to list them here due to their nature.

The prohibition of spoil on the downslope, and the prohibition against any exposed highwall after reclamation are sufficient in themselves to severely curtail, if not completely eliminate the surface mining industry in the Appalachian area, notably the small operators who produce the majority of the percentage of surface coal mined.

If this measure is approved, we are committing a grave injustice to producers and consumers of coal and coal products alike, and the results will be deeply felt through the resulting employment and economic situations of our surface coal mining regions.

I ask for your responsible and reasonable consideration of the impact of this conference report, and I urge its rejection.

Mr. Speaker, I am certainly no prophet, but I predict—and I think I am on sound ground when I make this prediction—it will not be too many years when this committee or some committee of the Congress will be back before us asking us to undo much which we have done today, which, in my opinion, is going to make it virtually impossible for this Nation to achieve self-sufficiency in energy, certainly, at any time in the future.

Mr. UDALL. Mr. Speaker, I yield 2 minutes to the gentleman from Pennsylvania (Mr. MURPHY), who played a very valuable role as a member of the committee in developing this legislation.

Mr. MURPHY of Pennsylvania. Mr. Speaker, I thank the chairman of the committee for yielding me these 2 minutes.

Mr. Speaker, I would like to allay the fears of my colleagues from Idaho, from Virginia, and from some of the other States who are in opposition to this conference report.

From 1961 through 1963, when I was a young member of the Pennsylvania Legislature. I heard many of these arguments. I live in a coal area; I live in a part of Appalachia; I live in the mountains.

I want to tell the Members that there is more coal being stripped in western Pennsylvania today than at any other time in the history of the State of Pennsylvania. That includes the free-wheeling days of strip mining in the 1940's when they used the excuse of winning World War II to desecrate many sections of Pennsylvania, Ohio, and West Virginia.

This mining today is being conducted by large and small operators. It is being conducted at a profit. The land is being backfilled to the high wall; it is backfilled to contour. We have no more high wall in Pennsylvania. I invite the Members to come and see our reclaimed areas in Pennsylvania today.

The only thing that is causing us a problem is a result of strip mining operations of past years. The reclaiming of these stripped lands costs millions and millions of Pennsylvania taxpayer dollars that are needed to reclaim our land. That we are doing.

But today strip mining in Pennsylvania is regulated, and yet it is more profitable than ever, and coal is more plentiful than ever.

Mr. Speaker, I urge my colleagues to support this conference report.

Mr. BAUMAN. Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. LAGOMARSINO).

Mr. LAGOMARSINO. Mr. Speaker, I rise in support of H.R. 2, Surface Mining and Control Act of 1977, and I intend to vote for it.

However, I must say that I am deeply disappointed by the failure of the conferees to retain the language in section 610, title VI, designation of lands unsuitable for noncoal mining, that I supported in that committee.

That language, which was included in the bill as passed by the House, would have permitted the Secretary to set aside lands containing noncoal minerals if such lands are unique.

That precedent would have helped to prevent in the future what is now threatened by the application of D. S. Gypsom Co. to strip mine for phosphate in the Los Padres National Forest near Djai, Calif.

Mr. BAUMAN. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio (Mr. REGULA).

Mr. REGULA. Mr. Speaker, I want to compliment the gentleman from Arizona (Mr. UDALL) for bringing us this conference report, and I urge its support.

The gentleman from Arizona is going to get a lot of satisfaction from seeing this bill passed and signed. However, he is going to get even greater satisfaction in the years ahead when he can see the fruits of his labor in terms of good reclamation practices, in terms of restored orphaned lands, and in terms of the land that will be stripped and put back into a useful purpose for society.

I think we tend to overlook the fact that in establishing uniform rules for the national development of our coal reserves we are going to encourage greater production. People will now know what kind of equipment to buy, and they will know what kind of operations to develop. The establishment of the rules embodied

in this legislation, with the uncertainty that will be removed by the signing of it, is very vital to the increased production of coal.

As the gentleman from Pennsylvania (Mr. MURPHY) pointed out, there were arguments against regulation in Pennsylvania, and I heard all the same arguments in the Ohio Legislature some years ago when we developed a bill that is very similar to what we are passing today. Yet when one drives through Ohio today, we find that we do have increased mining, and that the land is being restored to a useful purpose. Certainly the Ohio results have been gratifying, and I am confident that this bill will be achieving the same results at the national level.

Mr. Speaker, one other other thing should be pointed out, and that is that the reclamation fund that will be generated by this bill will restore orphaned lands, and the benefits of this will be immeasurable. This is going to remove a lot of the sources of water pollution that are today fouling streams throughout our country. This will afford the opportunity to return many of these orphaned lands to a useful recreational purpose while at the same time solving the problems of pollution that result from a failure to restore lands in past years.

Mr. BAUMAN. Mr. Speaker, I yield 1 minute to the gentleman from Pennsylvania (Mr. MCDADE).

Mr. MCDADE. Mr. Speaker, I rise in support of the conference report.

To a lot of Members on this floor, this seems like the end of a long dream come true.

I want to associate myself with the comments of my friend, the gentleman from Ohio (Mr. REGULA), and I want to commend especially my friend, the gentleman from Arizona (Mr. UDALL), who has worked so long and so hard to see this day come true. I wish to commend all the Members who have worked for the adoption of this bill.

I think this is a great day for America. I would like to have seen a few changes in the bill, and the Members will recall that I have discussed that feature many, many times in the past.

Mr. Speaker, I hope that this conference report is agreed to overwhelmingly.

Mr. BAUMAN. Mr. Speaker, I yield such time as he may consume to the gentleman from Kansas (Mr. SKUBITZ), the ranking minority member on the Committee on Interior and Insular Affairs.

Mr. SKUBITZ. Mr. Speaker, I rise in support of this conference report for two basic reasons: First, this legislation is superior to any previously considered by Congress; and second, this administration has represented to this Congress that passage of this legislation will not adversely affect its stated goal of increasing coal production.

Although there are aspects of this legislation which are still bothersome, I do not intend to belabor you with them because I have been granted every courtesy and I have availed myself of every opportunity to be heard during the markup of this legislation, in subcommittee, full committee, on this floor and in the conference.

In some respects, this vote today, is almost anticlimactic. For 11 years I have sought legislation which would not only prevent the scarring of our lands in the process of removing this most abundant and important resource, but would also restore the previously scarred lands. As a result of these past 11 years, although personally frustrating for me in this respect, we have not only produced a better, more well thought-out piece of legislation, the passage of time has allowed the coal industry to perfect its reclamation processes to the extent that some lands may be made more productive after strip mining than before they were disturbed.

My recommendation of this legislation, is further supported by the fact that this administration has clearly said passage of this legislation will not hinder its reliance on increased coal production to address this country's present and future energy needs. Although there are still those among us who are fearful that the constraints in this legislation will retard coal production, I am willing to accept the representation of this administration, and I am confident the American public will hold them accountable if they are not correct in their representation.

I would like to join Chairman UDALL, in his commendation of the staff, some of whom have almost made a career out of this one piece of legislation. The subcommittee and full committee members are also to be commended for not only their competence but their patience and persistence.

Mr. Chairman, The conference managers, although faced with many emotionally laden issues worked tirelessly for 13 days on an average of 4 hours per day to produce this product, and I am proud to be associated with them and join them in presenting and recommending this legislation for your favorable consideration.

Mr. RUPPE. Mr. Speaker, I rise in support of the conference report on H.R. 2.

As a manager on the part of the House for this bill and as a member of the Committee on Interior and Insular Affairs, I want to compliment the gentleman from Arizona (Mr. UDALL) who, as chairman of the conference committee, has so ably guided this legislation to the final stage of congressional action. This is a proud moment for many of us who have worked for five sessions of Congress to develop a strong Surface Mining Control and Reclamation Act. I want my colleagues to be aware of the long hours of hearings, briefings, field trips, markup sessions, floor actions, and conference committee deliberations that the gentleman from Arizona has devoted to this piece of legislation. At all times he has been fair, patient, and receptive to the many demands on his time that this legislation has required. I personally feel that the final product favorably reflects our chairman's commitment to hear all points of view and to seek an equitable resolution of the many controversial issues generated by consideration of this bill.

The Interior Committee has struggled for 5 years to develop surface coal mining legislation which would strike a reasonable balance between achieving our energy goals and enhancing the quality of our environment. The committee has reported similar legislation four times in the last 3 years. The House has considered similar conference reports twice in the last 3 years. While I have supported previous efforts to enact a surface mining bill, I believe H.R. 2 to be, on the balance, a more carefully drafted and a better reasoned product of congressional consideration than its predecessors.

The conference report on H.R. 2 contains many compromises, both major and minor, which will permit a more orderly implementation of the regulatory program and which should assuage the fears of those who have predicted massive production losses and increased unemployment resulting from the provisions of previous bills.

Mr. Speaker, the conference committee faced many difficult decisions and I believe the House conferees have succeeded in bringing back a conference report that the House can wholeheartedly endorse.

One of the most controversial issues to be resolved by the conference was the protection to be afforded to prime farmlands. The House bill contained a carefully designed set of environmental protection standards that provided for soil surveys, productivity statements, and soil reconstruction standards. The standards of section 515(b)(7) required segregation, stockpiling if not utilized immediately, replacement, and regrading of the "A", "B", and "C" horizons of the natural soil. The "B" and C" horizons can be mixed together if an equal or better root zone can be obtained.

The Senate amendment contained a special test, effective on the date of enactment, with respect to the protection of prime farmlands. Any mine application whose area in prime farmlands exceeded 10 percent of the total area included in the application would have to demonstrate that such lands would be restored to full productivity. The granting of such a permit would be discretionary on the part of the regulatory authority. Permits and coal surface mine operations existing on the date of enactment would not have to meet this test.

The House bill had no such provision.

The conferees agreed to accept the standards contained in the House bill, delete the special test contained in the Senate amendment, and add a revised provision which stipulates that such a permit shall be granted if the regulatory authority finds that the applicant has "the technological capability to restore such mined area, within a reasonable time, to equivalent or higher levels of yield as nonmined prime farmland soils in the surrounding area under equivalent levels of management."

The conference report on H.R. 2 states that—

It is the intention of the conferees that the written finding that the regulatory authority is required to make before a permit is granted to mine on prime farmland can be based in part on the expert opinion of the regulatory authority that the operator has the technological capability to perform the soil reconstruction standards of section 515 (b)(7) and the performance of those stand-

ards will result in the restoration of the mined area to equivalent or higher levels of agricultural yield as nonmined prime farmland in the surrounding area under equivalent levels of management. This does not mean that mining and restoration must have taken place in the surrounding area, but simply that the operator can show by agricultural school studies, or other data for comparable areas that equivalent yields can be obtained after mining.

It is my understanding the above-quoted language makes clear that the permit applicant will not be required to demonstrate the technological capability to restore the mined land by developing a test plot in the surrounding area but rather the regulatory authority can make a finding of technological capability by noting the success of reclamation practices in other regions of the country, by examining relevant agricultural school and soil conservation agency studies, and by reviewing the methodology the permit applicant is proposing to comply with the soil reconstruction standards.

Section 510(d)(2) provides that the special requirements prescribed in that subsection for mining on prime farmland shall not apply to any permit issued prior to the date of the act, or to any revisions or renewals thereof, or to any surface mining operations for which a permit was issued prior to the enactment of this act.

The conference report explains that this exclusion for existing mine permits or renewals thereof after the date of the enactment was designed to assure continued operation of ongoing mines.

It is my understanding that the exclusion will apply to continued operation of an ongoing mine beyond the acreage and time covered in the existing permit at the time of the enactment of the act, just so long as the continuance does, in fact, constitute a continued operation of an ongoing mine.

I wish to point out that while the House receded to the Senate's definition of "prime farmland," the conferees included the House requirement that land subject to prime farmland protections must "historically have been used for intensive agricultural purposes."

It is my hope that the provisions that the conference committee adopted for the protection of prime farmland will insure that this valuable resource will be brought back to full productive use within a reasonable amount of time and yet will not be an impediment to the continuation and expansion of coal mining in the Midwest and the Northern Great Plains. It is certainly not the intention of the conferees to prohibit the future production of coal from these areas.

Another issue which historically has been difficult for conferees to resolve is the question of surface owner consent to the mining of federally owned coal in the West.

The House bill contained language which I offered in subcommittee that required the Secretary to obtain the written consent of the surface owner—as defined—before leasing any Federal coal deposits underlying the surface owner's land for surface mining. The Senate amendment allowed the Secretary to override the surface owner's objection to leasing Federal coal under his land if the Secretary found that such leasing was in the national interest. Compensation to the surface owner was limited to twice the value of the surface estate under the Senate amendment.

The Senate receded to the House position. Yesterday, the Senate upheld the conference committee's decision to accept the House language by a vote of 52 to 43 on a motion to recommit the conference report so that the surface owner consent issue could be reopened.

It is my firm belief that the House language will facilitate the development of Western coal and, at the same time, encourage the ranchers and farmers to stay on their land instead of selling out lock, stock, and barrel to large energy corporations. The language that the Senate amendment contained and the language that previous conference reports contained never took into account the fact that the surface owner would either say "no" to strip mining or sell his entire interest in the land. It is very unlikely that he would avail himself of any legislative formula limiting the value he could receive for leasing his land. It is important to realize that the Senate amendment in no way restricted the surface owner's prerogative to sell his land. The language contained in this conference report encourages both coal development and the retention of surface ownership by Western farmers and ranchers.

Finally, Mr. Speaker, I would like to comment on the treatment of alluvial valley floors in this conference report. The language that was agreed to is substantially similar to the approach recommended by the House Interior Committee. This approach was superseded on the House floor by an amendment which placed a total ban on mining on alluvial valley floors subject to certain grandfather rights.

The House receded to the Senate provision with few changes. The phrase "not interrupt, discontinue or prevent farming" was modified to "not interrupt, discontinue or preclude farming" in order to assure coverage of those lands which may be taken out of agricultural production in order to qualify for a new mine start on an alluvial valley floor. The conferees did not want this type of change in land use to qualify an alluvial floor for mining. The phrase "not adversely affect" with respect to off-floor operations was changed to "not materially damage." The conferees also stipulated that the Secretary develop and carry out a coal exchange program for fee coal located in alluvial valley floors under the provisions of section 206 of the Federal Land Policy and Management Act of 1976. If developed lands on alluvial valley floors were of "such small acreage as to be of negligible impact on the farm's agricultural production" they may be included in a mine plan. The conferees recognize that farming on the mine site must be interrupted during the mining and reclamation process. Therefore, the language quoted above is not intended to apply to such temporary onsite interruptions but is limited solely to such interruptions of offsite farm activities.

The language added by the conferees to the Wallop amendment of the Senate version is designed to make it clear that the Secretary should actively implement the coal exchange program. This program would apply to all those private coal deposits, regardless of any previous financial or legal commitments, which the Secretary determines cannot be mined because of the provisions of section 510(b)(5). The program would not apply to privately owned coal which might have been mined in the same operation but which can still be mined.

Mr. Speaker, I feel that the conference committee actions I have discussed above represent fair and wise compromises and I urge the adoption of the conference report.

Mr. BAUMAN. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. UDALL. Mr. Speaker, before I yield back the balance of my time and before I put the previous question, I want to thank my colleagues on the other side of the aisle. Not all of the proponents of this bill were over here on this side. Indeed, not all of the opponents were on the other side of the aisle. Members like the gentleman from Kansas (Mr. SKUBITZ); the gentleman from Ohio (Mr. REGULA), who was on our committee for a while; the gentleman from California (Mr. LAGOMARSINO); and the gentleman from Michigan (Mr. RUPPE) all worked diligently on this legislation. We even had some helpful amendments offered by the gentleman from Maryland (Mr. BAUMAN), from time to time.

Therefore, Mr. Speaker, we have had a good staff and a good job has been done by a lot of people. I think it is a good day for the country.

Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore (Mr. BROWN of California). The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. SYMMS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 325, nays 68, answered "present" 1, not voting 39, as follows:

NOT VOTING—39

Badham	Flippo	Metcalfe
Badillo	Flowers	Minish
Boggs	Ford, Mich.	Montgomery
Brademas	Frey	Murphy, N.Y.
Broomfield	Giaimo	Murtha
Burke, Mass.	Guyer	Quillen
Byron	Holland	Ruppe
Chisholm	Hollenbeck	Sikes
Cotter	Koch	St Germain
Cunningham	Le Fante	Stark
Dent	Luken	Teague
Dickinson	McKinney	Thompson
Diggs	Maguire	Zeferetti

The Clerk announced the following pairs:

Mr. Burke of Massachusetts with Mr. Teague.
Mr. Zeferetti with Mr. Montgomery.
Mrs. Boggs with Mr. Flippo.
Mr. Murtha with Mr. Diggs.
Mr. Cotter with Mr. Badham.
Mr. Brademas with Mr. Byron.
Mr. Cunningham with Mr. Badillo.
Mr. Dent with Mrs. Chisholm.
Mr. Flowers with Mr. Broomfield.
Mr. Frey with Mr. Dickinson.
Mr. Giaimo with Mr. Ford of Michigan.
Mr. Hollenbeck with Mr. Guyer.
Mr. Le Fante with Mr. Holland.
Mr. Minish with Mr. Koch.
Mr. McKinney with Mr. Luken.
Mr. Murphy of New York with Mr. Maguire.
Mr. Quillen with Mr. Metcalfe.
Mr. St Germain with Mr. Stark.
Mr. Thompson with Mr. Sikes.

Mr. VOLKMER changed his vote from "nay" to "yea."

Mr. GONZALEZ changed his vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table

GENERAL LEAVE

Mr. UDALL. Mr. Chairman, I ask unanimous consent that I may revise and extend my remarks and that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report on the bill H.R. 2.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona?

There was no objection.

AUTHORIZING CLERK TO MAKE TECHNICAL AND CONFORMING CHANGES IN ENROLLMENT OF H.R. 2

Mr. UDALL. Mr. Speaker, I call up from the Speaker's table the Senate concurrent resolution (S. Con. Res. 39) authorizing technical corrections in the enrollment of H.R. 2 and ask unanimous consent for its immediate consideration.

The Clerk read the title of the Senate concurrent resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, what are we doing here?

Mr. UDALL. Mr. Speaker, will the gentleman yield?

Mr. ROUSSELOT. I am glad to yield to the gentleman.

Mr. UDALL. Mr. Speaker, in connection with the adoption of the stripmining conference report in the Senate yesterday, the Senator from New Mexico was worried about some language in regard to interpretation of the effect of the jurisdiction of these Indian lands. In order to accommodate the Senator and the Speaker, this passed the Senate. It simply directs the Clerk in enrolling the finally engrossed bill to make technical changes.

Mr. ROUSSELOT. Mr. Speaker, further reserving the right to object, how many technical changes are we making? Are we rewriting the bill?

Mr. UDALL. Mr. Speaker, I would be glad to explain to the gentleman. It was in the RECORD yesterday on the Senate bill (S. 1244), and there were some improper section references. At the end there is a proviso that nothing in this act is to change the existing jurisdiction of Indian claims. The minority on the Senate side sought this. It was not our problem. It was their problem and we agreed to it.

Mr. ROUSSELOT. Mr. Speaker, further reserving the right to object, I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, would the gentleman be willing to make some amendments to this in areas other than just the Indian lands? I did not have a copy of this.

Mr. UDALL. Mr. Speaker, I apologize to the gentleman from Maryland. I thought the staff had given a copy to the gentleman from Maryland.

Mr. ROUSSELOT. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona?

There was no objection.

The Clerk read the Senate concurrent resolution, as follows:

S. CON. RES. 39

Resolved by the Senate (the House of Representatives concurring), That the Clerk of the House of Representatives is authorized and directed, in the enrollment of H.R. 2, an Act to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of service coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes, to make the following technical and conforming changes:

(1) in section 406(1) strike out "303(c)" and insert in lieu thereof "401";

(2) in section 701(4)—

(A) strike out "715" and insert in lieu thereof "714"; and

(B) strike out "712" and insert in lieu thereof "715"; and

(3) in section 710 add at the end thereof the following:

"(h) The Secretary shall analyze and make recommendations regarding the jurisdictional status of Indian Lands outside the exterior boundaries of Indian reservations: *Provided*, That nothing in this Act shall change the existing jurisdictional status of Indian Lands.".

Mr. UDALL (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the Senate concurrent resolution be dispensed with, and that it be printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona?

There was no objection.

The Senate concurrent resolution was concurred in.

A motion to reconsider was laid on the table.

CONFERENCE REPORT ON H.R. 6370, INTERNATIONAL TRADE COMMISSION AUTHORIZATION, 1978

Mr. VANIK submitted the following conference report and statement on the bill (H.R. 6370) to authorize appropriations to the International Trade Commission for fiscal year 1978, to provide for the Presidential appointment of the chairman and vice chairman of the Commission, to provide for greater efficiency in the administration of the Commission, and for other purposes:

CONFERENCE REPORT (H. REPT. NO. 95–518)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 6370) to authorize appropriations to the International Trade Commission for fiscal year 1978, to provide for the Presidential appointment of the chairman and vice chairman of the Commission, to provide for greater efficiency in the administration of the Commission, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate to the text of the bill and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

SECTION 1. AUTHORIZATION OF APPROPRIATIONS.

Subsection (e) of section 330 of the Tariff Act of 1930 (19 U.S.C. 1330 (e)) is amended—

(1) by inserting "(1)" immediately before "For"; and

(2) by adding at the end thereof the following new paragraphs:

"(2) There are authorized to be appropriated to the Commission for necessary expenses for fiscal year 1978 an amount not to exceed $11,522,000.

"(3) There are authorized to be appropriated to the Commission for each fiscal year after September 30, 1977, in addition to any other amount authorized to be appropriated for such fiscal year, such sums as may be necessary for increases authorized by law in salary, pay, retirement, and other employee benefits.".

SEC. 2. APPOINTMENT OF CHAIRMAN AND VICE CHAIRMAN.

(a) Subsection (c) of section 330 of the Tariff Act of 1930 (19 U.S.C. 1330) is amended to read as follows:

"(c) CHAIRMAN AND VICE CHAIRMAN; QUORUM.—

"(1) The chairman and the vice chairman of the Commission shall be designated by the President from among the members of the Commission not ineligible, under paragraph (3), for designation. The President shall notify the Congress of his designations under this paragraph.

"(2) After June 16, 1978, the terms of office for the chairman and vice chairman of the Commission shall be as follows:

"(A) The first term of office occurring after such date shall begin on June 17, 1978, and end at the close of June 16, 1980.

"(B) Each term of office thereafter shall begin on the day after the closing date of the immediately preceding term of office and end at the close of the 2-year period beginning on such day.

"(3)(A) The President may not designate as the chairman of the Commission for any term—

"(i) either of the two commissioners most recently appointed to the Commission as of the beginning date of the term of office for which the designation of chairman is to be made; or

"(ii) any commissioner who is a member of the political party of which the chairman of the Commission for the immediately preceding term is a member.

"(B) The President may not designate as the vice chairman of the Commission for any term any commissioner who is a member of the political party of which the chairman for that term is a member.

"(C) If any commissioner does not complete a term as chairman or vice chairman by reason of death, resignation, removal from office as a commissioner, or expiration, of his term of office as a commissioner, the President shall designate as the chairman or vice chairman, as the case may be, for the remainder of such term a commissioner who is a member of the same political party. Designation of a chairman under this subparagraph may be made without regard to the limitation set forth in subparagraph (A)(i).

"(4) The vice chairman shall act as chairman in case of the absence or disability of the chairman. During any period in which there is no chairman or vice chairman, the commissioner having the longest period of continuous service as a commissioner shall act as chairman.

"(5) No commissioner shall actively engage in any business, vocation, or employment other than that of serving as a commissioner.

"(6) A majority of the commissioners in office shall constitute a quorum, but the Commission may function notwithstanding vacancies.".

(b) EFFECTIVE DATE.—The amendment made by this section shall apply with respect to the designation of chairmen and vice chairmen of the United States International Trade Commission for terms beginning after June 16, 1978.

SEC. 3. ADMINISTRATION OF COMMISSION.

(a) Subsection (a) of section 331 of the Tariff Act of 1930 (19 U.S.C. 1331) is amended to read as follows:

"(a) ADMINISTRATION.—

"(1) Except as provided in paragraph (2), the chairman of the Commission shall—

"(A) appoint and fix the compensation of such employees of the Commission as he deems necessary (other than the personal staff of each commissioner), including the secretary,

"(B) procure the services of experts and consultants in accordance with the provisions of section 3109 of title 5, United States Code, and

"(C) exercise and be responsible for all other administrative functions of the Commission.

Any decision by the chairman under this paragraph shall be subject to disapproval by a majority vote of all the commissioners in office.

"(2) Subject to approval by a majority vote of all the commissioners in office, the chairman may—

"(A) terminate the employment of any supervisory employee of the Commission whose duties involve substantial personal responsibility for Commission matters and who is compensated at a rate equal to, or in excess of, the rate for grade GS–15 of the General Schedule in section 5332 of title 5, United States Code, and

"(B) formulate the annual budget of the Commission.

"(3) No member of the Commission, in making public statements with respect to any policy matter for which the Commission has responsibility, shall represent himself as speaking for the Commission, or his views as being the views of the Commission, with respect to such matter except to the extent that the Commission has adopted the policy being expressed.".

(b) Section 331 of such Act (19 U.S.C. 1331) is amended—

(1) by striking out "approved by the Commission" in subsection (c) and inserting in lieu thereof the following: "approved by the chairman (except that in the case of a commissioner, or the personal staff of any commissioner, such vouchers may be approved by that commissioner)", and

(2) by striking out subsection (d) and redesignating subsections (e), (f), and (g) as (d), (e), and (f), respectively.

(c) The amendments made by this section take effect on the date of enactment of this Act.

SEC. 4. HARMONIZATION OF TRADE STATISTICS.

Section 484 (e) of the Tariff Act of 1930 (19 U.S.C. 1484 (e)) is amended by striking out "production," and inserting in lieu thereof the following: "production and programs for achieving international harmonization of trade statistics,".

SEC. 5. CONTINUATION OF REPORTS WITH RESPECT TO SYNTHETIC ORGANIC CHEMICALS.

The International Trade Commission is hereby directed to make, for each calendar year ending before January 1, 1981, reports with respect to synthetic organic chemicals similar in scope to the reports made with respect to such chemicals for the calendar year 1976.

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate to the title of the bill and agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 6370) to authorize appropriations to the International Trade Commission for fiscal year 1978, to provide for the Presidential appointment of the chairman and vice chairman of the Commission, to provide for greater efficiency in the administration of the Commission, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the

action agreed upon by the managers and recommended in the accompanying conference report:

AUTHORIZATION OF APPROPRIATIONS TO THE U.S. INTERNATIONAL TRADE COMMISSION FOR FISCAL YEAR 1978

House bill.—The House bill authorizes appropriation of $11,522,000 to the U.S. International Trade Commission for Fiscal Year 1978.

Senate amendment.—The Senate amendment authorizes appropriation of $12,187,000 to the U.S. International Trade Commission for Fiscal Year 1978.

CONFERENCE AGREEMENT.—The conference agreement follows the House bill. The conferees noted that the conference report on H.R. 7556, H. Rept. No. 95-476, provides for appropriation of $11,500,000 to the Commission for Fiscal Year 1978.

LIMITATION ON USE OF APPROPRIATIONS FOR COMMISSIONERS' PERSONAL STAFF

House bill.—The House bill limits each Commissioner's personal staff to four persons of all categories (professional and support), except that the Chairman of the Commission may have six persons.

Senate amendment.—The Senate amendment deletes the House provision.

CONFERENCE AGREEMENT.—The conference agreement omits this provision of the House bill. The Conferees expect the Commissioners to keep the number of individuals on their personal staffs at approximately the current levels.

QUALIFICATIONS FOR APPOINTMENT AS A COMMISSIONER

House bill.—The House bill requires that any person appointed as a Commissioner be a United States citizen and be knowledgeable about United States international trade problems. It also requires that persons be appointed as Commissioners on the basis of their maturity, experience, integrity, impartiality, good judgment and objectivity.

Senate amendment.—The Senate amendment deletes the House provision.

Conference agreement.—The conference agreement omits this provision of the House bill. This agreement retains present law which requires that an appointee possess qualifications requisite for developing expert knowledge of international trade problems and efficiency in administering the duties and functions of the Commission. (19 U.S.C. 1330(a)).

REMOVAL FROM OFFICE OF COMMISSIONERS

House bill.—The House bill provides that the President may remove a Commissioner from office for inefficiency, neglect of duty, or malfeasance.

Senate amendment.—The Senate amendment deletes the House provision.

Conference agreement.—The conference agreement omits this provision of the House bill as unnecessary because the Commission is an independent agency with quasi-legislative and quasi-judicial responsibilities and removal of the Commissioners is subject to the standards set down by the Supreme Court (e.g., *Humphrey's Executor v. United States*, 295 U.S. 602 (1935), *Wiener v. United States*, 357 U.S. 349 (1958)).

DESIGNATION OF CHAIRMAN AND VICE-CHAIRMAN

House bill.—The House bill provides for the appointment of the Chairman and Vice-Chairman of the Commission by the President, by and with the advice and consent of the Senate. The Chairman and Vice-Chairman could not be members of the same political party. When there is no Chairman or Vice-Chairman, the senior Commissioner in terms of continuous service acts as Chairman.

Senate amendment.—The Senate amendment deletes the House provision.

Conference agreement.—Under the conference agreement, the President will designate one Commissioner as the Chairman and one Commissioner as the Vice-Chairman of the Commission. The President may not designate an individual to be Chairman who has the same party affiliation as the individual whom he succeeds as Chairman. The conferees intend that the first Chairman designated after June 16, 1978, not have the same party affiliation as his predecessor as Chairman. Nor may the President designate as Chairman either of the two Commissioners who were most recently appointed to the Commission, including an individual whom the President appoints to the Commission at the time he designates the Chairman. This requirement does not apply when the President designates an individual to fill the unexpired term of a Chairman. The Vice-Chairman of the Commission may not have the same party affiliation as the Chairman of the Commission. The President must notify the Congress of any designation of a person to be Chairman or Vice-Chairman. Designation as Chairman or Vice-Chairman by the President is not an appointment requiring the advice and consent of the Senate. This provision of the conference agreement will apply with respect to the designation of the Chairman and Vice-Chairman for terms beginning after June 16, 1978.

TERM OF OFFICE OF CHAIRMAN AND VICE-CHAIRMAN

House bill.—The House bill provides for three-year terms for the Chairman and Vice-Chairman. No Commissioner may be appointed Chairman if he has served two full terms in such position nor may he be appointed Vice-Chairman if he has served two terms in such position.

Senate amendment.—The Senate amendment deletes the House provision.

Conference agreement.—Under the conference agreement the terms of office of the Chairman and Vice-Chairman will be two years, respectively.

ADMINISTRATIVE AUTHORITY OF THE CHAIRMAN

House bill.—The House bill provides that the Chairman is responsible for all administrative matters of the Commission except that actions he initiates relating to the employment and discharge of key personnel, external relations, and the budget of the Commission are subject to the approval by a majority vote of the Commission.

Senate amendment.—The Senate amendment provides that the Chairman is responsible for all administrative matters of the Commission subject to disapproval by a majority vote of the full Commission.

Conference agreement.—Under the conference agreement, the Chairman shall exercise and be responsible for all administrative functions of the Commission, subject to disapproval by a majority vote of the Commission. However, two kinds of actions by the Chairman are subject to approval, by a majority vote, of the Commission: (1) Termination of employment with the Commission of an employee (A) with responsibility for supervising personnel, (B) whose duties involve substantial personal responsibility for Commission matters, and (C) who is a G.S. 15 or above, and (2) formulation of the annual budget of the Commission. In addition, no member of the Commission, including the Chairman, may speak for the Commission on policy matters unless the Commission has adopted the policy in question.

The conferees expect the entire Commission to retain responsibilty for administrative matters in the area of external relations involving liaison and relations with the Congress, with the President, and with the Executive Branch agencies. In the field of public relations, the entire Commission must also be in the position to protect the reputation of the Commission as an objective, nonpartisan, fact-finding body. In this respect, it is necessary that the Commission as a body be in a position to discipline individual members who may undertake action which would tend to discredit the Commission.

It is the intention of the conferees in agreeing to this provision to enable the Commission to devote all its energies to substantive matters within the jurisdiction of the Commission, leaving responsibility for administration of the Commission to the Chairman and his delegates. The conferees believe that ending full Commission debate of administrative matters should result in more definitive majority decisions on matters of substance.

By repealing section 331(d) of the Tariff Act of 1930, the conferees do not intend that the Commission may not rent office space or purchase furniture, equipment, and necessary supplies. The conferees intend these administration functions to be carried out by the Chairman.

HARMONIZATION OF TRADE STATISTICS

House bill.—The House bill provides that the Secretaries of the Treasury and of Commerce and the U.S. International Trade Commission, in establishing a program for the comparability of statistics for imports and exports, should also seek to establish the comparability of import and export statistical programs with programs for achieving international harmonization of trade statistics, for example, the program now under discussion in the Customs Cooperation Council.

Senate amendment.—The Senate amendment deletes the House provision.

Conference agreement.—The conference agreement follows the House bill.

SYNTHETIC ORGANIC CHEMICAL REPORTS

House bill.—No provision.

Senate amendment.—The Senate amendment provides for continuation of the present reports by the U.S. International Trade Commission covering the period until January 1, 1981, on synthetic organic chemicals.

Conference agreement.—The conference agreement follows the Senate amendment.

MR. CARTER CAN SAVE THE CACHE

(Mr. TUCKER asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. TUCKER. Mr. Speaker, reports from one source or another keep trickling in that President Carter in the end will compromise with Congress and accept funding for several of the 17 water projects that he originally opposed flatly. One of those projects on the compromise list, it is said, is the Cache River-Bayou DeView channelization in east Arkansas.

The compromise, so the story goes, would include assurances to Mr. Carter that the House will stand by its position against funding the Clinch River nuclear

breeder reactor, thus negating the support the breeder has in the Senate and killing the project.

Certainly the only puzzling thing about all this is why the President should feel that a compromise is necessary at all, especially in light of the fact that he has made a persuasive case against all of the 17 water projects on environmental, economic and safety grounds. And the case for the breeder is totally without merit. Mr. Carter does not have to compromise, to back down on the promise for fearless decisionmaking that was given so magnificently earlier on the B–1 bomber.

For him to back down on his opposition to ditching on the Cache in Arkansas, certainly, would be for him to stand aside and allow the destruction of an important free-flowing stream. It would be, in short, a cop-out—an unnecessary sacrifice simply to serve a short-term political purpose.

This would be especially so now that a reasonable and attractive alternative to ditching the Cache and DeView has been presented to the State Game and Fish Commission. The commission is one of three sponsors—the others are the Arkansas Wildlife Federation and the Rockefeller Foundation—of the alternative study done by a Louisiana consulting firm after it became painfully clear that the Army engineers were committed inflexibly to a plan that would relieve flooding on the upper part of the basin by moving it downstream in a ditch. It is the ditch plan that would be furthered by the new funding now before the Congress.

Findings and recommendations of the consultants were outlined Monday by Dr. Sherwood Gagliano, the firm's head, adding to a preliminary recommendation that a moratorium be placed on channelization of the river basin. Unlike the engineers, the private consultants considered the special situations that attach to the upper, middle and lower sections of the basin as well as the overall impact on the environmental quality of the entire basin. Thus, the list of recommendations is long and detailed, but it is by far the best outline for saving the environmental qualities of the Cache basin while providing a reasonable measure of flood control to be placed on the public agenda.

Supporters of the Cache ditching like to argue that the only way to save the remaining woodlands along the river from clearing—and more soybean production—is through the mitigation program that is supposed to be a part of the project. Otherwise, say these supporters, private landowners will strip the forests bare and do great damage to the environmental qualities of the region. The plan calls for the engineers to acquire 70,000 acres in mitigation; at last accounting, a few days ago, however, options had been obtained on only 150 acres! The Engineers may be tigers when it comes to digging a ditch, but they have proved to be tamer than pussy cats on acquiring mitigation lands.

The consultants, in any case, recommend that all land within the 10-year floodplain of the middle and lower Cache basin be bought by the public or placed under floodplain leases. The purchase would include from 100,000 to 130,000 acres, preserve woodlands and reduce flooding pressures that are increased by clearing of land.

The immediate course that should be followed on the Cache project is clear. President Carter should hold to his insistence, including veto, that funding not be provided for ditching the next segment of the Cache, regardless of what proposition reaches his desk from Congress. This done, the Engineers should be directed to develop environmentally acceptable alternatives for controlling flooding in the upper basin, perhaps using some or all of those developed in the private consultants' study. In the meantime, there is no apparent obstacle to the Army Engineers continuing the acquisition of woodlands in mitigation, to blunt the movement for needless clearing. All this may not be the simplest way to approach the issue, but it is a sensible way that is workable, and Mr. Carter in the past, especially in the B–1 decision, has illustrated that he can analyze and act on such a commendable basis.

[From the New York Times, July 21, 1977]

THE PORK-BARREL CHALLENGE

(By John B. Oakes)

If the public-works appropriations bill emerges from conference with the traditional string of political-grease projects that have already been approved by Senate and House, President Carter will have only the choice of vetoing the measure, as he has threatened, or of surrendering on both his principles and the clear-cut public interest.

For what the old-timers in Congress have done has been to scrape the bottom of the pork barrel once again, just as though there was no inflation and no budgetary squeeze on Federal expenditures to meet urgent social needs.

To the President's demands that Congress eliminate an irreducible minimum of 18 water-control projects (ultimately costing over $2.5 billions), each one of which is "economically or environmentally unsound," the House has approved all but one and the Senate approximately half.

This despite the fact that the President had previously capitulated on a number of equally harmful and extravagant projects, including the $1.6 billion Tennessee-Tombigbee Waterway.

As a careful study by the Environmental Defense Funds shows, this project will be of benefit primarily to barge operators carrying coal for export to Japan, at the cost of destroying 30,000 acres of hardwood timber and 17,000 acres of farmland, of degrading the water system, and of disrupting both the economy and the landscape without benefit to the people of several adjacent rural counties in Alabama and Mississippi.

Of the nine projects that the Senate is now trying to push through for full funding over Mr. Carter's objection, no less than eight are located in states whose Senators happen to be on the Appropriations Committee (seven of them on the public works subcommittee), which gives a pretty good idea of the criterion of judgment used by the Senate in making its evaluation.

One of the nine, the Atchafalaya channelization in Louisiana, is (as charged by various environmental experts and the White House itself) for the primary benefit of two large and highly profitable oil-rig construction companies, J. Ray McDermott International and Avondale (subsidiary of the Ogden Corporation), to enable them to float their super-rigs more expeditiously from Morgan City, La., out to the Gulf of Mexico. This will be at the cost of over $20 million in public funds and destruction of irreplaceable wetlands, and interference with major shrimp and shell fisheries.

"Do I have a parochial interest in this?" says Senator J. Bennett Johnston Jr. of Louisiana, a member of the subcommittee. "You bet I do." But does anyone else in the United States except the two shipyards?

Another such project, estimated to cost at least $93 million in public funds, is to increase the yields of large-scale soybean and rice growers in Arkansas, at the cost of over 200 miles of stream channelization, clearing over 100,000 acres of forested bottomland and swamp, with devastating effect on water quality, on existing fishery resources, and on one of the most important migratory-waterfowl areas in America. But Cache Basin is in Arkansas, home state of Senator John L. McClellan, chairman of the committee.

Then there is the Columbia Dam in Tennessee, a huge $142-million empire-building proposal of the Tennessee Valley Authority, to create jobs (about as expensively as it can be done) and to promote recreation in an area that needs new lakes and lake frontage about as badly as the Sahara needs sand.

This one would eliminate more than 20,000 acres of productive farmland and would destroy or modify another 25,000 acres of forest and upland habitat, but it will bring some temporary dollars to the state of Senator James B. Sasser, a member of the subcommittee.

Appelgate Lake, Ore., is to cost $81.5 million mainly for flood control for future floodplain development in the River Rogue Basin, "in contradiction," the White House points out, "of established Federal policy for flood plain management," not to mention "potential contamination of fish and drinking water from the mercury deposits which the project would inundate." But Senator Mark O. Hatfield of Oregon is on the subcommittee.

To keep the peace with Congress, President Carter will doubtless be asked by his political advisers to accept the bill containing these and similar extravaganzas.

If he does so, it will be a sad and crippling retreat. For he is the first President in generations to have faced up to the political and moral corruption inherent in so many of these projects.

To back down now would be a severe defeat for the public, the economy and the environment, not to mention the surprisingly large number of members of Congress (especially the younger ones) who are sick and tired of pork-barrel venality and who are looking for a way to escape from it.

WHALING COMMISSION REDUCES WHALING QUOTAS BY 36 PERCENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. LEGGETT) is recognized for 60 minutes.

Mr. LEGGETT. Mr. Speaker, the International Whaling Commission recently concluded its 29th annual meeting after reducing the whaling quota by 36 percent. This meeting, probably more than any other in recent history, affirmed the importance of scientific management of whale populations and continued scientific control over the determination of annual quotas.

The Commission accepted every major recommendation of the Scientific Committee on appropriate harvest levels for the upcoming season. When the Scientific Committee divided on the appropriate quota, the IWC adopted either the

majority position or the most conservation-oriented recommendation.

The IWC approved a quota of 17,839 whales for the upcoming whaling season. This is a 36-percent reduction from the 28,050 quota approved for last year. The actual reduction in whaling over the last few years is even greater when you consider that the whaling nations have been forced to shift much of their activity from large to small whales.

The new quota included a precipitious drop in the quota for North Pacific sperm whales. The IWC approved a quota of zero males and 763 females. Last year, the IWC adopted a quota of 4,320 males and 2,800 females. The drastic reduction resulted from a more detailed analysis of sperm whale population and catch data and the application of that data to the new management procedure. Despite the fact that this quota may well end the commercial viability of this fishery, the Commission had little difficulty supporting the recommendation of the Scientific Committee.

Following is a comparison of the whaling quotas for 1977 and 1976:

IWC quotas

Species/stock	1977–78	1976–77
Southern hemisphere:		
Sperm whales:		
Males	4,538	3,894
Females	1,370	897
Total	5,908	4,791
Sei whales	771	1,863
Minke whales	5,690	8,900
North Pacific:		
Sperm whales:		
Males	------	4,320
Females	763	2,880
Total	763	7,200
Bryde's whales	524	1,000
Minke whales	400	541
North Atlantic:		
Fin whales	459	455
Sei whales	84	132
Minke whales	2,555	2,483
Sperm whales	685	685
Grand total	17,839	28,050

BACKGROUND

The International Whaling Commission—IWC—was established in accordance with the 1946 International Convention for the Regulation of Whaling. The main duty of the IWC is to keep under review and revise, as necessary, the measures prescribed in the schedule to the Convention governing the conduct of whaling. These measures at present provide for the complete protection of certain species of whales; set the maximum catches of whales which may be taken in any one season; prescribe open and closed seasons and areas for whaling; fix size limits below which certain species of whale may not be killed; prohibit the capture of suckling calves; locate females and females accompanied by calves; provide for the compilation of catch reports and other statistical and biological reports, and provide for the appointment of observers on factory ships and land stations.

There are currently 17 member nations of the IWC: Argentina, Australia, Canada, Brazil, Denmark, France, Iceland, Japan, Mexico, Netherlands, New Zealand, Norway, Panama, South Africa, United Kingdom, U.S.S.R., and the United States. Commercial whaling is carried on by six member nations: Australia, Brazil, Iceland, Japan, Norway, and the U.S.S.R. Not all whaling nations are members of the IWC. Chile, Korea, Peru, Portugal, Somalia, and Spain also engage in whaling, often in contravention of the IWC schedule.

The Commission meets once a year in June. The IWC has three committees: the Scientific Committee, the Technical Committee, and the Finance and Administration Committee. The Scientific Committee meets in the 2 weeks immediately before the main Commission meeting. The Scientific Committee, composed entirely of scientists, provides data and recommendations to the Technical Committee which form the basis for the annual whaling quotas. All quotas are contained in the schedule to the Convention which can only be amended by a three-quarter majority of the Commissioner's voting.

Perhaps the greatest single weakness in the Convention is the provision allowing member nations to object to any IWC regulation within 90 days and, thereby, prevent application of the regulation to the objecting nation.

Over the years, the IWC has been notably unsuccessful in conserving whales in a commercially viable state. Nearly all of the largest species of whales subject to commercial harvesting have been reduced to very low levels. Only one of these species, the gray whale, has recovered to any significant extent.

The IWC changed significantly in 1975 with the adoption of the "New Management Procedure." Under this management scheme, all whale populations are classified into one of three categories—protected, sustained management, and initial management—depending on the size of each population. Populations classified as protected are not to be subject to any whaling. Sustained management populations are subject to harvesting to maintain them at or near maximum sustainable yield levels. Initial management stocks are subject to harvesting which reduces them to their estimated maximum sustainable yield levels.

The importance of the new management procedure is that it places the Scientific Committee in firm control over the designation of annual quotas. Recommendations of the Scientific Committee can be rejected by the Technical Committee or the Plenary, but there have been few changes in the recommendations over the last few years.

BOWHEAD WHALES

The IWC voted unanimously, the United States abstaining, to remove the aboriginal exemption in the schedule which allows a subsistence harvest of bowhead whales. Although the bowhead whale has been protected from commercial exploitation for 40 years, the population remains at a dangerously low level. The Scientific Committee estimated the Alaskan bowhead population to be as small as 6 to 10 percent of its initial population, and the entire bowhead population to be 2 to 3 percent of its initial level. Despite the fact that the bowhead continues to be the most endangered of all whales, the Alaskan harvest continues at about 5 percent of the current Alaskan population size. The Scientific Committee noted that such a high kill rate is only endorsed for those stocks in the initial management stock category.

The Scientific Committee and the IWC severely criticized the United States for failing to control the Eskimo bowhead harvest. The United States was put in the embarrassing position of appearing to be very concerned about all whaling except its own. Last year, the IWC had noted the bowhead problem and called for controls on native harvests. The action this year, removing the native exemption and prohibiting any take, appeared to grow out of a realization that the United States failed to do anything in the past year to limit the native harvest. In fact, the Scientific Committee noted that the level of kill increased by 200 percent in 1976, and that the number of whales struck and lost this year increased dramatically over last year.

The bowhead issue clearly weakened the U.S. position as the leading conservationist voice within the IWC. Several other nations have aboriginal fisheries. None of them share our difficulty in controlling native whale harvests. The Russians noted in the Scientific Committee that they had overcome a high loss rate in their aboriginal fishery by replacing aboriginal methods with a special catcher. The Russians have killed only one or two bowheads a year over the last 3 years. The Commissioner for Denmark severely criticized the United States for its allegedly inconsistent position and noted that native Greenlanders have taken only one bowhead in the last 5 years. Alaskan Eskimos, in contrast, killed 56 bowheads in 1976 and struck and lost another 35. In the first half of 1977, the Eskimos killed 26 bowheads and struck and lost 77. These are dangerously high kill levels for a population that is estimated to be as small as 1,000 animals.

The United States abstained on the vote removing the native bowhead exemption from the schedule on the grounds that it was not entirely clear that the IWC prohibition on taking bowheads could be fully and immediately implemented. The U.S. Commissioner, Dr. William Aron, announced to the Commission that while the United States agreed with the Scientific Committee's decision on bowheads, provisions of domestic law made it unclear whether the United States could succeed in reducing the bowhead kill to zero.

Both the Marine Mammal Protection Act of 1972 and the Endangered Species Act of 1973 include a native exemption to the normal prohibition on taking depleted or endangered species. Both acts limit the native exemption to harvests for subsistence purposes. The Marine Mammal Protection Act provides that

the Secretary may regulate native hunting if he determines the target species to be depleted. The Endangered Species Act permits the Secretary to regulate native subsistence hunting if he determines that the hunting "materially and negatively affects" the species—section 10(e)(4).

Over the last few years, the United States has been the most strident voice within the IWC for the conservation of whales. As a result of our strenuous efforts, the whaling quotas have been progressively reduced and the recommendations of the Scientific Committee have been given preeminent consideration by the Commission. All of this progress could be jeopardized by United States inaction on the bowhead issue. The United States cannot continue to press for further reforms within the IWC unless we ourselves are willing to abide by determinations of the Scientific Committee and the Commission.

SCIENTIFIC PERMITS

A major issue at the meeting involved the misuse of scientific permits to avoid IWC regulations. Article VIII of the Convention gives contracting governments the authority to permit the killing of whales for scientific purposes without regard to other limitations contained in the Convention or the Schedule. Last year, Japan issued a scientific permit permitting the taking of 240 bryde's whales. The U.S. delegation considered this permit to be an abuse of the authority granted by article VIII.

The United States proposed a change in the IWC rules of procedure to allow the Scientific Committee to review the scientific permits and to prepare a list of minimum data collection requirements. The IWC adopted this proposal after accepting conforming amendments offered by Japan.

Restrictions on import of whale products from nonmembers nations: Several nonmember nations continue to harvest whales and the IWC has consistently urged them to join the IWC. In some cases, the whale products of these nonmember nations are subsequently imported by member nations.

The United States proposed and the IWC adopted a resolution providing that all nations shall actively seek to encourage membership by nonmember nations, and shall take all necessary steps to prevent the importation of whale products from nonmember nations.

Restrictions on transfer of whaling equipment to nonmember nations: The significant reduction in the whale quotas over the last few years has forced the whaling nations to reduce the number of vessels employed in whaling operations. There is concern, however, that as some nations abandon whaling other non-IWC nations will enter the whaling industry.

The IWC adopted a U.S.-proposed resolution to discourage the entry of new whaling nations by prohibiting the transfer of whaling equipment by member nations to nonmember nations.

Revision of the International Whaling Convention: For the past several years, the United States has urged the IWC to call a meeting of Plenipotentiaries to redraft the Convention, changing the IWC from an industry-oriented body to a conservation commission concerned with all cetaceans. It appears that for the first time this Conference may become a reality. The IWC agreed to convene early next year to work out the details for such a conference.

In summary, Mr. Speaker, I am very pleased with the reformation of the International Whaling Commission. We have more to accomplish, of course, but the decisions of the IWC this year amount to an important step in the effective conservation of all cetaceans.

Mr. McCLOSKEY. Mr. Speaker, will the gentleman yield?

Mr. LEGGETT. At this point I yield to the gentleman from California (Mr. McCLOSKEY), a member of the U.S. delegation. I would certainly be pleased to hear whatever observations the gentleman cares to make.

Mr. McCLOSKEY. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I want to echo the remarks of my colleague from California (Mr. LEGGETT) and point out that the decision of the International Whaling Commission on the bowhead whale faces us with a very real dilemma because in both our Endangered Species Act and our Marine Mammal Protection Act we made specific provision to exempt Alaskan Natives for the taking of this species for subsistence purposes. We are faced with this historic problem between preserving the momentum of our leadership in the conservation of the last great mammal species in the world and our historic concern for the Native Alaskan, who originally took this species for subsistence and may still do so today to some extent.

I know that the distinguished gentleman in the well, who is the chairman of the Subcommittee on Fisheries and Wildlife Conservation and the Environment, joins me in the belief that we must extend full due process to the Alaskan Natives in this process of perhaps prohibiting any further taking of the bowhead whale. The Alaskan Natives are entitled to a full hearing on the circumstances they face, and with respect to any expert evidence they can offer on the true state of the remaining bowhead population off their coasts.

We hope that in August, during the congressional recess, we can visit personally the Alaskan area where the bowhead has been taken and afford a full hearing to the Alaskan Natives who have been engaged in this activity.

Nevertheless, I think it is incumbent upon us to state to the administration, which is now faced with the question as to whether or not to except to the findings of the International Whaling Commission on the bowhead, that it is essential that our country not make an exception as we are entitled to do under the Whaling Commission treaty. If we should say that the hardship to our Eskimos is such that we must except to the complete prohibition, then we cannot expect the Soviets or the Japanese to agree to reduced last year's whaling quota of 28,000 to the figure of roughly 18,000, which is a reduction of one-third, the reduction that the Commission imposed.

There is a square dilemma between our leadership position in protecting the fast-diminishing stocks of great whales and our duty of sensitivity to the needs of one of our earliest native populations.

Mr. LEGGETT. If the gentleman will yield back to me at that point for a question, does not the gentleman think—and of course, the gentleman was there—that there was so much decisiveness at the IWC on this bowhead at this point, and considering the fact that they did make the decision which they did, and considering the fact that we have reduced the overall kill of whales by these tens of thousands over the past several years, that it would be an extremely poor precedent for the United States at this point to except, unless we absolutely have to, on any particular issue?

Mr. McCLOSKEY. I frankly think that we would destroy our entire credibility as a leader in the whole conservation effort of this species if we were to except.

I know the chairman has brought this point home to the Assistant Secretary of State, who faces this decision and this dilemma, Mrs. Mink, our former colleague from Hawaii. I have informed her likewise that I think it would be a tragedy if we were to except.

Mr. LEGGETT. As we grope for a decision in this area, obviously in order to effectuate U.S. internal law in this area, we would need to promulgate new regulations respecting the Aleut and aboriginal taking under both the Endangered Species Act and the Marine Mammal Act.

I would anticipate that we would give everybody a fair hearing on those reductions that might be effected as a result of the promulgation of regulations under those acts.

Would it not be a fact that if we did reduce for the coming year in compliance with the IWC suggestion and mandate, more or less, that we could come back, say, next June or sometime next year with new statistics and new information and a new program for taking some bowhead, but perhaps not as many as we have taken in the past, which would allow for some type of management regime that would be acceptable to the conservationists in the IWC?

Mr. McCLOSKEY. That is a possibility.

The most important aspect of the progress that the International Whaling Commission has made has been the complete adherence of the Commission's political representatives to the recommendations of the Scientific Committee. This year, when the Scientific Committee meeting considered all available evidence on the bowhead whale. there was no evidence that the United States could produce that it was not a depleted species within the meaning of our own law. We had the problem in Canberra that despite the fact that the bowhead situation had been called to our attention at last year's International Whaling Commission meeting, we could demonstrate no real progress by the Department of

Commerce toward holding the hearings to reduce the taking of bowhead whales by the native Alaskans. That may have played a part in the decision of the Commission to impose an absolute prohibition rather than a reduction that would be consistent with the needs of the Alaskan Natives; but we had no evidence as to what the Alaskan Eskimos truly needed. We had no evidence of our own to question the admitted depletion of the bowhead species.

Clearly, it is now incumbent upon the Department of Commerce to initiate thorough hearings, not only so that the Alaskan Natives can fully present their case, but so that we can supplement to every extent possible the scientific knowledge on the bowhead whale so that if we absolutely prohibit the taking next year, in compliance with the Whaling Commission's mandate, we will at least be able to make a case for our Alaskan Natives, if a case can be made, at the next meeting of the Commission.

These hearings should serve both to further educate us on the precise situation of the bowhead whale, as well as on the situation of the natives.

Mr. LEGGETT. I am sure our committee will take an informal, and perhaps a formal, look at this next month when the committee is in Alaska. I am sure we will have some reply to this colloquy on the floor today. I am sure the gentleman from California realizes that merely because we are down to 1,000 bowheads does not mean that the species is in danger but means undoubtedly that it is depleted by the definitions we have used under the Marine Mammal Act. We have been down below that on the Tule elk, and we have determined that it was not endangered but that it was an appropriate species to perpetuate in certain areas in California.

I believe we have some discretion in this matter, but I think it is incumbent that the United States take every action possible, and oriented in a conservation vein, to implement and support the recommendations and the regulations of the International Whaling Commission.

Mr. McCLOSKEY. Mr. Chairman, will the gentleman yield further?

Mr. LEGGETT. I yield further to the gentleman from California.

Mr. McCLOSKEY. Mr. Speaker, if I can add one point to the comments of the gentleman, and that is that this has been a real success story of the U.S. delegation to the International Whaling Commission in the past several years, because this Commission after all is a voluntary organization of some 17 nations. Each year when it determines the reduction of taking of whales, it is by a voluntary acquiescence by each country involved, each of which have 90 days after the Commission's meeting to file exceptions that they decline to go along with that year's determination.

Further, there are nations such as Peru and Spain and South Korea who continue to whale who are not members of the IWC. The only pressure on these nations to engage in a voluntary reduction in the taking of whales is the public opinion which the United States has been successful in engendering, and which has been led by the United States since the 1972 Stockholm International Conference on the Environment.

It would be a tragedy if we were to give up this leadership at this point for the sake of 150 bowhead whales.

I might say further that the Russians who similarly have a native population on the north coast of Russia have answered this problem by diverting whale meat taken by their whaling fleet to these natives for subsistence purposes. That is their answer to the cultural problem involved, the problem of a native population which has been engaged in whaling as a very basic part of their culture for many years. But that is a question we must also face up to at this time.

Again I thank the gentleman for yielding.

Mr. LEGGETT. Again I want to commend the gentleman from California (Mr. McCLOSKEY) for his comments, and for the work he has done and that of our colleagues out in Canberra, and particularly the work of the special deputy counsel in charge of whales, Mr. Bob Thornton, who did an excellent job, as well as the other members of our staff who were there.

Mr. McCLOSKEY. Mr. Speaker, if the gentleman will yield further, let me say that I, too, was impressed that this was a particular case where the congressional staff present really did assist the delegation in achieving an excellent result. And I am impelled to say that, as usual, I think executive branch agencies will always do a better job under careful congressional staff scrutiny and oversight. Mr. Thornton did a superb job in Canberra, for the Nation as well as for the Congress.

Mr. Speaker, supplemental to the remarks of the gentleman from California (Mr. LEGGETT), I would like at this time to formally report to the House on the International Whaling Commission held in Canberra, Australia, on June 19–25.

It was my privilege to attend the Commission's meeting as the Congressional Representative, and to offer opening remarks on behalf of the Congress at the first day's session.

The International Whaling Commission was established in accordance with the International Convention for the Regulation of Whaling, signed in Washington, D.C., in 1946 and entering into force in 1948. For many years the Commission served primarily to encourage, rather than regulate, the continued depletion of the remaining great whale population.

In recent years, however, there has been a significant evolution of this Commission from an organization dominated by industry and working toward management of populations to a strong, independent body, committed to act solely on the basis of scientific evidence and dedicated to the conservation of whales.

This year the Commission was able to reduce whale quotas for the 1977–78 whaling season by approximately one-third to 17,839, compared to the 28,050 quota established last year. Also, a full moratorium on the taking of the bowhead whale in the North Pacific was adopted. This represents, in the words of Dr. William Aron, U.S. Commissioner to the IWC, "a victory for conscientious protection of the world's whales, based on sound science."

The Commission also considered several other whale-protection provisions, including the banning of imports from a number of smaller nations who continue to whale and are not members of the IWC, and thus not subject to the sanctions of that agreement. Although this provision was not agreed upon, the fact that it was even considered is an indication of the sincerity of the Commission's commitment to the protection of the whale.

Both the administration and the House Merchant Marine and Fisheries Committee are considering steps to implement the so-called polly amendment against non-IWC nations who fail to comply with IWC quota restrictions. As I have mentioned, the Commission adopted a full moratorium on the killing of the bowhead whales, which brings me to the important problem which this Congress must face in the near future.

Although the Marine Mammal Protection Act makes the killing of any whales by a U.S. citizen illegal, this act and the Endangered Species Act, which also protects the bowhead, provide exemptions for native peoples, that is, aboriginal Alaskans, who kill whales for their subsistence. With the United States abstaining, the Commission unanimously adopted a moratorium on the killing of the bowhead whales in the North Pacific by Native Alaskans and other aboriginal peoples. Although the bowhead has been protected from commercial exploitation for 40 years, this is the first time the Commission has eliminated the native peoples' exemption from bowhead-taking. In recommending the moratorium on the bowhead harvest, the scientific committee of the Commission noted that the population of the bowhead may be as little as 6 percent of its original population size, or approximately 600 to 1,000 animal total.

Despite the Commission's strong recommendations last year that the United States begin to curtail the taking of the bowhead, and the assurance by the U.S. delegation that indeed something would be done, the number of bowheads killed and lost by Alaskan Natives has actually increased over last year, and I can find no record that an executive branch took any action whatsoever in response to the IWC's warning.

The welfare of the Native Alaskans must be of great importance in our consideration of this matter. It was not the Native Alaskans, after all, whose whaling activities depleted this species essential to their historic culture. But the U.S. position as an international conservation leader must also be fully considered. Since 1972 the United States has pressed for a complete moratorium of the commercial taking of all whales. Although we have not been successful in this endeavor, our efforts have resulted in the progressive lowering of commercial whale quotas, from approximately 45,000 in 1973 to 18,000 in 1978. The Japanese and Soviet whaling industries have been

devastated by this continual lowering of quotas, particularly this year's quota of zero on the male sperm whale in the Northern Pacific. If the United States were to ignore the Commission's moratorium on the bowhead, or worse yet, file on objection with the IWC, it would totally undermine our position of strength in the conservation of all whales and effectively negate the substantial progress made by the Commission thus far. As the Danish delegation stated:

The U.S. has been conservative in all whaling matters except its own.

I am recommending to Secretary of State Vance and Assistant Secretary Mink that we not file an objection with the IWC. I am further recommending to Secretary of Commerce Krebs that she initiate immediate hearings in Alaska to give full audience to the problems of the Alaskan Natives as the administration pursues the procedures provided for in tne Endangered Species and Marine Mammal Protection Act.

Mr. FORSYTHE. Mr. Speaker, the 29th annual meeting of the International Whaling Commission was concluded on June 24, 1977. I take the floor at this time to voice my support of the quotas on whaling established at that meeting, including the moratorium on the taking of one species, the bowhead whale.

As a member of the U.S. delegation to the International Whaling Commission in 1975, I was privileged to take part in this country's successful effort to change that organization from a club of whaling nations into a responsible, conservation-oriented one. In the last 5 years, quotas on the take of the various species of whales have been drastically reduced. The reductions have been brought about by the U.S. commitment to the development of a broad base of information on whale populations and strict IWC adherence to the quota recommendations of the IWC Scientific Committee which are derived from that data base. With dogged determination, the United States has insisted in case after case that the quota recommended be strictly adhered to, even if it meant that some quotas were cut in half and many people were put out of work in the whaling nations. There is no question in my mind that the continued success of the Whaling Commission depends on our continued adherence to the principle of scientifically set quotas.

Those species or populations which are endangered, such as the California gray whale and the bowhead, have been protected by a moratorium on commercial taking. Only aboriginal people were exempted from the moratorium and allowed to take animals for subsistence purposes only. During its most recent meeting, the Whaling Commission voted unanimously to remove the aboriginal exemption due to scientific evidence of the extremely endangered position of the bowhead population. Its present Bering Sea population is estimated at as low as 6 to 10 percent of its initial level.

Although the Bering Sea population may be as low as 600 animals, Native taking last year exceeded 100 animals. According to statistics supplied by the National Marine Fisheries Service, 27 animals were harpooned and landed, 77 were harpooned and lost, and 1 animal was killed but sank. That is a total of 105 animals. This Native taking has risen in recent years, although the United States has assured the Whaling Commission that we would take steps to keep the catch down.

Although the situation of the Alaskan Natives is a difficult one, neither the Marine Mammal Protection Act nor the Endangered Species Act provide any citizen an unqualified right to avoid the application of the law. This Nation must maintain its strong legal and moral position in the international arena. We cannot ask other nations to continue to suffer serious economic and social dislocations by our insistence on adherence to quotas on whales which are not in the endangered category while we fail to enforce a moratorium on a species which is getting close to extinction. The bowhead has not shown any signs of population recovery despite 40 years' protection from commercial fishermen. It's only hope is in adherence to the scientifically valid moratorium the International Whaling Commission voted a month ago. I strongly urge the Secretary of State Cyrus Vance refrain from filing an objection to the IWC action.

GENERAL LEAVE

Mr. LEGGETT. Mr. Speaker, I ask unanimous consent that all Members may revise and extend their remarks on the subject of my special order today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

STATEMENT OF INTRODUCTION, UNEMPLOYMENT COMPENSATION REFORM ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. CARR) is recognized for 5 minutes.

Mr. CARR. Mr. Speaker, the Unemployment Compensation Reform Act, which I introduce today with the cosponsorship of Messrs. DIGGS, FORD of Michigan, BRODHEAD, HARRINGTON, MURPHY of Pennsylvania, FARY, TRAXLER, BONIOR, EILBERG, SCHEUER, and BLANCHARD is intended to immediately strengthen the weakened Federal-State unemployment insurance system, and to insure that the system will be able to function effectively in future periods of prolonged and excessive unemployment.

The economic recession of the last 2 years has threatened the financial viability of this system, and exposed its inability, during periods of deep and prolonged economic decline, to provide benefits of sufficient duration for workers who have lost their jobs through no fault of their own.

The recession wreaked havoc on many States unemployment insurance programs. During the past 2 years, a total of 23 States have entirely exhausted their unemployment insurance funds. Most of these States ran out of unemployment compensation moneys prior to this year and during a period of peak stress upon the entire unemployment insurance system. In order to replenish these unemployment insurance funds, States were forced to borrow from the Federal unemployment fund. Currently, the total outstanding debt of these States is over four and a half billion dollars.

The recent economic decline has also weakened the Federal unemployment insurance trust fund, which was forced to borrow $8.8 billion from the Treasury in order to provide extended and emergency jobless benefits.

Clearly, these debts must be repaid if the unemployment insurance system is to avoid the threat of collapse. The system is now weak enough that it could not endure another period of severe unemployment. We must be prepared to face another recession, though that may be an unthinkable prospect.

Currently, the funds to pay for unemployment benefits and the funds necessary to replenish the depleted unemployment insurance reserves must both be raised from State and Federal payroll taxes. If a State has borrowed Federal funds for its unemployment programs, these debts must also be repaid by means of a payroll tax.

State payroll tax rates currently average about 2.6 percent, but are as high as 6 percent on some employers. In addition to this, many States which have outstanding loans from the Federal trust fund must levy a Federal penalty tax upon employers in order to begin repayment of the loan. This penalty tax begins at 0.3 percent in the first year, and increases by that amount every year until the loan is fully repaid. In the State of Michigan for example, whose outstanding debt is $624 million, this penalty tax is expected to rise as high as 1.5 percent before the loans can be repaid. Some States may also have to levy similar additional taxes in order to replenish their own depleted trust funds.

On top of all these State payroll taxes comes the Federal payroll tax, currently levied at a rate of 0.7 percent of the payroll base for all employers. The base of this tax is presently the first $4,200 in wages paid to each employee, but it will rise next year to the first $6,000 in wages per employee.

In sum, the total tax on an employer from a region which experienced or is experiencing severe unemployment could in some cases rise to as much as 8 percent of his total taxable payroll, perhaps remaining there for several years. Such crippling tax levels could result in bankruptcy and in cancellation of planned expansions. In general, high payroll taxes on employers are a serious threat to our Nation's fragile economic recovery.

We need a way to strengthen the unemployment compensation system and to restore the reserves of unemployment insurance funds without having a detrimental effect upon economic recovery. We must also buttress the system so as to enable it to withstand any future periods of excessive unemployment.

These are the two central goals of the Unemployment Compensation Reform Act of 1977.

The bill would create a cost equalization and reinsurance program to insure that the burden of prolonged unemployment is equitably shared. Under this new program, a State may qualify for a reinsurance grant to pay a portion of its unemployment insurance benefits during prolonged periods of excessive unemployment. The program would be implemented retroactively to 1975, so as to help States restore their already-depleted reserves, and would be funded from general revenues. It would benefit the States now in debt, and would also directly affect another 15 States that have suffered rampant joblessness.

The bill would also enable the unemployment compensation system to withstand future periods of high and prolonged unemployment by establishing a permanent, two-tiered, standby program of extended benefits. This program of extended and supplemental extended benefits would be automatically activated during periods of severe joblessness. The importance of this step was dramatized during the last recession when only the rapid action of Congress in enacting and twice renewing the Emergency Unemployment Compensation Act saved millions of workers from exhausting their benefits before they could find new work. The Unemployment Compensation Reform Act would eliminate the need for such last-minute ad hoc legislation.

In summary the bill would insure that unemployment benefits will be available for those workers who have lost their jobs through no fault of their own and that such benefits will be of sufficient duration in times of rampant unemployment to permit unemployed workers to find new jobs. I sincerely hope that my colleagues will join me in supporting the Unemployment Compensation Reform Act of 1977.

A title-by-title summary of the bill, which was also introduced in the Senate, can be found in the statement of Senator WILLIAMS on pages 22806–22809 of the CONGRESSIONAL RECORD of July 13, 1977. The full text of the bill appears on pages 22813 of the same issue.

TRIBUTE TO WAYNE ALDERMAN, DISTINGUISHED WESTERN MASSACHUSETTS CITIZEN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. BOLAND) is recognized for 5 minutes.

Mr. BOLAND. Mr. Speaker, I take this opportunity to pay tribute to Wayne Alderman of South Hadley, Mass., a man who has devoted his life to public service in western Massachusetts. Mr. Alderman recently announced his retirement as chairman of the board of Community Savings Bank, which is headquartered in Holyoke, Mass. He will be honored by many of his friends, colleagues, and admirers at a banquet on July 23, 1977.

The story of Wayne Alderman's business career has been one of success. The story of his public life has been one of service. It has now been 42 years since Wayne Alderman entered the banking profession as a messenger of Hadley Falls Trust Co. He did not remain a messenger for long and was savings department manager when he resigned in 1945 to join the Brooks Bank and Trust Co. of Torrington, Conn. In 1959, he began his career with what we now know as Community Savings Bank. In those days the bank was known as Mechanics Savings Bank and he became its president in 1961. Community Savings Bank was formed in 1967 when Mechanics Savings Bank merged with Chicopee Falls Savings Bank. Since then the assets of the Community Savings Bank have more than tripled. He retires as chairman of the board of this valuable community savings institution.

The success of the Community Savings Bank is a fine tribute to the hard work of Wayne Alderman. Despite the long hours that his career in banking has required, however, Mr. Alderman has always found the time to devote himself to public service. A list of his activities in community service organizations would fill several pages. From his service as an alderman in the city of Holyoke in the early 1940's to his work as chairman of the 1977 special gifts division of the United Way's annual drive, Wayne Alderman has kept active in valuable community groups. A past president of the Holyoke Rotary Club, he is also a past director of the Holyoke Chamber of Commerce, United Fund of Holyoke, Holyoke Credit Bureau, Holyoke Building Committee, the Salvation Army, and the Springfield Chamber of Commerce. Along with his work on several banking organizations, Mr. Alderman was the cofounder of the New Holyoke Corp. and a trustee of the First Congregational Church of South Hadley. He is currently serving as: a member of the Pioneer Valley Savings Bank "Low Interest for Expansion" Loan Committee, a trustee of American International College, director of the Springfield Area Development Corp., a member of the Boston District Advisory Council of the Small Business Administration, a member of the South Hadley Industrial Development Finance Authority and as a corporator of the Holyoke Public Library. In 1968, Mr. Alderman received the Dwight Distinguished Service Award.

This list of accomplishments and service organizations is quite impressive, yet it does not adequately represent the spirit and devotion that Wayne Alderman brings to his work in the community. Perhaps his work on the problems associated with the gradual reduction of military activity at Westover Air Force Base best represent his ability to serve his area. The economy of an area can be drastically affected by the removal of a major military facility and Mr. Alderman has been working on lessening the impact of the Westover phaseout since the start. He served in 1973 as the Westover Task Force chairman and in 1974 he became chairman of the Westover Metropolitan Development Corp. This year the WMDC received an award for its role in helping the development of surplus Government land for civilian uses. The award was presented by the Defense Department to Wayne Alderman on March 1.

Mr. Speaker, with the retirement of Wayne Alderman, the banking community is losing one of its finest executives. The people of western Massachusetts will continue to benefit, however, from his many ongoing commitments. I congratulate Wayne Alderman on his many successes in his career and thank him for his many years of service to western Massachusetts. I also would like to wish him the best of luck in all future endeavors and hope that his retirement years are fruitful ones.

Mr. CONTE. Mr. Speaker, I want to thank my colleague and dear friend, the gentleman from Massachusetts (Mr. BOLAND) for requesting this special order so that those of us who have witnessed the good that Mr. Wayne Alderman has done for the people in our districts can take a few minutes to congratulate him on his years of service and wish him all the best as he retires as president of the Community Savings Bank.

Wayne Alderman's story, as my colleague has just recounted it, reads like a page out of a book by Horatio Alger. Forced by the Depression to leave college, he took a job as a bank messenger, rose to be bank president and now will assume the position of chairman of the board.

Wayne Alderman has worked hard to get to the position of professional esteem and community leadership that he now occupies. And, over the years, many people have learned that they can put their trust in Wayne Alderman.

The people of Holyoke, Mass., Wayne Alderman's hometown, put their trust in him when they elected him to their board of aldermen.

A share of the well-being of the community was entrusted to his care as president of Holyoke Hospital.

Into his trusteeship has been placed a part of the educational activities of the area through his position on the board of trustees of American International College, as a member of the panel of "Tribunes" of channel 57, the area's public broadcasting station, and as a corporator of the Holyoke Public Library.

That his colleagues in banking have trusted his judgment is certainly demonstrated through his being named to responsible positions in professional organizations such as the National Association of Mutual Savings Banks—director— and the Savings Banks Association of Massachusetts—president—and his appointment to the Small Business Administration's Boston District Advisory Council and the Special Legislative Committee on Demand Deposits.

As my colleague has mentioned, when the community was faced with the loss of an important and long-standing segment, Westover Air Force Base, it was Wayne Alderman who was commissioned by his fellow area residents to work to cushion that blow and to recoup and rebuild. In recognition of the fine work

he did in that regard, as my colleague has also pointed out, he was recently named as the recipient of an award by the U.S. Defense Department.

That is not the only honor that Wayne Alderman has culled in his career. In 1968, Wayne Alderman was named the recipient of the William G. Dwight Award for Distinguished Public Service, given to persons who have long participated in community service. It is an honor that seems to run in the Alderman family, as his sister, Mrs. Donald P. Cooke, is also a past recipient.

Three years ago, Wayne Alderman was also honored as the recipient of Holyoke's St. Patrick's Day Parade "Outstanding Citizenship Award."

But lest you are led by my remarks to believe that all of his activities have brought public recognition, I hasten to add that there are many, many personal kindnesses of Wayne Alderman's that will never go sufficiently recognized, nor will it ever be known all of the people he has aided. There are, for example, the youngsters he encouraged through his work with the Holyoke Boys' Club and the Golden Gloves activity of that organization, and the handicapped who have been assisted through his generous donation of time as director of the local Salvation Army. A devoted family man, the father of five, including four daughters, he has also been active as a director of the Ox-Bow Chapter of the Girl Scouts of America. The list of charitable, fraternal, and civic organizations that have benefited through his membership go on and on—the YMCA, the Red Cross, and following consolidation, the United Way. My colleague has mentioned others.

In all of these positions, through these many years, Wayne Alderman has never betrayed the trust of his friends, neighbors, or colleagues. He has never let us down. This weekend, we will have the opportunity to express our gratitude to him for his unselfish devotion to public service and community betterment. Prior to that date, I am pleased to join my colleague, Mr. BOLAND, in saluting Wayne Alderman and wishing him the best of health and happiness in his retirement.

THE NATURAL GAS PRICING DEBATE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. MARKS) is recognized for 15 minutes.

Mr. MARKS. Mr. Speaker, seldom has there been an issue before Congress with more agreement on the end to be sought and less agreement on the means to be used than there is in the case of natural gas pricing. Who would argue that our goal is other than maximum development of our natural gas resource base through appropriate incentives to natural gas producers on the one hand, and maximum protection for consumers both from drastically higher prices and shortages of natural gas on the other?

Yet despite a common purpose, there has been a strong polarization of views as to the best means of reaching this end.

The world oil and gas industry began in our area of Pennsylvania, a little more than 100 years ago. From the technologies and ideas pioneered here in our rolling land has developed the industry and the source of energy on which we today rely. Representing this area in Congress, I cannot help feeling a special poignancy when the energy crisis is debated; when the decline of our domestic production of oil and gas is discussed.

We still produce substantial amounts of oil and natural gas in our region. In 1974, for example, more than 1.5 billion cubic feet of natural gas was produced from wells in Erie, Crawford, and Mercer County. Nor is this merely the residue of our former production. We drilled 39 new wells in 1974, 17 of which were successful natural gas producers. In the sands and shales underlying our district, I am sure that there is still a great amount of oil and gas to be located and tapped. I want that to happen. And I recognize that it can only happen if it is profitable.

Despite our significant production, we consume much more oil and natural gas in our region than we produce. And this is the crucial fact, because it applies to most States across the Nation. We have developed a national appetite for energy that exceeds our current ability to produce and discover energy. Indeed, we have put our independence at risk by allowing imports of energy from overseas to become a central prop of our economy.

No one, as far as I have been able to learn, anticipates that we can increase conventional recovery of our oil and gas production enough to end or even seriously reduce our vulnerability to another import embargo, regardless of what pricing or regulatory policies we adopt here at home. We can increase our findings over what they have been in recent years. We can slow the decline of production of oil and gas. We may even, if we are lucky, be able to increase our current domestic production through the development of promising, but still to-be-proved, technologies. But it is doubtful that even under the best circumstances will we be able to increase production even to the peak levels we have enjoyed in the past—and of course our over-all energy requirements have grown substantially since we passed our peak production of oil and gas.

In the case of natural gas, for example, our peak annual production, according to the American Gas Association, was 22.6 trillion cubic feet in 1973. Since then production has fallen to 19.5 trillion cubic feet in 1976 and will probably be less this year. The American Gas Association has published a report on how production levels would be affected by deregulation. AGA, of course, is one of the most vigorous supporters of deregulation, and one could not assume that their estimate would be conservative. Yet even at a deregulated price of $3.25, a price AGA considers higher than likely, the supplies of gas anticipated to result from deregulation do not attain last year's levels until 1980, and by 1985 reach only 20 trillion cubic feet. In 1990, the anticipated production is 20.1 trillion cubic feet—still 2½ trillion cubic feet short of our historic peak—and in what AGA considers the best of all possible worlds.

Similarly, the Project Independence Blueprint prepared by the Federal Energy Administration in the wake of the oil embargo assumed deregulation and estimated that gas production in 1985 would reach 19.114 trillion cubic feet if the price were 80 cents per thousand cubic feet, and 19.141 trillion cubic feet—virtually the same—if the price were $2.00 per thousand cubic feet. Unfortunately, the supply of natural gas is not directly related to its price.

I do not dispute the evidence that natural gas remains to be found, perhaps more than we have already found. But what makes the crucial difference to our society is how much we can economically produce. It is clear that we are going to have to make do with reduced supplies of natural gas regardless of our pricing and regulatory policies.

I should also note that our drilling efforts to find natural gas have risen dramatically over the past few years, primarily in response to the high unregulated prices of the producing States' own gas markets. And although there are prospects where this price incentive has not applied—offshore, where the lands are leased by the Federal Government, and in States where production has not been sufficient to warrant an intrastate system, for example—the very meager supply response to this rush of new drilling in the major onshore producing regions has not left much room for optimism. Today we are finding half the natural gas per foot drilled than we did just a decade ago, and 25 percent of what we found in the 1950's.

Recently Senators HENRY JACKSON and ERNEST HOLLINGS and Congressman JOHN DINGELL released a summary report prepared by the Congressional Research Service entitled "Project Interdependence: U.S. and World Energy Outlook Through 1990." The study, representing the work of more than 20 CRS energy specialists plus a dozen outside energy consultants, noted the alarming decline in natural gas production, notwithstanding increases in prices:

> In spite of the substantial increases in drilling rates in recent years—in response to higher interstate prices—finding rates in the lower 48 States traditional areas continued their general downward trend. Drilling productivity has continued to decline from 536,000 cubic feet of gas per foot drilled in 1966 to 220,000 cubic feet per foot drilled in 1975. In 1976, reserve additions were again substantially below 1975 reserve additions, in spite of the higher price allowed for interstate gas.
>
> Natural gas production is almost certain to decline in the lower 48 States onshore and even assuming successful exploration and development of the frontier areas offshore Atlantic, Pacific, and Alaska, the trend in the direction of lower production is not likely to be reversed. Successful exploration and development in the frontier areas could at best stabilize production, probably during the period from the middle 1980's to the early 1900's.
>
> This forecast may be considered optimistic for the following reasons: It assumes that

additions to reserves in the traditional producing areas in the lower 48 States will increase substantially above the 1968–76 annual average of 8.6 trillion cubic feet; and, that between now and 1990 about 90 percent of the maximum undiscovered recoverable natural gas resources in the Atlantic and Pacific OCS as quoted in the USGS circular 725, will in fact be found. Moreover, these projections assume a most favorable political and economic climate.

So we are going to have a continuing natural gas shortage in comparison to our historic production. Obviously, the smaller that shortage can be, the better.

But we must take into account the factor of diminishing returns. The supply will not double when the price doubles; in fact, there is less additional supply for each addition to the price. The price for new natural gas has risen from 19 cents to $1.42 since 1970. Even discounting inflation, that is a mammoth price increase. Production has fallen, nonetheless, and additions to our reserves have stagnated at a fraction of the amounts we would need to maintain current production. The realities of nature cannot be altered by paying increasing billions for a diminishing fuel.

I see no evidence that deregulation would permit us to break this law of diminishing returns—the price may double from its current levels, but the increase in production would be marginal at best, and only then if we assume a complete reversal of our existing fortunes in findings. Even in the deregulated intrastate market, increasing prices have still resulted in declining production. Natural gas production peaked in Texas in 1972, and peaked in Louisiana and Oklahoma in 1973. Thus, in those States which should be proving that deregulation will increase natural gas production, we find instead that deregulation has failed to reverse a trend of declining production.

Even if the extraordinarily high deregulated price could be specifically and exclusively focused on new natural gas, which I question that any definition adequately does, the amount of new natural gas for which there would be adequate incentive at prices up to $1.75 would far exceed the amount for which there would be insufficient incentives at prices from $1.75 to $3. In other words, I am persuaded that we can get most of the available return for just under half of the investment.

The Office of Technology Assessment recently completed an analysis of the national energy plan. That report applied a well-developed model to estimate the supply-price elasticity for 13 offshore areas at various prices. The elasticity between $1.45 and $1.75 was a very high 1.0. Above $1.75 the elasticity drops to a very low .13. That sharp differential proves the point that the bulk of new conventional gas supply can be produced at moderate ceiling prices and the remaining portion can be produced at special higher prices.

Our economy is now fairly well recovered from the drastic slowdown that was caused when energy prices went through the roof thanks to OPEC. We must, in my opinion, do whatever we can to preserve this recovery from additional energy price shocks. Based on studies by the Congressional Budget Office, the Library of Congress, and the Office of Technology Assessment, the actual cost of the incremental quantity of natural gas we would obtain from deregulation has been calculated to range from $71 billion to $150 billion. On the low side, that is the equivalent of $116 per barrel of oil. I think this probably overstates the cost, because the supply predictions in these studies tend to be conservative, and we would at least offset a barrel of foreign oil at $13. But the basic point appears valid: It would be folly to threaten our economy with a massive energy price hike occasioned by the cost of a marginal small quantity of high-cost natural gas, when we can obtain the greatest part of the potential increase at a far smaller cost. It is interesting to note that Alice Rivlin, director of the Congressional Budget Office, made the following observation in a letter to Congressman DONALD FRASER in response to his request for additional information at a hearing of the Task Force on Distributive Impacts:

On the basis of these estimates we calculate that if natural gas were deregulated, as opposed to being priced in accordance with the schema proposed by the Administration, consumer costs for natural gas would rise by about $80–$85 billion (in 1977 prices) over the period 1977–1985 *for the same volume of gas*. (Emphasis Ms. Rivlin's.) Since producer costs are not expected to vary significantly as a result of deregulation, it is anticipated that industry profits would also rise by about $80–$85 billion.

Even the AGA supply projections show exactly the same amount of production of new gas as of 1990 for a deregulated price of $2.75 versus $3.25. In either case, AGA estimates 12.5 trillion cubic feet of new gas for 1990 production, yet the 50 cents difference in price means $6.25 billion in that year alone in higher fuel prices, not to mention the billions of extra dollars spent in the intervening years. In my opinion, we cannot afford to allow this kind of massive transfer of wealth from consumers to producers that would accompany deregulation. Representative JOHN DINGELL, the distinguished chairman of the Subcommittee on Energy and Power, in a statement on long-term natural gas issues printed in the CONGRESSIONAL RECORD of March 21 outlined the following scenario concerning the economic impact of deregulation.

The price and supply concerns underly my greatest concern—the potential economic dislocation which may result from natural gas deregulation. A recent study by the General Accounting Office assesses the potential effects of deregulation and concludes that within five years, deregulation would raise the cost of energy to natural gas consumers by $27 billion per year. This would amount to an increase of approximately $200 per year over 1975 levels in residential natural gas bills.

An increase in natural gas prices of this magnitude might reduce real GNP by as much as $12–$15 billion and add .5% to the prevailing inflation rate. Total consumer disposable income for purchasing goods and services, other than natural gas, would be adversely affected. Higher operating costs for many industries and lower consumer demand for their products would raise the unemployment rate to roughly 0.4 percentage points above the unemployment rate that would otherwise prevail. This represents a potential loss of 400,000 jobs.

If deregulation is unwise because we are so far along the road of diminishing returns, then what can we do? I do not like Government regulation any better than anyone else. In fact, it is Government regulation that is to blame for the fact that 55 percent of our most precious fuel is priced under long-range contracts at 32 cents per Mcf. It is this outrageously low price that makes deregulation so dangerous, since gas-starved interstate pipelines will be able to bid $4 or $5 or maybe even $6 per Mcf for deregulated gas that they can roll-in with their 32-cent gas and still sell at prices competitive with foreign fuels. That is why as much as we may admire the marvelous mechanism we call the free market, it really cannot work in this setting. Only after we gradually bring natural gas supply and demand back into balance can we then rely on the market to price natural gas.

Neither is the solution to give up and say that we ought to freeze gas prices—we cannot get all we need, let us forget what we might be able to get—that would be tragic. No, we need a middle ground.

We need to adopt a general price for natural gas that will give us the greatest part of the available discoveries, while we move toward a more balanced market that avoids pricing all of our new gas at the level necessary to secure production of only a small part of it. In my opinion, President Carter's proposed natural gas policy, setting a wellhead natural gas price at the equivalent of the average refiners' acquisition cost of domestic crude oil, or about $1.75 to begin with, does that. The Congressional Budget Office, in its working paper entitled "President Carter's Energy Proposals: A Perspective," came to a similar conclusion:

But the plan has, however, been criticized by producers for not adequately stimulating new production. CBO analysis of these proposals does not concur with this criticism. Although prices for new gas are controlled under the plan, the proposed level of the controls (a cap of $1.75 per thousand cubic feet, at current prices) appears to be high enough to encourage exploration and new production, and it is unlikely that production would be much higher if prices were not controlled. Moreover, if the prices were not limited, new gas prices could go as high as $4–5 per thousand cubic feet, and producers could reap large windfall profits.

Ron Calhoun expressed the point a bit more colorfully in his column in the June 27 edition of the Dallas Times Herald:

Of course, drilling, transmission and distribution costs have soared since 1955 (and I hope Lone Star laborers are making more than the $1.15 per hour I was earning), but you ask any gas production man privately and he will tell you $1.75 per thousand cubic feet at the wellhead is a damn good price, well worth the risk of capital for deep drilling.

Under the President's plan, the $1.75 price will rise steadily and gradually over the years, and that is as it should be, because the costs of finding conventional new gas supplies will rise also. It is a

substantial increase over the prevailing price under which over-regulation has discouraged new drilling efforts. In addition to the new escalating incentive price, it also frees producers from the cumbersome control requirements of FPC interstate jurisdiction, and does away prospectively with the vintaging of gas contracts that has resulted in the large quantities of under-priced 32 cent per Mcf gas.

That is not to say we should ignore the higher cost gas even if we must insure that it does not determine the selling price for lower cost gas. President Carter's proposal does not ignore this critical hope for the future. The proposal contemplates that gas from super-deep wells or other high cost new sources can be priced at the equivalent of deregulated prices. The long-term projections—including those of the industry—rely for substantial new supplies principally upon the more exotic, high cost sources, such as Devonian Shale and geo-pressurized methane. The President's program provides for special higher pricing to enable development of those supplies without allowing higher prices for lower cost conventional supplies. I am not of the opinion that the President's version of natural gas pricing policy has no need for corrections—there will probably be refinements that I will support. But on balance, I think it is the appropriate policy at this time. That is why I voted in the Interstate and Foreign Commerce Committee to keep that policy in the comprehensive energy plan we are working hard to enact. Its pricing program, together with the incremental pricing provision which protects the home gas consumer from price increases by first passing these increases on to large industrial users, is a prescription for moving toward workable deregulation someday in the future, while protecting consumers and providing adequate incentives for producers.

It is going to be a very hard job to break our society away from oil and gas to alternate forms of energy while increasing our overall energy supply along the way. We would not help ourselves if we let the enormous potential price increases for oil and gas, which are latent in an inevitable production decline, wreck the economy we are trying to save. The days of cheap energy are over. That we must all learn to recognize. But to the extent that we can prudently and carefully moderate our inevitable transition to a more efficient future of high cost energy while nurturing our economy, the better off we will all be.

SUBSISTENCE WHALING IN ALASKA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Alaska (Mr. YOUNG) is recognized for 5 minutes.

Mr. YOUNG of Alaska. Mr. Speaker, I would like to take this opportunity to reply to the remarks made by my distinguished colleague from California (Mr. LEGGETT). While I recognize my colleague's concern for the great whales of the world, I do take exception to his suggestion that the United States comply with the International Whaling Commission decision to ban subsistence hunting of whales.

When the International Whaling Convention was signed in 1946, it was obvious from the references in articles I and II that the regulations were designed for commercial whaling. Article I of the protocol to that convention, signed in 1956, reinforced this definition. The Congress of the United States further recognized the special importance of subsistence whaling when it passed the Marine Mammal Protection Act in 1972. Section 101 of that act specifically exempts Alaskan Natives from the permitting process. In spite of these previous actions, we now hear cries for a complete moratorium on the taking of bowhead whales by Alaskan Natives for subsistence purposes. These misguided attempts are not based on scientific knowledge, but on a sort of emotional myopia that dictates saving every single whale in the ocean, even though it may cause the starvation of 5,000 Americans.

Let us examine the body of scientific knowledge first. We all know that the bowhead whale no longer exists in the great numbers that it used to. However, this decline was caused by commercial whaling, not subsistence hunting. Commercial whaling on bowheads has not been conducted for many years. In spite of low population levels and continued subsistence hunting, the bowhead seems to be slowly increasing in numbers. My colleague stated during hearings on the Japanese fishing agreement yesterday that there are only 1,000 surviving bowheads. I would like to point out that the National Marine Fisheries Service has determined that the minimum number is 800 and a conservative maximum is 3,000. My distinguished colleague further stated that 120 whales had been killed this year. Again, according to Fisheries Service scientists, the number taken as of May 31, 1977, was 27 whales. If the number of whales is increasing, and the number taken remains at such small levels, what is the reason for ignoring past actions and banning subsistence hunting entirely?

Aside from the simple facts and figures of modern science, there is another reason for continuing subsistence whaling. The Eskimos of Arctic Alaska have for centuries considered the whale and the act of whaling as an integral part of their culture. The prestige of the traditional hunter was more closely tied to whaling than to any other form of hunting. The ritual surrounding whaling not only affected the hunt itself but also everyday life. To this day, whaling crews in some villages still return the skull and jawbones of bowhead whales to the sea as part of the ritual practice. To sum up, let me quote from the statement made by one whaling captain in 1968:

> Whaling is the thing of total importance—jobs, the outside world, time and school can wait.

Ladies and gentlemen, I have no desire to see all the whales of the world slaughtered by massive mechanized commercial whaling fleets. I certainly will defend the reduced commercial quotas proposed by the International Whaling Commission. I will not, however, stand idly by and watch the culture, the lifestyle, and the very existence of 5,000 Americans be destroyed.

SMOKEY ATOMIC BOMB BLAST-CONNECTED DISABILITIES MUST BE COMPENSATED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Kentucky (Mr. CARTER) is recognized for 15 minutes.

Mr. CARTER. Mr. Speaker, I have a very serious problem in my district. A wonderful young fellow, a veteran of the Army, Donald Coe, was diagnosed earlier this year as having hairy-cell leukemia. On August 31, 1957, he was at Camp Desert Rock in Nevada, at which time an atomic bomb called Smokey was exploded. Actually he was exposed to several such explosions during his temporary-duty assignment there.

Today Donald Coe was denied service-connected compensation for his leukemia, a condition which in my mind undoubtedly was related to his exposure to the atomic blasts.

The Army has been reluctant to release the names of the men who participated in observing this particular explosion. But of the 2,232 men at Smokey, we know that 3 have come down with leukemia.

There has also been a case of bone cancer reported from these men who were exposed to Smokey, and the four confirmed cancer victims are from among less than a quarter of the number known to have been exposed to Smokey.

I want to point out further that Dr. Glyn G. Caldwell of the Center for Disease Control in Atlanta is doing an extensive epidemiological study on the Smokey blast but has been hampered by not having the names of the men at Smokey.

Since the names of these men have not been released, and the Army is reluctant to release them, it is my feeling that the Army is hiding behind the Privacy Act and that the Veterans' Administration is also, and that they are afraid that many more cancer cases will show up. I feel quite certain that they will, and that the cost of compensating them will be great. However, I submit, Mr. Speaker, that we owe it to the men who were there and who have come down, and will come down with leukemia that they and their families be compensated as other men who have service-connected disabilities have been.

During another atomic bomb explosion, an underground test called Bainberry in 1960—an underground test that blew its top—900 men were exposed. Of these men, 145 were so contaminated that they had to undergo decontamination procedures. Two of these 145 men have come down with leukemia, and a third case is suspected. This works out to be an incidence of 1,300 per 10,000 as against the expected 2 per 10,000 normally expected.

Since the Veterans' Administration and the Army have been reluctant to release the names of the men exposed,

and also have been reluctant to compensate them for the illnesses incurred as a result of the different blasts which have taken place, I shall submit a resolution of inquiry based on section 855 of the Rules of the House of Representatives to force the Veterans' Administration and the Army to name those men who were exposed so that we can further the CDC study and so that the men who come down with leukemia or other forms of cancer can be adequately compensated or, in case of death, that their widows and orphans can be adequately cared for.

Mr. Speaker, I insert for the RECORD a letter from Dr. Caldwell and yield back the remainder of my time.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, PUBLIC HEALTH SERVICE, CENTER FOR DISEASE CONTROL,

ATLANTA, GA., *May 19, 1977.*

Hon. TIM LEE CARTER, M.D.,
House of Representatives, Rayburn Building, Washington, D.C.

DEAR DR. CARTER: After discussing Mr. Coe's situation with Ms. Johanna Schrambling, she requested that I forward to you information about hairy cell leukemia and some of the data on leukemia incidence derived from the Hiroshima and Nagasaki experiences. Enclosed are xerox copies of a number of reprints concerning both of these subjects for your information.

Also enclosed is a list of the units known to be present at Camp Desert Rock during the test in which Mr. Coe participated. We at the Center for Disease Control are attempting to identify all men present in the field from these units and to determine whether or not their risk of developing cancer or leukemia is increased. I have consulted with the Surgeon General of the Army, General Taylor; Colonel Still; and Colonel Stromberg of the Armed Forces Radiobiologic Research Institute, who are helping us identify these men from various sources of data, both classified and unclassified, so that we may try to follow-up on them and determine their current health status.

At the present time, the known information indicates that there were 2,232 men present in the field at the detonation of Smokey; 457 were observers, 1,195 in the troop units, and 583 were involved with special projects. Assuming that the average age of all of these men was 22 years, then the expected number of cases of leukemia over the past 20 years would have been most likely 2, although 0, 1, 2, 3, or 4 would represent no significant difference from expected. However, since we have not completely identified all men and do not know that we have complete ascertainment of cases, any estimate of risk at this time is highly speculative. In order to refine the data, we need to know the health status of all men in the field, their precise age at time of exposure, whether living or dead, what they died of, and to follow them in the future to see if their risk of leukemia remains high.

The primary reason for undertaking this study is to determine if this suspected increase is due to low-dose radiation and consequently that our accepted standard of safety, 5 rads per year, is appropriate; or if these men somehow received a higher amount of radiation than the records indicate. Certainly if we complete this study and do find an increased risk, the information would be forwarded to all individuals who have contacted the Center for their personal use. In addition it would, in all likelihood, require that we confirm the results by evaluating men present at other years and with other tests.

I hope the above information is useful to you, and should you require either further information or have information about men that I might not know of, I would appreciate hearing from you.

Sincerely yours,

GLYN G. CALDWELL, M.D.,
Deputy Chief, Cancer Branch, Cancer and Birth Defects Division, Bureau of Epidemiology.

CAPTIVE NATIONS WEEK

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. BURKE) is recognized for 10 minutes.

Mr. BURKE of Florida. Mr. Speaker, I rise to speak in observation of Captive Nations Week, a week set aside in accordance with Public Law 86–90 which was signed into law by President Dwight D. Eisenhower 18 years ago this week.

We honor this occasion, Mr. Speaker, because in this land which is blessed with political freedom we are mindful of other lands where there is no freedom—only the dictates of alien overlords or of regimes which slavishly visit draconian and soulless measures on their countrymen. Some 30 nations among the peoples of the world are governed by Communist masters, from Armenia to Laos, from the Baltic to the China Seas.

Mr. Speaker, freedom is indivisible. If another man is in chains, I am not free. If another country suffers slavery, the U.S. freedom is impaired. The people of the North American colonies, in breaking their ties with Britain in 1776, appealed to a universal value which is as valid today as it was 201 years ago—that all men are equal before God and that their governments must have their consent to be legitimate. Our freedom was founded on the right of people everywhere to freedom. We cannot see that freedom denied, cannot acquiesce in freedom's denial, without destroying our own right to freedom.

Mr. Speaker, today the worst offenders against freedom are the Communist states of Europe and Asia and, certainly Cuba. Millions of people are enslaved, taught to revere men as gods, taught that only tomorrow is real, and sacrifice on the altar of Russian expansion or mere political opportunism in the name of communism. Souls are perverted and the spirit denied. Hearts are quenched and dissent ruthlessly suppressed, all in the name of "socialism" and historical progress.

The freedom loving peoples of the Baltic States are a case in point, Mr. Speaker. They have had proud but brief histories as independent countries, and were then successively raped by Nazi Germany and the Soviet Union. Hitler's forces are no more, but the proud Republics of Lithuania, Estonia, and Latvia have not so quickly been free of the Soviets. To this day, and without recognition by the United States, the Baltic States suffer under Russian imperialism. In H.R. 864, which I voted for along with 406 other Members on December 2, 1975, this body affirmed its refusal to have the United States recognize or accept the forcible incorporation of Lithuania, Latvia, and Estonia into the Soviet Union. We expressly made this point because of the Conference on Security and Cooperation in Europe, and the Helsinki Accords. We wanted there to be no doubt that the House of Representatives honored the victims more than the victors.

It was in recognition of captives like these that the Congress created a Commission on Security and Cooperation in Europe, to oversee the results of the Helsinki accords. I voted for that measure also. Mr. Speaker, along with a vast majority of my colleagues. Measures like these are the very least we can do to hold up the torch of freedom.

The number of captive nations, however, is not shrinking. If the list is changing at all it is growing, not diminishing. Angola might be added to the numbers, and there are efforts to bring still other nations under Communist domination.

Does the pestilence spread because our resolve is weak? Mr. Speaker, there are those who depend on our resolve as a measure of the value of freedom—on us as leaders in a battle worth fighting. Have we become so smug and so uncaring that we dare to relax our vigilance against the persistent enemies of freedom? There are those who don't care about the lesson to be learned from the fate of the captive nations. We seek relations with Communist Vietnam and Cuba, ignoring our own proclamations about human rights. We need, Mr. Speaker, to be honest with ourselves and those who depend upon us. If we do not stand firm on vital issues, we can only lose the vitality of our beliefs and ultimately of our institutions themselves. We dare not lose our resolve.

Mr. Speaker, in this day when overuse and political opportunism cheapen the currency of concern of human rights, it is easy to become cynical about the fate of others. It is attractive to say that we must be selective about applying our human rights prescriptions. But, we must realize that having appealed to the very heart of our national honor, we dare not abandon that principle, at cost of abandoning the honor itself.

Captive Nations Week, 1977, Mr. Speaker, is an occasion for us to recognize that our beliefs truly link us to other peoples everywhere who love freedom. We can only say, we have not forgotten you. We do not countenance your captivity. To do so would be to diminish our right to freedom. We will remain firm in our concern for the fate of nations everywhere which struggle with the chains imposed by political opportunism and alien imperialism cloaked in communism. To be true to ourselves we can do nothing else.

NEW YORK BLACKOUT LOOTING PROVES NEED FOR CRIME INSURANCE STILL EXISTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, the loot-

ing that took place during the blackout in New York City last week is a clear indication that there still exists in this country a need for Federal crime insurance.

As the author of the legislation establishing the Federal crime insurance, I am dismayed that only some 30,000 policies have been sold and that the program is available in only Alabama, Arkansas, Colorado, Connecticut, Delaware, Florida, Georgia, Illinois, Iowa, Kansas, Maryland, Massachusetts, Minnesota, Missouri, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Tennessee, Virginia, and the District of Columbia.

I have maintained that the main reason more policies have not been sold is that under the sales plan adopted by the Department of Housing and Urban Development, the insurance industry, the very industry that fought against passage of the legislation, is responsible for selling the policies. That industry has made certain that as little information as possible about the Federal crime insurance program gets into the hands of homeowners and businessmen; particularly small businessmen.

I am certain that every American who saw the television news stories of the looting was shocked by the mob action of the looters. What was pathetic was the realization that most of those looted stores were not covered by insurance. Most of the store owners indicated that they could not obtain insurance from private sources, and virtually every store owner said that he did not know about the Federal program. It may well be that most of those looted and burned stores will not receive a penny back on their losses and will have to go out of business.

There is a push on now to drop the crime insurance program, and it is argued that one of the reasons we do not need the crime insurance program is that we are past the riot era. The television scenes of looting, of burning, and of firemen being pelted with bottles and rocks when they attempted to put out fires, indicates that the riots are still very much with us. Even without riots there is a need for Federal crime insurance, but the riots make the policies even more important.

While it is true that the crime insurance program has not been totally self-supporting, I can tell you that without it the Federal Government would lose millions of dollars a year in tax revenue. Try to estimate how much money in Federal income tax will be lost because stores looted during the blackout will never reopen. For every dollar we spend on Federal crime insurance we receive $1,000 back in tax revenues.

It is unfortunate that crime insurance is not available in more States. It is disappointing to me when I receive letters from small businessmen in States without the program wanting to know why they cannot get the coverage. Under the law, the Governors of each State must determine that adequate crime insurance is not available through private sources in that State before the Federal program can go into effect. It is unfortunate that provision is in the law, but the insurance industry is so powerful, that was the only way we could get the bill passed.

I am extremely disappointed that HUD has not used more of its powers to focus attention on the availability of crime insurance. Time and time again I have suggested methods for making more policies available and each time no action has been taken on my suggestions.

Mr. Speaker, HUD must share the blame for the results of looting in New York City. True, HUD was not a part of the looting, but that agency could have provided protection for hundreds of small businessmen who now may be forced out of business.

Let us not blame the Fedreal crime insurance program, let us blame those who are trying to kill the program and in doing so are killing small business in this country.

INTRODUCTION OF TRADE ADJUSTMENT LEGISLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, yesterday I introduced a bill (H.R. 8442) cosponsored by my colleague, SAM GIBBONS, of the Subcommittee on Trade, to improve the operation of the adjustment assistance programs for workers, firms, and communities under the Trade Act of 1974.

For a number of months, the Trade Subcommittee has been considering the lack of effectiveness in the existing adjustment assistance programs. In addition, in response to the President's announcement of April 1 that the administration would develop a broad new program of adjustment assistance, the subcommittee has been preparing for early hearings on this matter.

Recognizing the difficulties any new administration has in developing a broad set of proposals in a program area as difficult as adjustment assistance, I have delayed introducing the bill that Congressman GIBBONS and I have developed. However, the Subcommittee on Trade and the Committee on Ways and Means have a very limited period of time within which to consider adjustment assistance in this session of the 95th Congress. Therefore, the Honorable SAM GIBBONS and I have decided to introduce a bill in order to provide a focal point for the subcommittee hearings on this matter. In introducing the bill, I am hopeful the administration will indicate those provisions of the bill which it could support, those provisions to which it would object, and those provisions which at this time it has been unable to study thoroughly. We also have invited testimony from the private sector and I welcome their analysis and statements on the bill.

The provisions of this bill are based on the problems in the adjustment assistance program which have been brought to the attention of the subcommittee through its hearings earlier this year and through its staff's study. The bill has been developed by the staff of the subcommittee for discussion purposes.

It is my feeling that to delay further objective, specific discussions of the needed improvements in the adjustment assistance program can only result in no legislative action. As has been recognized by the administration, an effective adjustment assistance program is a vital and necessary aspect of a balanced trade program.

WE MUST SPEAK OUT AGAINST REPRESSION AND RELIGIOUS PERSECUTION IN EL SALVADOR

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 10 minutes.

Mr. KOCH. Mr. Speaker, recently, I have expressed my concern about the need to emphasize human rights in U.S. foreign policy, most notably in the cases of Uruguay and Nicaragua. I would like to draw attention to oppression and religious persecution taking place in El Salvador. Today I had the opportunity to hear testimony on this issue before the International Organizations Subcommittee of the House International Relations Committee, chaired by Congressman DON FRASER. Jesuit priests, both Salvadoran and American, spoke of the bombings, beatings, and rampant terrorism that the Jesuit Order is being subjected to in El Salvador. In fact, today is the day that the White Warriors Union, a right-wing terrorist group, has threatened to begin a campaign of extermination against Jesuits in El Salvador.

Why has the Jesuit Order been subjected to such repression? Tragically, it is because of the good work that the Jesuits have done in El Salvador. The Jesuits have pledged to serve the poor, and have honored that pledge by advocating a progressive land reform program—at one time supported by the government—and by substantially improving the educational system of that underdeveloped country. The Jesuits have made every effort to work within the legal and constitutional system of El Salvador.

In the last year, however, right-wing terrorism has escalated against the Jesuits. The White Warriors Union, whose activities are tacitly approved by the government and openly supported by the country's oligarchy, have claimed credit for 6 bombings at the Jesuit University and for the killing of Father Navarro, and have now sworn to exterminate the Jesuits if these 48 priests do not leave the country. Because they serve the poor and defend their basic rights, the Jesuits are labelled "Communist" and "subversive" by the right-wing terrorists. These right-wing terrorists are under the direction of the nation's oligarchy, which also supports the military government. That link between the White Warriors Union and the military government is an abomination. The fact that, to date, the Government of El Salvador has done nothing to protect the Jesuits is an outrage.

I believe that if the Government of El Salvador does not make bona fide efforts to protect these priests and uphold law and order in that country, the United States should disassociate itself from that government. For if a government does not make every effort to protect its citizenry from such vicious, rampant terrorism, that government abdicates its responsibilities and ultimately forfeits its legitimacy to govern. We should surely not provide military aid to such a government. One must also question whether U.S. economic aid in such a situation is really reaching the poor, as it is supposed to.

It was revealed during the testimony that on July 19, the Government of El Salvador did issue a statement that it will protect the Jesuits. These are only words at this point, without any proof of action. Apparently, State Department officials, at the urging of Members of Congress and others, have communicated our great concern in this matter to President Romero of El Salvador. I am hopeful that the United States can have a positive impact on this situation. Certainly, if former U.S. Ambassador to El Salvador, Ignacio Lozano—who testified candidly about repression in El Salvador—is any indication of State Department sentiment, we can be assured that the human rights issue is being pressed strongly.

However, I will not be satisfied until we receive solid assurances that the Government of El Salvador will make every effort to protect the Jesuits. The Jesuits are truly doing God's work and they will not be intimidated. We should support them, through every appropriate means, in their courageous defense of basic human rights.

I was particularly moved by the testimony of Father Jose Inocencio Alas, an El Salvadorean Jesuit priest who has been expelled from his country after numerous threats and bombings of his house. His story needs to be told. I, therefore, append it to my statement for the information of my colleagues:

TESTIMONY OF FR. JOSÉ INOCENCIO ALAS BEFORE A HEARING OF THE SUBCOMMITTEE ON INTERNATIONAL RELATIONS, CONCERNING PERSECUTION OF THE CHURCH IN EL SALVADOR, JULY 21, 1977

I. INTRODUCTION

My name is José Inocencio Alas. I am 42 years of age, a Salvadoran by birth and a Roman Catholic priest in good standing.

I did my graduate studies in El Salvador, Canada, Rome, Belgium and Ecuador. Ordained a priest in Rome in 1959, I then worked for fifteen years in my country, six years primarily with middle and upper class Catholics and then nine years with the peasants, especially in Suchitoto, an agricultural zone in an area of 45,000 inhabitants.

I wish to testify to you, gentlemen, about the violation of human rights in my country, something which goes on all the time, but is right now particularly serious. I make this testimony in order that the whole world can find out what is going on in El Salvador. Beyond the frontiers of any single country is the good of each and every person. Where there is one human who suffers, there ought we all to be.

II. WHAT WE HAVE DONE

My work, like that of many of my fellow priests, has had as its goal to present the vision of Christian faith through questioning the real situation in which the people, especially the peasants, live . . . without either land or work. This, of course, presupposes some understanding of the situation in which our people live and a search with them for some solutions.

Surely the most pressing problem in El Salvador is the problem of land distribution.

In the face of this situation we have struggled to make possible agrarian reform which has now been accepted by the Government of El Salvador. To make agrarian reform a reality we have organized at both the local and the national levels, courses of information on agrarian reform (which, I emphasize, is *now* a program of the government) and we have come to see the need of peasant organizations. I personally founded a School of Agriculture where, besides teaching agricultural techniques, we informed the students about the agrarian reform and how to organize themselves to achieve its ends.

III. CONSEQUENCES OF OUR ACTION

The consequences of this section have been the following:

In 1969: The city of Suchitoto was twice placed under siege by security forces in order to oblige me to abandon it; the peasants demanded that I stay with them and I did.

In 1970 (January 8): I participated as a delegate of the Church in the first National Congress of Agrarian Reform convoked by the Legislative Assembly in El Salvador. Because I spoke out forcefully there in favor of the peasants I was arrested by Government agents and, only on the way to prison, did I overhear that the order for my assassination had been revoked. But, after forcing me to drink a full quart of pure alcohol, mixed with some drug, they left me abandoned, stripped, on a high mountain in the country. For nine days I was unconscious in the "Emergency Center," fighting for my life.

1971–1977: Many threats of death against me; continuous propaganda against me in the press, on radio and television; an appearance in a court before a municipal judge charged with inciting the peasants against the President (I was acquitted); deliberate destruction of my parish house by a fire set by an arsonist; partial damage to my house from a bomb explosion; I was twice captured (once by National Police and once by the National Guard) and then released thanks to the timely action of two bishops, the clergy and the peasants. Several times I have had to take refuge in the Archbishop's house and finally in the House of the Papal Nuncio, from where I came to the United States and am now here as a refugee, thanks in part to the gracious help of Dr. Ignacio Lozano.

My case is not unique. Many of my companions have been captured for the same reasons. The most serious case is that of Fr. Rafael Barahona: captured in 1976 and again this year, we fear for his mental health since he was brutally beaten and for a long time, in the General Headquarters of the National Guard.

Many priests, my friends, were expelled from the country after being interrogated: Fr. William Denaux (Belgian), Fr. Bernard Survil (United States), Fr. Jorge Sarsaneda (Panamanian). Some others were expelled from the country, and yet others were abandoned on the Guatemalan frontier without identity documents and then were imprisoned by Guatemala for not possessing their documents.

The most serious events have been the assassinations of Fr. Rutilio Grande and Fr. Alfonso Navarro with both of whom I worked for some years. Fr. Navarro was with me just an hour before he was assassinated. He came to see me at the Archbishop's House, where I had taken refuge, after he had spoken with the private secretary of the President of the Republic. I was the first to receive the news of his death. His admitted assassins were the White Warriors Union, an extreme rightist clandestine organization which is becoming more and more powerful. The Government of El Salvador has a responsibility to protect the lives and well-being of its people against such terrorist organizations. Fr. Navarro had worked, among other things, for civil rights, especially that democracy may live in my country.

Summing up, we present the following table of attacks on the people and the church of El Salvador:

2 priests assassinated.
5 priests tortured.
8 priests expelled.
7 priests denied re-entry.
3 priests obliged to flee their country.
parish assistants, catechists, sacristans of parishes assassinated.
clergy of San Salvador and San Vicente accused and calumnicated in a mass-media campaign which began seven months ago and still continues.
many priests threatened with death and Bishop Rivera Damas forced to hide himself many times.
peasants and priests afraid to sleep in their own houses.

In the successive massacres (for example, in 1977 alone: San Salvador, Feb. 28–Mar. 1; San Salvador, May 1; Aguilares, May 19) at least 200 persons have died. To give you a final ideas of what persecution against the church means, it is enough for me to quote from some flyers distributed and also broadcast on the radio: "Serve your country, kill a priest." This became translated by the White Warriors Union into a concrete threat under which 47 Jesuits are now suffering. If they do not abandon El Salvador today, July 21, they will be systematically executed.

IV. WHY IS THE CHURCH PERSECUTED?

There is but one answer to this question: for locating itself, out of our belief in evangelical charity, on the side of the poor who make up 92% of the population. This situating of oneself on the side of the poor . . . what does it mean? It means helping them articulate in their minds and in their actions the content of human rights. This process can be and is called "conscientization." This is what we Bishops and priests in El Salvador have been doing since 1969. Our point of departure has been the Bible, the Word of God, and we have made use of all the human sciences to carry out the task. The goods of creation belong to all people. To monopolize these goods in the hands of a few people is against divine law, no matter what human laws may say. We have supported the agrarian reform because we consider it good for everybody, and the same goes for any project whatever which means liberty for our people, which means enjoyment of human and civil rights. For this we are persecuted.

FORTY FRESHMEN COMMEND SPEAKER O'NEILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Nebraska (Mr. CAVANAUGH) is recognized for 5 minutes.

Mr. CAVANAUGH. Mr. Speaker, for the benefit of all the Members of the House I would at this time ask to have

printed in the CONGRESSIONAL RECORD the text of a letter that was sent to you today and signed by 40 of the Democratic freshmen.

As a class, we came to the Congress hoping to find that the institution, and its leadership, was capable of policing itself. Public knowledge of past abuses of the allowance accounts and staff as well as conflict of interest charges made congressional ethics a central issue in our election. The actions which you have taken to insure a conclusive investigation on the Korean matter will contribute immeasurably to rekindling respect for the Congress within our people.

The text of the letter and a list of signatories follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., July 21, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker, U.S. House of Representatives,
U.S. Capitol,
Washington, D.C.

DEAR MR. SPEAKER: We wish to commend you for the outstanding leadership you have displayed over the last several days in your handling of the Korean investigation question.

Your swift and decisive action in the wake of Mr. Lacovara's resignation was essential to the restoration of the confidence and faith of the American people in the willingness and ability of the Congress to impose upon itself the highest standards of ethics and constitutional responsibility.

Your selection of Leon Jaworski as Special Counsel to the Select Committee on Ethics was an essential step toward accomplishing these goals.

Your continued vigorous leadership is vital to a final exhaustive and satisfactory conclusion of this investigation.

We wish to assure you of our continued efforts and desire to achieve a resolution of this matter in a manner which will restore the faith and confidence of the American people in the institution of the Congress of the United States and their political process.

Edward J. Markey, Bruce F. Vento, Andy Ireland, Jim Mattox, John J. Cavanaugh, Raymond F. Lederer, Ike Skelton, Allen E. Ertel.

Norman D. Dicks, Peter H. Kostmayer, Lamar Gudger, Richard Gephardt, Albert Gore, Jr., Nick Joe Rahall, Dale E. Kildee, Billy Lee Evans.

Robert A. Young, Doug Barnard, Joseph A. Le Fante, Harold L. Volkmer, Donald J. Rease, Thomas A. Luken, Leon E. Panetta, Jerry Huckaby.

Doug Walgren, Michael O. Myers, Bob Gammage, Bob Stump, Wes Watkins, Charles Whitley.

Daniel K. Akaka, Dan Glickman, Douglas Applegate, Wyche Fowler, Anthony C. Beilenson, Ed Jenkins, Adam Benjamin, Jr., Cecil Heftel, Barbara A. Mikulski, Jim Guy Tucker.

A VETERAN'S FLAG FOR THE UNITED STATES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. SCHEUER) is recognized for 5 minutes.

Mr. SCHEUER. Mr. Speaker, last month, it was brought to my attention that the United States has no official flag commemorating our veterans. This point was raised by a valued friend and leader in my community, Commander Irwin Bronstein of the Jewish War Veterans.

In order to correct this situation I am today introducing legislation that directs the Administrator of Veteran's Affairs to select a design for a flag commemorating U.S. veterans. The bill sets up a citizens advisory panel of seven members to advise the Administrator in his choice.

Mr. Speaker, this legislation is designed to fill a void that has remained vacant too long. I hope that this legislation can be moved expeditiously through the Veterans' Affairs Committee back to the floor.

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Louisiana (Mrs. BOGGS) is recognized for 5 minutes.

Mrs. BOGGS. Mr. Speaker, on Wednesday, July 20, I was granted a special order to honor the memory of Dr. Alice Paul, a leader of the women's suffrage movement.

During my remarks, I included in the RECORD a statement by Mr. MCKINNEY who was out of the city recuperating from a recent illness.

Mr. MCKINNEY's statement was printed during the special order as if he had actually delivered it.

Therefore, I would like the record to show that Mr. MCKINNEY's statement was inserted as part of my remarks, rather than delivered.

WHY REFORM OF THE NATIONAL LABOR RELATIONS ACT IS NEEDED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. THOMPSON) is recognized for 5 minutes.

Mr. THOMPSON. Mr. Speaker, it has been suggested by some opponents of the Thompson-Williams bill, H.R. 8410, for reform of the National Labor Relations Act that the law as it presently exists is in proper "balance" between labor and management, and that such reforms are unnecessary. Some of these opponents have gone so far as to suggest that my proposals are a concoction of what they call the "labor bosses" and are designed merely to enhance their own positions of power.

Well, I recently came across a newspaper article which responds to these allegations and which I would like to share with all of my colleagues. This article tells it like it is and explains exactly why we need a thorough overhaul of the NLRA to expedite its processes and to strengthen the remedies available to the National Labor Relations Board to deal with employer resistance.

I only recite the relevant portions of the article:

Companies seem increasingly willing to incur the remedial penalties they risk by flouting federal labor laws. And to stall organizing, the expertly use delays that are usual in National Labor Relations Board procedures. For example, consider how Florida Steel Corp., Tampa, has kept the United Steelworkers union at bay for four years.

The union's strategy was to organize Florida Steel's three mills first, presuming that its eight other plants would "fall into line." It won organizing elections at two of the mills in 1973.

During the campaigns the company fired 12 workers at its Charlotte, N.C., plant. The NLRB later said the firings were made illegally to keep workers away from the union. It also found to be illegal a company move to withhold certain wage and benefit increases from the two unionized plants while giving them to its other plants.

In late 1975, the NLRB ordered the dozen fired workers rehired. The company filed two years' worth of appeals before offering to rehire the workers early this year. Also, in September 1975 the board ordered the company to pay the wage and benefit raises it withheld. The company appealed, and when that failed, it complied—with increases the union claims were too small.

Meanwhile, the union hasn't been able to win organizing campaigns at the third mill that existed in 1973, or at a new one that has been started up since then. It hasn't even been able to negotiate contracts at the plants where it won organizing elections. Florida Steel still is in essence a nonunion company.

Such tactics inevitably hurt organizing. For instance, the 12 employes fired at the company's Charlotte plant were all entitled to return to Florida Steel, but only three chose to. "It doesn't help (a union sympathizer) who has been fired illegally . . . to be told two years later he can have his job back," says Betty Southard Murphy, a member of the NLRB.

Indeed, some union and government officials point to figures on firings as evidence of increased industry flouting of U.S. labor laws. Last fiscal year, the NLRB ordered 4,400 workers reinstated because they were illegally fired during organizing. That was up 16% from the number ordered reinstated in 1970.

Even when a union wins an election, the delaying maneuvers often simply move from one arena to another. That has been the case at J. P. Stevens. After 11 years of trying, what is now the Amalgamated Clothing and Textile Workers union persuaded employes at the company's plant in Roanoke Rapids, N.C., to vote in the union in August 1974. But the union still hasn't been able to win a contract. The NLRB has repeatedly charged the company with refusing to bargain.

Now, I am sure that most of you have immediately assumed that this statement is from one of those union newspapers put out by those "labor bosses." The fact is that it cmes from an article which appeared June 24 in the Wall Street Journal, which is not quite the labor press.

THE DROUGHT RELIEF AND WATER CONSERVATION ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California, (Mr. MILLER) is recognized for 15 minutes.

Mr. MILLER of California. Mr. Speaker, I am introducing today the Drought Relief and Water Conservation Act of 1977. Today, while much of the Nation suffers through one of the worst droughts in our history, some are talking of the need for bigger and more expensive water projects. I suggest that the drought of 1977 should have taught us

already that, before we initiate the construction of costly and environmentally intensive projects, we should fully explore the potential for conserving the water which we have today, but which we utilize extravagantly because we never thought that it would run out.

In many parts of this country, unfortunately, that myth has been proven false. Farmers, industries, private citizens, and our environment, too, are realizing, in Interior Secretary Andrus' words, that "water is a finite resource, just like energy." The administration has wisely taken the position that a total review of water projects, water needs, and water use is necessary in order to rapidly develop a more realistic water policy. This legislation, which I am introducing today, is my own contribution to the development of that program.

This bill would do several things, both of an immediate, and of a long-range planning nature. The first portion of the bill authorizes the Secretary of the Interior to make loans to drought-stricken water districts which, because of the reduction in water use by their customers, are facing serious economic hardships. In California, where personal conservation has been far more successful than we had contemplated, some of these districts are actually urging their customers to consume more water in order for the district to avert economic loss. The insanity of this policy, in a year when our reservoirs are at an all-time low, is of truly stunning proportion.

I would much rather provide those districts with loans to help them survive this year without raising prices or encouraging additional use. We have made money available to help drought-stricken farmers. I believe that we should similarly make funds available on a loan basis to hard-hit water suppliers, because otherwise the consumer will be the one most affected.

The bulk of this bill establishes programs and rules which will place the Federal Government in a leadership position in the area of water conservation. Much of the Federal effort in the past has gone into constructing gigantic water projects which have fostered the idea that water is a boundless resource, and that with enough dams and aqueducts, we will never again know drought. This year, we have learned the falsity of that belief.

As Secretary Andrus has said, "Water projects don't create water, they just store it and move it around." I have often noted that, had some of these very questionable projects been on line this year, they would be just as depleted as the ones which currently exist, because we have put all of our energy into building them and nothing into developing sound water management techniques. Most importantly, we have minimized the need for conservation. I suggest that, before we again commit billions of future dollars to the construction of questionable projects, we explore ways to more adequately use the water which we have available to us already.

My legislation would encourage and, in some cases involving the supply of Federal water, mandate conservation in homes and on the farm. It would establish a loan program whereby a local unit of government could acquire funding for a conservation program to retrofit homes in its jurisdiction. The legislation specifies the kinds of inexpensive, nontechnical kinds of retrofitting—toilet tank displacement devices, flow restrictors, aerators—which can be employed in this program. Communities accepting a loan would be required to have on their books legislation mandating the use of water conservation devices in future construction.

This bill would also make the development of a conservation program mandatory for water districts, either municipal or agricultural, which are recipients of Federal water. The Bureau of Reclamation delivers billions of gallons of water annually. Yet a recent General Accounting Office study concluded that only about one-half of that water is used directly on crops. Moreover, there are many cases where irrigation is still conducted by means of open-trough, dirt trenches, which results in a loss of 25 percent of all water to evaporation or seepage. This bill would require that each contractor for Federal water have in place before a contract is signed or extended an approved conservation program.

Failure to enact such a program would prohibit that district from receiving surplus Federal water, as many currently do. If a district refused to participate in such a program, the Secretary also could not renew a contract at more than 85 percent of the amount of water the contractor was already receiving, thus imposing conservation. To assist agricultural contractors in meeting the conservation requirements of this bill, my legislation would authorize a loan program to help them meet the cost of installing irrigation pipes, drip irrigation devices, and such equipment.

Admittedly, this is a tough program. But the drought is also very serious, and failure to push water conservation into the forefront will insure that, in future years, we will be confronted with the precise same crisis which we face today, regardless of how many water projects we have built. Let me assure my colleagues that there exists a substantial body of information which demonstrates the effectiveness of water conservation. Indeed, the remarkable voluntary cutbacks by Californians in recent weeks, which necessitate the first section of my bill, demonstrate that the drought is recognized as a catastrophe. Moreover, the people have demonstrated their willingness to cooperate to overcome the crisis.

The California Department of Water Resources, which has been a leader in the development of conservation programs, has estimated that it would cost about $14 million to retrofit the entire State. Yet listen to the effect of that rather minor program: Simply retrofitting one-third of the State would result in an annual saving of 109,500 acre-feet of water, which is close to 40 million gallons, at a financial saving of $4.38 million. And, since water heating constitutes 4 percent of our national energy consumption, that reduction in water use would result in a saving of 1.67 million barrels of oil annually, a saving of $25.1 million.

The metropolitan water district which serves southern California cities has estimated that, between voluntary conservation and retrofitting, as much as 1 million acre-feet of water could be saved annually. Applying this same kind of effort nationwide could have major impacts on reducing future drought and improving water planning and management. Nationally, it has been estimated that, over 10 years, residential water users could save $22.5 billion through conservation and retrofitting, and water and wastewater industries could save $52.3 billion. The individual homeowner who puts a flow restrictor on his shower at a cost of $2, would realize an annual return on his investment of 270 percent.

There is another important facet of the national conservation program—job creation. Some have argued that the construction of these enormous water projects is good for labor. But they produce rather few long-term jobs, and, in some cases, they have such major environmental impact that residential and industrial growth is restricted or agricultural land is destroyed. In California, a goal was set in 1975 to create some 37,000 new jobs in water conservation related fields. Only 2 years later, 26,000 jobs have already been created, and the program managers have estimated that they will exceed their original projections.

I would like to congratulate the Carter administration, and especially Secretary Andrus, for emphasizing the need for a national water policy, including conservation. He has rightly drawn the analogy between the energy crisis and our situation concerning water:

> With the drought and with environmental degradation, the people recognize that they are going to have to conserve water and use it in a different way than we have in the past. The wasteful methods of the past are going to have to be done away with in energy. They are also going to have to be done away with in water.

The bill which I am introducing today establishes that policy. It says that the Federal Government, as a major supplier of water, is going to require strict conservation. And it says that the Government is going to assist cities, water districts, and farmers to overcome their current crisis and modify their water uses to assure that we can avert such catastrophies in the future.

A synopsis of the bill follows:

SYNOPSIS OF THE DROUGHT RELIEF AND WATER CONSERVATION ACT

Section 1: Short title.

Section 2: (a) Loan program for water suppliers likely to suffer financial loss because of drought in order to alleviate the need to either raise prices or encourage consumption.

(b) Loan rate (5% annually) and duration (up to 10 years).

(c) Technical-approval procedure.

Section 3: (a) Prohibition on Secretary entering into new water contracts unless

contractor has adopted an approved water conservation program. Without such a program, an existing contract could be extended at 85% its current rate.

(b) No surplus water may be sold to a federal water contractor failing to adopt an approved water conservation program.

(c)(d) Technical.

Section 4: (a) Secretary of the Interior is authorized to make loans to water districts and units of local government to finance approved water conservation programs such as the installation of retrofitting devices in homes and improved agricultural irrigation devices.

(b) Terms of loans.

(c) Technical.

(d) Requires that entities applying for loans have enacted mandatory conservation standards for new construction after January 1, 1979, and also have adopted a plan for the retrofitting of facilities owned or administered by that jurisdiction.

(e) Installation of devices need not be done by public employees.

(f) Conservation loan program may be on demonstration basis.

Section 5: Monitoring requirements.

Section 6: Certification of water conservation devices by Secretary.

Section 7: Report to the Congress.

Section 8: Definitions.

H.R. 8468

A bill to establish a loan program to provide financial assistance to drought-impacted water districts, to provide Federal assistance to water districts for acquisition and installation of residential and agricultural water conservation devices and equipment, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Drought Relief and Water Conservation Act of 1977".

DROUGHT IMPACT RELIEF LOANS

SEC. 2. (a) The Secretary of the Interior is authorized to make loans to any local water district, unit of local government, or other public agency which supplies agricultural or municipal water to consumers if such water district, unit of local government, or other public agency has sustained or is likely to sustain a substantial reduction in income due to a reduction in water consumption caused by drought. The Secretary shall by rule prescribe standards for determining which local water districts, units of local government, and other public agencies are eligible for loans under this section.

(b) Loans under this section shall be made at rates of interest not to exceed five percent per annum and shall be made for periods not to exceed ten years. Repayment of loans under this section shall be made at such times, in such manner, and subject to such conditions as the Secretary may prescribe.

(c) A loan under this section shall be made upon approval of an application submitted by a local water district, unit of local government, or other public agency which supplies water to consumers. Such application shall be in such form and manner, and shall provide such information, as the Secretary may by rule require.

WATER CONSERVATION PLAN REQUIREMENT FOR FEDERAL WATER PURCHASERS

SEC. 3. (a)(1) The Secretary may not enter into a new contract, or (except as provided in paragraph (2)) extend or renew an existing contract, for the sale of water from any Federal reclamation project unless the purchase of such water under such contract has adopted a water conservation program approved by the Secretary.

(2) The Secretary may extend or renew a contract in effect on the date of enactment of this Act for the sale of water from any Federal reclamation project if under such extension or renewal the Secretary will not provide more than 85 percent of the amount of water provided under the terms of such contract as in effect on the date of enactment of this Act.

(b) The Secretary may not sell any surplus water to any contractor for water from any Federal reclamation project if such contractor has not adopted a water conservation program approved by the Secretary.

(c) Subsections (a) and (b) shall not apply in any State in which loans under section 4 are not available.

(d)(1) Subsections (a) and (b) shall take effect at the end of the one-year period beginning on the date of enactment of this Act.

(2) During such one-year period, any contract for the sale of water from any Federal reclamation project entered into by the Secretary, and any extension or renewal of any such contract, shall not be for a period of more than five years unless the purchaser of water under such contract has adopted a water conservation program approved by the Secretary.

WATER CONSERVATION LOAN PROGRAM

SEC. 4. (a) Upon the approval of an application of any general purpose unit of local government or of any local water district, the Secretary may make loans to such unit or water district for purposes of acquisition, distribution, and installation of certified residential water conservation devices and certified agricultural water conservation devices and certified agricultural water conservation equipment to be installed in residences or for agricultural purposes within the jurisdiction of such unit or water district, and for related technical and educational information. An application for a loan under this section shall describe—

(1) the number of residential units or the agricultural area in which such devices or equipment, as the case may be, will be installed;

(2) the types and quantities of certified water conservation devices and equipment to be purchased, in whole or in part, with money received under this section;

(3) the amount of water which the entity submitting the application estimates will be conserved following installation of such devices and equipment; and

(4) such other information as the Secretary may by rule require in order to carry out the purposes of this Act.

(b) Loans under this section shall be made at rates of interest not to exceed five percent per annum and shall be made for periods not to exceed ten years. Repayment of loans under this section shall be made at such times, in such manner, and subject to such conditions as the Secretary may prescribe.

(c)(1) No loan under this section shall be approved unless the Secretary has determined that the entity receiving the loan has established such procedures and requirements respecting a program for the distribution and installation of water conservation devices and equipment to be acquired with money received from the loan as the Secretary considers appropriate to carry out the purposes of this Act in an effective, fair, and equitable manner.

(2) Such procedures and requirements shall provide appropriate priorities for the distribution of such devices and equipment, considering the area in which such entity is located and the amount of water available in such area.

(d) No loan under this section shall be made to any general purpose unit of local government unless such unit has—

(1) adopted a regulation or ordinance requiring that all new construction begun after January 1, 1979, within the jurisdiction of such unit shall be required to include appropriate water conservation devices; and

(2) adopted a plan for the retrofitting of existing facilities owned or administered by such unit with appropriate water conservation devices.

(e) Nothing in this section shall be construed to require that distribution or installation of water conservation devices or equipment be carried out by officers or employees of a local government agency.

(f) The Secretary may initiate the loan program authorized by this section on a demonstration basis in not less than five States, such States to be selected on the basis of the acuteness of their water shortages in the previous two years and the likelihood of such a program having a significant effect on the residential consumption of water within such States.

MONITORING

SEC. 5. (a) The Secretary shall monitor the operation of entities receiving loans under sections 2 and 4 of this Act through on-site inspections and such other means as may be effective to assure that the requirements of this Act are met.

(b)(1) Each entity receiving a loan under this Act shall maintain such records as the Secretary may require.

(2) The Secretary and the Comptroller General of the United States shall have access, for purposes of examination and audit, to any book, document, paper, information, and record pertaining to any loan made under this Act.

CERTIFICATION OF DEVICES

SEC. 6. The Secretary shall, upon application of any manufacturer of a residential water conservation device (such as low flow showerheads and flow restriction and toilet tank displacement devices), or of any item of agricultural water conservation equipment (such as materials for lining or enclosing irrigation conveyances and drip irrigation equipment), certify such device or item for purposes of section 4 if the Secretary determines that such device or item—

(1) is effective in reducing the consumption of water in residential units or in agricultural use, as appropriate; and

(2) meets such other requirement (including requirements with respect to cost and quality) as may be prescribed by the Secretary.

REPORT

SEC. 7. The Secretary shall submit a report to the Congress on the operation of the loan programs authorized by this Act not later than July 1, 1979.

DEFINITIONS

SEC. 8. As used in this Act:

(1) The term "Secretary" means the Secretary of the Interior.

(2) The term "residences" means private homes, apartment buildings, hotels, motels, and institutional, retirement, and hospital facilities.

(3) The term "State" means any of the fifty States and the District of Columbia.

UNDERSTANDING HOW FEDERAL FUNDS ARE DISTRIBUTED

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, today I am introducing legislation to make it easier for Congress and the public to understand how Federal funds are distributed to State and local governments.

My bill would require that information be provided on the formulas and statistical assumptions used under Federal

programs. This would make it possible to analyze and verify the accuracy of Federal assistance, and help to determine whether the funds are being spent wisely.

Under the existing system, many billions of dollars in Federal funds are distributed every year on the basis of formulas. These formulas set forth in general terms how eligibility for grants or other assistance may be decided.

As an example, a Federal program to reduce unemployment may provide funds to areas with high jobless rates. Those States and cities with most unemployment would receive the most funds.

Many such formulas are quite complicated and include numerous factors such as population, per capita income, State and local taxes, and other matters. Often, data on the various factors is fed into a computer, and the results determine how much money each State or local government or other recipient will receive.

Due to the increasing complexity of the formulas, and the inadequacy of the data that may be available, assumptions frequently must be made on how to "program" the computer. If no specific data is available on unemployment rates in towns of 10,000 or less, for example, the government may have to estimate the rates based on statewide data.

With so much money at stake, the arbitrary assumptions made in this manner can have a great impact on the amount of funding made available to each State and local government. Some jurisdictions may receive more than they should under an ideal distribution, and some may receive less.

Recently, it was discovered that the Commerce Department adopted an arbitrary policy with respect to data used that resulted in the exclusion of thousands of smaller communities across the Nation from the $4 billion public works jobs program that had been adopted by Congress. In ruling that no State or local data on joblessness would be accepted for inclusion in the computer programs, the Department overruled a specific instruction by Congress.

According to a Labor Department official, an estimated $30 billion a year changes hands automatically on the basis of statistics compiled by the Bureau of Labor Statistics. For some data, it has been reported, statisticians sometimes make adjustments "on the basis of their subjective judgments."

Imperfections in the distribution can be particularly harmful when they deny funds to areas with critical needs, and provide excess funds to places which do not really want them. This is a wasteful use of Federal moneys which should not be tolerated.

While we may not be able to immediately correct all shortcomings in the availability of data, I believe that more information should be made available on the assumptions and subjective decisions made by those who implement Federal programs. This would enable Congress, recipients, and other interested parties to examine more closely how well our Federal assistance programs are meeting their original intent.

Under my bill, the Director of the Office of Management and Budget would be responsible for assuring that detailed information is available on the way funds are distributed under Federal programs. This information would include the nature and source of each data element, any assumptions or projections made, and the probable percentage of error.

This information would enable the public, congressional committees, local communities, or others to duplicate the computer programing and test how well programs are carrying out their mandate. It would also make it more possible to experiment with different factors in an attempt to improve the efficiency and economy of Federal programs.

We must not continue to permit technicians in the governmental agencies to make subjective decisions on how billions of dollars are given out, with no review or guidance from elected officials or the public. My bill will permit a start toward improving our distribution systems. I am hopeful that Congress will act on this legislation as soon as possible.

At this point in the RECORD, I would like to include the text of my bill and news articles which tend to support the need for remedial action by Congress:

H.R. 8458

A bill to require the Office of Management and Budget to provide information on the formulas and assumptions used in the distribution of domestic assistance

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. For the purpose of this Act, the term—

(1) "assistance" refers to the transfer of money, property, services, or anything of value; the principal purpose of which is to accomplish a public purpose of support or stimulation authorized by Federal statute. Assistance includes, but is not limited to, grants, loans, loan guarantees, scholarships, mortgage loans, insurance, or other types of financial assistance; provision or donation of Federal facilities, goods, services, property, technical assistance, and counseling, statistical and other expert information, and service activities of regulatory agencies; but does not include provision of conventional public information services; and

(2) "Federal domestic assistance program" means any function of a Federal agency which provides assistance or benefits for a State or States, territorial possession, country, city, other political subdivision, grouping, or instrumentality thereof; any domestic profit or nonprofit corporation, institution, or individual, other than an agency of the Federal Government.

SEC. 2. The Director of the Office of Management and Budget shall identify all existing Federal domestic assistance programs and make available to the public, information describing, as to any domestic assistance program which provides for the distribution of funds on the basis of any distribution, allocation, or other formula—

(1) the formula and assumptions under which program funds are distributed, including—

(A) a narrative statement of the formula;

(B) a mathematical statement of the formula;

(C) an annotated listing of any computer program used in the application of the formula; and

(D) as to each of the items listed in clauses (A), (B), and (C), a statement of the nature and date of any revision; and

(2) the data and assumptions used in the application of the formula, including—

(A) the definition of each data element, and the nature and date of any revision of such definition;

(B) the source of data, the method of data collection, and the cost of such collection;

(C) the period of time covered by the data, or for which the data is accurate;

(D) the imputation techniques used to supply missing elements of data; and

(E) the statistical properties of the data, including sampling error rates if known, as to each class or size of beneficiary.

ADMINISTRATION BARS PUBLIC WORKS FUNDS FOR SMALLER TOWNS

(By Martin Tolchin)

WASHINGTON.—The Carter Administration ignoring a Congressional mandate, has adopted a policy that has resulted in the exclusion of thousands of smaller communities from the $4 billion public works job program.

This has generated a new dispute between the President and members of Congress, some of whom have encouraged communities in their districts to take legal action to compel the Administration to comply with the intent of Congress.

"We're getting a lot of flak from the Hill on this program," acknowledged George T. Karras, the Commerce Department's Deputy Assistant Secretary for Economic Development.

The dispute focuses on a directive in the conference report of the bill, the centerpiece of President Carter's economic stimulus package, which was intended to distribute Federal funds on the basis of local unemployment. The directive provided that when the Bureau of Labor Statistics lacked unemployment data on a community, "the Secretary [of Commerce] shall accept state or local data."

COMMUNITIES EXCLUDED

The Commerce Department, which administers the program, has decided, however, to provide funds only to those communities for which the Federal Government had unemployment data. This excluded smaller communities for which the Bureau of Labor Statistics had compiled no such data.

"This alternative was adopted as being the most fair considering the time constraints on the program," Robert T. Hall, Assistant Secretary for Economic Development, said in a letter to all members of Congress.

Mr. Karras contended in an interview that compilation of local unemployment data would have led to delays that would have thwarted the program, through which communities receive Federal funds to build schools, hospitals, police stations and other facilities.

"We had to get the money into the ground this construction season," said Mr. Karras, who is a Nixon-Ford holdover—a fact that upsets some Democrats in Congress. "We have until Sept. 30th to allocate the money."

"That's preposterous," retorted Representative Charles Rose, Democrat of North Carolina and chairman of the House Administration Committee's policy group on information and computers. "I knew that the bureaucracy was inefficient, but with even a modest amount of pre-planning, state employment security agencies could have been asked to provide the data. It shouldn't have taken more than two weeks.

"If I had known that small communities were going to be trampled in the stampede to get this money out, I never would have supported the program," Mr. Rose added.

Representative James J. Florio, Democrat of New Jersey, called today for a Government Accounting Office investigation of the

Economic Development Administration's System used to distribute the funds. He called the distribution "the biggest bureaucratic bungle" that he had seen since his election to Congress.

"The result of this fiasco is that many, many of our towns have gone to the expense of having engineering plans drafted for projects that will never be initiated," he said.

Mr. Hall's letter was in response to a letter sent to all members of Congress by Mr. Rose, who charged that the agency's use of incomplete data had violated the law.

DIFFERENT TREATMENT

Mr. Rose said that the situation had been called to his attention by uneven treatment of three communities in his district, each with about the same number of unemployed persons. Data on those communities, Hope Mills and Steadman, were not in the computer. They were therefore ineligible for funds.

The third community, Spring Lake, adjoins Fort Bragg, an Army base, and perhaps that is why it was included in the Bureau of Labor Statistics unemployment data. The bureau certified that Spring Lake had 147 unemployed persons, and the community was awarded $1,880,000.

Similarly, in the New York metropolitan area, several Long Island communities were automatically disqualified for funds because of lack of Federal unemployment data. They include East Meadow, Elmont, Merrick, North Bellmore, Hicksville, Plainview, Port Washington and Bayport. Westchester communities automatically excluded from the program included Armonk, Chappaqua, Cortlandt, Eastchester, Harrison, Hawthorne, Mamaroneck, Shrub Oak and Yorktown Heights.

* * * * *

"GONE AGAINST INTENT"

Mr. Rose's concern is shared by many representatives from rural districts.

"I'm very disappointed in the way they've implemented the bill," said Representative John Paul Hammerschmidt, Republican of Arkansas, the ranking minority member of the economic development subcommittee of the Public Works Committee.

"They've gone against Congressional intent and they've gone against the explicit language of the conference report," Mr. Hammerschmidt continued. "I've talked to a number of members who have communities with the worst unemployment, and they're not even being considered for grants.

"I'm not sure that they're not subject to lawsuits by those communities," Mr. Hammerschmidt said.

Representative Robert A. Roe, a Democrat from Wayne, N.J., who is chairman of the Economic Development Subcommittee of the Public Works Committee, said that he was chagrined by the Administration's policy.

"What's in the law is in the law," Mr. Roe said.

$75,000 LOWER LIMIT

The Administration also has decided, on its own initiative, not to provide communities with funds unless they were entitled to $75,000 or more. Some members of Congress believe that that policy also discriminates against smaller communities.

"This is a program designed to put construction workers to work," said Mr. Karras. "If you're dealing with less than $75,000, you're not dealing with public works, you're dealing with beautification."

Some Congressmen noted, however, that those funds could be used for such work as repaving roads and repairing sewers.

[From the Washington Star, May 26, 1977]

THERE'S A LOT OF MONEY RIDING ON THE JOBLESS RATES

(By Lee M. Cohn)

Like generals plotting a military campaign, Congress and the Carter administration study maps as they deploy federal money for public works, manpower training, public service employment and the other programs enacted to create jobs and spur economic growth.

Guided by computer runs of finely tuned formulas, they allocate shares of the money to states, metropolitan areas, cities and towns—minimum amounts where unemployment rates are below the national average, large sums to places with high unemployment.

If a city's unemployment rate is higher this month than a year ago, it may qualify for a bonus. If unemployment has declined, the payments may shrink.

Members of Congress who draft the formulas and administration officials who write the checks act as if they know what they're doing, disbursing the money exactly where it will do the most good. Julius Shiskin, who provides the data cranked into the computers, knows better.

"This legislation is really years ahead of BLS (Bureau of Labor Statistics) ability to produce required statistics at reasonable levels of accuracy," says Shiskin, commissioner of labor statistics.

"Some of these figures, we shudder when we think how inaccurate they may be."

BLS statistics on employment and unemployment are very accurate at the national level, and fairly accurate for large states and metropolitan areas, Shiskin says. But the potential errors grow as statistics are calculated for smaller groups and areas, he says, admitting: "When you get to these very small areas we're talking about, we worry about whether we're giving any better than random numbers."

That's a polite way of saying that unreasonable demands by Congress and the administration compel Shiskin to pull numbers out of his hat.

Shiskin freely acknowledges the shortcomings in his statistics, and he keeps warning Congress against relying so heavily on flimsy data in paying out billions of dollars. But Congress needs something to lean on, and BLS is available.

"When we don't have facts to make our decisions on, we turn to statistics," Rep. Elliott H. Levitas, D-Ga., told Shiskin at a House Government Operations Committee hearing.

Shiskin loves numbers, so he is thrilled by the growing BLS role—even though it worries him.

"When I started my career, statistics were used only in dealing with academic, abstruse questions," he says. "Now it's a different world."

Besides the money disbursed for employment programs, figures cranked out by BLS trigger cost-of-living wage increases and other big effects. All told, Shiskin says, "I estimate that $30 billion a year changes hands automatically on the basis of BLS indicators. That's sort of sensational."

State and local statistics on unemployment determined allocations of $8 billion to $10 billion of federal money last year, and the total will increase by $5 billion this year, he estimates.

Shiskin is proud of the national data. A thousand Census Bureau interviewers, under contract to BLS, ask standardized questions once a month on the employment status of residents of 55,000 households, which is considered a large sample.

To avoid slanted responses, the interviewers never use the word "unemployed" in finding out whether members of the household are working, are looking for jobs or are outside the labor force. The sample covers 923 counties and independent cities in every state and the District of Columbia.

BLS says the sampling error for the national figures is very small. The agency calculates that chances are 90 out of 100 that the monthly estimate of unemployment is within 185,000 of the total that would be reported by a complete census of every household in the country. In April, when the estimated unemployment rate was 7 percent of the labor force, the actual rate was between 6.8 and 7.2 percent.

The band of potential error widens as smaller groups than the total population are measured. For example, the April unemployment rate for blacks was estimated at 12.3 percent, and BLS calculates that the true rate was between 11.5 and 13.1 percent.

BLS publishes monthly unemployment estimates for 4,300 places—states, metropolitan areas, cities and towns. The accuracy rate declines rapidly as members are reported for smaller and smaller places. As a rough rule of thumb, Shiskin says estimates are close enough to the mark to be useful for areas with populations over 50,000, but very questionable for places with smaller populations.

Although estimates for some of the 4,300 places are iffy, laws allocating billions of dollars on the basis of unemployment rates require data for about 25,000 locations. These estimates are so "synthetic" that the margin of error cannot be calculated, BLS says.

State and local unemployment figures are estimated monthly by state agencies under supervision by the federal government, using a procedure called the 70-step method, which is as complicated as the name suggests. They start with unemployment insurance statistics, which cover only about 60 percent of jobless workers, and extrapolate to estimate—or guess—total unemployment in each locality.

Once a year, BLS measures the statewide figures against benchmarks derived from its national household survey and issues revised state numbers. The national sample had been sufficient only to provide reasonably reliable estimates for 19 big states, but it has been enlarged from 47,000 to 55,000 households to provide data for all 50 states and the District of Columbia.

BLS calculates that chances are two out of three that its annual average unemployment rate estimates for the states are within 10 percent of the rates that would be reported by a full census count. Local estimates derived from the state data are much less accurate than that.

State and local monthly estimates for 1976 must be revised on the basis of the BLS annual benchmark figures, which were released in February 1977. Tentative monthly estimates this year will be based on the 1976 BLS benchmarks, subject to revision when the 1977 benchmarks are issued next year.

Shiskin ducks his head when BLS publishes the annual revisions. "An awful lot of money is riding on these figures, so people get mad and scream at us, and I can't blame them," he says.

The special world of federal grantmanship is upside down. Good news is viewed as bad, and bad news is good.

State officials assail BLS—sometimes suing the agency—when their unemployment rates are lowered, because that may mean reductions of federal payments. When estimates are raised, state officials happily rub their hands in anticipation of extra money.

Maryland is suing BLS is an attempt to void previous reductions in its unemployment rate, although the latest figures raise the state's 1976 rate from 6.3 to 6.8 percent. Rep. Parren J. Mitchell, D-Md., told Shiskin this was a "very commendatory" revision.

The D.C. rate for 1976 was raised from 7.4 to 9.1 percent, one of the biggest changes, and the Virginia rate was increased from 5.5 to 5.9 percent.

Nationwide, BLS raised rates for 26 states and the District, lowered rates for 23 states and left Alabama unchanged.

Local unemployment data never will be as accurate as Congress apparently assumes when it votes to pay out billions of dollars, but there are ways to make the statistics somewhat more reliable.

"This is probably the most important im-

mediate policy issue" facing the National Commission on Employment and Unemployment Statistics, says Sar A. Levitan, the manpower expert who is in line to be commission chairman.

Levitan suggests that state and local statistics could be made substantially more accurate by improving the underlying unemployment insurance data and by enlarging the BLS survey sample from 55,000 households to perhaps 70,000 or 100,000.

This would be costly, he admits, but "such huge amounts are at stake that it is not unreasonable to spend a few million dollars for better data to assure that the money (for public works and other job programs) goes to the right places."

Shiskin and Levitan both say federal aid formulas should take account of income as well as unemployment. Levitan is a leader of efforts to revise job statistics to measure hardship and need.

Apart from issues of accuracy, BLS job statistics do not mean exactly what they say. The agency reported early this month that 90,023,000 workers had jobs in April, 6,737,000 were unemployed and the unemployment rate was 7 percent of the labor force. Careful study of the report revealed that the actual figures were 89,258,000 employed, 6,568,000 unemployed and 6.9 percent for the unemployment rate.

BLS was not fudging the figures. The statistics that received most of the attention were seasonally adjusted in an effort to spotlight underlying trends

Because of cold weather and other factors, unemployment almost always rises substantially between December and January. Seasonal factors are reversed in April, so unemployment almost always declines.

If unemployment increases by a "normal" amount in January, that does not indicate that the situation really has worsened, so the seasonally adjusted total of unemployed workers and the unemployment rate are reported as unchanged. If joblessness increases more than usual for that time of year, a seasonally adjusted rise is reported. If unemployment rises less than usual, that indicates improvement, so it is reported as a seasonally adjusted decline.

Between March and April, the number of unemployed workers declined by an estimated 988,000, from 7,556,000 to 6,568,000, which reduced the unemployment rate from 7.9 to 6.9 percent of the labor force. That was partly seasonal and partly a real improvement. Seasonally adjusted, unemployment declined by 327,000, from 7,064,000 to 6,737,000, and the unemployment rate fell from 7.3 to 7 percent.

A few economists contend that seasonal adjustments are misleading and actual figures should be used. The great majority of economists believe that seasonal adjustments are essential for monitoring the economy. Purely seasonal factors account on average for about 90 percent of the month-to-month changes in unemployment. Without seasonal adjustment, wide fluctuations from month to month would mask real changes, and valid comparisons could be made only from year to year.

Although there is broad agreement that seasonal adjustments are necessary, economists fiercely dispute the formulas. There are many different ways to adjust the figures for seasonality, and Shiskin pubishes 11 versions.

In April, when the actual unemployment rate was 6.9 percent and the official seasonally adjusted rate was 7 percent, the various formulas yielded rates ranging from 6.9 to 7.1 percent. The range last September was wider, from 7.6 to 8 percent.

Confusion is compounded every January, when BLS updates its formulas to take account of the most recent seasonal patterns, and issues revised figures for the preceding 12 months.

Seasonal adjustment arguments are behind much of the suspicion that BLS may manipulate the data to help one party and hurt the other.

The AFL-CIO research department charged early last year that BLS was using "seasonal adjustment gimmickry" in changing the formula for 1976. The change was lowering the unemployment rate early in the year, making the job picture look brighter than it really was, and would raise it in later months, the memo said.

If BLS wanted to help the incumbent Republican administration, Shiskin replied, it would have made more sense to lower the unemployment rate later in the year, just before the election. In fact, the Ford administration's Council of Economic Advisers complained after the election that BLS adjustment methods raised the unemployment rate unduly in the fourth quarter of 1976.

For some economic statistics, seasonal adjustment formulas are chosen to fit the circumstances of each month or quarter, and statisticians sometimes make further adjustments on the basis of their subjective judgments.

Shiskin says the employment and unemployment data would be more accurate if the formulas could be revised each month, but he realizes that the figures are too politically sensitive to permit that. Therefore, he says, BLS announces the formulas it will use at the start of each year and sticks with them for 12 months, "to preclude the possibility that ad hoc current adjustments would be interpreted as manipulation."

Most of the suspicion arises among those who are not familiar with BLS operations. Specialists have confidence in the agency's integrity, whichever party is in power, even if they disagree with the statistics it issues.

"The operation is totally professionalized," says W. Willard Wirtz, secretary of labor in the Kennedy and Johnson administrations, and now president of the National Manpower Institute, a research organization. "Any political officer of the government would try to influence it at personal peril"

Some White House officials in the Nixon administration suspected that Democrats in BLS were manipulating the statistics, or at least were interpreting them to make the administration look bad. BLS career officials were ordered to stop holding press conferences after their interpretations clashed with the White House line, and a few were squeezed out of the agency.

Sen. William Proxmire, D-Wis., moved to fill the gap by calling Shiskin to testify before the Joint Economic Committee each month on the day of the employment report. This practice continues, with Shiskin interpreting the figures but cautiously avoiding policy recommendations and remarks that might sound political.

Shiskin, a government economist and statistician since he went to work for the War Production Board in 1942, recalls that he fielded "a lot of questions about the integrity of the BLS" in the first few months after Richard Nixon appointed him commissioner in 1973.

"The controversy about political interference has died out," he says. "I don't think I've heard such a question for at least two years. The TV people tell me my appearances (at Joint Economic Committee hearings) help—they say 'people believe you'."

Shiskin says he was picked for the job because it was realized that BLS needed someone who was "not a political type," and his long career put him in that category. Now 64, he is waiting anxiously to hear whether President Carter will reappoint him when his four-year term expires at the end of July.

FALSE CHARGES AGAINST ANATOLY SHCHRANSKY

(Mr. BUCHANAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BUCHANAN. Mr. Speaker, I am today introducing with my colleague from Connecticut (Mr. DODD), a resolution expressing our concern over the blatantly false charges brought by the Soviet Union against Anatoly Shchransky.

Our resolution calls upon the Soviet Union to fulfill its own promises to its own citizens with regard to basic human rights and freedoms. It urges the release of Mr. Shchransky and calls on the Soviet Union to permit him to be reunited with his family. It also expresses the sense of Congress that the Soviet Union ought comply, with regard to all its citizens, with international and Soviet documents which it has signed.

Anatoly Shchransky may face the death penalty because he dared to speak out against Soviet violations of human rights.

He is a member of the Group to Promote the Observance of the Helsinki Agreements in the U.S.S.R., otherwise known as the Orlov Group. In recent months many members of this group have been arrested, sentenced, or exiled in an effort to silence their pleas for freedom and basic human rights promised by the Soviet Constitution.

He is a Jew and has been a courageous, outspoken defender of religious rights. For this he has been subjected to harassment and has been prohibited from emigrating.

It appears that the Soviet Government cannot tolerate Mr. Shchransky and his embarrassing references to their violations of human rights. Thus, they have decided to try him on the ludicrous charge of treason for allegedly working with the CIA.

The Soviets know this is a false charge. The resolution which we are introducing today underlines President Carter's statement that Mr. Shchransky "has never had any sort of relationship to our knowledge with the CIA."

The Soviet treatment of Anatoly Shchransky reflects a litany of abuses.

Article 9 of the International Covenant on Civil and Political Rights states:

> Everyone has the right to liberty and security of person. No one should be subjected to arbitrary arrest or detention. Anyone who is arrested shall be informed, at the time of arrest of the reasons for his arrest and shall be promptly informed of any charges against him.

The Soviet Union ratified this Covenant, yet blatantly violated it with respect to Mr. Shchransky by arresting him and refusing for months to state the charges.

Chapter 6, Article 34 of the Soviet Constitution says that "citizens of the U.S.S.R. are equal before the law irrespective of their attitude toward religion." Yet, Anatoly Shchransky's problems began when he became an outspo-

ken leader on behalf of Soviet Jews who were denied permission to emigrate.

Article 50 guarantees freedom of speech, press, assembly, street procession and demonstration, yet Shchransky's voice in support of the Helsinki Final Act have been silenced by the selfsame Soviet Government pretending to guarantee rights outlined in the Final Act.

Article 18 of the Universal Declaration of Human Rights provides for the right to leave one's country. Yet the Soviet Union, which signed the Universal Declaration, has denied not only Mr. Shchransky, but thousands of other Soviet citizens this basic human right. His wife was permitted to emigrate 4 years ago, but he continues to be prohibited from doing so.

Basket III of the Final Act of the Commission on Security and Cooperation in Europe, which the Soviet Union signed and which will be reviewed in a very few months, commits all signatory nations to basic human rights and to "deal in a positive and humanitarian spirit with the applications of persons who wish to be reunited with members of their family." The Soviet Union's response in Mr. Shchransky's case and in the cases of many other Soviet citizens, but particularly Jews, has not been positive. It has been anything but humanitarian.

If the world is to take the Soviet Union even partially seriously when it seeks to negotiate treaties or other agreements with nations outside its boundaries, it must demonstrate that it intends to comply with its own laws within its own borders.

The Soviet Union can express its good faith intentions by complying with the international agreements which I have just mentioned and by releasing Anatoly Shchransky and permitting him to be reunited with his family.

The text of our resolution follows:

Whereas the Soviet Union is a signatory to the Final Act of the Conference on Security and Cooperation in Europe, signed at Helsinki, Finland, on August 1, 1975, which provides for basic human rights including freedom of conscience, religion and emigration;

Whereas the Soviet constitution provides for freedom of conscience and religion;

Whereas the Soviet Union is a signatory to the Universal Declaration of Human Rights and the subsequent International Covenant on Civil and Political Rights which provides for specific protections concerning freedom of conscience, religion and emigration;

Whereas Anatoly Shchransky has been denied an exit visa so that he may be reunited with his family and whereas he currently faces unwarranted charges of treason based on false allegations of his being connected with the CIA; and

Whereas President Carter has publicly stated that Anatoly Shchransky has never had any relationship with the CIA: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), that it is the sense of Congress that the Government of the Union of Soviet Socialist Republics should comply with the Final Act of the Conference on Security and Cooperation in Europe, the International Covenant on Civil and Political Rights, and the Soviet Constitution, with respect to all of its citizens, and, in order to so comply, should release Anatoly Shchransky from custody and should allow him to emigrate from the Soviet Union so that he may be reunited with his family.

PERSONAL EXPLANATION

(Mr. MIKVA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MIKVA. Mr. Speaker, I was meeting with State Department officials this morning, and was not present to vote on rollcall No. 446, the motion to close the conference on H.R. 7933. Had I been present, I would have voted "aye."

STATEMENT OF CHAIRMAN AL ULLMAN WITH RESPECT TO THE RULE TO BE REQUESTED FOR CONSIDERATION OF TITLE II OF H.R. 6831, NATIONAL ENERGY ACT

(Mr. ULLMAN asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. ULLMAN. Mr. Speaker, on July 13, 1977, the Committee on Ways and Means favorably reported to the House a committee amendment in the nature of a substitute for title II of H.R. 6831, the National Energy Act. Title II of H.R. 6831 embodies the tax aspects of President Carter's energy proposals.

I take this occasion to advise my Democratic colleagues in the House as to the type of rule the Committee on Ways and Means will request for consideration of title II of H.R. 6831 on the floor of the House. The Committee on Ways and Means instructed me to request the Committee on Rules to grant a closed rule which would provide for amendments to be offered by the Ad Hoc Energy Committee and the Committee on Ways and Means—which would not be subject to further amendment—and which would provide for motions to strike any section of title II, which would provide 4 hours of general debate on title II, to be equally divided, which would waive all points of order with respect to title II, and which would provide for one motion to recommit as to the total bill with or without instructions.

The committee report on title II of H.R. 6831 was filed on July 13, 1977.

PERSECUTION OF JESUIT PRIESTS IN EL SALVADOR

(Mr. RONCALIO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RONCALIO. Mr. Speaker, I call to our attention the continuing persecution in El Salvador—now a persecution of Jesuit priests. The upheaval in that small country revolves around land occupancy, and age-old problems relating to political reform.

Thirty days ago, a rightist group calling itself the White Warrior Union sent a warning to the Jesuit priests in El Salvador warning them that they must be out of the country by July 20—today—or they will be systematically executed.

The situation in El Salvador is yet another example of the inhumanity which surfaces when people are oppressed. I want to bring to the attention of my colleagues an excellent column by Colman McCarthy. We must recognize the agony of countries in Central America, if possible, without injecting ourselves into their internal problems or forcibly imposing our own beliefs on them; but all the while fostering the growth and stability of free and Democratic governments.

Following also is a copy of War Order No. 6, commanding the Jesuits to leave El Salvador. I think my colleagues will be interested to read this:

LATIN AMERICA'S OUTSPOKEN CHURCH

(By Colman McCarthy)

Terrorists in El Salvador have said that 47 Jesuits must leave that country by today or they will be gunned down. This latest death threat is one more sign that violence has replaced law in El Salvador and that the Catholic Church is seen as subversive. Two priests have already been slain; several have been tortured. Others have been expelled. The government claims that the Jesuits are meddling in politics and riling the people.

That is the standard defense made by those Latin American governments in which thuggery is the main political force. The significance of El Salvador, though, is that the Church is not backing down. In a country of four million in which 70 per cent of the land is held by one per cent of the people, and 90 per cent of the peasants are landless, bishops and priests are refusing to be pressured into silence. They are insisting that such papal encyclicals as *Pacem in Terris* and *Populorum Progressio* are liberation documents meant to defend the weakest and poorest. Last December, El Salvador's Archbishop Chávez y Gonzáles attacked the government's fear of dissent by stating that "to proclaim the gospel's demands . . . is not communism; it is a commitment to the Christian faith. . . . What will the country's answer be to the misery of the common people, especially the *campesinos*? If we love God but our neighbor suffers, is hungry, has no work or land to cultivate, if his future is uncertain and his present also, we who think we are Christians must act."

As the confrontation unfolds in El Salvador, the Church elsewhere is offering support. The president of the National Conference of Catholic Bishops, the Most Rev. Joseph L. Bernardin, stated that "the landless peasants and the ministers of the Church" are on one side in El Salvador and "the national security forces and the landed oligarchy" on the other.

What is to be tested in this small country where over 90 per cent of the rural children are undernourished is less the future of strong-arm politics than the role of the Church as an instrument for social change throughout Latin America. Except for Costa Rica and perhaps Venezuela, citizens throughout the hemisphere are victimized by social and economic structures that a 1968 conference of bishops called "institutionalized violence." Military governments systematically torture their political opponents. Security forces hunt down and imprison "subversives." Amnesty International states that in Latin America "police brutality and harsh prison conditions have long been a traditional and largely accepted part of the social structure."

Catholicism is embedded in the history of Latin America, so much so that the current terror could not have grown over the decades without its blessing or at least its complicity. Today's turnabout is striking, because the same religion that was once used to subdue

the poor is now used to rally them. The militarists and dictators running the Latin American governments have been able to suppress the labor unions, if any existed at all, and the press. But these are local institutions. The Church is international, led by a figure in Rome whose voice has been regularly raised in behalf of human rights and the fair distribution of wealth. A few priests can be murdered and some bishops sent into exile. But how can the entire organization be stamped out? And how can the *campesinos* be stopped from turning to the Church when they see it suddenly concerned with economic development rather than merely dispensing the sacraments?

Latin American governments can create martyrs, but history shows that the Church only grows stronger when its members are willing to die for it. The irony of Latin America is that, as its generals and dictators attack the Church in the name of national security and in defense against communism, they are imitating and even surpassing the brutality of Eastern European and Asian regimes that truly are Communist. From Gen. Augusto Pinochet in Chile to Gen. Alfredo Stroessner in Paraguay to Gen. Carlos Romero in El Salvador, Latin America is all but an armed camp that is fenced in by the culture of poverty. Latin American theologians, backed by the bishops and invoked by the priests and nuns who go among the poor, are telling the victims to reject fatalism. Religion has use in this life, too, is the message: to end hunger, unemployment, sickness and anything else that degrades human beings.

TRANSLATION OF THE WARNING RECEIVED FROM THE WHITE WARRIOR UNION ORDERING JESUIT PRIESTS TO LEAVE EL SALVADOR BY JULY 20, 1977

WAR ORDER NO. 6

SAN SALVADOR, JUNE 21, 1977.

The Supreme Command of the White Warrior Union (Union Guerrera Blanca—U.G.B.) in the face of the criminal persistence of those groups that through the bloodying of our fatherland plan to enslave it to international Communism orders:

1) All Jesuits without exception must leave the country forever within 30 days of this date. These miserable supporters of the murderous Popular Forces of Liberation have no reason to continue poisoning our people.

2) The religious orders and priests who are not agents of international Communism have nothing to fear from us and can continue their work in complete tranquility. Our struggle is not against the Church but against Jesuit guerillaism (el guerillerismo jesuitico).

3) If our order is not obeyed within the indicated time, the immediate and systematic execution of all Jesuits who remain in the country will proceed until we have finished with all of them. Further: We warn A) all neighbors, B) parents and students, C) employees that if as of the indicated date there is disobedience, all Jesuit installations and places frequented by them will be considered military targets. Since this warning has been made with sufficient anticipation, we will not be responsible for the death of third persons as a consequence of our operations.

4) According to the circumstances, the U.G.B. reserves the initiative to effect operations before the deadline.

Long live the Commandos of Liberty!
War to the death with international Communism!
The Fatherland to Power!
White Warrior Union
W. W. U.

The deadline is July 20, 1977.

CLARIFICATION ON ARCO COAL CREEK PROPERTIES

(Mr. RONCALIO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RONCALIO. Mr. Speaker, during the April 28, 1977, House floor debate on H.R. 2, Mining Control and Reclamation Act of 1977, I included at page 12639 a tabulation captioned "Occurrence of Alluvial Valley Floors in Areas of Proposed Surface Coal Mines With Federal Involvement: Montana, Wyoming, Colorado, and New Mexico." Included therein was Atlantic Richfield Co.'s Coal Creek, Wyo., mine. Relying on an unpublished surficial geologic map put together by D. A. Coates, 1975, the tabulation reflected that the size of the alluvial valley floor in the proposed mine area was 0.19 of a square mile which translated to 2.0 percent of the proposed mine area classified as an alluvial valley floor.

In fact, Atlantic Richfield Co.'s Coal Creek mine does not contain an alluvial valley floor as that term is defined in our recently completely H.R. 2. Nor is any portion of this mine considered to be in an alluvial valley floor by the Environmental Protection Agency's Region VIII January 1977 final draft report on alluvial valley floors in the Great Plains entitled "Alluvial Valley Floors: A Reconnaissance Analysis of Their Occurrence on Coal Lease Tracts in the Interior Western United States."

Upon further analysis, it seems to me that the Coal Creek mine mentioned in the tabulation I referred to was one with that name in Montana rather than the Coal Creek mine in Wyoming. I would like the record to reflect this change.

WHITE HOUSE MEETING OF HOUSE SELECT COMMITTEE ON AGING WITH PRESIDENT CARTER—JULY 15, 1977

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, on Friday, July 15, the House Committee on Aging, which I have the privilege of serving as chairman, met with President Carter at the White House to discuss ways that the Congress and the President can work together to improve the lives of this Nation's elderly.

I would like to thank the entire committee for participating and particularly our subcommittee chairmen and ranking minority members who made fine presentations: Representative WILLIAM WAMPLER, ranking minority member of the full committee as well as its Subcommittee on Retirement Income and Employment; Representative EDWARD ROYBAL, chairman of the Aging Subcommittee on Housing and Consumer Interests; Representative JOHN PAUL HAMMERSCHMIDT, ranking minority member on that subcommittee; Representative FRED ROONEY, chairman of the Subcommittee on Retirement Income and Employment; Representative MARIO BIAGGI, chairman of the Subcommittee on Federal, State, and Community Services; and Representative WILLIAM COHEN, ranking minority member of the Subcommittee on Health and Long-Term Care.

During the meeting, we discussed with the President the legislation and executive actions which would implement the recommendations that our committee has developed thus far.

I was most encouraged that the President noted in his remarks that at the same time that we need his help, he needs ours.

I was particularly pleased that the President said he was committed to the principle of legislation to end mandatory retirement.

In addition, he indicated his support for home health care.

Finally, President Carter advocated containment of hospital costs, quick action by the Congress to ward off the bankruptcy of the social security system, and Government reorganization to eliminate the widespread fragmentation in the delivery of services to the elderly. The President commended our committee's efforts to reorganize the proliferated service delivery system of benefits to the elderly and said this could well fit into the current Government reorganization which is being developed. Specifically, he expressed support for our suggestion for direct White House involvement in interagency agreements.

I would like to insert in the RECORD the statements made by the committee members and the agenda for this important meeting:

AGENDA—MEETING OF HOUSE SELECT COMMITTEE ON AGING WITH PRESIDENT CARTER, JULY 15, 1977

(Items I–VIII are broken down in the attached materials)

A. Recommendation of House Select Committee on Aging.
B. Statement of President Carter concerning recommendation.
C. Legislation which would implement recommendation.
D. Executive action which would implement recommendation.
E. Cost to federal government.
I. Mandatory Retirement/Age Discrimination.
II. Alternatives to Institutionalization: Home Health Care, Senior Centers, Outpatient Clinics, and Day Care.
III. Income Security/Jobs.
IV Housing.
V. Transportation.
VI. Medical Appliances and Prescription Drugs.
VII. Crime.
VIII. Nursing Home Fires.
IX. Other Issues of Concern to the Select Committee on Aging:
A. Better Coordination of Services to the Elderly.
B. White House Conference on Aging.
C. Long-Term Financing of Social Security.
D. Increase in Social Security Benefits.
E. Hypertension Screening in Preventive Health Services for the Elderly.
F. Standards for Home Health Agencies, Nursing Homes and Adult Care Homes.
G. Meals for the Homebound Elderly.

*Items I–VIII reflect reports adopted to date by the House Select Committee on Aging.

I. MANDATORY RETIREMENT/AGE DISCRIMINATION

A. Recommendation of House Select Committee on Aging: In September 1976, the Committee recommended that "Legislation to eliminate the upper age limit of 65 in the Age Discrimination in Employment Act of 1967 and to end mandatory retirement solely because of age be enacted as soon as possible."

B. Statement of President Carter has said: "We force millions of older people to retire abruptly at age 65, but people don't suddenly lose their skills or their desire for a steady income and a full life on their 65th birthday. Age should not be the only standard for work. We need to change the laws and policies that force retirement on older people who are willing and able to work."

C. Legislation which would implement recommendation: H.R. 5383, as reported out by the Education and Labor Subcommittee on Employment Opportunities, would be a first step toward ending mandatory retirement. This bill would (1) abolish mandatory retirement and extend the protection of the Age Discrimination in Employment Act (including hiring and advancement) to all federal workers 40 or above; (2) raise the upper age limit for protection of other covered workers, public and private, from age 65 to 70; and (3) clarify the pension exemption.

D. Executive action which would implement recommendation: The Committee has recommended "full funding" of the $5 million authorized for enforcement of the Age Discrimination in Employment Act by the Department of Labor. This could be accomplished through legislation, or internal action by the Department of Labor. In addition, the Committee recommended "close review and evaluation of efforts to enforce the Age Discrimination in Employment Act's provisions in the federal sector". This could be carried out administratively by an agency and, or the Office of Management and Budget or a joint effort with the Congress through the General Accounting Office.

E. Cost to federal government: Difficult to determine because of lack of experience and data as well as because of offsetting costs and savings; e.g., savings to pension plans, costs to health and other insurance benefit plans, increased taxes from elderly, continued higher wages to older workers rather than their being replaced by younger workers, impact on unemployment benefits, etc.

II. ALTERNATIVES TO INSTITUTIONALIZATION: HOME HEALTH CARE, SENIOR CENTERS, OUTPATIENT CLINICS, AND DAY CARE

A. Recommendation of House Select Committee on Aging: In a recent report, the Committee recommended that "Legislation should be enacted to expand home health benefits under medicare and medicaid, providing eligibility to more people in need of health services as necessary to provide a comprehensive alternative to often inappropriate and costly full-time institutionalization." In addition, the Committee recommended that "the establishment of multipurpose senior centers providing basic service assistance in health, nutritional guidance, recreation, and social endeavors should be encouraged by a variety of Federal statutory and program options," and that "outpatient clinics specializing in geriatrics" be established and expanded. Finally, the Committee recommended that "medicare and medicaid be amended to authorize reimbursement for health and supportive services for the elderly received in elderly day care centers".

B. Statement of President Carter concerning recommendation: President Carter reflected these recommendations in speeches in Pittsburgh and Miami and in position papers during the campaign, saying: "We do not need to wait for the enactment of a national health insurance program to improve health services for older people. One important reform we can begin immediately would be to shift the focus of our programs away from institutions and toward outpatient and home health services."

C. Legislation which would implement this recommendation: H.R. 1116 (would remove the limit on medicare home health visits and the prior hospitalization requirement. This bill would also add coverage of health and supportive services furnished in day care centers under medicare).

H.R. 1123 (would authorize an additional $80 million per year for senior centers).

H.R. 1122 (would amend the Internal Revenue Code to allow a tax deduction for donations to senior centers).

D. Executive action which would implement recommendation: Under current regulations one percent of medicaid expenditures is for home health care for the elderly. In contrast, 70 percent of medicaid's over $3 billion for the elderly goes to nursing homes. This continues despite the fact that home health care is a requirement under State medicaid plans.

E. Cost to federal government: The Congressional Budget Office has determined that the total cost of "modifying" medicare and medicaid by "Liberalizing coverage of home health services" and adding coverage of day care would be a maximum of $800 million to $1.5 billion a year. In addition, savings could result through the reduced institutionalization that would be brought about by the implementation of this recommendation.

The cost of expanding senior centers above the FY 77 level ($20 million a year) to the $100 million recommended by the Committee, would be an additional $80 million per year.

Outpatient clinics specializing in geriatrics could be financed by providing special emphasis in the neighborhood health center program for geriatric care. There are now only 162 Neighborhood Health Centers under the current $247 million authorization under Public Law 94–63.

III. INCOME SECURITY/JOBS

A. Recommendation of House Select Committee on Aging: The Committee has recognized the very close causal relationship between employment in later years and income security both before and after retirement. The Committee has recommended: (1) revisions in Social Security Act to provide individually maintained earnings records with married couples allowed to share social security credit for covered employment: (2) establishment of training, counseling and placement programs for displaced homemakers; (3) liberalization of $3,000 earnings limitation under social security; (4) restoring the position of an Assistant to the Secretary for Older Workers within the Department of Labor; (5) earmarking of funds under Title III of the Comprehensive Employment and Training Act (CETA) for economically disadvantaged older workers; (6) amending regulations for the CETA program to require CETA sponsors to include precise provisions in their "manpower plans" and "employment plans" to meet the special needs of low-income older workers; (7) establishment of a separate, adequately staffed administrative unit with responsibility only for the Title IX (Older Americans Act) employment program; (8) changing policies and practices in the U.S. Employment Service so that older worker applicants receive more proportional share of services provided.

B. Statement of President Carter concerning recommendation: In the campaign, President Carter said, "We should remove the remaining traces of sex discrimination from the (social security) system." In addition, President Carter said, ". . . we should, as revenues permit, move toward liberalization of the social security earnings test, which currently penalizes retirees who earn more than $3,280 per year." In speeches in Miami and Pittsburgh, he said that he supported action "to give more work opportunities to the elderly."

C. Legislation which would implement recommendations 1 through 8, as listed above: (1) H.R. 3247 (earnings record for couples); (2) H.R. 4266; (3) large number of bills, including H.R. 1134. For recommendations 4–8, see "D" below.

D. Executive action which would implement recommendations: (1) Legislation needed; (2) Some efforts in this area could probably be done administratively prior to legislation; e.g. a) the Commissioner on Aging's (HEW) providing model project or discretionary funding under Title III of the Older Americans Act, b) Secretary of Labor providing discretionary funds for training under the Comprehensive Employment Training Act, c) the Commissioner on Education's (HEW) providing discretionary funds for second careers under the Vocational Education Act. For recommendations 4–8, most would involve primarily administrative action with a minor amount of legislative action (e.g., slightly increased appropriations and re-creation of an Assistant to the Secretary for Older Workers).

E. Cost to federal government: (1) This should not be significant since it is meant to be a restructuring within the present benefit structure; (2) The cost is subject to levels of authorization and appropriation. H.R. 28 would authorize $10 million for FY '79; (3) The costs will vary tremendously depending on the amount selected and the type of beneficiary covered. For example, total elimination for all would cost about $7 billion (total elimination for 65 and over would be about $2.9 billion); (4) An Assistant Secretary for Older Workers might be established at a cost of about $350,000 for a staff of 15 plus. Some of this cost may not be new since it could involve consolidation of existing part-time persons now involved with older workers; (5) Earmarking should cause little or no increase in present level since it involves more a shifting of priorities within the area of discretionary funds and there seems to have been a surplus in FY 1977 level (see Economic Stimulus legislation); (6) Regulation changes should have minimal, if any, cost impact at Federal level. Again, this requires a change in priorities or emphasis; (7) Presently about 10 staff-years at a cost of $250,000 are allocated to the Title IX program within the Office of National Programs. Judging from other specialized programs under Title III, a staff of about 30 would seem needed at a cost of about $750,000; (8) Presently those age 55 and over represent about 6.5% of the applicants and about 3.9% of those receiving services from the U.S. Employment Service. Approximately $700 million is spent annually on employment services by USES. Based on percentages, those 55 and over receive an estimated $29 million (3.9%), but would receive closer to $47 million (6.7%) if our recommendation were implemented. This may necessitate an increase in federal expenditures of about $20 million if services to other groups remained unchanged and less if priorities are partially changed.

IV. HOUSING

A. Recommendation of House Select Committee on Aging. In March, 1976, the Committee recommended that "Congress should provide a new authorization for the Section 202 housing program to provide new monies for the next three years." Congress authorized $3.3 billion for three years. However, HUD policies and decisions have created problems that have delayed or slowed the full implementation of this program.

B. Statement of President Carter concerning recommendation. In the campaign, President Carter said, "I am committed to a rapid increase in the section 202 housing program for the elderly."

C. Legislation which would implement recommendation. An Assistant Secretary for the Elderly should be established at HUD. The Secretary would have authority to plan and control use of funds available for housing and related facilities for the elderly (i.e., nursing homes, etc.), responsibility for developing policies and procedures, supervising the operation of elderly facilities, preparing legislation as appropriate, and serving as an advocate, problem solver and administrator in all matters within HUD relating to the development and operation of all facilities and services for the elderly.

D. Executive action which would implement recommendation: (1) Adopt "total development cost plus the cost of the land" in the determination of Section 202 mortgage amounts, in lieu of Section 231 mortgage limits; (2) Have flexible guidelines in order to make good projects work. For example, the maximum size of 100 dwelling units is too small and forces high unit costs ruling out many excellent sites; (3) Revise requirements which hamper the development of feasible congregate housing, such as the prohibition of infirmaries; (4) Permit more local administrative discretion in modifying fair market rents to a local situation; (5) If the program is to be decentralized, it should be only to the Regional Office level. In addition, elderly housing specialists should be developed for each Regional Office. These specialists would be expeditors, problem solvers, advocates. They would have line authority in resolving problems involving specific projects. They would coordinate and expedite the review of each application by Regional Office technical staff. They would have authority to settle differences, subject to the concurrence of the Regional Administrator; (6) Finally, HUD needs to develop realistic unit cost data and data on rentals and service costs for projects designed to serve the elderly and establish guides which can be modified by the Regional Administrator.

E. Cost to federal government: None, since this is a loan program.

V. TRANSPORTATION FOR THE ELDERLY

A. Recommendations of House Select Committee on Aging: In a May 1976 report, the Committee recommended providing increased transportation opportunities to the elderly, millions of whom have severe problems of mobility, through better tax deductions to promote volunteer drivers and tax-exemptions for providing non-profit transportation of the elderly. In addition, the Committee recommended legislation to allow reduced airfares for the elderly. That legislation passed Houses of Congress last year but narrowly missed conference agreement on the last day of the session. It was passed again by the House in the first weeks of the 95th Congress but, as of yet, there has been no action in the Senate.

B. Statement of President Carter concerning recommendation: President Carter reflected many of these recommendations during the campaign, saying: "Many Older Americans cannot drive automobiles because of physical problems or because they cannot afford them. One way we might help solve this problem would be to provide subsidies through the Urban Mass Transit Association to cities that provide free transit services to older people during off peak hours. We might also encourage reduced airfares for the elderly such as we now have for military personnel."

C. Legislation which would implement recommendations: H.R. 1131, 1132, 1133, and 5010.

D. Executive action which would implement recommendation: The Department of Transportation has mandated that "Transbus", a vehicle accessible to elderly and handicapped persons, be made the exclusive standard transit bus beginning in late 1979. This is a major step forward, but many years will pass before normal replacement in bus fleets brings about major improvements in mobility for the elderly and handicapped through this device alone. Therefore, existing Department regulations requiring planning and "special efforts" to meet the needs of the elderly and handicapped should be monitored closely, and tightened if necessary.

E. Cost to federal government: Reducing airfares paid by the elderly would not cost the federal government any money. Neither the IRS or OMB has been able to estimate the cost of the tax exemptions, but both agreed it would be a tiny fraction of the $5 billion deducted each year for charitable contributions.

VI. MEDICAL APPLIANCES AND PRESCRIPTION DRUGS

A. Recommendation of House Select Committee on Aging: In September, 1976 the Committee concluded that "Presently the massive needs of the elderly for appliances like eyeglasses, dentures, and hearing aids are unmet because in many cases, the elderly cannot afford the devices and because public and private health benefit programs have provided only limited help in this area. Extending the optional Part B section of medicare so that it would cover the cost of hearing aids, eyeglasses and dentures is imperative in attempting to solve the problems of the high costs paid by the elderly for health care in general and medical appliances in particular." The Committee has also recommended adding under medicare "medical supplies, including prescription drugs."

B. Statement of President Carter concerning recommendation: President Carter, in campaign speeches in Pittsburgh and Miami discussed the "urgent needs" of the elderly for "eyeglasses, dentures, and hearing aids" and cited the "high cost" of these devices.

C. Legislation which would implement recommendation: H.R. 1127 would extend medicare to include coverage of eyeglasses, hearing aids, dentures, and related medical care and provide safeguards against abuse of people purchasing these devices.

H.R. 453 Sec. (2)(a)(5) would extend medicare to include coverage of prescription drugs.

D. Executive Action which would implement recommendation: The Committee found conclusive evidence of the waste of 10 million taxpayer dollars per year because Medicare allows excessive payments (as opposed to cheaper methods of acquisition e.g. leasing) for hospital beds, crutches, wheelchairs, and dialysis equipment, that are covered by Medicare. Five years ago legislation was passed authorizing HEW to take the necessary steps to end that waste. Yet the Department has progressed only to the point of beginning a test of a "design of an experimental concept".

E. Cost to federal government: For Medical Appliances—$1.9 billion per year during the first year of the program, but this amount would decline drastically (by as much as $1 billion per year) in succeeding years because the enormous backlog of elderly people who presently need these devices will be reduced.

The cost of providing prescription drugs under medicare (with $50 deductible) would be $2.4 billion according to the office of the Social Security actuary.

VII. CRIME

A. Recommendation of House Select Committee on Aging: In its most recent report, "In Search of Security: A National Perspective on Elderly Crime Victimization", the Committee recommended (1) Congress enact legislation that would provide assistance to states which operate programs to compensate victims of crime. Legislation should provide assistance for personal injury, and loss of essential property to low income elderly victims; (2) Congress should enact legislation to create a Central Office of Criminal Justice Statistics within the Department of Justice that would be responsible for compiling and analyzing all data regarding crime nationally (including that gathered by the FBI and LEAA). In addition, this office would require the FBI to record, through the Uniform Crime Report, the age of all crime victims; (3) Congress to amend Title XX of the Social Security Act, Title II of the Economic Opportunity Act of 1964 and Title III of the Older Americans Act of 1965 to provide for the installation of security devices and minor structural modifications in the homes of elderly residents; (4) Congress give full consideration to employment bills that have specific provisions of education, training, and jobs for teenagers.

B. Statement of President Carter concerning recommendation: President Carter has said, "We need federal programs that work with state and local law enforcement agencies to get rid of the street criminals who prey on older people, and we also need enforcement against swindlers and con-men who take advantage of older people."

C. Legislation that would implement recommendations 1 through 4, listed above: (1) H.R. 6607, compensation to elderly victims of crime; (2) Legislation to create a Central Office of Criminal Justice Statistics is presently being developed and will be introduced within a few weeks; (3) The following three bills provide for the installation of security devices and minor structural modifications in the homes of elderly residents: H.R. 6605 (amends Title II of Economic Opportunity Act of 1964); H.R. 6606 (amends Title III of Older Americans Act of 1965), and H.R. 6608 (amends Title XX of Social Security Act); (4) There are a number of bills before the House and Senate which contain special provisions for education, training and jobs for teenagers. At least one of these bills should be given full consideration and passed by Congress.

D. Executive action which would implement recommendation: While recommendations 1, 3 and 4 would require legislation, a Central Office of Criminal Justice Statistics could be created by executive action. In addition, the Federal Bureau of Investigation could be required without legislation to record the age of crime victims through the Uniform Crime Report.

E. Cost to the federal government: (1) Preliminary cost estimate for assistance to elderly victims. The table below presents the five-year costs:

[In thousands of dollars]

High costs:	
Fiscal year 1978	28,200
Fiscal year 1979	31,700
Fiscal year 1980	35,600
Fiscal year 1981	40,000
Fiscal year 1982	45,000
Low costs:	
Fiscal year 1978	7,500
Fiscal year 1979	8,400
Fiscal year 1980	9,500
Fiscal year 1981	10,000
Fiscal year 1982	12,000

(2) The consolidation of 53 statistics-gathering units would not involve any costs. The savings, in the long run, would probably be substantial; (3) Monies for these acts are appropriated annually, and at the present time seem to be sufficient to cover these amendments. In the future, however, minimal increases may be necessary; (4) It is not possible to determine costs at this time because the scope of the program has not been determined, e.g., the number of participants, whether or not the program is in the public sector, private sector or a combination of both, and the length and scope of the training.

VIII. NURSING HOME FIRES

A. Recommendation of House Select Committee on Aging: In a recent report, the Committee, noting that three multiple death nursing home fires in 1976 had resulted in the deaths of 34 elderly residents and injuries to 50 others, recommended that "the Congress should immediately enact legislation which will require that all nursing facilities participating in medicare or medicaid be fully protected with automatic sprinkler systems." The Committee found that currently only half of the nation's nursing homes have sprinklers and that the existing fire safety standards were clearly inadequate. The special urgency of this recommendation is pointed out by the most recent nursing home fire which took place in Zion, Illinois, and killed two elderly people while seriously injuring eleven others.

B. Statement of President Carter concerning recommendation: In a speech to the American Public Health Association in October, President Carter said that he supported "encouraging nursing home standards of safety."

C. Legislation which would implement recommendation: H.R. 1129 (which has been cosponsored by 107 Members of Congress).

D. Executive action which would implement recommendation: On May 24, 1977, the Department of Housing and Urban Development issued regulations to implement the HUD loan-insurance program for the installation of fire safety equipment in health care facilities. The HUD regulations completely removed the Department of Health, Education and Welfare from involvement in the HUD loan insurance approval process. The previous joint HUD–HEW program was complex and led to a very long application processing time. As a result, no loans were ever approved under the program.

While the May 24 regulations are a welcome step, the Department should go a step further and approve applications for loan insurance within a reasonable time after work has begun. The General Accounting Office has determined that the current HUD prohibition on providing loan insurance after work has begun results in a hardship on owners who enter into contracts and begin work in order to meet HEW certification requirements. The GAO has determined that the Department is not precluded by law from approving applications for projects which already have been started.

E. Cost to federal government: None, since this is a loan program. The cost to facilities themselves has been estimated by the General Accounting Office to be between $250 and $400 million (which is the equivalent of 10–19¢ per patient per day).

IX. OTHER ISSUES OF CONCERN TO THE SELECT COMMITTEE ON AGING

A. Better Coordination of Services for the Elderly: Fragmented, confusing service delivery systems serving the elderly, documented in virtually all the Committee's hearings, must be rectified. Detailed recommendations are being prepared, but will certainly include calls for improvements in such areas as staffing of area agencies on aging, federal grants application procedures, visibility and authority of officials with responsibility for aging-related programs, Presidential-level approval of interagency agreements, and experiments and demonstrations of alternative (coordinated) service delivery systems.

More recent hearings by the Committee revealed that federal disaster relief for older persons is a creaking mechanism, and the need exists for redesigning the relationship between state and federal disaster agencies; for greater participation in relief planning by all people in the area, particularly the area agency on aging; and more liberal replacement of property lost by disadvantaged older people.

B. White House Conference on Aging: The Committee would like to offer its experiences and services in the preliminary planning of the next Conference, if there is to be one (as there was in 1950, 1961, and 1971). Legislation to provide the President the authority to call such a Conference has been introduced by Chairman Pepper and by Rep. John Brademas, Chairman of the Education and Labor Subcommittee on Select Education (which has jurisdiction).

C. Long-Term Financing of Social Security: Recent and future demographic changes have been characterized as "the Graying of America", (Newsweek, Feb. 28, 1977). A decreasing number of younger workers will have to support an increasing number of older retirees. This will cause greater and greater deficits in the Social Security trust fund. Options the Committee has considered to meet this change are: funding the deficit out of general revenues, or raising the wage base on which social security taxes are paid. The Committee is well aware of the President's plan, which should serve as a focus for prompt action.

D. Increase in Social Security Benefits: A general increase in Social Security benefits would certainly be desirable. The short run and long run difficulties of the trust fund, however, make maintenance of the trust fund's fiscal integrity a priority issue by increasing the revenues of the trust fund in a manner that does not increase the Social Security tax rate for wage earners and by resolving the "decoupling" problem in a manner that assures constant replacement rates. Several steps could be taken that would have minor or no cost impact on the trust funds but which would make Social Security benefits more responsive to the needs of older persons; namely, a consumer price index for the elderly that would be used for cost-of-living increases and a semi-annual cost of living adjustment for Social Security as has been done for civil service annuitants. The sub-poverty benefit levels for SSI are of great concern to the committee and steps to increase the benefit at least to the poverty level should be undertaken even if only on a gradual basis. The removal of the purchase price requirement under the food stamp program (which has been approved by the Senate and is pending in the House) would be of great benefit to the elderly.

E. Hypertension Screening in Preventive Health Services for the Elderly: Almost half of all Americans between the ages of 65 and 74 have high blood pressure. Hypertension is a principal cause of cardiovascular disease, strokes, heart disease, which, with cancer, account for almost three-quarters of all deaths in the United States each year.

Hypertension screening and treatment should be an integral part of regular physical examinations, and special emphasis should be placed on this aspect of health care in the course of treatment of the elderly in hospitals, outpatient clinics, nursing homes and intermediate care facilities, and in the delivery of home health care. Careful consideration should be given to providing Medicare and Medicaid coverage for diagnosis and treatment of hypertension.

F. Standards for Home Health Agencies, Nursing Homes and Adult Care Homes: (1) *Standards for Home Health Care:* Few will argue the desirability of home health care as an appropriate means to meet many health care needs of the elderly while allowing them to remain independent in their own homes. It appears, however, that home health agencies are facing the same dilemma nursing homes faced in 1967. We want to avoid the problems that developed in the nursing home field during an accelerated growth period by developing and enforcing standards for providers of these services. Recently, both the House Ways and Means Committee and the House Interstate and Foreign Commerce Committee adopted an amendment to H.R. 3, the Medicare and Medicaid Anti-Fraud and Abuse bill, which directs the Secretary of HEW to conduct an in-depth study of home health care with respect to the utilization control, quality assurance, and prevention of fraud and abuse. The secretary would be required to submit a report to the appropriate committees of the Congress analyzing, evaluating and making recommendations within one year. The intent of this amendment is to set specific, enforceable standards in titles XVIII, IX, and XX of the Social Security Act to assure high quality home health services and the protection of the health and safety of recipients of such services. (2) *Nursing Homes:* Committee hearings and investigations have revealed that current Medicare and Medicaid programs do not adequately guarantee residents of nursing homes an acceptable level of care as mandated by Congress. Contributing factors include: failure of federal and state agencies to effectively enforce standards; failure to formulate regulations that emphasize nursing care more than building construction; and failure to prevent unnecessary and inappropriate admissions. HEW must move to assert a more significant federal influence and assure effective quality control. (3) *Adult Care Homes:* Recently the Committee uncovered the development of yet another, and to date, essentially unregulated component of the health care-housing continuum. Known variously as Adult Care Homes Boarding Homes, sheltered care homes and the like, these facilities are providing services at a level below licensed Intermediate Nursing Care and just above independent living. These facilities offer room, board, 24–hour oversight and access to medical and social services to hundreds of thousands of elderly SSI recipients, neglected hospital dischargees, and (the) handicapped. Widespread allegations of fire-trap conditions, food of poor and unsanitary quality, physical abuse and theft have punctuated the growth of this industry. Immediate federal and state action is required to enact and enforce standards to protect against unscrupulous entrepreneurs profited from human misery. At the same time, we must encourage the controlled growth of this industry—a potentially vital part of the human services system.

G. *Meals for the Homebound Elderly:* The Committee has investigated the need for a National Meals-on-Wheels Program. Less than 1 percent of the 4 million homebound elderly receive meals from the federal government. It is estimated that 25 percent of the one million persons in nursing homes are there because of an inability to maintain a proper diet. Their cost to the taxpayer is between $300 and $400 million. To provide these same persons with homebound meals would cost less than $200 million.

Passage of such a bill would be consistent with campaign statements in support of promoting deinstitutionalization of the elderly, as well as reducing government spending.

REMARKS TO PRESIDENT CARTER BY REPRESENTATIVE CLAUDE PEPPER, CHAIRMAN, HOUSE COMMITTEE ON AGING AND SUBCOMMITTEE ON HEALTH AND LONG-TERM CARE, DURING WHITE HOUSE MEETING BY AGING COMMITTEE WITH THE PRESIDENT, JULY 15, 1977

Mr. President, we are grateful for this opportunity to meet with you. We appreciate your concern and that of Mrs. Carter for the elderly, and we applaud the appointment of Nelson Cruikshank as a Special Counselor to the President.

Since its inception, in 1974, the House Committee on Aging has heard from over 2,000 witnesses, published 85 hearings and reports, developed over 15,000 pages of testimony, and maintained communication with 4,000 organizations and individuals dedi-

cated to the cause of the elderly. Today, before introducing the ranking majority and minority member of each of the committee's subcommittees I would like to single out for special attention six legislative proposals which I consider particularly worthy of your consideration.

1. During your campaign you opposed mandatory retirement. Our findings after 7 days of hearings suggest that mandatory retirement severs productive persons from their livelihood, squanders their talents, scars their health, strains an overburdened social security system and drives many elderly persons into poverty and despair. Yesterday the Education and Labor Committee by a 33–0 vote reported to the floor our bill, H.R. 5383, banning mandatory retirement in the Federal sector. I ask you to endorse that bill.

2. Institutionalization of the elderly is costly and often needless. Our written agenda offers some specific suggestions for changes in the governmental approach to health care. Let me stress three obstacles that force needless institutionalization: The prior hospitalization requirement, the 100 home visit limit, and the requirement that the services be "skilled". I urge you to support the committee's recommended legislation which would abolish these obstacles. I would point out, however, that as you have also said, we need not and should not wait for enactment of full national health insurance to make these improvements.

3. We should also provide medical appliances which the elderly sorely need including eyeglasses, hearing aids, dentures, and prescription drugs, and cost-effective services, such as preventive check-ups, including hypertension screening. I urge you to endorse these measures.

4. After 32 elderly persons died needlessly in nursing home fires last year and 50 were injured, we recommended legislation mandating sprinkler systems in nursing homes funded by medicaid and medicare. GAO endorsed the proposal after finding that "federal fire safety requiremnts do not insure life safety in nursing homes." Nursing home safety is the special concern of all persons who will grow old and whose loved ones will grow old and will face the possibility of care in such a facility. Yet, HEW opposes this legislation. I urge you to reverse that unfortunate decision before another elderly person dies needlessly in a nursing home fire.

5. Our committee's hearings have revealed fragmented, confusing service delivery systems serving the elderly. Improvements desperately needed include—(1) improved staffing for area agencies on aging and local coordinating bodies; (2) simplified and standardized application procedures for federal grants; (3) representation of the interests of the elderly at sub-cabinet level in appropriate departments; and (4) presidential approval of interagency agreements concerning older persons to give special emphasis on the need for interagency cooperation.

6. In addition, I urge you to sign the labor-HEW bill which includes a significant increase for programs for the elderly over last year's levels. I urge you to call a White House conference on aging and offer the help of this committee in preparing such a conference.

I was very pleased to note your pollster Patrick Caddell's recent finding that the American people support "aid to the elderly" first, over all other possible government program increases. This confirms the important findings of our committee and the need for action.

To conclude my own statement, Mr. President, may I make this suggestion: that you send to the Congress a Presidential message on the elderly, listing the ingredients of a major program which could be accomplished in legislation and executive action. By submitting a Presidential message on the elderly to the Congress, you would highlight your commitment and give major impetus to needed solutions.

We cannot speak of human rights without recognizing the right of the elderly to work as long as they are willing and able, the right of the elderly to safety in the marketplace, on the streets and in nursing homes, the right of the elderly to a decent and humane standard of living. Good intentions will not assure adequate health care, adequate nutrition, safety, and a decent standard of living for the elderly. We offer our help and ask yours in assuring that the ledger ultimately balances in favor of the nation's 23 million elderly persons.

REMARKS BY REPRESENTATIVE WILLIAM WAMPLER, RANKING MINORITY MEMBER OF SELECT COMMITTEE ON AGING AND SUBCOMMITTEE ON RETIREMENT INCOME AND EMPLOYMENT AT MEETING WITH PRESIDENT CARTER

EARNINGS LIMITATION

1. Senior citizens suffer most from the discrepancies in our social security system.

2. Under the earnings limitation provision of the social security act, an individual under 72 years of age is permitted to earn only $3,000 before he must forfeit social security benefits.

3. Example of possible financial stress facing such a person: After the initial $3,000 is earned, the next $3,000 of earned income is almost totally wiped out by federal, state and city income taxes, other social security taxes and the loss of benefits.

4. Incentive or choice for an elderly person to return to work on a full time or part-time basis is virtually non-existent because of the financial burdens likely to result.

5. Loss of valuable skills, productivity & experience may result for the employer as well as for the employee when older workers are discouraged from working.

6. President's Commission (to study the financial well-being of the public and private retirement programs) may also find it beneficial to review all of the innovative retirement income programs as they exist in both the public and private sectors (i.e. gradual retirement, voluntary retirement, part-time work, flexitime, second career training, vocational training, etc.)

PENSION COMMISSION

1. Commend President on intention to appoint commission to study the financial well-being of both public and private retirement programs (long overdue opportunity to solve the long-time myriad of problems associated with pension inequities).

2. Change needed because of huge proliferation of retirement systems which duplicate and overlap one another. (Federal Government: 65 pension plans, Private pension system: close to 500,000 plans).

3. Need for a discernible Federal retirement income policy to coordinate the multitudinous system toward common retirement goal. Must determine the proper blend and role that public, private and individual retirement plans should play.

4. Need to determine if existing retirement systems are beyond coordination.

INCOME MAINTENANCE/INFLATION

1. 16 percent of all persons aged 65 and over were living *below* the poverty line in 1975 ($3,232 for older couples, $2,572 for individuals).

2. At beginning of 1971, the dollar purchased more than 40 percent over what it does today.

3. Effect of inflation felt most by low income persons such as the elderly. The costs of food and medical care (which comprise a larger portion of their budgets than for the general population) have risen at a faster rate than the consumer price index.

4. Even if inflation continues at the rate of 5 or 7 percent, the dollar will be worth 51 cents in 10 years.

SOCIAL SECURITY

1. Federal Government is not immune to the effects of inflation.

2. Estimated that by the year 1980 or 1981, the social security trust "fund" will be entirely depleted.

3. 60 percent of the American elderly population depends on social security income as the major source of their income.

4. Commend President Carter for taking lead in solving short-term problems (e.g. use of general revenue funds to finance the shortfalls of the trust "fund" which may make the system's tax structure less regressive and would lessen the burden on the press).

5. We must also investigate solutions to long-term financing problems. Over the next 75 years, the Trustees estimate that expenditures will exceed revenues by an average of 7.96 percent of the taxable payroll.

MANDATORY RETIREMENT

1. Need to look at mandatory retirement as an option rather than as a directive.

2. Physical and mental problems may arise when an individual is forced to retire, as well as financial difficulties. AMA states "arbitrary retirement and denial of work opportunity—whether the work is for pay or the pleasure of giving—seriously threatens the health of the individual concerned."

3. Revisions in mandatory retirement policies must be complemented with considerations of the impact upon public pension systems, ERISA, social security, existing employment practices, collective bargaining agreements, Federal income tax laws and the provisions of the Age Discrimination in Employment Act.

FRAGMENTATION

1. Comprehensive overview of priority service needs of elderly could be enhanced by giving aging more visability within the Federal Government.

2. Consideration should be given to White House Conference on Aging Recommendations (Creation of central office on aging within Executive Office of the President, naming Assistant Secretaries on Aging within all Executive Departments.

3. Mention of letter which was sent with Cong. Pepper to Secretary of Labor, Marshall. (Support that an Assistant for Older Workers be restored at a high level within the Department.).

4. Inter-agency agreements between AoA and various Federal agencies and depts. should be strengthened in order that older Americans receive an equitable portion of Federal resources.

RURAL NEEDS

1. Rural areas are particularly susceptible to difficulties posed by fragmentation and inaccessibility to the various social services scattered throughout large geographical areas.

2. Resource allocation often favors areas with concentrated populations, therefore, rural services are often fewer and the distances between people and services are greater.

3. Need for continued suport of Title V (senior centers, delivery of social services).

REMARKS BY REPRESENTATIVE EDWARD R. ROYBAL, CHAIRMAN OF SUBCOMMITTEE ON HOUSING AND CONSUMER INTERESTS, AT MEETING WITH PRESIDENT CARTER

Mr. President, as you know, Section 202 is the only housing program that specifically provides housing for the elderly. Basically the program is sound, however, since its reinstatement in 1974, actual construction has moved slowly. This is due in part to the previous administration's reluctance to fully

implement the program. However, research conducted by my Subcommittee indicates that some of HUD's policies are also responsible for hindering the full implementation of Section 202.

I would like to briefly outline some measures which I believe would strengthen this program and make it more responsive to the needs of the elderly:

1. An office of the Assistant Secretary for the Elderly should be established at HUD. The Assistant Secretary should have the authority to plan and control funds for housing and related facilities for the elderly. In addition, this person should be responsible for developing policies, establishing procedures, and preparing and reviewing legislation pertaining to housing for the elderly. Further, the Assistant Secretary for Elderly Housing would be responsible for supervising the operation of elderly facilities and the supportive services provided within these facilities.

2. The need for Congregate housing (A residential environment which includes services such as meals, housekeeping, health and transportation to assist elderly tenants to maintain a semi-independent life style and avoid institutionalization) continues to grow. Section 202, as presently structured, hampers the development of feasible congregate facilities. Therefore, Section 202 requirements, such as those that prohibit infirmaries, should be revised.

3. The Fair Market Rental System should be more flexible, HUD should permit more local administrative discretion in modifying fair rents to local situations.

4. Mr. President, I was alarmed to read in yesterday's paper, that the Office of Management and Budget has recommended that the level of new subsidized housing commitments be reduced to 50,000 units a year. I believe that this drastic cut back would have an adverse impact on the neighborhood revitalization effort. Therefore, I strongly urge you to maintain your previous commitment of 400,000 units. The Housing and Consumer Interests Subcommittee, which I chair also undertook a study of criminal victimization in response to the anxiety expressed by Older Americans across the nation. Just recently the subcommittee published the first national report on criminal victimization of the elderly. This comprehensive report makes 20 recommendations to the Congress, Federal Agencies and Local Units of Government. I will briefly discuss two of the major recommendations:

1. The study indicates that the elderly are more frequently victims of property crimes than victims of violence. In addition, 50 percent of the elderly are poor. Thus, it is imperative that any victim compensation legislation compensate the elderly for the loss of essential property.

2. Home security is of vital importance to the elderly since burglary is the predominant crime committed against them. Mr. Hammerschmidt and I have introduced bills that would amend three public laws to provide for the installation of security devices and minor structural modification in the homes of elderly residents.

In closing, I would like to say that I am very fortunate to have Mr. Hammerschmidt as the ranking minority of the subcommittee. He has been a strong advocate for the elderly and has strongly influenced the direction of the subcommittee. He will further elaborate on the subcommittee recommendations.

REMARKS BY REPRESENTATIVE JOHN PAUL HAMMERSCHMIDT, RANKING MINORITY MEMBER OF SUBCOMMITTEE ON HOUSING AND CONSUMER INTERESTS, AT MEETING WITH PRESIDENT CARTER

Mr. President, I would like to begin by expressing my support for the viewpoints and recommendations stated by our fine subcommittee chairman, Mr. Roybal. Our subcommittee is an example of bipartisan cooperation, and the excellent report on Elderly Crime Victimization (which he has just given you) attests to the results of such cooperation.

I share Mr. Roybal's concern with the implementation of the Section 202 housing program. I would like to add one further recommendation with regard to the selection criteria for Section 202 projects. Priority is presently being given to the larger projects containing one hundred units. Although rural communities have only thirty percent of the nation's population, they have seventy percent of the country's substandard housing. It is necessary that we fund smaller Section 202 projects to meet the needs of the less populated rural communities. The lack of adequate housing in rural areas forces older people to seek housing in other communities and adds further to the breakdown of the American family.

One of the most cost-effective uses of housing funds for the elderly are low-interest loans and grants for home repairs. Often the elderly are prematurely forced into adult care homes and institutions because they do not have the funds to maintain their homes. To minimize unnecessary moves and increased costs of institutionalization, we recommend an expansion of home repair programs under Community Services Administration, the Older Americans Act and Farmers Home Administration.

Like Mr. Roybal, I wish to express my concern over any possible decreases in the construction of new subsidized housing units. Since the demand for decent, safe, and sanitary housing far exceeds the supply in many communities throughout the country, I believe that any cutback in the construction of subsidized housing would have a detrimental effect on the elderly poor.

In regard to the issue of crime and the elderly, I stand firmly with Mr. Roybal in the belief that any victim compensation bill considered by Congress must include compensation to the elderly for loss or damage to essential property.

We know that a lot of these recommendations are not new to a man who has frequently expressed his concerns and sensitivity to the problems of older Americans. We appreciate the opportunity to work with you to make these recommendations realities.

REMARKS BY REPRESENTATIVE FRED B. ROONEY, CHAIRMAN, SUBCOMMITTEE ON RETIREMENT INCOME AND EMPLOYMENT, AT MEETING WITH PRESIDENT CARTER

Mr. President, as you know, 22 million retired Americans and their dependents are collecting Social Security benefits at the rate of $84¼ billion a month. The Social Security fund may be depleted by 1980 or 1981. We applaud your efforts to secure the financial soundness of the Social Security System and want to see your proposal pass the Congress. I think we all recognize the critical nature of this problem in view of the fact that we have a population which, on the average, is growing older, retiring earlier and living longer.

The record of the hearings before my Subcommittee on Retirement Income and Employment in this session of Congress shows that—

"The proportion of older Americans at or below the poverty livel is rising. About one fifth of all persons in poverty are 65 or older.

"Increased numbers of elderly people are either unemployed or in the category of "discouraged workers" (people who have abandoned their unsuccessful job searches) who are not even included in the unemployment statistics.

"About 5 million older people in this country who are retired or unemployed want to work.

"Older workers encounter many impediments to employment which are not experienced by younger people. These barriers range from mandatory retirement policies to disincentives inherent in Social Security and private pension plans to blatant age discrimination."

Mr. President, under these circumstances, I think we should begin to rethink our notions of work and retirement and formulate some kind of a comprehensive national policy which is realistically attuned to the employment and income needs of our senior citizens.

Very briefly, I would like to recommend at least three courses of action which I believe would bring us closer to the goal of equal employment opportunity and adequate incomes for older Americans:

1. Eliminate, or at least liberalize, the $3,000 a year Social Security earnings limitation and any other provisions in the Social Security Act which discourage continued employment beyond age 65.

2. Provide incentives to both public and private employers to introduce greater flexibility into their personnel practices to better accommodate the needs of older workers. Part-time jobs, flextime and job sharing are examples.

3. Include "age" in Title VII of the Civil Rights Act and consolidate the Civil Rights enforcement mechanism in one agency. (At the present time, Title VII is enforced by the Equal Employment Opportunity Commission. The law covers race, religion, sex and national origin, but not age. The Department of Labor is charged with the enforcement of the Age Discrimination in Employment Act).

Mr. President, with an overall unemployment rate of 7.1%, I would not go so far as to say that the Government should insist upon preference in employment for senior citizens. But I do believe very strongly, especially in view of the ravages of inflation on the fixed incomes of the elderly, that any older person in this Country who wants to work, should be assured an equal chance for a job. With you and your Administration and the Congress all working together, I think this is an area in which we can make some real progress in the coming months.

Thank you, Mr. President.

REMARKS BY REPRESENTATIVE MARIO BIAGGI, CHAIRMAN OF SUBCOMMITTEE ON FEDERAL, STATE, AND COMMUNITY SERVICES, AT MEETING WITH PRESIDENT CARTER

Good morning Mr. President:

As chairman of the Federal, State and Community Services subcommittee, I am concerned with the development of programs to guarantee delivery of important services to the elderly.

Good transportation is essential. Without transportation, the aged cannot reach doctors—visit family and friends—participate in senior center activities—or even worship. Inaccessibility to public transit promotes isolation and depression. Transportation provides mobility—mobility means freedom.

In 1970, I authored an amendment declaring it national policy that the elderly and handicapped have the same rights to public transportation as all others. After 6 years of inaction—your administration has taken a giant step forward in implementing my amendment. Secretary Adams announced that effective 1979, all buses purchased with federal funds will be fully accessible. Buses comprise more than 70 percent of all public transportation and the impact of this regulation is therefore highly significant. All remaining systems must do the same.

Inaccessibility to transportation is not only physical—it is economic as well. Federal subsidies to expand free and reduced

fare programs should be increased. We also urge support of legislation, already passed by the House, providing reduced air fares for the elderly.

We seek the establishment of a national meals on wheels program. Less than one percent of our four million homebound elderly are now served by Federal meals on wheels programs. Twenty-five percent of the one million in nursing homes today are there because they cannot maintain proper diets. This costs $400 million a year—for less than $200 million, these same people could receive homebound meals.

Elderly have been made prime targets for crime—hence we recommend strict penalties for those found guilty of such acts. Further, we support legislation to provide Federal assistance to states with crime victim compensation programs.

We also endorse the abolition of mandatory retirement. We feel a provision to stop this form of discrimination should be included in your social security reform proposal. Each year, 60,000 workers are forced to retire. A recent social security study reported that more than half of them wished to continue working. To allow them to work, would add some $140 million in contributions to the system in the first year. Contributions would total $2.1 billion after five years. We have submitted this proposal to Mr. Eisenstadt for review.

We also urge that funding for the title X elderly employment program be made permanent, as those employed by title X gain a sense of self-worth as well as economic security.

I would like to briefly mention two other issues of concern to our subcommittee.

The elderly Indian population in this Nation has numerous and complex problems. They merit the attention of both the Congress and the adminstration.

The recently published regulations for title V of the Older Americans Act, establishing multi-purpose Senior centers precludes leasing as a form of acquisition. Individual merit and need should be the primary criteria—not whether the facility will be leased or purchased.

REMARKS BY REPRESENTATIVE WILLIAM S. COHEN, RANKING MINORITY MEMBER, SUBCOMMITTEE ON HEALTH AND LONG-TERM CARE, AT MEETING WITH PRESIDENT CARTER

Mr. President, it is a privilege to be here.

The illnesses of the elderly tend to be chronic, not acute. Yet, we have attempted to treat these afflictions within a costly, acute-care model. We have promoted this method of health care delivery through government sponsored programs such as Medicare and Medicaid. Not only is this care often inappropriate, but its soaring costs threaten the availability of care.

My own observations have lead me to believe that we need to develop innovative options to complement our existing medical care system. We urgently need to emphasize social care as a necessary component for the care of the chronically ill. Likewise, we need to maintain the role of the family in protecting the health of its members.

I believe one important initiative we can and should undertake is the expansion of health care in the home. Mr. Pepper has mentioned legislation which seeks to increase the portion of Federal health expenditures allotted for home health care. Studies indicate that between 15 and 40 per cent of the 1 million patients in American nursing homes could live at home if alternate forms of care were made available. In addition, one out of every six Americans who are not institutionalized need direct social and health services to manage their own affairs within their own homes and communities.

Before the Federal government agrees to pay the bills for any new programs, however, steps should be taken to ensure the quality of care provided. I have introduced legislation which seeks to set standards for training, review and certification of the providers of home health care. This legislation, as a forerunner of the sorely needed legislation to expand these necessary services, is an essential step in the evolution of a more uniform, coordinated, and rational approach to the Federal financing of home health care.

Recently, the House Ways and Means and Interstate and Foreign Commerce Committees approved an amendment to H.R. 3, the Medicare and Medicaid Anti-fraud and Abuse Act, which incorporates the basic elements of my proposal. I was pleased that members of the Carter Administration contributed to the working of the amendment. I hope that this active participation is a sign of your support for a prudent, planned expansion of government support for home health care.

CONFERENCE REPORT ON H.R. 7558

Mr. WHITTEN submitted the following conference report and statement on the bill (H.R. 7558) making appropriations for the agriculture and related agencies programs for the fiscal year ending September 30, 1978, and for other purposes:

CONFERENCE REPORT (H. REPT. No. 95–520)

The Committee of Conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7558) "making appropriations for the Agriculture and Related Agencies programs for the fiscal year ending September 30, 1978, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 3, 4, 5, 6, 7, 8, 13, 14, 15, 21, 22, 23, 24, 32, 33, 34, 40, 42, 43, 44, 56, 61, 63, 69, 76, 77, 79, 86, 97, 100, and 101.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 20, 26, 35, 45, 47, 48, 49, 50, 51, 52, 55, 57, 62, 66, 67, 68, 70, 73, 74, 82, 83, 84, 85, 87, 88, 89, 90, 94, and 96, and agree to the same.

Amendment numbered 9: That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment insert the following: "$20,-204,000, and in addition, $8,231,000 shall be derived by transfer from the appropriation, "Food Stamp Program" and merged with this appropriation".

And the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$9,450,000"; and the Senate agree to the same.

Amendment numbered 11: That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$11,000,000"; and the Senate agree to the same.

Amendment numbered 12: That the House recede from its disagreement to the amendment of the Senate numbered 12, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$324,859,000"; and the Senate agree to the same.

Amendment numbered 16: That the House recede from its disagreement to the amendment of the Senate numbered 16, and agree to the same with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment insert the following: "8.5"; and the Senate agree to the same.

Amendment numbered 18: That the House recede from its disagreement to the amendment of the Senate numbered 18, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$5,750,000"; and the Senate agree to the same.

Amendment numbered 19: That the House recede from its disagreement to the amendment of the Senate numbered 19, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$441,204,000"; and the Senate agree to the same.

Amendment numbered 25: That the House recede from its disagreement to the amendment of the Senate numbered 25, and agree to the same with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment insert the following: "8.5"; and the Senate agree to the same.

Amendment numbered 27: That the House recede from its disagreement to the amendment of the Senate numbered 27, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$109,066,000"; and the Senate agree to the same.

Amendment numbered 28: That the House recede from its disagreement to the amendment of the Senate numbered 28, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$9,500,000"; and the Senate agree to the same.

Amendment numbered 29: That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$21,388,000"; and the Senate agree to the same.

Amendment numbered 30: That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$143,150,000"; and the Senate agree to the same.

Amendment numbered 31: That the House recede from its disagreement to the amendment of the Senate numbered 31, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$176,031,000"; and the Senate agree to the same.

Amendment numbered 36: That the House recede from its disagreement to the amendment of the Senate numbered 36, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$251,024,000"; and the Senate agree to the same.

Amendment numbered 37: That the House recede from its disagreement to the amendment of the Senate numbered 37, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$6,877,000"; and the Senate agree to the same.

Amendment numbered 38: That the House recede from its disagreement to the amendment of the Senate numbered 38, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$36,996,000"; and the Senate agree to the same.

Amendment numbered 39: That the House recede from its disagreement to the amend-

ment of the Senate numbered 39, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$29,864,000"; and the Senate agree to the same.

Amendment numbered 41: That the House recede from its disagreement to the amendment of the Senate numbered 41, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$46,484,000"; and the Senate agree to the same.

Amendment numbered 46: That the House recede from its disagreement to the amendment of the Senate numbered 46, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$3,370,000"; and the Senate agree to the same.

Amendment numbered 53: That the House recede from its disagreement to the amendment of the Senate numbered 53, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$3,379,000,000"; and the Senate agree to the same.

Amendment numbered 54: That the House recede from its disagreement to the amendment of the Senate numbered 54, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,330,000,000"; and the Senate agree to the same.

Amendment numbered 58: That the House recede from its disagreement to the amendment of the Senate numbered 58, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$620,000,000"; and the Senate agree to the same.

Amendment numbered 59: That the House recede from its disagreement to the amendment of the Senate numbered 59, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$550,000,000"; and the Senate agree to the same.

Amendment numbered 60: That the House recede from its disagreement to the amendment of the Senate numbered 60, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$825,000,000"; and the Senate agree to the same.

Amendment numbered 64: That the House recede from its disagreement to the amendment of the Senate numbered 64, and agree to the same with an amendment, as follows: In lieu of the sum named by said amendment insert "$5,000,000"; and the Senate agree to the same.

Amendment numbered 65: That the House recede from its disagreement to the amendment of the Senate numbered 65, and agree to the same with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment insert the following: "$185,184,000"; and the Senate agree to the same.

Amendment numbered 72: That the House recede from its disagreement to the amendment of the Senate numbered 72, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$156,492,000"; and the Senate agree to the same.

Amendment numbered 80: That the House recede from its disagreement to the amendment of the Senate numbered 80, and agree to the same with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment insert the following: "For necessary expenses to carry out the provisions of the National School Lunch Act, as amended (42 U.S.C. 1751–1761, and 1766), and the applicable provisions other than section 3 of the Child Nutrition Act of 1966, as amended (42 U.S.C. 1773–1785, and 1787); $2,422,901,000, of which $934,557,000 shall be derived by transfer from funds available under section 32 of the Act of August 24, 1935 (7 U.S.C. 612c): *Provided*, That of the foregoing total amount there shall be available $28,000,000 for the nonfood assistance program, $1,000,000 for nutrition education projects pursuant to section 18 of the Child Nutrition Act of 1966 (42 U.S.C. 1787), and $13,675,000 for the State administrative expenses: *Provided further*, That funds provided herein shall remain available until expended in accordance with section 3 of the National School Lunch Act, as amended: *Provided further*, That an additional $80,000,000 shall be transferred to this appropriation from funds available under section 32 of the Act of August 24, 1935 (7 U.S.C. 612c), for purchase and distribution of agricultural commodities and other foods pursuant to section 6 of the National School Lunch Act, as amended."

And the Senate agree to the same.

Amendment numbered 81: That the House recede from its disagreement to the amendment of the Senate numbered 81, and agree to the same with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment insert the following: "$155,000,000"; and the Senate agree to the same.

Amendment numbered 92: That the House recede from its disagreement to the amendment of the Senate numbered 92, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$45,665,000"; and the Senate agree to the same.

Amendment numbered 95: That the House recede from its disagreement to the amendment of the Senate numbered 95, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$13,196,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 2, 17, 71, 75, 78, 91, 93, 98, and 99.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and Senate at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7558) making appropriations for Agriculture and Related Agencies programs for the fiscal year ending September 30, 1978, and for other purposes, submit the following joint statement to the House and Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

TITLE I—AGRICULTURAL PROGRAMS

Office of the Secretary

Amendment No. 1: Appropriates $2,496,000 for the Office of the Secretary as proposed by the Senate instead of $2,440,000 as proposed by the House.

The conference agreement restores the House reduction of $56,000 for GSA space rental costs.

The conferees direct that the General Accounting Office shall conduct a review of the space rental rates charged the Department of Agriculture by the General Services Administration. The review shall be completed and a report submitted to the House and Senate Appropriations Committees no later than January 1, 1978.

Amendment No. 2; Reported in technical disagreement. The managers on the part of the House will move to concur in the amendment of the Senate with an amendment as follows: "; in addition to appropriations provided herein, the Secretary may transfer up to $1,500,000 for salaries and expenses of personnel on detail to his office".

The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

The conference agreement provides a transfer of up to $1.5 million from other appropriations explicitly provided in the bill (not from any transfer authority or CCC borrowing) in order to properly align the funding for personnel on detail. The Senate proposed a limitation of $2 million.

The conferees will expect the Department to notify appropriate Congressional committees regarding the amount and sources of the transfers, as well as the types of personnel on detail. The conferees will also expect the Department, in the fiscal year 1979 budget, to request those funds and personnel deemed to be necessary to the Office of the Secretary directly under this appropriation item.

Departmental Administration

Amendment No. 3: Earmarks $3,568,721 for Budget, Fiscal and Management as proposed by the House instead of $3,572,721 as proposed by the Senate.

Amendment No. 4: Earmarks $1,670,217 for General Operations as proposed by the House instead of $1,673,217 as proposed by the Senate.

Amendment No. 5: Earmarks $2,146,127 for Personnel Administration as proposed by the House instead of $2,149,127 as proposed by the Senate.

Amendment No. 6: Earmarks $1,444,600 for Equal Opportunity as proposed by the House instead of $1,446,600 as proposed by the Senate.

Amendment No. 7: Earmarks $5,245,000 for Information Services as proposed by the House instead of $5,249,000 as proposed by the Senate.

Amendment No. 8: Appropriates $14,276,000 for Department Administration as proposed by the House instead of $14,292,000 as proposed by the Senate.

Office of the Inspector General

Amendment No. 9: Appropriates $20,204,000 for the Office of the Inspector General instead of $20,093,000 as proposed by the House and $28,458,000 as proposed by the Senate.

The conference agreement provides that the transfer of $8,231,000 from the Food Stamp Program be continued, and the conferees will expect that at least that amount be used for activities relating to food stamps.

The conference agreement restores the House reduction of $111,000 for GSA space rental costs.

Office of the General Counsel

Amendment No. 10: Appropriates $9,450,000 for the Office of the General Counsel instead of $9,383,000 as proposed by the

House and $9,461,000 as proposed by the Senate. The conference agreement restores the House reduction of $67,000 for GSA space rental costs and deletes the Senate restoration of $11,000 for the annualization of pay costs.

Federal Grain Inspection Service

Salaries and Expenses

Amendment No. 11: Appropriates $11,000,000 for salaries and expenses of the Federal Grain Inspection Service instead of $10,944,000 as proposed by the House and $13,595,000 as proposed by the Senate. The conference agreement restores the House reduction of $56,000 for GSA space rental costs and deletes the Senate restoration of $2,595,000 for Washintgon personnel.

Agriculture Research Service

Amendment No. 12: Appropriates $324,859,000 for the Agricultural Research Service instead of $304,495,000 as proposed by the House and $362,812,000 as proposed by the Senate.

The conferees agreed to $1,100,000 in planning funds for the proposed North Central Regional Dairy Forage Research Center instead of $10,000,000 in planning and construction funds as proposed by the Senate. The conferees will expect the Department to design a facility that will not duplicate the work carried on at the other 56 locations where dairy/forage research is now conducted and that will not exceed $9,000,000 to construct and equip.

The conferees agreed to $3,500,000 for the construction of an addition to the Human Nutrition Lab at Grand Forks, North Dakota and $375,000 for replacement of a greenhouse facility at the Northern Great Plains Research Station at Mandan, North Dakota as proposed by the Senate.

The conferees have agreed that funds proposed for reprogramming by the Agricultural Research Service may be used for the construction of the Soil and Water Lab at Beckley, West Virginia, instead of a direct appropriation of $1,509,000 as proposed by the Senate.

The conferees have also agreed to a sum not to exceed $400,000 for planning a Soil and Water Lab at Purdue University. The conferees will expect this laboratory to coordinate its activities with the National Soil Sedimentation Laboratory at Oxford, Mississippi. The conferees will also expect the Department to maintain a regularly scheduled flow of work through the National Soil Sedimentation Laboratory rather than scheduling work on an intermittent basis

The conference agreement includes $1,500,000 for the replacement of the feed mill at El Reno, Oklahoma instead of $2,000,000 as proposed by the Senate.

The conferees have agreed to $2,000,000 in planning funds for the establishment of an adult human nutrition research facility at Tufts University in Massachusetts. In planning the new facility, the conferees will expect the Department to provide for a facility that can serve as a center for nutrition research available not only to USDA but to the local university and to leading nutrition scientists and the Food and Drug Administration.

The conferees have agreed to delete without prejudice the appropriation of planning funds for the establishment of a pediatric human nutrition research facility at the Baylor School of Medicine in Texas.

The conferees have also agreed to delete without prejudice the planning funds for moving the Denver Lab to Ft. Collins, Colorado. The conferees will expect the Department to review this proposal and report to the Committees with respect to the scheduling of the relocation of this laboratory.

The conferees have agreed to the Senate increase of $100,000 for a feasibility study of the need for a plant and moisture stress laboratory.

The conferees have agreed to an increase of $300,000 for the Appalachian Fruit Research Station at Kearneysville, West Virginia, instead of an increase of $375,000 as proposed by the Senate.

The conferees have not agreed to the proposed increase of $1,500,000 for staff for the North Central Dairy Lab since the Lab will not be completed during the fiscal year 1978.

The conferees have agreed to an increase of $1,000,000 for laboratory maintenance instead of an increase of $2,000,000 as proposed by the Senate.

The conference agreement provides $15,000,000 for a competitive grant program as proposed by the House instead of $27,600,000 as proposed by the Senate. Of this amount, $5,000,000 shall be reserved for human nutrition research. The grants will be awarded the most qualified scientists in colleges, universities, Federal agents and other public as well as private organizations. The eligible individuals would include, among others, scientists in the Agricultural Research Service at Beltsville, Maryland; Grand Forks, N. Dak.; and other locations, and also scientists at universities such as Tufts and Baylor.

The conferees have agreed to $74,900 for filbert research as proposed by the House instead of $64,900 as proposed by the Senate.

For mint research the conferees have agreed to a total of $137,100 instead of $91,100 as proposed by the House and $196,100 as proposed by the Senate.

Also included in the agreement is $1,086,800 for sunflower research as proposed by the House instead of $886,800 as proposed by the Senate.

For english walnut research the agreement includes $66,700 as proposed by the House instead of $16,700 as proposed by the Senate.

For soybean research the agreement includes $11,000,000 instead of $10,000,000 as proposed by the House and $11,350,000 as proposed by the Senate.

The agreement also includes $50,000 for guayule research as proposed by the House. The Senate had proposed to delete the House increase for this item.

The agreement includes a $100,000 increase over the budget request for the National Sedimentation Laboratory as proposed by the House.

Also included in the agreement is an increase of $60,000 over the House for stem rust research instead of an increase of $120,000 as proposed by the Senate.

The agreement provides an increase over the House of $173,000 for research on the Lone Star Tick instead of $345,000 as proposed by the Senate.

The conferees have agreed to $23,250,000 for research on beef cattle instead of $22,730,000 as proposed by the House and $23,770,000 as proposed by the Senate. The $520,000 in additional funds are to be utilized for work on methods of livestock management, including animal transportation work, as well as forage research. The Department is directed to undertake an accelerated research program in this area to the extent possible within available funds.

The agreement includes an increase of $1,000,000 for a study of the nutritional impact of USDA feeding programs, rather than an increase of $3,000,000 as proposed by the Senate. The conferees will expect the Department to pay particular attention to the impact of the food stamp program, the elderly feeding program, the food donations program, and the school lunch program with special attention to plate waste.

For cucumbers, onions and carrots the agreement includes $881,800 instead of $731,800 as proposed by the House and $1,181,800 as proposed by the Senate.

For citrus blackfly research the agreement includes $500,000 instead of $271,000 as proposed by the House and $971,000 as proposed by the Senate.

For tanning research the agreement includes $1,537,000 instead of $852,000 as proposed by the House and $2,222,000 as proposed by the Senate. Also included in the agreement is an increase over the House bill of $82,000 for GSA space rental costs and $144,000 for the restoration of a general reduction.

The conference agreement includes an increase of $1,000,000 over the House figure for brucellosis research. The conferees will expect the Secretary to present to the Committee a timetable for development of an effective adult vaccination program for eradication of brucellosis. This should include an accelerated research program of sufficient scale to bring about timely eradication of brucellosis in those remaining problem states.

The conference agreement maintains the contingency fund at $1,000,000 instead of $2,000,000 as proposed by the Senate.

The conferees also agreed to the House bill with respect to the annualization of pay costs rather than the restoration of $1,012,000 as proposed by the Senate.

Amendment No. 13: Limits the cost of constructing any one building to $65,000 as proposed by the House instead of $70,000 as proposed by the Senate.

Amendments No. 14 and 15: Allow for the construction of 8 buildings at a cost of $125,000 as proposed by the House instead of 10 buildings at a cost of $135,000 as proposed by the Senate.

Amendment No. 16: Limits the cost of altering any one building to 8.5 per centum of the current replacement value of the building instead of 7.5 per centum as proposed by the House and 10 per centum as proposed by the Senate.

Amendment No. 17: Reported in technical disagreement. The managers on the part of the House will move to concur in the Senate amendment with an amendment as follows:

That $8,975,000 of this appropriation shall remain available until expended for plans, construction, and improvement of facilities without regard to the foregoing limitation: *Provided further,*

The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

Scientific Activities Overseas

(Special foreign currency programs)

Amendment No. 18: Appropriates $5,750,000 for Scientific Activities Overseas instead of $5,000,000 as proposed by the House and $6,500,000 as proposed by the Senate.

Animal and Plant Health Inspection Service

Amendment No. 19: Appropriates $441,204,000 for the Animal and Plant Health Inspection Service instead of $429,225,000 as proposed by the House and $471,420,000 as proposed by the Senate.

The conference agreement includes $53,000,000 for brucellosis eradication instead of $46,331,000 as proposed by the House and $69,831,000 as proposed by the Senate. Additional funds for brucellosis research were agreed to under Amendment No. 12.

The conferees concur with the House position that funds requested for a trial boll weevil eradication program be held in reserve until the Director of boll weevil research at the Boll Weevil Laboratory certifies to appropriate Congressional committees that a substantial and sufficient scientific breakthrough has been achieved, and that he recommends the program be initiated; and, that each of the three States to be involved has passed and implemented the necessary legislation and has demonstrated to appropriate Congressional committees that they are legally and financially prepared to fulfill their responsibilities under the program.

The conferees agreed to $3,927,000 for witchweed as proposed by the House, instead of $6,927,000 as proposed by the Senate.

The conference agreement restores the House reduction of $1,150,000 for GSA space rental costs, as proposed by the Senate, and also maintains the decrease of $294,000 in pay costs annualization as proposed by the House. The conferees agreed to retain the reduction of $1,000,000 in travel, transportation, supplies and materials, equipment and other services as proposed by the House.

The conferees have agreed to $500,000 for range caterpillar control, instead of $2,000,000 as proposed by the Senate and no funding as proposed by the House.

The conferees are of the opinion that further research would be helpful to any control program, and funds for such research were agreed to under Amendment No. 29.

The conference agreement provides an additional $1,000,000 to continue a fire ant quarantine program, instead of an increase of $7,541,000 as proposed by the Senate. In addition, a reserve of $4,460,000 is provided under Amendment No. 21, as proposed by the House.

For citrus blackfly the agreement includes $4,712,000 as proposed by the Senate instead of $3,202,000 as proposed by the House. The conferees will expect these funds to be provided to States in proportion to whatever the needs may be at the time.

The conferees agreed to $200,000 for horse protection instead of $100,000 as proposed by the House and $500,000 as proposed by the Senate.

The conferees have agreed to $1,000,000 for pseudorabies control, instead of $1,550,000 as proposed by the Senate and no new program as proposed by the House. These funds are available for use, if needed, subsequent to the review and determination referred to by the Secretary in his letter of July 15, 1977. The conferees will expect the Department to make special efforts to apply the same control measures for pseudorabies to all segments of the swine industry including swine for slaughter and swine for breeding purposes. The conferees are of the opinion that additional research would be helpful to any control program and included in the conference agreement is $300,000 for the conduct of such research.

For activities under the recent amendments to the Animal Welfare Act the agreement includes $508,000 instead of $208,000 as proposed by the House and $808,000 as proposed by the Senate. The increased funds are for transportation-related activities. The conferees will expect the Department to review, prior to the fiscal 1979 budget hearings, the license fee structure under this activity to determine whether fees are in proper proportion to the costs of inspections.

For Japanese beetle the agreement includes $100,000 for spot checks as proposed by the House, instead of no funding as proposed by the Senate.

Amendment No. 20: Provides a contingency reserve of $2,500,000 as proposed by the Senate instead of $2,750,000 as proposed by the House. The conferees will expect nonearmarked contingency funds to be available if needed in regard to Japanese beetle control.

Amendment No. 21: Provides that $4,460,000 "may" be used to repay the Commodity Credit Corporation at the end of the fiscal year if not needed for the fire ant program, instead of "shall" be used for repayment as proposed by the Senate.

Amendment No. 22: Provides a limitation of $62,500 on the cost of constructing any one building as proposed by the House instead of $70,000 as proposed by the Senate.

Amendments No. 23 and 24: Provide limitations to allow for the construction or improvement of 3 buildings at a cost not to exceed $120,000 as proposed by the House instead of 4 buildings at a cost not to exceed $135,000 as proposed by the Senate.

Amendment No. 25: Provides a limitation on the cost of altering any one building of 8.5 per centum of the current replacement value of the building instead of 7.5 per centum as proposed by the House and 10 per centum as proposed by the Senate.

Cooperative State Research Service

Amendment No. 26: Deletes the words "grants for" as proposed by the Senate since McIntyre-Stennis funds are apportioned to the States on an administrative basis rather than by grant award.

Amendment No. 27: Appropriates $109,066,000 for payments to agricultural experiment stations under the Hatch Act and for penalty mail instead of $106,066,000 as proposed by the House and $116,066,000 as proposed by the Senate.

Amendment No. 28: Appropriates $9,500,000 for grants for cooperative forestry research instead of $9,000,000 as proposed by the House and $10,712,000 as proposed by the Senate.

Amendment No. 29: Appropriates $21,388,000 for contracts and grants for scientific research instead of $19,688,000 as proposed by the House and $21,509,000 as proposed by the Senate.

The conferees have agreed upon $100,000 for fever tick research as proposed by the Senate and $1,500,000 for range caterpillar research as proposed by the Senate.

The conference agreement also includes $450,000 for the STEEP program instead of $350,000 as proposed by the House and $571,000 as proposed by the Senate.

The Committee has been advised that the Extension Service is extremely concerned over the possibility of GSA classifying them as grantees and thereby eliminating the current program of Federal excess property utilization by State and County Extension Offices.

The Committee feels that because of the unique relationship which exists between the Department and the Land-Grant Universities in carrying out Cooperative Extension Programs that this program should not be considered the same as other programs financed by Federal grants for the purpose of establishing uniform or standard procedures for administering such programs. Therefore, it is the desire of the conferees that the Extension Service continue to obtain Federal excess property for assignment to State and County Extension Offices for use in approved Extension programs considered the official business of the Department. Likewise, State Cooperative Extension Services should be eligible to utilize GSA supplies and contracts.

In view of disturbing occurrences of "boxwood decline", a progressive disease of English boxwoods not yet adequately differentiated and for which no reliable arresting agent has been identified, and as spread of this disease would threaten invaluable plantings of English boxwoods of great age around historical homes and shrines and cause significant economic damage to boxwood nursery operations, the conferees recommend that the Department undertake intensified support of current investigations of "boxwood decline".

Amendment No. 30: Provides a total of $143,150,000 for the Cooperative State Research Service instead of $137,950,000 as proposed by the House and $151,483,000 as proposed by the Senate.

Extension Service

Amendment No. 31: Appropriates $176,031,000 for cooperative extension work under the Smith-Lever Act instead of $172,781,000 as proposed by the House and $179,281,000 as proposed by the Senate.

Amendment No. 32: Appropriates $50,560,000 for nutrition and family education for low income areas as proposed by the House instead of $49,060,000 as proposed by the Senate. Included in the agreement is the full amount proposed by the House for the 4–H program.

Amendment No. 33: Appropriates $3,000,000 for urban gardening as proposed by the House instead of $1,500,000 as proposed by the Senate.

Amendment No. 34: Appropriates $9,333,000 for the 1890 Colleges and Tuskegee Institute as proposed by the House instead of $8,833,000 as proposed by the Senate. The conference agreement provides an increase of $500,000 for the purchase of equipment as proposed by the House.

Amendment No. 35: Appropriates $2,500,000 for rural development education as proposed by the Senate instead of $1,500,000 as proposed by the House.

Amendment No. 36: Provides $251,024,000 for the Extension Service instead of $246,774,000 as proposed by the House and $250,774,000 as proposed by the Senate.

National Agricultural Library

Amendment No. 37: Appropriates $6,877,000 for the National Agricultural Library instead of $6,819,000 as proposed by the House and $6,880,000 as proposed by the Senate.

The conference agreement restores the House reduction of $58,000 for GSA space rental costs.

Statistical Reporting Service

Amendment No. 38: Appropriates $36,996,000 for the Statistical Reporting Service instead of $36,600,000 as proposed by the House and $37,508,000 as proposed by the Senate. The conference agreement restores the House reduction of $396,000 for GSA space rental costs.

Economic Research Service

Amendment No. 39: Appropriates $29,864,000 for the Economic Research Service instead of $28,642,000 as proposed by the House and $30,905,000 as proposed by the Senate. The conference agreement restores the House reduction of $222,000 for GSA space rental costs and also provides $1,000,000 for the direct distribution to farmers of an annual commodity analysis, supplemented by periodic newsletters, covering current production and marketing data.

Agricultural Marketing Service

Marketing Services

Amendment No. 40: Restores language deleted by the Senate which provides for the administration and coordination of payments to States.

Amendment No. 41: Appropriates $46,484,000 for Marketing Services instead of $46,379,000 as proposed by the House and $50,927,000 as proposed by the Senate. The conference agreement restores the House reduction of $105,000 for GSA space rental costs.

Amendment No. 42: Restores language deleted by the Senate which provides for payments to States and Possessions under the Agricultural Marketing Act of 1946 in the amount of $1,600,000.

Funds for strengthening markets, income, and supply

(Section 32)

Amendments No. 43 and 44: Restore language deleted by the Senate which provides for the transfer of $4,443,000 from Sec. 32 funds to the Agricultural Marketing Service for the formulation of Marketing Agreements and Orders.

Packers and Stockyards Administration

Amendment No. 45: Appropriates $6,252,000 for the Packers and Stockyards Administration as proposed by the Senate instead of $6,146,000 as proposed by the House. The conference agreement restores the House reduction of $6,000 for GSA space rental costs and adds $100,000 as proposed by the Senate for increased investigation of payoffs and commercial bribery.

Farmer Cooperative Service

Amendment No. 46: Appropriates $3,370,000 for the Farmer Cooperative Service instead of $3,048,000 as proposed by the House and

$3,770,000 as proposed by the Senate. The conference agreement restores the House reduction of $22,000 for GSA space rental costs and adds $300,000 over the House bill for studies of export markets.

Farm income stabilization

Agricultural Stabilization and Conservation Service

Salaries and expenses

Amendment No. 47: Appropriates $161,838,000 for salaries and expenses for the Agricultural Stabilization and Conservation Service as proposed by the Senate instead of $161,019,000 as proposed by the House. The conference agreement restores the House reduction of $819,000 for GSA space rental costs.

Federal Crop Insurance Corporation

Federal Crop Insurance Corporation Fund

Amendment No. 48: Provides a limitation of $11,413,000 for the Federal Crop Insurance Corporation Fund as proposed by the Senate instead of $11,283,000 as proposed by the House.

The conference agreement restores the House reduction of $130,000 for GSA space rental costs.

Commodity Credit Corporation

Limitation on administrative expenses

Amendment No. 49: Deletes a specific amount of funds for the Office of the General Sales Manager as proposed by the Senate.

Amendments No. 50 through 52: Delete references to Public Law 480 as proposed by the Senate. The deletion of the House language allows the Secretary discretion as to the organizational location of the P.L. 480 program.

TITLE II—RURAL DEVELOPMENT PROGRAMS

Rural development assistance

Farmers Home Administration

Rural housing insurance fund

Amendment No. 53: Provides $3,379,000,000 for insured loans as authorized by Title V of the Housing Act of 1949, as amended, instead of $3,284,000,000 as proposed by the House and $3,504,000,000 as proposed by the Senate.

The increase over the House amount provides for an additional $70,000,000 in low-income loans and $25,000,000 in moderate-income loans.

Amendment No. 54: Earmarks $2,330,000,000 for subsidized interest loans to low-income borrowers instead of $2,260,000,000 as proposed by the House and $2,430,000,000 as proposed by the Senate.

Amendment No. 55: Provides $900,000,000 for unsubsidized interest guaranteed loans as proposed by the Senate instead of $1,000,000,000 as proposed by the House. These funds are to be provided in accordance with the authorization of the guaranteed loan program. In no event shall they be utilized for providing loans to persons with incomes in excess of $20,000 or who can obtain credit elsewhere.

Amendment No. 56: Deletes language added by the Senate which provided that not less than $400,000,000 of the amount provided for guaranteed loans shall be for above-moderate income borrowers.

The conferees will expect the Department to review its definition of "moderate income" and make appropriate changes in the ceiling so as to reflect the impact of inflation.

Amendment No. 57: Deletes House language which provides "such amounts as may be necessary" for the rental assistance program and adds Senate language which provides "not to exceed $17,000,000 in fiscal year 1978" thereby placing a fixed limitation on the size of the program.

Agricultural Credit Insurance Fund

Amendment No. 58: Provides $620,000,000 for insured real estate loans instead of $520,000,000 as proposed by the House and $670,000,000 as proposed by the Senate.

Amendment No. 59: Earmarks $550,000,000 for farm ownership loans instead of $450,000,000 as proposed by the House and $600,000,000 as proposed by the Senate.

Amendment No. 60: Provides $825,000,000 for operating loans instead of $750,000,000 as proposed by the House and $900,000,000 as proposed by the Senate.

Very Low-Income Housing Repair Grants

Amendment No. 61: Restores House language which limited the Very Low-Income Housing Repair Grants "to the elderly". The conferees intend to monitor the use of funds under this program closely during the coming year.

Rural Development Insurance Fund

Amendment No. 62: Deletes House language limiting this program to guaranteed loans. The conferees were advised that guaranteed industrial development loans are not practical for Indian tribes since in many cases clear title to the collateral is not available. However, with the exception of some loans to Indian tribes, all other loans are to be guaranteed. In addition, the $1,000,000,000 provided in the conference agreement is the ceiling on total amount of loans to be made under this program.

Housing Technical and Supervisory Assistance Grants

Amendment No. 63: Deletes language added by the Senate which would have appropriated $1,000,000 to fund Sec. 525(a) Housing and Technical Assistance Grants.

Rural Development Planning Grants

Amendment No. 64: Appropriates $5,000,000 for Rural Development Planning Grants instead of $10,000,000 as proposed by the Senate.

Salaries and Expenses

Amendment No. 65: Appropriates $185,184,000 for salaries and expenses for the Farmers Home Administration instead of $182,600,000 as proposed by the House and $201,184,000 as proposed by the Senate. In addition, the conference agreement deletes House language which provided that the Rural Development Service be absorbed by the Farmers Home Administration. The conferees agree that the Rural Development Service should be under the direct supervision of the Deputy Secretary of Agriculture so that they may receive better direction.

The conference agreement also provides for 300 additional permanent positions instead of 1000 as proposed by the Senate. All of the additional positions are to be located outside of the Metropolitan Washington area.

Rural Development Service

Amendment No. 66: Appropriates $1,663,000 for the Rural Development Service and maintains it as a separate organizational entity as proposed by the Senate.

Rural Electrification Administration

Salaries and Expenses

Amendment No. 67: Appropriates $22,567,000 for salaries and expenses for the Rural Development Administration as proposed by the Senate instead of $22,551,000 as proposed by the House. The conference agreement restores the House reduction of $16,000 for GSA space rental costs.

Conservation—Soil Conservation Service

Conservation Operations

Amendment No. 68: Appropriates $229,060,000 for Conservation Operations as proposed by the Senate instead of $226,051,000 as proposed by the House. The conference agreement restores the House reduction of $3,009,000 for GSA space rental costs.

Amendment No. 69: Restores language deleted by the Senate which allows up to $1,000,000 to be used to relocate endangered species to other suitable habitats.

River Basin Surveys and Investigations

Amendment No. 70: Appropriates $15,506,000 for River Basin Surveys and Investigations as proposed by the Senate instead of $15,420,000 as proposed by the House. The conference agreement restores the House reduction of $86,000 for GSA space rental costs.

Watershed Planning

Amendment No. 71: Reported in technical disagreement. The managers on the part of the House will move to concur in the Senate amendment with an amendment. The conference agreement appropriates $11,847,000 for Watershed Planning instead of $11,778,000 as proposed by the House and $10,647,000 as proposed by the Senate. The conference agreement restores the House reduction of $69,000 for GSA space rental costs and the Senate reduction of $1,200,000 for new planning starts. The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

Watershed and Flood Prevention Operations

Amendment No. 72: Appropriates $156,492,000 for Watershed and Flood Prevention Operations instead of $148,677,000 as proposed by the House and $158,992,000 as proposed by the Senate. The conference agreement restores the House reduction of $315,000 for GSA space rental costs and adds an additional $7,500,000 for new construction starts under P.L. 566 instead of $10,000,000 as proposed by the Senate.

Amendment No. 73: Earmarks $26,044,000 for watersheds authorized under the Flood Control Act of 1936 as proposed by the Senate instead of $25,981,000 as proposed by the House. The Senate increase reflects the pro rata share of GSA space rental costs restored by Amendment No. 72.

Resource Conservation and Development

Amendment No. 74: Appropriates $31,033,000 for Resource Conservation and Development as proposed by the Senate instead of $30,964,000 as proposed by the House. The conference agreement restores the House reduction of $69,000 for GSA space rental costs.

Agricultural stabilization and conservation service

Agricultural Conservation Program

Amendment No. 75: Reported in technical disagreement. The managers on the part of the House will move to concur in the Senate amendment with an amendment which reads as follows: "of which $25,000,000 shall be available immediately upon enactment,".

The conference agreement provides that $25,000,000 would be available in fiscal year 1977 to liquidate contracts entered into during fiscal year 1977 instead of $75,000,000 as proposed by the Senate.

The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

Amendment No. 76: Deletes language added by the Senate which would have had the effect of converting the Agricultural Conservation Program from a contract authority program to a direct appropriation program.

Amendment No. 77: Restores the House language which provides for $190,000,000 in contract authority for fiscal year 1978.

Amendment No. 78: Reported in technical disagreement. The managers on the part of the House will move to concur in the amendment of the Senate which reads as follows: : *Provided further*, That for an additional amount to carry out the Agricultural Conservation Program, $50,000,000, to be immediately available upon enactment, to incur obligations for the period ending September 30, 1977, and to liquidate such obligations

for soil and water conserving practices in major drought or flood damaged areas as designated by the President or the Secretary of Agriculture: *Provided further,* That, not to exceed 5 per centum of the amount herein may be withheld with the approval of the State committee and allotted to the Soil Conservation Service for services of its technicians in the designated drought or flood damaged areas

The conferees agree that monies appropriated for this program be for reimbursement to farmers for expenditures incurred beginning on the date of the Presidential disaster declaration as authorized by law.

Forestry Incentives Program

Amendment No. 79: Appropriates $15,000,000 for the Forestry Incentives Program as proposed by the House instead of $7,500,000 as proposed by the Senate. The conferees will expect the Department to fully utilize carryover funds.

TITLE III—DOMESTIC FOOD PROGRAMS

Food and Nutrition Service

Child Nutrition Programs

Amendment No. 80: Appropriates $1,488,344,000 and provides a transfer of $1,014,557,000 from Section 32 for Child Nutrition Programs instead of an appropriation of $1,488,344,000 and $1,014,557,000 by transfer as proposed by the House and an appropriation of $1,183,901,000 and $1,319,000,000 by transfer as proposed by the Senate.

The conference agreement includes $1,000,000 for a new program of nutrition education grants to schools, as proposed by the Senate.

The conference agreement deletes the limitation of $13,504,000 on Federal Operating Expenses and provides a separate appropriation for Food Program Administration as proposed by the Senate (see Amendment No. 91).

Included in the Conference agreement is a transfer of $242,725,000 in commodities to States from Section 32 as proposed by the House, instead of a direct cash transfer as proposed by the Senate.

It is the intention of the conferees that the general level of commodity support provided per child not be decreased below the level authorized, and for the Department to purchase surplus commodities with Section 32 funds. However, Section 32 balances should not be drawn below $300 million, unless they are needed to stabilize prices.

Purchases of surplus commodities eligible for support with Section 32 funds will continue to receive first priority by AMS in the use of the funds transferred to the Child Nutrition Programs. Second priority will be to supply other commodities or cash in lieu of commodities to meet the required and traditional level of commodity support for donation to eligible persons and outlets. Third priority will be to use Section 32 funds in lieu of direct appropriations to supply required cash reimbursement, primarily to schools under the requirements of the Child Nutrition Act of 1966, as amended, and the National School Lunch Act, as amended.

Special Milk Program

Amendment No. 81: Appropriates $155,000,000 for the Special Milk Program as proposed by the House instead of $168,000,000 as proposed by the Senate.

The conference agreement deletes the limitation on Federal Operating Expenses and provides a separate appropriation for Food Program Administration as proposed by the Senate (see Admendment No. 91).

Special Supplemental Food Program (WIC)

Amendment No. 82: Appropriates $247,000,000 for the Special Supplemental Food Program (WIC) as proposed by the Senate instead of $250,000,000 as proposed by the House.

The conference agreement deletes the limitation on Federal Operating Expenses and provides a separate appropriation for Food Program Administration as proposed by the Senate (see Amendment No. 91).

Amendment No. 83: Deletes the limitation on the employment of consultants, as proposed by the Senate. An overall limitation is provided under Food Program Administration (see Amendment No. 91).

Food Stamp Program

Amendment No. 84; Appropriates $5,627,000,000 for the Food Stamp Program as proposed by the Senate instead of $5,673,804,000 as proposed by the House.

The conference agreement deletes the limitation on Federal Operating Expenses and provides a separate appropriation for Food Program Administration as proposed by the Senate (see Amendment No. 91).

Amendment No. 85: Deletes the limitation on the employment of consultants, as proposed by the Senate. An overall limitation is provided under Food Program Administration (see Amendment No. 91).

Amendment No. 86: Provides a 7 per centum reserve as proposed by the House instead of no reserve as proposed by the Senate.

Food Donations Program

Amendments No. 87 and 88: Appropriate $31,400,000 for the Food Donations Program as proposed by the Senate instead of $31,726,000 as proposed by the House.

The conference agreement deletes the limitation on Federal Operating Expenses and provides a separate appropriation for Food Program Administration as proposed by the Senate (see Amendment No. 91).

Elderly Feeding Program

Amendments No. 89 and 90: Appropriate $30,000,000 for the Elderly Feeding Program as proposed by the Senate instead of $30,830,000 as proposed by the House.

The conference agreement deletes the limitation on Federal Operating Expenses and provides a separate appropriation for Food Program Administration as proposed by the Senate (see Amendment No. 91).

The conferees agree with the Senate proposal that funds for the elderly feeding program shall be available for donation of foods or the making of cash payments in lieu thereof to States which elect to receive cash, in accordance with the provisions of the Older Americans Act of 1965, as recently amended by Public Law 95-65.

Food Program Administration

Amendment No. 91: Reported in technical disagreement. The managers on the part of the House will move to concur in the amendment of the Senate with an amendment as follows:

Food Program Administration

For necessary administrative expenses of the Domestic Food Programs funded under this Act, $64,951,000 to remain available until expended: *Provided,* That this appropriation shall be available for employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (7 U.S.C. 2225), and not to exceed $150,000 shall be available for employment under 5 U.S.C. 3109.

The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

The conference agreement provides $64,951,000 for Food Program Administration as requested in the budget, instead of $65,853,000 as proposed by the Senate and instead of the House proposal to earmark specific amounts for Federal Operating Expenses in each food program appropriation.

The conference agreement restores the House reduction of $387,000 for GSA space rental costs.

This new appropriation item will include the necessary funds to administer the domestic food programs of the Food and Nutrition Service, and will facilitate intensified congressional review of the operating activities associated with those programs. The conferees will expect the Department in the 1979 budget to provide specific and detailed justifications for every activity included within this account. Particular emphasis should be given to actions taken to improve the performance of the enforcement and financial management aspects of these programs. In preparing to justify the 1979 budget, the Department will be expected to complete a rigorous examination of information, personnel, and other similar overhead activities of the Food and Nutrition Service.

TITLE IV—INTERNATIONAL PROGRAMS

Foreign agricultural service

Amendment No. 92: Appropriates $45,665,000 for the Foreign Agricultural Service instead of $43,100,000 as proposed by the House and $47,040,000 as proposed by the Senate.

The conference agreement restores the House reduction of $190,000 for GSA space rental costs.

Also included in the conference agreement is $22,835,000 for Foreign Market Development instead of $20,835,000 as proposed by the House and $23,835,000 as proposed by the Senate.

In addition, the conference agreement includes $4,928,000 for Foreign Commodity Analysis instead of $4,553,000 as proposed by the House and $5,303,000 as proposed by the Senate.

U.S. agricultural exports in 1976 amounted to $24 billion. It is our most important trade sector in maintaining a sound balance of trade position. USDA has the principal role in assuring the continued growth in U.S. agricultural exports and has fostered a vigorous program of developing a strong agricultural attache network around the world. This actvity cannot be neglected, but as has been demonstrated in the recent past, the data and intelligence collecting capability of FAS has now outstripped the agency's ability to fully analyze and utilize this information on a timely basis.

Already included in the bill is $250,000 added by the House for a study on a country-by-country basis of restrictions to U.S. agricultural exports. $375,000 added by the Conference Agreement will complement this study by buttressing the in-house capability of FAS to do regional market analyses.

Food and Drug Administration

Salaries and Expenses

Amendment No. 93: Reported in technical disagreement. The managers on the part of the House will move to concur in the amendment of the Senate with an amendment appropriating $276,243,000 for Salaries and Expenses instead of $273,019,000 as proposed by the House and $275,743,000 as proposed by the Senate.

The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

Included in the conference agreement is a reduction of $500,000 from the budget request in non-regulatory travel as proposed by the House.

The conference agreement restores the House reduction of $3,224,000 for GSA space rental costs.

The conference agreement also includes $1,000,000 for artificial sweetener research, as proposed by the House.

In keeping Congressional Committees fully advised of matters pertaining to the use of antibiotics in animal feed, as directed in the Senate Report, the Conferees expect notice and explanation to be given to the Com-

mittees on Appropriations and other appropriate committees of the Congress at least 15 days prior to the agency's publishing any notice of intended action in the Federal Register or other governmental publication.

The hearings and other evidence indicate that under the present procedures of the Food and Drug Administration, the American people may have been deprived of beneficial drugs available in other countries. Part of this problem may be because applications for registration originate with the manufacturers. There are often unnecessary delays in making drug applications and, worse, sometimes no drug approvals are requested by the drug companies. Members have had their attention called to drugs available for migrane headaches, epilepsy, or other ailments or diseases, which are in common use in various countries but not readily available here. It is to be noted that the question of saccharin and the determination of that question has been delayed waiting on tests by Canada.

The conferees believe that this entire matter should be fully explored by the appropriate legislative committees.

Amendment No. 94:

The conferees have agreed to delete, as proposed by the Senate, the House language which would have prevented any imposition by FDA of a saccharin ban prior to September 30, 1978.

The saccharin bills of the House and Senate legislative committees have progressed in Congress since the House action on this appropriations bill. The subcommittee chairmen of those committees have given their personal assurances to the conferees that the bills will be promptly brought to the House and Senate chambers in order that Congress may work its will on this issue. The conferees have also been informed of the assurances given by the FDA Commissioner that FDA will not issue a ban on saccharin prior to October 1, 1977.

The conferees have confidence in these pledges and assurances, and have based the conference agreement upon them.

Commodity Futures Trading Commission

Amendment No. 95: Appropriates $13,196,000 for the Commodity Futures Trading Commission instead of $13,096,000 as proposed by the House and $14,521,000 as proposed by the Senate.

The conferees have agreed to an increase of $100,000 for a study regarding the development of regulatory methods to protect participants in forward contracts. The study should be completed and transmitted to appropriate Congressional committees by January 1978.

Farm Credit Administration

Limitation on Administrative Expenses

Amendment No. 96: Provides a limitation on administrative expenses of $9,509,000 as proposed by the Senate instead of $8,776,000 as proposed by the House.

TITLE VI—GENERAL PROVISIONS

Amendment No. 97: Provides a limitation of $54,000,000 on the Working Capital Fund as proposed by the House instead of $55,061,000 as proposed by the Senate.

Amendment No. 98: Reported in technical disagreement. The managers on the part of the House will move to concur in the amendment of the Senate with an amendment as follows:

(A) None of the funds provided in this Act may be used to reduce programs by establishing an end-of-year employment ceiling on permanent positions below the level set herein for the following agencies: Farmers Home Administration, 7,440; Agricultural Stabilization and Conservation Service, 2,473; and Soil Conservation Service, 13,955.

(B) The Secretary of Agriculture is authorized to transfer unexpended balances of prior appropriations to accounts corresponding to current appropriations provided for "Domestic Food Programs" in this Act: *Provided*, That such transferred balances shall be available only for the same purposes, and for the same periods of time, for which they were originally appropriated.

The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

Amendments No. 99 and 100: Amendment No. 99 is reported in technical disagreement. The managers on the part of the House will move to concur in the amendment of the Senate with an amendment as follows:

"Notwithstanding any other provision of law, employees of the agencies of the Department of Agriculture, including employees of the Agricultural Stabilization and Conservation County Committees, may be utilized to provide part-time and intermittent assistance to other agencies of the Department, without reimbursement, during periods when they are not otherwise fully utilized."

The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

The conferees have agreed to delete House language related to the payment of GSA space rental costs and to delete Senate language related to the grading of Hard Red Winter wheat. In the place of House and Senate language deleted, the conferees have inserted the Senate language contained in Amendment No. 100 and the Senate has receded from same. Conference action related to Amendment No. 100 is technical in nature.

The conferees deleted a provision added by the Senate which would have prohibited the use of appropriated funds to administer a program which provided sub-class grading of Hard Red Winter wheat. The conferees are very concerned that the so-called "yellow sub-class" may be an unreliable and obsolete means of gauging Hard Red Winter wheat grain quality and one which may be inappropriate for Federal regulatory use. Therefore, in light of pending legislation on this issue the conferees agreed to delete the provision.

Amendment No. 101: Deletes language added by the Senate which would have limited payments to any one sugar producer to $50,000.

Conference total—With comparisons

The total new budget (obligational) authority for the fiscal year 1978 recommended by the Committee of Conference, with comparisons to the fiscal year 1977 amount, the 1978 budget estimates, and the House and Senate bills for 1978 follow:

New budget (obligational) authority, fiscal year 1977	$13,339,731,000
Budget estimates of new (obligational) authority, fiscal year 1978	12,917,017,000
House bill, fiscal year 1978	12,658,830,000
Senate bill, fiscal year 1978	[1] 12,569,514,000
Conference agreement	[1] 12,749,378,000
Conference agreement compared with:	
New budget (obligational) authority, fiscal year 1977	−590,353,000
Budget estimates of new (obligational) authority, fiscal year 1978	−167,639,000
House bill, fiscal year 1978	+90,548,000
Senate bill, fiscal year 1978	+179,864,000

[1] In addition, $50,000,000 was provided for fiscal year 1977.

Managers on the Part of the Senate.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. CORCORAN of Illinois) and to revise and extend their remarks and include extraneous matter:)

Mr. MARKS, for 15 minutes, today.

Mr. YOUNG of Alaska, for 5 minutes, today.

Mr. YOUNG of Alaska, for 10 minutes, on July 22.

Mr. CARTER, for 15 minutes, today.

Mr. BURKE of Florida, for 10 minutes, today.

(The following Members (at the request of Mr. LEDERER) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. VANIK, for 5 minutes, today.

Mr. KOCH, for 10 minutes, today.

Mr. CAVANAUGH, for 5 minutes, today.

Mr. SCHEUER, for 5 minutes, today.

Mr. ASPIN, for 5 minutes, today.

Mrs. BOGGS, for 5 minutes, today.

Mr. MINISH, for 5 minutes, today.

Mr. THOMPSON, for 5 minutes, today.

Mr. MILLER of California, for 15 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. PHILLIP BURTON, and to include extraneous matter.

Mr. CORNWELL, to extend his remarks immediately following the closing remarks of Mr. FITHIAN on the Fithian amendment in the Committee of the Whole today.

Mr. JENRETTE, to revise and extend his remarks immediately after those of Mr. HARKIN in the Committee of the Whole today.

Mr. ENGLISH, and to include extraneous material in his remarks made today in the Committee of the Whole.

Mr. CONTE, to include extraneous matter during debate on agricultural bill, H.R. 7171.

Mr. PEPPER, and to include extraneous matter notwithstanding the fact that it exceeds five pages of the CONGRESSIONAL RECORD and is estimated by the Public Printer to cost $1,932.

Mr. FUQUA, to revise and extend his remarks during the consideration of the amendment by Mr. HARKIN today relating to corn disaster payments.

Mr. HARKIN, to revise and extend his remarks on provisions of agricultural bill and to include extraneous material.

(The following Members (at the request of Mr. CORCORAN of Illinois) and to include extraneous material:)

Mr. CEDERBERG.
Mr. PURSELL.
Mr. SARASIN in two instances.
Mr. COLLINS of Texas in two instances.
Mr. TREEN.
Mr. ASHBROOK in three instances.
Mr. CARTER.
Mr. FREY.
Mr. CRANE.
Mr. ROBINSON.
Mr. DORNAN in two instances.
Mr. CONTE.
Mr. WHALEN.
Mr. DERWINSKI in two instances.
Mr. LOTT.

(The following Members (at the request of Mr. LEDERER) and to include extraneous matter:)

Mr. ANDERSON of California in three instances.
Mr. GONZALEZ in three instances.
Mr. KOCH in six instances.
Mr. SCHEUER.
Mr. TEAGUE in 10 instances.
Mr. ASPIN in 10 instances.
Mr. MINISH.
Mr. BREAUX.
Mr. MAZZOLI in three instances.
Mr. EILBERG in two instances.
Mr. OBEY.
Mr. MOORHEAD of Pennsylvania.
Mr. NOWAK in five instances.
Ms. OAKAR.
Mr. MAGUIRE.
Mr. EDWARDS of California.
Mrs. KEYS.
Mr. ST GERMAIN.
Mr. RODINO.
Mr. MILLER of California.
Mr. STOKES in five instances.
Mr. CARNEY.
Mr. GINN.
Mr. NICHOLS.
Mr. BENJAMIN.
Mr. ALLEN.
Mr. OTTINGER in two instances.
Mr. GORE.
Mr. EVANS of Indiana.
Mr. OBERSTAR.
Mr. ULLMAN in two instances.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 658. An act to designate certain lands for inclusion and potential inclusion in the National Wilderness Preservation System; to the Committee on Interior and Insular Affairs; and

S. 1859. An act to amend the Act of July 31, 1946, as amended, relating to the U.S. Capitol Grounds; to the Committee on Public Works and Transportation.

ENROLLED BILLS SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 4746. An act to extend certain authorities of the Secretary of the Interior with respect to water resources research and saline water conversion programs, and for other purposes; and

H.R. 7557. An act making appropriations for the Department of Transportation and related agencies for the fiscal year ending September 30, 1978, and for other purposes.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 1474. An act to authorize certain construction at military installations, and for other purposes.

ADJOURNMENT

Mr. LEGGETT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 31 minutes p.m.) the House adjourned until tomorrow, Friday, July 22, 1977. at 10 o'clock. a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1983. A letter from the Director, Community Services Administration, transmitting a draft of proposed legislation to extend for 3 additional years the authorization of titles I, II, III–B, VI, VII and IX contained in the Economic Opportunity Act of 1964, as amended, and for other purposes; to the Committee on Education and Labor.

1984. A letter from the Secretary of Interior, transmitting a report on the addition of the Kittanning Path to the National Trails System, pursuant to section 5(b) of Public Law 90–543 (H. Doc. No. 95–190); to the Committee on Interior and Insular Affairs and ordered to be printed.

1985. A letter from the Administrator, U.S. Environmental Protection Agency, transmitting the fifth annual report on his administration of the ocean dumping permit program for calendar year 1977, pursuant to section 112 of Public Law 92–532; to the Committee on Merchant Marine and Fisheries.

1986. A letter from the Secretary of Commerce, transmitting a draft of proposed legislation to amend the act of June 18, 1934, regarding the submission by the Foreign-Trade Zones Board of annual reports to Congress; to the Committee on Ways and Means.

1987. A letter from the Comptroller General of the United States, transmitting a report on the impact that Federal antirecession assistance payments have had on selected governments and the need for an improved formula for distributing funds (GGD–77–76, July 20, 1977); to the Committee on Government Operations.

1988. A letter from the Comptroller General of the United States, transmitting a report on the examination of the financial statements of the Pennsylvania Avenue Development Corporation for the fiscal year ended June 30, 1975, and the 15-month period ended September 30, 1976 (FOD–77–4(a), July 20, 1977) (H. Doc. No. 95–191); jointly, to the Committees on Government Operations, and Interior and Insular Affairs and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. PEPPER: Committee on Rules. House Resolution 702. Resolution providing for the consideration of H.R. 4544. A bill to amend the Federal Coal Mine Health and Safety Act to improve the black lung benefits program established under such act, and for other purposes (Rept. No. 95–512). Referred to the House Calendar.

Mr. LONG of Louisiana: Committee on Rules. House Resolution 703. Resolution providing for the consideration of H.R. 6951. A bill to amend the Council on Wage and Price Stability Act to extend its termination date, and for other purposes (Rept. No. 95–513). Referred to the House Calendar.

Mr. MOAKLEY: Committee on Rules. House Resolution 70. Resolution to establish a Select Committee on Population; with amendment (Rept. No. 95–516). Referred to the House Calendar.

Mr. JOHNSON of California: Committee on Public Works and Transportation. House Concurrent Resolution 282. Concurrent resolution making apportionment of funds for the National System of Interstate and Defense Highways; with amendment (Rept. No. 95–517). Referred to the Committee of the Whole House on the State of the Union.

Mr. ULLMAN: Committee of conference. Conference report on H.R. 6370 (Rept. No. 95–518). Ordered to be printed.

Mr. STRATTON: Committee on Armed Services. S. 1372. An act to amend titles 10 and 5, United States Code, to disestablish one of the positions of Deputy Secretary of Defense and establish an Under Secretary of Defense for Policy, and for other purposes; with amendment (Rept. No. 95–519). Referred to the Committee of the Whole House on the State of the Union.

Mr. WHITTEN: Committee of conference. Conference report on H.R. 7558 (Rept. No. 95–520). Ordered to be printed.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. EILBERG: Committee on the Judiciary. H.R. 1939. A bill for the relief of Meda Abilay Florin; with amendment (Rept. No 95–508). Referred to the Committee of the Whole House.

Mr. FISH: Committee on the Judiciary. H.R. 2758. A bill for the relief of Carmen Prudence Hernandez; with amendment (Rept. No. 95–509). Referred to the Committee of the Whole House.

Mr. EILBERG: Committee on the Judiciary. H.R. 2759. A bill for the relief of Sealie

Von Kleist Hernandez; with amendment (Rept. No. 95–510). Referred to the Committee of the Whole House.

Mr. EILBERG: Committee on the Judiciary. H.R. 5555. A bill for the relief of Adelida Rea Berry (Rept. No. 95–511). Referred to the Committee of the Whole House.

Mr. HARRIS: Committee on the Judiciary. H.R. 3618. A bill for the relief of Martha Castro Fitz Maurice (Rept. No. 95–514). Referred to the Committee of the Whole House.

Mr. HARRIS. Committee on the Judiciary. H.R. 5928. A bill for the relief of Miss Coralia Raposo; with amendment (Rept. No. 95–515). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 8450. A bill to amend title 38 of the United States Code to make certain that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced because of increases in monthly social security benefits; to the Committee on Veterans' Affairs.

By Mr. BRODHEAD:

H.R. 8451. A bill to amend the Equal Credit Opportunity Act to prohibit discrimination against any applicant for credit on the basis of the geographic location of the applicant's residence or the applicant's occupation or title; to the Committee on Banking, Finance, and Urban Affairs.

By Mr. BURGENER (for himself, Mr. TREEN, Mr. KETCHUM, Mr. MOORHEAD of California, Mr. LOTT, Mr. RHODES, Mr. HYDE, Mr. ROUSSELOT, Mr. DERWINSKI, Mr. THONE, and Mr. RUDD):

H.R. 8452. A bill to amend the Immigration and Nationality Act to prevent the illegal entry and employment of aliens in the United States, to facilitate the admission of aliens for temporary employment, to regulate the issuance and use of social security account cards, and for other purposes; jointly, to the Committees on the Judiciary, Education, and Labor, and Ways and Means.

By Mr. CARR (for himself, Mr. DIGGS, Mr. FORD of Michigan, Mr. BRODHEAD, Mr. HARRINGTON, Mr. MURPHY of Pennsylvania, Mr. FARY, Mr. TRAXLER, Mr. BONIOR, Mr. EILBERG, Mr. SCHEUER, and Mr. BLANCHARD):

H.R. 8453. A bill to provide for equalizing the costs of unemployment compensation, revising the extended benefits program, and for other purposes; to the Committee on Ways and Means.

By Mr. COCHRAN of Mississippi:

H.R. 8454. A bill to authorize the Secretary of the Army to carry out a flood control project for flood control and related purposes on Hatcher Bayou and Durden Creek, Warren County, Miss.; to the Committee on Public Works and Transportation.

By Mr. COTTER:

H.R. 8455. A bill to make specific provisions for ball or roller bearing pillow block, flange, take-up, cartridge, and hanger units in the Tariff Schedules of the United States; to the Committee on Ways and Means.

By Mr. EDWARDS of California:

H.R. 8456. A bill to amend title II of the Social Security Act to provide that a woman divorced from an insured individual may qualify for wife's or widow's insurance benefits on such individual's wage record if she had been married to him for a total of 20 years, whether or not such years were consecutive; to the Committee on Ways and Means.

By Mr. EDWARDS of California (for himself, Mr. BUTLER, and Mr. DODD):

H.R. 8457. A bill to amend the Bankruptcy Act to provide for the dischargeability of certain debts; to the Committee on the Judiciary.

By Mr. FASCELL:

H.R. 8458. A bill to require the Office of Management and Budget to provide information on the formulas and assumptions used in the distribution of domestic assistance; to the Committee on Government Operations.

By Mr. FLORIO (for himself, Mr. SCHEUER, Mr. WALGREN, Mr. MURPHY of New York, Mr. EILBERG, Ms. OAKAR, Mr. LEGGETT, Mr. VAN DEERLIN, Mr. BEDELL, and Mr. CORNWELL):

H.R. 8459. A bill to amend title XIX of the Social Security Act to require States to reimburse health facilities on a preestablished all-inclusive rate for comprehensive routine maternity services provided by nurse-midwives; to the Committee on Interstate and Foreign Commerce.

By Mr. FRENZEL:

H.R. 8460. A bill to provide for the imposition of waterway fuel taxes and to authorize the replacement of locks and dam 26 on the Mississippi River at Alton, Ill.; jointly, to the Committees on Ways and Means, and Public Works and Transportation.

By Mr. GAYDOS:

H.R. 8461. A bill to amend title XVIII of the Social Security Act to authorize payment under the supplementary medical insurance program for optometric and medical vision care; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. HARRIS (for himself and Mr. UDALL):

H.R. 8462. A bill to provide for the referral to the Committee on Post Office and Civil Service of the House of Representatives of bills, resolutions, and other matters under which authority is granted to establish executive level positions, to limit the number of such positions which may be created, and for other purposes; jointly, to the Committees on Post Office and Civil Service, and Rules.

By Mrs. HECKLER (for herself, Mr. BADHAM, Mr. BAFALIS, Mr. BOWEN, Mr. BURKE of Massachusetts, Mr. CAPUTO, Mr. CLEVELAND, Mr. COLLINS of Texas, Mr. CONTE, Mr. CRANE, Mr. DAN DANIEL, Mr. FISH, Mr. GILMAN, Mr. GUYER, Mr. HORTON, Mr. KINDNESS, Mr. LENT, Mrs. LLOYD of Tennessee, Mr. LUKEN, Mr. MCDADE, Mr. MURPHY of Pennsylvania, and Mr. PATTERSON of California):

H.R. 8463. A bill to amend the Internal Revenue Code of 1954 to provide certain corporate income tax reductions and to increase the amount of the surtax exemption; to the Committee on Ways and Means.

By Ms. HOLTZMAN:

H.R. 8464. A bill to amend the Equal Credit Opportunity Act to prohibit discrimination against any applicant for credit on the basis of the geographical location of the applicant's residence; to the Committee on Banking, Finance and Urban Affairs.

By Mr. LATTA:

H.R. 8465. A bill to prohibit the use or expenditure of Federal funds for the conversion of weather information to the metric system without a direct authorization by the Congress; to the Committee on Science and Technology.

By Mr. LEACH (for himself and Mr. CORCORAN of Illinois):

H.R. 8466. A bill to amend title 28 of the United States Code to provide for the appointment of a Special Prosecutor to investigate alleged improper foreign influence in the Federal Government; to the Committee on the Judiciary.

By Mr. MANN:

H.R. 8467. A bill to extend the authority of the President to authorize emergency purchases of natural gas under section 6 of the Emergency Natural Gas Act of 1977; to the Committee on Interstate and Foreign Commerce.

By Mr. MILLER of California:

H.R. 8468. A bill to establish a loan program to provide financial assistance to drought-impacted water districts, to provide Federal assistance to water districts for acquisition and installation of residential and agricultural water conservation devices and equipment, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. OBERSTAR (for himself, Mr. FRASER, Mr. FRENZEL, Mr. NOLAN, QUIE, Mr. STANGELAND, Mr. VENTO, and Mr. HAGEDORN):

H.R. 8469. A bill to amend part A of title IV of the Social Security Act to permit a State to pay aid to families with dependent children, with respect to a child in school, until the child reaches any age between 18 and 21 which the State may select; to the Committee on Ways and Means.

By Mr. PICKLE:

H.R. 8470. A bill to amend section 501 of the Internal Revenue Code of 1954 to provide tax exemption for an association operated exclusively to provide workmen's compensation for State and local employees; to the Committee on Ways and Means.

By Mr. RONCALIO:

H.R. 8471. A bill to provide for the transfer and conveyance of the silver service of the U.S.S. *Wyoming* to the Wyoming State Museum, and for other purposes; to the Committee on Armed Services.

By Mr. RUPPE (for himself, Mr. BLANCHARD, Mr. BONIOR, Mr. BRODHEAD, Mr. CARR, Mr. COHEN, Mr. DINGELL, Mr. EILBERG, Mr. ERTEL, Mr. FLOWERS, Mr. FORD of Michigan, Mr. GEPHARDT, Mr. HOWARD, Mr. LEDERER, Mr. LENT, Mr. MITCHELL of New York, Mr. MICHAEL MYERS, Mr. NIX, Mr. PURSELL, Mr. SIMON, Mr. STOCKMAN, and Mr. VANDER JAGT):

H.R. 8472. A bill to provide that a portion of the savings which are realized by the Department of Defense as a result of the closure or realinement of a military base in a community shall be returned to the community for economic recovery and adjustment; to the Committee on Armed Services.

By Mr. RUSSO:

H.R. 8473. A bill to establish a Department of Education; to the Committee on Government Operations.

By Mr. RUSSO (for himself, Mr. ABDNOR, Mr. MADIGAN, Mr. SANTINI, and Mr. SMITH of Iowa):

H.R. 8474. A bill to amend the Department of Transportation Act and the Regional Rail Reorganization Act of 1973 to extend the eligibility for financial assistance under the rail service assistance programs, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. SCHEUER:

H.R. 8475. A bill to direct the Administrator of Veterans' Affairs to select a design for a flag commemorating U.S. veterans; to the Committee on Veterans' Affairs.

By Mr. SEIBERLING:

H.R. 8476. A bill to amend the Internal Revenue Code of 1954 to encourage the modernization of manufacturing plants by providing an additional investment credit for machinery placed in service in existing manufacturing plants or in nearby plants; to the Committee on Ways and Means.

By Mr. WHALEN (for himself, Mr. BEDELL, Mr. BALDUS, Mr. DRINAN, Mr. EDGAR, Mr. EILBERG, Mr. JEFFORDS, Mr. LEHMAN, Mr. MAZZOLI, Mr. MOLLOHAN, Mr. MURPHY of Pennsylvania, and Mr. PEASE):

H.R. 8477. A bill to amend title II of the Social Security Act to reduce the effect of

wage and price fluctuation on old-age, survivors, and disability insurance benefits, with such benefits being computed on the basis of the worker's 10 or less years of highest earnings; to the Committee on Ways and Means.

By Mr. YOUNG of Alaska:

H.R. 8478. A bill to amend title 18, United States Code, to make a crime the willful destruction of any interstate pipeline system; to the Committee on the Judiciary.

By Mr. GAYDOS:

H.J. Res. 552. Joint resolution relating to the publication of economic and social statistics for Americans of Balto-Slavic origin or descent; jointly, to the Committees on Education and Labor, and Post Office and Civil Service.

By Mr. BUCHANAN (for himself and Mr. DODD):

H. Con. Res. 303. Concurrent resolution expressing the sense of Congress that the Soviet Union should comply with the Helsinki Final Act, the International Covenant on Civil and Political Rights, and the Soviet Constitution, with respect to all its citizens, and on that basis should allow Anatoly Shchransky to emigrate from the Soviet Union; to the Committee on International Relations.

By Mr. WYDLER:

H. Con. Res. 304. Concurrent resolution expressing the sense of Congress with respect to the Baltic States; to the Committee on International Relations.

By Mr. BENNETT:

H. Res. 704. Resolution expressing the sense of the House of Representatives with respect to the establishment of a national telecommunications policy; to the Committee on Interstate and Foreign Commerce.

By Mr. LEACH (for himself and Mr. WALKER):

H. Res. 705. Resolution expressing the sense of the House of Representatives that a special council be appointed and given a charter of independence to conduct an inquiry into efforts by foreign governments to influence Members of Congress; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII,

234. The SPEAKER presented a memorial of the Legislature of the State of Arkansas, relative to the U.S. jurisdiction of the Panama Canal; to the Committee on International Relations.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DORNAN:

H.R. 8479. A bill for the relief of Algirdas Brazinskases; to the Committee on the Judiciary.

H.R. 8480. A bill for the relief of Pranas Brazinskases; to the Committee on the Judiciary.

By Mr. GIBBONS:

H.R. 8481. A bill for the relief of M. Sgt. George C. Lee, U.S. Air Force; to the Committee on the Judiciary.

By Mr. JONES of Oklahoma:

H.R. 8482. A bill for the relief of Magdalen F. Martin of Broken Arrow, Okla.; to the Committee on Veterans' Affairs.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 5400

By Mr. FRENZEL:

Page 30, after line 17, insert the following new paragraph:

(8)(A) Each State which desires to receive financial assistance under section 7 shall establish a procedure under which challenges may be made against the qualifications of any individual who desires to register to vote and vote under subsection (a)(1). Any such procedure shall—

(i) specify who is eligible to make any such challenge;

(ii) indicate the grounds upon which such challenge shall be based;

(iii) establish methods and procedures through which such challenge may be made;

(iv) provide for the separate counting of any ballot which is subject to such challenge; and

(v) ensure that such challenge is resolved within a reasonable time after the election involved.

(B) Each State which proposes to establish a procedure under subparagraph (A) shall submit such procedure to the Commission for review and approval for such procedure takes effect. The Commission shall approve any such procedure which meets the requirements of subparagraph (A).

Add at the end thereof the following new sentences:

In any case in which a unit of general local government establishes more than one polling place under this subparagraph, such unit of general local government shall ensure that—

(i) the boundaries of each such polling place are established to coincide with the boundaries of voting districts or other voting jurisdictions in the jurisdiction of such unit of general local government; and

(ii) each such polling place serves the same number, or approximately the same number, of such voting districts or other voting jurisdictions.

Any individual who desires to vote under this subsection shall vote at the polling place established under this subparagraph which serves the jurisdiction in which is located the polling place at which such individual would have been permitted to vote if such individual reigstered to vote before the date of the election involved.

Add at the end thereof the following new sentence:

Any unit of general local government which establishes any polling place under this subparagraph may require, in its discretion, that any individual who registers to vote under this subsection shall—

(i) register to vote at the registration place at which such individual would have been required to register if such individual desired to register to vote before the date of the election involved; and

(ii) vote at a polling place established by such unit of general local government under this subparagraph.

SEC. 910. Effective for the 1978 through 1981 crops section 301 of the Agricultural Act of 1949, as amended, is amended by adding the following at the end thereof: "The Secretary is authorized to make price supports available under this title for the 1978 through 1981 crops of soybeans, flaxseed, dry edible beans, sugar, and gum naval stores, for any other non-basic commodity not designated in title II, except that such authority shall terminate with respect to any commodity, other than those listed in this provision, at the end of any crop year in which the net outlays exceed $50 million."

By Mr. JONES of Tennessee:

Page 64, immediately after line 16, insert the following:

"AUTHORITY TO MAKE DEFERRED LOAN PAYMENTS

"SEC. 1013. The Consolidated Farm and Rural Development Act, as amended, is amended as follows:

"(a) Section 309 is amended by adding in subsection (f)(3) between the words 'any' and 'defaulted' the words 'deferred or'.

"(b) Section 309 A is amended by adding in subsection (g)(3) between the words 'any' and 'defaulted' the words 'deferred or'."

EXTENSIONS OF REMARKS

CAPTIVE NATIONS WEEK 1977

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. SARASIN. Mr. Speaker, this week from July 17 to July 23 marks the 19th commemoration of Captive Nations Week. It is quite appropriate that this observance should coincide with the continued deliberations at the Belgrade Conference over compliance with the Helsinki accord. Renewed interest and concern over the fate of captive peoples should be trumpeted to free nations all over the world, and hopefully, the 35 participatory nations at Belgrade will take heed.

President Carter has made concern over human rights the hallmark of his foreign policy. In no case is human rights more applicable than it is to the plight of the captive nations. Dr. Lev E. Dobriansky of Georgetown University and chairman of the National Captive Nations Committee wrote Members of Congress about this important issue. In his letter he stated:

. . . the captive nations issue has always been prominently and inextricably intertwined with that of human rights. Indeed, in the agrregate, no part of the world represents a graver denial of human rights, including the right to national independence, than the totalitarian world imprisoning the captive nations.

In this regard, Dr. Dobriansky identi-

fies basket I provisions of the Helsinki accord as more important and fundamental than basket III provisions for the principle of national self-determination is what human rights are all about. Accordingly, I would like to mention that on March 24, 1977, I introduced House Concurrent Resolution 177, a resolution calling for the freedom of the Baltic Nations. The resolution calls upon the President to take all necessary steps to bring the Baltic States question before the United Nations and to urge that the United Nations request the Soviet Union to withdraw all Russian troops from the Baltic Nations and to return all Baltic exiles from Siberia and from prisons and labor camps in the Soviet Union. Moreover, the resolution states that the United States should not agree to the recognition, by any international conference, of the Soviet Union's unlawful annexation of Lithuania, Latvia, and Estonia, and it should remain the policy of the United States not to recognize in any way the annexation of the Baltic States by the Soviet Union. I welcome my colleagues to join me in support of this resolution.

As free Americans, the plight of the captive nations continues to concern us all deeply. This year, with the Soviet Union quite chagrined over our insistence on human rights, and with the upcoming fall conference on the Helsinki accord, we have invaluable opportunities to press our concerns for the plight of the captive nations. Let us not allow 1977 to pass without our having sustained the hopes for freedom of the peoples of the captive nations with tangible progress.

CONTAINING HOSPITAL COSTS

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. CARTER. Mr. Speaker, I recently announced my intention to introduce legislation on hospital cost containment in the near future. In developing this legislation, I have found an excellent report prepared by the Government Research Corporation to be most helpful. The report, entitled "A Proposal for State Rate-Setting: Long Range Controls on Institutional Health Services," was brought to my attention by the National Conference of State Legislatures, which has subsequently prepared a statement on the report. The conference's statement is supportive of the general approach of the legislation I plan to introduce, and I am therefore including the statement in the RECORD in the interests of broadening the discussion on this important issue:

STATEMENT OF THE NATIONAL CONFERENCE OF STATE LEGISLATURES

The National Conference of State Legislatures commends the Administration's willingness and initiative to enact an interim program for restraining the unacceptable growth in hospital costs. Since hospital costs are the most rapidly rising component of health care costs and since they account for 45 percent of personal health expenditures, cost containment in the hospital sector deserves a high priority. Such an emphasis is particularly desirable because hospital care is the most expensive form of care; hence policies which encourage economizing on hospital services and substitution of other forms of care will almost certainly reduce costs of treatment.

The clear strategy of the Administration by the introduction of the Hospital Cost Containment Act is to provide something of a "dull meat ax" approach to containing hospital costs until a more sophisticated cost control system can be put in place. There is no dispute that a sensible cost control strategy or system must precede the implementation of a national health insurance program. Substantial disagreement is likely to occur, however, over what kind of cost control system will prove effective and what level of government should be responsible for administering and operating the system.

Given the fact that cost containment is still largely an art, not a science, flexibility and experimentation should be key to the eventual discovery of a system or systems that will function properly. The assumption that the solution to cost inflation in the hospital sector lies in a single approach is a faulty one and, if allowed to guide our policy, is likely to lead us into a system of extreme rigidity and inequity. The NCSL is therefore concerned that the present bill fails to provide real incentives for states to develop alternative hospital cost control programs within the parameters of reasonable revenue restraints. Recognizing that the development of sound regulatory controls on hospital costs is still in its infancy, states should be encouraged to experiment with several approaches or combinations of approaches to hospital cost control within the context of minimum federal criteria. NCSL is worried that the Administration's bill as presently drafted would set a precedent for precluding states from meaningful participation in hospital reimbursement policy under a national health insurance program. It is essential, therefore, that the bill be amended to allow interested states some opportunity to develop alternative statewide hospital cost containment programs.

AN ALTERNATIVE PROPOSAL

We feel that the encouragement of state rate-setting programs, is highly preferable to the complicated and inflexible regulatory system that would likely evolve at the federal level under the administration's program.

The National Conference of State Legislatures endorses a federal initiative of interim restraints on increases in hospitals' revenue, applicable to each state until that state enacts and implements an effective hospital cost containment program. Once the state program becomes operative, the Department of HEW should monitor the state system and be prepared to assume the functions if it is clear the state is not performing effectively.

We would suggest that an effective state hospital cost containment system should have the following characteristics:

Budget and rate review and approval should be mandatory for all institutional health care providers and shall apply to the rates charged to all payors;

The budget and rate review authority should be either an independent commission or an agency located within an appropriate department of the state;

The commission or agency should be organizationally related to other state agencies in such a way as to facilitate coordination of the various types of health care regulation.

Aside from enacting an interim program of restraints on increases in hospital revenues which would be waived for states operating effective cost containment programs, Congress should be willing to provide financial assistance to states for the initial start-up costs of the hospital commissions. Consideration of state requests for medicare and medicaid participation in the systems should be given the most expeditious consideration by the Department of HEW. HEW should exercise a monitoring function to ensure that the state commissions are performing satisfactorily. A national policy review board should be created to establish guidelines by which the performance of the state systems will be measured.

The case for state participation in hospital cost containment rests not only on the argument that states are good experimental "testing grounds"; many other arguments are equally compelling:

The protection of the citizenry's health has traditionally been within the recognized police powers of the state;

States shall continue to make large contributions to the health care system through medicaid and as purchasers of health care for state employees; therefore, they have a financial stake in the success of the program.

States are in the best position to view individual hospitals' needs, priorities, budgets, and operations in the context of statewide needs, priorities and resources for health care.

States can most easily assure the coordination of rate review and other forms of regulation, such as, certificate-of-need review.

THE 19TH ANNUAL OBSERVANCE OF CAPTIVE NATIONS WEEK

HON. LOUIS FREY, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. FREY. Mr. Speaker, this Saturday I will address a rally in Miami, Fla., commemorating Captive Nations Week.

I would like to insert my remarks in the RECORD:

REMARKS BY CONGRESSMAN LOUIS FREY, JR.

It is indeed a pleasure to be among you today and I thank you for inviting me to share in your activities during the 19th annual observance of Captive Nations week.

Coming as it does at the twilight of our bicentennial celebration this year's demonstration is especially emotional. As we meet today, a year later, in the shadow of the "freedom game," let us consider for a moment the meaning and promise of the Declaration of Independence, which decreed not just Americans—but all men—as free.

Most of you know first hand the blessings this new land has extended to the millions who have come here in search of a new life, and new opportunities to be enjoyed in freedom—the freedom to build lives in accordance with abilities, the freedom to work in dignity, to seek justice, to form families and build communities, and to worship in accordance with the dictates of individual consciences.

But this country represents far more than the sum total of the blessings you and I have been privileged to enjoy and we owe a loyalty and a duty to that larger meaning of America.

For America represents something far more important and fundamental than a particular economic order or system of government. The Declaration of Independence changed the course of history not because it was a political manifesto, but because it proclaimed certain moral principles of universal importance.

This great document affirmed that man is endowed not by government, not by a written Constitution, but by his Creator with certain inalienable rights that no majority however large, and no government however strong, has the moral authority to diminish or destroy.

It was this ringing affirmation of the primacy and dignity of the individual that was

our revolutionary message to the world two hundred and one years ago. It was this declaration of fundamental human rights that sent sparks flying eastward across the Atlantic to ignite the fires of liberty throughout the old world.

Over the next one hundred and fifty years, it was this revolutionary message, and the American example, that sustained scores of millions in their struggles to emancipate themselves from age-old tyrannies. And for a long while, it seemed that we had let loose a tidal wave of freedom that would ultimately liberate the world.

But today we know that liberty is in retreat around the globe.

America's revolutionary message is being challenged by a new and dynamic totalitarian force that is pledged to stamp out every vestige of individual freedom, and to destroy every humane and civilizing value for which we stand.

As I mentioned earlier, our meeting today is especially emotional. Two events since our bicentennial celebration have heightened and sharpened the focus of today's march.

First, the election of a President committed to the cause of human rights; and second, the favorable overtures that same President has made toward the nation most of you still call "home".

The President has made it absolutely clear that he intends to make significant gains in the area of human rights. His main target has been enslaved Eastern Europeans behind the Iron Curtain. The cost has been high, and may go higher, yet he moves on. He moves toward Europe and Africa however, and not toward the Caribbean.

With his left hand he has encouraged resumption of trade and diplomatic relations with Cuba. He has asked the State Department to conduct exchanges of "middle level" personnel with Cuba under neutral nation auspices. For the first time since I have been in Congress, Americans are free—perhaps encouraged—to travel to Castro's Cuba.

Why? Did the President misread the presence of 10,000 Cuban troops in Angola? Does the President think those troops journeyed to Africa on a one-time mission? Does the President believe Cuba has something the United States needs . . . sugar or citrus, maybe? Does the President believe Americans want to visit Havana?

Does the President not realize that with 20,000 political prisoners in jail, Cuba, on a prisoner-per-thousand basis, is one of the world's leading police states?

I don't know. I can't answer those questions. But I can tell you what I do and do not believe. I don't believe we can condone—either diplomatically, economically or morally—Castro's Cuba. I don't think we can afford it, but by the same token, I don't think Castro can afford for us not to.

It seems almost too simple . . . Castro's reign in Cuba. A man ousts an unpopular dictator and establishes a totalitarian state with a marxist economic order. He is supported by a super-power anxious for a foothold in our hemisphere. He arranges very favorable trade agreements with that superpower, and with other totalitarian regimes around the world. In addition the superpower freely gives him economic and military aid—a terrific amount.

For many years the super-power continues to provide aid while the economy of the state falters. Finally the super-power has economic troubles at home and begins to make noises about cutting the aid or renegotiating the trade agreements. And so the man takes his cause to another super-power, this one democratic and capitalist, and he is warmly received. He begins to see a way out of his economic hole.

And now it is time for the people of the democratic super-power to say "no" to a bailout of Castro's Cuba. If we break, if we resume diplomatic relations and trade relations, what do we gain? Nothing.

If Castro is successful, what does he gain? Everything. He has a market for sugar and citrus, at a great cost, I might add, to the economy of our state. He can export his agricultural products and receive in return technology—machinery and computers to help him move his country into modernity. He has an opportunity to make Havana the tourist capital it once was. He will gain American dollars with which to deal with other free nations. He will have a powerful new ally. He will be more secure at home and therefore more apt to export his brand of trouble.

And the Cuban people . . . what will they gain? Nothing. They will remain enslaved.

A man who is a patriot of the world, Alexandr Solzhenitsyn, warns us that we are locked in a mortal struggle between good and evil, and that in such a struggle there can be no compromise.

And an American President, speaking more than a hundred years ago, noted that no nation can survive half slave and half free. Today, with the global family a reality, can the world survive half slave and half free?

I submit that it cannot. That the people of Cuba, as well as the people of Europe and Africa and Asia deserve only the most intense support we can give them. That support must be unyielding, uncompromising, and consistent in every way. We must not pick and choose among those nations whose citizens' human rights we will go to bat for.

Let us resolve to remain true, to keep this torch of freedom burning with brillance that will penetrate every barrier, and sustain the courage and the hope of men and women everywhere who, like our forebears, are "yearning to breathe free."

POOR GENERAL SINGLAUB

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. ASHBROOK. Mr. Speaker, a lot of tears have been shed over Gen. John K. Singlaub. General Singlaub was summarily withdrawn from his command in Korea by his Commander in Chief and that architect of appeasement masquerading as our Defense Secretary, Harold Brown. General Singlaub should have known better than to suggest the sheer logic that withdrawal of American troops in Korea would lead to a takeover by the North Korean Communists.

Poor man, he certainly should have known better. How could the general have missed the finely tuned treachery of our catastrophic policy of surrender to communism in Southeast Asia? How could he have missed our policy to force Africa under the control of Moscow-Cuba communism and our transfer of the Panama Canal to a leftwing pro-Communist pipsqueak dictator?

He certainly must understand that this administration will allow Communist Vietnam to go into that international circus, the U.N., with no U.S. objection. He certainly must have watched those who want to give most favored nation trade status to our enemy, the Soviet Union, and those businessmen who hug Castro tight to see if a few dollars drop out of his pocket which they can gobble up in trade.

He certainly must know that our "human rights" initiatives are largely pointed at our friends with nary a peep at the enslaved people under Communist domination. He had to know that our disarmament experts have sold us out at SALT and look the other way as the Soviet Union forges ahead of us in the arms race in both Republican and Democratic administrations, I hasten to add.

Did it escape his attention that our administration cozies up to those Chinese Communists who have murdered more than 15 million of their own countrymen while kicking the Free Chinese in the shins? Or that we seem bent on destroying the only solvent, friendly, responsible governments in Africa, Rhodesia, and South Africa, while encouraging the Marxist dictatorships there?

In light of this record of perfidy, appeasement and disaster, why would General Singlaub or any honest, patriotic decent American like the general, think that the leftists in the State Department would allow the U.S. Army to stand in the way of Communist North Korea's "liberation" of South Korea?

Poor man, he was only telling the truth and putting his country's interests first. His only failure was in embarrassing the sellout artists who are endangering our country's future.

NINETEENTH OBSERVANCE OF CAPTIVE NATIONS WEEK

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. ZABLOCKI. Mr. Speaker, I am pleased to join my colleagues in the 19th observance of Capitive Nations Week.

Since my basic position on this issue is well known and has been expressed on many similar occasions in the past, I will not take up the time of the House to repeat it at this time. I would, however, like to make several brief observations which I believe are relevant to the current deliberations of this body in the human rights field:

First of all, I think it is important to recognize that a clear articulation of the U.S. concern about the denial of personal and civil liberties in much of the world today is by no means inconsistent with our attempts to negotiate agreements with other governments, friendly or unfriendly, on a variety of issues involving our national security and our overriding national interest.

As chairman of the Committee on International Relations, I fully support this administration's efforts to conclude a mutually acceptable arms control accord, to stem the proliferation of nuclear weapons and to work out an international treaty on the law of the sea. There are many other areas in which progress is both attainable and, I believe, desirable.

Our commitment to these goals does not mean, however, that we accept or condone Soviet oppression over its own minorities or over the peoples of Eastern Europe or the denial of human rights by

governments in all parts of the world, and I commend President Carter for having made that distinction clear. It is the cornerstone of his foreign policy.

Captive Nations Week, moreover, affords us the opportunity to draw public attention to violations of principles which the Soviet Union freely undertook to uphold when it signed the Helsinki accords. There is no reason whatever for this country to apologize for seeking reasonable implementation of those accords—and that is precisely what the Belgrade Conference is all about.

Second, it is worthwhile noting that the Soviet leaders themselves have unfortunately repeatedly proclaimed that the "ideological struggle" will continue—whether there is détente or no détente—agreement or no agreement. Their attitude on this subject is no secret and it is best to take them at their word.

Two points can be made: First, the record indicates that Communist ideology and propaganda have their strongest appeal—one might say their only appeal—in those regions in which the Communist totalitarian system of control has not yet been imposed; and second, in any "ideological struggle" which may ensue, there is no concept which fulfills basic human needs and aspirations as does that of freedom. It is also a concept which we cannot afford to disregard, except at our peril.

That, Mr. Speaker, is the message we should proclaim to all nations which are not free—not only at this time, or throughout this year, but at all times—until freedom, self-determination, and human dignity are restored to all people.

CAPTIVE NATIONS WEEK

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. CONTE. Mr. Speaker, as you know, in 1959, President Eisenhower signed the first proclamation designating the third week of July as Captive Nations Week. On this, the 19th anniversary, I wish to underscore our support for the oppressed and persecuted peoples of the world.

The United States was founded on the principles of liberty and democracy. Our beliefs are derived not from dusty tomes but live and organic documents such as the Constitution and the Declaration of Independence. With our freedom comes an obligation, a duty, to use our valuable liberty to support those suffering under the oppression of totalitarian governments.

There are certain human rights which transcend political ideologies and geographical boundaries. These freedoms are inherent in human nature; they are as inseparable from man as an arm or a leg.

We have enumerated these inalienable rights in the texts of the United Nations Charter, the United Nations Universal Declaration of Human Rights and the Helsinki accords. These compacts reflect the global acceptance of the basic liberties of freedom of thought, religion and self-determination.

While agreeing to abstract ideas on paper is one thing, bringing them to realization is quite another. Since 1920, over 30 nations have come under totalitarian rule despite righteous declarations of human rights and freedoms.

We must do what we can to reverse this deplorable condition. Détente is a step in the right direction. It has opened up closed Communists societies to the democratic influence of the Western political tradition. Knowledge is tryanny's worst enemy.

Partly because of our support, dissidents in captive nations have become more and more vocal in their denunciation of governmental oppression. The Sakharovs and Orlovs have spoken out, but they cannot go it alone.

Captive nations and peoples of the world need our support. At this time when the Soviet Union is cracking down on dissident groups, the ardent support of some of us who are committed to freedom gives renewed hope and strength to these courageous men and women.

We must hold the Soviet Union and all nations accountable to the Helsinki accords. As President Carter said in his inaugural address, "because we are free we can never be indifferent to the fate of freedom elsewhere." Silence in the face of oppression is acquiescence. We must not fail to speak out against human rights violations wherever they occur.

Other nations may say that we are interfering with their internal affairs, that we are foisting our ideology upon their citizens. But we must continue to live up to our obligations as a free people, to speak out as long as others cannot.

As we commemorate Captive Nations Week, let us remember as free men to continue our support of all those who are deprived of their full rights and liberties.

SALUTE TO FRANKLYN D. SPRINGER, PRESIDENT OF THE NATIONAL FARM AND POWER EQUIPMENT DEALERS ASSOCIATION

HON. DONALD J. MITCHELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. MITCHELL of New York. Mr. Speaker, it is with great pleasure and pride that I call to your attention and to the attention of my colleagues, the record of service and leadership established by Mr. Franklyn D. Springer, of Richfield Springs, N.Y., who will on August 3 become the president of the National Farm and Power Equipment Dealers Association.

As the son of a dairy farmer he organized with his father a J. I. Case Co. farm equipment dealership in 1933 terminating it in 1937 to allow him to become employed by the J. I. Case Co. as a territory supervisor in New England. After meritoriously serving his country during the Second World War he returned to New York State and became active with his brother in the local dealership which was now handling in addition to J. I. Case, DeLaval New Holland, Badger-Northland, and other varied lines of farm machinery. In 1961 J. I. Case was replaced with Ford.

Through the dealership, having been a member of the New York Farm Equipment Dealers Association since 1947, he served as president of the New York Association in 1957 and was elected to serve as New York's national director to the national association in 1968. In 1973, he became a member of the national executive committee.

In addition to these responsibilities he was elected to the Richfield Springs Central School Board in 1958 and served for 4 years as president. He is also a member of the advisory board of the Richfield Springs Branch of the State Bank of Albany. He joined the local Rotary Club in 1950 and has had a record of perfect attendance for 24 years, serving as president between 1960 and 1961. Additionally, he served 3 years on the advisory board of the agricultural engineering department of the Cobleskill Ag and Tech College in Cobleskill.

Mr. Springer's dedication and diligent work for the association is commendable. His service to his community is deserving of the highest praise. His entire career has been marked with dedication, honesty, integrity, and fairness. His dealership is regarded by other dealerships and customers alike as one of the best in the country.

I ask you and my colleagues to join me in congratulating and giving our best wishes to Mr. Springer in his new and important position as president of the National Farm and Power Equipment Dealers Association.

OUTSTANDING JOURNALISTIC CAREER OF JOHN FUSTER

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. STOKES. Mr. Speaker, I rise on this occasion to bring to your attention and to the attention of my colleagues in the U.S. House of Representatives the outstanding journalistic career of John Fuster of Cleveland, Ohio. As former sports editor of the Cleveland Call and Post, he is truly one of the great contributors to the challenging field of sports reporting.

Mr. Speaker, John Fuster has also distinguished himself in other areas of the newspaper business. He has been a managing editor and women's editor for the Call and Post as well as an advertising executive. Unfortunately, the years have passed much too rapidly and the time for retirement has approached. But even though John Fuster has turned in his press card, he has by no means laid down his pen. In fact, Mr. Speaker, he is eagerly awaiting the publication of three short stories in the very near future.

At this time, Mr. Speaker, I would like to submit for the RECORD an article which appeared in the Saturday, July 2, 1977, edition of the Cleveland Call and

Post highlighting events from Mr. Fuster's notable career. I am certain that my colleagues will share my admiration for this talented and courageous individual. The article follows:

JOHN FUSTER EXEMPLIFIED THE BLACK PRESS CREDO

(By Mary Lynn)

Seventy one years ago, in Calhoun, South Carolina, John Fuster was born to the union of Mr. and Mrs. John Fuster, Sr. Little did the parents or townspeople know that this little boy would have such an impact on the field of journalism.

Before he was a year old, the family moved to Columbus, Ohio, the place and surrounding circumstances which would mold his life.

At the age of nine, he took a paper route distributing the Chicago Defender in Columbus. This was during a time of racial, social, and economic unrest when lynchings were rampant in the south.

No other black newspaper in the country prior to this time had ever attempted to lash out and display the injustices and sheer murder of blacks as did the Chicago Defender.

As a child, Fuster had wanted to become a lawyer, but the influence of racial bigotry and his deep interest in the Defender's headlines led him into the area of journalism.

The Chicago Defender was the first major American institution to start a civil rights movement in Chicago. Not only were they the only paper to report lynchings, they also sent reporters to witness and write about them. This further impressed Fuster.

Lynchings and murders of blacks were not of interest to the white publications; nor were the harassments of blacks all over the country. In preparation for his new career, Fuster studied journalism at Ohio State University.

Later, with assets totaling $157.00 he founded the Ohio State Press. He and a friend Eddie Johnson, ran the paper and it became the first black oriented one in Columbus, Ohio to share controversial views with the readers.

This was back in the 30's and when the depression struck the paper was short lived. Eventually, he joined the staff of the Call which merged with the Post and his first experience with the Call and Post was initiated.

He worked steadily until being drafted into the military but returned in 1945 and has been with the publication ever since.

He has served in the capacities of general newsperson, sports editor, women's editor, and editor of all three publications (Cleveland, Columbus and Cincinnati).

While serving as women's editor, the circulation soared. He consulted with students at Western Reserve University who were studying prenatal needs of expectant mothers. This drew much public interest and added a new dimension to the weekly. He may have been the first man ever to serve as women's editor at a newspaper.

Of all his experiences, he loved being sports editor the most and speaks of it fluently. The Call and Post he recalled, was instrumental in bringing blacks into the major leagues in Cleveland.

Fuster recalls that in 1947, when he was state sports editor, the paper was directly responsible for bringing the great Larry Doby to the Indians.

He was the first black signed by owner-manager Bill Veeck and was signed upon the recommendation of then city sports editor Walton C. Jackson.

Fuster and Jackson had always been persistent in their questions concerning the lack of blacks in the Indian's team. Finally, Veeck, after a heated argument that took place at Kent State University, conceded and said (in jest), that if Jackson could find a black player who could play, he'd sign him.

Jackson referred Veeck to Doby, a talented second baseman with the Newark Eagles. Veeck put scouts on Doby for three days and then he was signed.

The persistence of Fuster and Jackson, broke the color line in the American Baseball league.

Another monumental accomplishment by Fuster was the desegregation of the Indian's training camp in Tucson, Arizona.

Revelations like this, although many years ago, are still vivid in his mind. His pleasant memories in the field of sports also revert to 1940, when the Cleveland Buckeyes, a Negro American League baseball team won the national championship.

Owners of the team, Wilbur Hayes and Ernie Pope wanted to keep the team all black.

Fuster worked diligently against bigotry in reverse. Hayes and Pope blocked the efforts of two white men to try out for the team.

As a result, Fuster discontinued to print articles about the team unless the owners opened the tryouts. Realizing that the Call and Post was the only paper to print black sports news, the owners consented and the two whites tried out and made the team.

This gesture shows Fuster to be a man who used journalism to strive for the rights of all.

The newspaper business has filled the great majority of John Fuster's life.

Until 1951, he had worked in every capacity except advertising. In 1951 he entered the field. His dynamic personality and public relations finesse again caused him to make great strides.

He brought in the ads of the big white-owned business establishments who previously did not advertise with the paper.

Today, although retired, from the company, he still writes. Presently, he is working on three short stories (soon to be published) and endeavoring into journalistic "cartoonism."

Of late, he has been lonely due to the recent demise of his lovely wife, Maryette, a former public school teacher and concert pianist of great educational wealth. John Fuster is wealth in many ways—and always has been.

He looks back with great pride on his first professional interview with Adelaide Hall and her dance troupe. He recalls the warmness of comedian Jack Benny and his wife Mary Livingston.

He remembers the excitement with which he interviewed Joe Louis, whom he hails as the best fighter who ever lived.

He also remembers Paul Brown, the founder-manager of the Cleveland Browns and his blindness to skin colors where his team was concerned.

And he also remembers Connie Mack, owner-manager of the Philadelphia Athletes who never had a black on his team and when questioned about it always answered "No comment"

He also reminisces about interviews with some of the top entertainers of his day such as Duke Ellington, Count Basie, Dorothy Dandridge, and Dinah Washington.

You may never see a picture of John Fuster hanging in the Baseball Hall of Fame—but he is there in the persons of the great blacks who benefitted by his persistence that the major league doors become opened and segregation in sports be kept a thing of the past.

SYRIA TEMPLE OF SOUTHWEST PENNSYLVANIA CELEBRATES 100 YEARS

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, May 19 of this year was a landmark date for Syria Temple of southwestern Pennsylvania. It was on this day that the temple celebrated its 100th year of charitable existence. Although the temple's record of continued life and learning speaks for itself, I feel that a word or two on the subject is in order during this special anniversary year.

Day in and day out the good men and women of the Ancient Arabic Order, Nobles of the Mystic Shrine, act as a powerful force for charity and good in the United States and other countries. While the temple's financing of crippled children's hospitals and burn facilities is their best known contributions to the community, it is their extraordinary dedication and concern for their fellow men that truly sets them apart. I am sure that Americans everywhere join me as I salute Syria Temple of southwestern Pennsylvania and its current potentate Frederick T. Hiller.

THE MORAL SIDE OF THE NEUTRON BOMB ISSUE

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. MAZZOLI. Mr. Speaker, as the Senate attempts to decide the fate of the neutron bomb, I feel that it is imperative that we all seriously consider the consequences of having such a weapon at our disposal. This is not merely a pragmatic question concerned only with appropriation of funds, but a moral question as well. An editorial in the Louisville archdiocesan newspaper, the Record, addresses the moral questions posed by the neutron bomb debate:

NEUTRON BOMB DEBATE POSES MORAL QUESTIONS

A new Pandora's box is being juggled in the U.S. Senate. It is a bill to provide the funds to produce the latest in a long line of superbombs.

The measure touched off a heated controversy in the Senate, at one point bringing about the clearing of the gallery for a secret session that lasted nearly three hours. With opponents of the bill threatening a filibuster, the senators postponed a vote until after the holiday recess.

What is this new weapon that is being so hotly debated? It is the neutron bomb, known as the "death ray" bomb during the developmental stages in the 1960s, because it is designed to kill people with lethal doses of nuclear radiation. It incapacitates its victims, bringing as much as six days of torment and finally death. Except for the immediate area of impact, property suffers little damage.

To bring into relative focus the immensity of the potential of this proposed new addition to our arsenal of war-deterrent weapons, consider the following data:

The atom bomb, dropped on Hiroshima Aug. 6, 1945, had a destructive force equivalent to 13,000 tons of TNT. The final toll of destruction of that one bomb has yet to be summarized at this time, nearly 32 years later, not because of negligence to the detail of recording statistics, but because the extent of its effects are yet to be discovered. The morality of the decision to use that first atom bomb remains a source of considerable debate. It was an act that opened a new chapter on "man's inhumanity to man."

Nov. 1, 1952 made history with the test explosion of the first hydrogen bomb—a

bomb with destructive force equal to 12,000,000 tons of TNT as opposed to 13,000 tons of TNT of the atom bomb.

Just two years later, the world experienced its first nuclear test explosion of a bomb with a destructive force of 15,000,000 tons of TNT.

All nuclear explosions produce four lethal effects: blast, heat, radiation and fall-out. A one-kiloton neutron bomb with destructive force equal to "only" 1,000 tons of TNT can devastate an area of approximately one-third of a mile with heat and blast and approximately a mile and a fraction with radiation. A conventional nuclear device big enough to spread lethal radiation over a mile and a fraction would expand the blast and fire area to over 12 miles.

Neutron weapons would replace nuclear weapons that destroy civilians and homes far beyond the battlefield area to which the effects of the neutron weapon would be confined. Pentagon spokesmen cite the fact that the neutron warhead would pinpoint a column of Soviet tanks known to be impervious to heat and blast effects and that ". . . the radiation from a neutron bomb penetrates tanks and lasts only a few seconds, allowing allied troops to move into a target area soon after an explosion." According to proponents "this is considered a more humane type of weapon because it is more precise in its target."

The opponents led by Senator Mark Hatfield (R. Ore), maintain that the precision might encourage use of the neutron bomb. Defense officials disagree claiming use would be limited to "only . . . times of desperation." They press their case by saying that the primary value would be the safety it will afford U.S. troops and allied forces and territory. "The Soviets know we may be reluctant to use nuclear warheads because of the devastation to allied territory. The precision of the neutron warhead would be a deterrent the Soviets would respect, knowing it to be a force decreasing their chances of surviving an assault." Critics of this view argue that the U.S. cannot assume that the Soviet Union would not retaliate against the neutron bomb by using conventional nuclear weapons. (Though the reaction of the Soviet Union indicates it has not perfected a neutron bomb to date, there is no certainty that they have not.) On July 7, 1977, the Soviet news agency Tass reported on America's test of the neutron bomb: ". . . prospects for a new arms race has brought new liveliness to ultra right organizations in the U.S." The Soviet newspaper Pravda has denounced the warhead as ". . . practically a chemical-warfare weapon."

According to Senator Hatfield, who has led the fight against appropriation of funds for the production of the neutron bomb, the development of the weapon has been shrouded in secrecy. "Everything up to this point has been more by discovery than by information. We discovered that it was in the budget. We discovered that no president had ever approved it. This whole thing has stumbled into our life." (Tests of the neutron bomb are continuing beneath the Nevada desert. The Pentagon spokesmen declined to give details about it.)

Secrecy might be the Defense Department's idea of control of the neutron bomb. For some individuals in the Defense Department, secrecy for the sake of national security might justify shrouding its mind-boggling destructive potential. But even within this context, what can justify burying the funding for production of the neutron bomb in the public works budget (where it was "discovered") instead of including it in the more appropriate budget for the Defense Department? This is gross misrepresentation of the total figure of funds appropriated for defense spending. It is a pertinent question that calls for some answers before forming any judgment about the neutron bomb.

We are not directly concerned here with the strategic value of the neutron bomb, nor even the secrecy shrouding it. Rather our serious question and very real concern is the morality of using weapons of such awful magnitude as the atom, nuclear and neutron bombs. The strategists seem to be more concerned with the preservation of property than with the destruction of life. This is even more awesome when one considers the possibility of the neutron bomb coming into irresponsible hands. One must pose the question: does the end, that of preserving property, justify the means designed to destroy human life on an unprecedented scale?

The new Defense Secretary Harold Brown is a nuclear physicist who helped perfect the neutron bomb. Reportedly he could not speak without emotion when he revealed some of the visions that drive him. He said he was on hand to observe "between 10 and 30 nuclear explosions including 10 of megaton or more"—equivalent to "only" 1,000,000 tons of TNT. "When you've seen those, you don't forget easily. It has a big effect on your estimate of what a nuclear war would be like."

As defense secretary, his responsibility is to restructure the nation's weapons and strategy, and to maintain sufficient military strength to be a deterrent to war. But reportedly he fervently believes that both the U.S. and the Soviet Union have far too much nuclear power for their own good. A proposal for big reductions in the U.S. and Soviet nuclear arsenals—not just a ratification of current ceilings which he thinks are too high—was put before the Strategic Arms Limitations Talks (SALT) in March. Mr. Brown was the President's most influential advisor on the proposal. In his five months in office he has shown he is not averse to pressuring the Soviets to sign an arms agreement by deploying new weapons.

Perhaps our hope rests with the defense secretary as President Carter's advisor who is acknowledged to have "the full faith of the President." Obviously he has not been able to dissuade the President from approving the neutron bomb and requesting funds for its production. But with his acute awareness of the awesomeness of nuclear warfare, perhaps the Defense Secretary can use his influence to encourage President Carter to lead the heads of all nations to the conference table. There, perhaps, an agreement can be reached to outlaw war by international law and to use technology in striving for peace and harmony among nations instead of using it for outdistancing one another on a collision course for the complete destruction of mankind.

STATE DEPARTMENT HARASSMENT OF IRISH AMERICAN COMMUNITY CONTINUES

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. BIAGGI. Mr. Speaker, for some time I have been concerned over the practices and policies of the U.S. State Department with respect to refusing visas for leading Irish politicians to visit America. I personally visited Ireland in April of 1975 to discuss this matter with senior American officials.

The harassment continues. Most recently, the Department of State refused to grant a visa to Mr. Ruairi O'Bradaigh, president of the legally sanctioned Sinn Fein political party in Ireland. They cite a rarely used and outdated portion of the Immigration Act which bars persons whose associations in their nation make them a possible threat to our Government and security. They used an unfounded allegation that Mr. O'Bradaigh was a member of the Irish Republican Army to deny him his visa. Mr. O'Bradaigh has repeatedly denied that charge yet was not even given a chance by the State Department to refute it.

I have written to the President on this matter. I pointed out to him that very recently, a visa was granted to the Italian Communist mayor of Florence, Italy.

My letter continued—

You have championed the very just cause of human rights and made it an integral part of our foreign policy. It is clear that the actions of the State Department are in direct conflict with the spirit of this policy. I urge you to examine this situation at once.

It is my hope that the House International Relations Committee will also become involved in examining this and other facets of the Irish question. Such hearings have been requested by myself and other concerned Members. I intend to continue my efforts to get hearings on this critical issue.

I now wish to insert into the RECORD a copy of an interview conducted recently between noted New York City radio personality Bob Grant and Ruairi O'Bradaigh:

INTERVIEW

On Monday night last, July 11, Mr. Bob Grant of WOR Radio, made a prearranged trans Atlantic telephone hook-up to Mr. Ruairi O'Bradigh, President of Sinn Fein, in Ireland.

INTRODUCTION

Mr. GRANT. Rory O'Bradaigh, President of one of the political organizations in Ireland was invited to speak at Niagara Falls at the A.O.H. Convention. The A.O.H. is the largest Catholic organization in the United States—the grounds given were that Mr. O'Bradaigh was refused a visa to enter the United States, the grounds given were that Mr. O'Bradaigh was a member of the Provisional I.R.A., an accusation he says is untrue.

While many are claiming that this may be part of a larger issue, the selectivity discriminating against those who may enter this country to speak.

Mr. GRANT. Mr. O'Bradaigh, what organization are you President of, and what is its goal?

Mr. O'BRADAIGH. I am President of the Sinn Fein organization which exists for more than seventy years, since about 1905. It is entirely a political organization and its goal is to remove British rule from Ireland and to establish majority rule in Ireland with due respect for minorities through a Federal arrangement.

Mr. GRANT. Are you a member of the I.R.A.?

Mr. O'BRADAIGH. This question doesn't arise at all, and I would like to point out that when I applied for a visa on the 8th of June I wasn't asked any political questions. I have in front of me here a copy of the form I filled on that occasion, and in answer to the question: "What is the purpose of your trip?" I wrote in, "To advocate solutions to the Irish Problems to Irish-American societies and to Congressmen." I wasn't asked any political questions whatever, and I wasn't given any reason when I was told that such a visa would not be available. I was told that some weeks later. I was given no reason whatever. I was just told that the State Department declined and in fact, the reason you have mentioned yourself is news to me.

Mr. GRANT. Once again the question, Mr. O'Bradaigh, which for some reason you have failed to answer, are you a member of the I.R.A.?

Mr. O'BRADAIGH. No! I'm not a member of the I.R.A.

Mr. GRANT. Isn't Sinn Fein closely associated with the IRA?

Mr. O'BRADAIGH. Sinn Fein, historically, has been associated with many organizations in Ireland and it is a political organization and its object is to secure the removal of British rule from Ireland by political means. It is as clear as that and there is a comprehensive program which I intended to put before the New York State Convention of the A.O.H. at Niagara Falls, at the invitation of the President, Mr. John Keane.

Mr. GRANT. Well O'Bradaigh, I want to assure you that whether you are or are not a member of the I.R.A. is at this point, in my opinion anyway, even if you were, I think it would be immaterial at this point. I think the relevant question is: Why do you feel you have been denied entry into the U.S.?

Mr. O'BRADAIGH. Well, because I am opposed to British rule in Ireland, and I believe that the British Government and the Dublin Government which rules a part of Ireland and which is in collaboration with British policy, because they both have used influence with the American State Department to have me denied entry, and I would say that at this it is a violation of the human rights of the A.O.H. and also of my own right to travel, to deny me entry to the United States at this time. Now, much has been made of the Helsinki Agreement as I'm sure your listeners are aware and much has been made also of the rights of Jews within the Soviet Union to have liberty to travel, and at the same time an Irishman is denied the right to enter the U.S. to advocate a peaceful solution to the Irish problem. I think this is a very grave situation. It's true that I am a political dissident! That is so, but I understand that President Carter has said that if necessary, the U.S. would have to change its laws to conform with the Helsinki Agreement. Now, all this coming up for review in the Fall at Belgrade, Yugoslavia, and the Helsinki Agreement is being looked at again and its progress reviewed, and I believe that this refusal of a visa to me without hearing my case; without accusing me and giving me a right to defend myself that is in violation of the spirit and of the letter of the Helsinki Agreement.

Mr. GRANT. You mentioned the President, I hear that he has indicated that he would allow you to enter the country. Did you hear that also?

Mr. O'BRADAIGH. No, I haven't heard that at all. That's news to me.

Mr. GRANT. Well, this was something we had heard from an individual who asked us not to use his name on the air, but it might very well be that he is only guilty of some wishful thinking.

Mr. O'BRADAIGH. Well, I just used to say in respect of the Helsinki Agreement International Arrangement and is of great interest to President Carter who expressed his great concern for human rights, not alone in the U.S. but throughout the world, and I would submit that Ireland, and the conflict in Ireland, provides a threat to human rights.

Mr. GRANT. Mr. O'Bradaigh, let me just say this to you, sir. With some of the incredible types of people they have been allowing to come into this country, I certainly think there should be room for you. I really don't understand why you should be denied entry into this country for the purposes you've stated. I think it is an outrage, and I want to extend to you an invitation to appear on this program when, and if some sanity prevails in the State Department and you are allowed to come in and visit us.

Mr. O'BRADAIGH. Well, thank you very much Mr. Grant, and I'll be looking forward to that. I would like to make a final point and say, that I have in the past negotiated with the British Government. My life has been dedicated to finding a solution to this interminable problem of British rule in Ireland and I look forward very much to having any visa restored to me and traveling to America advocating a peaceful solution to the Irish problem and appearing on your show, and for that invitation I'm very grateful to you.

Mr. GRANT. And I am sure Mr. O'Bradaigh, it wouldn't bother you one bit that the Governor of this state, Mr. Hugh Carey, wouldn't come over to say 'hello'?

Mr. O'BRADAIGH. Well, no, but I do know that many Congressmen would. I have met them in the past and the last time I was in America I was at Washington testifying before a Human Rights Committee of the International Affairs Committee of Congress, chaired by Congressman Donald M. Frazer and in the course of my visit to America and their visits to Ireland I have met Congressman Biaggi, Lester Wolff, Joe Moakley, and so forth, so that even if Governor Carey would not say "hello" I know very many Congressmen who did in the past and would indeed, in the future, all good friends of Ireland.

Mr. GRANT. Thank you very much, sir.

Mr. O'BRADAIGH. Thank you indeed, Mr. Grant.

The Irish people, on behalf of all our readers, wish to sincerely thank Mr. Bob Grant and WOR Radio for their courage, effort, and consideration in bringing the voice of Mr. Ruairi O'Bradaigh to their Radio listeners.

GOING UP IN SMOKE

HON. ANDREW MAGUIRE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. MAGUIRE. Mr. Speaker, once again we have an opportunity to incorporate our national commitments to improved health and environmental quality into our farm subsidy program. It strikes me as the height of hypocrisy that we continue Federal subsidies to tobacco farmers at the same time as the Department of Health, Education, and Welfare, through both its Secretary and the Center for Disease Control, has pledged to educate the public on the serious health consequences of smoking, both for smokers and those exposed to smoking by others. As President Carter has pointed out, the national commitment to health is difficult to reconcile with Congress annual payouts of millions of dollars to tobacco growers. I believe it is up to us to reexamine these policies, and to shift the balance in favor of protecting the public's health.

Let us look for a moment at the health effects our tax dollars buy when we subsidize tobacco farming. For example, we know that children have a higher incidence of respiratory infections than adults, and are most sensitive when exposed to tobacco smoke and other airborne pollutants. There is also statistical evidence that demonstrates a clear relationship between parental smoking and respiratory illness in children. For years scientists have shown strong correlations between smoking and diseases such as lung cancer and heart and respiratory diseases. Now we are beginning to hear about the deleterious health effects that tobacco has on those involuntarily exposed to smoking by others.

For these reasons, I strongly favor an end to tobacco subsidies, and to the policies that underlie them. We as a nation literally cannot afford to support industries that damage our health. Tobacco payments represent only one side of the equation; how much does the subsidy really amount to when the so-called external costs are taken into account? Such costs include lost man-hours, a drain on health insurance funds, and intangible, yet very real, psychological costs to families faced with the agonies of tobacco-induced disease.

For those who argue that the subsidies are keeping small tobacco farmers afloat, let me say that I am sympathetic to the problem. But we cannot compromise on an issue as important as our national health. I therefore concur with Mr. JOHNSON of Colorado in recommending that the Agriculture Committee prepare an impact statement on tobacco desubsidization, along with a report on economic options for those farmers for whom desubsidization would create financial adversity. In the long run, the policy shift I have enunciated is sure to have beneficial consequences for this body, and for the health of our people—consequences that will far outweigh the temporary problems posed for tobacco farmers. In short, the question I put to my colleagues is this: Do we want federally subsidized lung cancer, heart disease, and respiratory disease, or would we rather go on record as supporting an end to America's tobacco addiction?

ROUND TWO ON VINYL CHLORIDE: INDUSTRY CRYING WOLF AGAIN?

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. OBEY. Mr. Speaker, in 1974 the Department of Labor instituted strict regulations to protect workers from exposure to vinyl chloride, an extremely dangerous carcinogen. At that time industry spokesmen said that the strict regulations would cripple the plastics industry and that they would cost too much in view of the small number of workers involved. But the regulations went into effect anyway and as the Wall Street Journal reported a year later, the industry had not been crippled but instead was prospering.

Now the Environmental Protection Agency wants to place restrictions on the level of emission of vinyl chloride in the air and water. It is now feared that people living and working in a 5-mile radius of places which emit vinyl chloride may be adversely affected. Once again the industry is saying that the regulations are useless and too costly to implement.

I am inserting an article from the Washington Post which explains the EPA and industry arguments regarding the new regulations and the Wall Street Journal report from 1975 in hopes that Members of Congress will remember that industry complaints about the cost of implementing regulations to protect workers and the general public may sometimes be unrealistic:

[From the Washington Post, July 20, 1977]

VINYL CHLORIDE TRIGGERING ANOTHER ENVIRONMENTAL FIGHT

(By Bradley Graham)

Vinyl chloride, the cancer-causing chemical which menaces the plastics industry, again has roused industrialists and environ-

mentalists to fierce debate over when enough is enough.

In open hearings yesterday, industry spokesmen angrily denounced as unnecessary, usless and too costly strict new standards to limit the emission of vinyl chloride.

But an attorney for the Environmental Defense Fund, the leading proponent of federal action, claimed the new regulations—the second set of emisison standards to be strapped on the industry in nine months—are necessary to jolt plastic manufacturers into developing more efficient clean-air technology.

Until 1974, vinyl chloride was accepted as a cheap and almost innocuous gas used as a propellant for insecticides and hair sprays and as a base ingredient in a common plastic (polyvinyl chloride) found in flooring, car upholstery, wrapping, pipes, phonograph records, film and other products.

In recent months, however, the chemical has been blamed for the cancer death of at least a dozen industrial workers. Several studies suggest prolonged exposure to vinyl chloride can cause a rare and fatal form of liver cancer in the hundreds of employees who work in, and 4.6 million people who live within five miles of, the nation's 58 manufacturing plants.

Standards proposed by the Environmental Protection Agency would reduce the acceptable amount of chloride from 10 to 5 parts per million in air or water discharges.

Though the reduction appears significant, Ralph Harding, president of the Society of the Plastics Industry, complained it would do little to improve air quality because of the relatively larger amount of gas that would continue to escape through uncontrolled points in the manufacturing process.

LABOR LETTER—A SPECIAL NEWS REPORT ON PEOPLE AND THEIR JOBS IN OFFICES, FIELDS AND FACTORIES

Crying wolf? Vinyl chloride plants keep humming under new federal rules.

A year ago, makers of vinyl chloride and its many plastic derivatives were saying that adoption of proposed rules cutting workers' exposure to the cancer-causing gas would force the industry to "close down immediately." But, six months after tough new rules took effect, no plant has closed because of them, four new plants have opened and prices are below 1974 highs.

U.S. output of vinyl chloride plastic is way down this year, but the industry concedes that's due to the recession. The Society of the Plastics Industry, the trade group that foresaw doom last year, claims compromises over details of the rules averted disaster; but it concedes the industry "surprised itself" by being able to comply.

One company, Tenneco, even takes ads to hail its progress in cutting worker exposures; Robintech boasts of a cheap new method for cutting in-plant emissions.

KENNEDY'S CENSORSHIP

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. DERWINSKI. Mr. Speaker, one of the contradictions of our legislative activity are Members who, claiming to help some aggrieved section of society, wind up imposing a greater Government burden on the entire public or segments of society.

In my judgment, the saccharin debate, caused as it is by an overbenevolent bureaucracy, could well result in the legislative cure compounding rather than solving the problem. This seems to be the case with the senior Senator from Massachusetts, which is properly commented on in an editorial broadcast by WBBM-TV in Chicago, which I insert in the RECORD at this point:

Censorship of broadcast advertising has been tried before, of course, with cigarettes. And look what happened. Cigarette smoking increased to record levels. And so did cigarette advertising in other media.

So, Senator Kennedy's attempt to prohibit broadcasters from airing certain commercials will solve no problems. It will only create problems—bad problems, government censorship problems.

KENNEDY'S CENSORSHIP

(By Gary Cummings)

Senator Ted Kennedy wants to censor television and radio. He wants to order us not to broadcast certain material.

Kennedy's misguided censorship involves the saccharin controversy. He's pushing a bill to allow you the right to continue buying products containing saccharin, provided they warn of saccharin's health hazard. That's fine. You should have that right.

What's not so fine is that Kennedy's proposal would effectively ban all broadcast advertisements for such products—diet drinks, diet foods, even toothpaste and chewing gum.

Kennedy isn't trying to muzzle the other media—magazines or newspapers. He either doesn't dare or he can't get at them. But because broadcasters are regulated by the government, he can put the screws on us. And he's trying to do so.

AMERICAN DEFENSES

HON. LES ASPIN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. ASPIN. Mr. Speaker, one of the major issues in last year's campaigns revolved around then President Ford's suggestions that the "Democrat-controlled Congress" had crippled American defenses by chopping more than $32 billion from Republican defense requests in the previous 6 years.

I requested the Library of Congress to analyze just what Congress had done and released the results last fall.

The Library of Congress study concluded:

Congressional reductions to the defense budget between fiscal year 1971 and fiscal year 1976 were less critical than might be supposed by a superficial presentation of the total reductions. . . . Congress has exercised only a limited influence on U.S. defense policy and the military force structure.

The Library analysis found that:

Thirty-five percent of the cuts were illusory or simply financial adjustments such as the elimination of aid for Saigon after Saigon fell;

Nine percent of the cuts were in noncritical areas such as reductions in the number of servants assigned generals and a cutback in the size of the military's public relations force;

Twenty percent were not cuts but simply postponements where Congress, for example, noted a program was having difficulties and dropped funds for procurement until a later year when the teething problems were resolved;

Thirty-six percent of the cuts, or a mere 2 percent of the defense funds requested, were in areas that might possibly be considered to effect defense policy in some manner.

The study, entitled "An Analysis of Congressional Reductions in the Defense Budget: Fiscal Years 1971–1976," was published as Congressional Research Service multilith No. 76–205F, September 16, 1976.

Mr. Speaker, subsequently I asked Mr. Richard P. Cronin of the Library staff to update his study by making the same analysis of the congressional actions on the fiscal year 1977 defense request—the request that was moving through Congress while the debate on the Ford charges was going on.

Mr. Cronin has now submitted his analysis. The raw figures indicate that Mr. Ford's attacks may have had some impact: the total reductions in the defense budget request last year were proportionately the lowest in 6 years. Mr. Speaker, I enter in the RECORD at this point the analysis and three tables that comprise Mr. Cronin's report:

THE LIBRARY OF CONGRESS,
CONGRESSIONAL RESEARCH SERVICE,
Washington, D.C., July 11, 1977.

To: Honorable Les Aspin, Attn: Warren Nelson.

From: Richard P. Cronin, Analyst in National Defense.

Subject: Analysis of Congressional Reduction to the FY 1977 Defense Budget.

In response to your request we have evaluated final congressional action on the FY 1977 Department of Defense budget request in accordance with the methodology employed in a September 16, 1976, report to you covering the fiscal years 1971–1976.

The present analysis consists of tables 1 and 2 from the earlier report as updated to accommodate the FY 1977 data, and table 3 as modified to display the FY 1977 data only. Since the original report was keyed to Department of Defense data referring to a specific total of congressional funding cuts for the period FY 1971–76, we have not included summary totals for all years in the revised tables.

Congressional cuts in the FY 1977 Department of Defense budget amounted to $4,056 million, or about 3.5 percent of the total $114,426 million requested by the Administration. This includes funding in the regular Department of Defense Appropriation Act, the Military Construction Appropriation Act, the Second Supplemental Appropriation and funding for foreign assistance and civil defense programs. Based on the categorizations employed in our earlier report to you, the FY 1977 reductions break down as follows: "substantive"—62.1%; "non-critical"—6.4%; "postponements and deferrals"—16.2%; and "adjustment"—15.2%.

The proportion of FY 1977 reductions falling into the substantive category is considerably higher than that found in the analysis of the period FY 1971–76. The significance of this divergence, however, is questionable. In dollar terms the substantive reductions for FY 1977, some $2.5 billion in all, are smaller than for any year since FY 1973. Substantive reductions as a proportion of the total dollar request are 2.2 percent for FY 1977 versus an average of 2.6 percent for the period FY 1971–76.

One explanation for the high proportion of substantive type reductions is the fact that the FY 1977 picture did not include the kind of large postponement and deferral and adjustment actions which characterized some earlier years. Large postponement and deferral actions were especially prevalent during action on the FY 1973 and FY 1974 budgets, while FY 1975 and FY 1976 budget action fea-

tured large and atypical adjustment items, notably a "windfall" from the abrupt demise of South Vietnam and the denial by Congress of anticipatory funds for cost growth and inflation in approved shipbuilding programs. (see p. 12 of the earlier report.)

If you have any questions regarding the attached tables or the analysis employed please call 426-5060.

TABLE I.—CONGRESSIONAL REDUCTIONS IN DEFENSE BUDGET REQUESTS,[1] FISCAL YEAR 1971-76

[Appropriations[2]—Dollar amounts in millions]

	Fiscal year—						
	1971	1972	1973	1974	1975	1976	1977
DOD request	$75,346	$79,883	$84,999	$90,262	$94,160	$106,470	$114,426
Congressional action	−2,507	−3,917	−6,160	−5,825	−6,719	−8,218	−4,056
Appropriated	72,839	75,966	78,839	84,437	87,441	98,252	110,371
Percent reduction	3.3	4.9	7.3	6.5	7.1	7.7	3.5

[1] The figures cited in this and subsequent tables refer to funds appropriated to or managed by (military assistance) the Department of Defense. Excluded are other programs which make up the total national defense functional category of the budget such as ERDA atomic energy defense activities, the Selective Service System, defense stockpile materials transactions etc. The DOD military and military assistance programs account for more than 95 percent of the total national defense functional category of the budget.

[2] Appropriations are provided in the form of new obligational authority (NOA). This is nearly, but not completely synonymous with the term budget authority (BA). The Department of Defense also uses a term total obligation authority (TOA) which excludes the financing and trust fund adjustments which in some cases distinguish budget authority from new obligational authority.

TABLE II.—CONGRESSIONAL REDUCTIONS BY CATEGORY, FISCAL YEAR 1971-77[1]

[Dollar amounts in millions]

Fiscal year	Substantive		Noncritical		Postpone and deferrals		Adjustments		Total
	Amount	Percent	Amount	Percent	Amount	Percent	Amount	Percent	
1977	−$2,517	62.1	−$261	6.4	−$659	16.2	−$620	15.2	−$4,056
1976	−3,446	41.9	1,477	18.0	−471	5.7	−2,824	34.4	−8,218
1975	−3,081	45.8	−487	7.3	−1,036	15.4	−[2]2,115	31.5	−[2]6,719
1974	−2,608	44.8	−172	3.0	−1,950	33.4	−1,096	18.2	−5,825
1973	−1,839	29.9	−159	2.6	−1,610	26.1	−2,551	41.4	−6,160
1972	−1,681	42.9	−70	1.8	−351	9.0	−1,815	46.3	−3,917
1971	−903	36.0	−125	5.0	−512	20.4	−967	38.6	−2,507

[1] Number may not add due to rounding.

[2] Includes $183,000,000 in rescissions.

TABLE III.—SUMMARY BY APPROPRIATION ACCOUNT AND CATEGORY

Appropriation account	Substantive reduction	Percent of total request	Noncritical reductions	Percent of total request	Postponements and deferrals	Percent of total request	Adjustments	Percent of total request	Total reductions	Percent of total request	Total request fiscal year 1977
Military personnel	−73	0.3	−95	0.4					−168	0.6	26,392

CAPTIVE NATIONS WEEK

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1977

Mr. ANDERSON of California. Mr. Speaker, another Captive Nations' Week has come and almost gone. Nearly every year, I address myself to the occasion, as do many of my colleagues. Skeptics sometimes say that these are only hollow words that do no good. I would, and do, respond that indeed, they are only words. But this is Capitive Nations' Week, and they are words, words that help us to focus our attention on lands and people of the world who have lost those freedoms that we in this country so easily take for granted.

The point that the critics are driving at, of course, is that we must not restrict ourselves to speaking these words once a year, while the people are denied their human rights on a daily basis. Letters should be written, and protests filed, indicating that Americans deplore the conditions existent in too many nations. And in Congress, we have the opportunity and responsibility to see that U.S. policy reflects the views of these people whom we represent.

It saddens me to look at a globe and see in it the faces of millions of people in captive lands. I can cast my memory back and remember days when these lands, and these people, were free. So I am surprised from time to time, when I speak with groups of young people and they ask me to continue pressing for action to free these lands.

It surprises me, because they cannot remember the day when these lands were free, but they do remember some film clip they saw, or article they read, commemorating Captive Nations' Week.

CAPTIVE NATIONS WEEK

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1977

Mr. OTTINGER. Mr. Speaker, Captive Nations Week is a time we have set aside to reflect upon the terrible enslavement of thousands of fellow human beings. We, in the United States, have minimal understanding of the intense suffering which is the inevitable result of being denied the most basic and fundamental human rights.

Extending our deepest sympathy to those oppressed peoples behind the Iron Curtain is only part of our responsibility. It is also imperative that we strongly protest the illegal annexation of Latvia, Lithuania, and Estonia by the Soviet Union. These nations under Soviet tyranny and domination look to us for

support and inspiration. Captive Nations Week was established as an indication of our firm and unyielding devotion to the democratic ideals of liberty, justice, and freedom for all.

In honor of Captive Nations Week let us rededicate ourselves to helping restore to these nations their freedom.

SUGAR AMENDMENT TO GENERAL FARM BILL

HON. JOHN B. BREAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. BREAUX. Mr. Speaker, the sugar situation has been thoroughly studied by the U.S. International Trade Commission. They concluded that the domestic sugar industry is seriously threatened by imported sugar. The Commission recommended administrative action to reduce the level of imports, but their recommendation was not carried out due to ongoing negotiations aimed at achieving an International Sugar Agreement. The International Sugar Agreement negotiations ended May 27, with no relief provided to American sugar producers. The President has, in the meantime, proposed a 2 cents per pound subsidy as an interim stop-gap measure. The inadequacy of such a proposal is obvious in light of the fact that sugar prices have dropped to below 10 cents per pound. Secretary of Agriculture Bergland, on May 4, placed the minimum cost of production at 13.5 cents per pound. I consider it imperative to this Nation's sugar industry that a more substantial means be found to prevent the total destruction of domestic producers.

This can only be accomplished if Congress takes immediate action to provide relief to sugar producers in a manner similar to that which other U.S. farmers enjoy, through Federal crop loans or purchases. The industry will not be sufficiently assisted by the President's program and cannot survive on the hope that an international agreement to protect our producers will be reached sometime in the future.

The approach which will save the industry and which has been recommended to me by my good friend and colleague Congressman DE LA GARZA of Texas, would add sugar beets and sugarcane to the list of "designated nonbasic commodities" in section 201 of the Agriculture Act of 1949. This amendment, if adopted, would provide mandatory price supports to sugar beet and sugarcane producers in the same manner as now provided to milk and honey producers.

The amendment will not guarantee producers a profit. It will simply extend to more than 15,000 farm families who grow sugar crops the treatment given to producers of other commodities. It will allow sugar producers to regain at least the bare minimum cost of production and help preserve approximately 27,000 union jobs connected with the sugar industry.

In addition to offering economic protection to farmers, processors, and their employees, the amendment will protect American consumers from being totally dependent on foreign suppliers. It will help assure consumers of a reliable sugar supply and avoid the possibility of international scheming toward a sugar cartel.

I believe the amendment will also have the effect of encouraging our foreign trading partners to come to an equitable agreement in the international negotiations. We must demonstrate that we will not sit idly by and watch the destruction of an important U.S. industry.

I urge my colleagues to come to the aid of a seriously threatened segment of our economy and support Congressman DE LA GARZA'S amendment to title IX of H.R. 7171.

SIMON SPEAKS ON ENERGY

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. CRANE. Mr. Speaker, a recent review of former Treasury Secretary William Simon's comprehensive tax refrom proposal speaks in glowing terms of "what good civil servants—also known as bureaucrats—can do when their pure expertise is enlisted in a challenging cause. It—the tax refrom study—is analytically rigorous, free of ideological taint, and laced with commonsense." These comments are equally appropriate when Bill Simon writes on energy matters, owing to his stint as the first Federal Energy Administrator. Thus, I commend his fine article on President Carter's national energy plan, which appeared in the July 23, 1977, issue of Human Events, for your reading and study:

CARTER'S NATIONAL ENERGY PLAN IS FOUNDED ON FALLACIES

(By William Simon)

"Our National Energy Plan is based on 10 fundamental principles," President Carter soberly announced. "The first principle is that we can have an effective and comprehensive energy policy only if the government takes responsibility for it. . . ."

From that statement onward, it's all been downhill for the President's proposals. Why? Fundamentally because the President and his advisers, although acting with the best intentions, have chosen the worst of the solutions. Instead of relying upon the dynamism of a free market and a free people, they have nominated the government as our national energy savior.

Let's look at 10 basic fallacies that, in my judgment, lie at the foundation of this 10-part plan.

Fallacy No. 1: The country has no comprehensive policy for dealing with energy.

Contrary to the President's frequent assertions, the country has long had a comprehensive energy policy. It's just been the wrong policy.

For more than 20 years the government has increasingly tried to regulate the energy industry so that prices were artifically held below market levels. Consumers, the intended beneficiaries, have naturally increased their demands, but producers have gradually curtailed their output.

Demand for natural gas, the most clearcut example, has risen spectacularly since the Phillips decision of 1954 (legalizing wellhead price regulation of natural gas), but drilling for new domestic wells peaked in 1961 and production has been sliding downward since 1970.

Fallacy No. 2: More governmental control is the only solution to the current crisis.

History shows that the more the government has tinkered with the intricate marketplace machinery, the worse things have become. Quotas, tariffs, price controls, taxes, regulations—each has taken a toll. It is folly to believe that the same people who created this mess can now improve the situation by tightening their grip over every single energy resource.

The only sensible answer is to begin dismantling existing controls, beginning with price controls over oil and natural gas and including repeal of the energy bill that President Ford, in a tragic error, signed in December 1975.

Fallacy No. 3: The United States has almost exhausted its supplies of fossil fuels.

The President is crying wolf the same way that other governmental agencies have in the past. In 1914, 1939 and again in 1949, responsible governmental officials predicted a quick end to domestic oil supplies, and every time they were wrong.

What we have learned over time is that increases in demand, when allowed to work in the marketplace, have brought increases in supply.

Between 1950 and 1970, for example, the known oil reserves of the U.S. increased by over 500 per cent. Even now, as the National Academy of Engineering has pointed out, we have only recovered by relying on low-cost technologies; with higher prices and greater return on investment, it should be possible to recover much of the remainder.

To hold prices below market levels as we have in the past, will only increase reliance on OPEC and leave us more vulnerable to foreign blackmail. We can impose a windfall profits tax on funds that aren't plowed back into new investment. It may not be popular to support higher profits, but it makes no sense to continue pouring our money into OPEC so that we can withhold it from our own producers.

Fallacy No. 4: Because our fuels are almost exhausted, we must rely primarily upon rigid conservation.

Conservation is critical, and in recent years the U.S. has made important progress in that direction. Recent FEA figures show that from November 1973 to November 1976, energy consumption dropped by 6 per cent in the industrial sector. While some of that drop may be due to economic conditions, there is also some evidence that energy/GNP ratios have improved, indicating significant conservation. Further progress can and should be made through better home insulation, more efficient auto engines and the like.

Conservation alone, however, is only half an answer; the other half must be a determined national effort to increase production and accelerate development of new technologies.

Even Prof. Lawrence Klein, the President's chief economic adviser during the 1976 campaign, has said that "the energy package is very negative in being so wholly concentrated on restricting demand. . . . It might have been better to tailor it more to increasing supply."

Fallacy No. 5: The President's program contains ample incentives for new oil and natural gas production.

By permitting higher prices for newly obtained oil and natural gas, the NEP does indeed represent a step forward. But if this is deregulation, as proposed by candidate Carter, then understanding the proposal requires more imagination than I possess.

Consider the position of the producers. In the case of "new, new oil," the price is to be raised over three years to the world price and thereafter tied to domestic inflation. If

the recent past is any guide, however, energy production costs will rise more rapidly than the national inflation rate, so that the government will once again be artificially depressing prices.

In the case of natural gas, the new price proposed by Mr. Carter is still below the market price and the price controls he wants to extend to intrastate natural gas would bring its prices down—and provide a disincentive for producers.

Fallacy No. 6: On questions of energy and the environment, it is possible to have our cake and eat it, too.

It is misleading for the Administration to pretend that our energy goals can be met without some relaxation of overly strict existing environmental and pollution standards.

Stripmining legislation, non-degradation standards for air pollution and a generally activist approach to environmental issues will all inhibit production of new coal, which is the keystone of the President's production plan. How can industries and utilities be expected to switch to coal if they can't burn it because of pollution restrictions, and producers can't produce it because of environmental restrictions?

It is clearly necessary to protect the environment, but it is also imperative to strike a sensible balance between economic and environmental tradeoffs.

Fallacy No. 7: The President's program will introduce greater certainty into energy production.

In view of the regulatory explosion of the past decade, this claim is baffling. By definition, more bureaucracy means more uncertainty. In just three years' time, the FEA has tied producers and consumers in knots. They can never be certain what they can do and what they can't. The petroleum industry already must file about 600,000 forms a year with the FEA.

Fallacy No. 8: The President's program will be equitable to consumers.

Where is the equity in a program in which consumers of heating oil get rebates but other home owners do not? Where consumers of natural gas continue to receive governmental subsidies but electricity users do not? Where larger industrial users of gas and oil are heavily taxed but small firms are not? And where industries and utilities pay widely different taxes depending on how well they fare in extracting exemptions, exceptions and special permissions from a GS–15 in Washington?

Moreover, the Administration has signified that it intends to put the $70 billion or more of rebates to other purposes—perhaps to pay for welfare reform, tax reform, or just to balance the budget. It would be more honest if it admitted this could be the biggest tax increase in U.S. history.

Fallacy No. 9: Adoption of the Carter plan will have only minor economic impact. There is a gathering consensus that the NEP would mean higher inflation, lower productivtiy, a cutback in energy usage and more stagflation. Indeed, those who have recognized the similarities between the recommendations of the NEP and a Ford Foundation study earlier in the '70s think that the NEP will inevitably bring the same result envisioned by the Ford Foundation study: an era of "no growth."

Fallacy No. 10: The free market cannot be expected to overcome the energy crisis.

Of all the mistaken notions underlying the President's program, none is more egregious than this one, for it assumes that our country no longer has the ingenuity or the dynamism to work its way out of crisis. This view, timid and cramped, is fair neither to our past nor our future.

Our recovery from the whale oil crisis a century ago and breakthroughs in electricity and then in petroleum are striking examples of what the U.S. can accomplish in relying upon individual initiative and private enterprise. We can do it again today if we reject this unhapy vision of America and affirm once again our commitment to a free, dynamic society.

On one point, at least, I find myself in agreement with the National Energy Plan. The President has predicted a calamity in energy. By adopting this program, that's exactly what we'll get.

IS THE CARTER ADMINISTRATION PREPARING A MASSIVE ATTACK ON GUN OWNERSHIP?

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. ASHBROOK. Mr. Speaker, as the ranking member of the Judiciary Subcommittee which considers all gun control legislation, I have endeavored to keep a daily alert to the activities of our adversaries who seek registration and confiscation of firearms in this country. While legislative activity has been dormant for the first 6 months of the 95th Congress; the efforts of our enemies outside the Congress have been frantic. The White House is a key target where my information points to an all out effort to win support of President Carter and Attorney General Bell for antigun measures.

The Civic Disarmament Committee for Handgun Control, one of the front groups for antigun legislation, had an interesting item in its June–July newsletter. That liberal group noted that its ally, the National Council to Control Handguns—NCCH—has, listen to this:

Lobbied strenuously, have established very good relations with the Carter Administration and expect the Administration to come out with strong handgun recommendations sometime in July.

I attended a press conference of NCCH on the hill a few months ago and they are aggressively on the attack. The National Mayors Conference recently had a symposium in Washington on the exclusive subject of gun control. It was conducted during the time the House of Representatives was in session and while I could not attend that meeting, I had a staff member sit in on their entire session. As you know, that group is dominated by the big city, liberal mayors and the small city mayors who generally support our position, are shunted aside.

From every strategic base I have checked, the information assembled is the same. The focal point is the Carter administration. Hold up the congressional campaign until Mr. Carter signals full speed ahead.

We saw how important the Carter influence is to public opinion on issue after issue in past months so we cannot sit back on this one. Aid to Communists, upgrading discharges of draft dodgers and deserters, the list could go on and on.

The draft dodger and deserter issue is a travesty. Mr. Carter repeatedly says "Let us put the past behind us." He then uses that pretext to suggest taxpayer aid to Vietnam or Laos and to bring new relations with Communist countries which are our enemies. It was bad enough to upgrade the discharges of the draft dodgers but it should stop there. I know most veterans feel the same way. Forgive, maybe but forget, never. Forgive maybe, but reward, never.

Having held its silence in the early days of its administration, the Carter organization may have developed a game plan for new antigun legislation, at a time when all seems quiet in the rank of the antigunners. In a press conference conducted in Washington, D.C., July 13, a pro-second-amendment group, the Citizens Committee for the Right To Keep and Bear Arms cited a White House plan to deprive tens of millions of lawabiding American citizens of their constitutionally guaranteed right to keep and bear arms.

The citizens committee unveiled a proposed White House antigun policy statement which it claims was prepared by the Justice Department and submitted to the White House. Calling for a ban of so-called Saturday night special handguns, the document declares war on private ownership of handguns for personal protection. Purchase of more than two handguns in a year, and more than one handgun in a month by a single individual would be outlawed. It would prohibit the use of sporting guns except under very limited conditions. Citizens would be forced to submit their names to a data bank in a forced gun registration program.

That the Carter administration would harbor this antigun attitude is of no surprise. Morris Dees, Mr. Carter's chief political fund raiser, was the chief organizer of the National Gun Control Center, a vocal antigun group. Gun owners remember well the threat issued last year by chief Carter adviser Hamilton Jordan, who said, "Carter will really go on gun control and really be tough. We're going to get those bastards".

The great surprise is the fact that Mr. Carter would maintain this unfavorable policy in light of the public's attitudes favoring handgun ownership. In a nationwide survey by "Decision Making Information," an independent research organization, 85 percent of those surveyed voiced support for their right to own guns. The public has spoken loudly in favor of private ownership of handguns. Why not follow their wishes, Mr. Carter?

JAWORSKI TO SERVE AS SPECIAL COUNSEL

HON. HENRY J. NOWAK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. NOWAK. Mr. Speaker, it is very gratifying to learn that Leon Jaworski will be serving on the House Committee on Standards of Official Conduct as special counsel for the South Korean lobbying investigation.

His integrity, impartiality, and intelligence were demonstrated vividly in his

role as Watergate Special Prosecutor, and those qualities should bring new impetus to the House inquiry into charges of Korean influence-buying.

It is unfortunate—but true—that as long as these individual allegations are unresolved, a cloud of suspicion hangs over the entire Congress. Public confidence must be regained by a vigorous, thorough investigation, followed by legal or in-house action in appropriate cases.

The stringent Code of Ethics adopted by the House this year should deter future incidents like the ones connected with the South Koreans, but we must clear up these pending charges and concentrate on our legislative duties. Leon Jaworski can provide the necessary competent staff direction for the job.

WHAT NEW YORK CAN DO FOR MR. CARTER

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. BINGHAM. Mr. Speaker, up to now no action or statement by President Carter or his administration on the subject of what happened during New York City's blackout last week has revealed any degree of the underlying significance of those events.

Last Tuesday, July 19, the New York Times in its lead editorial, made a wise and compassionate statement on the subject. I hope President Carter has read and pondered this editorial or that, if not, he will do so.

The editorial follows:

WHAT NEW YORK CAN DO FOR MR. CARTER

With misleading solemnity and precision, President Carter made a place for himself in the news of the New York blackout by demanding a full report from the Federal Power Commission—in exactly two weeks' time. (Nine days remain to deadline.) But that was a press-agent President at work or, at best, a White House that takes too seriously its press clippings about the President's talent as an engineer.

What New York can finally do for Mr. Carter is to broaden his sense of the national defense and Presidential duty. A President does not worry about generator nuts and bolts when the social fabric of the nation's largest city is exposed as inflammable. A President cannot confine himself to tension in Korea or negotiation with Israel when life's losers are rampaging in the streets of America, spreading blight and the disease of racism. Nor does he need yet another commission to discover that half the black and Hispanic youths in his major cities are out of work and out of hope and out of mainstream America.

The President prides himself on his knowledge of poverty in the rural South. But he need no longer pretend, as in his campaign, that this equips him to understand the culture of desperation that makes urban centers unlivable. A President who knows what he does not know about urban America would seize on such dramatic opportunities as the New York looting to inform himself and to rouse a nation. He would meet with looters and their victims and find a way to convey their nightmares to the rest of the land. And he would find ways to lead the nation to take up the burdens that it has unintentionally dumped upon New York and Newark, Detroit, St. Louis and Los Angeles. He would seek ways to have the Federal Government assume responsibility for more of the poorhouse costs that weigh upon these cities. He would struggle urgently to create the proposed national youth service corps and also programs for massive neighborhood rehabilitation, vocational training and job-placement services. (And as James Wieghart observed in yesterday's Daily News, a President seeking to keep in touch with the American people would do better one week after the blackout to visit Brooklyn than the home of a fertilizer manufacturer in Yazoo City, Miss.)

Understandably, this was the year in which President Carter intended to sacrifice almost everything else for the design and adoption of a sound national energy policy. When he heard about a power failure, it was his energy program that he thought of first. So much depends on it, that the program rightly claims his highest priority. But a President so shrewd at recognizing political opportunity, and so in need of a memorable social program as well, might also seize upon the New York experience to ask whether welfare reform must really wait four years more, to ask whether job-creation and city rebuilding must really remain in the category of primitive and experimental Federal programs.

A lack of money can be a pretext for inaction but not a reason. The causes that Americans embrace in common can be afforded and enacted, whether they are called national security or unemployment insurance. The need in our cities is for both defense of the society and insurance against the unemployable underclass. That is not a noble way of defining our most urgent human problem, but anything would do for a President who cares to learn and then sets out to teach us to care.

It has been estimated that a National Youth Service Corps to enlist the energies of the idle in social reconstruction and personal rehabilitation might cost $15 billion. The large-scale Federal assumption of more welfare costs might cost $5 billion. Call these figures conservative. Imagine an effort that might cost $30 billion. What price millions of our fellow citizens properly motivated, educated and relocated in jobs? What price conquest of a social disease? What price habitable cities, with hundreds of billions of dollars worth of housing and transit already in existence, that law abiding citizens can find fit places for raising children? The last President's fear of the swine flu cost the Treasury a quarter of a billion dollars and produced damage claims close to a billion. Another recent President's payoff to a single lobby of milk producers cost consumers nearly one billion dollars. The direct cost of the damage done in one night in New York last week is estimated at a billion, and a billion more each year in lost commerce and opportunity and taxes is inevitable if the damage to morale and property is not soon repaired.

But the issue is not what Mr. Carter can do for New York. The crisis exposed so devastatingly in our home city is not a special product of New York mismanagement or fiscal legerdemain. It points up a national danger that threatens dozens of communities, millions of homes and livelihoods. It points to a people waiting to be led.

INCREASING DEPTHS OF WELLS

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. COLLINS of Texas. Mr. Speaker, Freestone County, Tex., is another example of the price responsiveness of natural gas reserves. Shallow oil and gas were originally discovered in the county during the wildcatter era 1920–30, at depths ranging from 1,500 to 3,000 feet. Many such 50-year-old fields are signposts to deeper deposits.

In the wartime 1940's and the fuel-hungry expanding economy of the early 1950's, deeper, more expensive horizons were penetrated in the 8,500-foot range. In the mid-1950's, price controls on natural gas stifled exploration. Drilling activities declined and the United States began to draw down existing reserves, a process that was ultimately to lead to the energy crisis.

Decontrolled intrastate gas prices led to a revival of exploratory activities in Freestone County in the early 1970's. Six new deep gas reservoirs were discovered in the county at depths of approximately 13,000 feet, and active exploration and development drilling is underway. The six fields have proved reserves of 350 billion cubic feet, with an estimated reserve potential in the area of 3 TCF.

This historical development confirms what the latest MOPPS study postulates: Decontrolled gas prices will provide substantial new gas reserves in the United States.

LIKE IT OR NOT, IT IS THE PLUTONIUM AGE

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. TEAGUE. Mr. Speaker, in reviewing the ERDA authorization bill for fiscal year 1978, H.R. 6796, and the issues surrounding breeder technology, our committee has become convinced that the nuclear age brings with it proliferation risks which can only be successfully dealt with by international agreements and cooperation. We feel the U.S. policy must be to work together with other countries and begin to build a framework for cooperation with those countries who share our common interests.

I am inserting in the RECORD excerpts from a thoughtful and most informative speech made recently by Senator CHURCH in which he points out the status of nuclear technology today and why we must continue to grapple with the issue of nuclear proliferation rather than deny its existence:

[From the Washington Post, July 1, 1977]

LIKE IT OR NOT, IT IS THE PLUTONIUM AGE

(By Senator FRANK CHURCH)

Sen. Frank Church (D-Idaho) has become a leader of the campaign to build a breeder reactor on a commercial scale at Clinch River, Tenn. President Carter vehemently opposes it. The chief reason for canceling the Clinch River project is to slow down the movement toward commercial use of plutonium fuel, from which nuclear weapons can rather easily be made. Sen. Church laid out his dissenting view in a June 18 speech in England, from which these excerpts are taken:

The question is no longer whether the world should enter the plutonium era; that era is upon us now.

Given this perspective, it is not surprising that the Carter administration's proposal to

guarantee supplies of enriched uranium as a substitute for the plutonium-fueled breeder has fallen on deaf ears. Countries that are now dependent upon one depletable resource, oil, controlled by the OPEC cartel, are unlikely to opt for a new dependence upon a second depletable resource, uranium, controlled by a different, but also foreign, group of nations.

It is unrealistic to believe that other fuel-deficient governments are going to confine themselves to multibillion-dollar conventional reactor programs while relying upon a future supply of natural uranium that is unsure in quantity and susceptible to drastic price manipulation.

It is equally unrealistic, in my judgment, to expect fuel-deficient countries to forego the reprocessing of spent fuel rods from their nuclear reactors. Not only can they squeeze out an extra 30 per cent in energy by recycling the rods, but densely populated countries like Japan and West Germany see reprocessing as at least a partial answer to the acute problem of storing radioactive wastes.

One must add to this the fact that the oncoming breeder, whether eventually fueled by some new thorium-based cycle or, as I believe much more likely, by the plutonium-based cycle now underway, will require reprocessing as an integral part of the cycle.

So it is not surprising to find experimental reprocessing plants already operating in France and Great Britain, or to see Japan insisting on opening its own reprocessing facility at Tokai Mura, over which a serious trilateral confrontation is now developing.

Thus, we are left with the unfortunate but ineluctable conclusion that the nuclear age, in whatever form it takes, brings with it proliferation risks that we must deal with on an international scale. Unilateral acts of abnegation are unlikely to be emulated. That is why I oppose the Carter administration's abandonment of reprocessing and proposed termination of the U.S. fast-breeder program. Instead of advancing the effective control of nuclear-weapons proliferation, our self-imposed denial runs the grave risk of leaving an international vacuum, which is an invitation to nuclear anarchy. In short, the plutonium genie is out of the bottle. The better part of wisdom is to recognize this rudimentary truth rather than bemoan it.

I, therefore, believe that we have no alternative but to begin now to build upon the existing international system of safeguards, working with the International Atomic Energy Agency-member countries to devise a framework for living with plutonium. The IAEA is perhaps the only international institution where the United States and the Soviet Union find that their interests run parallel and where they have been able to work together in relative harmony.

The number of nations that are capable of supplying nuclear plants and technology on a commercial scale is still small—seven or eight. And for the next generation, the number of countries in the developing world that can realistically contemplate a sizeable nuclear-energy program is limited—not more than 12 to 16. So if we put our mind to it and apply ourselves at this still-early stage to constructing a durable framework for managing the risks inherent in the plutonium era, we have a reasonable chance of success.

The elements of an international framework are discernible. They encompass two basic principles: first, an international system of safeguards and physical security that minimizes the risk of diversion of plutonium to weapons purposes. Second, a system that offers developing countries an assured access to enrichment and reprocessing services.

More specifically, we could advance the first objective by adopting the following proposals suggested by Manson Benedict, professor emeritus of nuclear engineering at the Massachusetts Institute of Technology:

First, fuel reprocessing plants should not be permitted to produce plutonium in pure form, but should produce only a decontaminated mixture of uranium and plutonium. This so-call "coprocessing" operation is technically feasible, and the product, though unsuitable for bombs, can readily be fabricated into new fuel elements.

Second, fabrication of plutonium-enriched fuel should be permitted only at the same well-guarded site as the reprocessing plant, to minimize the number of places at which plutonium is processed and to eliminate unnecessary shipments.

Third, before delivering reprocessed fuel, it should be irradiated to around one per cent of the design burnup. This will make the elements so radioactive as to require the same heavy casks for shipment as are now used for spent fuel, and will provide the same kind of deterrence to diversion of reprocessed fuel as we now accept for spent fuel containing plutonium from light water reactors. Recent reports indicate that the Carter administration is now negotiating with the Japanese precisely such an arrangement to clear the way for them to start operating their reprocessing facility.

I do not mean to suggest that what I am proposing is in any way a panacea. Far from it. I see nothing but agonizing choices ahead. Speaking personally, I agree with the observation of Bernard Baruch that the splitting of the atom was the greatest act of pollution in history. I wish, in a way, it had never happened. I would much prefer to wake up each morning in a world unburdened with nuclear warheads, and free of worry about how to contain nuclear wastes for 20,000 years.

But this is the world as it is, not as we would wish it to be. The hard truth is that we are dealing not with a future threat to be avoided by timely action but with conditions that are presently upon us. In designing an effective international system to harness the energy atom to peaceful uses, the United States should take the lead.

TRIBUTE TO GUAM LIBERATION DAY

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. ANDERSON of California. Mr. Speaker, it is with great pleasure that I join our colleague, and my good friend, from Guam, the Honorable ANTONIO BORJA WON PAT, in celebrating Guam's liberation.

Today marks the anniversary of Guam's liberation from Japanese forces on July 21, 1944. President Harry S. Truman signed into law the Organic Act, Public Law 81–630, on August 1, 1950. This finally made the native residents of Guam, American citizens. We salute this historic document and the people who implemented the statute so effectively.

It is very pleasing to look back at an act of Congress after 27 years of operation and to see that it has worked in a positive manner. The approximate 600 Guamanians living in California's Harbor Area have contributed to the ethnic diversity there. These individuals have proven themselves to be productive American citizens.

I believe that it is in the best interest of our Nation to expand our friendship and alliance, and I am honored to offer congratulations to my fellow countrymen on the anniversary of Guam's citizenship. Along with their brothers and sisters of California's 32d Congressional District, I wish the people of Guam congratulations and success in the years to come.

THE TRUTH ABOUT THE BLACK LUNG DISEASE BILL: FAILURE TO READ THIS REPORT COULD BE INJURIOUS TO YOUR CONSTITUENCY

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. SARASIN. Mr. Speaker, we shall undoubtedly have before us some time soon in this Chamber the Black Lung Benefits Reform Act of 1977. Supporters of this bill would have us believe that it simply "reforms" and improves our earlier efforts to provide some relief to the many coal miners who have been seriously handicapped by lung damage suffered from years of inhaling coal dust.

If this were true, I would be urging my colleagues to support this measure, but nothing could be further from the truth. What this bill, H.R. 4544, would do is to set up a special pension fund, in the guise of black lung disease benefits, for every individual who worked a certain number of years as a coal miner, regardless of any evidence, medical or otherwise, of actual disability.

The rationale for this incredible precedent is the contention that "everyone gets black lung" after a specified time in the mines. This argument is specifically and convincingly refuted by the following report, issued just last year by the National Academy of Sciences. The glossary alone refutes many of the arguments of the supporters of the act, but anyone who votes on the question of H.R. 4544 in its present form without reading this report risks casting a highly uninformed, expensive and dangerous vote:

COAL WORKERS' PNEUMOCONIOSIS—MEDICAL CONSIDERATIONS, SOME SOCIAL CONSIDERATIONS

GLOSSARY

A brief glossary is provided to assist the reader. It is important for the reader to distinguish between Coal Workers' Pneumoconiosis (CWP), a medical entity, and Black Lung Disease (BLD), a legal entity; and between disability and impairment or dysfunction.

CWP denotes a precise clinical entity. CWP may be defined as accumulation and retention of coal mine dust in lungs, coupled with the tissues' reaction to this dust.[1] An appreciable coal dust burden must be present before any tissue reaction occurs; the mere presence of dust in the lungs does not constitute pneumoconiosis. This definition of CWP is accepted by the International Labor Organization (ILO) and by most medical scientists.

By contrast, Black Lung Disease, as commonly used, is any chronic respiratory dis-

ease experienced by a coal miner, including CWP as defined above. It may be non-specific and pleomorphic. In many instances the "blackness" is indistiguishable from that present in the lungs of elderly inhabitants of industrial cities like Pittsburgh or New York.

Impairment signifies reduced or defective function. In the case of the lung, the impairment may involve any of the following processes: ventilation occurring between the lung and external environment, distribution of ventilation within the lung, and exchange of gases (oxygen and carbon dioxide) between the lung and circulation. In contrast, disability denotes incapacity for work or performance which may be partial or complete. Disability is determined by complex interrelations among the amount and type of work that is attempted, the amount and type of functional impairment that is present, and the person's perception of discomfort. Dysfunction, if severe, may be the principal cause of disability. Nonetheless, the same level of dysfunction in two persons is not necessarily accompanied by the same degree of disability. For example, ordinarily the loss of hearing would produce total disability in a musician, while barely affecting a proofreader, at least as far as earning capacity is concerned. Virtually all cigarette smokers, including those who are young adults, have some functional impairment of the lung, yet relatively few are disabled. A mild functional respiratory impairment of a coal miner does not imply inability to work.

CHAPTER 1: COAL WORKERS' PNEUMOCONIOSIS (CWP)

This chapter summarizes some relevant features of CWP, a well studied distinctive entity.

Classification

CWP exists in two forms—simple and complicated. Simple CWP is caused by dust alone, and is recognized by the presence of small opacities in the chest X-ray. It is divided into categories 1, 2, and 3 according to the extent and profusion of these opacities. There is a direct relation between the coal mine dust content of the lung and radiographic category (Rossiter 1972). Accordingly, the chest X-ray is the most effective way of monitoring dust exposure and retention occurring over long period of time.

The second form of the disease, complicated pneumoconiosis or Progressive Massive Fibrosis (PMF), is recognized by the presence on X-ray of one or more opacities greater than 1 cm in diameter. PMF is divided into categories A, B, and C according to the number and size of these opacities. A fairly heavy dust burden plus other unknown factors appear to be necessary antecedents before PMF occurs. PMF usually arises from categories 2 or 3 of simple CWP. Lee (1971) reported that approximately 2 percent of the cases of simple CWP develop PMF annually. Unlike simple CWP, PMF may progress in the absence of dust exposure, it may also develop after a coal miner has stopped working.

Pathology

The essential pathological lesion of simple CWP is the coal macule. Macules develop around the smallest air passages, called respiratory bronchioles, that lead directly into the air spaces or alveoli. When enough coal dust particles have aggregated around the respiratory bronchioles, the muscle tissue in the wall of the airway atrophies, the passages show irregular dilation, and some scarring (fibrosis) may appear (Heppleston 1963). Involvement of a cluster of bronchioles is often referred to as "focal emphysema," but unlike the emphysema seen following cigarette smoking, the focal variety is not associated with significant functional impairment.

The pathological findings in PMF, the more advanced form of CWP, are those of large conglomerate black fibrous masses (Morgan 1971). PMF is sometimes a misnomer since the lesions are not always massive or progressive. In some miners (20 percent to 40 percent) there is progression of category A to B and C (Cochrane et al. 1961). The large fibrous masses may distort or obliterate airways and more importantly, blood vessels, causing severe functional impairment of the heart as well as the lung.

Diagnosis: Reliance on X-ray

The diagnosis of CWP is based on a history of occupational exposure, X-ray findings, in some circumstances, direct examination of the lung by surgical biopsy or autopsy. The radiographic findings are not unique to CWP. Similar, occasionally indistinguishable findings may be seen with other occupational diseases, including silicosis, berylliosis, aluminosis, talc pneumoconiosis, and benign conditions such as silver polisher's lung and stannosis.

It is estimated that at least 10 to 15 years of underground mining are required to produce CWP. The occurrence of the disease after only 8 to 10 years of underground exposure is exceptional, probably occurring in less than 1 percent of miners (Gilson 1968, Lainhart 1969). If a miner has abnormal radiographic findings after working less than 5 years underground, it is unlikely that coal mine dust is the cause.

The chest X-ray is not a useful means of assessing the functional status of the lung nor of determining disability. Its value is in helping to determine the coal mine dust burden of the lungs, and to provide one of the essential ingredients for the diagnosis of CWP.

The previously described macules are radio-opaque, appearing as small rounded opacities on X-ray. The more dust retained, the greater the number of opacities and, hence, the more advanced the classification of simple CWP. Post-mortem studies have shown that the coal mine dust content of one lung (one side) having a diagnosis of category 1 (simple CWP) is usually 4 to 8 grams, of category 2, 8 to 12 grams, and category 3, 10 to 15 grams (Rossiter 1972).

The interpretation of X-rays for diagnosing CWP is acknowledged to be imperfect. Observers, upon reexamining the same film, may disagree with their earlier interpretation and propose a different category ("within observer variability"). Differences in interpretation among observers are also encountered ("between observer variability") (Peters et al. 1973, Reger and Morgan 1970). Moreover, the appearance of the film and its interpretation may be affected by a number of extraneous factors, including: how the X-ray is taken and developed, the girth of the subject, and the presence of non-related diseases. In spite of such limitations, the chest film remains the best available index of retention of coal mine dust. It is vital to large-scale studies designed to assess the prevalence of CWP.

With careful training and standardized X-ray techniques that rely on films of good quality, it is possible to achieve agreement among observers on X-ray categories of simple CWP in better than 8 out of 10 films. With a large mining population that includes many normal films, the measure of agreement is usually much higher.[2]

Dissatisfaction with the X-ray, even distrust, has found expression among coal miners and officials of the United Mine Workers of America (see Appendix, Section II.5). The charge has been made with justification that the program of X-raying coal miners is neither uniform nor efficient, and that on occasion the interpretation of X-ray is biased. Before 1972, miners whose applications for disability benefits were denied because their X-rays did not support the diagnosis of CWP were frustrated and angered. In a sense, an unfair burden was being placed on the X-ray. It could not be used to judge either the presence or degree of disability (other tests are needed for this), but only to determine if CWP was present and might serve as a basis for disability. With the passage of the Black Lung Benefits Act of 1972, the requirement of an abnormal chest X-ray for awarding disability was abolished.

Functional changes

Simple CWP may cause minor functional impairment (Lyons et al. 1967, Morgan 1972, Morgan et al. 1974, Seaton et al. 1972 a and b). For example, X-ray categories 2 and 3 (simple CWP) may be associated with: (a) reduction of the maximal ventilatory rates the subject can achieve owing to narrowing of the airways; (b) abnormalities in the distribution of inspired air; (c) slight diminution in the level of oxygen in arterial blood resulting from the uneven distribution of inspired air.[3]

None of these functional abnormalities is sufficient to cause disability. They do not impair the miner's capacity for work or reduce his life expectancy. Indeed, cigarette smoke probably causes more functional impairment among miners than does exposure to coal mine dust (Kibelstis et al. 1973). In the latter study, the association between smoking and narrowing of the tracheobronchial tree was over five times stronger than that between exposure to coal mine dust and airway narrowing; the subjects were coal face workers and surface workers.

PMF, especially categories B and C, is likely to be associated with serious functional impairment. In these advanced categories, the work of breathing is considerably increased due to airway obstruction (see Appendix, section III.2). In addition, the lung becomes a less efficient diffusing surface for oxygen, and arterial oxygen levels fall significantly. A proportion of the pulmonary vascular bed is destroyed, pulmonary blood pressure rises, and the right side of the heart is subjected to increasing stress. Eventually the right ventricle enlarges and fails. Miners with categories B and C are commonly short of breath on exertion and may even be short of breath at rest. There is no effective treatment for PMF, although relief can be provided for some of the symptoms.

Whereas PMF decreases life-expectancy, longevity of coal miners is not influenced by simple CWP nor by the number of years spent underground. (While the increased risk of deaths from accidents related to years spent underground might be expected to reduce longevity, this effect appears to be offset by a lower coronary artery disease and lung cancer incidence among coal miners. (Cochrane 1973, Ortmeyer et el. 1973, Ortmeyer et al. 1974). It should be noted, however, that this conclusion reached in the Ortmeyer studies cited above was based on data from the larger unionized coal mines, where accidents are probably fewer than in smaller, non-unionized mines.)

Prevention

CWP can be prevented through adequate dust control. Furthermore, if categories 2 and 3 of simple CWP can be prevented, complicated CWP (PMF) should virtually disappear. Studies in Great Britain (Rae 1971) suggest that the present U.S. respirable dust standard of 2 mg per cubic meter of air established by the Federal Coal Mine Health and Safety Act of 1969 should, if enforced, lower the incidence of simple CWP to less than 3 percent in all miners working underground as long as 35 years. German studies (Ulmer 1975) show that the long-term risk of developing CWP (X-ray category 1 or more) at 4 mg of respirable coal dust per cubic meter of air (current German standard) is less than 10 percent. The British and German studies employed meticulous techniques in correlating the progression of X-ray changes with the prevailing dust levels in mines over periods of 15 to 20 years. A sim-

ilar study is currently underway in selected U.S. coal mines under the joint sponsorship of the Public Health Service and the Mining Enforcement and Safety Administration. Some observers (see Appendix, Section II.5) have criticized this study, questioning both the validity of the measurements of dust levels and the objectivity of the medical assessments. The criticism appears to have some justification. While standardization of the techniques of taking and interpreting X-rays is vital to the study, a deliberate effort to achieve this end was started only two years ago and it may still be inadequate.[4]

Prevalence

The National Institute of Occupational Safety and Health (NIOSH) recently completed the first part of an extensive survey of working coal miners to determine the prevalence of CWP (Morgan et al. 1973). Between 1969 and 1971, 9,076 miners from 29 bituminous and 2 anthracite mines were examined. The overall prevalence of CWP was found to be nearly 30 percent; 2.5 percent of the miners had PMF.[5] The work force was divided into 5 groups according to a declining order of dust exposure: face, transportation, maintenance, miscellaneous underground tasks, and surface.

The relation between the prevalence of CWP and the geographic regions included in the study is shown in Figure 1. There was a decline in prevalence of CWP from East to West, the highest rate being found in Eastern anthracite miners. The reasons for these regional differences are not understood. Among the factors which might be responsible are undefined regional differences in both chemical composition and size-distribution of the coal mine dust. There is no evidence that systematic differences in working conditions play a role.

The relation between the prevalence of CWP by region to years of underground exposure is shown in Figure 2. Without exception, the prevalence increased with the duration of exposure to coal mine dust.

The most striking implication of the study is that controlling the respirable dust levels is the most effective means of reducing the incidence of CWP.

The relation between job category and predilection for CWP is shown in Figure 3. The prevalence of CWP was highest among workers at the face and least among those at the surface. Many of the miners in the category of miscellaneous underground tasks had duties involving work at the face which may account for their high rate of disease.

Finally, the relations between X-ray category, age, and years spent underground are shown in Table 1.

MAYOR "MIKE" OF NORTHVILLE

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. PURSELL. Mr. Speaker, there are many levels of public service, and many public officials who have served their communities with dedication and distinction. But there are some individuals who have exceeded the superlatives like outstanding and dedicated. In this superior order of public officials I rank the Mayor of Northville, Mich., Mayor A. Malcolm "Mike" Allen. Mayor Mike is one one of my oldest friends, and his wisdom and personal character make him one of the people I most respect.

Mayor Mike Allen has decided to retire as mayor Northville, a post he has held since 1958, capping a 25-year career in public service. I greet his decision with sadness, but also the satisfaction of seeing a fine man conclude a job well done.

Because of my deep respect for Mike Allen, and to express my personal thanks for all he has done for his community and State, I would like to acquaint my colleagues with this outstanding citizen.

The following article is reprinted from the Northville Record of July 6, 1977. This article outlines the career and some of the many accomplishments of Mayor Mike.

The article follows:

MAYOR ALLEN TO END POLITICAL CAREER

He was a 36-year-old businessman in Northville when at the last minute he decided to take a crack at running for public office.

That decision by A. Malcolm Allen, known by friend and foe alike simply as "Mike", proved to be a lasting one. Today, a quarter-century later, he still holds public office.

When he steps down as mayor in November, he will have served longer than any public official—village, city, township or school—in Northville's 150-year history.

Next to Dearborn's Mayor Orville Hubbard, he is acknowledged as the dean of Michigan's municipal leaders. He is only the second mayor to serve in this city's history.

In the span of those 25 years, Allen has never been seriously challenged for office. He has been consistently among the election favorites in the even dozen times he has run for office.

Allen has been so closely identified with the progress of this community over the years that the city council has named the new senior citizens apartment complex, under construction here now on Northville's historic Buchner Hill, in his honor.

That facility is expected to open about the time Allen officially steps down as mayor.

In March of 1952 when Allen decided to run for an unexpired two-year term on the then village commission, Northville was faced with a dying downtown section, primarily, studies showed at the time, because of inadequate parking accommodations.

That issue—off-street parking—became Allen's battle cry, and he has continued to champion that issue throughout his 25 years of service. It won him friends and enemies as he led the efforts to acquire all of the property for today's municipally-owned parking facilities.

The late Conrad Langfield was president of the village when Allen first ran for office.

Mary Alexander was clerk, A. Russell Clarke was treasurer, James Little was attorney, Joseph Denton was police chief, William McGee was fire chief, Herman "Bud" Hartner was superintendent of public works and water commission, Dr. George Chabut was health commissioner, and Stanley Waterloo was the building inspector.

Russell Amerman was superintendent of schools, and Mollie Lawrence was township supervisor.

As a village, Northville was still part of the township. As such, its citizens elected their own municipal leaders and, together with the remainder of the township, elected township board members as well.

Although he mounted no rigorous campaign—a characteristic of all of his election bids, Allen easily won his seat on the commission, defeating Levi M. Eaton by a vote of 226 to 118. Eaton had been appointed earlier to fill the seat of George Locke who moved to Marquette.

Also newly-elected in that race was Edward M. Bogart, assessor.

The year 1952 saw the late Oscar Hammond being elected as the American Legion commander, renovation of the post office on North Center Street, movement toward construction of a community building, annexation of more country school districts to the growing consolidated Northville district.

The new Northville State Hospital was dedicated that year, Northville joined the nation in electing General Dwight D. Eisenhower as their new president, and the late Edward Cardinal Mooney, archbishop, dedicated OLV's new school.

Besides Allen and Mr. Langfield, other members of the village commission in 1952 were John (Jack) Stubenvoll, Gerald Woodworth, the late Claude N. Ely, and Alton F. Peters.

Allen, who at the time lived at the northwest corner of Main and Griswold, retained his position as superintendent of Rural Hill Cemetery and was appointed to the fire commission by Langfield.

Re-elected to the commission in 1954, this time to a four-year term, Allen was joined by new commissioners Earl L. Reed and Ed C. Welch. The new president was the late Claude N. Ely, replacing Langfield who decided to retire from public office.

That was the year huge oil reserves were discovered in the vicinity, when Seven Mile Road—from Northville Road to Rogers Street—was extended, when the average teacher salary was raised to $3,000, when construction of the community building began, and when construction of Amerman Elementary School began.

Allen was among those leaders who spearheaded the incorporation of Northville as a city the following year.

In 1958, Allen was appointed mayor of Northville by fellow council members upon the death of Mayor Ely. Mr. Ely was the last village president and the first city mayor.

At the time of his appointment, Allen had been serving as mayor pro tem of the city—the senior member of the council, having led the ticket in each of his three elections. Thus, at the age of 43, he began the job he has held ever since.

The Record, at the time of his appointment, called him "a self-made businessman". Owner of Allen Monument Works, he had started learning his trade in Flint in 1932. He launched his business here in 1935, buying an interest in the Milford Granite Works the same year.

By 1958 he also owned Travers and Allen monument sales firm north of Flint.

As mayor, Allen began serving on the Wayne County Board of Supervisors—a position he held for years before it was reorganized as the present Wayne County Board of Commissioners.

During his long tenure on the village commission and city council and then, since 1958, as mayor of the city, he has been directly involved in most of the changes that have occurred here—ranging from city incorporation and annexation of properties on the north side of Base Line to construction of today's city hall.

His efforts, in many cases, were not without controversy. But despite the sometimes heated public resentment, he somehow has maintained a friendly relationship with even those who disliked his actions most.

Perhaps more than any other, he is either directly or indirectly responsible for—

Acquisition of property from Wayne County the land at the curve of East Main Street at Cady, which was used in part for private industrial development.

Acquisition from Wayne Couny the property near the Northville Spring, known as the Jaycee Park.

Acquisition from Wayne County property at the corner of River Street and Seven Mile to facilitate expansion of Northville Downs.

Transfer of Center Street jurisdiction from Wayne County to the city.

Acquisition of land off Gerald Avenue for a landfill and later for development of the Department of Public Works center.

Spearheading installation of major sewer and water lines through Northville by the county and Detroit, and acquisition of a well site on Novi Road which later was sold for private development and establishment of park lands.

Development of Joe Denton Park, the Fish Hatchery Park, and park lands and open space in the Maplewood area and elsewhere in the city.

Locating of Anger Manufacturing in Northville.

Paving of Randolph Street.

Property acquisition and development of Northville Square.

Establishment of sites for Kroger and Chatham stores.

Acquisition of properties for the extension of Griswold Street.

Development of the Eight Mile and Seven Mile cutoffs through Northville.

The razing of unsightly buildings in the alleys of the Central Business District.

Maintenance, enlargement and improvement of Rural Hill Cemetery and construction of the new cemetery drive bridge.

And construction of the city hall, Scout Building, the DPW garages and office, and the senior citizens apartment complex that bears his name.

THE 25TH ANNIVERSARY OF THE COMMONWEALTH OF PUERTO RICO

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. ULLMAN. Mr. Speaker, on July 25, 1977, the people of Puerto Rico will be celebrating the 25th anniversary of the establishment of Commonwealth status.

The relationship between Puerto Rico and the United States, based upon the principles of interdependence and free association, has been a fruitful one, and the people of Puerto Rico can be proud of their achievements.

Since 1950, GNP has increased from $755 million to $7.7 billion; life expectancy has risen from 46 to 68 years. Per capita income is $2,000, and 90 percent of the population of Puerto Rico is literate.

Although the island's industrialization program has undergone a temporary setback since the shock of the 1973 oil price increase, and Puerto Rico continues to struggle against combined inflationary and recessionary pressures, the concept of the Commonwealth form of government has withstood the test of time, and the United States will continue to look upon Puerto Rico as a close partner, friend and neighbor.

I would like to share with my colleagues an article by Jonathan Evan Maslow which appeared recently in the New Republic:

[From the New Republic, July 2, 1977]

PUERTO RICO, THE 51ST STATE?

Americans who only read of Puerto Rico in travel brochures— or when a terrorist bomb shatters skyscraper glass—must have greeted last New Year's headlines with some bewilderment. For it was on New Year's Eve that Gerald Ford came off the Vail slopes and proposed Puerto Rican statehood. Were we really offering this Caribbean commonwealth a place in the Union, a star on our flag? Then Jimmy Carter returned the Puerto Rican status issue to its long-held spot in oblivion. Congress should take no action, said Carter, "until the Puerto Rican people express a preference"—to remain a commonwealth, join the Union as a state, or become an independent republic. Now this was more like it: Puerto Ricans have been arguing their island's political status preference ever since the U.S. Army invaded in 1898. Seventy-nine years later they have still come to no conclusion and under the Carter plan they will undoubtedly be debating the issue 79 years from now.

Ford's apres-ski remarks coincided with the advent in San Juan of a pro-statehood administration under the New Progressive party of Governor Carlos Romero Barcelo. His election marks the first time in Puerto Rican history that the statehood forces—allied with the mainland's Republicans—won an electoral majority against the Popular Democrats, counterpart of the mainland Democrats. The lameduck President's statement paid a political debt—the Puerto Rican delegates to the Republican national convention had delivered their four votes to Ford in expectation of his backing statehood. But, Ford spoke before consulting a single Puerto Rican, and no one in Congress took his statement the least bit seriously. And though Ford may have intended to assist statehood forces, actually he embarrassed and irritated the new Puerto Rican administration. Romero had campaigned on a pledge to strenuously avoid the status issue until he could improve the horrendous economic conditions prevailing on the island for the past four years.

Until 1973, Puerto Rico was a model of Caribbean progress. The island's industrialization program, known as Operation Bootstrap, dates from the postwar era when the father of modern Puerto Rico, four-term Governor Luis-Munoz Marin, began luring American corporations to the island. At that time, rapid modernization seemed the only way to save Puerto Rico from the curses of high population, a plantation agricultural system and its despairing colonial mentality. In two decades, Operation Bootstrap transformed Puerto Rico from the poorhouse of the Caribbean to "a showcase of democratic development."

Few Puerto Ricans seriously question the material benefits the island has gained from its postcolonial economic association with the mainland. GNP has increased from $755 million in 1950 to $7.7 billion last year. Life expectancy has risen from 46 to 68 years in the same period, and 90 percent of the population is literate. Per capita income is $2000, far above any Latin nation, though only two-thirds of Mississippi's average income.

More than 2000 American companies have hustled south to take advantage of Operation Bootstrap's corporate tax exemptions and the seemingly limitless supply of willing factory hands. Pharmaceutical companies have moved to Puerto Rico in such great numbers that islanders often refer to their native land as "the pill capital of the world." Furthermore, a booming construction industry has blanketed the island with housing developments and condominiums; the bond market has buzzed with Puerto Rican issues as the commonwealth built an infrastructure of roads, docks, water and power facilities to service the industrial sector. A billion dollars worth of American food products are imported annually, along with enough automobiles and television sets to satisfy a voracious internal consumer market; and—at least through 1973—a three-billion-dollar petrochemical industry was all set to refine that "cheap foreign crude" which was supposed to serve as an artificial resource base for a century of economic growth in plastics and textiles.

But, the OPEC price surge staggered the petrochemical industry. Imported food prices soared. The construction industry collapsed, and the jittery bond market downrated Puerto Rican notes to prevent a "New York situation." Reeling under the simultaneous inflation and recession, Puerto Rico suddenly lost its attractiveness for new American investment. Two years ago, the Popular Democratic administration of Governor Rafael Hernandez Colon braked the economy sharply to restore investor confidence. The austerity measures, including new taxes, government cutbacks, and a wage freeze in the public sector, spawned massive labor unrest, sending rank and file workers straight to the arms of Mr. Romero and his New Progressives.

Today the slump remains intractable. Fully half the 3.7 million natives are calculated as living below the federal poverty line. Two thirds of the island's families subsist on federally supplied food stamps, a $593 million annual transfusion from Washington, which, as former Governor Luis Ferre told me, "saved the island from complete economic collapse." Government economists estimate that 40 percent of the labor force may be out of work. But the despair of ordinary Puerto Ricans is best demonstrated not by the statistics, but by the very fact that they have turned, at the bottom of this depression, to—of all people—the Republicans.

Governor Romero, formerly the mayor of San Juan, is the man generally credited with having convinced the Nixon administration to extend the food stamp program to Puerto Rico. He made this accomplishment a centerpiece of his election campaign, and he argued that he could pull off the same feat with other US social programs. The new governor promises more federal public works funds, countercyclical federal stimulus, federal housing programs, federal grants, stamps and increased unemployment compensation. In essence, the governor's economic recovery program is based on the very un-Republican theory that federal spending is the best bootstrap for Puerto Rico.

The new administration's economics have a direct connection to its statehood ambitions. In the most recent island plebiscite on status, in 1967, 60 percent of the electorate favored the present commonwealth arrangement and only 39 percent favored statehood; the independence movement boycotted the plebiscite. Governor Romero signaled his strategy in a book entitled Statehood is for the Poor. As former Governor Ferre puts it, "Once Puerto Ricans are getting food stamps, social security, federally guaranteed home mortgages, and unemployment benefits, statehood becomes inevitable. To become independent under those circumstances would be a return to the beautiful era of the Indians." Washington's financial support of Puerto Rico, exclusive of defense costs, now amounts to two billion dollars a year. Before calling for a new status plebiscite the Romero administration hopes to double that aid over the next four years. Ironically, the American subsidy of Puerto Rico far outdoes Russia's one million-dollar-a-day support of Cuba—and one certainly doesn't hear the Cubans threatening independence from the Soviets.

Nevertheless, this "locking-in" strategy by no means guarantees a pro-statehood majority at the next plebiscite. Although Puerto Rican political alignments have generally followed the status question, islanders readily abandon status politics when it's in their economic interest to do so. The statehood movement, in fact, gained its first adherents shortly after the American invasion when local anarcho-syndicalists promoted entrance into the Union as a means of

winning the eight-hour day. The independence movement, on the other hand, has never had a credible economic program and has never won more than 10 percent of the vote. Traditionally, advocating independence for Puerto Rico was a parlor game for the island's intellectual elite. In the '30's, the pro-independence Nationalists wore black shirts and borrowed a strange semi-mystical ideology from the Irish Republicans and the Spanish Falangists. The '60's wed the independence and student antiwar movements, but their neo-Cuban socialism lacked any appeal whatsoever for the Puerto Rican masses, and the movement soon fragmented. Extremist remnants such as the FALN are now "carrying the struggle" to the mainland with their pipe bombs.

The Popular Democrats were the first party to declare explicitly that a social-economic program took precedence over the long and stultifying status debate. Accordingly, Luis Munoz Marin created the Commonwealth as a means of industrializing the economy and raising living standards. Only in the past 10 years since Munoz's retirement has the Commonwealth been thought of as a permanent status option. But by this time commonwealth status is strongly identified with Bootstrap economics and this relationship was a major reason for the Popular Party's debacle at the polls last November.

Puerto Ricans now criticize Operation Bootstrap on two counts. Complete dependence on investment and imports from the mainland have left Puerto Rico highly vulnerable to the US business cycle, and created a pseudo-American lifestyle centering around the automobile, the ranch house, the hamburger, and, of course, television. Little public or private capital has been employed to modernize farming. As Governor Romero protested in his first State of the Commonwealth address: "While we import most of our food, most of our land is cultivated inefficiently or lies abandoned."

Dependence on the mainland has also left the island without an indigenous entrepreneurial class, so crucial to the success of industrial revolutions in underdeveloped lands. Local capital formation is practically nonexistent and Puerto Ricans are far more likely to put their money into real estate speculation or bank it abroad. In addition, the Commonwealth has never required American companies to train Puerto Ricans to improve their lot in the industrialized economy. In the studies made prior to the Commonwealth's purchase of the Puerto Rican Telephone Company in 1974 it came to light that after 60 years of operation on the island, ITT's subsidiary was still run by an all-white, all-male, continental management team. Not a single Puerto Rican had ever held a top executive position.

The island might still have survived the recession had it not been for Operation Bootstrap's second and grosser failure—the failure to resolve the island's profound population problem. Even in the heyday of economic growth Puerto Rico exported surplus population at a frightening rate. Two million Puerto Ricans presently live on the mainland, but even so the island's population density is 925 people per square mile, higher than India's. Until the onset of recession, the mainland barrios served as a spillover for Puerto Rican migrants. Now, however, the mainland recession has reversed the flow of migration back to the island. Last year, Puerto Ricans streaming homeward accounted for a two percent population increase. The great tragedy is that prodigal Puerto Ricans find themselves as redundant in San Juan and Ponce as they are in New York and Chicago. Worse, the world recession has driven a wave of legal and illegal Latin aliens to Puerto Rico—140,000 in the last three years. Operation Bootstrap simply can't provide jobs for these people. As Teodoro Moscoso, Bootstrap's director for 25 years, frankly admits: "There's just no way. The unemployed of 20 years from now were born yesterday." Moscoso not long ago outraged the island's Catholic majority by publicly suggesting that birth control pills be poured into the water supply. He retired from office shortly thereafter.

Governor Romero has assumed the post of Operation Bootstrap's chief critic, but his designs on the US Treasury do not assure a revived economy. For one thing, Congress may tire of the costly pump-priming operation. Last year, Representative Albert Quie (R, Minn.) introduced legislation to make Puerto Ricans pay Federal income taxes like ordinary Americans (under the Commonwealth compact, Puerto Ricans escape the 1040). The Quie legislation was roundly defeated by congressional liberals. But with Republicans now in power in San Juan, mainland liberals will be under pressure from island Democrats to thwart Governor Romero's efforts to achieve statehood by maximizing dependency on Washington.

Statehood is also made a doubtful prospect by Puerto Rico's connection to American multinationals. US corporations have provided 150,000 new jobs for Puerto Rico, but they are there because Puerto Rico is neither a country nor a state. Independence would place Puerto Rico outside the American tariff, making it unprofitable for US companies to carry on their export manufacturing. Statehood would render the islands corporate tax exemption illegal. So both status options are seen as precipitating a devastating flight of American capital. The presence of five billion dollars in American fixed investment favors the status quo Puerto Ricans cannot afford to throw the Yankees out, but neither can they afford to become Yankees.—Jonathan Evan Maslow.

INTELLIGENCE COMMITTEE HAS A SECURITY LAPSE

HON. DAVID C. TREEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. TREEN. Mr. Speaker, last Thursday the House passed House Resolution 658, which established a permanent Select Committee on Intelligence. Based on our recent experience with another House Select Committe on Intelligence, the success or failure of this new committee may well depend on the ability of the committee and its members to implement effective and workable procedures for the control of classified information.

The provisions of House Resolution 658 seem to me to be completely inadequate in this regard. During debate, specific questions were raised with regard to several provisions of the resolution which deal with disclosure and control. The answers of the gentleman from Missouri, the manager of the resolution, and of the majority leader, were unresponsive and revealed their apparent uncertainty over these provisions.

Even though the resolution has been passed, I think it is important, as a matter of public record, to inform the Members of the House of these apparent defects. If my interpretation is incorrect I will gladly stand corrected. If not, I hope that the leadership will take prompt corrective action.

The resolution adds a new rule XLVIII to the current rules of the House. Clauses 6 and 7 of the new rule deal with disclosure and control of classified information.

Clause 6 allows the committee to prevent the disclosure of information which violates the privacy or constitutional rights of individuals. This concern for individual rights is well taken. However, on its face the resolution does not make any comparable provisions for the control of information, based solely on security classification and considerations of national security.

Clauses 7(a) and 7(b) establish a procedure where the committee may disclose publicly any information in its possession. Allowance is made for objection by the President, and for the committee, subsequent to and not withstanding the objections of the President, to vote to recommend that the issue of disclosure be considered in a closed session of the House.

Clauses 7(c)(1) and 7(c)(2) appear to direct the committee to disclose information in its possession to other Members and committees of the House, under regulations which the committee shall prescribe. Clauses 7(d) and 7(e) provide that the Committee on Standards of Official Conduct shall investigate, and report on, unauthorized disclosure of intelligence or intelligence-related information.

However, the Catch 22 in these provisions is that they apply only to information which is classified and which the committee has determined shall not be disclosed under paragraph (b)(2) of clause 7.

Clause 7(b)(2) is an integral part of the procedure whereby the committee may disclose publicly any information in its possession, allowing for the objections of the President, and action by the committee and the House, in spite of those objections. Clause 7(b)(2) provides:

> The select committee may disclose publicly such information after the expiration of a five-day period following the day on which notice of such vote is transmitted to the President, unless, prior to the expiration of such five-day period, the President, personally in writing, notifies the committee that he objects to the disclosure of such information, provides his reasons therefor, and certifies that the threat to the national interest of the United States posed by such disclosure is of such gravity that it outweighs any public interest in the disclosure.

In other words, the only explicit provision in the resolution for making classified information held by the committee available to other Members and committees applies only to information where the President has objected to public disclosure, under procedures which were designed to deal with extraordinary questions of public disclosure, and which have no logical or necessary relationship to the question of disclosure to other Members and committees.

Similarly, the authority given to the Committee on Standards of Official

Conduct, under clauses 7(d) and 7(e) of the new rule, to investigate unauthorized disclosure of classified information, is limited to classified information which has been subject to the procedures for public disclosure, and Presidential objection, in clause 7(a)(2).

The resolution makes no explicit provision for the committee to disclose, or decline to disclose, other classified information in its possession which has not been subject to the clause 7(b)(2) procedure.

Of course the House operates under other rules and laws which relate to the disclosure of information. House rule XI (2)(e)(2), which the resolution applies to the select committee, provides in part that:

All committee hearings, records, data, charts, and files . . . shall be the property of the House and all Members of the House shall have access thereto, except that in the case of records in the Committee on Standards of Official Conduct. . . .

During debate, it was asked to what extent this rule would be modified by the provisions of House Resolution 658. The majority leader replied—H. 7116—that the committee would be able to establish procedures for the control of "classified information." Similarly, the committee report (95–498) on House Resolution 658 states on page 3:

The committee would be required to prescribe regulations to protect the confidentiality of any information which may be made available to any other committee or any Member of the House. The Committee on Standards of Official Conduct would investigate and report to the House any unauthorized disclosure of intelligence information by a Member, officer, or employee.

However, the resolution extends the authority of the committee, and of the Committee on Standards of Official Conduct, only to information which has been classified, and which has been subjected to the procedures in clause 7(b)(2). All other classified information in the possession of the committee would be available to any Member of the House under rule XI(2)(e)(2).

Current security regulations are established by Executive order, and do not apply to the Members or staff of the Congress. The only restraints on the Members and staff of the Congress are limited in application, and have been shown to be largely ineffective.

The espionage statutes—18 U.S.C.A. et seq.—are generally restricted to disclosure to enemy agents with the intent to injure the United States or assist a foreign nation, and do not effectively apply to general public disclosure of classified information.

The protection provided by the speech and debate clause, in article I, section 6 of the Constitution, does not extend to proceedings within the Congress, and under article 5, section 5 of the Constitution, each House may determine the rules of its own proceedings, and may punish and expell a Member. Senate rule XXXVI establishes procedures for the control of classified information, and provides sanctions for violations. The House has no comparable procedure, and on the basis of a careful reading, House Resolution 658 does not provide one.

GOVERNMENT AND EDUCATION

HON. BO GINN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. GINN. Mr. Speaker, Dr. Rufus C. Harris, internationally acclaimed educator and President of Mercer University in Macon, Ga., recently presented a most eloquent statement to his board of trustees regarding Government regulation of private colleges. He points out that the private college in America should be included on the endangered species list as a result of the onslaught of regulations and guidelines.

Dr. Harris makes his point more effectively than I could ever relate it to the House, and I insert his statement in the RECORD at this point:

GOVERNMENT AND EDUCATION

Telling administrative officers of colleges and universities that they are operating in a quagmire of government regulation and interference is hardly big news to them. The professional journals and conferences, their mail, their daily routine all overflow with tidal waves of activities, regulations and legislation that threaten to wash away our freedom. On all sides, we are being told that the sophisticated, experienced administrator must recognize that increasing control is inevitable; that we must learn to swim or sink. We are no longer asked if we can cope with the regulatory environment. We are told we must.

It seems time to ask, it is regulation or strangulation? The private college, as we know it today is an endangered species, due to overdoses of regulation and guidelines. We are suffering through a most dangerous crisis. Businesses bigger than colleges have crumbled when decisions that affect solvency are made by bodies that bear little if any of the financial responsibility.

Every area of college management and operation today is influenced in some measure by government regulations pending or in effect. Our practices of employing or discharging personnel from the lowest to the highest ones; paying them; how we release them or pay them, are now controlled. Permits and licenses must cover everything. Our premises are subject to inspection from agencies that govern the ways we dispose of waste, the ways we protect against fire, the ways we make secure the campus, the ways we maintain sanitary conditions.

Other promised regulations seek to restrict us in the matter of the students which we can and we cannot accept, the persons and percentages of those whom we may employ. The bureaucrats do not care whether we employ competent teachers and scholars, so long as we employ the percentages they prescribe in sex and color. With it all, we have become the nation's whipping boy, flailed for our "inability to contain costs" when indeed our regulators are a major part of that problem.

It has been estimated by one of America's leading economists, Dr. Murray Weidenbaum, that it costs taxpayers $4 billion a year to support the agencies that ride herd on business. No one, to my knowledge, has isolated the funds that colleges must generate to comply with the government bodies we must answer to, funds that must in turn be retrieved in charges if we are to remain solvent. The controls are profuse and are inseparably entwined through our entire fabric.

Some regulation would be expected in quality preparation. No one could oppose adequate wages for personnel, good working conditions, financial aid for the indigent, or the goal of equal access for all to quality education at reasonable cost. But should the main direction of regulation encompass only students and employed personnel? As the organization which provides education, it seems our needs have been largely getting lip service, where in many instances support was promised in full.

It seems difficult to understand how political agencies can regulate so much of the college endeavor when they are not charged with the financial responsibility of them. In another year or so, it may be too late to get out from under this blanket of bureaucracy. But it will not go away by itself. We need muscle behind our objections. We need to make them known in every way we can. In the guise of assisting the colleges, in many instances what HEW is obviously attempting to determine is the admitting practice of the colleges and whether their practices are discriminatory. We should become weary of reaffirming over and over and over again that we voluntarily desegregated this college.

"Discriminate" means more than acting on the basis of prejudice. It also means the ability to make a clear distinction, and in modern education that distinction must remain in the hands of those best qualified to do so. We understand that some advice is needed and can be helpful, but we are proceeding beyond the point of no return. It would be unfortunate if we should become so inured that we become passive, accepting control as inevitable without objection or resistance. If the public is not aware of the cost or consequences, it is time we made everyone aware. By speaking out—and loudly—now, we may not change the past, but hopefully we may slow down some controls in the future.

SUPPORT OF PASSIVE RESTRAINTS IN NEW CARS

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. MAZZOLI. Mr. Speaker, I want to go on record strongly in support of our former House colleague Secretary Brock Adams' decision to require airbags or other passive restraints in new cars beginning for many models in September 1981.

My only reservation with Brock's decision is that I wish an earlier deadline for mandatory airbags could have been ordered.

There are those who argue that this decision is an encroachment on the individual freedoms of American citizens. But that, Mr. Speaker, is simply not the case.

This decision gives an individual freedom: the freedom to get in one's car and drive off without unnecessary fear of being killed. As Colman McCarthy wrote in a recent Washington Post: "Such a freedom is worth preserving."

I have written Secretary Adams praising his decision and urging him to consider accelerating the airbag timetable.

For the benefit of my colleagues, I am inserting into the RECORD the McCarthy column which makes some excellent contributions to the discussion of the important public-safety issue:

THE FREEDOM TO CHOOSE SAFETY

(By Colman McCarthy)

As a listener to nearly every meaningful syllable uttered in the current debate on air bags, I have yet to hear from the one citizen I've been waiting for: a crash victim saved by an air bag but who is against air bags. I have listened to other opponents, from those who see the Department of Transportation's favorable ruling on this passive restraint system as Big Brotherism on the march again to others who believe air bags are being imposed as unproven and costly gimmicks that represent still another theft of what one congressman calls "our individual freedoms."

Many have been persuaded by these arguments, but for myself nothing would be more convincing than the words of a man who should be dead but who lives to denounce the federal government for denying him the individual freedom to be killed in his car. I would be persuaded by a man who walked away from a head-on collision livid that he had to pay $100 or even $200 to have his life saved.

If we haven't heard from this person, assumption can be safely made, as our cars are not, that he doesn't exist. It is hard to imagine the automobile industry—the air bag's most stubborn opponent—not searching out, and then gleefully exploiting, at least one negative reaction from the one group of motorists whose knowledge of air bags is experiental, not theoretical.

This group is not large but it is alive, well, and has seen the gore in crashes from Mercer, Pa., to Needles, Calif. Although no air bag cars are currently on sale, about 12,000 vehicles so equipped—mostly General Motors cars from 1974 to 1976—have been on the highways. As of July 1, 153 crashes have occurred, involving 219 front-seat occupants.

Of the 219 crashers, 215 survived, and nearly all of those without major injuries. From a sampling of the survivors' sentiments, an ardency for air bags is evident.

The most recent partisan is C. W. Beck, a state senator from Port Orchard, Wash. On June 18, he wrote a letter to his friend Brock Adams, the Secretary of Transportation, who was then in the process of deciding favorably on air bags and hoping his decision would not be vetoed by Congress. Beck reported the details of his crash:

"On Tuesday, June 7, 1977, I was involved in a two-car collision on a perfectly clear, warm, dry day at the intersection of two Kitsap County arterials in which the lady who was driving the other car was killed. I am able to be sitting here today writing to you without a scratch, bruise, ache or pain because my car was equipped with an ACRS [air cushion restraint system]. I'm sure I owe my life to this device.

"You may not recall the car, but you rode in it about two years ago for a short distance in Seattle to the Olympic Hotel. It was a gray Cadillac Eldorado and was new then. It now has about 49,000 miles on it. It is no more, both cars were totaled out . . .

"I was driving in a 40 mph speed zone with my cruise control set at 39 mph. Only two cars were visible to me, one coming towards me and the one which I hit. It had pulled up to a boulevard stop sign and made what looked to be a legal stop.

"When I was about 50–75 feet from the intersection, the other car suddenly darted out, fast. I applied my brakes and swerved to the right but could not prevent the impact. I hit the right side of the other car head-on with my brakes set and skidding to swerve to the right.

"After the impact, both cars were diverted, mine to the right and the other to the left. My car had a multiple impact; it hit a telephone pole and sheared the pole off at the ground level.

"The sudden explosion and puff from the inflator assembly was heard and the bag inflated before I felt the impact and sudden stop of the vehicle. The inflation of this air bag was astounding. I worked as an engineer during the war and for many years with tools as an instrument maker and I couldn't believe the sensors from the bumper could actuate the inflators so fast.

"Normally, I wear seat belts, but this time I neglected them. This did not impair the air bags from performing their duty. The lap belt would have prevented me from being thrown around in the front seat.

"The bag in the steering wheel was the most effective; the passenger air cushion inflated and prevented me from being thrown to the floor on the passenger side. In fact, it shoved me back into an upright position behind the wheel. I was protected by both bags . . .

"At no time was my vision impaired by any part of the [air bag]. Rolling around with the lower part of my face in the steering wheel bag, I knocked my glasses off and they fell to the floor but they were not broken and I put them on before I got out of the car."

Similar testimony has come from other survivors, including a movie stunt man. He told the Department of Transportation last year that "when you look at a 44-ton brick wall and you know it is coming at you, you think of a whole lot of things, but the least of which is how much this air bag costs you."

For me, these voices are the most credible, and therefore the most persuasive. But even then, a judgment on air bags can be made in the area of the debate in which its opponents are most comfortable, the so-called "individual freedom" issue. The individual motorist must be free of the government's excessive power to restrict his liberty, even if government officials mean to keep you from danger. A Pennsylvania congressman, Bud Shuster, says "this air bag edict is a very small piece of a heavy and dark blanket, gradually being lowered over a free people by their paternalistic government."

Put that way, the question becomes even broader. Whom do we choose to trust and believe: Big Brother in Washington or Big Cousin in Detroit? Both relatives have their nasty habits, but if I had a choice to disown either, it would be Big Cousin. Not only have automakers repeatedly resisted safety innovations but they have raised the cost of cars by heavily promoting those pictures of their products that do nothing at all to protect motorists.

When pressed by the gory consequences, auto executives plead their case with the argument of innocence: Don't blame us, we just give the customer what he wants. If that's the case, the showrooms of America are jammed with customers clamoring for cars that are incessantly being recalled fo safety defects, that poison the air and can cost up to $686 in repairs for a front-end crash at 10 mph.

One who trusted Detroit more than the pro-air bag advisers in his own department was former Transportation Secretary William E. Coleman Jr. Last December, when he decided not to decide on air bags, Coleman struck an agreement with GM, Ford and Mercedes to offer air bags as options on a small number of cars. The agreement was a curious one, in light of earlier industry promises.

In 1970, General Motors said, as quoted in a recent report from the Insurance Institute for Highway Safety, "In the fall of 1974, the air cushion would be made standard equipment on all 1975 GM passenger cars . . ." Chrysler said, "We hope to be in a position to provide passive restraint systems in volume production by Jan. 1, 1975." Ford said in 1970 that "air bags for the front right and center occupants could be installed in all 1975 model cars . . ."

Now it is 1983 before citizens can buy air bags as standard equipment on all cars. Tens of thousands of men, women and children will be killed before then. Few of these potential victims are likely to have strong ideological feeling one way or the other about air bags and the moral responsibility of government or industry to provide them. Most people probably assume that whatever is in the marketplace has to be safe or else it wouldn't be there. We have safety laws, don't we? And isn't there competition?

But the carnage occurs daily. The emotional cost to bereaved families is beyond counting. Estimates of other costs are more easily figured: Nationwide Insurance says air bags would mean an annual reduction of $2.5 billion in insurance premiums. The hospital care for citizens crippled in car crashes exceeds $1 billion a year.

Neither I nor anyone I know expects to be killed or maimed in a car crash, either today, this year or this century. But this is an expectation of the heart, not the head, because somewhere in America more than 100 people die every day in car crashes. The issue is less whether the government should protect lovers of liberty like Rep. Shuster than what it should do about the safety of countless citizens. Cars have become love objects, dream fulfillments, as well as common transporters, but who except the rare citizen suspects them of being potential exterminators? The air bag is merely the best system yet devised to give an individual the freedom to get in his car and drive off without suspecting that he may be killed. Such a freedom is worth preserving.

YOUNGSTOWN VINDICATOR SUPPORTS NO-FAULT

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. CARNEY. Mr. Speaker, the following editorial appeared in the Youngstown Vindicator on Tuesday, July 19, 1977, regarding the need for national no-fault insurance legislation.

I agree with the Vindicator that the time has come to enact no-fault insurance legislation. Victims of automobile accidents must get prompt and fair compensation for losses resulting from injury or death, without the need to decide who is to blame for the tragedy. No-fault motor vehicle insurance can accomplish this.

I commend the Vindicator for taking a stand on this controversial issue, and I would like at this time to share this editorial with my colleagues:

CARTER SUPPORTS NO-FAULT

Congress has been considering no-fault insurance legislation for six years, but has always defeated it by a narrow margin, largely because of opposition from the Nixon and Ford administrations. Now a federal standard for auto insurance that pays accident victims automatically has unprecedented support from the White House, and prospects are looking up despite the powerful opposition of the American Trial Lawyers Association, representing lawyers who try auto accident personal injury cases.

The Department of Transportation recently concluded from a study of the 16 states that already have no-fault systems that victims of auto accidents in those states get faster and fairer compensation than those in other states. Under the plan proposed in both the Senate and the House, car owners would have to buy insurance. In the event of an accident, all reasonable medical and rehabilitation bills up to $100,000 for driver and passengers would be paid automatically no matter who caused the accident. The car owner could buy extra coverage up to $1 million.

Lost wages up to $12,000 and the costs of replacement services for housewives for one year would be paid, as would funeral expenses up to $1,000. Victims could still sue for economic losses beyond those amounts and could sue for pain and suffering in cases of wrongful death, disablement for more than six months and gross disfigurement or permanent injury.

Supporters of no-fault maintain that by eliminating the cost of litigation, the no-fault system provides larger benefits for the same insurance premiums. Records compiled by the insurance companies in the 16 states with no-fault legislation support this argument. In most cases, but not all, premium rates are lowered by no-fault plans, depending on the extent of the no-fault coverage.

In 1972, the Senate voted down no-fault 49 to 46, but in 1974 passed it, 53 to 42. There was no action in either instance by the House. In 1976, the Senate defeated it again, 49 to 45. Considering the fact that a good many legislators are trial lawyers who have a vested interest in preserving the tort, or fault system, it is significant that so many of them support no-fault. Enough time has been spent determining the facts. Both the House and Senate should go ahead with the bill.

IN PRAISE OF TELEPHONES AND THE NEW YORK TELEPHONE CO.

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. KOCH. Mr. Speaker, on July 13, 1977, at about 9:30 p.m. the lights of the city of New York went out. The city did not grind to a halt, it halted. It is not my intention at this time to discuss the failures of Con Ed or the looting which ensued in some parts of our city. Rather, I would like to dwell on one of the few positive aspects that made it possible to get through a long hot night. It was the telephone system. Yes, the telephones continued to work, and it was possible for people who were terribly worried about their relatives and friends to call and to be reassured. The same continued telephone service which operated during the power failure of 1965 was repeated in the power failure of 1977.

I have been to a number of other countries, including Mexico and the Soviet Union to cite just two, and it was always remarkable to discover how poor their telephone systems were to say nothing of the paucity of telephones available to the citizens of those countries. Here in the United States, telephone service is deemed to be an essential service encompassing the poor as well as the rich and not the prerogative of the upper or middle class. In the past I have had a number of disagreements with the New York Telephone Co., for example, on rates and the substitution of numbers for letters on the telephone exchanges. And there was a time when the telephone company sought to hire as operators welfare recipients and individuals without adequate education, which, although it was an admirable policy, caused extreme difficulties in obtaining a telephone number from an information operator.

Indeed, on one occasion I read in Pete Hamill's news column that he had sought to get my telephone number, which is listed, from the information operator. He reported his conversation with the information operator, as I recall it, as follows: "I would like the number of Congressman KOCH." The reply from the operator after she had apparently studied the records was "there is no KOCH with the first name Congressman listed in our records." That does not happen any more and it is because the telephone company has trained its operators well.

I asked New York Telephone to provide me with some facts concerning its activities during the night of July 13 and I am appending that report to this statement. Since I have never hesitated to criticize the telephone company when I thought criticism appropriate, I am delighted to be able to praise it. Its performance on the night of July 13 and thereafter was superb.

STATEMENT OF NEW YORK TELEPHONE COMPANY

On July 13, 1977, New York City was plunged into darkness by a massive power failure. The lights of the city flickered off at 9:35 p.m., and with the loss of electricity, most of the normal activities of Manhattan and the rest of the city came to a halt. A principal exception was the telephone system.

As happened in the great blackout of 1965, New York Telephone and other Bell System subsidiaries took immediate steps to make sure there was no break in vitally needed communications.

All telephone switching centers in the affected area were able to use emergency power generating equipment maintained by the telephone company. A total of 106 New York Telephone Company equipment buildings and six long distance centers operated by AT&T's Long Lines division were involved.

Although there were periods of network congestion throughout the first night and following morning because of the heavy volume of calls, there was no interruption of either local or long distance service.

Using an emergency plan coordinated by New York Telephone's Emergency Control Center, the Bell System was able to handle 80 million outgoing calls as opposed to 36 million on an average day. By limiting the number of incoming calls, customers in blacked out areas were assured that their own calls would get through. In some cases, the entire nationwide network was brought into play. Calls from New Jersey to New York, for example, were routed by way of Long Beach, California, in order to avoid overloading certain New York switching offices. Round-the-clock communications with other Bell System companies made sure that special network controls were in effect throughout the blackout.

The special needs of the stricken city were also handled promptly. Within two hours after receiving a request from the Mayor's office, for instance, New York Telephone had installed 24 lines to the City's emergency communications center.

Throughout the emergency, other Bell System companies including Western Electric and New Jersey Bell came to the assistance of the New York Telephone Company. Local telephone people also demonstrated unusual dedication to duty. Despite limited transportation during the early part of the blackout, 85 percent of New York Telephone employees reported for work.

The fact that the communications network continued to operate well made it easier for New York City's citizens to live through the emergency.

SALUTE TO NATIONAL MUSIC CAMP

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. CEDERBERG. Mr. Speaker, for many of us, when you mention the words "summer camp" and "musical instruction," we conjure up two different, perhaps incompatible, images. But the combination of these two concepts has proven very successful for the National Music Camp in Interlochen, Mich., which is located within the 10th Congressional District.

This summer begins a 2-year celebration for the camp marking their 50th season—1977 and their 50th anniversary—1978. Their first half century has seen them grow to the extent that this summer some 1,500 individuals, ranging from grade school to college students, from approximately 46 States and 20 other countries will participate in their 8-week program. This figure is augmented by another 1,000 Michigan students who will participate in their four 2-week programs.

More impressive, however, are the graduates of the National Music Camp who number among the most prominent musicians in the world. Included in this elite group are pianist Van Cliburn, an annual participant in a special summer concert, and conductor Guido Ajmone-Marsan, an Interlochen alumni who now leads the World Youth Symphony.

None of this, however, would have been achieved without the guidance and determination of Dr. Joseph E. Maddy, the founder of the camp. A man of vision, Dr. Maddy established the camp in 1928 to train promising young high school musicians. The support for this undertaking originally came from the Carnegie Foundation, which donated to the University of Michigan funds for the furtherance of the fine arts. And the University of Michigan, recognizing the promise of Dr. Maddy's ideas, gave him $6,000 a year for 5 years with which he was free to do as he pleased and travel where he saw fit—as long as he promoted good music. This official stamp of approval by the University of Michigan was the beginning of a close affiliation which immeasurably enhanced the prestige of the National Music Camp in those fledgling years. And rough they were.

Just when Dr. Maddy seemed to have the means at hand to achieve his goals, the depression hit. The record of his efforts in the intervening years between

1932 and 1940 to keep the camp solvent are a credit to the tenacity of his character. Never losing sight of his dream to establish the arts as a separate field of study, he gave everything he had to the continuation of the camp.

The results of his labors are a living testimonial to his dream. Not only did the National Music Camp continue to flourish and grow, but in 1962 the Interlochen Academy for the Arts was also established. Unique in its emphasis on the arts, especially music, it provided year round academic instruction to high school students.

It is thus in recognition of the past 50 years of achievements of the National Music Camp that I ask my colleagues to join me in saluting the contributions that Interlochen has made to music and the arts.

Recognized throughout the world, Interlochen is a realization of Dr. Maddy's original charge: to promote good music. Providing gifted musicians the opportunity to realize their potential, it has given us all something of immeasurable value that would never have been achieved otherwise. For this we offer our sincerest congratulations on this memorable occasion.

AMERICAN BAR ASSOCIATION SECTION RECOMMENDS GRAND JURY REFORM

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. EILBERG. Mr. Speaker, I have recently obtained a copy of recommendations by the American Bar Association's Section of Criminal Justice regarding grand jury reform.

This report will be presented to the ABA House of Delegates next month.

As the following indicates, these recommendations are similar to the provisions of H.R. 94, the Federal grand jury reform bill of 1977. This bill is now under consideration by the House Judiciary Subcommittee which I chair.

Because of the importance of this issue, I commend the report to the attention of my colleagues:

[The attached presently represents only the policy of the ABA Section of Criminal Justice, and not the position of the American Bar Association. This report will be presented to the ABA House of Delegates in August 1977]

AMERICAN BAR ASSOCIATION, REPORT TO THE HOUSE OF DELEGATES, SECTION OF CRIMINAL JUSTICE

RECOMMENDATION

The Section of Criminal Justice recommends adoption of the following resolution:

Be it resolved, That the American Bar Association support in principle grand jury reform legislation which adheres to the following principles:

1. Expanding on the already-established ABA policy, a witness before the grand jury shall have the right to be accompanied by counsel in his or her appearance before the grand jury. Such counsel shall be allowed to be present in the grand jury room only during the questioning of the witness and shall be allowed to advise the witness. Such counsel shall not be permitted to address the grand jurors or otherwise take part in proceedings before the grand jury. The court shall have the power to remove such counsel from the grand jury room for conduct inconsistent with this principle.

2. No prosecutor shall knowingly fail to disclose to the grand jury evidence which will tend substantially to negate guilt.

3. A prosecutor should recommend that the grand jury not indict if he or she believes the evidence presented does not warrant an indictment under governing law.

4. A target of a grand jury investigation shall be given the right to testify before the grand jury, provided he/she signs a waiver of immunity. Prosecutors shall notify such targets of their opportunity to testify unless notification may result in flight or endanger other persons or obstruct justice; or the prosecutor is unable with reasonable diligence to notify said persons.

5. The prosecutor shall not present to the grand jury evidences which he or she knows to be constitutionally inadmissible at trial.

6. The grand jury shall not name a person in an indictment as an unindicted co-conspirator to a criminal conspiracy. Nothing herein shall prevent supplying such names in a bill of particulars.

7. A grand jury should not issue any report which singles out persons to impugn their motives, hold them up to scorn or criticism or speaks of their qualifications or moral fitness to hold an office or position. No grand jury report shall be accepted for filing and publication until the presiding judge submits *in camera* copy thereof to all persons named or identifiable and such persons are given the opportunity to move to expunge any objectionable portion of said report and have a final judicial determination prior to the report's being published or made public. Such motion to expunge shall be made within ten days of receipt of notice of such report. Hearings on such motions shall be held *in camera*.

8. The grand jury should not be used by the prosecutor in order to obtain tangible, documentary or testimonial evidence to assist the prosecutor in preparation for trial of a defendant who has already been charged by indictment or information. However, the grand jury should not be restricted in investigating other potential offenses of the same or other defendants.

9. The grand jury should not be used by the prosecutor for the purpose of aiding or assisting in any administrative inquiry.

10. Witnesses who have been summoned to appear before a grand jury to testify or to produce tangible or documentary evidence should not be subjected to unreasonable delay before appearing or unnecessarily repeated appearances or harassment.

11. It shall not be necessary for the prosecutor to obtain approval of the grand jury for a grand jury subpoena.

12. A grand jury subpoena should indicate the statute or general subject area that is the concern of the grand jury inquiry. The return of an indictment in a subject area not disclosed by the grand jury subpoena shall not be a basis for dismissal.

13. In any case in which a subpoenaed witness moves on proper grounds to quash a grand jury subpoena, the prosecutor should be required to make a reasonable showing *in camera* (which may be *ex parte* at the court's discretion) and on the record before the court convening the grand jury that the evidence being sought is:

(a) likely to be relevant to the grand jury investigation;

(b) not sought primarily for an improper purpose.

14. A subpoena should be returnable only when the grand jury is sitting.

15. When the circumstances place a hardship on the witness, motions to quash or modify subpoenas may be brought at the place where the witness resides, the documents sought are maintained, or before the court which issued the subpoena at the election of the witness. Such motion should be heard *in camera* and on the record.

16. All matters before a grand jury, including the charge by the impaneling judge, if any; any comments or charges by any jurist to the grand jury at any time; any and all comments to the grand jury by the prosecutor; and the questioning of and testimony by any witness, shall be recorded either stenographically or electronically. However, the deliberations of the grand jury shall not be recorded.

17. The prosecutor should not make statements or arguments in an effort to influence grand jury action in a manner which would be impermissible at trial before a petit jury.

18. Expanding on the already-established ABA position favoring transactional immunity, immunity should be granted only when the testimony sought is in the public interest; there is no other reasonable way to elicit such testimony; and the witness has refused to testify or indicated an intent to invoke the privilege against self-incrimination.

19. Immunity shall be granted on prosecution motion *in camera* by the trial court which convened the grand jury, under standards expressed in Principle No. 18.

20. The granting of immunity in grand jury proceedings should not be a matter of public record prior to the issuance of an indictment or testimony in any cause.

21. A lawyer or lawyers who are associated in practice should not continue multiple representation of clients in a grand jury proceeding if the exercise of the lawyer's independent professional judgment on behalf of one of the clients will be or is likely to be adversely affected by his or her representation of another client. If the court determines that this principle is violated, it may order separate representation of witnesses, giving appropriate weight to an individual's right to counsel of his or her own choosing.

22. The confidential nature of the grand jury proceedings requires that the identity of witnesses appearing before the grand jury be unavailable to public scrutiny.

23. It is the duty of the court which impanels a grand jury fully to charge the jurors by means of a written charge completely explaining their duties and limitations.

24. All stages of the grand jury proceedings should be conducted with proper consideration for the preservation of press freedom, attorney-client relationships, and comparable values.

25. The period of confinement for a witness who refuses to testify before a grand jury is found in contempt should not exceed 6 months.

26. The court shall impose appropriate sanctions whenever any of the foregoing principles have been violated.

REPORT

Background

The Section of Criminal Justice urges House of Delegates approval for 26 legislative Principles to which it believes grand jury reform legislation should adhere. The Section has spent more than three years studying the grand jury. In August 1975—at Section urging—the House of Delegates approved a policy addressing one grand jury bill (H.R. 1277) in the 94th Congress. That policy is a limited one, but includes Association support for such key elements of grand jury reform as allowing counsel in the grand jury room, transactional immunity, and strengthened penalties for unauthorized disclosure of grand jury information. Since 1975, the Section's Grand Jury Committee has analyzed a number of pending bills, including H.R. 2986 and S. 3274 (94th Congress), both with a broader focus than H.R. 1277, on which the current ABA policy was formulated. New

legislation, including H.R. 94, H.R. 3736, and S. 1449, has been introduced in the 95th Congress; hearings are already being held on these proposals.

Based on its continued study of this issue since 1975, the Criminal Justice Section now asks House of Delegates adoption of Association policy addressing a broader range of grand jury issues. This is timely not only because of the increasing public, press and professional attention being focused on this issue, but also because action is anticipated in the 95th Congress on the pending legislation. Further, a number of states are now considering—and some have already enacted into law—similar bills.

In February, 1977, the Section asked the House of Delegates to approve a package of 23 legislative principles. At the personal request of Attorney General Bell, the Section asked the House to defer action until the August Annual Meeting. Since February, the Section has revised several Principles to clarify intent; has added 3 new Principles concerning prosecutorial conduct; and has met with Honorable Benjamin Civiletti. Assistant Attorney General in charge of the Criminal Division, U.S. Department of Justice, and other Department representatives to discuss the Principles. Mr. Civiletti has expressed support for some 15 of the Principles, and noted that the Department would take no position on an additional five. On several additional Principles, Mr. Civiletti said that some rephrasing might moot Department objections. In an attempt to reach compromise in as many areas as possible, the Section's Grand Jury Committee held a special meeting in early June, made additional amendments to a number of the Principles, and gained Council approval for these changes via a special mail ballot.

It should be noted that proposed Principles were drafted by a Committee composed almost entirely of present and former prosecutors. It is chaired by Richard E. Gerstein, State Attorney for the greater Miami area for more than 20 years, and former President of the National District Attorneys Association. The Committee also included members with state and federal prosecutorial experience (including the last Watergate Special Prosecutor, Charles Ruff), judges, law professors and members of the defense bar. The Principles further represent a consensus of the Criminal Justice Section Council, which includes a similar mix of persons from all parts of the criminal justice system. Most of the Principles were approved by the Council unanimously.

In recent years, the grand jury as an institution has come under increasing criticism for a number of reasons and from a number of sources. It has been accused of an absence of procedural safeguards. Reflecting these and other concerns, England—where the grand jury originated—abolished the institution in 1933; the majority of states in our country allow prosecution either by indictment or by information. However, it remains a part of the federal system and in many state systems because of constitutional provisions. The ABA House of Delegates in 1975 went on record opposing amendment of the United States Constitution to eliminate the requirement for indictment by a grand jury. That position of the ABA should not be changed, but a comprehensive effort is needed to correct existing abuses The Section believes that its proposed legislative Principles will go a long way towards remedying the ills of the grand jury as an institution.

CONCLUSION

When the grand jury was created in 12th Century England, it was intended to serve as a shield between the citizen and the Crown. In recent years, the grand jury has come under increasing attack: observers charge that the grand jury system is riddled with abuse, and is no longer a shield for the citizen but a shield for the government. Critics declare that it has departed from its proper Constitutional function of protecting citizens from unwarranted prosecutions.

The Section of Criminal Justice, based on the work of its Grand Jury Committee, chaired by experienced prosecutor Richard E. Gerstein, believes that reforms are needed to insure fairness—but without undercutting the grand jury's legitimate functions or destroying it as an institution. While legitimate objections to these Principles have been raised, resistance to change from those within the criminal justice system cannot in itself be sufficient reason to reject well-considered—and needed—proposals.

The Section urges the House of Delegates to support the 26 legislative Principles. The Congress and many states legislatures are now acting on grand jury reform proposals; professional, media and public focus on this subject cannot be expected to abate. The Association—as in its landmark Standards for Criminal Justice project—has long been in the forefront of criminal justice improvement.

ABA leadership is now needed to help fashion well-reasoned, workable and effective grand jury reform legislation.

Respectfully submitted,

B. JAMES GEORGE, Jr.,
Acting-Chairperson.

SECRET POLICE IN CHICAGO MURDER?

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. DORNAN. Mr. Speaker, the recent murder of an editor of a Chicago anti-Communist newspaper and his 9-year-old daughter give hint to a new and frightening aspect of the spread of world communism. In a commentary which appeared in the News World newspaper on June 21, inferences are drawn about the involvement of the Yugoslav secret police in the murder.

The agents of the Yugoslav secret police have allegedly committed a number of assassinations of political opponents in Western Europe during the last 10 years. The murders of Dragisa Kasikovich and Ivanka Milosevich have all the markings of being similarly motivated. Mr. Kasikovich has been an outspoken critic of the Tito regime and of the Soviet domination of his homeland, Serbia. It is believed in some circles that this was the reason for his murder. His hapless daughter was stabbed and shot because she was a witness to her father's death.

If the inferences drawn from the facts are true even in part, the United States can no longer consider herself to be the asylum of freedom-loving people. If the Yugoslav secret police can murder their opponents within the United States with impunity, then the time has come for this Congress and the State Department to reevaluate our policy toward Tito and the activities for foreign Communists within our borders.

The article follows:

BEYOND THE MURDER OF A SERB ANTI-COMMUNIST IN CHICAGO

CHICAGO—An editor of the anti-Communist newspaper *Liberty* and his 9-year-old step-daughter were found murdered in the newspaper office about 4 a.m. on Sunday, June 19.

According to the police officers investigating the murder, Dragisa Kasikovich, 44, and Ivanka Milosevich, 9, were each repeatedly stabbed with knives and finally shot once in the head and once in the chest, sometime after 11:30 p.m., Saturday, June 18.

Mr. Kasikovich was placed in the chair behind his working desk with his face beaten beyond recognition with the dead girl on his lap. This is the position in which they were found by his wife at 4 a.m.

The murder case of Dragisa Kasikovich has two distinct aspects: the first one is criminal and individual. At this time when the police have not yet finished their investigation so we do not know the identity of the murderer or the details.

But there is a second aspect which may be even more important and that is the political aspect. There is speculation that the murder was politically motivated and that the perpetrators is/are agents of the Communist regime of Josef Broz Tito of Yugoslavia.

Ever since the Communists came to power in Yugoslavia (owing to Stalin who sent Soviet Marshall Tolbunin to install Tito in power in Belgrade on October 20, 1944) the free Serbian anti-communists have been an embarrassment and a thorn in the side of the Yugoslav Communists.

In the past decade, the agents of the Yugoslav secret police, UDBA, have allegedly committed a number of assassinations of political opponents in Western Europe.

To name some of the most prominent cases: Andra Loncaritch in Paris, Sava Cubrilovich in Sweden, Ratko Obradovich in Munich, Borda Blagojevich in Brussels, Jasha Lyotich in Munich, Pierre Valich in Brussels.

Last year in Washington, D.C. a hired Yugoslav agent surrendered to the Federal Bureau of Investigation, turned over the special poison which she received from the legal counsel in the Yugoslav embassy in Washington and admitted that her assignment was to poison five members of Serbian political emigration in Washington, D.C.

One of the most eminent members of the Serbian community in the Free World, Dr. Slobodan M. Draskovich, former professor at the University of Belgrade, and president of the Serbian Cultural Club St. Sava of Chicago, Ill. made the following statement: "I had the occasion several years ago to bring this to the attention of the then Attorney General John Mitchell, predicting that unless these criminal activities of the Yugoslav Secret Police UDBA were stopped they would spread to the United States."

Dr. Draskovich also commented, "I think that the most important aspect of the murder of Dragisa Kasikovich is precisely that—emboldened by the unconditionally friendly policies of our State Department—the Communist regime of Josef Broz Tito has decided to cross the ocean to silence by terror the anti-communist Serbs in the United States."

Dr. Draskovich continued, "For not only that, no attention at all was paid to the machinations of Tito's agents in the United States, but their infiltration into the Serbian Orthodox Church has gone unhindered and was even facilitated."

The Communists also allegedly caused a split in the Serbian Orthodox diocese of the United States and Canada in May 1963, which was known to oppose the Communist rulers in Yugoslavia.

The free Serbs in the United States rallied in defense of their diocese against the dictates of the Religious Commission (known as the arm of the Yugoslav Communist regime for religious affairs).

The litigation before various U.S. courts of justice lasted for 14 years.

The Serbs feel the most damning single

event was the majority opinion of the Supreme Court of the United States of June 21, 1976, which deprived the American Serbs of the protection under the First Amendment of the U.S. Constitution, and ruled that U.S. Courts are forbidden to examine and pass judgment on the rulings of the ecclesiastical courts under Communist control in Yugoslavia.

In a letter to Chief Justice Warren Burger on July 19, 1976, Dr. Draskovich predicted that such a majority opinion would entail very grave consequences, among which would be to give green light to the Communist terrorists from Yugoslavia and he claims this has now come to pass.

The Serbs feel it is beyond the details of the murder of Dragisa Kasikovich. The most ominous aspect to them is the Communist regime of Tito.

They claim they must fear for their lives like the Serbian editor and his step daughter.

HEARINGS ON SOUNDNESS OF SOCIAL SECURITY SYSTEM

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. WHALEN. Mr. Speaker, this week the Ways and Means Committee's Subcommittee on Social Security has undertaken an important series of hearings concerned with the financial soundness of the social security system and with other problems which plague this valuable program. I was privileged to testify on the first day of hearings regarding legislative proposals aimed at both the projected long-range deficit and the short-term crisis. I would like to share with my colleagues the remarks which I presented to the subcommittee.

REMARKS BY REPRESENTATIVE CHARLES W. WHALEN, JR.

Mr. Chairman, I appreciate this opportunity to appear before your subcommittee to discuss proposals addressing the financial ills besetting the social security system.

The fiscal soundness of the social security system is of crucial importance to all Americans. Yet, a distressing imbalance between expenditures and income has occurred during the past two years and is predicted to become worse in the future.

The current decline in the Social Security Fund, from $45.9 billion in 1974 to an expected $35.5 billion by the end of this year, stems from two principal sources: a higher than average rate of unemployment and serious inflation.

A projected long-range problem is expected to result from action taken by the Congress in 1972 and the subsequent invalidation of the economic and demographic assumptions upon which the 1972 Social Security Amendments were predicated.

Representative Berkley Bedell and I have introduced legislation—H.R. 7154 and H.R. 8368—dealing respectively with both sets of problems.

1. SHORT-RANGE ISSUES

When our nation's social security program was originally conceived, 95 percent of covered workers paid taxes on all of their wages. In recent years this has shrunk to 85 percent of eligible employees. H.R. 7154 increases to $30,000 over a three year span, the ceiling on the amount of earnings which may be counted for social security benefit and tax purposes.

If enacted, H.R. 7154 would accomplish two objectives:

First, it would raise once again to about 95 percent the number of covered employees whose entire wages are subject to social security taxes. By exposing higher salaries to taxation, this measure reduces somewhat the system's regressivity.

Second, by producing increased annual revenues H.R. 7154 forestalls the depletion of the Social Security Funds which, under present circumstances, should occur by 1982. Instead, this proposal will rebuild the system's assets of $58.4 billion by December 31, 1983.

A word of caution is in order, however. As more and more high-bracket wage earners (up to $30,000) retire, benefit outlays will increase. Therefore, if H.R. 7154 becomes law, by 1984 yearly social security expenditures again will exceed annual receipts. Consequently, in addition to a stop-gap approach, the Congress must develop a long-term solution if erosion of the trust fund is to cease.

2. Long range problem

One half of the future social security deficit is attributable to the double indexing or "coupled" benefit formula adopted by the Congress in 1972 when it revised the Social Security Act. Until that time social security benefits were raised on an ad hoc basis. The 1972 amendments were designed to protect both present and future recipients against the ravages of inflation by: first, providing that current benefit levels rise automatically to correspond to increases in the Consumer Price Index; and, second, adjusting the maximum earnings base, on which social security taxes are levied, to conform to increases in average earnings.

Unfortunately, since 1972 two situations have developed which have contributed greatly to the financial dilemma confronting the social security system.

First, the future cost projections made in 1972 were based on an obsolete set of demographic assumptions which bore little relationship to our recent, sharply declining birth rates. Population estimates developed in the 1960's were not revised until 1974—hence the alarming and radically different computations released in 1975 by the Advisory Council on Social Security. Indeed, the actual birth rate in 1972 was 30 percent lower than the assumed rate. Obviously, since support for future costs (benefit outlays) depends crucially upon the number of available contributors (taxable workers), any decline in that figure requires that alternative income sources be considered.

Second, in the 1972 Amendments, Congress legislated an indexing method that overcompensates for inflation. Under this plan if inflation occurs in a given year, present workers (retirees of the future) receive a double benefit. First, their wages undoubtedly are adjusted to compensate for the cost-of-living increase. Second, a higher benefit percentage is ascribed to their actual average monthly wage.

These automatic cost-of-living increases affect both current and future retirees. Permit me to elaborate by using two examples.

(A) Mr. Smith is retired after forty years of employment. During these four decades his average monthly wage was $200. He now receives a benefit equal to 50 percent of his average monthly wage, or $100 per month. If inflation in a given year reaches 10 percent, under the 1972 Act Mr. Smith's benefits automatically increase by 10 percent. Mr. Smith, therefore, would be entitled to $110 monthly benefits. This procedure correctly adjusts for inflation for retired workers.

(B) Mr. Jones, age 50, has been in the labor force for thirty years. His average monthly pay during this period is $200. If consumer prices advance 10 percent in Mr. Jones thirty-first year of employment, he will receive two compensation adjustments. First, his employer undoubtedly will increase his wages to offset the ten percent inflation rate. Second, provisions of the 1972 Act will boost the ratio of his present earnings in relation to his future retirement benefits. Thus, Mr. Jones, upon retirement, will obtain a much greater percentage of his average monthly wage than did Mr. Smith. And, of course, he also will receive the annual cost-of-living adjustment after he leaves the work force. As Hobart Rowen noted in his column which appeared in yesterday's Washington Post "As a result, many retirees would get benefits far above the best pay they ever earned."

H.R. 8368 eliminates the provision of the 1972 Act which mandates an automatic adjustment to the benefit percentage figure. Instead, it incorporates a progressive three-step benefit formula with average earnings based on the highest ten years of the contributor's work life.

Enactment of this measure would achieve two objectives.

First, it would reduce by almost one-half the estimated seventy-five year social security trust fund deficit.

Second, while replacing an erroneous benefit formula, the Whalen-Bedell decoupling proposal also simplifies the system significantly, bringing it within the understanding of the more than 33 million citizens who participate in the social security program. The present method of determining one's benefit entitlements is incomprehensible. The new retiree is presented with a blue pamphlet which illustrates the first eight steps he must take to estimate his first benefit check. After arriving at step eight, he then is referred to the benefit tables established every year or so by law. This table, in turn, is based upon a nine-step formula. Is it any wonder that our respective offices are swamped with social security cases?

There is a lot of simplicity attendant to the computation of the benefits provided by the "top ten" Federal Retirement systems. Five of these base benefits on a high-X number of years. The others are based on wages at the time of retirement. Only social security benefits are determined on an average of a lifetime of earnings, often including years of part-time or minimum-wage employment. Social security participants deserve the same considerations as federal employees.

Perhaps the best summary of the long-range financial problem facing the social security system, and its possible resolution, is contained in a recent Congressional Research publication.* I would like to close my remarks by quoting from this excellent analysis.

"Under the present law, the period over which wages are averaged depends on the year in which an individual reaches age 62 or dies. For example, an individual who becomes 62 in 1978 will require 22 years and so on until the maximum averaging period, 35 years, is reached in 1981. This lengthening, averaging period is one of the factors which seems to complicate proposals to change the benefit computation in a way which would be both equitable and reduce long-term costs. On the other hand, if benefits were to be based on the present benefit formula (or an approximation of it) with wages averaged over a high-X number of years of earnings (the X could be equal to as few as one or two years or as high as the present level), a significant reduction in long-term costs could result. In fact, conversations with various actuaries have indicated that one can develop a high-X formula which would provide equitable benefits with relatively stable

replacement ratios for the next decade or so and which could have a long-term surplus under actuarial estimates based on the economic and demographic assumptions used for the 1976 report of the trustees."

RENEGOTIATION REFORM ACT

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. MINISH. Mr. Speaker, in recent months Members of Congress have received many communications regarding H.R. 5959, the Renegotiation Reform Act of 1977.

Unfortunately, virtually all this intense lobbying has been from special interests who would rather not see a fair system of renegotiation operating in the public interest.

In order to give my colleagues the benefit of a less biased and more professional perspective on this issue, I am today inserting into the RECORD excerpts from the testimony of the General Accounting Office on the Renegotiation Reform Act:

STATEMENT OF RICHARD W. GUTMANN, DIRECTOR, PROCUREMENT AND SYSTEMS ACQUISITION DIVISION BEFORE THE SUBCOMMITTEE ON GENERAL OVERSIGHT AND RENEGOTIATION OF THE BANKING, FINANCE AND URBAN AFFAIRS COMMITTEE

Mr. Chairman and members of the Subcommittee:

We are here today at the request of your Subcommittee to present our views on the proposed legislation to revise and extend the Renegotiation Act of 1951. As you know, the General Accounting Office has maintained an interest in the renegotiation process through its continuing audits and varied assistance to the Subcommittee.

In testimony before this Subcommittee in June 1975 we outlined and discussed the findings and recommendations of our study of the operations and activities of the Renegotiation Board. Several of our recommendations have been considered by the Subcommittee for inclusion in your proposed legislation on renegotiation.

We have reviewed H.R. 4082 and, as before, want to express our strong support for this legislation. We believe it is constructive and should lead to major improvements in the renegotiation process. We welcome the opportunity to provide our views on the major issues in the current bill.

METHOD OF REPORTING CONTRACTS

We support the provision in Section 4 that the percentage of completion method of accounting no longer be used for contracts which are subject to renegotiation. One of the problems we see with the percentage of completion method of accounting is the lack of a precise method of estimating percentage of completion. Engineering estimates are frequently involved that are largely subjective. There are opportunities for such estimates to be manipulated to improperly minimize the possibility of an excess profits determination. However, we do not know whether such manipulation has actually taken place. We believe that elimination of the use of the percentage of completion method of accounting and the required use of a "units delivered" or "completed contract" method of accounting for renegotiation purposes would add necessary objectivity to the process. We recognize that for projects of long duration with a single unit to be delivered, costs and related revenues will need to be excluded from renegotiation until the project is completed.

The principal advantage of the completed contract method is that it is based on results as finally determined, rather than on estimates of cost to be incurred on uncompleted work. In our opinion, excessive profits can be determined with reasonable certainty only when units are delivered or at contract completion.

PRODUCTION LINE RENEGOTIATION

Section 4 of the bill also requires contractors to report renegotiable business on the basis of division and product line. We believe this is a much needed reform in the Renegotiation Act. The current method of renegotiation appears to favor large diversified corporations because they can offset the results of high profit activities against the result of low profit or loss activities. We believe this constitutes an advantage over smaller single product line firms. Use of a product line approach would be more effective in minimizing the number of firms that are now escaping renegotiation and place both large and small firms on a more equal footing.

We do not believe that the requirement for division and product line reporting will create an administrative burden. Most contractors maintain their accounting records on a divisional basis and the incidence of multiple product lines within divisions is generally not high. We believe that reporting procedures could be worked out by the Renegotiation Board with the contractors that would minimize or prevent any additional administrative or reporting burden for contractors. We believe that provision should be made to give the Board the necessary flexibility to work out these procedures.

STANDARD COMMERCIAL ARTICLES

We found that it is not possible to determine, on the basis of information available to the Board, the extent to which a contractor may have excluded standard commercial articles and services sales with high profits and included sales with low profits in its report on renegotiable sales because of the absence of cost and profit data on exempted items. Though the Board has recommended that the Congress repeal this exemption, it lacks the data showing that substantial profits escape renegotiation due to the exemption.

It is apparent that a significant amount of sales has escaped renegotiation in recent years due to this exemption, but the amount of profits escaping is indeterminate. Moreover, if the rationale for the exemption assumes that competition exists for all standard commercial items thus insuring reasonable prices and profits, it may not be valid in all cases. For example, a commercial item which is produced by a sole-source supplier and which qualifies for the exemption has not necessarily been subject to competition, and the price quoted in a contractor's catalog may include an unusually high profit margin. Yet the existence of effective competition is assumed. It is for these reasons we have recommended that the Congress require the Board to obtain and analyze profit and cost information relating to standard commercial articles and services to determine whether large amounts of excessive profits and cost information relating to standard commercial articles and services to determine whether large amounts of excessive profits are escaping renegotiation.

In view of the above we are pleased to see a provision in Section 5 for a comprehensive study of the standard commercial articles and durable productive equipment exemptions by the Board.

OIL AND GAS WELL EXEMPTION

It is our understanding that the present raw materials exemption was enacted by Congress in 1942. As explained in previous hearings, the provision was included in the original act to recognize the fact that the world market gives the Government immediate access to price information. This rationale was formulated long before the present era of multinational oil companies, boycotts, etc.

As the Committee previously recognized, the creation of international cartels, which control all facets of production, has distorted the world market price for oil where it no longer reflects the true costs of production. Simple reference to the world commodity market, therefore, gives no assurance that contracts for unrefined oil or gas are not providing the contractor with excessive profits.

The theory that the raw materials exemption would encourage exploration and production of crude oil or gas was an additional rationale for the exemption at the time it was enacted by Congress. In light of currently high oil and gas prices and the scarcity of these materials, this rationale appears questionable. Therefore, we concur with the elimination of the oil and gas well exemption.

KNOWINGLY FAILING TO FILE, AND KNOWINGLY SUBMITTING FALSE INFORMATION

We have advocated civil penalties aimed at discouraging delinquent filings and for failure of contractors to furnish data or information required by the Board. The penalties now included in Section 7 of the proposed legislation, in our opinion, should increase compliance with the act's filing requirements.

INTEREST ON EXCESSIVE PROFITS

Section 8 provides that interest on profits found to be excessive shall begin to accrue on the day following the end of the fiscal year in which the excessive profit was made. We support the provision for interest charges. Since penalties cannot be applied to late filers and nonfilers unless their actions are proven to be wilful, there is no inducement for them to file on time. Rather, contractors stand to gain financially by not filing with the Board or by delaying their filings as long as possible. Contractors should not be allowed to utilize excessive profits without paying interest on those funds.

SUBPOENA POWER

Section 10 authorizes a majority of the Board to issue subpoenas requiring the production of any records, books, or other documents required under this act. We concur in the provision. The Board has been faced with the problem of obtaining accurate and complete information to make its analyses. At the present time, the Board has no practical means of requiring contractors to provide timely information which it deems necessary. Although the penalty provision of the act may be imposed when the contractor refuses to furnish adequate data, the Board must prove that the contractor's refusal was willful.

ETHICS IN BUSINESS

HON. J. KENNETH ROBINSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. ROBINSON. Mr. Speaker, despite the many matters in which we may differ, in varying degrees, in our thinking and actions as Members of this House, all of us continue to subscribe, I am confident, to the concept of a free enterprise system.

Unfortunately, the mechanics of the system are not comprehended adequately by many citizens. In particular, we are not doing enough in our educational process, to explain the concept to young people.

We have to acknowledge, as well, that, the defects of human nature being as they are, the free enterprise idea becomes tarnished from time to time by the excesses and indiscretions of some individuals and groups having roles of responsibility in the day-to-day operations of the system.

Free enterprise obviously cannot function effectively when adversary relationships develop between management and employee, or between a business and its customers. Responsible business people—and most in business are such, or they do not survive—recognize this.

As an excellent example of such awareness, I take the liberty of bringing to the attention of the House a circular letter directed to the members of the Virgina State Chamber of Commerce by its president and the chairman of its education committee, together with the suggested elements of a code of ethics for officers and employees of a business, as follows:

VIRGINIA STATE CHAMBER OF COMMERCE,
Richmond, Va., June 14, 1977.

To: Members—Virginia State Chamber of Commerce.

Re: Chamber action on ethics.

The members of the Virgina State Chamber, at their Annual Meeting at The Homestead on May 13, voted unanimously to amend the constitution of the Chamber by inserting a paragraph under Article II, Section I, adding to the purposes of the Chamber, the following:

(e) Encourage the dedication to and the application of the highest standards of ethical conduct by Virginia associations, business firms and individuals.

Recognizing that abuses of the public trust and the public interest in business activities will undermine our highly valued private enterprise system by both inviting more government regulation and by giving aid and comfort to those who seek a government controlled society, we hope that all Chamber members will take this Chamber action very seriously. At its quarterly meeting on October 21–22, 1976, the Chamber board passed a resolution calling on the members to act toward this end, upon adoption of the constitutional change, as follows:

Resolved: The Virginia State Chamber of Commerce, having taken action to modify its constitution calling for the dedication to and application of the highest standards of ethical conduct, does urge each of its members to adopt a code of ethics and emphasize its application in the conduct of its business.

In furtherance of this board resolution, we call on all of you who have not as yet adopted a formal code of ethics for the conduct of your business, to construct such a code applicable to your particular enterprise. It would give added weight to your resolve if you have your board of directors go on record as adopting this code as a standard for management to follow. We urge you, further, to publicize the fact that your code is applied in all your business dealings and to display a summary of the code, suitably framed or in plaque form, in those places in your company where the public is received.

To assist you to develop a code of ethics for your business, the Chamber's Education Committee has drafted a statement (copy enclosed) that incorporates a number of points that should be covered. This is not suggested as a code for your business, but only as a guideline. If you have questions about how you might proceed in this important and urgent venture, contact the Chamber and we will help in any way we can. Write or call Edwin C. Luther, III, who is Secretary for the Education Committee, and he will transmit your requests for assistance to the Education Committee.

In today's world it is not enough to in fact deal honestly and openly with all of our contacts; it is imperative that we communicate our attitudes and actions to the general public. We must refute false charges as energetically as those who create them to discredit us and convince the public of the basic values that exist only in a free society. We must effectively fight the growing flood of propaganda that seeks to portray business as heartless, inhumane, dishonest and abusive of public interest. If we cannot do this successfully, those who adamantly and persistently push for a government run economy and society will surely emerge the victors, and humanity at large will have lost its most important bulwark, the private enterprise system, protecting individual freedom of action, individual self-determination.

We urge you to join with us in this fight. Do your part to portray a more accurate picture of the beneficial role played by businessmen both in meeting human needs in a more efficient, effective and progressive way than is possible under any other system and forestall those who would seek to impose more and more controls upon us.

WILLIAM F. MOHR,
President.

R. PIERCE LUMPKIN,
Chairman, Education Committee.

Enclosure.

CODE OF ETHICS

SUGGESTED POINTS FOR COVERAGE

Whereas, it is essential to the survival of a free society that all of its members transact their affairs with due regard to and respect for the rights of others, and

Whereas, the private enterprise system is an essential ingredient of a free society and must deserve and achieve the respect, confidence and support of the public for its survival, and

Whereas, only by the strict self-enforcement of high ethical standards can businessmen justify the continued privilege of freedom of private enterprise,

Therefore be it resolved, that the Board of Directors of ---------- adopts the following Code of Ethics and calls on its officers and employees to be guided by it in the conduct of this company's business:

We pledge to deal fairly, equitably, openly and honestly with:

I. Customers—by representing our products clearly and factually, standing fully behind our warranties, direct or implied, responding to our customers' needs, and in all other ways justifying their respect and confidence;

II. Employees—by clearly explaining their duties and responsibilities and our obligations to them, dealing with each employee on the merits of individual performance as it relates to the overall conduct of the company's business, and in all ways seeking to establish a cooperative, safe and satisfying work environment;

III. Creditors and Stockholders—by managing our affairs to fully meet all financial obligations and seeking a profitability that will assure our equity investors an adequate return on their investment;

IV. Governmental Units and Agencies—by complying with applicable legislation and regulations while also being constantly and actively involved in efforts to affect legislation and regulations in a manner that best serves the basic principles of our free enterprise system;

V. The Community—by seeking to conduct our affairs in a manner that is consistent with the public interest and that contributes to an environment that is conducive to healthful and pleasant living conditions for this and future generations.

THE HIDDEN COSTS IN THE ADMINISTRATION'S URANIUM RESOURCE FIGURES

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. TEAGUE. Mr. Speaker, one of the most controversial aspects of the debate over the Clinch River breeder reactor demonstration project is the amount of domestic uranium resources. The breeder was first justified because it will replace our dwindling uranium supplies with renewable resources—the fuel produced in a breeder. Our estimates of electrical growth and uranium resources also showed us that the program on breeders needed to be given a high priority.

As can be seen, the amount of uranium resources available is significant in this debate. If there is more uranium than originally thought, then the date of commercialization can be pushed back. Unfortunately, much confusion reigns over the amount of domestic and foreign uranium reserves and the extent to which they can support U.S. nuclear power plants in the future.

ERDA's estimates of reserves and probable additions are 1.9 million tons. Their possible and speculative reserves are 3.5 million tons. On the other hand, the National Research Council study estimates that there are 1.8 million tons—with a 97-percent probability that the United States has less than 3.8 million tons—all figures are $30 per pound.

However, all of these arguments are somewhat mooted because a present light-water reactor can use less ore by simply enriching its fuel more. After examining his proposal, one can see that this is what the President does to make the U.S. reserves supply the 380 LWR's predicted by the national energy plan in the year 2000.

By more thoroughly processing the 1.9 million tons of domestic ore—that is, reducing the tails assay from the present 0.25 to 0.10 percent—ore consumption in

LWR's is reduced by about 30 percent. However, to build the extra enriching capacity to do this would cost at least an additional $9 to $10 billion, according to ERDA.

This startling additional cost was never discussed as part of the President's decision to terminate the Clinch River breeder reactor. Yet if the Congress goes along with the President's idea to stretch our supplies by enriching the ore we have that much more thoroughly, the taxpayers of this country will have to pay $10 billion more for additional enrichment capacity. What is important to remember is, this is in addition to all of the capital investment that will be necessary for the powerplants themselves.

To further explain this, I have included the portion of our hearing record which deals with this added cost:

Mrs. LLOYD. Dr. Schlesinger, in his testimony to us on Tuesday, assumed that one-tenth percent tails assay would be reached. This will certainly increase our uranium supply sufficiently to arrange for delay of the breeder program.

What does this mean in terms of enrichment capacity necessary, and what kind of costs would be undertaken for us to attain this capacity? What is this going to mean in terms of more enrichment capacity? What is this going to mean in terms of cost? The only thing that I've ever heard is that the most is two-tenths as a pie-in-the-sky estimate, and Dr Schlesinger referred to one-tenth percent tails assay. How are we going to do this?

Mr. NININGER. Madam Chairman, I'm in the unusual position of being backed up by my boss, Bill Voigt, who is in charge of both resources and enrichment.

Mrs. LLOYD. I'd like to refer it to Mr. Voigt at this time.

Would you please state your name?

Mr. VOIGT. My name is William Voight, and I'm Director of Uranium Resources and Enrichment for ERDA.

The statement made by Jim Schlesinger really related to the possibility or the practicability of going to a one-tenth tails assay in subsequent enrichment plants to be built between now and, say, the turn of the century.

With respect to the three existing plants, the three existing difusion plants, and with the add-on centrifuge plant, this would enable ERDA to operate and fulfill its existing commitments of 323,000 megawatts at a tails assay at about .25 percent. The additional enrichment capacity to be added beyond these four plants, say, the fifth, sixth, seventh or eighth plant, could permit us to operate at a much reduced tails assay. But that is really in relationship, then, to a tradeoff of feed versus separative work.

Mrs. LLOYD. Would you repeat that, please?

Mr. VOIGHT. It's a tradeoff of feed versus separative work. In other words, it would require more separative work to go down to a one-tenth tails assay. In fact, if we were to operate our complete complex at one-tenth it would require the addition of 18 million separative work units above and beyond the 28 million that will be coming out of the three existing plants, plus the 9 million that would be added by the centrifuge plant.

Mrs. LLOYD. I'm going to ask you to go slowly with me on that. I don't have the background you do. Let's start with 18, okay?

Mr. VOIGHT. Let me start from where we are today and then add up to what would be required to get to the one-tenth tails assay.

Mrs. LLOYD. All right.

Mr. VOIGHT. The three existing plants when fully improved by the Cascade Improvement and Cascade Upgrading Programs will produce 28 million separative work units. In addition to that, we would add the 9 million separative work units that would come from the add-on centrifuge plant, giving a total of 37 million separative work units within the existing complex. That is the number I referred to in the context of operating at a .25 tails assay. To get to the one-tenth in the existing complex would require an additional 18 million separative work units, and that in total, then, would permit us to operate at the one-tenth.

But Dr. Schlesinger wasn't really referring to the existing complex. He was looking at future increments of enrichment sometime between after the fifth plant and then, say, the turn of the century.

Mrs. LLOYD. Could you give me an estimate on the cost of this, a rough estimate? We're making rough estimates today anyway.

Mr. VOIGHT. If we were to use 1978 dollars, we are presently estimating that the add-on plant would cost somewhere of the order of $4.5 billion. So if you were to add two additional increments above and beyond that you're talking of the order of 9 to 10 billion.

Mrs. LLOYD. 9 to 10 billion dollars?

Mr. VOIGHT. Yes.

JOHN KRUPA ELECTED AS AMERICAN LEGION DEPARTMENT COMMANDER

HON. ADAM BENJAMIN, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. BENJAMIN. Mr. Speaker, the State of Indiana, national headquarters of the American Legion, and the Indiana Department of American Legion are excited and joyous over the recent election of John G. Krupa of east Chicago as department commander.

Commander Krupa, long known as "Mr. Patriot" in northwest Indiana, has been active in service to the American Legion for the past 34 years and has held office and assignments at the post, district and State levels for most of these years to include outstanding service as the department congressional delegation liaison officer for 3 years.

Commander Krupa has had an illustrious career of service in Government and in community civic activities. For 8 years, he distinguished himself as the clerk of the Lake County Superior and Circuit Courts and served as president of the Indiana Clerks' Association. During that same period, he managed an equally brilliant career as chairman of the Lake County Central Democratic Committee.

To recount all of the positions of leadership and responsibility he has enjoyed and successfully discharged since his World War II military service would require a full-length book. Suffice, representative and illustrative is his work of recent years which includes chairmanship of the Lake County Bicentennial Committee; Easter Seal Parade Volunteers; fund raiser for the Trade Winds Rehabilitation Center; chairman of the American Cancer Society Drive, March of Dimes and Indiana Football Hall of Fame; Lake Area United Way Division Chairman and founder and promoter of the American Polish Federation of Lake County Annual Dyngus Day.

Commander Krupa has also been extremely active in clean up drives, Boy Scouts, National Council for Encouragement of Patriotism, East Chicago Elks, Knights of Columbus, Kiwanis, Moose and preservation of the Lake County Courthouse.

He has been cited on numerous occasions by almost every civic organization in Lake County as well as his home post, American Legion Post 369 of east Chicago.

It would be difficult to determine which of his many accomplishments stand above the others as most memorable. I am sure he is honored by being continuously listed in Who's Who in the United States as well as being honored as "Mr. America" for Americanism, receiving a citation from the American Security Council for his eloquent and articulate editorial on "What's Right About America" and his recent citation from the Lithuanian-American Council of Indiana for patriotic activities and encouragement of anti-Communist activities. I am also convinced that he was thrilled in being named Outstanding Legionnaire for the State of Indiana last year. I also know that he is overwhelmed with love for his wonderful wife, Lee Ann, and his children, Kathleen, Marilyn Ann, and Sandra Lee as well as his granddaughter, Lisa. But if we were able to conduct an introspective search, I think these loves and honors would be overshadowed by his great love of the United States and the honor of being an American, both of which he defended in time of war.

Commander Krupa is affectionately known as "John" in Lake County. His praise has been echoed countless times by the thousands of people he has helped from the priests at St. Stanislaus to Boy Scouts, immigrants, and senior citizens he has fostered and aided without request, and many times without acclaim.

Mr. Speaker, John G. Krupa will be a great Indiana department commander for the American Legion because he believes in and exemplifies the best in America. His leadership, untiring efforts, and effective communication will build and revitalize the Indiana department as well as the entire organization. I ask that you join with me to congratulate John G. Krupa for his willingness to continue his fight for a better America—internally, internationally, and forever. I know that his recognitions and laurels will continue to grow because he will never stop growing as long as there is a person in need, his community to improve, or his country to defend.

STATE OFFICIALS OPPOSE UNIVERSAL VOTER REGISTRATION BILL

HON. TRENT LOTT

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. LOTT. Mr. Speaker it is fortunate that the U.S. House of Representatives

did not act with speed in passing H.R. 5400, the Universal Voter Registration Act of 1977. Since this measure was first introduced on March 22, 1977, it has become evident that this bill would create more problems than it would solve.

The measure would not merely make it easier for individuals to vote. It would open up a whole series of problems—especially voter fraud and mass manipulation of the electorate.

Recently, the American Conservative Union took a poll by mail of the secretaries of state of the 50 States to get their opinion on this proposal. The secretaries of state opposed this measure by almost 3 to 1. Thirty opposed this proposal, 12 favored it, and 8 took no position.

The letters received by Vice President MONDALE from the secretaries of state also revealed strong opposition to H.R. 5400.

Fortunately, some of these officials took the time and effort to discuss the major defects of universal voter registration.

I enter into the CONGRESSIONAL RECORD letters by: Secretary of State Robert F. Burns of Rhode Island; Secretary of State Ernestine D. Evans of New Mexico; Secretary of State Heber Ladner of Mississippi.

The letters follow:

DEPARTMENT OF STATE,
OFFICE OF THE SECRETARY OF STATE,
Providence, May 2, 1977.

MR. JAMES C. ROBERTS,
Executive Director, the American Conservative Union, Washington, D.C.

DEAR MR. ROBERTS: I am replying to your letter of April 26, 1977 in which you ask my views on how Universal Voter Registration would work in practice. I can only answer for the State of Rhode Island. After conferring with scores of people who bear a responsibility to administer elections in Rhode Island, the answer is almost unanimous—terrible!

If Universal Voter Registration becomes national policy in Federal elections, the possibility of fraudulent voting is obvious. What is not so obvious is the fact that this bill, if enacted, would destroy the present electoral process used in Rhode Island's state and local elections. Our state election laws as they pertain to registration, residency and signature identification at the polls, would be rendered meaningless.

In my view, the proposal for instant voting in Federal elections is a disaster looking for a place to happen. I trust that it does not happen here. If some states want this type of registration procedure, by all means give it to them. However, Congress should not force the plan on states who do not want Universal Voter Registration—states like Rhode Island who can back up their opposition to the bill with a solid performance of voter turnouts in past elections. The plan should be optional, or not at all.

Rhode Island had 68% of its voting age population go to the polls last November—and we have safeguards built into the electoral process to protect those voters against fraud. I believe that record speaks for itself, and Rhode Island does not need the Congress to tell it how to run elections, whether Federal, state or local.

Universal Voter Registration would create more problems than it would solve. The bill should either be defeated, or Congress should allow states to opt in or out of the program.

Sincerely,

ROBERT F. BURNS,
Secretary of State.

STATE OF NEW MEXICO,
OFFICE OF THE SECRETARY OF STATE,
Santa Fe., May 2, 1977.

Hon. HOWARD W. CANNON,
Chairman, Committee on Rules and Administration, U.S. Senate, Washington, D.C.

DEAR SENATOR CANNON: The Secretary of State, as the chief election officer of the State of New Mexico, is opposed to the concept of voter registration on election day.

The primary purpose of voter registration systems is to provide rosters containing the names of those who are qualified and eligible to vote according to law. They establish that the persons offering to register are United States citizens and meet all established residency criteria. Voter registration systems were originally initiated to safeguard the electoral process by preventing multiple voting. Election day registration would make it administratively difficult to detect such fraud and, once committed, the secret ballot makes nullification of the fraudulent votes impossible.

Since 1969, the State of New Mexico has had a comprehensive voter registration system in which numerous categories of persons may be appointed deputy registration officers. The system has been liberalized to the extent that one may call at an individual's home to register him to vote. Voter registration drives are conducted by civic groups and organizations with materials provided on request by the Secretary of State, and voter registration booths are available in supermarkets, shopping centers, high schools and colleges prior to the registration deadline.

It may also be mentioned that election day registration is not a statistically valid solution to voter apathy. In the State of New Mexico alone, 165,123 registered voters out of a total of 504,197, chose not to go to the polls for the general election of 1974. Yet, these same people, when contacted prior to the purge of non-voters, followed up on procedures required to remain on the registration books.

Since there is no means by which the validity of affidavits of registration can be determined on election day, and since the after-election procedures for verifying the eligibility and qualifications of those who utilized this system would be time consuming and costly, we oppose the Universal Voter Registration Act of 1977, as financially extravagant and conducive to fraud.

The Secretary of State of New Mexico does, however, support the Congress in its efforts to suggest ways of coping with the problem of voter apathy. We have been involved for a long time in combatting this phenomenon, and have achieved some impressive results. There is, however, always room for improvement and such new and imaginative procedures as may from time to time be developed, will be enthusiastically evaluated.

Sincerely,

ERNESTINE D. EVANS,
Secretary of State.

STATE OF MISSISSIPPI,
SECRETARY OF STATE,
Jackson, Miss., March 31, 1977.

Hon. WALTER F. MONDALE,
Vice President of the United States, Washington, D.C.

DEAR MR. VICE PRESIDENT: This is to acknowledge receipt of your letter of March 19th together with copy of an act proposing to establish a Universal Voter Registration Program.

Having consistently opposed even post card registration and having read the universal voter proposal wherein a person through an identification card can register and vote on election day, I can see no justification for such an act.

I believe that one who decides to participate in the election process should put forth some effort to qualify as an elector, and I am sure that the Supreme Court of the United States had this in mind when it held that one must be registered at least thirty days prior to an election.

I am also of the opinion that such legislation as proposed would further compound the duties and responsibilities of the election officials throughout the country, and in addition thereto, would be an invitation for fraud.

Sincerely yours,

HEBER LADNER,
Secretary of State.

NEW YORK LOOTING—A PROPHECY FULFILLED

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. OTTINGER. Mr. Speaker, the New York Times recently carried an excellent column by Tom Wicker—"A Prophecy Fulfilled." Mr. Wicker asks: Why was there so much looting this time when in the last great blackout in 1965 virtually no looting or extraordinary violence resulted? I believe he offers a depressingly accurate assessment. Urban neglect, total lack of promise for improvement of the lot of the poor and, soaring unemployment of urban youth have resulted in a sense of smoldering hostility and their feeling they have no stake in society.

Sadly, Mr. Wicker concludes our Nation has now realized the warning of Father Theodore Hesburgh, chairman of the National Advisory Commission on Civil Disorders set up to assess the violent urban disorders in the 1960's:

Our nation is moving towards two societies, one black, one white—separate and unequal.

As Mr. Wicker properly concludes, our highest priority must go to addressing the dreadful problems of our cities and the tensions caused by a 40 to 65 percent unemployment rate among black youth, with more than half our unemployment rate among all youths under age 25.

A PROPHECY FULFILLED

(By Tom Wicker)

For all its other fascinating aspects, the 1977 blackout of New York City will be remembered primarily for the looting and burning that erupted as soon as the lights went out and which ultimately resulted in the arrest of more than 3,700 persons, as well as untold property damage and heartbreaking losses for innocent merchants.

About the only redeeming circumstance of this orgy of violence and pillage was the restrained manner in which the New York police responded. Despite much violence directed against them, heavily outnumbered and as much in the dark as the rest of us, the police still did not resort to indiscriminate shooting, yet appear to have done as much to restore order as could reasonably have been expected. Since many of the looters appear to have been little more than children, a truly tragic outcome may well have been averted by police courage and good sense.

Whether the city can effectively prosecute all those arrested remains to be seen. So overwhelmed was the criminal justice system at first that bail was not even set for most of those arrested, even though most couldn't

have met it anyway; they were simply remanded for trial under a court rule that prevents bail in felony cases if the suspect has no fingerprint record.

This shortcut procedure was not a particularly auspicious beginning for the necessary prosecution. Nevertheless, the city must speedily sort out at least the most serious and sustainable cases, bring them to trial and mete out proper sentences. Legal order all but vanished in some sections of the city in the hours following the blackout, and if the criminal justice system now finds itself unable to deal effectively and fairly with the looters and burners, probably nothing so drastic as a blackout will be needed to set off the next round of pillage.

Even so, prosecution is only a small part of the problem and—unfortunately—probably the easiest of the needed responses to make. Why, for example, was there so much looting this time when in the last great blackout in 1965 virtually no looting or extraordinary violence resulted?

The answer has to be more than the contrast in temperatures of the hot summer night of July 13, 1977, and a chill November evening in 1965. For one thing, it was after the 1965 blackout that most of the great urban riots of the 60's took place, and scenes of looting and burning became a commonplace of city life in America. What was uncommon, to many unthinkable, 12 years ago has become part of the peculiar lore of the ghetto.

The riots of the 60's, moreover, elicited a fateful, paradoxical response—at first, concern, effort, investment, promises, programs by government, business, social agencies, affluent whites, all determined to bring the urban ghetto more nearly into the national mainstream; then disappointment, shock, frustration, at the depth and complexity of the problem, the degree of sacrifice and discomfort that the task required of the white community; finally, resentment and retreat.

Meanwhile, to all its other ravages, the Vietnam War was adding a voracious consumption of resources that might have been directed into social and economic investment in the black, Hispanic and poor white communities. Glittering promises had been followed by shattering disappointment, smoldering hostilities.

Worse—as the nation plunged in the 70's into the worst recession since the Great Depression, those at the bottom of the economic ladder suffered the most. And as the slow recovery began and continues, those at the bottom of the ladder have benefited the least. The administrative and technological development of the American economy, moreover, has meant the loss of many of the entry-level or non-specialized jobs through which the disadvantaged used to get a chance to better themselves; thus, economic growth, that ancient American panacea for anything that ails us, will no longer suffice as a means of extending to the poorest and worst-equipped among us at least a small share of the pie. They aren't needed.

More than half of the nation's unemployed are less than 25 years old. Even officially, black teen-age unemployment is near 40 percent with some estimates ranging as high as 65 percent. President Carter's fixation on balancing the Federal budget means economic policies that will not bring unemployment below 5 percent by 1980—and that in turn means youthful unemployment in the ghetto will remain above 30 percent. Rather than investigating Con Ed, Mr. Carter would do well to look into his own economic priorities.

Surveying the urban chaos of the 60's, the National Advisory Commission on Civil Disorders issued a plain warning. "This is our basic conclusion: Our nation is moving toward two societies, one black, one white—separate and unequal."

That was 1968. Briefly, the warning seemed to be heeded. Then interest waned, hope died. On the night of July 13, 1977, in Brownsville, Harlem and Bedford-Stuyvesant, prophecy was fulfilled. We are two societies, separate and unequal.

THE PORK-BARREL CHALLENGE

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. MAZZOLI. Mr. Speaker, in today's New York Times, John B. Oakes, senior editor, has written a very perceptive piece on the challenge facing President Carter when the public works appropriations bill hits his desk.

The final version of the bill will apparently retain 9 of the original 17 water-control projects Mr. Carter termed "economically or environmentally unsound."

One such project reportedly retained is the Richard Russell Dam in the district of our colleague, BUTLER DERRICK. He took a courageous stand against "business as usual" politics by sponsoring the amendment to kill these 17 projects.

BUTLER carried President Carter's water very effectively. Now, he seems to be getting a bath as his reward.

I hope the morning line is wrong. I hope President Carter has not given his imprimatur to the compromise the House-Senate conferees have reportedly settled upon.

More is at stake here than the fate of 17 water projects.

What is at stake here is a profoundly important political question. How Mr. Carter answers this question has implications all across the legislative board and deep into the future.

The question: Will the "pork barrel" continue to dominate Capitol Hill? Will it remain politics-as-usual around here?

I hope Mr. Carter displays his abundant good sense and courage by vetoing the "pork barrel." If he does, I predict his veto will be sustained in the House and we will have made a significant and auspicious break with the past.

The article follows:

THE PORK-BARREL CHALLENGE

(By John B. Oakes)

If the public-works appropriations bill emerges from conference with the traditional string of political-grease projects that have already been approved by Senate and House, President Carter will have only the choice of vetoing the measure, as he has threatened, or of surrendering on both his principles and the clear-cut public interest.

For what the old-timers in Congress have done has been to scrape the bottom of the pork barrel once again, just as though there was no inflation and no budgetary squeeze on Federal expenditures to meet urgent social needs.

To the President's demands that Congress eliminate an irreducible minimum of 18 water-control projects (ultimately costing over $2.5 billions), each one of which is "economically or environmentally unsound," the House has approved all but one and the Senate approximately half.

This despite the fact that the President had previously capitulated on a number of equally harmful and extravagant projects, including the $1.6 billion Tennessee-Tombigbee Waterway.

As a careful study by the Environmental Defense Funds shows, this project will be of benefit primarily to barge operators carrying coal for export to Japan, at the cost of destroying 30,000 acres of hardwood timber and 17,000 acres of farmland, of degrading the water system, and of disrupting both the economy and the landscape without benefit to the people of several adjacent rural counties in Alabama and Mississippi.

Of the nine projects that the Senate is now trying to push through for full funding over Mr. Carter's objection, no less than eight are located in states whose Senators happen to be on the Appropriations Committee (seven of them on the public works subcommittee), which gives a pretty good idea of the criterion of judgment used by the Senate in making its evaluation.

One of the nine, the Atchafayala channelization in Louisiana, is (as charged by various environmental experts and the White House itself) for the primary benefit of two large and highly profitable oil-rig construction companies, J. Ray McDermott International and Avondale (subsidiary of the Ogden Corporation), to enable them to float their super-rigs more expeditiously from Morgan City, La., out to the Gulf of Mexico. This will be at the cost of over $20 million in public funds and destruction of irreplaceable wetlands, and interference with major shrimp and shell fisheries.

"Do I have a parochial interest in this?" says Senator J. Bennett Johnston Jr. of Louisiana, a member of the subcommittee. "You bet I do." But does anyone else in the United States except the two shipyards?

Another such project, estimated to cost at least $93 million in public funds, is to increase the yields of large-scale soybean and rice growers in Arkansas, at the cost of over 200 miles of stream channelization, clearing over 100,000 acres of forested bottomland and swamp, with devastating effect on water quality, on existing fishery resources, and on one of the most important migratory-waterfowl areas in America. But Cache Basin is in Arkansas, home state of Senator John L. McClellan, chairman of the committee.

Then there is the Columbia Dam in Tennessee, a huge $142-million empire-building proposal of the Tennessee Valley Authority, to create jobs (about as expensively as it can be done) and to promote recreation in an area that needs new lakes and lake frontage about as badly as the Sahara needs sand.

This one would eliminate more than 20,000 acres of productive farmland and would destroy or modify another 25,000 acres of forest and upland habitat, but it will bring some temporary dollars to the state of Senator James B. Sasser, a member of the subcommittee.

Applegate Lake, Ore., is to cost $81.5 million mainly for flood control for future floodplain development in the River Rogue Basin, "in contradiction," the White House points out, "of established Federal policy for flood plain management," not to mention "potential contamination of fish and drinking water from the mercury deposits which the project would inundate." But Senator Mark O. Hatfield of Oregon is on the subcommittee.

To keep the peace with Congress, President Carter will doubtless be asked by his political advisers to accept the bill containing these similar extravaganzas.

If he does so, it will be a sad and crippling retreat. For he is the first President in generations to have faced up to the political

and moral corruption inherent in so many of these projects.

To back down now would be a severe defeat for the public, the economy and the environment, not to mention the surprisingly large number of members of Congress (especially the younger ones) who are sick and tired of pork-barrel venality and who are looking for a way to escape from it.

EQUAL TREATMENT AND SOCIAL SECURITY

HON. MARTHA KEYS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mrs. KEYS. Mr. Speaker, I wish to insert for the RECORD the following remarks made by Congressman FRASER today before the Social Security Subcommittee:

Mr. Chairman and Members of the Committee, I appreciate the opportunity to testify before you. I address my remarks to Title III of H.R. 8218, "Social Security Equal Rights Amendments of 1977," that purports to eliminate gender-based distinctions in the social security system.

The Supreme Court compelled the Administration to include an "equal treatment" section by recent rulings that old-age survivor and spouse benefits must be available to widowers and husbands on the same basis they are currently available to widows and wives. The Administration "solution," however, is no solution at all. It will deny benefits to many women who, under current law (with or without the Supreme Court decisions), are entitled to them and it fails to address the full range of inequity permeating the system.

My remarks will review the assumptions of the program as it was developed in the '30's and '40's and point out how these now out-dated assumption create questions of fairness. Secondly, I'll review the actions of the Supreme Court, identifying the population affected and the cost of bringing them into the system. Thirdly, I'll describe how the Administration attempts to revise the system to exclude this new population of beneficiaries and then identify the actual victims of their plan. Finally, I'll discuss earnings-splitting as the most comprehensive and practical alternative.

SOCIAL SECURITY AND DEPENDENCY

Social security was originally developed as a family protection program. The system's architects assumed that most workers were men with dependent wives and children and that most marriages lasted through lifetimes.

In the 1930's and '40's, when protection for dependents was added to the list of those insured, these assumptions were reasonable. Today, they are out-of-date. The system of the '30's fits neither the world of work nor contemporary economic relationships between spouses in the 1970's.

Between 1940 and 1975, the labor force participation rate for married women rose from 15% to over 40%. Half of all married women under age 60 were in the labor force in 1975. Presence of children does not stop married women from working either: in 1975, 52% of wives with school-age children, and 37% of those with pre-school children were in the labor force. Their earnings kept their families out of poverty by contributing over one-fourth to the total family income which did not exceed an average of $11,400 in 1975 for two-earner couples. Clearly, dependent wives are a norm of the past.

Most marriages no longer last forever. In 1940 the ratio of divorces to marriages per year was about 1 to 6. In 1975 it was 1 to 2.

A system grounded in the assumption that wives don't work and marriages last forever runs awry in the reality of today.

Example: the current system disregards the social security contributions of married working women by entitling working and non-working wives to a Wife's Benefit regardless of their past earnings. One woman works and makes contributions for the same benefit the woman next door is getting "free."

Example: under the current system a woman loses all rights to dependent benefits if she divorces her husband before 20 years of marriage. The 20-year rule disregards the contribution of a homemaker to the economic unit during child-rearing years, which are usually the early years of a marriage. The increase in the number of divorces during the first 20 years of marriage leaves many homemakers without access to social security through their husband's wage record, even though they may have spent their prime wage-earning years working in the home raising children. On the other hand, a married woman need only 1 year of marriage behind her before she is entitled to wages from her new spouse's record.

Example: the "recency of work" requirement for entitlement to Disability Benefits excludes working women who generally move in and out of the labor force and may not accrue the necessary 20 quarters of coverage out of the 40 preceding the disability.

Example: entitlement amounts are based on average monthly earnings computed for quarters elapsing after the worker (or non-worker) turns age 21. Zero-earning years of women working in the home pull the average down and along with it, their benefit amounts.

Example: the present system prevents a wife from receiving her dependent benefit entitlement (Wife's Benefit) until her husband applies for his Old-Age Benefit. If he continues to work after he reaches entitlement age, his wife cannot collect her dependent benefit, reinforcing the notion that a homemaker role is a dependent, secondary role from which one need not retire.

These examples demonstrate how the present system is "dated" by changing patterns of work and family life. *None* of these situations are addressed by either the Supreme Court or the Administration's H.R. 8218.

ACTIONS OF THE SUPREME COURT AND THEIR CONSEQUENCES

Prior to a Supreme Court ruling in March 1975 (*Weinberger* v. *Wisenfeld*) a husband of a fully insured woman was not entitled to a father's benefit upon the death of his wife while a wife of a fully insured man *was* entitled to a Mother's Benefit if her husband died. Since *Wisenfeld*, a father is able to receive Mother's Benefits, if his wife dies. However, unlike mothers, fathers still are not entitled to Mother's Benefits if their wives retire or become disabled. Since the Court ruling in 1975, 14,000 widowers applied for Mother's Benefits, adding $17 million to the cost of Survivors Insurance.

Prior to Supreme Court decisions in March 1977 (*Califano* v. *Goldfarb* and *Califano* v. *Silbowitz*, referred to hereafter as *Goldfarb*) a husband or widower had to prove he was receiving at least one-half of his support from his fully insured wife (or contributing less than ¼ to their combined income) to become entitled to Husband's or Widower's Benefits derived from his wife's wage record. This "dependency test" was not imposed on a wife or widow who is 'automatically' entitled to Wife's or Widow's Benefits if her spouse is fully insured.

The dependency test was administered generally by looking at the income of both spouses over the 12 month period preceding the event that caused the entitlement, i.e. her retirement, death or disability.

Theoretically, *Goldfarb* shouldn't affect too many men: an individual can receive only one benefit even if entitled to more than one. Most men who, with *Goldfarb*, became entitled to a dependent benefit from their wife's wages, were already entitled to an Old-Age Benefit themselves. No doubt their own Old-Age Benefit would be higher than a dependent benefit (because women's wages are lower) so *Goldfarb* should have little impact.

The only population affected by *Goldfarb* would have to be men with *no* entitlement to social security prior to the decision because (1) they did not have the required number of quarters to qualify for their own Old-Age Benefit, and (2) they failed the dependency test to qualify from their wives' records. Almost without exception, this group is male government employees married to women fully insured under the social security system.

The Office of the Actuary estimated that *Goldfarb* would create 520,000 new beneficiaries; 300,000 men entitled to Husband's Benefits and 220,000 men entitled to Widower's Benefits. They also anticipated that half of these men would apply for benefits in FY '77. Actual applications, however, through July 13, 1977, total only 45,000, significantly less than the number estimated by the Actuary. The Office of the Actuary is currently under-going considerable downward revision of their original estimates that *Goldfarb* would cost the system $220 million in 1977 and $540 million in 1978.

One might note that costs are held down because husbands generally don't survive wives—there are fewer widowers than widows and women's wages are generally low—a dependent benefit derived from a low wage will be a very low benefit.

ADMINISTRATION SOLUTION AND ITS CONSEQUENCES

Goldfarb creates a problem by providing access to social security to government workers married to women covered by social security. The obvious solution is social security coverage of government employees. Obvious or not, it isn't likely to happen.

The Administration proposes to re-establish a variation of the dependency test for Widower's and Husband's Benefits and extend it to Wife's, Widow's and Mother's Benefits. Extending the test to Mother's Benefits is intended to limit the number of fathers taking advantage of *Wisenfeld*.

Instead of looking at income over the *12 month* period immediately preceding the event that causes entitlement, the new test would consider income over a *3 year period*. An individual would "pass" the dependency test if s/he were found to be *earning less* (instead of ¼th) than the spouse upon whom s/he was claiming dependency.

"Dependency" is an artificial concept in today's work world and an arbitrary method of limiting participation in the social security system. A 3 year period plucked from entire life-times will not reflect a couple's economic relationship.

In addition, women's work lives have always been more fluid than men's. The accepted work role for men is stable and long-term. A woman moves in and out of the labor force depending on her own and family needs. If she makes the wrong move into the labor

force 3 years prior to her husband's retirement, death, or disability, (of which only retirement is predictable) she may risk her dependent benefits.

The real culprits to catch with this dependency test are male government employees. However, following are some of the possible victims of the plan:

"1. Husband (H) worked his entire life in covered employment until age 61 when he lost his job. His wife (W), the same age, worked periodically at part-time jobs but most of the time stayed home raising their three children. When H lost his job, W luckily found a full-time job to keep them going for 4 years until they turned 65.

"Looking 3 years back to test the "dependency" of W on H, we find that W did, in fact, earn much more than unemployed H. She fails the test and, because she does not qualify for a benefit from her own limited earnings, has no retirement income at all and no dependent benefit when H dies a few years later.

"2. Thirty-five year old H worked 10 years in covered employment when he decided to go back to school to finish two years left on a college degree. W went to work to support H and their 2 small children. Three years later, H dies and W applies for a Mother's Benefit.

"W fails the dependency test because during the three year period prior to her husband's death, she earned more than he. She won't be entitled to a Widow's Benefit when she reaches age 60 either, as she would be under present law.

"3. H and W are divorced at age 55 after 30 years of marriage. During most of 30 years, W worked in the home so has only a few quarters of covered employment. H worked his entire life in covered employment. After the divorce, W lives on alimony for a few years and then, at age 58, takes a part-time job.

"At retirement age, W still doesn't have enough quarters to qualify for her own social security benefit. She files for a divorced Wife's Benefit. The Administration plan makes no provision for how the dependency test would apply to W. What three years would be viewed? Three years prior to retirement age when there was no economic relationship between the two at all?

"4. Anticipating reduced income, 3 years before H reaches age 65 his younger wife (of 4 years) goes in to real estate. W does well and earns as much as H for the 3 years before his retirement and continues working in the business for another 4 years until she reaches retirement age.

"W does not have enough quarters to be entitled to her own Old-Age Benefit. She applies for a Wife's Benefit and fails the dependency test because during the 3 years prior to H's retirement, W did not earn less than H."

In all of the above situations, the people denied benefits under this dependency test are *not* denied benefits under present law and were *not* denied benefits before either *Goldfarb* or *Wisenfeld*. *None* of them are male government employees. *All* of them are women. In none of the examples is a 3 year dependency test relevant to the life-time economic relationship of the couple.

The Court in *Goldfarb* classified "dependency" in the social security system as an "old notion" and "archaic." People simply aren't economically dependent on each other for whole life-times anymore. Workers of both sexes move in and out of the labor force: couples exchange child-rearing and breadwinner roles, they put each other through school, they face unemployment, or they both work side-by-side to keep from sinking into poverty.

As the Justice Department's Task Force on Sex Discrimination notes, "the fundamental problem with the current social security system is its inability to cope with the employment patterns of the majority of women, who are neither full-time homemakers nor full-time employees." The Administration plan exacerbates a problem it purports to alleviate.

ALTERNATIVE: EARNINGS-SPLITTING

The Task Force further finds that, "the current social security system treats the worker as an individual for the purpose of building an earnings record, and as part of a family unit with "dependents" for the purpose of paying benefits. Almost all of the inequities in the current system can be traced directly to this approach, and almost all of these inequities can be eliminated by treating the family as a unit for the purpose of building earnings records, as well as for the purpose of paying benefits." This can be accomplished through earnings-splitting.

Earnings-splitting is based on the fundamental assumption that marriage is an economic partnership. Each partner contributes to the economic stability of the unit and both enable the income to be earned. Both should have access to the benefits associated with that income.

Various earnings-splitting plans are under study right now in the Departments of HEW and Justice. The Urban Institute has undertaken research in the area of equal treatment, concluding preliminarily that earnings-splitting is the most equitable direction to follow in ridding the system of its sex bias.

My wife, Arvonne, and I developed our own earnings-splitting plan which we first introduced in the 94th Congress. My colleague, Congresswoman Martha Keys, has found our plan constructive and joined me last February when the bill was introduced in the 95th Congress. Since then, 56 other House colleagues have expressed their support of this concept by their co-sponsorship. My office has been flooded with mail from throughout the country requesting information about our plan and offering encouragement and support.

The Fraser/Keys plan credits each spouse annually with an equal portion of the wages earned by the couple. Through the years they are married, a couple will have identical wage records. For the years homemakers are not working in covered employment they would maintain wage records through the earnings of spouses who were. Our plan creates portability in social security. Partners may marry, be widowed, divorce or remarry without losing benefits. Wage records belong to individuals, not to marriages. Following are examples of how our plan would work in various situations.

"Case 1: The Social Security benefits of a woman who was married and a homemaker for 19 years and then divorces.

"Current System: The woman loses any entitlement to Social Security benefits from her husband's wages because she was not married for 20 years.

"During her 19 years working in the home she developed no wage record of her own from which she could derive her own Old-Age Benefit. She is left with nothing. If she had lasted in her marriage another year she would have been entitled to a Wife's Benefit from her former husband's wage record when she reached retirement age.

"Fraser/Keys: The woman, during her 19 years as a homemaker, would have been developing her own wage record through the wages of her spouse working in covered employment. When she retired (or became disabled) she would be entitled to benefits from her own wage record, developed during her 19 years as a homemaker."

"Case 2: The Social Security benefits of a homemaker who becomes disabled.

"Current System: A homemaker is not entitled to disability benefits unless she has worked in covered employment at least 5 of the last 10 years. The family is not insured against the loss of her homemaker services.

"Fraser/Keys: A disabled homemaker may be entitled to benefits if she has contributed to her wage record—either from her own earnings or through the earnings of her spouse during 5 of the last 10 years."

"Case 3: A woman works in the home, raising children for several years and then, in mid-life, begins to work in covered employment.

"Current System: Upon retiring, the woman's Old-Age Benefit level will be computed by averaging her earnings per year since 1950. Since she has several zero earning, child-rearing years, her average will drop considerably and drag her benefit level down with it.

"Fraser/Keys: If, during her years in the home, the woman's husband worked in covered employment, she would build her wage record through his earnings. She would not have zero earning years reflected on her wage record but a portion of her husband's earnings instead."

Our plan rids the system of a dependency concept in adult benefits. When fully implemented, each spouse will have his or her own wage record on which to collect benefits, obviating dependency-based benefits.

The Fraser/Keys plan would be relatively inexpensive. We don't create a whole new class of beneficiaries. Rather, we redistribute benefits equitably. Last February your Committee requested department reports on the Fraser/Keys bill from Treasury and HEW. The reports with cost analyses are not back from those agencies. However, we do have some idea of where the costs would arise.

First, as a transition feature, Fraser/Keys lowers the age at which a widow or widower could collect Survivors Benefits from 60 to 50. The provision is primarily for the benefit of a woman who becomes a "displaced homemaker" from losing her breadwinner spouse.

Currently, a woman is entitled to Mothers' Benefits if her spouse dies and she has a child less than 18 years of age. When the last child turns 18, the woman loses benefits and has no entitlement until age 60. Benefits are lowered in the Fraser/Keys plan to age 50 because a woman's youngest child would turn 18 when the (average) woman was 50.

After a period of disorientation it is likely this woman would go to work. These benefits would be subject to the earnings limitation so would be phased out as her participation in the labor force became more intense.

This provision is a transition feature. As noted earlier, after full implementation, all adults would have their own Social Security wage records built upon their own life experiences of working in covered employment or being married to someone who has a work-life in covered employment.

The cost of this provision could be estimated by computing the number of widows between the ages of 50 and 60 (1.4 million in 1970) who also are not disabled, not entitled to benefits under the present system and have no children under age 18. The group's average income could be used to estimate the degree to which they would use Survivor's Benefits. We do know that the median income of widowed women between the ages of 35 and 64 in 1975 was $13,700.

earnings too high to withstand the earnings test.

Second, Children's Benefits are also affected. Under the present system, children are entitled to benefits if an insured parent retires, becomes disabled, or dies. The present system prevents any beneficiary from receiving more than one benefit regardless of the number of entitlements.

The Fraser/Keys bill lifts this prohibition to allow children to receive benefits from both parents' records. Since families with both spouses present will have been income splitting, their wage records will be similar.

If both parents either die, retire, or become disabled, each child would receive a benefit from both wage records. Total benefits would still be subject to the Family Maximum.

Cost of this provision can be determined by computing the number of children less than age 18 (or students less than age 22) who have parents who both are either retired, deceased, or disabled.

Finally, Disability protection would be extended to homemakers. Under the present system, a woman working in the home, though married to a man working in covered employment, is not entitled to Disability Benefits.

Cost of this provision could be estimated by learning the number of disabled homemakers less than 65 years of age with spouses protected by Disability Insurance. We anticipate there would be few.

CONCLUSIONS

Mr. Chairman, the Administration method of "desexing" social security is destructive. It won't work, it defies reality, it avoids the range of issues that need be addressed by equal treatment plans. I believe it is senseless to set up the complicated and costly administrative mechanism this dependency test requires, only to dismantle it a few years from now in favor of another more thorough and thoughtful approach.

Instead, I urge the Committee to consider the merits of earnings-splitting. I realize such a reform is beyond the scope of H.R. 8218. However, the limited reform proposed in the Administration plan further entrenches dependency in a system that has out-grown the concept. Accepting the Administration plan is a retreat from progress.

I urge you to require, in place of the "Revised Test for Dependent's Benefits" in H.R. 8218, that the Department of Health, Education and Welfare establish a Task Force to study earnings-splitting and develop recommendations with the Justice Department's Task Force on Sex Discrimination. Both agencies have already developed favorable analyses of earnings-splitting, leading each to intensify their preliminary work. The Task Force could report findings back to the Committee in six months.

The Administration anticipates a cost of $70 million to administer their dependency test in its first year of operation. The Office of the Actuary estimates the savings from the test will be less than $100 million in its first year, not considering the administrative costs. *Net* savings then, will be less than $30 million, only .03% of total OASI benefits paid in one year!

While I do not want to undermine the seriousness of the system's diminishing base, I suggest that the relative miniscule savings and devastating effects of the plan leave us better off doing nothing in the interim between now and sound reform.

I encourage you to demonstrate your willingness to address equal treatment problems in the social security system by suspending action on *Goldfarb* and *Wisenfeld*. An HEW study of earnings-splitting anticipates substantive Committee action on equal treatment in the near future.

NINTH CENTENARY OF BAYEUX, FRANCE

HON. DAVID W. EVANS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. EVANS of Indiana. Mr. Speaker, I would like to take a moment to report to the Congress of the United States that my participation in the Ninth Centenary of Bayeux, France, truly indicated to me that our country has a devoted ally in France and true friends in the people of Bayeux, Normandy. As the first city in Europe to be liberated after D-day, June 6, 1944, the residents of Bayeux are freedom-loving supporters of the American people.

The near-by American cemetary at Omaha Beach is a most moving site for almost a half million visitors per year. The thousands of American soldiers buried on this piece of American soil are all valiant men who fought and died to preserve freedom in its hour of greatest need. I was humbled to have participated in a wreath laying ceremony to honor those soldiers. Everywhere I went and at each event in which I was honored to participate there were French people who honor freedom and who are friends of this Nation.

I would like to share with my colleagues a part of an address I delivered to representatives of France, England, and Germany who were present in Bayeux:

I am pleased to be here this evening as the Representative of the United States Congress. There is a familiar phrase which I feel is most appropriate tonight, "Everyone has two countries, his own and France." Especially, this is true in view of the historical significance of Bayeux to freedom-loving people throughout the world, and also since it is a location where so many American soldiers gave their lives to preserve freedom for all the people of Europe.

It is most fitting that today, July 14, is your day of national liberty, and that we give it proper recognition. It is also proper that we recognize, today, the important role of the Church in French history as we especially honor your own Cathedral.

I see here, now, the similarities of yesterday and today between our two countries. We all take pride in our friendship of today and that past history. There are also diversities, however, between our different countries in certain policies which we advocate today. But we still remain friends and allies and that is important and necessary while we work out our difficulties.

Even within my own country of the United States there are differences between our new President and the Congress, but it is recognized that there must be a relationship and that it must be one of cooperation. So, too, must the international relations of our countries be based on mutual recognition of similarities and differences. Apart and without that needed understanding our nations are less great and less secure and the free world suffers more than when we are united in purpose.

The most important goal upon which our nations are agreed today is that goal which is illustrated so well by the statue on top of the Colonne de Juillet, the "Genie de la Liberte." The United States Congress salutes the Cathedral of Bayeux, the City of Bayeux, and the spirit and nation of France.

FEDERAL FUNDS FOR ABORTIONS

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. EDWARDS of California. Mr. Speaker, I wanted to call to the attention of my colleagues an excellent article by David S. Border on the subject of Federal funds for abortions. The article appeared in the Washington Post on July 20.

Mr. Broder points out the inherent inequity of placing restrictions on the use of Federal funds for abortion. Denial of access to safe, legal abortions will have tragic consequences for low-income women.

I hope my colleagues will carefully consider Mr. Broder's comments on this sensitive issue.

The article follows:

[From the Washington Post, July 20, 1977]

THE UNFAIRNESS OF SAYING, "LIFE IS UNFAIR"

(David S. Broder)

Like most politicians who were on their way up in the early 1960s, Jimmy Carter has a well-developed case of Kennedy envy. It turns up in everything from his hairdo to his speech. So it was not altogether surprising that when pressed for his views on the equity of recent abortion decisions by Congress and the Supreme Court, President Carter fell back on Kennedy's famous observation that "life is unfair."

Judy Woodruff of NBC, referring to the legislative and judicial actions against Medicaid payments for abortion, asked: "How fair do you believe it is that women who can afford to get an abortion can go ahead and have one and women who cannot afford to are precluded from this?"

Carter replied: "Well, as you know, there are many things in life that are not fair, that wealthy people can afford and poor people can't. But I don't believe that the federal government should take action to try to make these opportunities exactly equal, particularly when there is a moral factor involved."

Carter did more than borrow John Kennedy's words; he wrenched them out of context. When Kennedy said "life is unfair," he was responding to the complaints of Army reservists mobilized during the Berlin crisis. He was not talking about the 350,000 poor women—one-third of them teenagers—who last year sought government aid in ending unwanted, sometimes dangerous, pregnancies.

A nation—or a President—that cannot distinguish between the inevitable inequities in a military mobilization and the deliberate decision to deny help to a pregnant teenager is a nation that has lost its way.

Some members of the House tried to say just that, in arguing unsuccessfully against the Hyde amendment, which denies federal funds for abortion, even in the case of incest or rape or to save a mother's life.

Rep. Parren J. Mitchell (D) of Baltimore, the head of the Black Caucus, told of visiting a patient at Brownsville State Hospital for the mentally ill, the victim of a rape who went through an illegal, back-alley abortion. "She is still there," he said, "paranoid, detached, alienated, not even a woman, because we permitted an illegal abortion to take place, a brutal, vicious assault on her."

Others were not so sympathetic. Rep. Eldon Rudd (R) of Scottsdale, Ariz., few of whose constituents need help from the government, found it as easy as Carter to dismiss the concern about "discrimination against the poor."

"By that logic," he said, "taxpayers can be forced by Congress to pay for poor people to have faceliftings, hair transplants, expensive cars and tickets to the Kennedy Center."

If "a woman has a right to control her own body," Rudd said, "let her excercise control—before she gets pregnant."

It was such comments as these that caused Rep. Elizabeth Holtzman (D) of Brooklyn to remark that the Hyde amendment would not prevail if the House had 417 women and 18 men, instead of the reverse, as is the case today.

Ironically, a few days after this debate, Holtzman's district was one of those ravaged by looters in the New York blackout, a reminder to Carter and the rest of us that the social consequences of unwanted, uncared-for children are felt by everyone—not just their mothers.

The comment that capsuled my own reaction to the debate came from Rep. Charles Rose (D) of Fayetteville, N.C., where Carter's sister lives.

Rose is just about as radical as you would expect the head of the congressional Rural Caucus to be. But after listening to the House debate, he said: "I cannot believe what I have heard . . . If your religious convictions tell you abortion is wrong, honor them. But do not impose on the poor women of this nation this kind of strapping discrimination."

Like Rose, I believe one must honor the deep convictions of those who oppose abortion on moral grounds. One must respect the holding of the Supreme Court that there is no clear constitutional mandate requiring federal- or state-financed abortions.

But one must also remember what we are talking about. The amount of money involved here is $45-million—exactly what the taxpayers provided last fall to finance Carter's and Gerald Ford's general election campaigns.

Those campaign funds were not there because everyone in America thought that was a good idea. They were available because Congress provided a voluntary checkoff on the tax form—which less than one-third of the taxpayers used.

Jimmy Carter is in the White House today because of those funds. And from that position, he says it is no business of his to help find a way—a constitutionally permissable and morally acceptable way—for equivalent funds to be used to help programs, needy women.

Life is unfair, all right. But, as Carter also used to say in the campaign, "It is not the people in positions of power who suffer when the government makes a mistake."

DEAD CAMBODIANS AND HUMAN RIGHTS

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. DORNAN. Mr. Speaker, one would think from reading the major newspapers and listening to the evening news that there is a dearth of news in Southeast Asia. The strategic peninsula is rarely mentioned. It is as if nothing is happening behind the new Bamboo Curtain.

It is tempting, given the trauma of the collapse of Indochina, to lapse into the negativistic assumption that because our allies were defeated, both we and they were wrong and bygones should be bygones. It is also easy, in the absence of the constant and critical media coverage to which our allies were subjected during the fighting to forget about those countries today—about their citizens, and their lives and well-being.

To many who would like to pretend that this Nation was never involved in Southeast Asia, this may be convenient. It is also, however, an abrogation of our responsibility—both as a nation which was long at the center of Southeast Asian developments, and as a nation which is today seeking to reassert its moral leadership in the world. Our history and our present status require that, at the very least, we closely monitor events in that part of the world and criticize the excesses and brutalities of the Communists.

On Thursday, July 21, a very revealing and, I think, disturbing article appeared in Jack Anderson's column in the Washington Post. It is title is "Cambodia: Most Brutal Dictatorship," and it deals with the current situation in a nation which was once a close friend of the United States. The magnitude of the genocide being perpetrated in Cambodia is only now coming to light, and as of today still has not received the coverage and publicity it deserves.

This is murder and repression on a massive scale; it is brutal, it is systematic, it runs counter to every fundamental human value. Much is said today, particularly in Washington, criticizing the human rights policies of nations friendly to the United States. Why is there such anominous silence when dealing with the monumental mass murder which is taking place in a formerly allied nation?

At least in part, this is an embarrassed silence—because what is happening in Cambodia today is a profound embarrassment to those in this country who hailed the Khmer Rouge as righteous, nationalistic liberators, rather than the mass-murderers they are.

We can ignore this, and other cases of totalitarian repression, only at our own peril. If we are indeed to be the moral leaders of the world, then we must keep both eyes open to the world around us, and not turn a blind eye to those situations which are embarrassing or which we would otherwise like to ignore.

Mr. Speaker, I insert Mr. Anderson's column in the RECORD. I ask the Members to take 5 minutes of their time to read this piece, and thereby become more aware of the true nature of the foes which this country faces:

CAMBODIA: MOST BRUTAL DICTATORSHIP

(By Jack Anderson and Les Whitten)

The uproar over human rights has ignored the world's most brutal dictatorship. Adolf Hitler at his worst was not as oppressive as the Communist rulers of tiny Cambodia.

In a nation of 7 million people, an estimated 1 million have already died from mistreatment and executions. But the entire populace has been enslaved in a fashion that violates every international standard of human conduct. Only the Communists have any rights in Cambodia.

They have tried, with frightening success, to hide their horrors from the world. They have sealed off their country tightly. The borders are mined and patrolled.

Only nine nations have opened embassies in the capital city of Phnom Penh. Yet these diplomats, most of them Communists from friendly countries, are restricted to a street about 200 meters in length. When they wish to conduct official business, they are picked up in a government car and escorted to their destination.

Yet a few refugees managed to escape, some of them after harrowing experiences. They told essentially the same story about the conditions they had left behind. Some even brought out bootleg photographs of the atrocities.

We picked up their stories from intelligence sources and began publishing them as early as June, 1978. But U.S. intelligence agencies were hesitant to accept the word of refugees. All other intelligence channels had been effectively cut off.

But the reports can no longer be dismissed. Too many independent witnesses have now reached the outside. The story of the brutal Cambodian repression, therefore, can be told with authority.

It began even before the Communists swept to victory in April, 1975. Some of the last classified cables out of Cambodia reported that the Communist guerrillas had turned upon the civilian population with a sudden savagery.

The last American ambassador, John Gunther Dean, gave Washington this secret assessment of the Communist ruthlessness: "Inquiries as to motives of the KC [Communists] have produced a similarity or response, with the answers varying only in degrees of sophistication.

"The refugees express the view that the KC forces control most of the land area but need more people. The attacks are seen by the refugees as enemy punishment inflicted on them for rejecting KC offers to come over to the KC side."

Many of the Khmer Rouge soldiers were young, illiterate and so unsophisticated, according to refugee accounts, that they were frightened of food that came in bottles and tin cans. They were also consumed with uncontrollable hatred.

Within hours after they swarmed over Phnom Penh on April 17, 1975, the wholesale slaughter began. These were not the ravages, however, of undisciplined troops gone wild. On the contrary, they were part of a deliberate, disciplined campaign to remake the society from the ground up.

First, the civilian populace was ordered out of the cities. Hestitation brought instant death. The people were herded into death marches, without food or water, into the countryside.

At the end of the death marches, the harassed people were organized into small villages called "peasant cooperatives" and were put to work planting rice, building dikes and digging canals. Families were separated and marriages forbidden.

The Khmer leaders, meanwhile, grimly began purging every trace of the old culture and foreign influence. Orders went out to execute doctors, teachers, anyone with an education, anyone who could read or write. Every soldier above the rank of private in the old army was sentenced to death.

By the thousands, Cambodians were dragged out of their villages to be shot, stabbed or bulldozed alive into mass graves.

The number of executions, apparently, has now fallen off. People are given verbal reprimands for stepping out of line or failing to show the proper "enthusiasm", for the revolution. After three such reprimands, according to refugee reports, the errant citizen simply disappears.

Rice is rationed; the current measure is half a tin can per person each day. Families are still kept separated. Marriages are now permitted, but a love affair can be a capital offense.

There is no monetary system, everything is obtained by barter. There is no education system, no telephones, no newspapers. Three short propaganda messages are broadcast daily.

The cities remain virtually empty. Phnom Penh, once a bustling city of 3 million before the Khmer Rouge came, now has a population around 50,000.

CHRISTIANS AND JEWS IN PHILADELPHIA HOLD VIGIL FOR SCHARANSKY

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. EILBERG. Mr. Speaker, this morning in Philadelphia, which I am privileged to represent in Congress, a coalition of Christians and Jews began a 2-day vigil to protest the imprisonment by the Soviet Government of Jewish activist Anatoly Scharansky.

Mayor Frank L. Rizzo has proclaimed the period of July 21–22 as Anatoly Scharansky Freedom Days to help focus public attention on the plight of this courageous young man.

For me, Mr. Speaker, the vigil has a deep personal meaning, because I had the honor of meeting Anatoly nearly 2 years ago when members of the House subcommittee which I chair traveled to the U.S.S.R.

Anatoly served as one of our translators, and my colleagues and I were tremendously impressed by the bravery he demonstrated in meeting with us to tell us of the latest harassment against Soviet Jews.

Since that time, I have met Anatoly's wife, Natalia, who lives in Israel. They have been cruelly separated for some 4 years now by an arbitrary Soviet policy which forced Natalia to leave for Israel without her husband.

I came away from these meetings, Mr. Speaker, convinced more than ever that we Members of Congress must continue to raise our voice against the violations of human rights guaranteed by international law to the Scharanskys and their fellow activists.

And so today, although I am unable to join the vigil in Philadelphia, I add my voice to the concerns being raised by the Christians and Jews of conscience who gather in the shadow of Independence Hall to demonstrate their outrage against government policies which have forced the tearing apart of many families such as the Scharanskys.

Taking part in the Philadelphia vigil are the Reverend Richard Firster, director of Judeo-Christian relations for the American Baptist Churches of Pennsylvania and Delaware; Rabbi Richard Levine, president of the Board of Rabbis of Greater Philadelphia; I. Jerome Stern, president of the Federation of Jewish Agencies; Sol Fisher, president of the Jewish Community Relations Council; my wife, Gladys Eilberg, a member of the executive committee of the Soviet Jewry Council of JCRC; and Sister Gloria Coleman, director of ecumenical and interreligious affairs for the cardinal's commission on human relations of the archdiocese of Philadelphia.

FATHER GENE R. WILSON: MAN OF THE PEOPLE

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. STOKES. Mr. Speaker, I rise on this occasion to pay tribute to one of Cleveland's outstanding religious and community leaders, Father Gene R. Wilson, pastor of Saint Adalbert-Our Lady of the Blessed Sacrament Church. Father Wilson has devoted so much of his time and energy to the social and economic advancement of Cleveland's inner-city neighborhoods. In both secular and religious affairs, he has provided the type of guidance and thoughtful leadership which is so sorely needed in our city.

Mr. Speaker, Father Wilson will be leaving St. Adalbert's Parish after 11 years of dedicated service. This comes as a great loss to Cleveland. So that my colleagues in the U.S. House of Representatives can familiarize themselves with Father Wilson's notable career, I would like to relate to you some of the highlights of his life.

Father Gene Wilson was born on May 18, 1928, in Charleston, W. Va., the son of Luther Lee Wilson and Hilda Lawson. In 1928, the Wilson Family moved to St. Clairville, Ohio and then on to Cleveland in 1929. As a youngster, Father Wilson was educated in the Cleveland public school system and spent time studying for the religious life at Collegeville, Minn. and also with the Graymoor Friars in Garrison, N.Y. In 1950, he began his studies with the Society of the Precious Blood at Brunnerdale Seminary in Canton, Ohio. During this time, he also attended St. Joseph College and received a B.A. in liberal arts from the University of Dayton. On May 28, 1960, he was ordained into the priesthood, the first black person to achieve this position from the city of Cleveland.

Father Wilson continued his scholarly pursuits, having attended both Detroit University and Purdue University. He has also completed a masters degree in library science at Catholic University in Washington, D.C.

His assignments as a priest in the Society of the Precious Blood included the assistant pastorship at St. Adalbert from August 1961 to August 1963, Instructor and librarian at Brunnerdale Seminary in Canton, Ohio from 1964 to 1969, and copastor and pastor at St. Adalbert's since 1969.

As I mentioned earlier in my remarks, Father Wilson has been extremely active in community affairs. He has served on the Board of the Catholic Inter-Racial Council of Cleveland, the Commission on Alcoholics, the Board of Trustees for Ohio Boys Town, and is a member of the Fairfax Foundation. He is also the vice president of the Interdenominational Ministerial Alliance, chairperson for the C.P.P.S. Inner City Black Caucus, dean and diocesan consultor to the Bishop of Cleveland and spiritual director of the Black Lay Catholic Caucus of Cleveland.

Mr. Speaker, on Friday, July 29, 1977, a dinner will be held in Father Wilson's honor in the grand ballroom of the Cleveland Plaza Hotel. Parishioners, friends, associates, and leading citizens of Cleveland will be on hand to pay tribute to Father Wilson in recognition of the exceptional role he has played in the life of our city. Mr. Speaker, I feel that it would be fitting for you and my colleagues in the House to join with me in lauding Father Wilson and congratulating him for his years of devoted service. As a man of God and a man of the people, we are grateful to have had him by our side. I am sure that I can speak for thousands of citizens in Cleveland when I say not "goodbye" but "farewell for now" for we all feel confident that he will return to continue his excellent work in an even greater ecclesiastical capacity.

OIC OF RHODE ISLAND, INC.

HON. FERNAND J. ST GERMAIN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. ST GERMAIN. Mr. Speaker, on July 19, it was my privilege to vote with an overwhelming majority of my colleagues for the conference report on H.R. 6138, youth employment and demonstration projects.

Passage of this bill has particular significance for me and for Rhode Islanders because it allows a program which has brought so much benefit to our State to continue and to grow.

The Opportunities Industrialization Center of Rhode Island, Inc., established

in 1968, has brought new life into youth training and diversionary programs, so that those young people who had for so long been excluded from the mainstream of life in terms of employment and involvement can now feel a part of the system and share in the possibilities for success.

OIC, in a relatively short time, has accomplished the impossible in bringing together those from the business and professional communities with members of the disadvantaged and poor communities within our society, to the mutual benefit of all.

Under the enthusiastic leadership of Michael Van Leesten, executive director, and Rev. Arthur L. Hardge, chairman of the board of OIC, this organization has never ceased to amaze and cannot help but earn the admiration of all citizens of Rhode Island in the creativity, care and genuine devotion with which each of the counseling, education, and training programs has been implemented.

I am proud of the success of OIC of Rhode Island, and I am sure this pride is shared by the Rhode Island delegation and all of Rhode Island's citizens. As long as programs like OIC continue to provide this necessary service, I hope we will also continue to provide the funding which these programs need and deserve.

H.R. 8359 A BILL TO RESTORE EFFECTIVE ENFORCEMENT OF THE ANTITRUST LAWS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. RODINO. Mr. Speaker, I should like to insert for the record the court of appeals decision in the Illinois Brick litigation. H.R. 8359 is designed to reinstate the analytical approach and the equitable policies of this decision.

As a result of the Illinois Brick decision in the Supreme Court, a first purchaser of price-fixed goods may now recover damages even though he was not injured because he passed the overcharge on to his customers. On the other hand one of those customers who was indeed injured could not sue—simply because he was not the first purchaser. This is neither logical nor fair.

I am hopeful that we will be able to take action on this measure as soon as possible, and I shall tomorrow introduce this remedial legislation in a cosponsored version.

The text of the seventh circuit's decision in Illinois Brick follows:

STATE OF ILLINOIS, ET AL. v. AMPRESS BRICK CO., INC., ET AL.

U.S. Court of Appeals, Seventh Circuit, No. 75-1561. Decided June 22, 1976. Appeal from U.S. District Court, Northern District of Illinois, Eastern Division.

SHERMAN ACT

Private Suits—Concrete Block Price Conspiracy—Suit by Ultimate Consumers—Public Building Projects—Standing of State to Sue.—The State of Illinois, as a purchaser of buildings and structures containing allegedly price-fixed concrete blocks, had standing to sue the producers of the blocks even though the State had made no direct purchases from them. In private suits seeking to vindicate rights conferred by Congressional enactment, the State had to show an injury in fact that was "arguably within the zone of interests to be regulated by the statute." Whatever difficulty the State might have in proving injury did not require that the suit be dismissed. Furthermore, appropriate means could be found to avoid double recovery by both the State and building contractors, who made direct purchases from the concrete block producers.

For plaintiffs: Lee A. Freeman, Sr. and Lee A. Freeman, Jr., of Freeman, Rothe, Freeman & Salzman, Chicago, Ill. For defendants: Edward H. Hatton, of Jenner & Block, Chicago, Ill., John Edward Burke, of Ross, Hardies, O'Keefe, Babcock & Parsons, Chicago, Ill., Thomas W. Johnston, of Chadwell, Kayser, Ruggles, McGee & Hastings, Chicago, Ill., Richard L. Reinish, of Keck, Cushman, Mahin & Cate, Chicago, Ill., Gary Senner, of Sonnenschein, Carlin, Nath & Rosenthal, Chicago, Ill., Thomas F. Carey, of Carey, Filter & White, Chicago, Ill., Samuel J. Betar, of Schippers, Betar, Lamendella & O'Brien, Chicago, Ill., George B. Collins, of Collins & Amos, Chicago, Ill., James P. Morgan, Chicago, Ill., and Michael J. Guinan, of Griffin, Guinan & Griffin, Chicago, Ill.

Before: Fairchild, Chief Judge, Cummings and Pell, Circuit Judges.

Opinion

CUMMINGS, Cir. J.: This treble damage antitrust action was brought by the State of Illinois on its own behalf and on behalf of various governmental entities in the Greater Chicago area. Except for the American Brick Company,[1] the eleven defendants are manufacturers of concrete block. In Count 1 of the complaint Illinois charged that the defendants violated Section 1 of the Sherman Act (15 U.S.C. § 1) by conspiring to fix the price of concrete block, allegedly resulting in overcharges of "an amount in excess of $3 million." Because of the treble damage provision contained in Section 4 of the Clayton Act (15 U.S.C. § 15), plaintiffs apparently sought in excess of $9 million in damages.[2]

The present lawsuit was filed after the United States had filed similar criminal and civil cases against eleven manufacturers of concrete block used in building construction in the Greater Chicago area. Pleas of *nolo contendere* were accepted in the criminal case and a consent decree was entered in the civil action. Comparable private treble damage actions brought by masonry contractors, general contractors and private builders were settled with the payment of agreed-upon sums of money. The settlements were without prejudice to this suit.

Public projects

Plaintiffs assert that the defendants sold large quantities of concrete block to masonry and general contractors for incorporation in public buildings and structures. Most of the building project contracts were awarded pursuant to competitive bidding based on plans and specifications setting forth the amount and type of concrete block required. The bids submitted included the cost of the concrete block purchased from the manufacturer or masonry contractor. Thus the plaintiffs were not the first purchasers of the concrete block although they alleged that the cost of the product was passed on to them.

Ultimate consumers

Defendants moved for summary judgment against all plaintiffs that were not direct purchasers of concrete block from defendants.[3] In its memorandum opinion (67 F.R.D. 461), the district court first noted that the plaintiffs did not purchase concrete block indirectly pursuant to cost-plus contracts but instead purchased buildings of which concrete block was a component part. As Judge Kirkland put it, the critical issue before him was "whether parties more remote than the direct purchaser from an alleged anti-trust violator have standing to sue under Section 4 of the Clayton Act * * *." 67 F.R.D. 464.

Citing *Hanover Shoe, Inc. v. United Shoe Machinery* [1968 TRADE CASES ¶ 72,490], 392 U.S. 481, the district court held that an immediate consumer or direct purchaser unquestionably has standing to use the antitrust violator, 67 F. R. D. 466. However, relying upon our decision in *Commonwealth Edison v. Allis-Chalmers Mfg. Co.* [1963 TRADE CASES ¶ 70,725], 315 F. 2d 564, 567 (7th Cir. 1963), certiorari denied, *sub nom. Illinois v. Commonwealth Edison Co.*, 375 U.S. 834, the court held that "as to *ultimate* consumers [such as plaintiffs], their injuries are too remote and [in]consequential to provide legal standing to sue against the alleged antitrust violator." 67 F. R. D. 468. Therefore, summary judgment was granted as to this phase of defendants' motion.[4]

Zone of interests

In private actions seeking to vindicate rights conferred by Congressional enactment, to establish standing the plaintiffs must show an injury in fact that is "arguably within the zone of interests to be regulated by the statute." *Association of Data Processing Service Organizations, Inc. v. Camp* 397 U.S. 150, 153; *Malamud v. Sinclair Oil Co.* [1975-2 TRADE CASES ¶ 60,442], 521 F. 2d 1142, 1151-1152 (6th Cir. 1975). The district court held that plaintiffs' interests as ultimate consumers were not protected by the antitrust laws. We disagree and therefore reverse.

Statutory language

Our holding that ultimate consumers may recover for violations of the Sherman Act is motivated by the broad language of the treble damage provision in Section 4 of the Clayton Act. It provides in pertinent part:

Any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws may sue therefor * * * and shall recover threefold damages by him sustained * * *. (15 U.S.C. § 15; emphasis supplied.)

The broad reach of a treble damage action under the Sherman Act was stressed in *Mandeville Island Farms, Inc. v. American*

[1] American Brick Company was sued on the theory that it was a purchaser of concrete block for resale primarily from its production affiliate, Carey Brick Company.

[2] In Count II, plaintiffs were two named hospitals suing also on behalf of all Chicago area private hospitals (in part supported by private funds) that were damaged by purchases of concrete block. No set damages were claimed in Count II. Summary judgment was also rendered for defendants with respect to that Count.

[3] Defendant also moved for summary judgment as to direct purchasers from nondefendants. The denial of this motion is not involved in this appeal. As a result of the partial summary judgment, the claims of only four governmental entities remained in the suit.

[4] Final judgment was subsequently entered thereon pursuant to Rule 54(b) of the Federal Rules of Civil Procedure.

Crystal Sugar Co. [1948–1949 TRADE CASES ¶ 62,251], 334 U.S. 219, 236, where the Supreme Court noted that the Sherman Act "does not confine its protection to consumers or to purchasers, or to competitors, or to sellers * * *. The Act is comprehensive in its terms and coverage, protecting all who are made victims of the forbidden practices by whomever they may be perpetrated."[5] No subsequent decision of that Court has confined the treble damage remedy to direct consumers. The sweeping language of the statute and the policy encouraging private enforcement of the antitrust laws persuaded us that if plaintiffs can prove a violation which resulted in an injury to them, they ought to recover. See *Hawaii v. Standard Oil Co., supra*, 405 U.S. at 262; *Zenith Radio Corp. v. Hazeltine Research, Inc.* [1969 TRADE CASES ¶ 72,800], 395 U.S. 100, 130–131.

Precedent

Although the Supreme Court has not decided the issue presented here, the two courts of appeals that have squarely considered the problem have held that ultimate consumers are within the reach of the treble damage statute. In *In re Western Liquid Asphalt Cases* [1974–1 TRADE CASES ¶ 75,081] 487 F. 2d 191 (9th Cir. 1973), certiorari denied *sub nom. Standard Oil Co. v. Alaska*, 415 U. S. 919, the Ninth Circuit noted that Congressional policy favors the allowance of recovery to plaintiffs who can prove both the occurrence of an antitrust violation and that they thereby incurred substantial damage. The Court refused to confine standing under Section 4 of the Clayon Act to first-line purchasers or more remote consumers who bought goods subject to a cost-plus contract. Similarly, in *Armco Steel Corporation v. State of North Dakota* [1967 TRADE CASES ¶ 72,058], 376 F. 2d 206 (8th Cir. 1967), the court held that because unlawfully fixed prices could injure the ultimate consumers, North Dakota should be permitted to recover $258,255 on its indirect purchases of metal products eventually used in state highways.

The District of Columbia, Second, Fourth, Fifth and possibly the Sixth Circuits also seem hospitably inclined to the rule that ultimate purchasers may sue under Section 4 of the Clayton Act to recover damages incurred as a result of a price-fixing conspiracy.[6]

Analysis of defendants' cases does not lead to a different conclusion. Defendants rely primarily on *Hanover Shoe, Inc. v. United Shoe Machinery Corp.* [1968 TRADE CASES ¶ 72,490], 392 U. S. 481. In that case, the Court held that first-line purchasers could recover for antitrust violations even if the purchaser passed on the cost of the product attributable to the anti-competitive practice. 392 U. S. at 488. However, the Court did not enshrine privity as a requirement of recovery under the antitrust laws. See *In re Western Liquid Asphalt Cases, supra*, 487 F. 2d at 196–198; *Boshes v. General Motors Corporation, supra*, 59 F. R. D. at 592–596. Although the Court noted that more remote purchasers might have difficulty in establishing the relationship between the antitrust violation and the injury suffered, we do not believe *Hanover Shoe* precludes those purchasers from ever recovering.

The Third Circuit's *per curiam* opinion in *Mangano v. American Radiator & Standard Sanitary Corp.*, [1971 TRADE CASES ¶73,477], 438 F. 2d 1187 (1971), is cited by defendants in favor of the summary judgment below. However, a careful reading of *Mangano* shows that the affirmance was based on "the district court's sound discretion to dismiss the actions of the present appellants solely for inexcusable failure to answer interrogatories" (438 F. 2d at 1188). More significantly, the failure to answer the interrogatories revealed plaintiffs' inability to show that the alleged antitrust violations were the proximate cause of the injury to the plaintiffs.[7]

Our decision in *Commonwealth Edison Co. v. Allis-Chalmers Mfg. Co., supra*, is distinguishable on an identical rationale. In part, that decision was based on *Keogh v. Chicago & North Western Railway Co.*, 260 U. S. 156, which held that complaints against legally established regulated rates must first be addressed to the regulatory agency. 315 F. 2d at 567. See *United States v. Radio Corporation of America*, [1959 TRADE CASES ¶ 69,284], 358 U. S. 334, 346–347. However, like *Mangano*, the decision in *Commonwealth Edison* also rests on the failure to prove that the violations damaged the plaintiffs. Because the rates were set by an independent regulatory agency, plaintiffs could not show that the allegedly inflated prices for the generators resulted in higher prices for the electricity produced. In the next consideration of Commonwealth Edison's antitrust claim, the author of our previous opinion approved the rule of *Clark Oil Co. v. Phillips Petroleum Co.*, [1944–1945 TRADE CASES ¶ 57,358], 148 F. 2d 580 (8th Cir. 1945), certiorari denied, 326 U. S. 734, that the Clayton Act permits ultimate consumers to recover from antitrust violators, thereby refuting defendants' interpretation of our prior holding. *Commonwealth Edison Co. v. Allis-Chalmers Mfg. Co.*, [1964 TRADE CASES ¶ 71,197], 335 F. 2d 203, 208 (7th Cir. 1964); see also *Boshes v. General Motors Corporation, supra*, 59 F. R. D. at 597, n. 10.

Proof of Injury

The error in defendants' reading of *Hanover Shoe, Mangano*, and *Commonwealth Edison* is that they view the failure to show that antitrust violations caused plaintiffs' injury as an element of standing. It is not. Rather, the question is one of fact (*Perkins v. Standard Oil Co.*, [1969 TRADE CASES ¶ 72,822], 395 U.S. 642, 648; *In re Western Liquid Asphalt Cases, supra*, 487 F.2d at 199), and any decision thereon is an adjudication on the merits. *Cf. Sierra Club v. Morton*, 405 U.S. 727, 741. Although in *Mangano* and *Commonwealth Edison* the facts were sufficiently clear early in the litigation to permit resolution of the case on a motion to dismiss or for summary judgment, in the instant case they are not.

Double Recovery

We do not believe that the difficulty plaintiffs might have in proving the injury requires us to dismiss the suit. Nor do we believe that dismissal is warranted because both the immediate purchasers and the plaintiffs in this case might recover damages from the defendants. As Judge Carter pointed out in *In re Western Liquid Asphalt Cases, supra*, 487 F. 2d at 200–201, according standing to ultimate purchasers need not result in double recovery because appropriate means can be found to apportion any damages that might be assessed.

To the extent that the district court held that these plaintiffs, as opposed to ultimate consumers in general, lack standing, we disagree. The plaintiffs here have alleged an injury in fact and are within the target area of the Sherman and Clayton Acts. They have shown that they were "within the area of the economy which [defendants] reasonably could have or did foresee would be endangered by the breakdown of competitive conditions." *In re Western Liquid Asphalt Cases, supra*, 487 F. 2d 199.

The judgment below is reversed insofar as it grants summary judgment on Counts I and II against indirect purchasers of concrete block with costs to plaintiffs-appellants.

[6] See *State of Illinois v. Bristol-Myers Co.* [1973–1 TRADE CASES ¶ 74,262], 470 F. 2d 1276, 1278, n. 4 (D. C. Cir. 1972); *In re Master Key Antitrust Litigation* [1975–2 TRADE CASES ¶ 60,648], 528 F. 2d 5, 12, n. 11 (2d Cir. 1975); *South Carolina Council of Milk Producers, Inc. v. Newton* [1966 TRADE CASES ¶ 71,742], 360 F. 2d 414, 417–418 (4th Cir. 1966), certiorari denied, 385 U. S. 934; *Lehigh Portland Cement Co. v. City of North Bay Village* (Misc. No. 2364, 5th Cir. 1972), denying appeal in *Southern General Builders, Inc. v. Maule Industries, Inc.*, 1973–1 CCH TRADE CASES ¶ 74,484 (S. D. Fla. 1972); *Dailey v. Quality School Plan, Inc.* [1967 TRADE CASES ¶ 72,153], 380 F. 2d 484, 487–488 (5th Cir. 1967). In a different context, the Sixth Circuit seems to lean the same way in *Malamud v. Sinclair Oil Corporation* [1975–2 TRADE CASES ¶ 60,442], 521 F. 2d 1142 (6th Cir. 1975). The split among the district courts was noted in *Boshes v. General Motors Corporation* [1973–1 TRADE CASES ¶ 74,483], 59 F. R. D. 589, 592–593, n. 5 (N. D. Ill. 1973) and in the opinion below, 67 F. R. D. at 464, n. 1. We approve of those district court decisions permitting ultimate consumers to sue antitrust violators.

[7] To the extent that there is dicta that only the first consumers in a chain of distribution may sue under Section 4 of the Clayton Act, we respectfully disagree with the Third Circuit.

LET'S GIVE THE FBI A CLEAR MANDATE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. DERWINSKI. Mr. Speaker, all Members should be concerned with the problems that face our intelligence agencies. Of course, a major complication is that facing the FBI. In my judgment, much of the criticism of the FBI is exaggerated and unfair. The noted columnist Bob Wiedrich addresses this point most effectively in his column which appeared in the Chicago Tribune on July 19.

The article follows:

LET'S GIVE THE FBI A CLEAR MANDATE

(By Bob Wiedrich)

It is the nature of man to call the fire department when his house is burning.

However, once the flames have died, he blames the firemen for not having gotten there soon enough. Or for having used too much water. Or for not having used enough.

For you see, second guessing also is the nature of man.

And that, in essence, is the plight in which the Federal Bureau of Investigation finds itself today.

It has done its job as the fireman of American national security. But now it is being criticized for having used too much water.

Whenever things go up for grabs in this country, the public, Congress, and the White House all holler for the FBI, the "firemen" of

the United States Department of Justice.

Over the last 60 years, the FBI has been called on to repel all manner of threats to the nation:

The German Menace of World War I, the Red Menace of the 1920s, the Nazi and Japanese Espionage Menaces of World War II, and the Radical Menace of the 1960s.

In hot wars and cold wars and in between, the men of the FBI have pretty much been left to their own devices without any clearly defined guidelines from the folks hollering for help to prevent the agency from getting caught in post-crises switches.

And now that the FBI is catching hell for having overreacted during the battle with the more radical antiwar groups of a decade ago, some of the same people who hollered for help when their cities were being bombed are hollering for the FBI's scalp.

"For too long," says FBI Director Clarence M. Kelley, "the FBI has been compelled to draw authority from presidential directives and executive orders originally intended to meet urgent, specific needs at a given time of national crisis, particularly in the area of domestic security.

"The history of the FBI's involvement in intelligence matters is closely interwoven with peaks and valleys in the national mood toward domestic security."

During World War I, the FBI's predecessor agency, the Bureau of Investigation, was haphazardly handed foreign and domestic security responsibilities by Congress.

A citizens auxiliary group called the American Protective League [APL] was formed with the approval of the U.S. attorney general to give the under-manned, fledgling agency a hand.

In no time, other ad hoc citizen groups were taking it upon themselves to investigate what they perceived to be un-American activities. Thus, despite the best of intentions of many Americans, mass deprivation of constitutional rights occurred.

In 1918, raids on deserters and draft dodgers in New York and New Jersey were carried out without warrants or sufficient probable cause for arrest by 35 agents assisted by 2,000 APL members, 2,300 military personnel, and several hundred police officers. Some 50,000 men were rounded up.

Constitutionally, it was rough. But nobody raised a stink because it was wartime.

After World War I, the bureau and the U.S. Department of Labor again were tossed into the soup when an aroused public cried out to be saved from the Red Radical Scare during which violence and anarchy had Washington uptight.

"If the advocates of civil liberties were speaking out, no one was listening," Kelley said.

In 1919 and 1920, raids were conducted against suspected Red radicals.

"But once the radical fires had been put out, the passion for resolute government action also cooled," Kelley said. "The Red raids generated a storm of criticism, including an investigation by the Senate Judiciary Committee."

Again, the agents had been caught in a bind carrying out the mandates of a thoroughly frightened government. And the people who had hollered for the firemen, now were hollering criticism.

The same happened during the 1930's as World War II approached.

The White House ordered the FBI to investigate the Nazi movement in the country. That later was broadened to include Communist and Facist activity as well.

As the years passed, President Roosevelt's directives were reinforced by those of Presidents Truman and Eisenhower as the nation moved from a world war to a Korean War and into the Cold War.

By the time the rioting and bombings of the 1960s arrived, the Justice Department again was instructing the FBI to conduct vigorous intelligence operations against suspected radicals.

And just as before, the FBI got caught in the switches once the public and political ardor for vigorous action cooled.

As Kelley says, "Never again should FBI agents be placed under such tremendous pressure to act in the absence of explicit lawful authority."

Once and for all, Congress, the American people, and the executive branch of government should tell the FBI what they want done, how they want it done, and spell it out in legislation that clearly defines what they mean.

That would be far fairer than changing the rules in the middle of the game and making them into a retroactive pillory for FBI agents who thought they were doing the right thing for their country.

PUBLISHER FINALLY GETS HIS FBI FILES, OR SOME OF THEM

HON. ALBERT GORE, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. GORE. Mr. Speaker, the FBI has played an absolutely essential role in law enforcement in this country during its 50-year history. Besides its important work in enforcing Federal laws, it has also made a valuable contribution in professionalizing law enforcement throughout the country through its cooperative programs with State and local law enforcement agencies.

In order to further strengthen the FBI, this Congress must continue to exercise its oversight responsibilities. In a free nation, public support of law enforcement agencies depends upon recognition and correction of excesses. In recent years, there has been a great deal of concern about charges that the FBI has apparently sometimes gathered derogatory information about private individuals—uncorroborated rumors, raw data, and pure gossip—and kept this information in the individual's file where it could cause unforeseen embarrassment or damage in the future. In response to this concern, the Congress enacted—and the FBI has implemented—a law guaranteeing a citizen access to his or her FBI files.

Mr. John Seigenthaler, the publisher of the Nashville Tennessean, has recently written an account of his efforts, pursuant to this law, to obtain access to his FBI files. His account points out the lengthy delay in the FBI's decision to release his files, the fragmentary nature of the information finally released, and the kind of information placed in his files to begin with. I hope my colleagues will find this article informative and useful in our continuing effort to insure that the FBI remains a strong law enforcement agency, responsive to the need to protect individual rights as well as to the need to work for vigorous enforcement of the Nation's laws.

The article follows:

PUBLISHER FINALLY GETS HIS FBI FILES, OR SOME OF THEM

(By John Seigenthaler, Tennessean publisher)

"Allegations of Seigenthaler having illicit relations with young girls . . ."—Report of Memphis FBI to FBI Director Clarence Kelley, May 6, 1976.

I have been reporting and writing for this newspaper, The Tennessean, for most of the last 28 years—and this is the most difficult assignment I have undertaken.

This is a story about myself. It is personal. It is painful.

The allegation cited in the FBI communication printed above, dated May 6, 1976, are not true. But they were repeated, in substance, in another communication to FBI Director Kelley four days later, on May 10, 1976.

I found out about it two weeks ago—when, after more than a year of denial and delay, Director Kelley finally complied with provisions of federal laws and sent me my FBI files. At least he sent me some of my files.

I have now been assured by ranking officials of the Justice Department that the words cited in the May 6 and May 10 "telexes" will be purged from my records.

But as of this moment they are part of the "official" FBI files. I have been given access, under law, to some FBI reports mentioning my name. But nothing I have received from the federal Bureau explains how such information could get into my files, why it was sent on May 6 to Director Kelley, or why it was repeated in another message to him a few days later.

The law which allows citizens the right to examine their files also allows the FBI to decide arbitrarily what records will not be shown. I am appealing Kelley's decision in my own case to try to get more information.

Like most Americans, I grew up believing completely in the integrity of the FBI. I know many agents I like and admire. The hard work of agents like them gave the Bureau a reputation which was unblemished for decades. I am aware that disclosing the mere fact that this material is in my files will raise doubts about me in the minds of some people. It will raise the inevitable questions: "If there is smoke isn't there fire? If the FBI had it in the files isn't it true?" That realization is why I would prefer not to write this.

But I appeared before a Congressional Committee May 20, 1976 and stated under oath that if I could get access to my FBI files I would publish what was there, no matter how scurrilous or scandalous or false.

I then wrote a letter to FBI Director Kelley. I told him I was convinced that his agency had collected defamatory gossip about me. I demanded access to my FBI records. I told Kelley that I was going to publish that material if I could get it.

Then, recently, I was honored in New York by the Sidney Hillman Foundation and given an award for "courage in publishing."

Having accepted that award, and having told Kelley I would publish what was in my files, and having sworn before a committee of congress to do so, I can hardly lock it up in a filing cabinet now and forget it.

For years the FBI has engaged in a "vacum cleaner" approach to intelligence gathering. That means the some FBI agents will

solicit or accept any information, even hearsay, remove or gossip, and put it into Bureau's "raw files."

At the time I testified before Congress I had a idea that if I would voluntarily expose the "vaccum cleaner" method of information gathering that it might help stop that corrupt practice.

For some time it has been clear that J. Edgar Hoover, when he was FBI Director, collected titillating tid-bits of gossip about high-ranking officials in Washington—members of congress, senators, cabinet officers, even presidents.

But nobody ever thinks the FBI is collecting common gossip about them; nobody realizes that the "vacuum cleaner" is always turned on, possibly sucking up information about them. Before May, 1976, I did not suspect that the FBI had collecting damaging or discrediting information about me. I didn't want to think that about myself; I didn't want to think it about the FBI.

Then, on May 13 last year an FBI official named Homer Boynton, while visiting the Washington offices of the New York Times, made disparaging comments to members of the Times' staff about me and the Tennessean.

Boynton said "Seigenthaler . . . is not entirely pure."

I don't know why he said it. I can't prove what he meant.

But for more than a year I have suspected the worst; now, having received my FBI records—or some of them—I know the worst. I know that in the week before Deputy FBI Director Boynton made those comments about my "purity" the FBI in Memphis sent two messages to Director Kelley which included false allegations that "Seigenthaler involved in having illicit relations" with young girls.

If this is a difficult story for me to relate, it also may be difficult for the reader to follow. It involves complex events and confusing relationships with the Federal Bureau of Investigation.

The job of a journalist is to make complexities simple and confusion easy to understand. Because of my personal stake in this story, I may fall short of doing the reporter's job.

My conflict with the FBI dates back more than a year—to May 5, 1976, the day before the first Memphis FBI telex was sent off to Kelley.

It was on that day that Mrs. Jacque Srouji, then a part-time copy editor for The Tennessean was separated from the newspaper.

On May 3, 4 and 5 I had talked at length with her about what the FBI has since described as her "special relationship" with the Bureau. I was concerned about how that special relationship affected our newspaper's staff. On May 5 I made the difficult decision to dismiss Mrs. Srouji.

There was no public controversy about why Mrs. Srouji was fired. Ultimately, I am confident, that controversy will be resolved. That will be another story for another day.

What is pertinent to this story is the date of her firing: May 5, 1976. It was the day before the first FBI telex went from Memphis to Director Kelley in Washington. Her dismissal became public knowledge in news accounts published in The Tennessean and other newspapers on May 8. Two days later the second FBI telex was shot off from Memphis to Kelley in Washington.

Three days later I appeared at the Department of Justice in Washington to file a formal complaint with Justice officials about the FBI developing a "special relationship" with a member of the staff of The Tennessean. It was on that day—in fact at the very hour while I was filing the complaint—that Deputy Director Boynton showed up at the office of the New York Times and made his "not entirely pure" crack about me and The Tennessean.

The files I now have received from the FBI are maddeningly incomplete. For example, the May 5 and May 10 telexes have been heavily censored and excised by either Kelley or agents who make the decision as to what in my records I may not read.

Consider the May 6 "document." It appears to be a two-page telex. It has been so heavily censored that nothing appears on the first page but the notation that a "coded" "nitel" was sent to the "Director" from "Memphis" at 7:15 p.m.

Everything else on that first page has been deleted by the FBI. Kelley, in a letter that came with these documents, said this was to protect the privacy of others, including the source of the information.

On the second page of this "nitel" every word has been deleted by the FBI except what appears to be the last two and a half lines. Starting in what surely is the middle of a sentence, those lines read as follows:

"allegations of Seigenthaler having illicit relations with young girls, which information source obtained from an unnamed source."

When I first read that I wondered how I would write this story. I was tempted to try to soften the blow by beginning: "The Federal Bureau of Investigation says I'm a dirty old man."

But it isn't a laughing matter to me—although I am sure that some of my friends—and some who are not my friends—are going to chuckle and chortle about my discomfiture at having to publish such a thing about myself.

I concluded there was no way to begin this account other than to repeat the worst of the damaging lines as the first words of this article.

What is there to conclude from the May 6 "nitel" to Kelley? It shows that sometime prior to May 6 the FBI "vacuum cleaner" turned in my direction and ingested this derogatory information. Some "source"—unnamed in the FBI documents I have received—had sucked up this gossip from some other source. The second source is "unnamed" according to that telex.

That means not even the FBI knows the original source who started the rumor about me.

I had waited for more than a year for a look at my FBI records. It was a year of frustrating exchanges of letters with Kelley and Justice Department officials in which I would regularly demand immediate access to my files, Kelley would deny those demands, I would appeal to other Justice Department officials, and then there would be interminable delays.

When I finally read the few words included in the May 6 telex I was reminded of a letter I had written to the FBI Director exactly one year ago, on July 9, 1976. In that letter I stated that I was convinced "your agency solicits and files common gossip and rank character defamation, under the guise of 'investigating'. . ."

On July 21 Kelley wrote me: "I can assure you that the FBI does not solicit common gossip and rank character defamation."

When he wrote me those words he had in his possession the message sent him from Memphis May 6 quoting a "source" who quoted an "unnamed source."

He also had in his possession the telex sent him from Memphis on May 10. This one is three pages in length. Once again, as I read it I feel that I have been ripped off because either the FBI director or some of his agents have censored most of what it contained.

In addition, the copying machine used by the FBI in reproducing the document is a sad commentary on the technical equipment of the world's greatest investigative agency. Some of what I received is barely legible.

In the May 10 telex the FBI, once again, has blanked out everything that was on page one—except the fact that it was addressed to the "Director" from "Memphis" and that the teletype was "immediate," rather than a "nitel" as the May 6 communication had been. The rest of what was contained on that first page is blank—censored by the FBI. Most of the second page is blank. It is reproduced elsewhere as part of this story. On what appears to be the third line from the bottom one word appears: "volunteered".

The next line is mostly blank but it does contain three words, "heard rumors that".

What seems to be the last line on that page is mostly blank but near the end of the line is my name, "Seigenthaler"—followed by a comma.

Now, it is impossible to tell what those three lines really say. But the FBI official who censored those lines obviously wants me to know—or perhaps believe—that somebody "volunteered" that there were "rumors" around about "Seigenthaler."

Whether that came from "source" or "unnamed source" isn't spelled out quite as clearly in this message.

And what were rumors heard about Seigenthaler? Turn to page three. The first line is complete: "involved in having illicit relations with young females."

I am at a loss to explain the difference between "young girls" as set out in the May 6 communication and "young females" as included in the May 10 telex. It hardly sounds like a correction. Perhaps the agent in Memphis who sent the news to Kelley on May 10 thought it sounded less as if I had violated the age of consent if "young females" rather than "young girls" were involved in the "rumor," I hope that anonymous agent will understand if I fail to send him an anonymous note of appreciation.

The next sentence in the telex says: "Inasmuch as the information furnished by the source concerning Seigenthaler was unfounded rumor, since it could not be corroborated (and then there is a blank space), no record of this information was made in Memphis files."

But somebody kept it in Washington FBI files. And from there, after more than a year of denial and delay, I finally got access to it. The language of the FBI message on May 10 leaves no doubt that it was "unfounded rumor" which could not be corroborated. As I read the telex it is obvious to me that the FBI actually tried to corroborate it, and failed.

And after more than a year that unfounded, uncorroborated rumor has remained in my FBI files in Washington—where it rests today. And there it would remain forever were it not for current officials of the Justice Department who agree with me that it should be purged.

Still, Kelley wrote to me that he could assure me "the FBI does not solicit common gossip and rank character defamation."

In that same letter Kelley said "I am confident the records will speak for themselves."

Well, the documents are so heavily censored that they hardly speak at all. But insofar as they speak they leave no doubt in my mind that the FBI, even today, solicits—and keeps in its records—"common gossip and rank character defamation."

Last November, after I had protested the

actions by the FBI and the statements by Boynton I received a letter of apology from the Department of Justice. In December, a second letter came from Justice. Kelley and Boynton joined in this apology, this letter said.

Having now read my files I have a better idea of why that apology was forthcoming. I have difficulty understanding why it took from May until December.

But still the information I received is inadequate and incomplete. I suspect that means months of more appeals to get more information.

As I re-read the May 6 and May 10 telexes I have several random reactions:

The federal privacy act bars the FBI from providing me any information about any other person whose name is in my files. That, I think, is a sensible provision designed to let me know what the FBI says about me, but protects others from my finding out what the FBI says about them. At the same time, as long as the Bureau continues to use a "vacuum cleaner" process of information gathering and allows unnamed sources to feed in false rumors, this provision will encourage bureaucratic abuse. It also will prevent those who are victims of that abuse from their accusers.

This same provision that permits the FBI to determine what it will excise from documents will lead, inevitably to the suspicion that the Bureau is covering up its own misdeeds in the process of censoring documents.

There are many Americans who, I now am sure, have similar stuff in their files. There is no way for them to know how or when this may adversely affect their interests, or the interests of persons close to them. In one letter to Director Kelley, while appealing for immediate access to my records, I pointed out that there was another "John Seigenthaler"—my son—who might be damaged by such information in my files.

My hope that publishing the derogatory information about me might help cure the FBI practice of picking up such gossip and rumor has been dimmed by the tedious, tiring effort required to get even part of the records. Kelley sent a letter accompanying the documents he provided me, listing the provisions of the law which permit him to withhold information in my records in order to protect others. His letter never even acknowledges that it was improper for the FBI to gather such material. He never bothers to explain his letter of a year ago in which he said his agency does not solicit gossip. He did tell me that the information was never used in an investigation against me. If he was trying to make me feel good, he failed.

President Carter is now considering five names recommended to him by a presidential commission to replace Kelley. Whoever is selected, I cannot help but hope that it is a person with a background in solid law enforcement who understands the difference between legitimate police intelligence and slander. I also hope that the appointment comes soon. Very soon.

My wife is outraged by what was in my FBI files. Outraged at the FBI and not at me, I am happy to report.

While the two telexes in May, 1976 are the items in my FBI files which I found of the greatest interest, there were other documents which were intriguing.

Kelley actually forwarded me 78 pages of documents—the vast majority of them relating to the routine employment investigation done on my background in when I went to work as an official of the Justice Department.

I had read that material when I became the Administrative Assistant to the Attorney General. It is made up of page after page of statements from people I knew who invariably said nice things about me. In files I received from Kelley their names have been deleted to "protect" them. I remember most of them very well. They need no protection from me. I had known them in my neighborhood, at school, at work or at church. Some exaggerated my virtues beyond belief.

Among other documents are two letters included from J. Edgar Hoover—one praising me for being named to the U.S. Advisory Commission on Information in 1962 and another expressing gratitude for some good things I said about the FBI in a 1963 speech. On both copies Kelley sent me there is this notation at the bottom of each letter: "Mr. Seigenthaler is on the Special Correspondent's list."

I don't know what the special correspondent's list is, when I was put on it or when I was taken off it—if I was. My appeal includes an effort to find out.

There is a letter, dated March 10, 1970, addressed to Alexander Butterfield, then Special Assistant to President Nixon, presumably from Director Hoover. It says that he is writing in response to Butterfield's request for "name check" investigations on a number of individuals. There is a blank space of two or three lines where the other names were listed. I don't know who they were or what it was about.

I suspect that this was a "list" other than a "special correspondent's" list.

Then, in April, 1975 there is another communication sent to the White House about my wife and me in response to another "name check" investigation. It mentions that there was a similar check made on both of us in 1972. It doesn't say why, and there is nothing in the documents reflecting anything more on the 1972 inquiry. Again, I am appealing for more details.

There is a highly interesting document showing the Bureau was interested in what was going on in our newspaper office in November, 1967. At the top my name is listed, followed by a semi-colon. About half the one-page memo has been excised. The bottom half reads as follows:

"Toward the end of the conversation (here there is a blank where the name of the source has been blanked out) remarked that he had seen a memorandum from John Seigenthaler, Editor of The Tennessean, addressed to the staff of The Tennessean, regarding the feasibility of attempting to have some individual penetrate the security of government bases."

I remember the matter well. I had made a speech at Huntsville's Redstone Arsenal and thought the security there was lax. I suggested to our City Editors that we try to get a reporter to slip through security, live for awhile on the base, then write a news story about it. The story never developed. But somebody told the FBI about it.

I suggested that we also should check other military bases to see whether security was lax. I mentioned AEDC at Tullahoma and Fort Campbell. These are also mentioned in the FBI document. The unnamed spy accurately told the Bureau that the purpose of it all was to "write an article" about security on these bases.

I don't remember writing any such memo to members of the staff. There is no such memo written by me in our files.

There was also in the FBI records sent to me a derogatory note: as a young serviceman I once turned up at home in Nashville when I should have been at MacDill Air Force Base in Tampa, Fla. The FBI reports that for this indiscretion I was consigned to "hard labor." Actually, I was restricted to barracks and given three weeks of "K.P." duty. Once again, this report is accurate. Kitchen Police duty is hard labor.

Director Kelley has denied my request to meet with him face to face and discuss the details of my files. I regret that. He did mention to me that I owe the FBI $7.80—or ten cents a page—as a copying fee for sending me the 78 pages of my FBI records.

The check will be in the mail shortly—but I don't like to pay. The quality of the "copying" was just too bad.

JULY DAYS OF 1977

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1977

Mr. MILLER of California. Mr. Speaker, July 21 marks the centennial anniversary of the labor riots in San Francisco which served as the catalyst for the rejuvenation of the labor movement in that city.

These demonstrations, which began as peaceful protests against the depression which had gripped the Nation for the preceding several years, rapidly escalated into looting and arson. Out of the days of violence, however, were born a number of new labor unions and city federations of unions which were the forerunners of the strong labor movement in California today.

But the labor movement which emerged immediately from the so-called July Days of 1877 was not identical to the labor movement we know today. In 1877, the future course of American labor was undecided as to questions of political action, craft versus trade versus industrial organization, capitalism versus socialism, and other issues. During the course of the following 25 years, up to the San Francisco general strike of 1901, these competing ideologies and strategies were in constant conflict.

Also emerging from the riots which began 100 years ago were some of the most astute and unusual labor leaders in our history. They may never have reached the historical importance of a Samuel Gompers, but they were critical individuals in shaping the development of the working class movement of California and the United States:

Frank Roney—the immigrant molder who emerged from the riots as a key union organizer, helping to put the fledgling Coast Seaman's Union on a sound basis, and then going on to lead the Trades Assembly, the first strong city-wide federation of trade unions;

Charles Burgman—the brilliant organizer who became San Francisco's representative to the early national meetings of the American Federation of Labor;

Burnette G. Haskell—the erratic publisher of Truth, the radical labor weekly, whose views ran the gamut from revolutionary syndicalism—including the lib-

eral use of dynamite—to utopian communalism—which he realized in the Kaweah Cooperative Colony in the late 1880's—and whose organizational talents helped create many of the city's unions in the early 1880's and the Federated Trades of San Francisco.

Between the riots of 1877 and the general strike of 1901, there were many peaks and failures for the workers of San Francisco. The record of those triumphs and failures form the history of the labor movement and the working class in that city, and affected the development of the organized labor movement throughout the Western States. The "sand lot" demonstrations of July 1877, should be recalled as the spark which generated two generations of labor activity which culminated in the labor movement as we know it today.
